But notwithstanding this, the *Carthaginians* soon assembled an Army of an hundred and fifty thousand Foot, and twenty thousand Horse, in *Spain*, under the Command of the famous *Hannibal*, who march'd with them through *France* into *Italy*, passing the *Alps* and *Pyrennean* Mountains, which till that Time were thought impassible, especially for so great a Body of Forces. And having defeated the *Romans* in four set Battles; in the last of which, *viz.* at *Cannæ*, the *Romans* lost above thirty thousand Men; with this Success he was so elevated, that he penetrated almost to the very Gates of *Rome*. But the *Carthagenians* being jealous of the Fidelity of their General *Hannibal*, and afraid that his Ambition prompted him to make himself famous and great at their Expence, neglected to send him any Recruits or Supplies, till the *Romans* reinforced their Army, who then grew so strong, that they straitned *Hannibal*'s Quarters, cutting off all Supplies of Provisions, so that his Army was in Danger of famishing.

The *Romans* resolving to follow their Blow, dispatch'd their General, the famous *Scipio*, into *Africa*, to make a Descent upon the *Carthaginians* and give them a Diversion; which obliged them to call *Hannibal* home; and this put an End to the Wars in *Italy*; and the two Generals, *Hannibal* and *Scipio*, meeting (with all their Forces) in *Africa*, came to a general Engagement; in which, *Hannibal* being defeated, the Victory fell to the *Romans*, and *Carthage* was again obliged to make a Peace upon what Terms the *Romans* pleas'd to prescribe.

The State of the *Romans* thus increasing they were courted from abroad by the *Athenians*, and several other *Grecian* Cities that had been reduc'd to the Subjection of *Philip*, the great King of *Macedon*, imploring the Assistance of the *Romans* for the Recovery of their Liberties; which the *Romans* did so effectually, that *Philip* was obliged to abandon all his Conquests and become Tributary to *Rome*.

This

This increaſing Grandeur of the *Romans* ſo irritated *Hannibal*, that he ſued to *Antiochus* King of *Syria* for a Reinforcement, and prevail'd; but thoſe united Forces, tho' under *Hannibal*, both by Sea and Land were defeated by the *Romans*, and *Antiochus* obliged to purchaſe his Peace with the Commonwealth.

The growing Power of the *Romans* now becoming ſo formidable, and *Philip* King of *Macedon* being dead; his Son *Perſeus* confederating with the neighbouring States, they aſſembled a very numerous Army and march'd againſt the *Romans*; but the Conſul *Emilius* quite defeated *Perſeus* and his Party, and took *Perſeus* Priſoner. And now leaſt *Carthage* ſhould recover itſelf and be a Thorn in the *Romans* Sides, and contend for Empire, they under a ſlight Pretence laid Siege to it; and having made themſelves Maſters of it, after it had bravely maintain'd a Defence for three Years, they level'd it with the Ground.

After this, the *Romans* purſu'd their Conqueſts in *Africa* with ſuch Succeſs, that they defeated King *Jugurtha*, and brought him Priſoner to *Rome*. They repulſed the *Teutones* and *Cimbri* in their Attempts upon *Italy*, and obliged them to retire.

But notwithſtanding this Series of Succeſs of the *Romans*, they began to be uneaſy among themſelves, and divided themſelves into Parties and Factions; *Marius* at the Head of one Party, and *Sylla* at the Head of the other. *Sylla* was afterwards conſtituted General againſt *Mithridates* King of *Pontus*, when he encroach'd upon the *Roman* Territories in *Aſia* and *Greece*, and reduc'd ſeveral Towns and Provinces to his Obedience; for *Sylla* had not march'd out of *Italy*, before *Sulpicius* the Tribune, who was of a contrary Faction, propoſed a Law to recal *Sylla*, and confer the Command upon his Antagoniſt *Marius*; of which *Sylla* having Intelligence, march'd back with his Army, defeated *Marius* and *Sulpicius* in a pitch'd Battle, baniſh'd all his Enemies from *Rome*, and then turn'd his Arms againſt the common Enemy *Mithridates*; and having defeated him in two ſet Battles, *Mithridates* was forced to beg a Truce. In the mean Time, new Conſuls being choſen, *Marius* and *Sulpicius* was recall'd from Baniſhment, and exercis'd all manner of Cruelties on *Sylla*'s Party; who thereupon (as ſoon as he had ſign'd the Treaty with *Mithridates*) march'd back with Part of his Army to *Rome*, where though he found that *Marius* was dead, yet he was oppoſed by *Marius*'s two Sons and the Conſuls; but he overcoming, entred the City, reſtor'd his Friends to their Dignity, and procured for himſelf the Title of *Perpetual Dictator*; and conſequently was inveſted with Sovereign Power, and not liable to any Controul from the Senate or People. But though he was *Perpetual Dictator*, yet having ſettled the Government, he reſign'd his Authority, and retiring from Buſineſs, ended his Days in Peace.

But about the Year of *Rome* 685. *Mithridates* broke the Truce, and fell upon the *Roman* Provinces in *Aſia*, but was oppos'd by *Lucullus*, and both his Fleet and Army defeated. But *Lucullus* was recall'd, and ſucceeded in his Command by *Pompey*, who defeated another Army rais'd by *Mithridates*, drove him out of his Dominions, and compel'd him to fly for Refuge to his Father-in-law, *Tigranes* King of *Armenia*; but *Pompey* following him thither, *Tigranes* was ſo terrify'd at his Approach, that he immediately ſubmitted himſelf and his Kingdom to the Diſpoſal of the *Romans*.

But the Senate of *Rome*, inſtead of congratulating *Pompey* upon his Succeſs, began to be jealous of his entertaining ambitiouss Views of his own Preferment; but when he convinced them that he had no ſuch Deſign, and as a Proof thereof diſmiſs'd his Army as ſoon as he landed in *Italy*, and return'd to *Rome* with his ordinary Attendants, they receiv'd him with all poſſible Expreſſions of Joy, and decree'd him a Triumph upon his Entrance into the City.

Note, it was in the Time of *Pompey*'s Expedition into *Armenia* that *Cataline*'s Conſpiracy was diſcover'd.

The *Roman* State was at this Time under the Influence of thoſe three great and memorable Men, *viz. Pompey*, *Cæſar*, and *Craſſus*, yet in ſeparate Intereſts, and with ſelfiſh Views: *Pompey* was lov'd by the Senate, which one would think was a good Step towards a general Intereſt; but *Cæſar* was the Darling of the Soldiers and the People, a much greater Step than the former; but if the old Phraſe, *Pecunia obediunt omnia* was as much in force then as it is now, then *Craſſus* had the beſt of the Argument; for his Wealth had procur'd him a conſiderable Intereſt. Theſe three, while *Cæſar* was Conſul, enter'd into a Confederacy to ſupport their own and each other's Intereſt, and from hence it was that they were call'd the Triumvirate; and as ſuch, they procur'd to themſelves the Government of three of the beſt Provinces of the Empire, and divided them amongſt themſelves, agreeing that *Pompey* ſhould have *Spain*, *Cæſar Gaul*, and *Craſſus Aſia*; but *Craſſus* ſoon after was kill'd in an Expedition againſt the *Parthians*. *Cæſar* had great Succeſs in ſubduing the *Gauls*; but *Pompey* willing to maintain his Authority in the Senate, reſided at *Rome*, and appointed a Deputy, to whom he committed the Adminiſtration of the Government of his Dominions in *Spain*.

Cæſar by his repeated Victories in *Gaul* and *Britain* for nine Years together became exceeding popular, while the Senate on the other Hand were ſo jealous of his ambitious Deſigns, that when he petition'd for a ſecond Conſulſhip, they commanded him to disband his Army, and appear as a private Perſon at the Election; but he being at the Head of the beſt veteran Troops in the Empire, march'd directly to *Rome*, in order to obtain by Force what he deſpair'd of ever obtaining by the Conſent of the Senate; and they being appriz'd of his Intentions, and of his Power to put them in Execution, the greateſt Part of them left *Rome* and retir'd to *Greece*, which made *Cæſar*'s Entrance into *Rome* very eaſy, and gave him a Power to oblige thoſe who were left behind to declare him Conſul and *Perpetual Dictator* of the *Roman* Empire.

When he had gain'd this Point, his next Step in order to maintain his Ground, was to fall upon *Pompey*'s Forces in *Spain*; and they in general, either laying down their Arms, or coming over to him, he purſu'd *Pompey* into *Greece*, where he and the Senate had aſſembled a numerous Army to oppoſe him; and in the firſt Engagement, *Cæſar*'s Troops ſuffer'd ſeverely. But both Parties afterwards aſſembing their whole Force upon the Plains of *Pharſalia*, *Cæſar* obtain'd a compleat Victory; and marching into *Egypt* in Purſuit of *Pompey*, found that he had been kill'd by King *Ptolomy*. This happen'd in the Year of *Rome* 704. *Pompey* kill'd.

Cæſar then proceeded with his Wars in *Egypt*, and took *Alexandria* the Capital, and committed the Governmnt of *Egypt* to *Cleopatra* the Siſter of *Ptolomy*; who though ſhe had enſnared his Heart, yet not ſo much, but that he purſu'd his Conqueſts in other Parts of *Africa*; reduc'd *Sci-*

pio, *Cato*, and *Juba*, the Friends of the Senate, and afterwards *Pompey*'s two Sons in *Spain*, which Successes occasion'd his being receiv'd in *Rome* with a great Applause; insomuch that he was thereupon stil'd *the Father of his Country*. But this was only an outside Show; for the Senate observing, that if his aspiring Designs should prevail, and he be invested with Sovereign Authority, their Dignity would decline; to prevent this, they stabb'd him in the Senate-House before he had reign'd five Months; of which Tragedy, his Intimates, *Brutus* and *Cassius*, were the principal Actors.

Cæsar kill'd.

Upon this, two Parties were form'd in *Rome*; one in Defence of *Brutus* and his Party who had kill'd *Cæsar*, and the other to revenge his Death; which last was headed by *Mark Anthony* the Consul, who intended to follow *Cæsar*'s Steps and assume Sovereign Authority; which the Senate were so apprehensive of, that they declar'd him an Enemy to the State, and rais'd an Army under the Command of *Hirtius* and *Pansa* the new Consuls, and young *Octavius*, *Cæsar*'s Heir, to oppose him; but *Anthony* being defeated, they plainly shew'd that they never intended that young *Octavius* should succeed his Uncle; for they decreed *Brutus* and *Cassius* the two Heads of the late Conspiracy against *Cæsar*, the two Provinces of *Syria* and *Macedonia*, whether they had retired after *Cæsar*'s Death, to avoid the Fury of the Populace.

Octavius judging from hence, that the Senate had made use of him only as a Tool to defeat *Mark Anthony*'s ambitious Designs, and not to promote his Interest; he upon this Resentment, revolted to *Mark Anthony*; and they two, with *Lepidus* another General, form'd a second Triumvirate; and *Octavius* returning to *Rome*, was by their united Interest chosen Consul, though under twenty Years of Age; and all the Members of the Senate, whom they thought to be in a contrary Interest, were banish'd; and then they procur'd a Law, that all who were concern'd in the Death of *Cæsar*, should be deem'd Enemies to the Commonwealth.

Octavius and *Anthony* march'd at the Head of an Army into *Macedonia*, and at *Philippi* defeated *Brutus* and *Cassius*, who for Vexation kill'd themselves with their own Hands. The *Roman* Affairs continu'd still to be managed by the Triumvirate, as it was for ten Years after this Battle, when *Lepidus* attempting to render himself independant of his Colleagues in *Sicily*, was defeated by *Octavius*, and compel'd to relinquish his Share in the Government.

The three were now reduc'd to two, there being now only *Octavius* and *Anthony*; and they disagreeing, *Octavius* procur'd *Anthony* to be declar'd an Enemy to the State; and defeating him by Sea and Land, reduc'd him to such a Degree of Despair, that he laid violent Hands upon himself. And now *Octavius* succeeded as Supreme, and gaining the Affections of the Senate and People, he rejected the Titles of King and Dictator, and yet prov'd arbitrary in his Administration. He reign'd 41 Years, during which Time, he had such good Success in *Aquitania*, *Panonia*, *Illyricum*, and *Germany*, as very much contributed to the Establishment of the Empire.

Augustus Cæsar came to the Empire about twenty seven Years before the Birth of our Saviour, and reigning about one and forty Years, our Saviour was born in his Reign. And in the Year of our Lord 14. *Tiberius* succeeded; he was an indolent, indulgent Prince, noted for his Cowardize and Effeminacy; an Instance of which, was his Retirement to the little Island of *Capreæ* in the Bay of *Naples*, where he indulg'd himself in all Manner of Voluptuousness; abandoning the Affairs of the Government, and suffering his frontier Provinces to be insulted and over-run by other barbarous Nations.

Augustus.

Christ born.

Caligula began in the Year of Christ 37; and to redress the Abuses of his Predecessor, he was not only equally effeminate, but much more cruel; and is chiefly noted for a silly Expedition pretended against *Britain*; wherein being arriv'd on the opposite Shore, he, instead of embarking his Troops, order'd them to fill their Helmets with Cockle-shells, which he call'd the Spoils of the Ocean; and returning to *Rome*, demanded a Triumph for his Success; but they justly denying him the Applause he demanded, he became so horribly cruel, that his own Servants conspired to kill him in the fourth Year of his Reign. *Caligula*

Upon this, the Senate were aiming to return to their old Form of Government, but the Army set up *Claudius*, the Uncle of *Caligula*, to be Emperor, and compel'd the Senate to confirm the Election. He conquer'd *Britain*, which was the most remarkable Atchievement of his Life. *Claudius.*

Nero began in the Year of Christ 54. and held out a cruel Reign of fourteen Years; and after all, exercis'd his last Act of Cruelty upon himself, and dy'd by his own Hands. *Nero.*

Galba succeeded *Anno* 68. but had not reign'd many Months till he was murder'd by *Galba.*

Otho, who after a still shorter and less noted Reign, was succeeded by *Otho.*

Vitellius, *Anno* 69; but he for his Voluptuousness and Cruelty, was torn in Pieces by the Soldiers before he had reign'd eight Months, and *Vitellius.*

Vespasian was proclaim'd Emperor in the Year 69. He reformed the Abuses of the State, and added several Provinces to the *Roman* Empire, and was succeeded in the Empire by his Son *Vespasian.*

Titus, who was stil'd *The Delight of Mankind*. He reign'd but three Years, but made himself famous, not only for the Conquest of *Jerusalem*, but for his mild Behaviour in so brave an Action; of which, one grand Instance, was his shedding Tears at the burning of the Temple when he could not help it. *Titus.*

Domitian succeeded *Titus* in the Year of our Lord 81. He was a fortunate Prince, but so cruel, that he was murder'd by some of his nearest Relations; and so detested by the Senate, that they demolished his Statues, and raz'd all the pompous Inscriptions which he and his Creatures had set up in his Favour, and flatter'd him with Divine Attributes. This was the last of the Blood of the *Cæsars*. *Domitian.*

Nerva succeeded next to the Empire; he was elected by the Senate as having been an old General, who had successfully commanded the Army in *Gaul*; but he dy'd within two Years, and was succeeded by his adopted Son *Ner.* *96*

Trajan: He extended the Limits of the Empire; he reduc'd into Provinces, the large Countries of *Dacia*, *Assyria*, *Armenia*, *Mesopotamia*, and *Arabia*; and after he had reign'd about twenty Years, he was succeeded by *Tra.* *98*

Adrian, or *Hadrian*, a *Spaniard*: He built the Wall call'd the *Roman Wall*, from *Newcastle* to *Carlisle*, to keep the *Scots* out of *England*, and to set them their Bounds; but after a Reign of above twenty Years, he was succeeded by his adopted Son *Ad.* *11*

Antoninus Pius, a Man of excellent Morals and sweet Temper. He reigned twenty three Years, and was succeeded by his adopted Son *Ant. Pius*

Marcus Aurelius, a learned Man, and a great Philosopher, and successful in his Wars. He reigned about twenty Years, and was succeeded by his Son *Marc. Au.*

Com-

Commodus, 181.

Commodus, a vicious, extravagant Man; and one of his Miſtreſſes ſuſpecting that he had a Deſign to murder her, ſhe was reſolv'd to be beforehand with him, and murder'd him to ſave herſelf; whereupon

Pertinax, 194.

Pertinax was elected Emperor. He was a Man of mean Extraction, but obtain'd the Favour of the People by his Merit; but endeavouring to reform ſome Abuſes in his Army, was murder'd by the *Prætorian* Guards in the Palace, before he had reigu'd three Months.

Didius, *Severus*, 193.

The next was *Didius*; but before he had reign'd two Months, the Senate ſet up *Severus* againſt him, who was ſucceſsful againſt the *Parthians*, and defended the *Britains* againſt the Incurſions of the *Picts* and *Scots*. He dy'd at *York* in the eighteenth Year of his Reign.

Caracalla.

Caracalla and *Geta*, the Sons of *Severus*, ſucceeded; but *Caracalla* ſoon murder'd *Geta*, and getting the Government into his Hands, became one of the greateſt Tyrants that ever govern'd. He was murder'd by a Captain of his Guards after he had reign'd ſix Years, and was ſucceeded by

Opilius, 217.

Opilius Macrinus; but he being murder'd by his Soldiers in the ſecond Year of his Reign, was ſucceeded by

Heliogabalus, 219.

Heliogabalus, one of the moſt cruel, and voluptuous of all the *Roman* Emperors. He was the Baſtard-Son of the Emperor *Caracalla*; but he was murder'd by his Soldiers, and ſucceeded by his adopted Son

Alexander Severus, 223.

Alexander Severus, who notwithſtanding that he reſtor'd Juſtice to the Empire, and was ſucceſsful againſt the *Perſians*, yet was murder'd by his own Soldiers in the fourteenth Year of his Reign.

Maximinus Caius Julius, 236.

The next that ſucceeded, was *Maximinus Caius Julius*, a Man admired for his Stature, above eight Feet high, and every way proportionable; he was a *Goth* by Extraction, and at firſt but a common Soldier; but being inveſted with that Dignity, march'd into *Italy* to revenge himſelf of his Enemies; but laying Siege to *Aquileia*, which made an obſtinate Defence, he and his Son were both murder'd by the Soldiers before he had ſeen the City of *Rome*.

Pupienus, 238.

Pupienus and *Balbinus* then ſucceeded; but before they had reign'd a Year, they were murder'd by the Soldiers, and

Gordianus, 239.

Gordianus was elected; but he being fourſcore Years of Age, another Part of the Army oppos'd him, and kill'd his Son in the Field of Battle; upon which he laid violent Hands upon himſelf, and was ſucceeded by his Grandſon

Gordianus junior, 239.

Gordianus junior; but he was murder'd in the ſeventh Year of his Reign by his Co-partner *Philip*, the *Arabian*, and was ſucceeded by

Decius, 249.

Decius, who engaging againſt the *Scythians*, was kill'd in an Engagement in the ſecond Year of his Reign.

Gallus, 251.

Gallus, who was General of *Decius*'s Army, was next elected, and afterwards confirm'd by the Senate; but meanly ſubmitting to the Humour of the *Goths* or *Scythians*, he was murder'd by his own Party in the ſecond Year of his Reign.

Æmilianus, 253.

Æmilianus, another General, was next elected; he defeated the *Scythians*, and made a terrible Slaughter of them, but himſelf was kill'd by his Soldiers, and was ſucceeded by

Valerian, 254.

Valerian, who was betray'd by *Macrinus*, his General, in an Expedition againſt the *Perſians*, and was taken Priſoner by King *Sapor*, who firſt uſed him as a Foot-ſtool to mount his Horſe upon, and then flea'd him alive.

Gallienus, 261.

Gallienus his Son ſucceeded him; but by his Indolence and Voluptuouſneſs he became the Contempt of Mankind, and dy'd as he liv'd; he, his Brothers, and Children, being murder'd by

Claud II. 269.

Claudius II. and he dying in the ſecond Year of his Reign, was ſucceeded by

Aurelianus 271.

Aurelianus; who though a private Man, yet by his Merit, was advanc'd from Poſt to Poſt in the Army, till he was elected to the Empire. He was ſucceſsful in his War againſt the *Barbarians*, and conquer'd the famous *Zenobia*, (then call'd the *Queen of the Eaſt*) and took her Capital City *Palmyra*; but in the ſeventh Year of his Reign, he was murder'd in an Expedition againſt the *Perſians*, and was ſucceeded by

Tacitus, 276.

Tacitus, who was cut off by his Soldiers before he had reign'd ſeven Months, and was ſucceeded by

Probus, 276.

Probus; he was a Gardener, and rais'd himſelf by his Merit to the Command of the Army; and in that Capacity had great Succeſs againſt the *Germans*, *Goths*, and *Perſians*; but was murder'd in the ſeventh Year of his Reign in an Expedition to *Perſia*, and

Carus, 282.

Carus ſucceeded him, who was very ſucceſsful againſt the *Perſians*, but was found dead in his Tent in the ſecond Year of his Reign, ſuppoſed ſtruck dead by Lightning.

Dioclesian, 284.

Dioclesian ſucceeded him; he was ſucceſsful in *Egypt*, *Perſia*, and *Armenia*, but rais'd a very ſevere Perſecution againſt the Chriſtians; but he dying, and his Aſſociates in the Empire, *Maximinian* and *Severus* making but an obſcure Figure, there was no Notice taken of them; but he was ſucceeded by

Chlorus, 304.

Conſtantius Chlorus, who after good Succeſs againſt the *Germans*, dy'd in Peace at *York*; and his next Succeſſor was

Conſtantine, 306.

Conſtantine the Great, who was the Son of *Conſtantius Chlorus*, by *Helena*, who was with his Father at *York* when he dy'd; but though the *Britiſh* Army proclaim'd him Emperor at *York*, yet the Pretorian Guards at *Rome* ſet up *Maxentius*, the Son of the above mention'd *Maximinian* againſt him; and *Conſtantine* to avoid a Civil War, offer'd to aſſociate *Maxentius* with him in the Government: But the *Romans* refus'd to accept of a Share, or to compound for *Maxentius*, but inſiſted upon the whole; whereupon *Conſtantine* march'd his Army towards *Italy*, repuls'd the Forces of *Maxentius* ſeveral Times; but the laſt and deciſive Battle was at *Ponte Melle*, within a Mile of *Rome*; and the Victory falling upon *Conſtantine*'s Side, that great Triumphal Arch at *Rome*, ſome Part of which is yet to be ſeen, was dedicated to the Honour of the Conqueror *Conſtantine*, his Adverſary *Maxentius* being entiraly defeated, and drown'd in the River *Tiber*, *September* 24. 312.

Conſtantine II. *Conſtans*, *Conſtantius*, &c. 337.

Immediately after his Acceſſion to the Empire, he publiſh'd ſeveral Edicts in Favour of the Chriſtians. He erected ſeveral Churches in *Rome*, and ſettled Revenues on the Clergy; and when he remov'd the Seat of the Empire to *Conſtantinople*, he conferr'd the Government of not only the City of *Rome*, but a conſiderable Territory in *Italy*, on *Sylveſter*, then Pope, or Biſhop of that See, and his Succeſſors; and divided his Empire among his three Sons, *Conſtantine*, *Conſtantius*, and *Conſtans*. To *Conſtantine* he gave *Gaul*, *Spain*, and *Britain*. To *Conſtans*, *Italy*, *Illyricum*, and *Africa*. And to *Conſtantius*, *Greece*, *Thrace*, *Egypt*, and all the Eaſtern Provinces; but the three Brothers, each diſcontented with his Share, endeavour'd to deſtroy one another, till the two former Brothers were kill'd; then *Conſtantius* remain'd ſole Emperor, till *Magnentius* made a Head againſt him to uſurp the Empire; and *Conſtantius* appearing to defend his Empire, dy'd in his March againſt *Magnentius*, aged 45. and of his Reign 25.

Julian

Julian, 361. *Julian*, the Nephew of *Conſtantine* the Great, ſucceeded; he was ſurnamed the Apoſtate, becauſe he endeavour'd to reſtore Paganiſm. He was ſlain by the *Perſians* in the ſecond Year of his Reign, and was ſucceeded by

Jovian, 363. *Jovian* a Chriſtian, but he dy'd before he had reign'd eight Months.

Valentinian, 364. *Valentinian* ſucceeded him; he was accounted an excellent Prince, but was only the Son of a Rope-maker. He remain'd in the Weſtern Part of the Empire himſelf, and aſſign'd the Eaſtern Part to his Brother *Valens*; but *Valens* dying, *Valentinian* was ſucceeded by

Gratian, 375. *Gratian*, who aſſociated with him *Theodoſius*, who ſurviving *Gratian*, ſucceeded him in the Empire, and attain'd the Name of

Theodoſius, 379. *Theodoſius the Great*. He was a Native of *Spain*. He bravely defended the Empire againſt the barbarous Nations in its declining State; but he dy'd in the ſixteenth Year of his Reign, and left the Weſtern Empire to his Son

Honorius, 395. *Honorius*. In this Prince's Time, the *Goths* attack'd the Empire, ravaged *Italy*, and ſet Fire to *Rome* itſelf, and plunder'd the City, while the Emperor remain'd at *Ravenna* unable to relieve it.

Valentinian, 424. *Valentinian* next ſucceeded. In his Time *Attila* the *Hun* invaded *Italy*, but was repuls'd by *Ætius* the famous *Roman* General; but *Valentinian* the Emperor, having put *Ætius* to Death, the barbarous Nations over-run *Italy* as they pleas'd; and in this their Diſtreſs, *Maximus*, in order to make himſelf Maſter of the Empire, firſt procur'd the Murder of *Valentinian*, and then compell'd his Queen *Eudoxia* to marry him; tho' ſo much againſt her Will, that ſhe invited *Genſerick* the *Vandal* into *Italy* to deliver her from her Husband, which he promis'd to do; but contrary to his Oath, he came with a large Army, plunder'd the City of *Rome*, and carried thouſands of the Inhabitants into Slavery in *Africa*.

Avitus, 455. *Avitus* the *Gauliſh* General, next aſſum'd the Title of Emperor, but he held it but about eight Months, and reſign'd to

Majorianus, 457. *Majorianus*; he was very ſucceſsful againſt the *Goths* and *Vandals*; but after a Reign of near four Years, was ſucceeded by

Severus. *Severus*, and he by

Anthemius. *Anthemius*; but they were both depos'd and murder'd by *Ricimir*.

Olybrius. *Olybrius* was then ſent from *Conſtantinople* with Imperial Power, but did not live above ſeven Months; and after him

Glycerius. *Glycerius* was elected by the Soldiers, but depoſed by

Nepos. *Julius Nepos*, who was depoſed ſoon after by

Oreſtes. *Oreſtes*, who left the Empire to his Son

Auguſtulus. *Auguſtulus*; but he had not reign'd a Year till he was depos'd by *Odacer* King of the *Heruli*, a People near the Mouth of the *Danube*, which put a Period to the *Roman* Empire in the Weſt, about 475.

Theoderick. *Theoderick*, the Eaſtern Emperor, or King of the *Oſtrogoths*, inhabited *Dacia*, or *Mœsia* (now included under the Names of *Servia*, *Bulgaria*, *Walachia*, and *Moldavia*) and he having been ſerviceable to the Eaſtern Emperor *Zeno*, in ſuppreſſing a Rebellion, and being a Chriſtian, the Emperor adopted him for his Son; and about the Year 491. ſent him into *Italy* againſt *Odacer*; whom having defeated in ſeveral Engagements, *Odacer* ſubmitted to let *Theoderick* ſhare half of *Italy* with him; but the two Competitors differing, and a War enſuing, *Odacer* was kill'd, and *Theoderick* became ſole Sovereign of *Italy*; and at his Death, left the Kingdom to his Grandſon

Athalrick an Infant; but he dying in the eighth Year of his Reign, was ſucceeded by *Theobat*, the Nephew of *Theoderick*; but he being murder'd by his Subjects, *Athalr.*

Witiges, one of his Generals, ſucceeded; but *Juſtinian*, Emperor of the Eaſt, taking the Advantage of the Diviſions of the *Goths* in *Italy*, ſent an Army thither, who defeated *Witiges*, and ſent him Priſoner to *Conſtantinople*, and reunited Part of *Italy* to the Empire, while the other Part of *Italy* under the *Goths*, ſet up *Witig.*

Theobald and *Alarick*; but they did not both reign two Years, and were ſucceeded by *Theobal.*

Totilla; he made Progreſs in reſtoring the declining State of the *Goths*; he took and plunder'd *Rome*, but was ſlain by *Narſes*, one of *Juſtinian*'s Generals; and after him the *Goths* ſet up *Totilla.*

Tejas, who retook the City of *Rome*; but before he had reign'd a Year, he was defeated by *Narſes*, which put an end to the *Oſtrogoths*, or Eaſtern Kingdom of *Italy*. *Tejas.*

Narſes the Imperial General, notwithſtanding all theſe Services, was recall'd, and ſlighted by the Empreſs; upon which he was ſo provok'd, that he out of Revenge, invited the *Lombards* into *Italy*, who made themſelves Maſters of the North Weſt Part of that Country, and held it near two hundred Years. But the Eaſtern Emperors kept Poſſeſſion of ſome Part of it, and plac'd a Viceroy at *Ravenna*, the then Capital of that Part of *Italy*. *Narſes.*

To proceed now to the ſhort Race of the *Lombard* Kings, the firſt was

Alboin, who began his Reign in the Year 568. but after a Succeſſion of above twenty Princes, of which ſome were Orthodox Chriſtians, ſome Hereticks, ſome Papiſts, ſome Arians, *&c.* *Alboin*, 568.

Aſtulphus, the laſt King of the *Lombards* but one, took *Ravenna*, and put an end to the Eaſtern Emperor's Dominions in *Italy*, *Anno* 755. and proceeded to beſiege *Rome*; whereupon the Pope call'd *Pepin*, King of *France*, to his Aſſiſtance; and by his Help, compell'd *Aſtulphus* to ſurrender the Victory of *Ravenna*, and the Patrimony of the Church to the Pope; but *Aſtulphus* being kill'd by a Fall from his Horſe, *Aſtulph* 755

Didier ſucceeded as King of *Lombardy*; but he ſeizing on Part of the Pope's Patrimony, *Charlemain* the Son of King *Pepin* of *France*, march'd into *Italy* to the Pope's Aſſiſtance, and taking *Didier* Priſoner, confin'd him at *Liege*, which put an end to the Kingdom of the *Lombards*.

When the Regal Power of the *Lombards* was thus demoliſh'd, the Pope began to aſſume Sovereign Power over the City of *Rome*, and Territories thereunto belonging, which he holds to this Day, under the Name of *The Pope's Dominions*, or *The Eccleſiaſtical State*; or as ſome of our Geographers call it, much to the ſame Purpoſe, *The Land of the Church*, *or Papacy*.

CHAP.

CHAP. III.

An Abſtract of the Hiſtory of the Popes of Rome, *with a Chronological Hiſtory of their reſpective Reigns.*

The original of the Pope.

THE Word Pope or *Papa*, [Father] was formerly common to Biſhops and all Eccleſiaſticks; but that Title was never given to Biſhop's of *Rome* more than to other Eccleſiaſticks, till near the end of the eleventh Century, when Pope *Gregory* held a Council at *Rome*; in which he order'd, that the Name of Pope, ſhould be peculiar to the Biſhop of *Rome* only.

THE Pope's Juriſdiction extended at firſt, no further than the ten Provinces of the *Roman* Dioceſs, *viz.* 1. *Campania*. 2. *Tuſcia* and *Umbria*. 3. *Picenum Suburbicarium*. 4. *Valeria*. 5. *Samnium*. 6. *Apulia* and *Calabria*. 7. *Lucania* and *Brutii*. 8. *Sicilia*. 9. *Sardinia*. And, 10. *Corſica*; and ſome Authors ſtick not to ſay that *Germany*, *France*, *Spain*, and even *Britain*, and *Africa*, &c. were not ſubject to the Pope at the firſt Beginning of the Papacy.

Puffendorf aſſigns ſeveral Reaſons for the Increaſe of the Pope's Authority, as 1. The Barbarity and Ignorance, which as the *Roman* Empire declin'd, over-ſpread the Weſtern Part of the World; for its juſtly obſerv'd, that the ignorant are the moſt eaſily impos'd upon by ſuperſtitious and ridiculous Stories; and when they found the ignorant apt to receive the Impreſſion, they multiply'd the Number of Monks, Friars, and other intereſted Emiſſaries, to purſue and forward the Deſign. They ſoon found it began to ſucceed, and as thoſe Caterpillars encreas'd, they not only grew ſtronger themſelves, but by their Impoſitions, drain'd the Purſes of the Laity, and made them leſs able to reſiſt or defend themſelves; for doubtleſs, where there is a Deſign to reduce People to Slavery, the ready way is to over-burthen them with Impoſitions; and then as one Party grows ſtronger, the other grows weaker in the ſame Proportion, which is a ready way to turn the Scale. Take a Pound out of one Scale and put it into another, and it will make two Pounds difference.

BUT the chief Thing that contributed to the eſtabliſhing of the Pope's Authority, was the Doctrine of his Infallibility, ſo induſtriouſly propagated, and by ſome ſo implicitly believ'd, notwithſtanding their Schiſms and double Elections, their having two or three Popes at a time of different Intereſts, and different Opinions too, *and yet all infallible*; their being obliged to ſubmit their Opinions to thoſe Princes whoſe Help they implor'd; and laſtly, their being defeated, impriſon'd, depos'd, *&c.* and other ſuch like Teſtimonies of their *Infallibility*. But their ſham Miracles, their ſcandalous Practices of ſelling Indulgences to thoſe who had Money to purchaſe them; and thereby tolerate the Purchaſers to be as wicked as they pleas'd: Theſe and the like were ſuch bare-fac'd Impoſitions, as made them at laſt become the Contempt of Chriſtendom; and inſtead of being deem'd *Infallible*, it was held, that a Council might depoſe them for Male-Adminiſtration. And yet notwithſtanding this, they ſtill gain'd Ground, and at laſt got themſelves rank'd into the following Liſt. And here it may be obſerv'd, that about ſixty of them acquired and retain'd the Epithet of St. or Saint, till Reaſon was found by judicious People to leave out the additional Character of *Saint*, and call them either by their own Names like Chriſtians, or by aſſum'd Names like Popes; however to give a Sanction to the Order, they begin with *St. Peter*, and proceed as in the following Liſt, with the Year of Chriſt, and the time they reign'd.

A. D.		*Reign'd Years.*
43	St. Peter	24
67	Linus	11
78	Cletus	12
91	Clement I.	9
101	Anacletus	9
110	Euariſtus	9
119	Alexander	10
13[illegible]	Sixtus I.	9
140	Telesphorus	11
152	Higinus	3
	This Pope was the firſt that order'd the Conſecration of Churches, and Godfathers and Godmothers in Baptiſm.	
156	Pius I. *He was the firſt that ſettled the Feaſt of* Eaſter *to be govern'd by the full Moon, in, or after* March.	
165	Aniceetus.	7
173	Soter	3
177	Eleutherus	15
192	Victor I.	9
	He excommunicated the Biſhops of Aſia *for celebrating* Eaſter, *on the ſame Day the* Jews *did; but ſeveral Biſhops reprehended him for ſo doing.*	
201	Zepherinus	18
219	Calixtus I.	5
224	Urban I.	6
231	Pontianus	4
235	Anterus —— *A few Months.*	
236	Fabian	16
251	Cornelius	2
	In his Time was the firſt Schiſm in the Church, by the Inſtigation of Novatian, *a Prieſt, call'd therefore the* Novatian Hereſy.	
253	Lucius	2
255	Stephen	2
257	Sixtus II.	1
258	Dennis	12
270	Felix	4
275	Eutychianus	8
283	Caius	12
296	Marcellinus	7
	He apoſtatiz'd in Dioclefian's *Perſecution, but repenting, reprehended* Dioclefian *for his Cruelties, and was for that put to Death.*	
304	Marcellus	4
309	Euſebius	2
311	Melchiades	2
314	Sylveſter	22
	He was compell'd by Maxentius *to leave* Rome, *but reſtor'd by* Conſtantine the Great. *In his Time the Council of* Nice *was held.*	

A. D.		*Reign'd Years.*
336	Mark, *Eight Months.*	
336	Julius	15
352	Liberius	13
365	Damasus	20
385	Siricius	13
398	Anastasius	4
402	Innocent	15
417	Zozimus	1
418	Bonifacc	5
423	Celestine	9
	This Pope took part with Augustine *against* Nestorius.	
432	Sixtus III.	8
440	Leo	21
461	Hilary	6
	Hilary *confirm'd the Councils of* Nice, Ephesus, *and* Chalcedon.	
467	Simplicius	16
	It is remarkable in this Pope, that he order'd the Church Benefices to be divided into four Parts, one for the Incumbant, one for other Ecclesiasticks, one for the Repairs of the Church, and one for the Poor.	
483	Felix III.	9
492	Gelasius	4
496	Anastasius II.	2
498	Symmachus	16
514	Hormisdus	9
523	John	3
526	Felix IV.	4
	He was the first that order'd Extream Unction.	
530	Boniface II.	2
532	John II.	3
535	Agapetus	1
536	Silverus	4
	He was baniſh'd by the Procurement of the Empress Theodora, *and ſtarv'd to Death.*	
540	Vigilius	15
555	Pelagius	4
559	John, *or* Catelinus	12
571	Benedict	6
577	Pelagius II.	13
590	Gregory	14
	He was the first that introduc'd the Doctrine of Purgatory, Invocation of Saints, &c. *and prohibited the eating of Fleſh, Milk, or Eggs, on Faſt-Days; and it is ſaid, that he was the firſt that forbid the Prieſts to marry, and obliged thoſe of them that were married, to put away their Wives; but upon finding ſeveral Infant's Skulls in the* Tiber, *and imputing thoſe Murders to the Reſtraint that he had laid upon the Clergy from marrying, he revok'd that Decree.*	
604	Sabinus *reign'd ſive Months, in which time he introduc'd the burning of Lamps in Churches.*	
605	Boniface III.	2
607	Boniface IV.	7
614	Deus Dedit	3
617	Boniface V.	9
626	Honorius	13
639	Severinus *Two Months.*	
639	John IV. Lent *was firſt begun to be obſerv'd in his Pontificate.*	2
641	Theodorus	8
649	Martin	6
655	Eugenius *Five Months.*	
655	Vitalianus	14
	He was the firſt that introduc'd Organs into the Churches.	
669	Adeodatus	7
676	Donus	2
678	Agatho	5
683	Leo II. *Ten Months.*	
684	Benedict *Eight Months.*	
685	John V.	1

A. D.		*Reign'd Years.*
686	Conon	1
687	Sergius	14
	He introduc'd the Cuſtom of the Popes changing their Names on an Election.	
701	John VI.	4
705	John VII.	3
708	Siſinius *Twenty Days.*	
708	Conſtantine	6
714	Gregory II.	17
731	Gregory III.	10
741	Zachary	13
754	Stephen II. *Four Days.*	
754	Stephen III.	3
757	Paul	11
	He began to build the Church of St. Peter's *at* Rome.	
768	Stephen IV.	4
772	Adrian	23
795	Leo III.	21
816	Stephen V.	1
817	Paſchal	7
824	Eugenius II.	3
827	Gregory IV.	19
844	Sergius II.	3
847	Leo IV.	5
852	Pope Joan, *though to hide the Sex as being unfit for an Eccleſiaſtick, they call'd her* John VIII. *but being deliver'd of a Child as ſhe went to the Church of* St. John de Lateran, *ſpoil'd her Infallibility, and ſhe was ſucceeded by*	
855	Benedict III.	3
858	Nicholas I. *Surnam'd the Great*	9
867	Adrian II.	5
	He was choſen without the Conſent of the Emperor, and being inveſted with that independent Authority, order'd, that neither the Emperor, nor any Lay-man, ſhould from that time have any hand in electing the Pope.	
872	John VIII.	10
882	Martin II.	2
884	Adrian III.	1
885	Stephen VI.	5
	He firſt appointed the Sign of the Croſs in Baptiſm, and other Parts of Worſhip.	
890	Formoſus	7
897	Stephen VII.	4
901	Theodorus II. *Twenty Days.*	
901	John IX.	4
905	Benedict IV. *Leſs than a Year.*	
906	Leo V. *Forty Days.*	
906	Chriſtopher *Seven Months.*	
907	Sergius III.	3
910	Anaſtaſius III.	2
912	Lando *Not a Year.*	
913	John X.	15
928	Leo VI. *Six Months.*	
929	Stephen VIII.	2
931	John XI.	4
936	Leo VII.	3
939	Stephen IX.	4
943	Martin III.	6
949	Agapetus III.	6
955	John XII.	7
962	Leo VIII. *The Uſurper*	2
964	Benedict V.	1
965	John XIII.	7
972	Donus II. *Two Months.*	
972	Benedict VI.	3
975	Benedict VII.	9
984	John XIV.	1
985	John XV.	11
996	Gregory V.	3
999	Sylveſter II.	4
1003	John XVII. *A few Months.*	
1003	John XVIII.	6
1009	Sergius IV.	3

A. D.		*Reign'd Years.*
1012	Benedict VIII.	12
1024	John XIX.	10
1034	Benedict IX.	10
1044	Gregory VI.	2
1046	Clement II. *Nine Months.*	
1047	Damasus II. *Twenty three Days.*	
1049	Leo XI.	5
1054	Victor II.	3
1057	Stephen X.	1
1058	Nicholas II.	3
1061	Alexander II.	12
1073	Gregory VII.	13
1086	Victor III.	1
1087	Urban II.	12
1099	Paschal II.	19
1118	Gelasius II.	1
1119	Calixtus II.	5
1124	Honorius II.	6
1130	Innocent II.	13
1143	Celestine II. *Five Months.*	
1143	Lucius II.	1
1145	Eugenius III.	8
1153	Anastasius IV.	1
1154	Adrian IV.	5
1159	Alexander III.	22
1181	Lucius III.	4
1185	Urban III.	2
1187	Gregory VIII. *Not a Year.*	
1188	Clement III.	3
1191	Celestine III.	8
	He took Part with Richard III. *King of* England *against the Barons.*	
1199	Innocent III.	17
	He first appointed Auricular Confession.	
1216	Honorius III.	11
	He first order'd Kneeling at the Elevation of the Host.	
1227	Gregory IX.	14
1241	Celestine IV. *Poison'd in twenty eight Days.*	
1241	Innocent IV.	13
	He was the first that order'd the Cardinals to wear Red Hats.	
1254	Alexander IV.	7
1261	Urban IV.	4
1265	Clement IV.	6
1271	Gregory X.	5
1276	Innocent V.	
1276	Adrian V.	
1276	John XXI.	1
1277	Nicholas III.	4
1281	Martin IV.	4
1285	Honorius IV.	2
1287	Nicholas IV.	4
	After him there was an Inter-regnum of near three Years.	
1294	Celestine V. *He was chosen out of an Hermitage; and after he had reign'd five Months, he resign'd, and return'd to his Hermitage again.*	
1295	Boniface VIII.	8
1303	Benedict X. *Nine Months.*	
	In this Pope's time the See was remov'd to Avignon, *and the Reigns of the respective Popes there were as follow.*	
1305	Clement V. *He was elected after an Inter-regnum; after which, he and his Successors resided at* Avignon *for seventy Years: which because the See was then remov'd from* Rome, *was by the* Romans *call'd the* Babilonish Captivity. *He reign'd*	11
1316	John XXII.	18
1334	Benedict XI.	8
1342	Clement VI.	10
	He order'd the Jubilee *to be held once in fifty Years.*	
1352	Innocent VI.	12
	He was a Frenchman, *and burnt* Joannes de Rupe, *because in his Interpretation of the Apocalypse, he call'd the Pope Antichrist.*	
1364	Urban V.	6
	He first order'd, and wore the Triple Crown.	
1370	Gregory XI.	8
	He left Avignon, *and remov'd the See to* Rome.	
	After the See was re-settled at Rome,	
1378	Urban VI.	11
1389	Boniface	15
1404	Innocent VII.	2
1406	Gregory XII.	3
1409	Alexander V.	1
1416	John XXIII.	7
1417	Martin V.	14
1431	Eugene IV.	16
1455	Calixtus III.	3
1458	Pius II.	6
1464	Paul III.	7
1471	Sixtus IV.	13
1484	Innocent VIII.	8
1492	Alexander VI.	11
1503	Pius III. *Twenty six Days.*	
1503	Julius II.	10
1513	Leo X.	9
	He gave King Henry VIII. *the Title of* Defender of the Faith *for writing against* Luther.	
1522	Adrian VI.	1
1523	Clement VII,	11
	It is remarkable, that in this Pontificate, King Henry VIII. *of* England, *divorc'd his Queen without consulting the Pope, whereupon the Pope excommunicated him; but the King was so far from being affrighted at his Anathema's, that he threw off the Pope's Supremacy; and in Contempt of the Papal Dignity, began the Reformation in* England.	
1534	Paul III.	16
	He cited King Henry VIII. *to appear at* Rome, *and charg'd him with Adultery, and absolved his Subjects from their Allegiance; but they look'd upon this as only an usurp'd Power, and only confirm'd them in their Aversion to the See of* Rome.	
1550	Julius III.	5
1555	Marcellus II. *Twenty one Days.*	
1555	Paul IV.	4
	He upon his Death Bed recommended the Inquisition as the only Support of Popery.	
1559	Pius IV.	7
1566	Pius V.	6
1572	Gregory XIII.	13
1585	Sixtus V.	5
	He encouraged the Attempt against England *with the* Armada *in the Year* 1588.	
1590	Urban VI. *Thirteen Days.*	
1590	Gregory XIV. *Not one Year.*	
1592	Clement VIII.	13
1605	Leo XI. *Twenty five Days.*	
1605	Paul V.	16
1621	Gregory XV.	2
1623	Urban VIII.	21
1644	Innocent X.	11
1655	Alexander VII.	12
1667	Clement IX.	3
1670	Clement X.	6
1676	Innocent XI.	14
1690	Alexander VIII.	1
1691	Innocent XII.	9
1700	Clement XI.	21
1721	Innocent XIII.	3
1724	Benedict XIII.	
	This Benedict *is the present Pope.*	

CHAP.

CHAP. IV.

Of the Ceremony obſerv'd at the Death of the POPE, *and at the Election of his Succeſſor.*

UPON the Death of a Pope, Notice is immediately given to the Sacred College, the Nobility, and Courts of Juſtice; and the ſame Day or the next, the Cardinal Chamberlain, dreſs'd in Purple, and attended by the Clerks of the Chamber, and ſome Members of the Council comes and views the Corps, and calls aloud by his Chriſtian Name, to ask him if he is dead; but the Queſtion is ask'd in *Italian*, as for Inſtance: If the Pope's Name was *Calixtus*, they cry *Calixtus, ſei morto? Or*, Calixtus, *Art thou dead?* And after a Pauſe, as if they waited for the dead Pope's Anſwer, and he not regarding them; he that ask'd the Queſtion, proceeds to give an Anſwer himſelf, and ſays, *Calixtus e Morto*, Calixtus *is dead.* He then takes the Seal, call'd *L' annello del Piſcatore*, or, the Fiſherman's Ring, he breaks it, and thereupon the great Bell in the Capital is immediately rung to give Notice to the Citizens of the Death of the Pope, that Bell never being mov'd but upon that Occaſion; and immediately Expreſſes are ſent to all the abſent Cardinals, and to all Roman-Catholick Princes and States, to ſummon them to the Election of another Pope.

DURING the Inter-regnum, the Cardinal-Chamberlain has the Adminiſtration of the Government, even as far as the Article of Coining Money, with his own Arms on one Side, and the Croſs-Keys on the reverſe. When the Corps is waſh'd and embalm'd, it is carried to St. *Paul's* Chapel in the *Vatican*, and dreſs'd in the Pontifical Habit, and from thence attended to St. *Peter's*, and plac'd in the Chapel of *Sixtus* V. on a Magnificent Bed of State, ſurrounded by a vaſt Number of Wax Lights, which burn Night and Day, the Prieſts in the mean time praying for the Repoſe of the Deceaſed's Soul. The Feet of the deceas'd Pope are ſet cloſe to the Iron Baluſtrade, which opens into the Chapel, where Multitudes of People crowd to kiſs them, eſpecially Women; imagining their paying this Veneration to God's Vicar on Earth, will be of great Advantage to them hereafter. On the Ninth Day, the Corps is put into a Coffin or Coffins, the firſt of Cedar, the ſecond of Lead, with ſixty of the deceas'd Pope's Coronation Medals; twenty of Gold, twenty of Silver, and twenty of Braſs; after which, the Funeral being ſolemniz'd, the Corps is convey'd to a little old Church, and depoſited there till he be removed to the Monument, which is commonly erected for the Deceas'd during his Life time; and there is commonly a magnificent Cavalcade at the Funeral.

THE Election of the Pope is perform'd in the Conclave, and is now manag'd by the Cardinals alone, without being confin'd to the Opinion of any other Power, excepting ſo far as receiving Addreſſes or Recommendations. And here the Word Conclave is underſtood in a two-fold Senſe; either as the Place where the Cardinals meet, or as the Cardinals ſo met, as we in *England* underſtand the Word Church; but they are not confin'd to any one Place, for the Conclave, only to have a Place large enough to receive and contain them, which of late has been a large Gallery in the Palace of the *Vatican*; where upon that Occaſion, there are prepar'd as many Apartments (ſeparated by Deal Boards) as there are Cardinals, with Lodgings, and Conveniencies for Servants, of which no Cardinal is allow'd above two at moſt, except in Caſe of Sickneſs; or if he be a Prince, he is allow'd three.

THE Day after the Pope's Funeral, (which is always celebrated the ninth Day after his Death) the Cardinals meet at the Cathedral, and celebrate high Maſs of the Holy Ghoſt; and then they go in Proceſſion to the high Palace of the *Vatican*, and having ſung the *Veni Creator*, and heard the uſual Prayers in St. *Paul's* Chapel, and ſworn to obſerve certain Articles for the better Government of the Church, they retire to their Cells, when every Body is order'd to quit the Place except the Members of the Conclave, the two Maſters of the Ceremonies, a Secretary, a Confeſſor, a Phyſician, and a Surgeon; and the Marſhal locks up all the Doors and Paſſages into the *Vatican*, which are guarded by the Militia of *Rome*, to prevent all Communication with the People without Doors; and further to prevent any ſuch Intercourſe, there is one appointed to inſpect into every Diſh that is brought in, to take Care no Letters of Intelligence ſhould be hid in the Meat; and that nothing may be convey'd clandeſtinely, all the Victuals is deliver'd in thro' a Hole left in the Wall for that Purpoſe; ſo that it is impoſſible it ſhould eſcape the Inſpector's Obſervation, except himſelf ſhould connive at what he ſees.

THERE are three ways of electing a Pope, or rather four; as firſt by Scrutiny, when every Cardinal writes in a Paper, the Name of the Perſon he votes for; or by Acceſs, when the Cardinals ariſe from their Places, and addreſs themſelves perſonally to the Perſon they intend to chuſe; or by Adoration, when their Deſign of voting for the Perſon intended is expreſs'd by a profound Veneration or Reverence; and the fourth way of chuſing a Pope is, when Differences run very high, they refer the Matter to three, or five (for it muſt be an odd Number) of them to determine the Election.

WHEN the Election is determin'd, the new Pope is cloath'd in his Pontifical Habit; and being placed before the Altar, he receives the Adoration of the Cardinals, who kiſs his Feet, Hands, and Mouth, and then the Doors of the Conclave are thrown open; and the Pope being led to the Lodge of Benediction, and ſhewing himſelf to the People, the firſt Cardinal-Deacon cries with a loud Voice, *I declare you Tydings of great Joy, the Reverend Cardinal* [Here he calls the new Pope by his Name] *is elected Pope, and has chosen the Name of* [Here he mentions his new aſſum'd Name, as *Benedict*, *Innocent*, &c.] and to this is added a great deal of Ceremony at his Inauguration.

SOME Days after this, they perform the Ceremony of his Coronation before St. *Peter's* Church, where a Throne is erected, and he being plac'd thereon, his Mitre is taken off, and the Triple Crown, embelliſh'd with rich Jewels, is plac'd upon

upon his Head; which is ſaid to be in that Form, to repreſent his Spiritual Dignity, his Temporal Dignity, or Authority, and his being ſupreme Judge and Legiſlator of all Chriſtians.

THERE is a great Ceremony perform'd in the new Pope's taking Poſſeſſion of the Church of St. *John de Lateran*, which is his Cathedral, as Biſhop of *Rome*. The Cardinals march in Order before him, and he is attended by all the foreign Ambaſſadors, Nobility, and Perſons of Diſtinction, Eccleſiaſtical and Secular, in and about *Rome*. When he comes at the Church, he knocks three times at the Door, which the Arch-Prieſt immediately opens, and preſents him with two Keys, one of Gold, and the other of Silver; which done, the reſt of the Canons kiſs his Slipper. Then the Pope advances to the high Altar, where he ſits enthron'd, and the Cardinals, and the reſt of the Clergy, are admitted to the Honour of kiſſing his Slipper. And after ſome other Ceremonies, his Holineſs bleſſes the People, and then returns to his Palace in the ſame State in which he came there.

CHAP. V.

Of the Eccleſiaſtical Power and Government of the Pope, *with an Enquiry into the Principal Points wherein the Church of* Rome *differs from the Church of* England; *with ſome Account of the Court of* Rome, *and of the Pope's Temporal Government.*

THE Pope's Power is diſtinguiſh'd into Eccleſiaſtical and Temporal; the Eccleſiaſtical is allow'd in all Places in the World where the Roman Catholick Religion is profeſs'd; the Temporal, is confin'd to the Pope's Territories in *Italy*. The Pope and his Adherents, the better to draw the World into Obedience to his Eccleſiaſtical Power, give out, that he is Chriſt's Lieutenant, and has Power to diſpenſe the Merits of our Saviour to whom he pleaſes; and that thoſe who refuſe to acknowledge this Prerogative, are incapable of Eternal Salvation: And hence, if they can once draw People into an Opinion, that it is in the Pope's Power to Damn or Save, it is natural to believe, that they will readily conform to his Doctrines, and become Proſelytes, and even throw off their Obedience to their Temporal Princes; and by this Artifice, has the Papal Power increas'd by Degrees, when People knew no better.

Some Remarks, wherein the Church of Rome *differs from the Church of* England.

THE Church of *Rome* maintains ſo many additional Articles to the Primitive Creeds, and eſpecially that one, of the Pope's Infallibility, that the knowing Part of the Chriſtian World begin to deſpiſe her Doctrines. For we find upon the Death of a Pope, the Clergy, or that ſelect Body of them call'd the Conclave, are at a Loſs to know where this Infallibility is lodg'd; and indeed, upon an impartial Enquiry, without any ſtrict Scrutiny, the Truth is found to be, that Infallibility is not lodg'd in any human Being, either amongſt the Roman Catholicks under all their Superſtition, or (which is what we do not pretend to) in the Church of *England*, under the happy Effects of a Reformation.

Infallibility

ANOTHER Doctrine is Purgatory, or the Fire that purges and cleanſes them from the Guilt of all venial involuntary Sins, which they had not time to attone for by Penances, and other meritorious Sufferings and Performances upon Earth; maintain'd by as good Authority as the former.

Purgatory

A THIRD Sort of Doctrine is that of Indulgences; the Pope pretending to have a Power to remit the Puniſhment due to Sinners, to exempt them from the Pains of Hell and Purgatory, and to grant Indulgence or Toleration for Sins hereafter to be committed.

FOURTHLY, *Limbo*, or the Confines of Hell, reſerv'd for thoſe who are too good to go to Hell, or not good enough to go to Heaven; and amongſt theſe, they rank Children that die without being initiated into the Church by Baptiſm. *Limbo*

FIFTHLY, Worſhiping of Saints and Angels, and craving their Interceſſion, and adoring the Images and Relicks of them. Worſhiping of Images.

SIXTHLY, The Sacrifice of the Maſs, which they hold propitiatory, both for the Living and Dead; and to this we may add, Tranſubſtantiation, or the Bread and Wine being changed into the Body and Blood of Chriſt immediately upon the Words of Conſecration; and that in ſuch an abſolute and perfect Manner, that although the Appearances, and Accidents, continue to make the ſame Impreſſion upon the Mind and Senſes, as before the Words were pronounc'd; yet you are obliged to believe, that they are then real Fleſh and Blood, and that the ſole and natural Body of Chriſt, with all its Parts and Blood, is as entire in every ſmall Particle of Bread, as it was upon the Croſs. Tranſubſtantiation.

We might obſerve another Doctrine of the Church of *Rome*, and that is Tradition; but the Uſe they make of that Doctrine is, one would think, beyond the Reach of a Chriſtian's Belief: They ſay it is a kind of Errata, or Supplement to the Holy Scriptures, to ſupply whatſoever is imperfect or defective therein; and therefore they ſuppreſs the reading of the Scriptures in common Families. And more effectually to ſuppreſs the reading of the Scriptures, they keep them lock'd up in an unknown Language, and forbid the reading of them in their own Mother's Tongue; and leſt ſome ſhould yet believe the Scripture, or be govern'd by its Dictates, they have ſet up the Inquiſition to put an end to all Diſputes, and to compel them to believe as the Church believes, whatever Scripture or Conſcience dictate to the contrary. Tradition

Of the Court of Rome, *and of the Pope's Temporal Government.*

THE Pope, beſides his Eccleſiaſtical Power, is, as a Temporal Prince, one of the moſt abſolute Monarchs in *Europe*; he holds, indeed, a Conſiſtory of Cardinals, who are his Council in Eccleſiaſtical Affairs, but never meddle in the Civil Government. Theſe Cardinals are elected by the Pope, but he is cautious as to

electing Persons of high Birth, or those that descend from Sovereign Princes, because of the Disturbances that have been occasion'd by the too potent Interest of such: But if any of such a high Rank happens to obtain a Cardinal's Cap, they are seldom, if ever, advanc'd to the Papal Chair, lest they should endeavour to fix it in their Families and make it Hereditary.

The Pope's chief Minister is, the *Cardinal Patron*, commonly a Nephew, or near Relation, to the Pope. The second Minister is the Pope's Vicar, who is always a Cardinal. 3. The Chancellor, who is always a Cardinal. 4. The Cardinal Chamberlain. 5. The Prefect of the Signature of Justice, a Cardinal. 6. The General, who commands the Troops and fortify'd Places. 7. The Penitentiary. 8. The Master of the sacred Palace. 9. The Vestry-keeper. 10. The Pope's Secretary. 11. The Governor of *Rome*, who has the Cognizance of Civil and Criminal Causes in the City. 12. The Treasurer-General. 13. The Marshal of *Rome*, always a Foreigner, and has the Cognizance of Causes between Citizens and Strangers. 14. Four Masters of Ceremonies. 15. The *Major Domo*, or Steward of the Houshold. 16. The Chamberlains of Honour. 17. The Master of the Stables. And, 18. The General of the Pope's Guard.

The Principal Courts of *Rome* are, 1. The Consistory of Cardinals. 2. The Congregation of the Holy Office, or, as they call them, the Supreme Court of Inquisition. 3. The Apostolick Chamber, which manages the Revenues of the Ecclesiastical State. 4. The Court of *Rota*, who have the Cognizance of Canonization of Saints, *&c.* 5. The Court of Datary, who dispose of vacant Benefices. 6. The Court of Penitentiary, who take Cognizance of all Bulls, Dispensations, *&c.*

The *Campania* of *Rome* is under the immediate Government of the Pope; but the other Provinces of the Ecclesiastical State are govern'd by his Legates, or other Deputies. The Pope in those Territories engrosses the Corn to himself, by obliging the Owners of Land, to sell it to his Agents at so low a Price, that some of them had rather let their Land lie fallow, than be at the Pains to cultivate it, when they know they shall get little or nothing by it; but this cannot be always the Case, for then in process of Time, there would be no Corn for the People, nor Money for Duty upon it, to be paid to the Sovereign.

CHAP. VI.

A Description of other remarkable Places in the Campania *of* Rome, *and of other Provinces and Towns in the* Pope's *Dominions.*

THE City of *Tivoli*, or the antient *Tibur*, is situate on the Side of a Hill, near the River *Teverone*, about twenty Miles to the Eastward of *Rome*: This Hill is cover'd with Olive-trees for five or six Miles together, and adorn'd with beautiful Villa's and Palaces; from which Eminency, there is a glorious Prospect over most of the *Campania* as far as *Rome* itself; but *Tivoli* is now reduc'd to a small Village, encompass'd by an old, ordinary Wall, but it is still a Bishop's See.

Palestrina is about ten Miles to the Eastward of *Tivoli*, and thirty Eastward from *Rome*; it stands at the Foot of the same Mountain on which the antient *Prænestæ* stood, famous for the *Temple of Fortune*. The *Granite* Pillars, and other Parts of the Ruins of this antient Temple, yet remain; but what is most valuable, is a beautiful Mosaick Pavement, so well join'd together, that the whole looks like one continued Picture; and the Stones are so disposed, as to represent both Animals and Landscapes in a lively Manner, though the Out-lines and Shadings, are distinguish'd by only the different Colours of the Marble, of which the Pavement is compos'd.

Frescatti is a little Town on the Brow of a Hill, famous for the *Tusculum* of *Cicero*, calld *Grotto Ferrare*, Mr. *Addison* compares it to *Versailles*; as to the Walks and Water-works; though *Misson*, a *Frenchman*, denies the Comparison, and thinks it much interior to *Versailles*; but perhaps this may be imputed to the *Frenchman*'s Ambition rather than real Fact; and I humbly conceive Mr. *Addison*, an indifferent Person, and no Native of either Place, is fittest to be believ'd. *Frescatti.*

Castel Gandolpho is about ten Miles South East from *Rome*, considerable only for a Palace of the Pope, where he sometimes resides for a Season in the Spring and Autumn.

Albano, built out of the Ruins of the antient *Alba Longa*, but twelve Miles South East from *Rome*; it is remarkable for the Prospect from the *Capuchin's* Gardens, which, as Mr. *Addison* tells us, takes in the whole *Campania* of *Rome*, and terminates in a full View of the *Tuscan* Sea. *Albano* is a Bishop's See, Suffragan to *Rome*, and held by one of the six eldest Cardinals.

Cisternæ is about thirty five Miles South East from *Rome*; near it, is the three Taverns, mention'd by St. *Paul*, in his Journey to *Rome*.

Other Places of less Note are, *Sermoneta*, *Anagni*, *Ferentini*, *Piperno*, *Terracina*, *Nettuno*.

Ostia, it lies at the Mouth of the *Tiber*; but the Harbour being choak'd up, it is a Place of little Note at present, only it is a Bishop's See, united to *Velitry*.

Another Province of the Pope's Dominions, *St Pat.* is St. *Peter's Patrimony*, on the North West of *Patrim.* *Campania*. Chief Towns are,

1. *Viterbo*, the Capital of the Province, formerly call'd *Tetrapolis*, as consisting of three Towns united in one; it is at the Foot of Mount *Cyminus*, about forty Miles to the Northward of *Rome*. It is a Bishop's See.

2. *Montefiascon*, about eight Miles North West of *Viterbo*; remarkable for nothing but the Wine it produces, call'd there, *Muscatella* Wine.

3. *Civita Vecchia*, is a Sea-port on the *Tuscan* Sea, about thirty Miles North West from *Rome*, and is one of the best Harbours upon that Coast.

Other Places, but of less Note in this Province, are *Bracciano*, *Rouciglione*, *Caprarola*, *Castro*, *Orvieto*, and *Aquapendente*.

The Province of *Sabina* lies North East from *Campania*. The chief Towns are, *Magliano*, *Viconaro*, and *Correse*.

The Province of *Umbria* lies to the North- *Umbr.* ward of *Campania*, and Eastward of St. *Peter's Patrimony*; it produces Plenty of Corn, Wine, Oil, and Fruit. Chief Town is *Spoletto*, from whence this Province is sometimes call'd the Dutchy of *Spoletto*. It stands near the Brook *Tissino*,

Teſſino, about forty five Miles North Eaſt from *Rome*; it is but a poor City, and not populous. The moſt remarkable Things here, are the old, but noble Cathedral, and an Aqueduct of three hundred and fifty Paces in Length, which joins the Mountain of *St. Francis*, and that of *Spoletto* together; and lies ſeven hundred Feet above the Middle of the Valley over which it runs. Other Towns are, *Foligne*, *Narni*, *Ceſis*, *Terni*, *Rieti*, *Norcia*, *Perugia*, or *Peruſa*, about ſix Miles from the Lake of *Thraſimene*.

The Marquiſate of *Ancona* lies between the Kingdom of *Naples*, and the Gulf of *Venice*. Chief Towns are,

1. *Ancona*, on a Promontory on the Coaſt of the *Adriatick* Sea, about an hundred and twenty Miles North Eaſt from *Rome*, and ſixty South Eaſt from *Urbino*. It has a good Harbour, and the Citadel commands both the Harbour and the Town; but it is a dear Place, and their Trade at a very low Ebb, notwithſtanding that the Pope has made it a free Port. I meet with a Remark with reſpect to the Gulf of *Venice*, which if true, is difficult to be accounted for; and that is, that at *Venice*, and at the Bottom of the Gulf, the Tide riſes four Feet; that at *Ancona*, above half way up the Gulf, it riſes but two Feet; and that at the Entrance of the Gulf, there is no Tide at all.

2. The City of *Loretto*, ſo call'd from a Grove of Laurel there, ſtands on an Eminence, three Miles from the Gulf of *Venice*, fifteen Miles South of *Ancona*, and an hundred and forty five to the Eaſtward of *Rome*. It is true, it ſtands in a pleaſant, fruitful Soil, but ſuch miſerable Roads to it, that if the Roman Catholicks were to undertake their Pilgrimages purely for a voluntary Puniſhment, they could ſcarce have found a Place to go to that would better have anſwer'd the Purpoſe; and yet it is ſaid, there is not leſs than an hundred thouſand Pilgrims there at a time; and yet the City conſiſts of only one large Street within the Gate, and an another without.

The vaſt Heaps of Wealth hoarded together here, as well as in other religious Places in *Italy*, may be look'd upon as ſo many Magazines or Treaſuries of the Church; but as to the Manner, how *Loretto* became ſo much admir'd by the Pilgrims, there is an Account hung up in the Cathedral of *Loretto* in ſeveral Languages; the Subſtance whereof, is to the following Purpoſe, *viz.* That this was the very Chamber near *Jeruſalem*, in which the Virgin *Mary* was born, and ſaluted by the Angel; and that ſhe conceiv'd, and brought up her Son *Jeſus* here till he was twelve Years of Age; and that after the Aſcenſion of our Saviour, the Apoſtles conſecrated it to the Honour of the Bleſſed Virgin; and that St. *Luke* drew a Picture of her, which is to be ſeen here to this Day; but that the Natives apoſtatizing from Chriſt, and becoming the Diſciples of *Mahomet*, the Angels carried it [this very Chamber, that was once near *Jeruſalem*] into *Dalmatia*, and placed it on a Mountain call'd *Terſatto*, near the Gulf of *Venice*; but the People there, not expreſſing a due Veneration for it, the Angels tranſported it over the *Adriatick* Sea, to a Wood about three Miles from *Loretto*, the Territory being ſo call'd, from its belonging to a Lady, named *Loretto*, from whence it obtain'd the Name of *Our Lady of* Loretto: And after it had remain'd here eight Months, it was upon the Wickedneſs of the Natives removed to the Hill where it now ſtands. But a Controverſy ariſing between the two Brothers to whom the Ground belong'd, it was about four Months after, remov'd a little further into a high Way, where they built a magnificent Church over it, which is the preſent Cathedral; under the Middle of the Cupola of which, this travelling Chamber now remains. This holy Chamber is ſurrounded with four Marble Walls to preſerve it, but there remains no more of it at preſent than the four Walls, compos'd of a reddiſh Stone, which is not to be found any where but near *Nazareth*; but Mr. *Miſſon* (though a *Frenchman*) tells us, that the Pretence of thoſe Stones coming from near *Nazareth*, is a Fiction; and that they have on purpoſe to carry on the Deluſion, made Choice of Bricks of different Shape and Bigneſs, with ſome greyiſh, and reddiſh Stones, which are common there; and that the Cement is common Lime and Sand, as in other ordinary Buildings.

But the further to confirm the Ignorant in their Belief of this wonderful Travelling Chamber, they ſay, that at the firſt Arrival of this Houſe at *Loretto*, the Inhabitants were ſurpriz'd, as not knowing from whence it came, till the Bleſſed Virgin appear'd to a devout Man in his Sleep, and declar'd the Manner of its Removal, and the Time, which was in the Year 1296. who diſcovering it to the Governor, he ſent ſixteen Perſons to *Nazareth*, who meaſured the Foundation from whence it was taken, and found every Dimenſion agree with thoſe of the Houſe of *Loretto*. They alſo ſaw an Inſcription on an adjoining Wall, ſpecifying that it had left that Place. This Concurrence of Teſtimonies, or rather Illuſions, ſo well adapted to confirm one another, has prevail'd with thoſe that were weak enough to believe what is reported concerning this Holy Houſe.

But the further to ſupport this Legend, it is reported that *Paul Silvia*, a Hermit of great Sanctity, declar'd, that going thither to Matins on the eighth of *September* every Year two Hours before Day, he ſaw a Light deſcend from Heaven upon the Holy Houſe; this he concluded was the Bleſſed Virgin, that deſcended every Year upon that Day, being her Birth-Day, according to Tradition.

They bring ſeveral other Articles in Favour of this Opinion of the wonderful Removal, or Flight of this Houſe; but as what I have already mention'd is more than either a Papiſt can maintain or a Proteſtant believe, I ſhall give a little Hint of the Deſcription of this Holy Houſe.

The Holy Houſe is ſituated Eaſt and Weſt; towards the Eaſt, ſtands the Lady of *Loretto* over a Chimney, with a little Jeſus on her right Arm; her Image is of Cedar, and as they give out, is the Workmanſhip of St. *Paul*'s own Hands, and brought hither with the Houſe; it is about four Feet high, with a tripple Crown upon her Head, and adorn'd with Rubies, Pearls, golden Lamps, *&c.* which it is ſaid, abound ſo much there, that it is no Wonder that the Lady of *Loretto* has ſo many Pilgrims to viſit her.

Urbino, the Capital of the Dutchy of *Urbino*, is about twenty Miles from the Gulf of *Venice*, and an hundred North Eaſt from *Rome*. Pope *Urban* VIII. from whoſe Name it is ſaid the City took its Name, being an intimate Friend of the laſt Duke's; and having in Time of Need, made him a Preſent of an hundred thouſand Ducats; he ſo entirely won the Duke's Heart, that he bequeath'd, and annex'd it to the See of *Rome*, about the Year 1630. and it is a Part of the Eccleſiaſtical State ever ſince. *Urbino*

But I ſhall not dwell upon the Deſcription of every inſignificant Biſhop's See in *Italy*; ſome of the Capitals of which, are not bigger than ſome of our Country Market-Towns; therefore to paſs by ſome of the leaſt material of them, I come next to,

Ravenna,

Ravenna. *Ravenna*, ſituate three Miles from the *Adriatick* Sea, and an hundred North Weſt of *Ancona*, and eighty Miles South of *Venice*. It is ſaid, it once ſtood upon certain Iſlands like *Venice*, and then it was a good Harbour; but it is now not only dry, but the Water is retired about three Miles from it; and the Ground that was formerly under Water, is now one of the moſt fruitful Plains in *Italy*. It was the Reſidence of *Honorius* the Emperor, and of many of the *Gothick* Kings; and afterwards the Capital of the Eaſtern Emperor's Dominions in *Italy*, where their Viceroys held their Courts; but ever ſince the Year 1512. it hath been in a declining Condition, and now moſt of the Trade is loſt, and the Town thinly peopled. What is remarkable here, is, Wine is ſo plenty, and good Water ſo ſcarce, that to a good Cuſtomer, they had rather put them off with entire Wine, than be at the Trouble to procure good Water to mix it with; though Wine and Water mix'd, is the ſame Price as Wine alone.

Bologna. THE Province of *Bologna* lies between *Romania* on the Eaſt, and the *Modeneſe* on the Weſt; it is a fruitful Country, abounding in Corn, Wine, Oil, Flax, and Fruit. Chief Town is,

Bologna, or *Bolonia*, or by ſome *Bononia*; it is ſituate upon ſeveral little Rivulets, and a navigable Canal, by which it has a Communication with *Ferrara*, and a Branch of the *Po*. This City is about ſixty Miles North Weſt of *Florence*, and above two hundred Miles North Weſt from *Rome*. The Country between *Florence* and *Bologna* is a Chain of the barren *Appenine* Hills; but the *Italians* imitate the Example of their Anceſtors, being extraordinary induſtrious in making new Roads, and repairing old ones. The City of *Bologna* is of a circular Form, of five or ſix Miles in Circumference, ſurrounded with a ſingle Wall, but of no great Strength. It is computed that the Town contains about ſeventy thouſand Souls; what they are moſt remarkable for is their Sauſages, ſo well known, that moſt Nations in *Europe* endeavour to imitate them; and here in *London* they attempt to imitate them under the corrupt Name of *Polonia* Puddings, or *Polonia* Sauſages ready dreſs'd, and cry them about the Streets.

Ferrara ſtands upon a Branch of the *Po*, about four Miles diſtant from the main Stream, with which it has a Communication. It is about eighty Miles South Weſt of *Venice*; it is about four or five Miles in Circumference; it is but poorly fortify'd, and thinly peopled, and is in a declining Condition. *Ferrara.*

A DESCRIPTION OF THE Kingdom of *NAPLES.*

CHAP. I.

Treats of the Situation, and Extent of the Kingdom of Naples; *the Seas, Ports, Lakes, Rivers, and Mountains; with a Deſcription of the City of* Naples, *and the Rarities to be ſeen in, and near that famous City, and in other Parts of that Kingdom.*

ITALY ſo nearly reſembles a Man's Leg, that the Sight of the Map of it readily diſcovers its Form. The South Eaſt Part of it is the Kingdom of *Naples*, which contains the Foot, and that Part of the Leg below the Calf. The Kingdom of *Naples* thus conſider'd, is bounded on the North Eaſt by the *Adriatick* Sea, or Gulf of *Venice*; on the South Eaſt, by the *Ionian* Sea; by the *Tuſcan* Sea on the North Weſt; and by the Church Lands, or Pope's Dominions, on the North. Their Seas are, the *Adriatick*, *Ionian*, and *Tuſcan*; on which, the chief Ports are, *Naples*, *Baia*, *Maremonto*, *Gaieta*, *Trani*, *Brindiſi*, and *Taremo*. The moſt conſiderable Lakes are, *Agnano*, *Averno*, *Lucrino*, *Patria*, *Leſina*, *Varano*, *Focino*, *Andronico*, *Auſanto*, *Vignola*, *Perito*, and *Baccino*. Chief Rivers, the *Volturna*, *Garigliano*, *Tronto*, *Piſcara*, *Sangro*, *Tortore*, *Candeloro*, *Uſente*, *Vaſento*, *Acriſino*, *Sarno*, and *Riofredo*. To theſe we may add ſeveral others which are inconſiderable, becauſe not navigable; and of theſe, they reckon up an hundred and forty ſmall Rivers, whoſe Courſe is ſhort, becauſe their Deſcent is ſteep from the *Apennine* Hills, and flow immediately into ſome of the aforeſaid Seas; but thoſe Rivers in their ſhort Paſſage enrich the Soil, and make it capable of producing the moſt delicious Fruits, Wines, &c. The principal Mountains are, thoſe of the *Apennine*, *Veſuvius*, *Pauſilippo*, and *Falerno*.

Seas.

Lakes.

Rivers.

THE Kingdom of *Naples* is divided into four Parts, *viz. Terra di Lavora*, *Abruzzo*, *Apuglia*, and *Calabria*.

IN *Terra di Lavora*, the chief Towns are,

Naples.

1. *Naples*, the Capital, called *Neapolis*, the antient *Parthenope*; it ſtands on the Declivity of an Hill, and is one of the fineſt Bays that ever the Sea form'd. The Bay is about thirty Miles from Point to Point; the Iſland *Capraæ* ſtanding in the Mouth of the Bay, as if planted there to break off the Waves, and make the Harbour more commodious. On the Eaſt Side of *Naples*, is a large Plain, which extends towards Mount *Veſuvius*. There is ſo bold a Shore at *Naples*, that I have ſeen Veſſels of conſiderable Burthen lie cloſe to the Keys. Wine, and Oil, and all Sorts of Proviſions, are exceeding good, and cheap, and plenty; which might be a great Inducement to any Perſon of Fortune and Opportunity to ſettle there; but the frequent and dreadful Eruptions of Mount *Veſuvius*, deſtroy the Happineſs; and the Earthquakes and Dangers ſo common thereabout, put the Inhabitants in continual Fear, and deſtroy the Sweetneſs of all the other Enjoyments.

IT cannot be an improper Digreſſion, if I here obſerve, that in the Year 1718. when I was School-maſter aboard his Majeſty's Ship the *Barfleur*, under Admiral *Byng*, who hoiſted his Flag on board the ſaid Ship, in his Expedition againſt the *Spaniards*; I had a great Opportunity of making the following Remarks upon *Naples*, Mount *Veſuvius*, and other valuable Curioſities in that, and the neighbouring Country.

NAPLES is ſituate in about 41 Degrees of North Latitude, and 15 Degrees of Long. Eaſt from *London*. It is about ſeven or eight Miles in Circumference within the Walls, excluſive of the Suburbs, and is ſuppoſed to contain about three hundred thouſand Inhabitants. It has three Caſtles, the chief of which ſtands towards the Top of a Hill, above, and to the Northward of the Town; but even that ſerves more to awe the Inhabitants, than to defend it againſt an Enemy, as ſeems evident from the *Spaniſh* Viceroy's quitting it without ſtriking one Stroke, and throwing himſelf into *Gaieta*. The Guns of this Caſtle were fired when Admiral *Byng* arrived with the *Engliſh* Fleet in *Naples* Bay, in the Year 1718. The Streets of *Naples* are wide, and the Houſes high; their Walls thick, built moſtly with Stone; and their Windows but little in Proportion, which makes their Building very ſtrong; and as it ſtands on the Declivity of a rocky Hill, ſome of the Foundations of the Streets are cut to a Level out of the Rock; ſo that although the Houſes on the North Side of the Streets ſeem to be lofty and handſome, yet ſome of the Houſes, when you are within them, have nothing but the Rock for the back Wall, which is ſometimes handſom-

ly polish'd, but more frequently the Rock is left rough, the Water trickling out of it very cool and pleasant into the Houses, where they have proper Cisterns, or Vessels to receive it, and private Sinks to convey the waste away, as with us, with respect to the *New River* Water. The Streets so cut out of the Rock, need no paving; but where paving is necessary, they commonly use Stones about a Foot square, which makes their Pavements very handsome. The Houses have flat Roofs for the Inhabitants to walk upon to take the Air. The Cathedral, dedicated to St. *Januarius*, is a beautiful old Fabrick. Here is St. *Januarius*'s Chappel, where his congeal'd Blood is kept in a Glass, which (as they would have their Followers believe) liquifies upon the Approach of that Saint's Head; and when that happens, it is a Sign of a favourable Answer to what they enquire about.

Mount *Vesuvius*

Mount *Vesuvius* is said to be six, or some say eight Miles from *Naples*; indeed its vast Height makes it seem to appear not above two Miles. The first Part of the Way to it from *Naples*, is upon a fine level Ground, through several good pleasant Villages; after which begins an easy Ascent, till within about a Mile and an half of the Top; after which it grows very steep, and cover'd with such burnt Earth as the Eruption of the Top throws out; and this makes the Ascent impracticable with a Horse, and very difficult on Foot. The Top of it is cover'd on all Sides with a kind of burnt Earth. I never had the Curiosity to go quite to the Top, but two of our Ship's Company went up, and never return'd; from whence we concluded, they were either swallow'd up in the Irruption, or form'd that Pretence, to give themselves an Opportunity to desert the Ship. However, those who have been up, say, that the Top is a wide, naked Plain, smoaking with Sulphur in several Places, and consequently, probably undermin'd with Fire, because of the hollow Sound it made under our Feet. In the Midst of this Plain is a high Hill like a Sugar-Loaf; at the Top of the Hill, there is in the Midst, the Mouth of *Vesuvius*, which goes shelving down to the Depth of about an hundred Yards, and is a round Figure, three or four hundred Yards in Diameter; this Hole is generally full of Smoak, but by standing to Windward, one may see into it: If a Stone be thrown into it, it seems by the Noise, to fall upon firm Ground. I gather'd up some of the Matter that it throws out; it was of a yellowish Colour like Brimstone, but in time it dissolv'd to Water, as Salt or Sugar does when laid in a moist Place.

There is another *Vulcano* to the North Westward from *Naples*, and I have observ'd, that when the Wind was Southerly, or South East, *Vesuvius* burnt furiously, and the other scarce blow'd itself; but when the Wind was Northerly, or North West, the other burnt much more furiously than *Vesuvius*: Their burning thus alternately according to the Wind, gives me Reason to think that there is a subterraneous Communication between the said two *Volcanoes*, by some combustible Cavern; and doubtless, where those Caverns are near the Surface of the Earth, and in process of time burn hollow, if it happens to be where a Town or Village stands, the Earth shrinks, and gives way, whereby the Houses tumble down; and this is what we call an Earthquake: And I am the rather confirm'd in this Opinion, by the fatal Experiment of *Parthenope*, or *Old Naples*, which sunk so deep by an Earthquake in one Night, or rather probably, in one Moment, that the Earth sunk so far beneath the Surface of the Water, that I have been at an Anchor in the *Barsleur* upon the same Spot (if the Term may be allow'd) where *Old Naples* once stood.

These Irruptions have been more frequent of late than formerly, for we do not read of above five of these Sort of Irruptions before the Reign of *Augustus*; but since that time, there has been no less than seven remarkable ones in forty Years, *viz.* in 1688, 1689, 1694, 1696, 1701, 1707, and 1727. The Desolation occasion'd by those Irruptions and Earthquakes, especially those in 1688, was so great, that it would require a Volume to communicate any adequate Ideas of the Ruin and Destruction they occasion'd; and not much inferior were those in 1707, and 1727.

What Coaches they have at *Naples*, are drawn by slow-footed Mules; their Wine at *Naples* is as good as any in *Italy*, if not the best; and of that best Sort of Wine, I have bought twenty two Gallons for the Value of ten Shillings *English* Money, which is not above five pence halfpenny a Gallon; but I bought it off at Sea in the Bay. They preserve Snow in vast Quantities all the Year round, and if you go in to call for a Bombelo [a flat bottom'd Bottle] of Wine, it is brought in a Box made of Cork, or some Sort of Wood, and cover'd to the Neck with Snow, or Ice, which keeps the Wine cool in the hottest Weather.

Without the City, are the Catacombs, or vast long Galleries, cut out of the solid Rock, of three Stories, one above another. These Galleries are about twenty Feet broad, and fifteen Feet high, and the Inhabitants tell us, that they go eight or nine Miles into the Rock; however, those that go a great way into the Rock, see no End of the Galleries on both Sides. There are six or seven Rows of Niches, large and high, into which they put their dead Bodies.

Puzzoli, or, as it is call'd in St. *Paul*'s Journey to *Rome*, *Puteoli*; it stands upon the Sea Coast, about nine Miles to the Westward of *Naples*; and between this Town and *Baia*, the Sea forms a noble Bay, call'd the Bay of *Baia*. The City of *Puteoli* is still a Bishop's See, but dwindled to a decay'd Condition. The Cathedral is built where *Jupiter*'s Temple once stood.

Baia stands on the same Shore, about three Miles to the Westward of *Puzzoli*; it is now but a small Village, and the Castle, its chief Ornament, is but an inconsiderable Building.

These three Places, viz. *Naples*, *Puzzoli*, and *Baia*, afford so great a Variety of Curiosities, that they are visited by all Travellers, who are inquisitive into the Rarities that fall in the way of their Travels. And first,

The Grotto of *Pausilipus*, which is in a little steep Hill, about four Miles to the Westward of *Naples* by the Sea Side. Through this Hill, the *Romans* dug a high Way large enough for Carriages to pass; it goes quite through under the Hill, about half a Mile from the Entrance to the coming out at the other End, and is about eighteen Feet broad; it is highest at each End, and lowest in the Middle, so that at which End soever you enter, it goes with an easy Descent to the Middle, and a soft Ascent to the other End, and towards the Middle, are two large Funnels, quite through from the Roof of the Grotto to the Top of the Mountain, to let in Air and Light; but it is still but a dark Passage through, and the Carriages making a Noise, the Men can hear them before they can see them; and to prevent running foul of one another, they call to one another, *To the Mountain*, or, *To the Sea*, to give Notice on which Side the Road they are.

Over

OVER the Entrance of the Grotto going to *Naples*, is an antient little Monument like a Pyramid, but it is now in a ruinous Condition; it is said to be the Tomb of *Virgil*.

A little beyond the Cave of *Pausilippus*, in the Way to *Puzzoli*, is the Lake of *Agnano*, about a Mile in Circumference; near this Lake is the Grotto *del Cane*, a little Cave at the Foot of a Hill, about ten Feet long, five Feet broad, and five in height. The Nature of the Cave is such, that if a Dog has his Nose held in the Vapours, he lies as dead, and will actually die if held too long; but if taken out with any Life in him, and carried into the open Air, or thrown into the neighbouring Lake, he immediately recovers. This Grotto *del Cane* is of such a moist, poisonous Quality, that a Pistol will not take Fire in it. It is merrily observ'd, that the Dogs in that Neighbourhood have been so frequently made use of to try this Experiment, that when a Stranger comes, they endeavour to get out of the way, as if they were sensible of the Danger of being the Object of so fatal, or at least so dangerous an Experiment. The Viceroy, *Don Pedro de Toledo*, made an Experiment on two Slaves, who both died; and which is more remarkable, one *Tournoil*, a Traveller, stooping down into the Grotto to take up a Stone, was seiz'd with the Vapour, and immediately lost all Signs of Life; and tho' he seem'd to recover a little by being put into the Lake, yet he expired in a few Minutes afterwards, as supposing his Spirits were over-pow-er'd, and suffocated past all Recovery.

As to *Caligula*'s Bridge, let modern Authors say what they please as to its being made of Boats; yet this I am certain of, as having been upon the Spot that the Natives call *Caligula*'s Bridge, that was built from *Puzzoli* to *Baia*, cross the Bay of *Baia*. The Account that Doctor *Burnet* gives us of *Baia* and the Bridge, is the most agreeable to what I observ'd in the Year 1718. His Words are these: "The Remains "of *Caligula*'s Bridge are the most amazing; "for there are yet standing, *Eight or Ten Pil-* "*lars* that supported the Arches, and some of "the Arches are yet half entire, *&c.*"

I must needs subjoin to Dr. *Burnet*'s Account, that in the Year 1718. there were fourteen of those Pillars to be seen, and in calm Weather, fifteen; and of them, *Eight or Ten* Arches were standing; which though large and famous in themselves, yet they bore such a small Proportion to the Breadth of the Bay, and the Length that the whole Bridge had been of from Point to Point, that those who do not know the original of those Pillars and Arches, do not now look upon them with that Curiosity and Admiration that Historians and Antiquarians see in them. But as for the Opinion of a modern Author, that these Arches were made only to support a Mole for the Defence and Conveniency of the Harbour, it is quite contrary to the concurrent Testimony of the Inhabitants, who unanimously affirm, that this was the Bridge of *Baia*, built by *Caligula*, and call'd by his Name.

But besides the Antiquities above-mention'd, we find the Ruins of a Theatre near *Puzzoli*; the Area of which, is an hundred and seventy two Feet long, and eighty two broad; and between this and the City, is the Ruins of the Temple of *Diana*, so much spoke of by the Poets; as is also the *Elysian* Fields, where the Poets feign, that *Charon* the Waterman ferries those People over that dye for Love, or being wrong'd by their Sweet-hearts, according to the Fiction of the Poets. But when you come to the *Elysian* Fields, it is but a small Spot of Ground, about a Mile from *Baia*; and the River *Styx* as some call it, but others more justly the *Stygian* Lake, is only a long Stagnum of Water, producing Moss and long Grass in such abundance, and the Edges of it so muddy and dirty, that it would not only be difficult to get into a Boat, but to row her over when you are in; so that in short, was it not for the Name, the Sight is worth nothing. And I cannot help thinking, that it is a Pity, that those Curiosities arising from such Heathenish Foundations, should gain so much Credit in a Christian Country, and especially in our Schools, as to delude Youth into a Belief of their being something sacred, or as if the *Elysian* Fields were a Sort of a State of Bliss, fix'd upon that Part of this Terrestial Globe. It might serve well enough for those who believe a Purgatory, and I suppose by such, the Delusion has been first form'd, however it may be now encouraged in Christian Schools, and so far instrumental in debauching the Principles of Youth, and making young Christians believe that those Fictions of Heathen Poets are really Fact. But to proceed to the Description of other Places.

Gaieta stands on a Rock near the Sea, about fifty Miles North West of *Naples*, and eighty Miles South East of *Rome*; it is one of the best Harbours in the Kingdom.

Salerno stands at the Bottom of a Bay in the *Tuscan* Sea, twenty seven Miles South East of *Naples*; it is a good Harbour, and an Archbishop's See, but of no great Consequence at present as to Trade.

Manfredonia is a tolerable Harbour and Castle in the *Adriatick* Sea, fourscore Miles to the Eastward of *Naples*.

Otranto is a Peninsula, encompass'd by the *Ionian* and the *Adriatick* Seas; it produceth Olives, Figgs, and other Fruit. The chief Towns are *Brundisi*, and *Gallipoli*.

Brundisi, the antient *Brundusium*, is about thirty Miles to the Northward of *Otranto*; it is a well built Town, and a good Harbour. Here *Cæsar* embark'd his Troops when he pursu'd *Pompey* to the Plains of *Pharsalia*, and here the Celebrated *Virgil* dy'd.

Gallipoli is situate on the *Ionian* Sea, about twenty Miles to the Westward of *Otranto*; it is a Peninsula, being join'd to the Continent by a stone Bridge; it is the See of a Bishop, but Suffragan to *Otranto*, and said to be one of the strongest Towns in the Kingdom of *Naples*.

Reggio, or *Regium*, stands upon the East Coast of the *Fare* of *Messina*, and over-against the City of *Messina*, which is the Capital of *Sicily*. This Strait from *Regium* to *Messina* is about nine Miles over. We in the *Barfleur* lay several Weeks at *Regium* in the Year 1718, while the *Spaniards* were besieging that Place, which gave me a great Opportunity of observing the Motion of Sound; and there I observ'd in a calm Evening, seeing the Guns fire from the *Spanish* Batteries, that the Sound was twenty seven Seconds in passing from *Messina* to *Regium*, there being that Distance of Time between the Flash of the Gun at *Messina*, and the Report of the same when heard at *Regium*.

CHAP.

CHAP. II.

An Abstract of the antient and modern History of Naples, *with an Account of their Product, Trade, Manufacture,* &c. *and a Description of the* Italian *Islands, as* Sicily, *&c.*

NOT to take notice of the numerous and reigning Clergy in those Priest-ridden Dominions, the chief Product of the Country is Corn, Oil, Silk, and Fruit. Their Naval Force is but weak, as having but one Man of War or two, and a few armed Gallies; and some few Frigats they have lately built.

THEIR chief Manufacture is Silk; and next to that is Soap, knit Waistcoats, Stockings, Snuff, and Perfumes.

THE publick Revenue is supposed to amount to the Value of near a Million sterling, which arises, 1. From a Tax imposed upon the Barons, *&c.* in Lieu of their personal Services. 2. From a Duty upon Houses, or rather Fire-places, every Hearth paying fifteen Carlines, which, according to some Authors, are worth Sixpence Sterling each; but when I was there, a Carline was reckon'd at Ten-pence Sterling. There is likewise a Duty upon Wine, Oil, Tobacco, and Meal, and every thing else either to be eat or wore, except Fruit, Fowls, and Game; and this being what the common People are very much subsisted by, was the Occasion of *Massinello*'s famous Insurrection, wherein that poor young Man and his Brethren, the Fishermen of *Naples*, assembled in such a powerful Manner, that in about twelve Days, they gave such a Turn to the Government, that there never was since then any Gabel, or Duty upon Game-Fowls or Fruit.

BUT to come next to the *Italian* Islands, of which *Sicily* is the chief. It is the antient *Trinacria*, so call'd, from its Triangular Form; not to mention the Name *Ethinæa*, given it by the Poets, from the famous Mount *Etna*; but it is now call'd *Sicily*, from the *Siculi*, an *Italian* People, that inhabited and planted this Island. It is situated between 36, 30, and 38, 40, of North Latitude, and between 12 and 16 of Longitude East from *London*. It lies in a warm but healthy Air, and is so fruitful, that it was call'd the Granary of *Rome*. There are no navigable Rivers of much Note. Their chief Harbours, are *Syracusa*, and *Messina*, standing upon Bays in the Sea in the East Part of the Island; *Melazzo*, on the North or North East; *Palermo* on the North West; and *Trapano* on the West.

Sicily is divided into three Parts, *viz.* 1. The Valley of *Demona*. 2. The Valley of *Mazara*, and, 3. The Valley of *Nota*.

Messina. 1. THE Valley of *Demona* is the North East Part of *Sicily*; the chief Town is *Messina*, which gives Name to the Vare or Strait, which is the narrow Sea passing between *Italy* and *Sicily*. *Messina* is a fine Bay and a good Harbour; along one Side of which, the Town stretches itself between the Mountains and the Sea. The Town is of a great Length, and makes a fine Appearance to Strangers in the Bay or at Sea, because the Houses are lofty, and standing upon a rising Ground from the Sea, adds very much to the Beauty of the Prospect, though when you are in the Town, the Streets are narrow and dirty.

Melazzo THE next Town of Note to *Messina* is *Melazzo*, on the North Side of the Vare of *Messina*, and on the *Tuscan* Sea. In the Year 1718, when Admiral *Byng* was there with the *English* Fleet, the *Imperialists* look'd upon this Town to be of such Consequence, that they made it a Place of Arms, and thought it one chief Branch of their Business to defend it against the Marquis *de Lede* the *Spanish* General, till the *Imperialists* receiv'd Supplies from *Italy*, and maintain'd their Ground, and recover'd themselves in the Year 1719.

NOT to mention Places not worth Notice, I proceed to the once beautiful *Catanea*, situate in a Bay on the East Coast of *Sicily*, to the Southward of *Messina*; but its unfortunate Situation near the Bottom of Mount *Etna* has been its Ruin; the violent Irruptions of Mount *Etna* vomiting out such heavy Stones and other gross Matter, rowl'd down against the Walls, and in process of time ruin'd both the Walls and the City.

AND as we are now arriv'd at the famous Mount *Etna*, called of late (for I do not know what Reason) Mount *Gibel*, I think the following short Description of it may be worth the Observation of the curious Reader. *Mons Ætna*

FROM *Catanea* to the Top of Mount *Etna*, there are two Ways, the shortest and steepest being twenty Miles; and the other, which is more winding to make the Ascent easier, is about thirty Miles; but they both go one Way for the first ten Miles before the very steep Ascent begins, and that ten Miles is handsomly adorn'd with Villages, Houses, Plantations, and Vineyards, which are rendred more fruitful by the burnt Matter which descends from Mount *Etna*, and is dissolv'd or wash'd to Pieces by the Rain; but ascending higher up, you meet with such dreadful Clefts and Cracks in the Earth, as makes the Passage dangerous; and the rather, because of the Smoak and Stench that issues out of them.

WHEN you ascend above this, the Mountain is on every Side cover'd with Snow till you come to the Grand *Volcano* at the Top, which continually sends forth Fire and Smoak, but the most furious in rainy, stormy Weather. The Top of the Mount, where the *Volcanoes* are, is four or five Miles in Circumference; and at the Grand *Volcano*, issues sometimes pure Flame, and at other times Smoak and Ashes, and both with Noise inconceivably dreadful.

THE next Town of Note is *Palermo*, on the North West of the Island; it is situate in a plentiful Soil, is a good Harbour, and has a brisk Trade. The Town is well built, and is the See of an Archbishop. When the *Spaniards* under the Command of the Marquis *de Lede* invaded *Sicily*, in the Year 1718, Count *Maffey*, Viceroy of *Sicily*, retired to *Messina*; so that the *Spaniards* easily got Possession of *Palermo*; but the *Imperialists* recover'd it in the Year 1720, upon the Treaty of Convention with the *Spaniards* for the Evacuation of *Sicily*. *Pa*

Trapano is a good Sea-port, on the West Part of the Island; it was antiently the most considerable Place in the Island, and long defended against the *Romans* by the *Carthaginians*. Antiently the chief Town was *Nota*. But *Trapano* is situate

ruate on the Top of a Mountain, about ſeven Miles from the Sea, and twenty five Miles to the Southward of *Syracuſa*, and twelve North Weſt of Cape *Paſſaro*. It is a large, populous Place, but not of any great Trade, as being ſo remote from the Sea.

Syracuſa is a fine Bay and Sea-port, on the South Part of the Eaſt Coaſt of *Sicily*, about forty Miles to the Southward of *Catanea*. It was the Capital of a rich, flouriſhing, and populous State; but in the Year 1693, it was demoliſh'd by an Earthquake, which almoſt ruin'd *Catanea*, and ſeveral Towns upon that Coaſt. Here lived that famous Mathematician *Archimedes*, who was kill'd at the ſtorming of the Town, contrary to the Order and Deſign of *Marcellus* the *Roman* General, who had generouſly given Orders to ſave his Life. The Houſe of this great Mechanick and Philoſopher, ſtood upon a Rock at the South End of the Town of *Syracuſa*. This high and ſteep Rock was ſurrounded with Water, but had a Communication with the Town by two Draw-Bridges; by one of which you are obliged to paſs, before you can come at the Rocky Iſland upon which *Archimedes*'s Houſe ſtands.

Here is a great Curioſity, which is a Grotto, cut out of a Rock by the Tyrant *Dionyſius*; it is cut in the Shape of a Man's Ear, and ſo artfully contriv'd, that he could hear the leaſt Whiſper in a Room he had over it: This Place is about forty Feet in Height, and twenty in Length. Here is an excellent Harbour, the Bay being above half a Mile broad at the Entrance, and a Mile and a half in Diameter when in. Here was the Rendezvouz of Admiral *Byng*'s Fleet after the Engagement with the *Spaniards* 1718, and here they brought in the twelve *Spaniſh* Men of War they took in that Engagement.

As to the Produce of *Sicily*, it is much the ſame with that of *Naples*, only Corn, Wine, Oil, Fruits, Silk, *&c.* in greater abundance, in Proportion to the Space of Ground and Number of Inhabitants.

The *Lipari* Iſlands lie on the North of *Sicily*, about thirty or forty Miles from it; the chief are *Strombolo* and *Hiera*, remarkable only for their fiery *Volcanoes* iſſuing out of them, which are ſeen a great way off at Sea.

But as we are now upon a Deſcription of *Sicily*, and the Engagement between Admiral *Byng* and the *Spaniſh* Fleet in the above-mention'd Year 1718, having been the Subject both of Diſcourſe and Diſpute, take the following brief Account of *Sicily*, and of the ſaid Engagement off Cape *Paſſaro*:

Upon the Declenſion of the *Roman* Empire, it follow'd the Fortune of the Kingdom of *Naples*, till the famous *Sicilian Veſpers* in the Year 1282, when it came into the Hands of the *Spaniards*, who enjoy'd almoſt an uninterrupted Poſſeſſion of the Iſland till the Peace of *Utrecht*, *Anno* 1714, when it was agreed by all Parties to that Treaty, that it ſhould be conferr'd on the Duke of *Savoy*, with the Title of King of *Sicily*; but the King of *Spain*, under Pretence that the Emperor had not acknowledged his Title to *Spain* and the *Weſt-Indies*, as the Confederates had engaged he ſhould, firſt invaded *Sardinia*, and made himſelf Maſter of it in the Year 1717, and the next Year invaded *Sicily*, landing ſeventeen thouſand Men near *Palermo*, under the Command of the Marquiſs *de Lede*, on the firſt of *July*; whereupon the Viceroy for the Duke of *Savoy* quitted *Palermo* and retired to *Meſſina*. On the ſeventeenth of the ſame Month, the *Spaniſh* Fleet, with moſt of their Infantry on board, ſail'd from *Palermo*; and appearing before the Fort or Tower of *Faro* on the twenty ſecond, the *Piementois* quitted it, and the *Spaniards* landed and took Poſſeſſion of the Fort; and having joined their Cavalry, advanc'd to *Meſſina*, while their Fleet came into the *Faro* or Channel, and detatch'd ſome Men of War and Gallies to block up the Harbour. The ſame Day the *Piementois* Troops quitted the Town, and retired into the Citadel and Fort of St. *Salvadore*; whereupon the Magiſtrates waited on the Marquiſs *de Lede* the twenty fourth, and deliver'd him the Keys of the Town, of which he immediately took Poſſeſſion.

Upon the firſt of *Auguſt N. S.* the *Britiſh* Fleet under Sir *George Byng* arriv'd at *Naples*, having been detach'd thither, as was given out, in order to ſee the Peace of *Utrecht* preſerved; and the tenth of the ſame Month, or the thirtieth of *July O. S.* the *Britiſh* Admiral came before *Meſſina*, whereupon the *Spaniſh* Fleet made to the Southward, and were purſued and defeated by Sir *George*; of which Action he ſent the following Account to *England* by his Son the Honourable *Pattee Byng*, who came Expreſs with it, which I chuſe to inſert *verbatim*, becauſe ſo great a Streſs ſeems to be laid upon the Circumſtances of the Engagement at this time, ſome affirming that the *Britiſh* Fleet were the Aggreſſors, and others that the *Spaniards* began the Fight.

From on Board the *Barfleur* off *Syracuſa*, 6 *Auguſt O. S.* 1718.

The Sea-Fight between the *Britiſh* and *Spaniſh* Fleets.

EARLY in the Morning on the 30th of *July*, as we were ſtanding in for *Meſſina*, we ſaw two Scouts of the *Spaniſh* Fleet in the *Faro* very near us; and at the ſame time a *Felucca* (a ſmall Veſſel) coming off from the *Calabrian* Shore, aſſur'd us they ſaw from the Hills the *Spaniſh* Fleet lying by; upon which the Admiral ſtood through the *Faro* (or Streight) after the Scouts, judging they would lead us to their Fleet, which they did; for before Noon we had a fair Sight of all their Ships as they were drawing into a Line of Battle, their Fleet conſiſting of twenty ſix Men of War, great and ſmall, two Fire-ſhips, four Bomb-veſſels, ſeven Gallies, and ſeveral Ships with Stores and Proviſions. The Admiral ordered the *Kent*, *Superbe*, *Grafton*, and *Orford*, being the beſt Sailors in the Fleet, to make what Sail they could to come up with the *Spaniards*, and that the Ship which could get headmoſt and neareſt to them, ſhould carry the Lights uſually worn by the Admiral, that he might not loſe ſight of them in the Night, and he made what Sail he could with the reſt of the Fleet to keep up with them. It being little Wind, the *Spaniſh* Gallies tow'd their heavieſt Sailors all Night. The 31ſt in the Morning, as ſoon as it was Day, they finding us pretty near up with their Fleet, the Gallies and ſmaller Ships, with the Fire-ſhips, Bomb-veſſels, and Store-ſhips, ſeparated from the Admiral and bigger Ships, and ſtood in for the Shore; after whom the Admiral ſent Captain *Walton* in the *Canterbury*, with the *Argyle* and ſix Ships more. As thoſe Ships were coming up with them, one of the *Spaniards* fir'd a Broad-ſide at the *Argyle*: The Admiral ſeeing thoſe Ships engaged with the *Spaniſh*, which were making towards the Shore, ſent Orders to Captain *Walton* to rendezvous after the Action at *Syracuſa*, where the Viceroy for the King of *Sicily* was with a Garriſon. The like Orders he diſpatched to the Flags, and to as many Ships as were within his Reach, that Place being defended againſt the *Spaniards*, as being the moſt proper Port on that Coaſt for the Fleet to gather together again. We held on our Chaſe after the *Spaniſh* Admiral, with three of his Rear-Admirals, and the biggeſt Ships, which

ſtaid by their Flags till we came near them. The Captains of the *Kent*, *Superbe*, *Graſton*, and *Orford*, having Orders to make what Sail they could to place themſelves by the four headmoſt Ships, were the firſt that came up with them. The *Spaniards* began by firing their Stern-Chaſe at them, but they having Orders not to fire unleſs the *Spaniſh* Ships repeated their firing, made no Return at firſt; but the *Spaniards* firing again, the *Orford* attack'd the *Santo Roſa*, which ſome time after ſhe took. The St. *Charles* ſtruck next without much Oppoſition, and the *Kent* took Poſſeſſion of her. The *Graſton* attack'd the Prince of *Aſturia*, formerly called the *Cumberland*, in which was Rear-Admiral *Chacon*; but the *Breda* and *Captain* coming up, ſhe left that Ship for them to take, which they ſoon did, and ſtretched a Head after another ſixty Gun Ship, which was on her Starboard-Bow, while ſhe was engaging the Prince of *Aſturia*, and kept firing her Stern-Chace into the *Graſton*. About one o' Clock the *Kent* and *Superbe* engaged the *Spaniſh* Admiral, which with two Ships more fir'd on them, and made a running Fight till about three, when the *Kent* bearing down upon her, and under her Stern gave her a Broad-ſide, and went away to the Leeward of her; then the *Superbe* put for it, and laid the *Spaniſh* Admiral on board, falling on her Weather Quarter; but the *Spaniſh* Admiral ſhifting her Helm and avoiding her, the *Superbe* rang'd up under her Lee Quarter, on which ſhe ſtruck to her. At the ſame time the *Barfleur* being within Shot of the ſaid *Spaniſh* Admiral aſtern, inclining on her Weather Quarter, one of their Rear-Admirals and another ſixty Gun Ship which were to the Windward of the *Barfleur*, bore down and gave her their Broadſides, and clapped upon a Wind, ſtanding in for Land. The Admiral in the *Barfleur* ſtood after them till it was almoſt Night; but it being little Wind, and they galing from him out of reach, he left purſuing them, and ſtood away to the Fleet again, which he join'd two Hours after Night. The *Eſſex* took the *Juno*, the *Montague* and *Rupert* took the *Volante*. Vice-Admiral *Cornwal* follow'd the *Graſton* to ſupport her, but being very little Wind, and the Night coming on, the *Spaniards* galed away from the *Graſton*. Rear-Admiral *Delaval*, with the *Royal Oak*, chaſed two Ships that went away more Leewardly than the reſt, (one of them ſaid to be Rear-Admiral *Cammock*) but we not having ſeen them ſince, know not the Succeſs. The Ship that ſuffer'd moſt with us was the *Graſton*, the Captain of which, though he had not the Fortune to take any particular Ship, yet was engaged with ſeveral, behaved himſelf much like an Officer and a Seaman, and bid fair for ſtopping the way of thoſe four Ships that he purſued, who got away not through his Fault, but Failure of Wind, and his own Sails and Rigging were much ſhatter'd.

A Liſt of the *Spaniſh* Ships taken and deſtroy'd off Cape *Paſſaro*.

	Ships.	Guns.	Men.	Commanders.
1.	*The Royal Philip*	74	650	Vice-Admiral *Caſtagnetta.*
2.	*Prince of Aſturia*	70	550	Rear-Admiral *Chacon.*

Burnt and deſtroy'd.

	Ships.	Guns.	Men.	Commanders.
1.	*Eſperance*	46	300	*D. Juan Delfino & Blandina.*
2.	*Hermione*	44	300	*D. Rodrigo de Torres.*
3.	*Porcupine*	44	250	*A Frenchman.*
4	*Pearl*	30	300	*Don Gabriel Alderete.*

Burnt alſo two Fire-Ships, two Bomb-Veſſels, and one Sattee.

Another Ship of thirty or forty Guns was taken, and twelve eſcaped, beſides a Bomb-Veſſel and ſeven Gallies, of which the *Spaniſh* Fleet was compoſed.

THE *Engliſh* Fleet conſiſted of the *Barfleur*, in which was the Admiral, of ninety Guns and ſeven hundred and thirty Men, nine ſeventy Gun Ships, one eighty Gun Ship, ſeven ſixty Gun Ships, two fifty Gun Ships, and one forty Gun Ship; in all twenty one, beſides two Fire-Ships, four Bomb-Veſſels, an Hoſpital Ship, and a Store-Ship.

AFTER this Engagement the *Engliſh* Admiral ſailed to *Syracuſa*, the Place appointed for the Rendezvous, where he was joined by the reſt of the Fleet, and from thence he went from *Rhegio* into *Calabria*, leaving Admiral *Cornwall* with ten Men of War at *Syracuſa*, to convoy the Ships taken. In the mean time the *Germans* embark'd a thouſand Men at *Rhegio*, and threw them into the Caſtle of *Meſſina*, which could not however prevent its being taken, that Fortreſs ſurrendring to the Marquiſs *de Lede* the 29th of *September*, and the Garriſon was tranſported to *Rhegio*. The *Imperialiſts* and *Piemontois* ſtill kept Poſſeſſion of *Syracuſa* and *Melazzo*, waiting Reinforcements from *Italy* to enable them to act offenſively.

IMMEDIATELY after the Fight, a Captain of the *Engliſh* Squadron came in the Name of Admiral *Byng*, to make a Compliment of Excuſe to the Marquiſs *de Lede*, giving him to underſtand that the *Spaniards* had been the Aggreſſors, and that this Action ought not to be looked upon as a Rupture, becauſe the *Engliſh* did not take it as ſuch. To which it was anſwer'd, That *Spain* on the contrary would reckon it a formal Rupture, and would act againſt the *Engliſh* in an hoſtile Manner, and do them all the Damage imaginable, by giving Orders to make Reprizals, *&c.*

UPON the Arrival of the News of the Defeat of the *Spaniſh* Fleet at *London*, Mr. *Craggs*, Secretary of State, ſent the following Letter to the Marquiſs *de Monteleon*, the *Spaniſh* Ambaſſador here, dated *Auguſt* the 28th.

May it pleaſe Your Excellency,

HIS Majeſty hath commanded me to acquaint you, that he hath received certain Advice of the Defeat of the *Spaniſh* Fleet on the Coaſt of *Italy* by his Admiral Sir *George Byng*. Nothing could have moved his Majeſty to this Step but the ſtrict Regard he bears to Treaties, by which his Majeſty was obliged to preſerve the Peace and Neutrality of *Italy*. I am further commanded to aſſure your Excellency, *That this Proceeding would have been entirely diſagreeable to the Sentiments of his Majeſty, had not the King of* Spain *made it abſolutely neceſſary, by his rejecting all Offers of Accomodation, and committing Hoſtilities on the Dominion of a Prince in Peace with the whole World.* That his Majeſty is firmly determin'd by the Bleſſing of God, and the Aſſiſtance of his Allies, to eſtabliſh the Peace of *Europe* on ſuch a Footing, as to put it out of the Power of any one Prince or Potentate to diſturb it hereafter.

Bur

Capri.

But now to leave *Sicily*, the next Iſland is *Capri*, or *Caprea*, at the Entrance of *Naples* Bay, about twenty Miles Southweſtward of *Naples*; it is remarkable for being the Retirement of *Auguſtus* for ſome time, and the Reſidence of *Tiberius* for ſeveral Years. It is about four Miles in Length, and one in Breadth.

Ischia

The next Iſland worth our Notice is *Ilva*, the antient *Athalia*, lying off of the Coaſt of *Tuſcany*. The chief Towns are, 1. *Porto Longone*, a good Harbour, in Poſſeſſion of the King of *Spain*. 2. *Porto Feraio*, on the North Side of the Iſland, where is alſo a good Harbour, ſubject to the Duke of *Tuſcany*.

Charybdis.

The ſo much talk'd of Dangers which go under the Names of *Scylla* and *Charybdis*, and by the Poets feign'd to be in the Vare of *Meſſina*, between the Shores of *Calabria* and *Sicily*, are now by the frequent Experience of the beſt Mariners, found to be nothing at all; ſo much has theſe idle Poetical Fictions prevail'd, tho' originally from a Heathen Foundation; yet not only to take place, but even to be retain'd in our Chriſtian Schools.

Sardinia

Sardinia is an Iſland lying to the Southward of *Corſica*, and conſequently of the Continent of *Genoa*; it is ſeparated from *Italy* by the *Tuſcan* Sea, and lies about forty Leagues North Weſt of *Sicily*; it is about an hundred and forty Miles in Length and ſixty in Breadth. It is a fruitful Iſland where it is well cultivated, producing abundance of Corn, Wine, and Oil; but much of it is loſt for Want of Induſtry, the Vulgar chuſing rather to live upon the Spontaneous Product of the Earth than to be at the Pains to improve it. The Capital City is *Cagliary*, or *Callary*; it is ſituated on the Declivity of a Hill, in the South Part of the Iſland. It is a tolerable Harbour, but of no great Strength, though ſome call it a ſtrong Citadel.

Corſica.

The Iſland of *Corſica* lies in the *Tuſcan* Sea, a little to the Northward of *Sardinia*; the In-land Part is mountainous, but the Plains afforn Plenty of Corn, as the Hills do of Wine, Oil, and Fruit. They have Plenty of black Cattle and Sheep, and ſome ſprightly Horſes. Here are Mines of Iron, and Allom; as alſo ſome Saltpits, *&c.* but they are reckon'd a brutiſh, pilfering People.

Baſtia.

Baſtia the Capital, ſtands on a Bay, at the North Eaſt Part of the Iſland; it is the Seat of the Viceroy, and a good Harbour.

Malta.

The Iſland of *Malta* lies on the South Side of *Sicily*; this is the Iſland of *Melita* mention'd in Scripture, where the Viper faſtned upon St. *Paul*'s Hand. It is about ſixty Miles South Weſtward from Cape *Paſſaro*, which is the South Eaſt Point of the Iſland of *Sicily*. It is about twenty Miles in Length and twelve in Breadth. It is a white Rock cover'd with a thin Cruſt of Earth, which produces ſome Corn and Grapes; but they produce no Wine, but their Cotton and other Plants produce them the moſt Profit; and rather than be at the trouble of cultivating their Land for Corn, they chuſe to ſupply themſelves from *Sicily*; but what Corn they have is generally Barley and Buck-wheat. They have alſo Plenty of Cummin-Seed, Anniſeed, and Cotton; and they have Lemons and Oranges all the Year round: Roſes, Thyme, and Fennel, grow wild in every Part of the Iſland, and their Honey is deem'd the beſt in *Europe*; but there is very little Wood, except Fruit-trees, upon the Iſland.

The chief Town is *Malta*, which ſtands upon ſeveral Peninſulaes, or Iſlands ſeparated by the Sea, and diſtinguiſh'd by the Names of the *Cité*, the *Bourg*, and the *Iſle*, which together form the City; and the Sea lying between them, forms a Harbour, or Harbours, capable of receiving a Fleet of Ships. Their Water (except what Rain Water they ſave) is brought four Miles by an Aqueduct.

The firſt Inhabitants of *Malta*, were the *Carthaginians* and the *Phenicians*, but it ſoon fell into the Hands of the *Romans*; and *Charles* V. gave it to the Knights of St. *John* of *Jeruſalem*, now call'd the Knights of *Malta*, call'd by ſome, Hoſpitallers, whoſe Riſe was from hence. Some time before *Godfrey* of *Bologn*'s Expedition to the *Holy Land*, ſome *Neopolitan* Merchants, who traded in the *Levant*, obtain'd Leave of the *Caliph* of *Egypt*, to build a Houſe there for the Entertainment of thoſe of their Nation, who came in Pilgrimage to *Jeruſalem*, for which they agreed to pay an Annual Tribute; after which, they built two Churches near their Houſe, and entertain'd the Pilgrims with very great Charity. At laſt, they founded a Church in Honour to St. *John Baptiſt*, and an Hoſpital for ſick People; and from thence they were call'd Hoſpitallers. *Godfrey* of *Bologn* having taken *Jeruſalem* about the Year 1099, they were diſtinguiſh'd by black Habits, and a Croſs with eight Points; and beſides what Vows they had already made, they took another to defend Pilgrims; and thus their Order became Military, into which, ſeveral Sons of good Rank and Figure enter; and inſtead of Hoſpitallers, take the Title of *Knights Hoſpitallers*.

After the taking of *Jeruſalem*, theſe retir'd to *Margalt*, and from thence to *Acre* in *Paleſtine*, till the Year 1290, and then they fix'd in *Cyprus*, where they remain'd till the Year 1310; at which time they took the Iſland of *Rhodes*; thoſe of this Order were thence call'd Knights of *Rhodes*; but they were diſpoſſeſs'd of this Iſland in the Year 1522, and retir'd to *Candia*, and from thence to *Sicily*; and in the Year 1530, the Emperor *Charles* V. gave them this Iſland of *Malta* for a Settlement, as looking upon it as a good Frontier againſt the *Turks*; and upon this Settlement it is, that they are to this Day call'd the Knights of *Malta*.

It may be obſerv'd, that in approaching *Italy* in the Courſe of this Hiſtory, I have omitted *Switzerland*, which I did on purpoſe, as intending to take it in my way from *Italy* to *France*, *Spain*, and the finiſhing of *Europe*, with our own *Britiſh* Dominions; and having now finiſh'd *Italy*, and the Iſlands belonging to it, call'd the *Italian* Iſlands, I ſhall proceed to *Switzerland* accordingly.

A DESCRIPTION OF SWITZERLAND.

CHAP. I.

Of the Situation and Extent of Switzerland; *of its Air and Climate; its Mountains, Rivers, Lakes, Springs and Woods; with the Nature and Product of the Soil, and of their Plants and Animals.*

SWITZERLAND, antiently *Helvetia*, if we include the Country of the *Griſons* and their other Allies, is bounded on the North by Part of *Alſace*, the *Black Foreſt*, and Part of the Circle of *Suabia*; and on the Eaſt, by *Tyrol*; by the Dutchies of *Savoy* and *Milan* on the South; and by the *French* Territories of *Burgundy* and *Franche Comté* on the Weſt. It extends about two hundred and ſixty Miles from Eaſt to Weſt, and above an hundred from North to South.

THE Middle of the Country lies in forty ſix, and forty ſeven Degrees of North Latitude; but their Mountains, which are ſaid by ſome Geographers to be the higheſt in *Europe*, are a great Part of the Year cover'd with Snow, which occaſions a ſharper Air than is generally found in Latitudes more remote from the Equinoctial. The Diſtempers they chiefly labour under, are Wens, and ſwell'd Throats, which is imputed to their drinking ſo much Snow-Water that deſcends from the Mountains, that being the chief of the Water with which they are ſupply'd; for Rivers are ſo ſcarce, that inſtead of them, their Cantons are commonly bounded, or ſeparated, by Ridges of Mountains; but the greateſt Part of the Canton of *Bern* is a pleaſant, fruitful Country, and produces Plenty of Corn and other Grain; but it requires a great deal of Labour to produce a good Crop.

BUT although there are but a few large Rivers in this Country, yet ſeveral famous Rivers riſe in it, and deſcend from thence, as the *Rhine*, the *Rhone*, the *Danube*, the *Adda*, the *Ticino*, the *Lintz*, the *Aar*, the *Ruſs*, and the *Jun*, with other leſſer Streams; and hence it is concluded, not without good Reaſon, to be the higheſt Land in *Europe*.

THERE are alſo a great Number of noble Lakes, ſome of which, may for their Largeneſs be call'd Seas, particularly thoſe of *Conſtance*, and *Geneva*, being near ſixty Miles in Length, and twelve in Breadth; and thoſe of *Neufchattel*, *Zurick*, and *Lucern*; and it is remarkable, that there is generally a Lake upon every Mountain. They have abundance of fine Woods, and whole Foreſts of Pine, and Fir-trees, and ſome Oaks, and Elms, but Fir is their chief Timber uſed in Building. Lakes

THE Mountains afford good Paſture, in which they feed vaſt Herds of Cattle. They have alſo arable Land, but the Difficulty of raiſing a Crop, makes Corn very ſcarce, by Reaſon of ſo much Rain and Tempeſt, by which they ſometimes entirely loſe their Harveſt; for which Reaſon, when they happen to have a plentiful Year, they ſtore up Magazines of Corn to prevent a Dearth.

THIS Country produces Wine of ſeveral Sorts, but I do not find that it excells in any; and their Vines very often undergo the Fate of their Corn, as being deſtroy'd by bad Weather. Here are good Cattle of all Kinds, inſomuch that they ſupply their Neighbours with great Plenty. They have Fowl, Veniſon, Deer, wild Hogs, and Goats plenty; the laſt of which, is reckon'd Veniſon; and of their Skins, our fine Shammy Leather is made. Their Lakes abound with excellent Fiſh, particularly Trout, ſome of ſixty Pounds weight or upwards, and in ſuch Plenty, that they ſend great Quantities abroad.

CHAP. II.

Treats of the Provinces or Cantons of Switzerland, *and of their chief Towns and Buildings; and alſo of their Perſons, Habits,* Genius, *and Temper.*

IN *Switzerland* are three Diviſions, *viz.* 1. The thirteen Cantons, or *Switzerland proper*. 2. The Subjects of *Switzerland*, or the conquer'd Countries. And, 3. The Allies, reckon'd alſo by ſome, a Part of *Switzerland*.

THE thirteen Cantons are, 1. *Zurich*. 2. *Berne*. 3. *Lucern*. 4. *Uri*. 5. *Schwitz*. 6. *Underwald*. 7. *Zug*. 8. *Glaris*. 9. *Bazil*. 10. *Friburg*. 11. *Solothurn*. 12. *Schaffhauſen*. 13. *Appenzel*. And of theſe, the Proteſtant Cantons are, *Zurich*, *Bern*, *Bazil*, and *Schaffhauſen*, with the greater Part of *Glaris* and *Appenzel*; all the reſt are Roman Catholicks.

Zurich. THE Canton of *Zurich* is bounded by *Schaffhauſen* on the N. and by *Appenzel* on the E. by *Zug* and *Schwitz*, on the S. and by *Bern* and *Lucern* on the Weſt. The People here apply much to Buſineſs, having eſtabliſh'd ſeveral good Manufactures. The chief of this Canton, beſides other eminent Places and Towns of Note, is,

Chief Town. *Zurich*, ſituate at the North End of the Lake of *Zurich*, about ſixteen Miles South of the Frontiers of *Germany*. The River *Limagus* runs thro' it, but the Communication is maintain'd by three Bridges. It is a ſmall, but populous Town; but the Houſes are generally built of Clay and Timber, and the Streets narrow. It is an antient City, and ſuppos'd to have been the Capital of the antient *Tigurini*, one of the four *Helvetian* People; it was enlarg'd by *Charlemaigne*, who built the great Church there, in which his Statue now remains. The Lake of *Zurich* upon which it ſtands, is four and twenty Miles long, and three broad; the Water is green but not ſalt. The chief Manufacture of *Zurich*, is Crape. This Lake having a Communication with the *Rhine*, gives them a great Opportunity of exporting and importing.

Bern THE Canton of *Bern*, has *Bazil* and *Solothurn* on the North; and *Lucern*, *Underwald*, and *Soleure* on the Eaſt; the Lake of *Geneva* on the South, and *Neufchatel* and *Burgundy* on the Weſt. It is about an hundred and twenty Miles in Length, and half as much in Breadth. It is ſuppoſed not only to make near a third Part of *Switzerland*, but to be the moſt fruitful Canton in it, as well as the moſt powerful.

Chief Town. THE chief Town is *Bern*; it ſtands on a Sort of a Peninſula, being almoſt encompaſs'd by the River *Idda*; it is about forty Miles South of *Bazil*, and as much Weſt of *Lucern*. It ſtands on a riſing Ground, moſt of the Houſes are of Free-ſtone; it is about a Mile in Length, and conſiſts chiefly of three broad Streets, through which run as many fine Rivulets. The Town is defended by a Wall, and other Fortifications after the modern Way.

Lucern. THE Canton of *Lucern* lies between *Soleure* on the North, and *Bern* on the South; it is about fifty Miles long, and thirty broad. It is one of the chief Roman Catholick Cantons. Chief Town is,

Chief Town. *Lucern*, ſituate upon a Lake of the ſame Name; it is about twenty Miles South Weſt of *Zurich*, and forty Eaſt of *Bern*; it is a neat Town with a ſpacious Market-place. Here the Pope's Nuncio, and the *Spaniſh* Ambaſſador, uſually take up their Reſidence. The adjacent Lake is about twenty Miles in Length, and ſeven or eight in Breadth, and hath a Communication with the *Rhine*, by the River *Ruſs*, which is a conſiderable Advantage to it in the way of Trade.

Uri. THE Canton of *Uri* is but inconſiderable, either for Trade, Product, or Manufacture. We ſhall therefore proceed to

Switz Canton. THE *Switz* Canton, has *Zurich* and *Zug* on the North; the Canton of *Glaris* on the Eaſt and South; and *Lucern* and *Underwald* on the Weſt; but as there is nothing remarkable in this, or in the Cantons of *Underwald*, *Zug*, or *Glaris*, I ſhall paſs them by, and proceed to the other Cantons; and firſt of

Bazil. *Bazil*; it is bounded on the North and Eaſt by *Suabia*, and by *Solothurn* on the South, and by Part of *Alſatia* on the Weſt; it is about twenty Miles long, and eighteen broad: This is a rich Canton, they apply themſelves wholly to Trade, and thereby enrich themſelves. The chief Town is,

Chief Town. *Bazil*; it is the moſt beautiful City in *Switzerland*; it ſtands on the River *Rhine*, about ſixty Miles to the Southward of *Strasburgh*, and three Miles South of the Fortreſs of *Huningen*; it is in Latititude 47 Degrees 40 Minutes. The *Rhine* runs through the Town, but the Communication between the Parts of the Town on each Side of the *Rhine*, is maintain'd by a Bridge of Stone of fourteen Arches. The Town is large, the Streets wide and clean, and their Squares ſpacious, adorn'd with three hundred Fountains. It a flouriſhing Univerſity, with proper Profeſſors in Law, Phyſick, and Divinity. The famous *Eraſmus* ſpent the latter Part of his Life here, and dy'd in the Year 1536. in the ſeventy firſt Year of his Age. The Inhabitants of this Place aſſume to themſelves the Invention of making Paper, and tell us that Printing was introduc'd among them in the Year 1478. This is as flouriſhing a Place for Trade as any in *Switzerland*, it lying near the Frontiers of *Germany* and *France*; and by that means has the Opportunity of the *Rhine* to facilitate their Commerce.

Friburg THE Canton of *Friburg* is almoſt ſurrounded by that of *Bern*; it is about twenty five Miles in Length, and twenty in Breadth. The chief Town is *Friburg*, ſituate on a Hill, almoſt ſurrounded by the River *Sana*; it is ſurrounded by a Wall, and defended by other Fortifications.

THE Canton of *Schaffhauſen*, is bounded by *Suabia* in *Germany* on the Eaſt, Weſt, and North, and by *Zurich* on the South; it is about twenty Miles long, and twelve Miles broad. The chief Town is *Schaffhauſen*, the fineſt Town in *Switzerland*, except *Basil*; it ſtands on the *Rhine*, about twenty five Miles North of *Zurich*, and as many to the Weſtward of *Conſtance*. The Streets are broad, and the Houſes built of Stone, and generally painted on the Outſide, as is the Cuſtom in *Switzerland*. All Veſſels that come here are obliged to unload, by reaſon of the neighbouring

T

ing Cataracts of the *Rhine*, and this creates a great deal of Business.

Appenzel. LASTLY, the Canton of *Appenzel*; it is a poor, as well as a small Canton, of so little Business, and such hard Living, that the Inhabitants frequently endeavour to get into foreign Service; which I suppose has occasion'd that Report, that the *Switzers* will fight for Money without any Regard to whose part they take.

Subjects of Switzerland. THE *Subjects of Switzerland*, are those Parts of the Country belonging to them all, of which is first, the County of *Baden*, on the South East Side of *Rhine*. The Capital City is *Baden*, so call'd, from the Hot Baths there. It lies about fourteen Miles North West of *Zurich*, and six to the Southward of the *Rhine*. It is one of the antientest Towns in *Switzerland*, and is still the Place of the General Diet. It is often call'd *Upper Baden*, to distinguish it from *Lower Baden* in *Germany*.

Turgow. THE County of *Turgow* lies on the Southwest Side of the Lake of *Constance*; the Capital is *Frawenfeld*, on the River *Mark*, but a Place of no great Note at present.

As for the other Counties and Bailiages, they are scarce worth our Notice, as having been so confused and mixt in their Wars with one another, that they who one Day were under one Government, became almost the next Day under separate Governments.

As to the Persons of the *Switzers*, they are Persons tall and strong, as living in a cold, mountainous and Country, where hunting upon the high Rocks and Persons Precipices is their chief Diversion. They are of a hardy Complexion, and mostly wear their own Hair, and they that do not wear long Beards, generally affect Whiskers.

THE Women, especially those who border upon *France*, affect the *French* Dress and Language; and those who border upon *Germany*, equally affect that Country's Dress and Language; but both as gay as their Circumstances will admit of.

THE *Switzers* are generally applauded for their Valour, but they are generally charg'd with letting out their Troops for Hire; by which Means the Son is engag'd against the Father, and kill one another in Sport, or as their Business, without Regard to Cause, Kindred, or Religion.

CHAP. III.

An Abstract of the antient and modern History of Switzerland.

THE first Account that we have of the *Helvetians* or *Switzers* being form'd into a Nation, we have from *Julius Cæsar*, who tells us, that this People made an Incursion into *Burgundy* during his Government of *Gaul*, with a Design to transplant themselves into that agreeable Country; and to take away from their People all Thoughts or Desires of returning to their antient Situation, they burnt no less than twelve great Cities, and four hundred Villages, and then began their March with their Families, amounting to about four hundred thousand Souls, whereof above an hundred thousand were able to bear Arms. They first thought to make an Attempt upon *Savoy*; but not daring to cross the *Rhone* in the Face of his Army, they alter'd their March, and enter'd the *Franche Comte*; but he engaging them, and cutting off many of them, the rest return'd home, and submitted to the *Roman* Power; and this Place was annex'd to *Gallia Celtica*.

AFTER this, they remain'd subject to the *Romans*, till the Destruction of that Empire by the Northern Nations; and new Kingdoms or States were erected out of its Ruins. *Switzerland* was comprehended in *Burgundy* about the Beginning of the fifth Century; but this Kingdom not lasting above an hundred Years, *Switzerland* was united to the Crown of *France*, and continued so till the Beginning of the ninth Century. About the Year 1032, *Radolph* III. and last King of *Burgundy*, dying without Issue, transferr'd his Kingdom to the Emperor *Conrad* II. whose Successors enjoy'd it near two hundred Years; but it being neglected by the Emperors, it was divided into several petty Sovereignties.

IN the thirteenth Century, the Counts of *Harpsburg*, from whom the House of *Austria* is descended, began to take the Government of this People upon them, particularly of their Cities, on their voluntary Submission; for their Nobility used them so barbarously, that they were obliged to implore the Assistance of some powerful, neighbouring Prince; and agreed, that *Radolph* should send Governors among them, with a Power to administer Justice in criminal Cases; but *Radolph* having his Hands full, could not sufficiently relieve them; and they resolving not to bear the Tyranny of the Nobility, broke out into open Rebellion, demolish'd the Castles of the Lords, and after twelve Years War, drove several of them out of the Country.

Radolph being now Emperor, the Nobility apply'd to him for Redress against the rebellious *Switzers*; but *Radolph* rather sided with the People, and got their Love by his great Mildness and Goodness to them. But upon his Death, his Son *Albert*, who succeeded him, endeavour'd to be absolute, which he attempted first by Persuasions only; but that failing, he gave Orders to his Governors, &c. to reduce them to his Obedience, by corrupting their leading Men; or if that fail'd, to do it by Force of Arms; which last they put in Execution. Whereupon the People sent to the Emperor to sue for Redress; but he return'd only Threats and Vengeance, in Case they did not conform to an absolute Submission to his arbitrary Demands; and accordingly at their Return home, they found their Governors using them with the utmost Tyranny; till the People wearied out, form'd a Conspiracy against the Goverment, which prov'd fatal to the Sovereign. It was form'd by three Persons at first in the following Manner.

THE three having first enter'd into a strict Friendship, each of them engag'd four more, and these twelve became the chief Managers, and met upon that Account at *Gruth*, where they laid a Scheme for a general Insurrection; and binding themselves to the utmost Secrety, they fix'd the first of *January* 1308, for their rising; but before the appointed Day came, they met with a fresh Provocation, which had like to have brought their Design into Execution sooner than they intended; for the Governor of the Canton of *Ury*, had order'd his Cap to be set upon a Post in the Market place of *Altorf*, the Capital of *Ury*, and required every Man that pass'd by, to pull off his Hat to

it.

it upon Pain of Death; which was mostly comply'd with, till *William Tell*, a bold Fellow, and one of the Conspirators, made it his Business to pass frequently by without paying any Respect to the Cap; whereupon he was brought before the Governor, who commanded him to set an Apple upon his Son's Head, and shoot at it with an Arrow; and that if he miss'd it, he should be hang'd: The Father, rather than run the Hazard of being accessary to his Son's Death, desired they would take away his own Life without further Ceremony; but the Governor would not condescend to that Proposal, declaring, that if he refused to shoot at the Apple immediately, he would hang up his Son before his Face and himself afterwards; whereupon poor *Tell* offer'd to perform the Execution in the Market-place, not so much with a Design of being publickly seen, as in Hopes that his fellow Conspirators would assemble and rescue him from the Experiment; but nothing of this happening, *Tell* took two Arrows out of his Quiver, and charging his Bow with one of them, had the good Luck to hit the Apple, and strike it off his Son's Head without doing any Damage; whereupon a general Acclamation was heard among the People; whereat the Governor being exasperated, ask'd *Tell* what was the Reason of his taking two Arrows out of his Quiver, with a Promise, that whatever his Design was, he should be pardon'd if he would tell the Truth: Whereupon *Tell*, boldly told the Governor, that if he had kill'd his Son with the first Arrow, the second was intended for him; for which bold Reply, the Governor, though he saved his Life according to his Promise, yet he order'd him to be laid in Irons, and transported to the Castle of *Cassenach*, on the Lake *Lucern*, the Governor himself going along with them to prevent his Escape, and see the Sentence put in Execution. But when they came about the Middle of the Lake, a violent Storm arose which endanger'd all their Lives; and *Tell* being the best Pilot, they knock'd off his Irons and gave him the Charge of the Vessel; whereupon he steer'd into smooth Water under the Shore, and took an Opportunity to jump ashore and make his Escape; whereupon the Governor steer'd for the next Town call'd *Brunen*, and propos'd to go to *Cassenach* by Land; of which *Tell* having Notice, he planted himself privately in a Wood, by the Side of a hollow Way, by which he knew the Governor must pass, and when he came, he shot him through the Heart with an Arrow and made off; and in Memory of this noted Escape, there was one Chapel built where *Tell* jump'd a-shore, and another where he kill'd the Governor; both which, or the Remains of them, are still to be seen.

A Conspiracy was form'd, and the Day appointed for its being put in Execution was *Jan.* 1. 1308. when they were prepared for a general Insurrection. Some of the most resolute of them resorted to the Castles, where the Commanders of the Imperial Troops resided under Pretence of carrying the usual Presents; but instead of that, having Arms conceal'd under their Cloaths, they fell upon the Guards, enter'd the Gates, and reduc'd every Fortress they attempted. The Governor of *Landenburg* and his Forces, fled without any Resistance, but were afterwards made Prisoners by the Country People, and compel'd to promise upon Oath, never to return into the Country again; and thereupon they gave them Liberty to retire where they thought fit. And thus was the Foundation of the *Helvetick* Liberty laid by three Men, who had neither Riches nor Parentage to boast of equal to such an Undertaking.

The Emperor *Albert*, hearing of the Defection, assembled an Army to have reduc'd them to Obedience; but being kill'd soon after he had pass'd the River *Russ*, these Cantons took the Opportunity of that Confusion of the Empire to establish themselves, till about seven Years afterwards; when *Leopold*, the Son of *Albert*, march'd into the Canton of *Switz* with twenty thousand Men, threatening utter Destruction to the Confederated Provinces. The *Switzers* made little Resistance, till the *Austrian* Army was advanc'd into a narrow Valley between two Mountains, near a Place call'd *Mortgarten*; where rolling great Stones down the Hill, threw all the *Austrians* into Confusion, and attacking them at the same time in the Front with fifteen hundred Men, they obtain'd a compleat Victory, and drove them entirely out of the Country.

Upon this Victory, the three *Switz* Cantons enter'd into a perpetual League, into which the Canton of *Lucern* came in in the Year 1332, and *Zurich* in the Year 1351. and the same Year *Glaris* came in; and in the following Year 1352, *Zug* and *Bern* came in: These continued in Confederacy above an hundred and twenty Years, and went by the Name of the *Eight old Cantons*; and in the Year 1481, *Friburg* came in, as did *Basil* and *Schaffhausen* in 1501, and *Appenzel* in the Year 1513, having purchas'd their Liberty of the Abbot of St. *Gall* their then Sovereign.

CHAP. IV.

Of the Government of the Switzers.

THE General Diet or *Helvetick* Body, consists of two Deputies; besides which, the Abbot of St. *Gall*, and the Cities of St. *Gall* and *Bienne*, send Deputies as Allies; and a General Diet is usually held at *Baden* annually on the Feast of St. *John Baptist*, and holds only a Month. The first Deputy of the Canton of *Zurich* presides in these Diets, and proposes Matters to be debated, and collects the Votes, and performs all other Offices proper for a President of an Assembly. The Canton of *Zurich* hath also the Power of convoking Diets by circular Letters, expressing the Reasons for calling them; and the Deputies of this Canton also draw up the Result of their Deliberations at the Conclusion of the Diet, which are sent to every Canton; and these are also the Speakers, when they compliment, or treat with a foreign Minister.

Besides those general Diets, the Differences in Religion have since the Reformation, occasion'd particular Diets; as those of the Protestants, held at *Arrow*, and of the Roman Catholicks at *Lucern*; these are summon'd whenever the respective Parties please; but the thirteen united Cantons do not make one Commonwealth or Republick; but are so many independant States, though strictly ally'd for their mutual Defence.

The

The Government in ſome of thoſe Cantons is *Ariſtocratical*, and in ſome *Democratical*; of the former are the Cantons of *Zurich*, *Bern*, *Lucern*, *Bazil*, *Friburg*, *Soleure*, and *Schaffhauſen*; and the reſt are *Democratical*: Each of the firſt Kind have one City, with very ſmall Territories belonging to it, and of Conſequence the Government lodgeth in the Citizens only; but the *Democratical* Cantons have no Cities, but are divided into Communities.

The Canton of Bern

In the Canton of *Bern*, the Legiſlative Power is lodg'd in the great Council, conſiſting of two hundred and ninety nine Perſons; but there ſeldom are above two hundred at a time, the reſt being abſent upon other Avocations; ſo that they are generally ſtil'd, *The Council of two hundred*; and out of them the Senate is choſen, which conſiſts of twenty ſeven Members. The Senate has the executive Power, and meet every Day except Sundays; but the great Council aſſemble but twice a Week except upon extraordinary Occaſions, as about Peace, War, Alliances, &c.

The great Officers of State in this Republick are, The two Avoyers, whoſe Employments are for Life, but they exerciſe them by Turns annually; and he whoſe Turn it is for that Year, is call'd the *Reigning Avoyer*; he preſides in both Councils, propoſes Matters to be debated, keeps the Seals, &c. and the other Avoyer takes place only as firſt Senator for the Year that he is not the Reigning Avoyer; but when that Year is expired, the reigning one reſigns, and the other reſumes his Place and Authority.

Lucern.

The Government in *Lucern*, *Friburg*, and *Soleure*, differs little from that of *Bern*, only the great Council of *Lucern* conſiſts of but an hundred Members, and the Senate of thirty five.

Leſſer Cantons.

As to the Government of the leſſer Cantons of *Switz*, *Underwald*, *Uri*, *Zug*, *Glaris*, and *Appenzel*, it is *Democratical*, the Supreme or Legiſlative Power being lodg'd in Perſons choſe by, and out of, the common People, every Diſtrict a Deputy. They aſſemble, and form a ſtanding Council of the Canton; but ſtill, when Matters in Debate are of great Importance, every Male above ſixteen (the Servant as well as the Maſter) has an equal Share by voting. Theſe Aſſemblies meet once or twice a Year to chuſe Magiſtrates and Repreſentatives for the General Diet.

The firſt Officer in theſe Cantons is call'd *Land-Aman*, who is choſen in full Aſſembly, and their Conſent is expreſs'd by holding up their Hands; he is Preſident both of their ſtanding Council and General Aſſemblies, and hath the chief Direction in publick Affairs, but with the Advice of the Council. The ſecond Officer is the *Stat-Halter*, who is Deputy to the *Land-Aman*, and acts in his Abſence. I ſhall conclude this Chapter with Mr. *Addiſon*'s Remark upon the Poverty of this Country; [*Addiſon's Travels pag.* 384.] who having taken Notice of their penurious Condition, adds,

"It is no Wonder therefore, that the poor "Commonwealth of *Switzerland*, endeavour to "ſuppreſs every thing that may introduce Va"nity and Luxury; that they prohibit Gaming, "Balls, and all Extravagancies of Dreſs; and "that their Magiſtrates in their publick Aſſem"blies, appear in the plaineſt Garb imaginable, "to ſet an Example to the reſt: But Perſons of "different Qualities are diſtinguiſh'd by the "Shape or Faſhion of their Ornaments more "than by the Value of them; for they take Care "to have ſuch as may be purchaſs'd at a mode"rate Price, becauſe they cannot afford dearer: "As for Example, a great Officer is known not "by his Gold Lace, but by the Depth of his "Hat Crown; but if they happen to have a "rich Suit, it commonly goes from Father to "Son, and ſo through three or four Generations, "inſomuch, that it is common to ſee a Man of "Subſtance wear the Breeches or Doublet of his "Great Grand-father; and the common Wear "of the Peaſants, is a coarſe Sort of Canvas, the "Manufacture of the Country."

CHAP. V.

Of the Revenues and Forces of the Switzers; *as alſo of their Trade, Manufacture, and Religion.*

It is not to be expected that a Place of ſuch poor Product and mean Trade, can have large publick Revenues, if compared with other Kingdoms and States; but as they ſuit their Expences to their Income, they may lay by ſomething every Year. The little popular Cantons have ſcarce any publick Revenues, but tax themſelves voluntarily in proportion as their Affairs require; and if they happen to have a Fund, or Stock in the Treaſury, that their preſent Circumſtances do not require to be diſburſs'd upon publick Affairs, they will agree to divide it among the Communities from whom it was collected. But thoſe Commonwealths in *Switzerland* that may be deem'd rich, are thoſe that have Cities for their Capitals, and of thoſe, the Proteſtant Cantons are the richeſt. The two wealthieſt Cantons, are thoſe of *Zurich* and *Bern*, the former of which is the richer in proportion to its Extent; but the latter is the larger by ſo much, that it far exceeds the Revenues of *Zurich*. The two ſmall Cantons of *Bazil* and *Schaffhauſen*, are more wealthy than any of the three Catholick Cantons.

These Republicks have always thought ſtanding Forces inconſiſtent with their Welfare and Safety, but they have a well regulated Militia, and with theſe they have maintain'd their Liberty againſt all the Attempts of the Houſe of *Auſtria*, and alſo of *France*; and during the long Wars they had with theſe Powers, they always found them to be good Soldiers to their Coſt. The Cantons have now been above two hundred Years at Peace, except among themſelves on Account of Religion; the higheſt Diſputes upon that Subject, were in the Years 1531, 1656, and 1712. in the two firſt of which, the Catholick Cantons gain'd Ground of the Proteſtants; but in the laſt, *viz.* 1712, which laſted but four Months, the Proteſtants broke the Power of the Roman Catholick Cantons; and there is no Reaſon to believe that the *Switzers* are more indolent now than formerly, only their new rais'd Forces have not been exerciſ'd in conſtant Wars as their

An-

Anceſtors have been; and therefore require ſome time to be diſciplin'd.

In order to have a powerful Militia, every Male from ſixteen to ſixty is enroll'd; and about one third of them regimented, under the Title of Fuzileers and Electionaries; and as theſe fail, they are recruited out of the other two thirds. The Fuzileers are all ſingle Men of a good Size, and in the Flower of their Age, always ready to march at an Hour's Warning. The Electionaries are married Men, but of a proper Age and Size for Service. Every Regiment of Fuzileers conſiſts of ten Companies, of an hundred and ten Men each; and every Regiment of Electionaries contains twelve Companies, every Company conſiſting of two hundred and eighteen Men Officers included. Every Soldier provides his own Arms, but they are all of one Make and Faſhion, there being a Commiſſioner at Arms to take Care that they all be conformable to the Standard or Patern they are to made by. Their Cloathing is of Grey Cloth, but fac'd up with different Colours for Diſtinction. Their Horſe being of little Uſe to them in this mountainous Country, they have generally converted them into Dragoons, of which there are ten Troops in every Regiment of ſixty Men each, and the Soldiers provide Horſes as well as Arms for themſelves.

In the Magazine of *Bern*, there is always an entire new Set of Arms for all the Militia of the Canton, beſides thoſe in common Uſe. The Canton of *Bern* has alſo a very fine Train of Artillery in their Capital ready to march upon the ſhorteſt Warning. They have alſo a great Number of Cannon in the Caſtles where their Bailiffs reſide, with proper Cannoneers, Bombardiers, *&c.*

Trade. The *Switzers* export very little Merchandize to foreign Countries, except Horſes, Black Cattle, Butter, and Cheeſe. The *French* take off great Numbers of their Horſe to mount their Cavalry in time of War, inſomuch, that a credible Author informs us, that he has known ten thouſand Horſes bought up by the *French* in this Country in a Years time for the Uſe of their Army; and the King of *Sardinia* in the late Wars, had *Switz* Horſe for his Dragoons and Artillery; they alſo ſell great Numbers of Horſe into the *Milaneſe*, and other Parts of *Lombardy*, for their Coaches; they diſpoſe of great Numbers of their black Cattle in *Italy*, and their Cheeſe to many Parts of *Europe*. The chief Towns for Manufacture are *Zurich*, *Bazil*, *Schaffhauſen*, and St. *Gall*. *Zurich* is famous for Crape, St. *Gall* for Linnen, but inferior to that of *Holland*; but ſold at a cheap Rate in Proportion. *Bazil* and *Schafhauſen* lie very commodiouſly for a Trade with *France*, *Italy* and *Germany*. As for Corn, they have not enough for their own Conſumption, but import from *Suabia* and the *Milaneſe*. Their Salt they have from *Tyrol* and *Bavaria*. They have ſcarce any Manufacture of Silk or Wool. What they wear of this kind they have from abroad, except a very coarſe Sort of a woollen Stuff. They are People of ſo little Ingenuity, that their better Sort of People are forc'd to ſend for their Utenſils from abroad. From the whole we may gather, that their Importations are more than their Exportations, which is a Sign of a poor Country. One Teſtimony of which is, that Silver and Gold in Specie is ſeldom ſeen uſed there in publick Commerce; and therefore to adapt their Expences to the Circumſtances of their Country, they have prohibited the wearing of Gold, Silver, Jewels, Silks, and Lace, or whatſoever is more chargeable than uſeful in Dreſs; only the Women that can afford it, are tolerated in wearing Silks at Weddings and Feſtivals.

It has been obſerv'd, that both the Roman Catholick and the Proteſtant Religion are profeſs'd here; and I may add, that both Parties are exceeding zealous in their Way; the Clergy making it their Buſineſs to aggravate one Party againſt the other's Religion. The Proteſtant Cantons are rigid *Calviniſts*; ſeveral Battles were fought on this Occaſion, in one of which *Zuinglius*, one of the Fathers of the Reformation, was kill'd. In the Year 1566, a Synod of the Proteſtant Clergy of *Switzerland* was held, where the Articles of their Faith were drawn up, and entituled, *The Helvetick Profeſſion*, in which they ſtick cloſe to the Doctrine of *Calvin* as to Election, Predeſtination, *&c.* and there is no Toleration in the Cantons, but every one who does not profeſs the eſtabliſh'd Religion is baniſh'd the Country.

CHAP. VI.

Of the Allies and Intereſt of the Switzers.

THE Allies of the *Switzers* are, 1. The *Griſons*. 2. The Town and Country of *Neufchattel*. 3. The Abbot of St. *Gall*. 4. The *Valetians*. 5. The Republick of *Geneva*. And, 6. The Towns of *Mulhauſen* and *Bienne*; but the *Griſons* is the moſt conſiderable; and as their Cuſtoms, Manners, and Government, differ not materially from thoſe of the *Switzers*, I ſhall not repeat the Deſcription of them.

Valteline. The *Valteline* or *Valetians* are ſo call'd, becauſe the Place is a long Valley of about ten Leagues in Length; it abounds in Corn, Wine, and Oil, and the moſt delicious Fruits; and it is commodiouſly ſituated, as being a Paſs between *Italy* and *Germany*, and therefore its Fertility is of greater Advantage: It lies between the County of *Griſons* on the North, and the Territories of *Venice* on the South; and between *Tyrol* on the Eaſt, and *Milan* on the Weſt. The Capital is *Tirano*, the Seat of the Governor, ſituate on the Banks of the River *Adda*, about ſix Miles to the Northward of the Territories of *Venice*. It is a fortify'd Place, and the ſtrongeſt in all the *Valteline*.

Neufchatel. The Counties of *Neufchattel* and *Valengin* are alſo Allies of the *Switzers*; they lie on the Weſt Side of the Lake of *Neufchattel*; their moſt profitable Produce is Wine, which they ſell to Foreigners to great Advantage. They participate with the *French* more than the *Germans*, both for their Language and Manners. *Neufchattel* or *Newburgh* ſtands at the North Eaſt End of the Lake of the ſame Name, fifteen Miles North Weſt of *Friburg*. It is a ſtrong Town, govern'd by a Council of ſixty Burghers, and enjoys large Privileges.

Geneva. THE next Ally of the *Switzers* of any Note is *Geneva*; the City ſtands at the Weſt End of the Lake of the ſame Name. The River *Rhone* runs through it, but the much larger Part is on the South Side; but the two Parts have a Communication maintain'd between them by three Bridges. It is remarkable for two very fine Streets, one of which aſcends the Hill, and the other goes along the Banks of the River and Lake, which makes it exceeding pleaſant; and indeed the fine Walks, and the Proſpect upon the Water, are what it is chiefly to be admired for. The Wall is above two Miles in Circumference; it is guarded both by the *French* and *Savoyards*, it being the Intereſt of one to prevent its falling into the Hands of the other. They have an odd Way of managing their Cattle, which they drive up to the Mountains about *May*, and have Huts, in which they manage their Dairy all the Summer, and return to the Town in Winter. The Counts and Biſhops of *Geneva* had ſome time a mixt Juriſdiction in the Place, but at the Reformation, the Biſhop became Sovereign both in Temporals and Spirituals. Their Church was form'd by *John Calvin* in Perſon about the Year 1535.

THE Lake, as above obſerv'd, is about ſixty Miles in Length, and twelve in Breadth, and produces Plenty of good Fiſh, eſpecially Trout. The City of *Geneva* ſtands upon a riſing Ground, and its Views are bounded on all Sides by ſeveral Ranges of Mountains, but at ſuch a Diſtance, that there are wonderful beautiful Proſpects contain'd within them; and theſe circumjacent Mountains break off the Sharpneſs of the Air. The River *Rhone* falls into the Lake at the Eaſt End of it. There is a noble Proſpect of *Geneva* from the Lake, and it is indeed the politeſt Town in *Switzerland*; it is the chief Place of Education for the Children of the Proteſtant Cantons.

THERE are many very wealthy Gentlemen in *Geneva*, who have a Cuſtom of laying up a great Stock of Corn in their publick Granaries built for that Purpoſe, and retailing it out to the Poor at the common Price when it is ſcarce; three of the little Council being appointed to inſpect into and manage this Affair; but none of theſe three Directors are allow'd to furniſh the Granaries from their own Stock, that they may not be under a Temptation to impoſe upon the Publick, either in the Price or Goodneſs of the Grain; nor are they allow'd to buy any Corn within twelve Miles of *Geneva*, leſt, inſtead of keeping it cheap, they ſhould make it dear, and the Reſult of the Inſtitution ſhould overthrow the original Deſign of it.

THE Situation of the *Switzers* may be ſaid to be almoſt in the Heart of *Europe*, and they are a hardy People, and the Proteſtants are ſufficiently able to deal with the Roman Catholicks if no foreign Power ſhould interpoſe; but the Popiſh Cantons are ſo much inclin'd to the *French* Intereſt, that it is not improbable, but that they may in a few Years become a Province of *France*, whoſe Prince they already look upon as their Protector; for there is no Nation courts them more, or employs more of their Troops than the *French*, which is eſteem'd the greateſt Favour that can be done to a *Swiss* Republick; becauſe it is a Proviſion for moſt of their leading Men, who are at the ſame time train'd up in the Art of War, on which Account they are at their Return more reſpected than any Claſs of Men in the Country.

THE Reaſon of the *French* being ſo fond of employing the *Swiſs* more than any other Nation, is becauſe of the Largeneſs of their Size; the *French* being more ſmall and effeminate, and more addicted to Gallantry than War, makes them unable to withſtand either the *German* or *Dutch* Infantry without the Help of the *Swiſs*.

AND now to cloſe this Deſcription of *Switzerland*, I ſhall take Notice of ſome of Mr. *Addiſon*'s Obſervations on this Country in his Travels through it, and he tells us, That at *Lauſanne*, the largeſt Town upon the Lake except *Geneva* itſelf, he obſerv'd the Crack in the Wall of the Cathedral which was open'd by an Earthquake, and clos'd again ſome Years afterwards by another, and ſo cloſe, that it was but juſt diſcernable when he ſaw it; but ſeveral People then living affirm'd, that between the Times of the two Earthquakes, they had frequently paſs'd through the Breach. The Country between *Lauſanne* and *Geneva* is the moſt fruitful and beſt cultivated of any in the *Alps*. About five Miles from *Nyon*, they ſtill ſhew the Ruins of *Cæſar*'s Wall of eighteen Miles in Length, *viz.* from Mount *Jura* to the Walls of the Banks of *Geneva*, as it is deſcribed by *Cæſar* in the firſt Book of his Commentaries. *Lauſanne.*

THE next Place he gives us a Deſcription of is *Friburg*, the Capital of one of the largeſt Popiſh Cantons, ſituate ſo irregularly amongſt the Rocks and Precipices, that they are forc'd to climb up to it by ſeveral Stair-Caſes of prodigious Aſcent. The College of Jeſuits here, is ſaid to be the fineſt in *Switzerland*, from whence they have ſeveral beautiful Proſpects, and they have a Collection of the Pictures of moſt of the Fathers of their Order; amongſt whom are ſome Natives of *England*, by us ſtill'd Rebels, but by them, Martyrs. The Inſcription under *Henry Garnet* relates, that when the Hereticks could not prevail on him either by Force or Promiſes to change his Religion, they hang'd and quarter'd him. *Friburg.*

THERE is a little Hermitage about two Leagues from *Friburg*, deem'd one of the greateſt Curioſities in *Switzerland*; it is ſituate in a very agreeable Solitude among Woods and Rocks, inſomuch that the very View and Situation of it is enough to incline one to be ſerious. The Hermit that then poſſeſs'd it had liv'd there five and twenty Years; in which Time, he had with his own Hands wrought in the ſolid Rock a pretty Chapel, a Sacriſty, a Chamber, Kitchen, Cellar, and other Conveniencies. His Chimney is carried up through the whole Rock, though the Rooms lie very deep; and he has cut the Sloping of the Side of the Rock level for a Garden; and for Soil, he brings Earth from the neighbouring Parts; and has indeed made it ſuch a delicious Spot of Ground, that it looks rather too luxurious for an Hermit. And for a Supply of Water, he obſerv'd the Drops diſtil from ſeveral Parts of the Rock, and purſuing the Veins from whence they proceeded, he found the Springs, and has cut him out two or three Baſons or Fountains, which both furniſh his Houſe with Water for common Uſe, and alſo ſupply his little Garden with Water. A fine Hermitage.

THE Roads from *Friburg* to *Bern* are very bad, For a great Part of them lie through Woods of Fir-Trees, which are ſo plenty, that they mend their Roads with them inſtead of Stone and Gravel. The publick Walks by the great Church at *Bern* are rais'd extremely high, and afford a noble Summer's Proſpect; for here you have a full View of the huge Range of Mountains in the Country of the *Griſons* all cover'd with Snow. I muſt own indeed, that thoſe who paint Landſcapes, would ſcarce allow Mountains cover'd with Snow to be a ſeaſonable Summer's Proſpect; but when we conſider that thoſe Snowy Mountains are ſeen in the Summer Time, and from a Place where the Weather is actually as hot

hot as can be expected in ſuch a Clime as the forty ſeventh Degree of Latitude, at that Time of the Year it muſt add to the Variety and Excellency of the Proſpect. And what is ſtill more agreeable, though theſe Mountains are fourſcore Miles from *Bern*; yet their prodigious Height and white Colour make them ſeem to be at a much leſs Diſtance. The Cathedral at *Bern* is eſteem'd one of the moſt magnificent Proteſtant Churches in *Europe*.

THE ſaid Mr. *Addiſon* obſerves, that *Zurich*, which is ſituate upon a Lake of the ſame Name, is one of the handſomeſt Towns in the Country, and the Town-Houſe is a fine Pile of Building; but concludes with this Remark, that they have in a Manner ſpoil'd the Beauty of the Walls with abundance of childiſh *Latin* Sentences, which conſiſt of a Gingle of Words; and from thence, and other Inſcriptions in the Country, he concludes, that their Men of Learning are extremely delighted in playing little Tricks with Words and Figures, (and we may add with Letters too) for their Wit conſiſts much in Anagram and Acroſtick.

A

THE HISTORY AND DESCRIPTION OF *FRANCE.*

CHAP. I.

Of the Original of the Kingdom and Government of France; *with an Abſtract of their general Hiſtory, from their firſt attempting to form themſelves into a People to their Eſtabliſhment into a Government.*

Original of *France.*

AS *France* has ſince its Eſtabliſhment into a regular Government, been frequently one of the moſt celebrated Kingdoms in *Europe*, as being the Stage whereon very great Things have been tranſacted both in Peace and War, both in Negotiations and actual Hoſtilities, and both within and without its own Boundaries; we have thought it neceſſary to introduce the particular Hiſtory of it with the following brief Account of its firſt Original.

THE furtheſt that we can go back with Certainty, is, that the *French* deſcended originally from a People that dwelt beyond the *Rhine*; but whether they were the *Aborigines* of that Country, or came from ſome Place more remote, is yet uncertain as to the Reach of Hiſtory. Not to go ſo far back as to take their Deſcent from *Adam* firſt, and afterwards from *Noah*, in common with the reſt of the human Race; this we are aſſured from authentick Hiſtory, that ſince their Settlement in *Gaul*, they have been intermix'd with *Romans*, *Gauls*, and *Germans*. The *Romans* made a conſiderable Part of this Beginning; and it is next to be conſider'd, what the *Gauls* and *Germans* were, and what they did before this Intermixture; and 'tis certain, they were both promiſcuouſly call'd *Celtæ*. But Authors differ about the Derivation and Extent of that Word; ſome apply it in common to the Inhabitants of *Britain*, *Illyricum*, and *Spain*. And as its Derivation does not determine either its Extent or Limitation, it is thought it included all thoſe Places; but was by Degrees reſtrain'd, till at laſt it now includes no more than that Part of *Gaul* which borders upon the *Marne*, the *Seine*, and the *Garonne*.

SOME Authors are of Opinion, that the Name of *Celtæ* remain'd only in thoſe great Countries, ſince call'd *Gaul*, and *Germany*; but *Germany* in this Extent, is ſaid by *Tacitus*, to be bounded by the *Rhine* and the *Danube*, and all the Northern Ocean; ſo that *Denmark*, *Scandinavia*, *Livonia*, and *Pruſſia*, were included therein; and the Limits of *Gaul* were the two Seas, the *Rhine*, the *Pyrenees*, and the *Alps*.

NOT to ſpend Time or Room about the Original or Derivation, either of the Words *Gaul* or *Celtæ*, we ſhall proceed to obſerve, that the moſt remarkable Irruption of the *Gauls*, was about the Year of the World 3416, when *Tarquinius Priſcus* reign'd at *Rome*, and *Ambigatus*, King of the *Berruyans* had the Command of all *Gallia Celtica*. This Prince ſent out *Sigoveſus* and *Bloveſus*, his Siſter's Sons, to ſeek their Fortunes; in Order to which, they aſſembled three hundred thouſand Men, and parted: *Sigoveſus*, went to the *Hyrcinian* Foreſt, and *Beloveſus* paſs'd the *Alps*, and ſeiz'd all the Country between the *Alps*, the *Appennine* Hills, the River *Teſis*, and the River *Jeſi*, which falls into the Sea not far from *Ancona*; and there built *Milan*, *Padua*, *Verona*, *Breſcia*, and ſeveral other fine Cities yet in being; while *Sigoveſus* fought his Way through the *Hyrcinian* Foreſt, and conquer'd ſeveral Countries, particularly that now call'd *Bohemia*.

BUT notwithſtanding thoſe Succeſſes of the *Gauls*, they were at laſt forc'd to ſubmit to the *Romans*, but not without long and bloody Wars, the *Gauls* withſtanding the *Romans* ſo ſtoutly that no Citizen in *Rome* was exempted from liſting himſelf when they were at War with the *Gauls*. The firſt open War they had with the *Romans*, was about the Year of the World 3615, and this War was ſucceeded by fifteen or twenty more, which at laſt tir'd the *Gauls* out, and forc'd them to ſubmit to the Terms of Peace propoſ'd them by the *Romans*; and now thoſe Parts of *Gaul* which are at preſent call'd *Savoy*, *Dauphine*, *Provence*, and *Languedoc*, are made (in a great Meaſure) ſubject to the *Romans*.

Julius

Julius Cæsar was at the same Time Governor of *Gallia Cisalpina*, which the *Romans* had conquer'd on this Side the *Alps*; and he made it his Business to attack the *Gauls*, who remain'd yet unconquer'd, and made War upon them contrary to the Sentiments of *Cato* and the Senate; and the *Gauls* being but a confused Sort of Government, like a Body without a Head, consisting of several petty States of different Interests, each for itself. *Julius Cæsar* took the Advantage of this, and in nine Years time subdu'd all *Gaul*, from the *Alps* to the *Rhine* and the Ocean; after which Conquest, the *Gauls* continu'd subject to the *Roman* Government near five hundred Years, in the Reigns of *Julius Cæsar* and *Augustus Cæsar* and their Successors.

And now to come to our intended Purpose; some, and with the best Reason, believe, that these *Gauls* that we have now derived from their Original, are the same with the *Franks*, from whence we derive *France*, or the *French*, only with this Limitation, that the present *Franks*, or *French*, are the Descent of those *Gauls* who return'd from the other Side of the *Rhine*; and the Reasons seem evident; for in our common Acceptation to this Day, *Gallia* and *France* are synonimous Terms, as are also the Words *Gallick* and *French*.

As to the Derivation of the Word *Franks*, which it is supposed, that either those People assum'd, or some other bestow'd the Epithet upon them, it may easily and without forcing, be deriv'd from a *High Dutch* Word, signifying *free*, or *Love of Liberty*.

But all this Time the *Franks* or *French* continued in their Non-age, and little is said of them till the Reigns of *Valentinian*, *Valens*, *Gratian*, and *Valentinian* II. who reign'd in the fourth Century. And if we come as low as *Theodosius* II. we find little said of the *Franks*, but that they were then brought to submit to *Honorius*, and two of their Kings degraded, and others substituted in their Room. But about the Year 409, all *Armorica*, and other Provinces of *Gaul*, endeavour'd to shake off the *Roman* Yoke; and in Order thereto, expell'd the *Roman* Governors and Garrisons. But before we proceed any further, it will be necessary to observe the Situation and Extent of *Armorica*; and first, the Word signifies Maritime or bordering upon the Sea; but that *Armorica* has had its Vicissitudes, and according to the different Success of contending Powers, has contain'd more or less Space. But *Cæsar* in his Commentaries says, the *Gauls* call'd all the Places that border'd upon the Ocean *Armorica*, and that that Name was common to all the Sea Coast, from *Bayonne* in the Bay of *Biscay*, to the Westermost Point of *Bretagne*, and thence to the Mouth of the *Rhine*; and this includes all the Coast of *France*. And here, according to *Zozimus*, the *Franks* or *French* join'd the *Armoricans*, and came into a strict League with them, which continu'd so firm, that it contributed very much to the Ruin of the *Roman* Empire in those Parts, and at last to the Establishment of the Kingdom of *France* under the following Crown'd Heads.

CHAP. II.

An Abstract of the Reigns of the Kings of France, *from* Pharamond *to* Charles I. *or* Charlemain.

PHARAMOND, who was the first King *France*, began his Reign in the Year of our Lord 418. The Manner of his Inaugura- 418

tion was, they set him upon a great Shield, and carried him thereupon into the Field, where the People were assembled and confirm'd their Approbation of the Choice by loud Acclamations. It is supposed he intended to make a Conquest of some Part of *Gaul* but the *Romans* drove the *French* beyond the *Rhine* about the Year 428; about which Time he died, after a Reign of ten Years, having establish'd the Salique Law, appointing, that the Crown shall not be inherited by any Woman.

Clodius, the Hairy, or Long-locks, began in the Year 428. In the Beginning of his Reign he dwelt beyond the *Rhine*, but was beat back by the famous *Roman* General *Aëtius*, when he attempted to make an Irruption into *Gaul*. However he privately retir'd from his Castle at *Dispurg* in *Thuringen*, broke through *Charbonnierre*, and took *Bavoy*, *Cambray*, and some other Places; from whence taking the Advantage of the Confusion of the *Roman* Empire, he pursued his Conquest, but met with *Aëtius* the *Roman* General, who for a Time put a Stop to his Progress, but at length conquer'd *Artois*, and enlarg'd his Dominions as far as the *Soame*, and took *Amiens*, which he made the Place of his Residence. He reigned twenty Years, leaving two Sons behind him, under the Guardianship of his near Relation *Merovæus*; but instead of being a faithful Protector, *Merovæus*, 448

Merovæus assum'd the Royal Dignity himself to the Prejudice of the Children with whom he was intrusted. He was a brave and warlike Prince, and joining his Forces with the *Roman* General *Aëtius*, and *Theoderick*, King of the *Visigoths*, they charg'd *Attila* King of the *Huns*, who had laid Siege to *Orleans* with so much Fury, that they made him quit it with great Slaughter. And at another Attack, they kill'd two hundred thousand of his Men, and made him glad to have Men enough to retreat into his own Country with. *Aëtius* quitted the *Visigoths*, and the *French* King *Merovæus*, who afterwards conquer'd *Mentz* and *Picardy*, a good Part of *Normandy*, and almost all the Isle of *France*; and after a Reign of eleven Years he died.

Childerick succeeded him in the Kingdom, but being a young debauch'd Prince, the People dethron'd him and advanc'd *Egidius* in his Room, *Childerick* at the same Time being glad to withdraw to *Thuringa* to save his Life; but the cunning *Guyeman*, a Friend of *Childerick's*, ingratiated himself so far into the Favour of *Egidius*, intending at the same Time, if possible, to procure the dethroning of him, that he advised him to burthen the People with Taxes; and when they grumbled, he advised him to cut off the principal Men among them as a seeming Example, but at the same Time gave secret Encouragement to the Rest that complain'd, and perswaded them to recal their natural King, which they did, and went as far as *Bar* to meet him; and the Subjects being now exasperated against *Egidius*, he was *Childerick*, 459

fore'd to quit *Cologne*, and *Childerick* took and burnt *Treves*, conquer'd *Lorrain*, and croſſing *Champaigne*, which then remain'd firm to the *Romans*, he took *Beauvais*, *Paris*, and many other Towns upon the *Oiſe*; and the People weary of the *Roman* Exactions, readily ſubmitted to him. He fell ſick of a Fever, and dy'd in the forty ſixth Year of his Age, when he had reign'd about twenty two or twenty three Years. It is ſuppoſed his Royal Reſidence was at *Tournay*, becauſe in digging there, they found a Ring with his Effigies and Name engraven upon it. He left behind him (beſides three Daughters) a Son named

Clovis. *Clovis*, now *Louis* or *Lewis*: He ſucceeded his Father; he early began War againſt *Siagrius* the Son of *Egidius*, who had been ſet up againſt *Childerick*; and defeating him near *Soiſons*, fore'd him out of the Hands of *Alarick*, King of the *Viſigoths*, and fiez'd all that the *Romans* had in *Gaul*, and ſubdu'd a Part of *Thuringia*, and brought it under Tribute. In the Year 491, he married *Clotilda*, the Niece of *Gaudebaud* King of the *Burgundians*.

THE *Almains* of *Germany* entering in a hoſtile Manner into the Territories of *Sigebert* King of *Cologn*, this *Clovis* King of *France*, engag'd in the Quarrel in *Sigebert*'s Intereſt; but his Men loſt Ground, and expos'd him to great Danger; whereupon he pray'd to the God of his Wife, ſhe being a Chriſtian, and made a Vow, that if he had a Deliverance, he would be baptiz'd; whereupon he kill'd Abundance of his Enemies, and the Day became his own; and purſuing his Conqueſt, he expell'd all thoſe that were on that Side the *Rhine*; and at his Return was inſtructed in the Principles of Chriſtianity, and was baptiz'd at *Rhems Dec.* 25. *Anno* 496. and his Example was follow'd by above three thouſand of his *French* Subjects.

Clovis baptiz'd, being the firſt Chriſtian King of *France*

WHEN *Clovis* was at Peace, he endeavour'd to reform the *Salique Law*; and making War upon *Alarick* King of the *Viſigoths* upon the Foot of Religion, he took *Tours*, and defeated *Alarick*'s Army, and kill'd him with his own Hands. He then took *Albigeois*, *Rovergne*, *Quercy*, and *Auvergne*; alſo *Poictiers*, *Saintonge*, *Bourdelois*; and laſtly, *Bourdeaux* itſelf, where he winter'd: And in the Spring, he took *Angouleſme*, and the three *Aquitains*, while his Confederate *Gondebaud* conquer'd the *Narbonnois*, with the City of *Narbonne* itſelf; theſe Succeſſes made *Clovis* famous even unto the Eaſt, whence the Emperor *Anaſtatius* ſent him *Imperial* Ornaments, with the Title of *Auguſt*, which Grandeur of his contributed very much to the bringing the *Gauls* into Subjection, they having a great Veneration for thoſe Titles.

BUT *Theoderick* King of the *Oſtrogoths* envying *Clovis*'s Succeſs, ſent an Army againſt him, and ſlew 30000 of his *French* and *Burgundians*, and afterwards took from them all they had conquer'd in *Provence* and *Languedoc*, except *Thoulouſe* and *Uzez*. *Clovis* fretted at theſe Loſſes, and began to exerciſe Cruelty and Treachery upon the other petty Kings of *France*, but was cut off, and dy'd at *Paris* in *Novemb.* 511. aged 45. after a Reign of thirty Years. In his Reign the *French* entirely freed themſelves from the *Roman* Yoke, and became their Allies upon equal Terms. When he dy'd he left four Sons, *Thierry*, *Clodomir*, *Childebert*, and *Clotair*.

Thierry, &c. *Thierry*, *Clodomir*, *Childebert*, and *Clotair* above mentioned, divided the Kingdom among them; *Thierry* had *Metz*, *Clodomir* had *Orleans*, *Childebert* had *Paris*, and *Clotair* had *Soiſſons*. *France* now began to be divided into *Oſtrich* or the Eaſter Part, and *Weſtrich* or *Neuſtria*; the firſt includes all between the *Meuſe* and the *Rhine*, with *Rheims*, *Chalons*, *Cambray*, and *Leon*.

Gondebaud King of *Burgundy* dying, was ſucceeded by his Son *Sigiſmond*, who was quickly betray'd into the Hands of his Enemies, and with his Wife and Children ſhut up in a Caſtle; but *Gondemar*, *Sigiſmond*'s Friend, with the Remains of his Brother's Army, and what he had of his own, plac'd himſelf upon the Throne; at which *Clodomir* being jealous, made a League with his Brother *Thierry* to expel *Sigiſmond*, which Deſign he not only compleated, but maſſacred *Sigiſmond* with his Wife and Children in ſuch a barbarous Manner, that his Brother *Thierry* forſook him and ſuffer'd him to periſh. However, the *French* revenged his Death by a terrible Slaughter of the *Burgundians*, and a Conqueſt of that Part of the Kingdom which lay next to *Orleans*. *Clodomir* left three Sons behind him.

SOON after, *Thierry*, with his Brother *Clotair*, over-run *Thuringia*, which was made over to *Thierry*. *Childebert* and *Clotair* join'd to expel *Gaudemar*, and put a final End to the Kingdom of *Burgundy*, after it had ſubſiſted about ninety Years, and united it to *France*, though it retains its Name to this Day. *Thierry* was ſlain in beſieging Lord *Munderic* in his Caſtle of *Vitry*, in the twenty third Year of his Reign and the fifty fifth of his Age, leaving only one Son, named *Theodebert*, to ſucceed him; and while his Uncles *Childebert* and *Clotair* prepared to invade his Kingdom, he broke through their Meaſures, and contracted ſo great a Friendſhip with *Childebert*, that he promiſed him the Succeſſion, having no Child of his own. But *Theodebert* being one Day hunting a wild Bull, the Blow of a Branch of a Tree threw him into a Fever and coſt him his Life, in the forty third Year of his Age, and the fourteenth of his Reign, leaving behind him his Son and Succeſſor,

Theobald: In his Time the Kingdom of the *Oſtrogoths* was extinguiſh'd in *Italy*, and the *Saxons* and *Thuringians* revolted; but *Clotair* beat and plunder'd them; and *Childebert* jealous of *Clotair*'s Succeſs, perſwaded his own Son *Chramne* to rebel againſt him, who engaged himſelf by Oath to *Childebert* never to be reconciled to his Father; and now *Childebert* thought himſelf eſtabliſh'd, but did not long enjoy it, for he dy'd in the Year 558. after a Reign of forty ſeven Years.

Clotair ſucceeded, and Prince *Chramne* having loſt *Childebert*'s Protection, was glad to reconcile himſelf to his Father; which done, he retir'd to *Canober*, one of the Princes of *Bretagne*, whither his Father hotly purſu'd him, kill'd *Canober*, and took *Chramne* and his Wife and Children and barbarouſly burnt them; of which Cruelty he repented ſo ſincerely, that he endeavour'd to attone for it by Acts of Devotion and large Donations to the Church. He dy'd in the ſixty firſt Year of his Age, and forty ninth of his Reign. He had four Sons, *Cherebert* King of *Paris*, *Goutran* King of *Orleans* and *Burgundy*, *Sigebert* of *Auſtraſia*, and *Chilperic* of *Soiſſons*.

THIS Diviſion of the Kingdom cauſed great Trouble in the Nation, and they had not been long ſetled in their reſpective Kingdoms, till the *Avares* flying from the Tyranny of the *Turks* into the Emperor *Juſtinian*'s Service, and being after his Death ſlighted by *Juſtin*, they penetrated into the Heart of *Germany*, and ravaged *Thuringia*, which belong'd to *Sigebert*; but undaunted at their Approach, he encounter'd them upon the Banks of the *Elbe*, and ſent them back with Loſs and Shame to the *Danube* whence they came. But while *Sigebert* was expelling his Enemies abroad,

broad, *Chilperic* fell upon his Territories, ravaged the Country of *Rheims*, and took *Theodebert* Priſoner; but they ſoon agreed, and the young Prince was diſcharg'd. The Kingdom of *Lombardy* was erected, and they made frequent Incurſions into *Rhetia* and *Provence*; and in *Anno* 571. march'd againſt King *Goutran*'s Army, defeated it, and ſlew his General *Amat*; but his Succeſſor *Mummole* afterwards hemm'd them in at *Ambrun*, and killed or took moſt of his Army. *Cherebert* dy'd in the forty ninth Year of his Age and the tenth of his Reign.

Cherebert being dead, his three Brothers abovemention'd, *viz. Goutran*, *Sigibert*, and *Chilperic*, re-divided the Kingdom, and even the City of *Paris* alſo; and *Sigibert* ſoon after made War upon *Goutran*, and attempted to take from him the City of *Arles*; but failing in that, he ſtudy'd other Satisfaction; and indeed *Cherebert*'s Kingdom being to be divided among the other three, made room enough for Contention, and the rather, becauſe *Tourain* and *Poictiers* falling to *Sigibert*'s Share, *Chilperic* had a great Deſire to make himſelf Maſter of them, which occaſion'd a cruel War and the Deſolation of many Provinces; and at this Time *Sigibert* was ſlain, about the forty fourth Year of his Age, and in the fourteenth Year of his Reign. He left a Son named *Childebert*, and two Daughters.

Upon the Death of *Sigibert*, the Siege of *Tournay* was raiſed, and the *Neſtrians* return'd to the Obedience of *Chilperic*; but Queen *Brunchaud* ſav'd her Son *Childebert* by lowering him over the Wall in a Basket, from whence he was ſafely convey'd to *Metz*.

Chilperic was aſſaſſinated in an Evening as he alighted from his Horſe, the Aſſaſſin giving him two Stabs with a Knife, one under the Arm-pit, and the other in his Belly, and put an End to his Life and Reign *Anno* 584.

Upon *Chilperic*'s Death, his Son *Clotair* ſucceeded in *Neuſtria*, *Goutran* in *Burgundy*, and *Childebert* in *Auſtraſia*. *Goutran* died in the Year 593, in the thirty ſecond Year of his Reign, and the ſixty eighth of his Age. And *Childebert* being now grown very potent, thought to have made an eaſy Prey of young *Clotair*; but the politick *Fredegonda*, the Mother of *Clotair*, uſed ſuch Artifice, that ſhe engaged thoſe to her Son's Intereſt who had been alienated from him; and by this Means, ſhe obſtructed the Progreſs of *Childebert*'s Army, and defeated them with the Loſs of three thouſand Men; notwithſtanding which, *Childebert* tore from *Clotair* ſome of the remote Towns of his Kingdom; but *Childebert* died *Anno* 595, and was ſucceeded by his two Sons, *Theodebert* in *Auſtraſia*, and *Thierry* in *Burgundy* and *Orleance*.

France was now come into the Hands of three minor Kings, *viz. Clotair*, *Theodebert*, and *Thierry*; the two laſt of which, made an Attempt upon *Paris* and other Places on the *Seine* which *Clotair* had taken from them; and *Clotair* met them, and gave them Battle, but loſt the Day, and thirty thouſand Men, and fled to *Paris*, where he was forc'd for Fear of loſing all, to yield to them the greateſt Part of his Kingdom; giving to *Thierry* all that lay between the *Loire* and the *Seine* as far as the Sea; and to *Theodebert*, he gave the Dutchy of *Deutelen*; but *Theodebert* was ſoon after ſlain by his Brother *Thierry* *Anno* 610, and *Thierry* was poiſon'd in the Year 612. And thus the Kingdom of *France* was again reduc'd to one Government under *Clotair*, who having now ſettled himſelf quietly upon the Throne, ſet himſelf to regulate his Kingdom and eſtabliſh Law and Juſtice. He dy'd near *Paris* in the Year 628, having reign'd alone after *Thierry*'s Death about fourteen Years. He left two Sons, *Dagobert* and *Aribert*; of which as follows:

Dagobert ſucceeded in *Neuſtria*, *Auſtraſia*, &c. and *Aribert* in Part of *Aquitain*, which with *Saintonge*, *Perigord*, *Agenoiſe*, *Thouloufain*, &c. were peaceably given him by *Dagobert*, and he made *Thoulouſe* the Place of his Royal Reſidence. He dy'd in *July* 638, in the thirty eighth Year of his Age. *Dagobert.*

The Royal Power now falling into the Hands of the Mayors of the Palace, and *Pepin* now ſupplying that Office, he preſently gave Notice thereof to Biſhop *Cunibert*, Governor to *Sigibert*, and removed the Court of *Auſtraſia* from *Metz* to *Cologne*; but in about a Year he fell ſick and dy'd, and was ſucceeded by his Son *Grimoald* as Mayor of the Palace, which Office became Hereditary. *Pepin.*

The ſucceeding Reigns produce nothing worth a Place in this Hiſtory, except the private Broils of the rival petty Kings of *France*, whoſe Names we ſhall juſt mention, *viz.*

Clovis II. who began *Anno*	638
Clotair III.	655
Childeric	668
Thierry I.	673
Clovis III.	690
Childebert II.	694
Dagobert II.	711
Chilperic II.	716
Thierry II.	722
Childeric III.	743
Pepin the Little	751

This *Pepin* was ſo call'd from his low Stature, for which his Nobles diſpis'd him; which he perceiving, ſtudied to find Means to convince them, that though his Stature was lower than theirs, his Courage was not ſo; and as an Inſtance of that, at one of their Combats of wild Beaſts, where a furious Lion had grappled a Bull, and held him faſt by the Neck, he bid ſome of his Lords *make him let go his Hold*; which when none of them durſt venture to do, he jump'd from the Stage, and with his Back-Sword, he not only cut off the Lion's Head, but enter'd the Sword a good way into the Bull's Neck; and then leaſt they ſhould not take Notice of this great Atchievement, ask'd them with an Air of Majeſty, *Do you not believe that I am worthy to command you.*

Pepin, as little as he was, conquer'd *Aquitain*, and dy'd immediately at St. *Dennis* in *September* 24. 768. He left four Sons, *Carloman*, *Charles*, *Pepin*, and *Gellis*, which laſt was thruſt into a Monaſtery very young, and *Pepin* dy'd at three Years old, and the Kingdom was divided between the other two, who falling out about their Shares, the Nobility interpos'd and ſettled *Charles* in *Neuſtria*, and the eldeſt, call'd *Carloman*, in *Auſtraſia*.

CHAP.

CHAP. III.

An Abstract of the Reigns of all the Kings of France, *from* Charles I. *surnamed* Charlemain, *or* Charles the Great, *to* Philip *the Conqueror; containing the Reigns of* Charlemain, Lewis I. Charles II. Lewis II. Lewis III. Charles III. Eudes, Charles IV. Rodolph, Lewis IV. Lotair, Lewis V. Hugh Capet, Robert, Henry I. Philip I. Lewis VI. *and* Lewis VII.

THE Reign of *Charles the Great* takes Date from the Death of his Father *Pepin*. He compleated the Conquest of *Aquitain*, and erected it into a Kingdom for his Son *Lewis*; but *Carloman* was very troublesome to *Charles* till he dy'd in the Year 770. and all the Lords and Nobility owning *Charles* for King, *Carloman*'s Widow and Children withdrew to *Tassilon*, Duke of *Bavaria*.

Charlemain was now become the sole King of *France*, but this his Greatness exposed him to more Enemies, the *Saxons*, *Huns*, *Lombards*, and *Saracens*; the first of which gave him a great deal of Trouble for thirty Years together; but he always opposed them with Success, and routed them in a great Battle near *Osnaburg*, took the Castle of *Eresburg*, and demolish'd the Temple of *Irmensel*, and broke his Image; and then passing the *Weser*, conquer'd the *Saxons*, rebuilt *Eresburg*, and put a *French* Garrison into it.

THE *Veronese* soon after submitted to *Charles*, and deliver'd up to him the Widow of his Brother *Carloman* and her Children, who were sent to *France*. *Charles* went afterward to *Rome*, where the Pope receiv'd him very graciously, and endow'd him with additional Power to what he had before; which when *Didier*, King of the the *Lombards* perceiv'd, he surrender'd himself with his Wife and Children to *Charles*, which put a Period to the Kingdom of the *Lombards* after it had continued above two hundred Years.

Charles, before his Return to *France*, went again to *Rome*, where the Pope, with an hundred and fifty Bishops whom he had summon'd for his more magnificent Reception, confer'd upon him the Title of *Patrician of Rome*, which was the next Degree to the Empire, and gave him the Investiture of Bishopricks, and even the Nomination of Popes; and upon his Return, he was crown'd King of *Lombardy* at *Modece* near *Milan* with an Iron Crown, though cover'd with a Plate of Gold on the Outside.

THE *Saxons* taking the Advantage of this his Absence, broke out, and put all the Country of *Hesse* to Fire and Sword. And in the Year 775, he went against them in Person, subdu'd their Forces, repair'd the Damages they had done, and drove them cross the *Weser*.

IN *March* 777. they came from all Parts to *Paderborn* to implore his Protection, which he readily granted them, and the *Saracen* Commanders met and tender'd him Hostages and other Assurances of their Fidelity; and thus he freed the Christians on the Frontiers of *Spain* from all Tribute or Subjection to the *Saracens*, and all between the *Pyrennes* and the *Ebre* were brought under his Dominion, and were call'd the *Marches of Spain*. But in his Return, repassing the *Rhine*, the *Saxons* rose against him, and three of his chief Commanders falling rashly upon the Enemy, were cut to Pieces; which so incens'd *Charles*, that he vow'd Revenge if they would not deliver up four thousand of the chief Mutineers; which being done, he caused all their Heads to be cut off upon the Banks of the *Alare*. And in the Year 785. two of their best Leaders, *Albion* and *Vitikind*, submitted to *Charles*, and appearing before the Estates of *Paderborn*, they follow'd him into *France* and were baptiz'd.

Charles having divided his Army into three Parts, sent one into the Valley of *Trent*, the second to the Borders of the *Danube*, and the other under the Walls of *Ausburg*, and so overpower'd the *Germans*, that he reduc'd them to Obedience even as far as the *Baltick*; which when he had done, he retir'd from Hostilities, and devoted himself to Works of Piety and Charity. And in the Year 790, the famous University of *Paris* was founded; and in 796, he reduc'd the *Saxons* to Obedience, though they now and then broke out into a Revolt.

ABOUT the Year 800, the *Danes*, *Normans*, and *Saracens* began their Piracies, and infested the Coast of *France*; but the King, however, went from *Metz* into *Italy*, where he had call'd a Parliament to take Cognizance of some Outrages committed against the Pope, and order'd the Offenders to be punish'd with Death; but the Pope interceded for their Lives, and as a Return for *Charles*'s Favour to the Holy See, he obliged the *Romans* to create him Emperor, and they crown'd him on *Christmas-Day* in St. *Peter*'s Church with the Acclamations of *A long and happy Life, and Victory to* Charles *the Angell, Great, and Peaceable Emperor of the* Romans, *crown'd by God*, &c. and the Ceremony of the Coronation being over, the Pope kneel'd down before the new Emperor and acknowledg'd him for his Sovereign.

BUT *Charlemain*, after a Reign of forty three Years, and the Fatigues of his Government, began to decline, and summon'd the Parliament to meet at *Aix*, and ask'd them if he should give the Title of Emperor to his Son *Lewis*; to which they assenting, he made him his Collegue in the Empire. He dy'd in the seventy second Year of his Age, the forty eighth of his Reign, and the fourteenth of his Empire. He had four Sons, *viz. Charles*, *Pepin*, *Lewis*, and *Lotair*, of whom *Lewis* succeeded to the Crown.

WHEN *Lewis* enter'd upon the Government, he divided his Goods with his Brothers and Sisters, and expell'd the Ladies of Pleasure from the Court, and confin'd those of his Sisters that were lewd and disorderly to the Abbeys that Father had confer'd upon them, and the next Year he employ'd *Bernard* to appease the Troubles at *Rome* occasion'd by Pope *Leo*'s partisans that had conspir'd against him to De-

but *Lewis* turn'd his Mind more to the Church than to the State, and was fitter to be a Bishop than a King. But at this Time he receiv'd Intelligence of the Defection of the *Abrodites*, and the Conspiracy of *Bernard* King of *Italy*, but both were stifled in the *Embrio*, and *Bernard* was put to Death; and *Lewis* apprehending that his own Bastard Brothers might in like Manner conspire against him, he caused them to be shaven and put into Monasteries.

But there being a Conspiracy on Foot to depose the Emperor, *Lewis* and his Empress being privy to it, and Abettors in it, she suffer'd herself to be seiz'd upon; when she, as if reduc'd to a Necessity, promised them to perswade her Husband to be shav'd or depos'd; and in the mean Time his Son *Lotair* arrived from *Italy*, and confirm'd all that was done. And they confin'd the Emperor in the Abbey of St. *Mard* at *Soissons*, but he was afterwards restor'd; and in the Year 833, he was depos'd again, and afterwards a second Time restor'd to his Imperial Dignity; but in the Year 840, he dy'd of an Imposthume in the sixty fourth Year of his Age, and the twenty seventh of his Reign as Emperor. He was succeeded by his Son *Charles*.

Some Time before *Lewis*'s Death, he sent the Scepter, Crown, and Sword (the Ensigns of Empire) to his eldest Son *Lotair*, with Orders to protect *Charles*, and preserve for him that Share which was allotted him, but especially the Imperial Crown and Dignity; but he having got Possession, and being the elder Brother, thought fit to take this Opportunity to secure himself; and marching with his Army to *Frankfort*, his Father *Lewis* came and boldly encamp'd close by him, which so startled him, that he was willing to come to Terms with his Father. *Charles* was then at *Bourges*, and sent to *Lotair* to desire him to remember his Oaths and Promises of Fidelity to him; and though he amused *Charles* with fair Words, yet he at the same Time put all his Engines to work to turn him out of his Dominions, and endeavour'd to stop up the Passages to prevent *Charles* from coming to *Atigni*, where they were to have met the Parliament to compose all Differences; but *Charles* got over the *Seine*, and fought his Way through to *Atigni*, and advanc'd to *Chalons*, where he found the Empress his Mother, and the Forces she had brought him out of *Aquitain*; and at the same Time *Charles*'s Brother *Lewis* had obtain'd a Victory over *Allart* Count *Metz*. They two join'd, and being then too hard for *Lotair*, he put off any Encounter, in Hopes to gain Time till his Brother *Pepin* might come up to him, and then he look'd upon the Conquest to be his own; but they would not be put off, but sent him Word they would fight him the next Morning, which was the twenty fifth of *June*.

In this Battle, all the Powers of *France* were employ'd on one Side and the other, and an hundred thousand Men perish'd in the Action: But however the Victory fell to *Charles* and *Lewis*, who afterwards march'd to *Aquitain*, thinking to drive *Pepin* entirely out of that Country, though they were therein disappointed.

Upon this Success, the two younger Brothers renew'd their Union in the most solemn Manner, reducing all *Charles*'s Subjects to Obedience, and recovering those that had revolted to *Lotair*; and by this Means became so strong, that they drove *Lotair* out of *Austrasia*; and the two Brothers coming to *Aix*, *Lotair* propos'd an Accommodation, and the Island of *Soone* was propos'd for the Place of the Congress, each being attended by forty Lords; and here they agreed to divide the whole Succession of their Father (*Bavaria*, *Lombardy*, and *Aquitain*, excepted) into three equal Parts, of which *Lotair* should take his Choice as being the eldest. To *Lotair* fell the Title of Emperor, with *Italy* and *Provence*, and all the Lands between the *Scheld*, *Rhine*, *Meuse*, and *Soane*. To *Lewis* fell *Germany*; and to *Charles* fell the Western Kingdom of *France*, and from the *British* Ocean to the *Meuse*.

While this was doing, young *Pepin* with the *Normans* surpriz'd *Bourdeaux*, and took *William* Duke of *Gascoign* Prisoner. About this Time *Lotair* and *Charles* had an Interview at *Peronne*, and renew'd their League, while *Charles*, Brother to *Pepin* of *Aquitain*, was seiz'd by Count *Vivian* and carried before *Charles* the then Emperor, who caused him to be shav'd and shut up in a Monastery. The ill Qualities of *Pepin* contributed to the settling of *Charles* the Bald upon the Throne, and to the taking of *Tholouse*, and at last was the Cause of *Pepin*'s being shav'd and confin'd at St. *Mard*.

In the Year 855, *Lotair* stripp'd himself of his Sovereignty, abdicated his Empire, which he had thought was his Right, and became a Monk in the Abbey of *Prom*, and dy'd soon after he had divided his Territories between his Sons; giving to *Lewis*, *Italy*; to *Lotair*, the Kingdom of *Lorrain*; and to *Charles*, *Provence*. This was *Lotair*'s Way of distributing, though at the same Time *Charles* was real Emperor, and young *Lotair* join'd him to recover the Empire; and while these Things happen'd, *Charles* the Bald was gone to make head against the *Britains*; and not being well beloved by his Subjects, they sent a Deputation to *Lewis* the *German*, to offer him the Sovereignty, and *Charles* advanced to fight him; but his Army being treacherous, he abandon'd it, and submitted to his Brother *Lewis*; but the *Germans* repenting the Change, conspired against *Lewis* and *Charles*'s Interest. But *Lewis* dying when he had reign'd near sixty nine Years, it put an End to his Life and Enterprizes, and after him dy'd *Charles* the Bald, *Anno* 877. in the fifty fifth Year of his Age, and thirty eighth of his Reign.

Lewis II. began in the Year 878. but nothing remarkable is recorded of him. He did not reign quite two Years, and was succeeded by, *Lewis* II.

Lewis III. He began in the Year 879. with his Competitor *Carloman*, and they divided the Kingdom between them, and join'd their Forces with *Lewis* the *German*, whole united Forces conquer'd as they went; but *Lewis* the *German* dy'd in the prime of his Years, and in the sixth of his Reign. *Charles* the Fat, in the mean Time laid Siege to *Vienna*, in Concert with his two Brothers. He was also crown'd King of *Lombardy*, and crown'd Emperor on *Christmas-Day* 881. *Lewis* fell sick, and dy'd at St. *Dennis*; and *Carloman* coming from the Siege of *Vienna*, and being hunting in a Forest near *Paris*, he was kill'd by a wild Boar, or as some say, by one of his Gentlemen, who missing the Boar with his Dart, hit *Carloman* and kill'd him. *Lewis* III.

Charles the Fat, then succeeded in the Sovereign Power alone, but was deserted by his Subjects, and depriv'd of all his Revenues, except that of two or three Villages for bare Subsistance; and in this Condition he dy'd with Grief, or as some say, was strangled by his Enemies. *Charles* the Fat.

Eudes Earl of *Paris*, and Duke of *France*, succeeded next to the royal Dignity; who, to shew how worthy he was of being their King, went out against the *Normans* and slew 19000 of them, and shew'd himself brave upon all Occasions. However, another Party in *Campaigne* ravaged the Country as far as *Paris*, while *Alain* and *Judicael*, (tho' the last suffer'd for his Rash- *Eudes*

ness at the Expence of his Life) yet *Alain* attack'd them with such Success, that of fifteen thousand, scarce four hundred escap'd.

The *Normans* would not give out thus, but procured an hundred thousand Men from *Denmark*, *Sweden*, and *Norway*; and entering the *Meuse* with ninety thousand Men, defeated *Arnold's* General, and slew infinite Numbers of his Nobility; at which *Arnold* being heartily nettled, redoubled his Charge, and forc'd their Camp near the *Meuse*, and left not one of them alive.

But all this while the *Neustrian* Lords did not own *Eudes* for their King; but instead of that, while he was busied in the *Poictou* Wars, they conspired to set *Charles* the Simple upon the Throne; and they succeeding, he was crown'd at *Rheims*, *Jan.* 27. in the Year 893.

Charles and *Eudes* now went to War together: But *Arnold* was sometimes on one Side and sometimes on the other; till at last for Quietness, the People divided the Kingdom between them, giving to *Eudes*, *Burgundy*, *Aquitain*, *Champagne*, and *Picardy*; and to *Charles*, all the rest; but the *Normans* renewing their Incursions, *Eudes* was slain *Anno* 898. and enjoyn'd his Brother and other Lords to own *Charles* for their King. In the Year 899, *Arnold* dy'd. *Charles.*

Lewis, the Son of *Arnold*, was but eight Years old when his Father dy'd; but he was immediately crown'd, and his Dominions soon enlarg'd by the Death of his Brother *Zuendibold*, whom the Lords of *Lorrain* had deserted for his Debaucheries; and he fighting to recover his lost Ground, was slain in *August* 900, after he had reign'd about five Years. He was succeeded by *Rodolph* Duke of *Burgundy*, who was elected to the Kingdom in *July* 923. *Lewis.*

Rodolph was no sooner elected but every Body deserted *Charles*, who then look'd like what he was call'd, *Charles the Simple*: He was first made a Prisoner, till Death releas'd him from his Captivity in *October* 929; and now *Rodolph* was sole King, and receiv'd Homage accordingly from many of the Lords and others, but he dy'd in *January* 936. *Rodolph.*

In the mean Time *Ogina*, the Widow of *Charles the Simple*, being gone over into *England* with her Son *Lewis*, to whom the *French* had a great Inclination to have him for their King; *Hugh le Blanc*, Earl of *Paris* and *Orleans*, Duke of *France*, and Brother-in-law to the late King *Rodolph*, who had the greatest Authority in the Kingdom, and consequently to assume the Throne himself; thought it more prudent to settle the Kingdom in the Race and Blood of *Charlemain*; and therefore sent to *Ogina* to bring back her Son *Lewis* to accept of the Crown, which he accordingly did, and he was crown'd at *Laon*, though *Hugh* might still be said to keep the Administration in his own Hand; but *Lewis* took it upon himself in the second Year of his Reign, and sent for the Queen his Mother to have the Benefit of her Advice, the better to establish his Authority; and in Order thereto, began first to punish some petty Rebels, especially *Herbert*, who had been treacherous to *Charles the Simple*. This *Herbert* continuing to be a cunning, designing Man, got his Son, though but ten Years of Age, to be nominated Archbishop of *Rheims*, though contrary to the Rules of the Church. But whatever Remorse affected *Herbert's* Conscience, he dy'd at *Peronne* in the Year 943, crying out, *We were twelve of us that betray'd King* Charles. *Lewis* dy'd in the Year 954, by a strange Accident; for as he was riding from *Laon* to *Rheims*, seeing a Wolf in the Way, he spurr'd his Horse to pursue him, and the Horse stumbling, threw him with so much Violence, that he kill'd him with *Lewis.*

the Fall. He left two Sons, *Lotair* and *Charles*; but *Lotair*, the eldest, succeeded to the Crown without any Rival; and from that Time forward the younger Brothers of *France* have never been Competitors to the Crown; and though there are Lands alotted them, yet even these revert to the Crown in Default of male Heirs.

Lotair, the eldest Son of *Lewis*, succeeded his Father as above observ'd, and was crown'd at *Rheims*. He was Co-temporary with *Otho* I. and *Otho* II. [*See* Germany *Chap.* IV. *page* 479.] He married *Emme* the Daughter of *Lotair*, sometime King of *Italy*. *Otho* I. surnamed the Great, dying, he was succeeded by *Otho* II. And *Lotair* expecting that *Otho* II. would have restor'd him some Part of his Country again, but finding himself deceiv'd, he march'd to *Aix la Chapelle*, and was so near to have surpriz'd *Otho*, that he had but just Time to leave his Dinner and his rich Palace, which *Lotair* plunder'd, and committed what Ravages he could in the Country. In the mean Time, *Otho* with 60000 Men made Irruptions into *France*, sack'd *Champagne* and the Isle of *France*, even to the Gates of *Paris*; but *Otho* and *Lotair* proposing a personal Conference together, which was perform'd, they came to an Accommodation, upon Condition that *Lotair* should yield *Lorrain* to be held by *Otho* in Fief of the Crown of *France*; at which the *French* Lords were very much dissatisfy'd; and now *Lotair* was not less than absolute Sovereign. *Lotair.*

But the Emperor *Otho* II. dy'd in the Year 982. and *Lotair* thinking that *Germany* would be in Confusion about the Guardianship of *Otho* III. who was then but ten Years of Age, he enter'd *Lorrain*, took *Verdun*, but soon restor'd it. He caused his Son *Lewis* to be crown'd to reign with him *Anno* 983. and in 987. *Lotair* dy'd in the forty fifth Year of Age, and in the thirty third Year of his Reign, leaving *Lewis* V. to succeed him.

Lewis V. was but a soft Prince, in so much that he was call'd *Lewis the Slothful*; and his Mother *Emme* not caring to trust to him, she carry'd him to his Grandmother *Adeleida*, the Widow of *Otho* I. but he soon ended his Life by the Treachery of his Wife. Some say he gave his Kingdom to *Hugh Capet*, others say he bequeath'd it to his Wife, provided, that after his Death she should marry *Hugh Capet*; but be that as it will, *Hugh Capet* succeeded *Lewis* after he had reign'd about three Years; and in him ended the Succession of *Charlemain*. *Lewis.*

Charles, Duke of *Lorrain*, was the only Person now left of the Race of *Charlemain*; but he being absent, and much out of Favour with the *French*, and *Hugh* being present among them, and much esteem'd, he gain'd the Consent of the People and was crown'd; but being told that his Race should hold the Crown for only seven Generations, he relinquish'd the Crown after his first Coronation, that there might be seven Generations besides himself to keep the Crown longer in the Family; and six Months after his Coronation he procur'd his Son *Robert* to be enthron'd. *Hugh Capet.*

Charles in the mean time, not able to forbear putting in his Claim to the *French* Crown, was betray'd into the Hands of *Hugh Capet*, and sent Prisoner to *Orleans*, where he dy'd *Anno* 994. leaving two Sons, *Otho* and *Lewis*; and *Hugh Capet* liv'd but two Years after him, and dy'd *Anno* 996. in the tenth Year of his Reign, and the sixty sixth of his Age, and was succeeded by his Son,

Robert. He was a very religious Prince; he delighted much to sing in publick Worship, and compos'd some Words and Notes for Songs, and Responses, which are retain'd to this Day. *Rob.*

Day. In the Year 1017. the King cauſed his eldeſt Son *Hugh*, to be crown'd as a Partner with him in the Government, tho' but ten Years of Age; and his Name was uſed in all publick Acts. The *Danes* and *Normans* purſuing their wonted Pyracies, landed in *Poictou*, and carried off ſeveral Priſoners, for whom they had their own Demands for Ranſom.

THE young King *Hugh* dy'd *Anno* 1028. and of three Sons, *Henry*, *Robert*, and *Eudes*, *Henry* was crown'd to ſucceed *Hugh* as a Partner in the Government with his Father *Robert*; but *Robert* dy'd in the Year 1033. and now *Henry* alone reign'd King of *France*.

Henry's Mother had always been his Enemy, in Favour of his Brother *Robert* above-mention'd; but *Henry* by the Aſſiſtance of the Duke of *Normandy* defeated his Mother, and reduc'd her to a quiet Life; but ſhe was no ſooner ſubdu'd, but *Eudes* put in his Claim; but *Henry* took him and ſent him Priſoner to *Orleans*, and ſo put an end to his Projects *Anno* 1041. But *Henry* being afterward defeated by the *Normans*, dy'd in the Year 1060. after having recommended his Son *Philip* to ſucceed him in the Kingdom, tho' he was but ſeven Years old, and under the Guardianſhip of *Baldwin* Earl of *Flanders*, who enter'd upon the Regency as ſoon as King *Henry* dy'd.

CHAP. IV.

Containing the Hiſtory of the Reigns of Philip I. Lewis VI. Lewis VII. Philip II. Lewis VIII. Lewis IX. *and* Philip III. *or The Hardy.*

WHEN *Philip* came to the Crown, every Body approv'd of the Guardianſhip and Regency of Earl *Baldwin* except the *Gaſcoigns*, who apprehended that he would attempt the Deſtruction of his Pupil, to make way for himſelf, to invade the Throne in the Right of his Wife, who was King *Henry*'s Daughter; but he ſoon ſuppreſs'd thoſe Malecontents, and govern'd *France* with great Tranquility all his Life, and dy'd in the Year 1067. And Differences ariſing between his Sons *Baldwin* of *Mons*, and *Robert* the *Friſon*; the eldeſt of them was ſlain, and King *Philip* engaging in the War in Perſon, was defeated and beaten, and fell to Wrangling and Diſcord with his Subjects; upon which the Pope threatned to excommunicate him and every Body that obey'd him.

William Duke of *Normandy* conquers *England*, 66

IN the mean Time, *William* Duke of *Normandy* had fix'd himſelf upon the Throne of *England*, which was in the Year 1066. and has ſince been recorded in *England* by the Name and Title of *William the Conqueror*, who before he went to invade *England*, did in the *French* King's Preſence, make over his Dutchy of *Normandy* to his Son *Robert*, and ſettled him in it accordingly.

Philip King of *France*, taking a Diſlike to his Wife *Bertha*, wanted to be divorc'd from her, under a Pretence of too near a Conſanguinity, notwithſtanding that he had by her a Son nam'd *Lewis*, and a Daughter *Conſtance*. Duke *William* (then King of *England*) was at that Time under a Courſe of Diet at *Roan* to reduce his over Fatneſs, at which, *Philip* King of *France* by way of Ridicule, ſent to him to know, *when he would be up after his lying in*; but Duke *William* ſmartly anſwer'd, *That when he came abroad, he would viſit him with* 10000 *Lances inſtead of Candles*, and he was ſoon after as good as his Word; for he deſtroy'd all the *French Vexin*, and fore'd and and burnt *Mantes*; but he dy'd ſoon after, *viz.* in the Year 1087.

IN the Year 1095. *Urban* II. came for Refuge into *France*, the Emperor having depos'd him in the Council of *Clermont*, where *Peter* the Hermit appear'd with Remonſtrances to excite them to undertake the Croiſade againſt the *Turks*, the Heat whereof laſted above two hundred Years, and proved a great Detriment both to the Nobility and common People; for the Popes and Kings in the mean Time found great Opportunities of taking Steps to make themſelves abſolute; but as it will be a Sort of a Digreſſion to enlarge upon this Subject in a particular Hiſtory of *France*, I ſhall only obſerve that this Affair gave the firſt Riſe to Coats of Arms; for in this mixt Multitude, where ſo many were united in one common Cauſe againſt the *Turks*, they diſtinguiſh'd themſelves by ſome Symbol or Badge in their Enſigns. The *Roman* Legions were diſtinguiſh'd by the different painting of their Shields and Bucklers; others adorn'd them with Devices, denoting their Birth, Parentage, or the Heroick Actions of their Anceſtors; others with Devices of Wit and Humour; and at laſt thoſe Devices became ſo common, Men were diſtinguiſh'd by them as Men are now by Surnames, which were then but little uſed; and hence came the Cuſtom of ſome taking Croſſes in their Shields, ſome Lyons, Leopards, *&c.* which Fancy hath continued from that Time to this Day. *The firſt Riſe of Coats of Arms.*

KING *Philip* dy'd at *Melun Anno* 1108. leaving by his firſt Wife, *Lewis* and *Conſtance*, of which,

Lewis VI. ſucceeded, and was crown'd within five Days of his Father's Deceaſe. He dy'd in the thirtieth Year of his Reign and was ſucceeded by, *Lewis VI.*

Lewis VII. Son of *Lewis* VI. who taking upon him the Croiſade, ſet forward for the *Holy Land*, but he ſoon return'd with no great Succeſs; and *Henry* II. being not only King of *England*, but Duke of *Normandy*, &c. and very great, took upon him to revive the Title his Wife had to the County of *Thoulouſe*, though he never inſiſted upon the Poſſeſſion of it becauſe they were reconciled, though he would not quit his Claim.

THERE was now an entire Peace between the Crowns of *England* and *France*, and *Lewis* King *France*, apply'd himſelf wholly to the Adminiſtration of Juſtice, and ſuppreſſing Diſorders; and not only ſo, but the two Kings, *Lewis* VII. of *France*, and *Henry* II. of *England*, contracted an Alliance, to ſtand by each other; and under this Reſolution, they march'd jointly to *Languedoc* to expel the *Albigenſes*; but *Lewis* grown old, had a Mind to have his Son *Philip* crown'd, which was done *Anno* 1179. and *Lewis* dy'd at *Paris* in *September Anno* 1180. in the ſixty third or ſixty fourth Year of his Age. He was ſucceeded by his Son,

Philip

Philip. *Philip* the Conqueror, or *Augustus*: He publiſhed an Edict againſt Blaſphemy, and expelled Players, Comedians, and Buffoonery, as being perſwaded, that to give to Players was to ſacrifice to Devils. It would be well if we had as good Notions of Religion now, as they ſeemed to have in thoſe Times which we call Times of Ignorance; but ſome of our reformed Chriſtians, under whatever Denomination, ſtick not to ſay, that there is as much to be learned by a Play, as by a Sermon! A wonderful Reformation from Ignorance and Debauchery, and Improvement in Chriſtian Knowledge, were we to repreſent Things ironically, or by the quite contrary.

Philip ſicken'd and dy'd of an Ague in *July*, 1222, at about 48 Years of Age, he left generous Legacies to pious Uſes, and was ſucceeded by his Son.

Lewis VIII. *Lewis*, whom he had not cauſed to be crowned in his own life-time, as his Predeceſſors Cuſtom was; but he was crowned at *Rheims*, with his Wife *Blanche*, *Aug.* 10, 1223, but he dy'd after a fruitleſs Attempt upon *Avignon*, *Tholouſe*, *&c.* his Conſtitution being broke with the Fatigue, or, as ſome ſay, poiſoned by one of his Grandees in the Country of *Avergne*.

Lewis VIII. was ſucceeded by his eldeſt Son *Lewis* IX. *Lewis* IX. ſurnamed *Saint Lewis*; he was married in the Year 1235, to *Margaret*, eldeſt Daughter to *Raymond*, Earl of *Provence*, and at the ſame Time the Earl of *Champagne* made a Defection, which was puniſhed with the Loſs of *Mountereau*, and other Places.

Soon after this Time, the Duke *de Montaine*, or Prince of the *Aſſaſſines*, who were ſettled in the mountainous Cantons of *Syria*, diſpatched two Murderers into *France*, upon no leſs Expedition than to kill the King; but whether his Conſcience pricked him, or he doubted his Succeſs, ſo it was that he countermanded them, and ſent the King a Caution to take care of himſelf.

Iſabella, Wife of *John*, late King of *England*, but ſince married to *Hugh de la March*, would not ſuffer her Husband to do Homage to *Alphonſo* the new Earl of *Poitow*, but the King, to force him to it, took ſeveral of his Towns, and demoliſhed *Fountenay*, where *Alphonſo* was wounded with an Arrow. The King of *England*, and *Richard* his Son, landed at *Bourdeaux*, in hopes of being joined by all *Poitow*, but they being too late, and their Expectations diſappointed, *Lewis* in Perſon attacked and repulſed them.

In the Year 1244, the *Saracens* did a great deal of Miſchief in the holy Land, and being aſſiſted by the *Choraſmins* from *Perſia* and *Arabia*, they quite ruined and laid waſte all the holy Places about *Jeruſalem*; and, as they called it, drowned them in the Blood of the Chriſtians; which *Lewis* hearing of, he vowed that if he lived he would go in Perſon againſt thoſe Heathens; upon which Expedition he ſet out in the Year 1248, conſtituting his Mother the Queen Regent, and embarked at *Languedoc* in *Auguſt*, and in *September* arrived at *Cyprus*, where he wintered to wait the reſt of his Forces and Ammunition, and in the mean Time received the agreeable News, that the great Cham, and a great Number of his chief Officers, had embraced Chriſtianity, and that his Army had deſtroyed the Sultan of *Bagdat*, the moſt powerful of all the *Mahometan* Princes; and the *Armenian* Ambaſſadors alſo confirmed to him at the ſame Time the Truth of their having overcome the Sultan of *Iconium*, to whom they were then tributary.

The King thus equipped, put to Sea, and in *June* arrived before *Damiata* in *Ægypt*, where he beat the *Saracens*, and landed.

In *September* the King's Brother *Alphonſo* came to him with a new Reinforcement; and the King with all this Force advanced towards the *Saracens* Army, drawn up at *Maſſoura*. *Lewis* encamped upon an Arm of the *Nile*, called *Raschit*; and having paſſed the *Raschit*, fell upon the Infidels, and in two Days Time obtained a compleat Victory over them. *Lewis*, like a Hero in Perſon, performing the chief part with his own hand; but the Chriſtian Army being encamped near *Pharamia*, to refreſh themſelves, they were hemmed in by a mighty Army of *Saracens*, that they could no Way contrive an Eſcape, and by Famine and the Scurvy, they were reduced to miſerable Circumſtances, and endeavouring to eſcape to *Damiata*, they were utterly defeated in their March; and *Lewis*, King of *France*, with his Brothers *Alphonſo* and *Charles*, were all taken Priſoners; upon which King *Lewis* fell ſick, but *Melec Sala*, though his Enemy, and a *Saracen* General, took ſuch Care of him, that he not only recovered his Health, but he and *Melech* entered into a Truce for ten Years, which was afterwards confirmed by *Terquenier*, who was then elected Sultan. The Chriſtian Priſoners were now all ſet at Liberty, on Condition they ſurrendered *Damiata*, and releaſed the *Saracen* Slaves, and gave 400,000 Livres to the *Saracens*, in ready Specie, all which was punctually performed.

KING *Lewis*'s Forces, as well as his Money, being now pretty much impaired, he contented himſelf to ſet ſail from *Ægypt*, to *Ptolomais*; but of about 30000 fighting Men that he brought from Home, he had not above 6000 left, which were too few for ſuch an Enterprize. *Lewis*'s Queen, *Blanche*, died *Anno* 1252, and ſhe being Regent or Guardian of the Realm, they deſired him to return home, which he did, and landed at *Marſeilles*, in *July*, 1254. He died in the 75th Year of his Age, and the 44th of his Reign.

Philip III. *Lewis* was ſucceeded by *Philip* III. ſurnamed the *Hardy*, he was crowned at *Rheims*, in *Auguſt* 1271. After he had been a Widower four Years, he took to Wife, *Mary*, the Daughter of *Henry*, and Siſter to *John*, Duke of *Brabant*. *Peter de la Broſs*, being a Court Sycophant, and thinking he had nothing to be afraid of but the young Queen, endeavoured to ruin her; and, in order to that, procured an Incendiary to charge her with the Death of the young Prince, by Poiſoning him; and the Charge was ſo far believed, that ſhe was near to have been burnt alive; but her Brother, the Duke of *Brabant*, ſent a Gentleman, who generouſly offered to prove her Innocency, or loſe his Life in a Duel with *Peter de la Broſs*. And when the Challenge came to perfidious *Peter*, his Heart failed him, and he declined the Duel; which was allowed to be a ſufficient Teſtimony of her Innocency, and his Guilt; and accordingly ſhe was acquitted with Honour, and he was hanged as a villanous Incendiary.

Philip IV. *Philip* died *Anno* 1285, and was ſucceeded by his Son *Philip* IV. He was crowned in *January*, 1286, when *Edward* I. King of *England*, coming to *Amiens* in *France*, *Philip* ſent ſeveral Lords to receive him, and conduct him to *Paris*, where he was handſomely treated, and was preſent in the *French* Parliament held after *Eaſter*, and preſs'd earneſtly that he might have ſome Reparation for *Normandy*, and other Countries, but without any Succeſs; which when he found, he received ſolemn

ſolemn Embaſſies from the Kings of *Caſtile*, *Arragon*, and *Sicily*, all Enemies to *France*, which gave *Philip* great Cauſe of Jealouſy, though at the ſame Time King *Edward* uſed his Intereſt not to aggravate, but to compoſe the Differences between *France* and the Kings of *Caſtile*, *Arragon*, and other Places at Variance with *France*, and in the Year 1290, *Philip* renounced all his Pretenſions to *Caſtile*.

About the Year 1292, a ſmall Spark bred a furious Flame between the two Kingdoms of *England* and *France*; for being at Peace, an *Engliſh* Mariner, and one of *Normandy*, being a-ſhore, upon the Coaſt of *Guienne*, to take in freſh Water, they quarrelled, and the *French* reſenting the Affront, which they imagined their Countryman had received, began to privateer, and make Repriſals upon the *Engliſh*, by which the *Engliſh* were Sufferers; and there being no open Rupture, King *Edward* demanded Satisfaction for the Damage that his Subjects had ſuſtained by the *French* Privateers; but *Philip* was ſo far from that, that he ſummoned King *Edward* to appear in his Parliament, as if he had been a Subject of his. King *Edward* condeſcended to ſend his Brother *Edmund*, but *Philip*, not ſatisfied with that Anſwer, cauſed him to be declared contumacious, and ordered his Lands to be ſeized; and accordingly the Conſtable of *France* ſeized ſeveral Cities in *Guienne*, and even *Bourdeaux*, the Capital; and *France* being thus embroiled, a Commotion happened at *Roan*, but that was ſuppreſt by hanging the chief Ring-leaders, and baniſhing, or otherwiſe ruining the reſt.

King *Edward* of *England*, being nettled for his Loſſes ſuſtained in *Guienne*, ſolicited the Emperor *Adolphus*, and the Earl of *Flanders*, againſt *France*, the firſt of whom ſent a Defiance to *Philip* in a haughty Stile, and *Philip* ſhewed his Contempt of his Threats, by ſending him for Anſwer, a blank Sheet of white Paper, which put an End to the Emperor's Threats; and King *Edward* having upon his Hands the Conqueſt of *Scotland*, as well as the Recovery of what he had loſt in *Guienne*; and thinking that he had pretty well ſecured *Scotland*, he, with the help of Friends and Allies, prepared a powerful Fleet. But *Philip*, to give him a Diverſion, induced the *Scots* to break off with *Edward*, and make an Alliance with *France*; and not reſting here, the *French* made an Inſurrection in *Wales*, and made ſuch Havock in *Pembrokeſhire*, that he was obliged to go in Perſon into that Country, and till that was ſettled, lay aſide his Expedition to *Guienne*.

While theſe Broils were on Foot, the proud Pope *Boniface* ſent his Commands to King *Edward* of *England*, and *Philip* of *France*, to make a Truce, and go to the holy War, upon Pain of Excommunication; but *Philip* deny'd the Pope's Authority any further, than to adviſe, but not to compel, and *Edward* no more regarding the Pope than *Philip* did, he fell upon the *Scots*, and took *John Baliol* (who was then as King of the *Scots*) Priſoner, and determined to keep him ſecure till he had finiſhed his War with *France*; but in the mean Time the Ambaſſadors on both Sides, had continued the Truce between *England* and *France*, to the end of the Year, and therein it was agreed that *Edward* ſhould marry *Margaret*, *Philip*'s Siſter, and his Son *Edward* ſhould marry *Iſabella*, *Philip*'s Daughter. 1298

In the Year 1302, the People of *Flanders*, not able to bear the Impoſt laid upon them, revolted from *France*, whereupon King *Philip* ſent an Army to chaſtiſe and reduce them; but the *Flemings* gained the Victory, with the Loſs of 20,000 *Frenchmen*, of which Number *Artois* the *French* Commander was one, with many great Men more, of which was *Peter Flota*, the buſy Perſon, by whoſe Inſtigations thoſe new Taxes were laid on, which cauſed the Diſturbance.

The Truce with *France* was renewed from Time to Time, till at length it came to a Peace; and *John Baliol* was ſet at Liberty, but the *Scots* would not own him, and ſo he died a private Man in *France*.

King *Edward* died in the Year 1307, and about that Time the Templars grew ſo rich and proud, and made ſo little Account either of temporal or eccleſiaſtical Authority, that King *Philip*, by the Pope's Conſent, cauſed them all to be ſeized throughout the Kingdom, their Eſtates to be confiſcated, their Temple and Treaſure to be applied to his own Uſe; and at the ſame Time the Pope writ to the grand Maſter *Molay*, to come from *Cyprus* (where he was valiantly maintaining a War with the *Turks*) to *Paris*; which he, and ſixteen Knights of his Order, obeyed; but were no ſooner arriv'd, but they were ſeized and proſecuted, and fifty of them burnt alive on a ſlow Fire, denying at their Death, what they had confeſs'd on the Rack, and *Philip* procured the Templars to be thus ſeverely puniſhed, in moſt Parts of *Chriſtendom*: And, after this, at a Council held at *Vienne*, the Pope declared it was convok'd for the Proceſs of the Templars, the Recovery of the holy Land, and for the Extirpation of Hereſy; and accordingly the order of the Templars was condemn'd and aboliſh'd, and their Eſtates left to the Pope's diſpoſing, who gave them to the Knights of *Jeruſalem*, then ſettled at *Rhodes*.

The Grand Maſter *Molay*, and the Dauphin's Brother, retracted, but too late, for they were burnt alive on the 11th of *March*, 1314; but it is reported, that *Molay*, by his wonderful Conſtancy, made ſeveral People believe he was innocent; for he ſummoned the Pope to appear before the Judgment Seat of God in forty Days, and the King in the Compaſs of a Year, and they both died within the Compaſs of that Time, for *Philip* died and finiſhed his Reign on the 24th of *November*, that ſame Year.

Lewis X. ſurnamed *Hutin*, ſucceeded to the Crown; he was the eldeſt Son of *Philip* IV. He was crowned the third of *Auguſt*, but his Reign was but ſhort, for they attempted to make away with him by Sorceries and Enchantments, and by waxen Images, to make him languiſh as long as they pleaſed, and then die: But however they might miſs of that, they ſupply'd it by giving him Poiſon; and he died on the 4th of *June*, 1316, leaving his Wife about four Months gone with Child. *Lewis* X.

Philip, V. ſurnamed the *Long*, came next to the Throne, and he was crown'd at *Rheims*, on the 9th of *January*, 1317; his Taxes and Exactions made him hated by both Clergy and Laity; and, under the Curſes of both, he died, when he had reigned but five Years. *Philip* V.

Charles IV. ſurnamed the *Fair*, ſucceeded, and was crowned at *Rheims*, *Feb.* 11. 1322. His firſt Buſineſs was to enquire into the Adminiſtration of the late Reign, and puniſh corrupt Miniſters and Agents; among which he found *Gerrard de la Guerre*, a Perſon of mean Extraction, had been a chief Manager of the Treaſury, but though there might be thoſe as wicked and as covetous in the Adminiſtration then, as ever has been ſince, yet obſerve how Juſtice purſued them; *Gerrard* was put upon the Rack to be examined, and was ſo ſeverely uſed, that he died *Charles* IV.

died under his Torture. One would think that such Discipline used at this Day, if such Occasions should offer, would deter People from such corrupt Practices. But that was not all, for his dead Body was dragged thro' the Streets, and hanged up on the Gallows at *Paris*. Then they made search for the Farmers of the Revenues, who were mostly *Lombards* and *Italians*, miserable Usurers and Exactors, and their Estates they confiscated, and sent them home to their own Countries, as miserable as they came from thence.

King *Charles* took such a Dislike at *Edward* II. King of *England*, for not assisting at his Coronation, and some other Affronts, that King *Charles* sent *Charles de Valois*, his Uncle, into *Guienne*, to *Edward*, Earl of *Kent*, King *Edward*'s Brother, where he so straitened him, that he compelled him to capitulate, quit the Place, and return to *England*, to perswade King *Edward* to come to an Accommodation; or, if not, that he must, upon Honour, come back and surrender himself as a Prisoner. But while this was doing, the Earl of *Valois* compleated the Conquest of *Guienne*, (except *Bourdeaux*, *St. Severe*, and *Bayonne*;) upon which Queen *Isabel*, *Charles*'s Sister, with her eldest Son Prince *Edward*, came into *France*, and got her Son invested in the Dutchy of *Guienne*, and the Earldom of *Ponthieu*.

At this Time the two *Spencers* had gained such an Ascendency over the King, that they did what they pleased in *England*. (But more of them when we come to treat of our own Country, as hoping that our Constitution is now sufficiently guarded against such monstrous Ministers or Agents; or, however, wishing it may be so.) King *Charles* died the First of *February*, 1327, in the Seventh Year of his Reign, and was succeeded by

Philip VI. 1327. *Philip* VI. who was crowned at *Rheims*, in *May*. He was surnamed the *Fortunate*, because his three Cousins died, and made Way for his coming to the Crown; but King *Edward* III. being now in his full Vigour, and having subdued *Scotland*, attempted to recover *France* by the Sword; and, to break Way, he accused *Philip* to the Pope, for having unjustly taken that Crown from him, during his Minority; and accordingly sent the Bishop of *Lincoln* to defy King *Philip* and his Allies. These Troubles prevented King *Philip*'s making an Expedition to the *Holy Land*, as he intended; and therefore discharging the worst of his Sailors, he kept the *Genoese*, and others the best of them, and sent a Fleet to the Coast of *England*. The Men landed at *Southampton*, plundered it and retired.

The Cities of *Flanders*, of which *Ghent* was the chief, were in a Surprize for some Time, between the Fear of the Power of *France*, and the Distress they were drove to by the *English*, because the latter had prohibited the Exportation of their Wool thither: However, the *Flemings*, in an Assembly held at *Brussels*, were willing to acknowledge *Edward* for King of *France*, provided he would take the Title and Arms upon him, and they promised him their Assistance; and King *Edward* this Year forbid that any should call *Philip* by the 1339. Title of King of *France*.

King *Edward* now besieged *Calais* so closely, 1347. that though *Philip* came to relieve it with 150,000 Men, yet all was in vain, King *Edward*'s Forces were so fortify'd and entrench'd; so that the Besieged being drove to the utmost Necessity, by Famine, without any Prospect of Relief, they surrendered, after a Year's Siege, wanting only eight Days; but King *Edward* not only required the Surrender of the Place, but to have six of their principal Burghers, to do with as he pleased; but they all were timorous, under Apprehension of being cruelly used, so that no Body cared to be one of that Six, till *Eustace du St. Pierre*, a Citizen, freely offered to be one; and, by his Example, the Six were soon compleated. They went out in their Shirts, with Ropes about their Necks, to deliver the Keys to King *Edward*; who, nevertheless, was obstinately bent to sacrifice them, but was prevailed upon to the contrary, by the Importunity of his Wife. However, he turned out all the Citizens and *French* Inhabitants of *Calais*, and peopled the Town with natural-born *English*.

King *Philip* dy'd in *August*, 1350, and was succeeded by

King *John*. He was crowned at *Rheims*, in *September*, the same Year; and, after a bloody and troublesome Reign of almost fourteen Years, he dy'd, and left the Crown to his Son *Charles* V. of whom we shall speak in the next Chapter. King *John*.

CHAP. V.

Of the Reigns of Charles V. Charles VI. Charles VII. Lewis XI. Charles VIII. *and* Lewis XII.

King *Charles* V. was surnamed the Wise, or the Eloquent; he was crowned at *Rheims*, *May* the 19th, 1364. In a few Years of his Reign, the *French* Affairs seemed to succeed better than the *English*; for the Prince of *Wales* having laid a Tax upon *Guienne*, the Lords resented it, and carried a Complaint to the Prince, but he rejected it; upon which they had Recourse to the King of *France*; who, thereupon, formed a Design against the *English*, and declared War against them, and calling a Parliament, they made a Decree, wherein, for Rebellion, Contempt and Disobedience, they declared all the Lands in *France*, held by the King of *England*, to be forfeited and confiscated; and to this King *Charles* added the Force of Religion and Eloquence, enjoining publick Fasts and Processions all over his Kingdom. The Archbishop of *Tholouse*, at the same Time, by his Intrigues, recovered above fifty Cities or Castles in *Guienne*, and amongst others, that of *Cahors*.

The King of *England*, in order to make Reprisals upon *France*, and to gain the *Gascons*, first sent a general Pardon to them, with a Promise upon Oath, that he would raise no more new Taxes; but they were so prejudiced, that all those Promises could not reclaim them. The *French* made Incursions into *Vienne*, as the *English* did into its Neighbourhood; but King *Charles* afraid to have the *English* so near his own Door, endeavoured to divert them, by landing some Troops

Troops in *England* under the Command of his Brother *Philip*; but as they were going aboard at *Harfleur*, News was brought, that *John*, Duke of *Lancaſter*, was landed at *Calais*, and made Incurſions into the *French* Territories; upon which, he quitted his Deſign of the Invaſion, and turned his Hand againſt his Invaders. *Lancaſter* ſeeing him in the Field, poſted himſelf upon the Hill of *Tournham*, between *Ardres* and *Guiſnes*, and *Philip* encamped over againſt him, as though he would attack him, or hem him in; but he grew ſick of the Undertaking, and disbanded his Army, which gave *Lancaſter* an Opportunity to over-run the Country as far as *Harfleur* and *Pontieu*, and took *Hugh de Caſtillon* Priſoner, who was Commander of the Croſs-Bows; and had, in King *Charles*'s Name, ſeiz'd that Country.

At the ſame Time, *Lancaſter*, with Sir *Robert Knolles*, and their Forces, which conſiſted of about thirty thouſand Men, ſtruck a Terror thro' all *France*, and ravaged the Country round *Paris*; and, about the Year 1377, a Conſpiracy was formed againſt King *Charles*, in *France*, and their Deſign was to poiſon him, which they ſo far effected as to give him the Doſe, but by the Diligence of a Phyſician of the Emperor it was prevented performing the intended Execution, by his making an Iſſue in his Arm; but that ſtopping, he dyed in *September* 1381. He had two Sons, *Lewis* Duke of *Orleans*, and

Charles VI. who ſucceeded his Father; he was a Minor of twelve years of Age when he came to the Crown, but he prov'd weak, and when married, his Queen took the opportunity of being an ill Wife, and when he had Children by her, ſhe was alſo an unnatural Mother, and accordingly the Nobles grew licentious, the Subjects ſeditious; all which hurry'd *France* into an Abyſs of Miſery. But to return to his State of Minority; the Duke of *Anjou*, as Regent, diſpoſed of Offices and Commands as he pleas'd; but the Dukes of *Burgundy* and *Bourbon* not willing to ſubmit to ſuch arbitrary Proceedings, inſiſted upon having the King crowned; but the Regent alledg'd that the King ought not to be crowned till he was fourteen years of Age; however, after a hot Diſpute, he was immediately crowned, receiving the Oaths and Homage of his Subjects, and all publick Acts went in his Name.

In the Year 1385, King *Charles* was married to *Iſabella*, Daughter to *Stephen* Duke of *Bavaria*, and being now come to about twenty years of Age, he took the Government upon himſelf, and diſcharged his Uncle from his Regency.

The two Houſes of *Orleans* and *Burgundy*, being now at ſuch Variance, that a Union ſeem'd next to impoſſible, King *Henry* V. of *England* took this advantage to declare his Pretenſions to *France*, as ſuppoſing he had a divided People to deal with, and that they would therefore be the eaſier overcome; accordingly he landed at *Havre de Grace* and took *Harfleur*; and the *French* ſeeing this, reſolved to meet the *Engliſh* and give them Battle, which accordingly they did at *Agin-Court* in the County of St. *Paul*; but though the *French* were forty Thouſand to fifteen Thouſand *Engliſh*, yet of the *French* there were ſix Thouſand ſlain, to ſixteen Hundred *Engliſh*, beſides other fatal Conſequences to the *French*, that attended this Battle. Afterwards King *Henry* took *Roan*, and made his triumphant Entry into it, *Jan.* 19, 1419.

King *Henry*'s Succeſs was ſo great in *France*, that they began to offer him Propoſals of Peace, and it was agreed, that King *Charles* ſhould name and own King *Henry* for his Heir to the Crown of *France*; but that, however, he ſhould not take the Title of King of *France* upon him, as long as *Charles* liv'd, only that he ſhould have the Quality of Regent, and the Government of the Kingdom. That *France* and *England* ſhould be united, and held by *Henry* and his Heirs; but that each ſhould be governed by their own Laws, and the Rights and Privileges of both ſhould be inviolably preſerved. After which King *Henry* reſided ſome Time at *Paris*, and ſent to *England* for a Supply of Men and Money. But, in the midſt of all his Grandeur, he dy'd in the Prime of his Years, in the latter End of *Auguſt*, in the Year 1422; and *Charles*, King of *France*, did not long ſucceed him, but dy'd in the 43d Year of his Reign, and the 55th of his Age, and was ſucceeded in the Kingdom by his 6th Son, but the third then living, which was

Charles VII. He was at the Caſtle of *Eſpailly* when he received the News of his Father's Death. He was crowned at *Poictiers* in *November*, 1422; he was very unfortunate; and, in a Year's Time received melancholy News from all Parts, as of the taking of *Menlane*, *Crotay*, *Compeigne*, and *Baſas*, in *Gaſcoigny*, and, which was the worſt, the Defeat of his Men before *Crevant*, beſieged by the Earl of *Salisbury*, who overthrew the Conſtable *Bouckaine*, and the Marſhal *Severac*, who went to relieve *Crevant*, but loſt a thouſand Men, and about as many were made Priſoners, of which the Conſtable was one; and the next Year was not much better, for the Duke of *Bedford* defeated the *French* at *Verneuil*, and killed four thouſand of their Men, and took the Duke of *Alenſon*, the *Mareſchal de la Fayette*, and about three hundred Gentlemen, Priſoners.

In the Year 1428, the Earl of *Salisbury* beſieged *Orleans*, on the 12th of *October*, but loſt his Life at that Siege by a Cannon Ball; but the Beſiegers ſucceeded ſo well, that the Place was deſtitute of all Hopes of holding out againſt the *Engliſh*, till they recovered freſh Courage by the following Accident.

About the end of *February*, the Governor of *Vaucouleurs* ſent a young Woman of Eighteen or twenty Years of Age, to the King, who affirmed ſhe had a poſitive Commiſſion from God to relieve *Orleans*, and cauſe the King to be crowned at *Rheims*, and that ſhe was frequently importuned to execute this Commiſſion, by the Apparitions of Angels and Saints. Her Name was *Joan*, or *Jane*; ſhe was bred up to keep Sheep; ſhe knew the King amidſt the Throng, and thoſe who examined her, affirmed, that there was ſomething ſupernatural in her Behaviour. She ſent for a Sword that lay in a Knight's Tomb, upon whoſe Blade were ſeveral Croſſes and Flower-de-Luces engraven, and the King openly affirmed, that ſhe had divined a very great Secret, not known to any but himſelf: Upon which they gave her an Army, and an Equipage, with proper Perſons to command under her. She wrote to the *Engliſh* in the Name of God to leave the Kingdom of *France* to the lawful Heir; or, if not, ſhe would expel them by Force; but they detained her Herald Priſoner, with a Deſign to have burnt him as a Confederate of *Joan*'s, whom they reputed to be a Witch. However, he was found in Fetters when the City was relieved. After this, *Joan* proceeds with her Expedition; and, having firſt thrown Proviſions into *Orleans*, ſhe entred the City in Perſon, and the Beſieged believing her to be ſent from Heaven, they reſumed their Courage, and ſally'd out with her at the Head of them, and on the 12th of *May* raiſed the Siege,

Siege, and diſlodged the *Engliſh* from all Places in the Country thereabouts.

The ſecond Part of her Commiſſion was to cauſe the King to be crowned at *Rheims*, which ſhe actually accompliſhed *July* 7. 1429; and the King, as a Recompence for *Joan*'s Services, ennobled her, her Father, and three Brothers, and all their Deſcendants by the Females, as well as the Males, and changed their Names from *de Arc*, to *Lucy*, or *Lily*, giving them a Coat of Arms peculiar to the Family.

Joan burnt

But *Joan* fell ſhort of Infallibility; for ſhe was taken Priſoner at the Siege of *Compeigne*, by a Gentleman of *Picardy*, who ſold her to *John de Luxemberg*, one of the Generals, and he again to the *Engliſh*, for ten thouſand Livres down, and five hundred Livres yearly Penſion; and the *Engliſh*, enraged to have been worſted by a young Woman, procured her to be try'd for a Witch, in the eccleſiaſtical Court, and charged her with being a Seducer, a Heretick, *&c.* and ſhe was accordingly burnt alive in the Market-Place at *Roan*, on the 30th of *May*, 1432.

King *Charles* by ſome means or other got Information, that his Domeſticks conſpired to take away his Life; with which, and his own Conceit and Jealouſy, he continually fancied, that he ſaw nothing but Daggers, Poiſon, and the like, and was afraid to take any Victuals and Drink from any Hand whatſoever; and ſo depray'd his Appetite by faſting, till when he would have eaten he could not, and ſo dy'd with Hunger *July* 22. in the thirty ninth Year of his Reign, and the ſixtieth of his Age, *Anno* 1461.

Lewis XI. *Charles* being dead, he was ſucceeded by his Son *Lewis* XI. He was crown'd at *Rheims* on the 15th of *Auguſt* 1461. and made his publick Entry into *Paris* on the laſt of the ſame Month; but as ſoon as he was fix'd upon the Throne, he turn'd out all the Officers of the King's Houſhold, as alſo thoſe belonging to the War, Judicature, and Treaſury, and took Delight to ruin what his Father had promoted or ſet up. He reſtor'd the Count *Armagnac* to his Eſtate, oppreſs'd the People with Taxes, and ſtripp'd the Nobility.

The King continued to exerciſe his Severities upon his Subjects, but he had a ſubtle projecting Genius. He contriv'd to ſow the Seeds of Diſſention among his Enemies, and to diſ-unite the Duke of *Burgundy* from the reſt of his Confederates in Alliance with him againſt *Lewis*; and in Order thereunto, he propoſed an Interview with the Duke of *Burgundy*; and to find him, he went to *Peronne* without any Guards, but only the Cardinal *de Ballue*, the Duke of *Bourbon*, and two or three other Lords, to ſhew what an entire Confidence he had; but ſoon after came three Princes of the Houſe of *Savoy* thither, and divers Lords, all Enemies to the King, and lodg'd in the Town of *Peronne*; but the King was ſo terrified at the Sight of them, that he deſired to be lodg'd in the Caſtle; and, what made him in more Danger, he had, before this, ſent Ambaſſadors to order the *Liegois* to take up Arms; and, not having ſince countermanded it, they were preſently in Arms, and took *Tongres*, at which the Duke was ſo enraged, that he cauſed the Caſtle Gates to be ſhut, and could ſcarce forbear revenging himſelf upon the King; who, for three Days together, was in the greateſt Agonies imaginable, as knowing himſelf now in the Hands of his juſtly exaſperated Enemies, and People that hated him in the higheſt Degree, and in a Houſe at the Foot of that Tower where the Count *Vermadois* had put *Charles the Simple* to Death: But, being of a cunning inſinuating Genius, he gain'd ſome of the Duke's Domeſticks to himſelf; and, by their Means, got himſelf introduced to a perſonal Conference with the Duke, at the Duke's own Houſe; but, the appointed Time being come, and, the Duke approaching him, *Lewis* was ſo afraid, that he ſaid to the Duke, *Brother, am I ſafe in your Houſe?* To which the Duke reply'd, *Yes Sir, ſo ſafe, that if I ſaw an Arrow come towards you, I would interpoſe myſelf to ſave you:* And, upon this Reconciliation it was agreed, that the *Burgundians* ſhould have the Counties of *Champaign* and *Brie*, and the King was to follow the *Burgundians* to the Deſtruction of the *Liegois*, who bravely defended themſelves for a Time, but the Place was taken one *Sunday* after Dinner, when they were not ſo much upon their Guard.

The *Pariſians* ſtill ridiculing the King's weak Conduct, eſpecially that of his being decoyed to his Confinement at *Peronne*, they taught ſome Birds that were capable of ſpeaking, as Parrots, or the like, to repeat the Word *Peronne*; which the King taking amiſs, he ſent to take away not only all their Birds that could ſpeak, but Cranes, Swans, Cormorants, as alſo Deers, Goats, *&c.*

Lewis thinking cunningly to allure the Greateſt in his Kingdom to come under his Clutches, inſtituted a ſet of Knights, called the Order of St. *Michael*, and limited their Number to 36; but he needed not to have reſtrained it's Number, for he never lived to ſee that Number filled up; for the Duke of *Bretagne* rejected it, and the Duke of *Burgundy* preferr'd the Order of the Garter before it, as more antient and honourable, and wore the Badge to his dying Day.

Edward IV. had an Army in *France*, and was 1475.
ravaging where he found Opportunity, till Propoſals of Peace were offered him by *Lewis* King of *France*, but at firſt King *Edward*'s Plenipotentiaries would not allow *Lewis* any other Title in the Negotiation, but *their Maſter's Couſin*, Lewis *of* France, which he ſubmitted to, and at laſt they agreed to a Truce for nine Years, in which the Dukes of *Bretagne* and *Burgundy* might be included, provided the *French* ſhould pay the *Engliſh* 73000 Crowns ready Money, and that the Dauphin ſhould be married to the King of of *England's* Daughter, for the Maintenance of whom King *Lewis* ſhould allow the Revenue of *Guienne*, for nine Years, or 50000 *l. per Annum*, which ſhould be carried to the Tower of *London*, for the Uſe of the King of *England*.

While the Time was approaching for the Kings to ſign the Treaty, King *Edward* advanced with his Army within half a League of *Amiens*, and *Lewis* ſent him three hundred Waggons laden with the beſt Wines, and order'd, that as many *Engliſh* as deſired it, ſhould go into *Amiens*, where they were plentifully entertained for three or four Days; and it was agreed that the two Kings ſhould have an Interview on the Bridge of *Pequigny*, upon the *Somme*, a Barrier made between them, and there the Peace was ratify'd, on the 29th of *Auguſt*, 1476.

Upon this King *Edward* returned home to *England*, and the Duke of *Burgundy* would not accept of the Truce till *October*; and the Conſtable who ridicul'd the Kings of *England* and *France*, and the Duke of *Burgundy*, found that he had now, when they were agreed, ſet them all againſt him, ſo that he knew not where to ſhelter himſelf ſafely, and which was ſtill worſe, his Wife, who was the Queen's Siſter, died. He, therefore, retired to the Duke of *Burgundy*; but he was no ſooner gone out of his Town of *St. Quintin*, but the King ſeized it, and acquainting the Duke of *Burgundy* with it, demanded the Conſtable to be delivered up as a

Priſoner

Priſoner, which was accordingly done, and he was condemned, and in *December* he was executed at the *Greve*.

The Duke of *Burgundy*, not content with his preſent Dominions, fell upon the *Switzers*, but they received him in the open Field, *April* the 5th, where he loſt his Infantry and rich Equipage; and on the 20th of *June*, he loſt all his Forces of 18000 Men, before *Murat*; and, to compleat his Tragedy, he loſt his Life; and, with it fell the Grandeur of his Houſe, on the 5th of *January* following, before *Nancis*.

He was ſucceeded by his Daughter, Princeſs *Mary*; but ſhe was now left in a poor Condition, though lately the greateſt Fortune in *Europe*, her Father having loſt all in the three laſt Battles; the Commanders and Nobles being almoſt all taken, and every Thing in ſuch a diſtracted Condition, that *Lewis* might eaſily have gained Poſſeſſion of *Burgundy*, if he would have agreed that his Son ſhould have married the Princeſs *Mary*, the Duke's Daughter, to his Son; but he ſo hated the Houſe of *Burgundy*, that he had rather their Territories ſhould fall to ſome *German* Prince, than that he ſhould ſtand in any Relation to the *Burgundian* Family, or have any Affinity with them.

But, notwithſtanding the King of *France*'s Hatred to the Houſe of *Burgundy*, the Princeſs *Mary* was belov'd elſewhere, and was married to *Maximilian*, Son of the Emperor *Frederick*, but he was but a poor Match for her. However, upon this Affinity, *Lewis* granted *Maximilian* a Year's Truce, and reſtored to him *Queſnoy*, *Bouchain*, and *Cambray*, which were ſituate within the Bounds of the Empire.

1478 The Truce being now expired, *Maximilian* ſent ſome Forces into *Burgundy*; who, for the Love of their Princeſs *Mary*, and the Houſe of *Burgundy*, couragiouſly took ſeveral great Places, and went on with ſo much Reſolution, that had the Emperor *Frederick* given him any Aſſiſtance, he had probably over-run the whole Dutchy; but, for want of Men and Money, he was almoſt as eaſily drove out again. Whereupon the Truces were again renewed for a Time.

King *Lewis* returning to *Tours*, fell into one of his old fainting Fits, which amounted to ſuch a Sort of a Melancholy, or Hypo, that he was afraid, or jealous, of every Thing, and eſpecially of his neareſt Relations; and, upon that Account, kept the Queen a Priſoner in the *Savoy*. He bred his Son at *Amboiſe*, as a Captive among his Servants, leſt he ſhould aſſume Majeſty; and *Lewis* Duke of *Orleans*, the firſt Prince of the Blood, he kept always with him, leſt he ſhould improve by Converſation or Education, and married him to one of his own Daughters, a wife Princeſs 'tis true, but ugly and lame, and ſaid by his Phyſicians to be uncapable of bearing Children, and it was ſuppoſed indeed, that he had cauſed them to uſe ſome Means to prevent it.

He continued under ſuch fearful Apprehenſions of being aſſaſſinated, being drove out of his Kingdom, *&c.* that to divert theſe Thoughts, he cauſed the young Maidens to dance about his Court; the Phyſicians to play on Flagelets, and other antick Diverſions; and growing worſe, Death approaching, he call'd thoſe about him, and adviſed them thus: *Go to my Son your King, and ſerve him faithfully.* Then he ſent for his Son, and adviſed him to eaſe his Subjects, and reduce the Levies of Money, and raiſe none without the Conſent of the People. Perhaps this Advice might be the Effect of Remorſe of Conſcience, for himſelf had increaſed the Taxes to four Million, ſeven hundred Thouſand Livres, and continued it till this time of his Sickneſs, *Aug.* 29, in the Year 1483, in the 23d Year of his Reign.

Charles VIII. ſucceeded, but he being but 1483
about fourteen years of Age, there was a Charles
Diſpute about the Regency between the VIII.
next Princes of the Blood, the Dukes of *Orleans* and *Bourbon*, who both inſiſted that he ought to be treated as a Minor; not only becauſe of his tender Years, but becauſe his Father had ſhut him up at *Amboiſe*, and kept him in ignorance of any thing of Government Affairs; and upon this Diſpute, the Coronation was put off till the Year following, *viz.* 1485. in which Year on the 5th of *June* he was crowned at *Rheims*; notwithſtanding which, the two Rival Dukes of *Orleans* and *Bourbon*, together with the Dukes of *Bretagne* and *Alenſon*, the Earl of *Angouleſme*, and the Prince of *Orange*, with ſeveral others, form'd a Party againſt the Government; and being withdrawn to *Beaugancy*, they demanded an Aſſembly of the States; upon which they immediately carried the King thither, confined him, and forced him to an Accommodation.

The Arch-Duke *Maximilian*, was crowned 1486.
King of the *Romans April* 12, with *Charlemain*'s Crown, but being Poor, his Succeſs was proportioned to his Riches; he therefore retired to *Malines*, where he cauſed his Son to be kept and brought up.

The King being at *Amboiſe*, receiv'd Intelligence that the Count of *Dunois* was forming a League againſt him in favour of the Duke of *Orleans*, and that he had drawn in the Earl of *Angouleſme*, the Duke of *Lorain*, the Lords of *Pents* and *Albret*: The Friends of the Duke of *Orleans* contriv'd to carry the King away, but the Deſign being blown, *Comines* and ſome other of the Managers were ſeiz'd. *Comines* was kept Priſoner near three Years, of which Time he was cloſe ſhut up about eight Months in an Iron Cage, forfeited one fourth of his Eſtate, and confin'd to one of his own Houſes for ten Years.

The Affairs of *Bretagne* were now very much embarraſs'd about diſpoſing of the Dutcheſs *Ann*; however ſhe was married by Proxy to *Maximilian*; but King *Charles* had an Inclination to marry her, either for amorous or politick Ends, and in order thereto, ſent ſome Forces to beſiege her in *Rones*; but they were countermanded, and indeed ſhe could have made but weak Reſiſtance, for *Maximilian* was ſo weak and poor, that he could never ſpare her above two thouſand Men; therefore ſhe preſſed for Aſſiſtance from *England* and *Germany*, but in vain.

In this Diſtreſs of the Dutcheſs, it had been eaſy for King *Charles* to have taken her away by force; but he, inſtead of that, became a Suitor to her, notwithſtanding her Proxy Marriage with *Maximilian*, and of an Enemy, he became her Lover; but ſhe would not break her Faith with her betroth'd Spouſe, and beſtow her Heart upon a Prince that had treated her ſo ill; but the King employed the Duke of *Orleans* in his Intereſt, and he being much in her good Graces, prevail'd ſo far that they were married *December* 16, 1491. It was indeed expected that *Henry* VII. King of *England* would have interpoſed to 1491
prevent the Marriage, but as he did not, *Maximilian* accuſed *Charles* of having forſaken his own Wife, to raviſh the Wife of his Father-in-Law; and now *Henry* VII. ſaw his own Fault, in ſuffering the Dutcheſs, and with her *Bretagne*, to be loſt; but it being now too late, he made Peace with *France*, which was ſoon follow'd

by a Peace between the Houſes of *Auſtria* and *France* in the Year 1493.

KING *Charles* being now at Peace with his moſt potent Enemies, he began to entertain thoughts of reſuming his Title to the Kingdom of *Naples*, which had been talk'd of in that Family above 30 Years; and further to animate his Reſolution of attempting the Conqueſt of that Kingdom, the Earl of *Salerno* and other Gentlemen, who had been baniſh'd from *Naples*, came and took Sanctuary in *France*, and were there handſomly entertained. By their Advice *Lewis* reſolv'd upon the Enterprize; but upon the Rumour of this War, the King of *Naples* offer'd *Charles* Homage, with an annual Tribute of 50000 Crowns, but *Charles* rejecting
1494. the Offer, the King of *Naples* died with Grief, leaving his Son *Alphonſo* to ſucceed him.

KING *Charles* ſubſtituted the Duke of *Bourbon* Regent in his Abſence, and proceeded with only 1600 *Gens d' Arms*, each with his two Armen, three or four hundred Horſe lightly armed, 12000 Foot, with a great many young Gentlemen Volunteers tender and undiſciplin'd; and marching forward to *Tuſcany*, he took a ſmall Caſtle on the Confines of *Florence* by Storm, and then the Fort of *Serazanella*. This firſt Succeſs ſo aſtoniſh'd *Peter de Medicis*, that he deliver'd four Places that were the very Keys of the Country in the King's Hand for a limited Time, and agreed that he ſhould have Liberty, to borrow two hundred thouſand Crowns of Gold in that City.

THE King (*Lewis*) gain'd their Affections by Degrees; *Piſa* cries out for Liberty, and the King grants it; *Florence*, who always inclin'd to the *French*, took this Opportunity of *Lewis*'s Approach to baniſh *Peter de Medicis*, and recover their Liberty; and the King enter'd that City with his Army in battle Array, and himſelf armed in all Points, and the *Florentines* enter'd into a Confederacy with him, which was publickly proclaim'd in *Italy*.

THIS Succeſs of the *French* and their great Train of Artillery, bred ſuch a Terror in all the Country, that young *Ferdinand* retreated from *Aubigny*, where he was, to *Rome*, and his Uncle *Frederick* getting out of *Leghorn*, returned to *Naples*; the Places about *Rome* contended who ſhould ſurrender firſt; the *Urſines* made their Peace with *Lewis*, and the Pope himſelf was forced to let him enter into *Rome*, himſelf being retired to the Caſtle of *St. Angelo*, from whence he capitulated with him, and granted almoſt whatever he deſired, particularly to let him have five or ſix of his beſt Places for a limited Time.

ON the 28th of *January*, King *Charles* left *Rome*, and march'd towards *Naples*, and made his publick Entry into that City the 22d of *February*, and the Caſtles held out but a ſmall Time afterwards, and thus in fifteen Days he conquered the whole Kingdom of *Naples*, except only *Brindes*; but this Series of Succeſs, ſo elevated the Spirits of King *Charles* and his Courtiers, that the Government was neglected; ſeveral Cities that had ſet up *French* Colours, deſerted to the *Arragonians*, for want of ſending proper Perſons to take Poſſeſſion of them for the King; or what Governments he did confer were upon his Minions and Favourites, who were more fit to deſtroy than to defend what he had conquer'd; the King began to have Thoughts of returning home, but firſt he thought fit to make his publick Entry into *Naples* on Horſeback, with a Crown upon his Head, the Globe in his right Hand, and the Scepter in his Left, and in that State he was conducted to the Great Church, and took afreſh their Oaths of Fidelity, leaving 4000 Men to defend the Kingdom; after which he left *Naples* on the 20th of *May*, 1495. 1495

BUT this Power and Grandeur did not laſt long, for, by King *Charles* and his Nobles Neglect, the *French* Affairs declined; *Aubigny* was ſick; *Percy* ſpoil'd his Succeſs by his Pride; the *Germans* muntinied for want of Pay; the Garriſons were unprovided; and, to give the finiſhing Stroke to theſe Misfortunes, *Montpeſier* the *French* Commander ſuffer'd himſelf to be ſhut up by the three Armies of the *Venetians*, *Spaniards*, and *Arragonians*; and for want of Proviſion, capitulated to give up the whole Kingdom, in a Month's Time. The *French* Soldiers being now wore out, and *Montpeſier* himſelf dying at *Puzzoli*, the Confederates puſh'd on their Work into *Calabria*, reduced *Manfredonia* and *Cozenza*; and though they did drive the *French* out of *Daubigny*, yet they beſieged it, and the *French* were thankful for the Honour of being ſuffered to go out with flying Colours, and thus of all this great Conqueſt in *Italy* little was left, except a dangerous and then ſtrange Diſeaſe, brought firſt by the *Spaniards* from *Florida* to *Naples*, and thence call'd the *Neapolitan* Diſeaſe, with which the *French* by Cohabiting with the *Neapolitans* got themſelves affected, or rather infected; and thence it was call'd the *French* Pox, by which Name it is now pretty well known in *England*; and it was ſuppoſed that King *Charles* knew the Effects better than the Cure of it, for he fell under an ill State of Health, and a broken Conſtitution, which continued till his dying Day.

HE finding himſelf decline continually, laid aſide all Thoughts of Conqueſt, and of the ſporting Females wherewith he had pleaſed himſelf, and by whom he had got enough to make him remember them; he now meditated a Reformation, both in himſelf and the Government; he heard Complaints and Cauſes of his Subjects, depoſed corrupt Judges, reſtor'd Juſtice without Bribes, contriv'd to leſſen the Taxes to their Original of 1200,000, and that not to be levy'd without the Conſent of the States; and many other good Things he propos'd, but his Weakneſs increaſing, he lived not to put them in Execution; he dy'd of an Apoplexy on the 6th of *April*, 1498.

LEWIS, Duke of *Orleans*, being next of the Male Line, ſucceeded by the Name of *Lewis* XII. he was crowned at *Rheims* the 27th of *May*, and at *St. Dennis* the firſt of *July*; his firſt Work was to eaſe his People and adminiſter Juſtice; in order to the firſt he leſſen'd the Taxes, and for the other he made moſt excellent Rules for abbreviating and eaſing the Charge of Proceſſes in Law.

HIS firſt Love was *Ann* of *Bretagne*, who was his Predeceſſor's Queen, and ſhe being now a Widow, nothing was in his Way to prevent his Marrying her, but his Wife *Jane*, from whom he therefore ſought to be divorc'd, which he obtain'd by proving that it was not his own Choice, but that he was forc'd to it by *Lewis* XI. and thereupon he married; the Widow *Jane* underwent the Divorce patiently, and retired into a Nunnery, but the *Pariſians* reſented it very highly.

BEFORE *Lewis* undertook any Expedition, he endeavoured to ſecure the Friendſhip of his Neighbours, firſt of the King of *England*, then of *Ferdinand* and *Iſabel*, and of the Arch Duke *Philip*; and now *Lewis* thought fit to ſend his Forces into the *Milaneſe* on one Hand, while the

the *Venetians* attack'd it on the other; the *Venetians* took all beyond the *Adda*, and the *French* ſucceeded as well; *Noverre* and *Alexandria* were ſack'd, *Mortara* capitulated, and *Pavia* ſent them her Keys.

LEWIS was now ſuppoſed to be ſtrong enough of himſelf to conquer the Kingdom of *Naples*, however he went Partner with *Ferdinand* of *Arragon*; and in order to this Conqueſt gave the Command of his Army to *Daubigny*, *Gajazza* and *Borgia*, while *Raveſtein* commanded by Sea; 1500. the Rendezvous was at *Genoa*; *Frederick* having no Aid but from the Conſtable, *Colonna* made little Reſiſtance when the *French* had forc'd *Capua*, and put 7 or 8000 People to the Sword; *Naples* and *Cajeta* were terrified to a Surrender, upon which he came to a Treaty with *Daubigny* and *Nemours*, and agreed to give up all the Towns, in the Partition made to *Lewis*, in ſix Days; they allow'd him to keep the Iſland of *Iſchia* for ſix Months, to retire where he pleaſed, and to take any thing out of the Caſtle of *Naples*, except the Cannon belonging to *Charles* VIII. The poor Prince being thus reduced, and betrayed by his Couſin *Ferdinand*, under pretence of Aſſiſtance, had no other way than to throw himſelf upon the *French* King's Mercy, who gave him ſafe Conduct to *France*, and allowed him a Penſion of 30,000 Crowns, which was continued after the *French* were again driven out of *Naples*.

GONSALVO, on the *Spaniſh* Side, conquer'd the other Part of the Kingdom, while the *French* King was ſeeking an Alliance with *Maximilian*, in order, if poſſible, to obtain the Inveſtiture of the Dutchy of *Milan*. The Cardinal *d'Amboiſe* was ſent to treat about it; the Emperor inſiſted upon the Releaſement of *Storza* his Brother Cardinal; *Aſcaguia* was ſet at liberty, and a mutual Promiſe was made for the Prolongation of the Truce on one Part, and of the Inveſtiture on the Emperor's Part; but with this Limitation, that it ſhould be only for his Daughters, and not for Sons. He cunningly made this Reſerve, becauſe he had a View of having the King's eldeſt Daughter, and that Dutchy in Dowry for *Charles* his Grandſon, which was accordingly agreed upon.

BUT the Limits for the Diviſion of the Kingdom of *Naples* not being intelligibly expreſt, there aroſe a Diſpute about the Country of *Capitinata*; the *French* would have it to be a Part of *Abruzzo*, and the *Spaniards* would have it belong to *Puglia*; the two Generals thought to determine it amicably, but the *Spaniards* ſoon broke out in Acts of Hoſtility, inſomuch that *Lewis* ſent to the Duke of *Nemours* a Command to begin a downright War upon them; for the King was got into *Italy* to take care of *Milan*, and to ſuppreſs the Tyranny of *Borgia*; but he ſoon left *Italy* and return'd home, and notwithſtanding that, yet the *Spaniards* were ſoon driven out of *Capitinata*, *Puglia* and *Calabria*, and *Gonſalvo* found himſelf pent up in *Barletta* without Proviſion or Ammunition; but the *Venetians* ſpeedily ſupply'd him, while the Duke of *Nemours* divided his Army into ſeveral Bodies to beſiege other Towns, which weakened him, and gave *Gonſalvo* an Opportunity to recover himſelf, and put him in a Condition to withſtand *Nemours* and the *French* Forces; and accordingly they engaged at *Cerignola* in *Puglia*, where *Nemours* was ſlain, *Aubigny* eſcap'd to *Angitola*, where he was beſieged, and forced to capitulate that all his Men ſhould quit the Kingdom, and that himſelf ſhould remain a Hoſtage till that were performed.

WITH this Succeſs *Gonſalvo* began to cut a great Figure; *Naples*, *Capua*, and *Averſa* open'd their Gates to him, and *Chaſteau Neuf* ſurrender'd, and the Caſtle *Del Ovo* held out but three Weeks; however the *French* ſtill held ſeveral Places; *Gonſalvo* alſo laid Siege to *Cajeta*, but it being a ſtrong Sea-port, they defended it till the Arrival of the *French* Army.

LEWIS reſolving to ſtrike while the Iron was hot, ſent out four Armies, three at Land, and one for the Sea; the greateſt by Land was commanded by *Trimoville*, conſiſting of 18000 Foot, and 2000 Men at Arms; theſe were to recover the Kingdom of *Naples*; and the other three were to attack *Spain*; the Firſt, commanded by the Lord *Albert*, were to make an Irruption towards *Fontarabia*; the Second, commanded by the Marſhal *de Rieux*, to enter by *Rouſſillon*; while the Fleet was to ſcour the Coaſt of *Catalonia* and *Valencia*.

TRIOMVILLE mov'd ſlowly towards *Italy*, and being arriv'd in the Territories of *Sienna*, fell ſick, and the King ſubſtituted *Charles de Gonzagues* in his Room, who made a Bridge over the *Gariglian*, and under the Cannon paſs'd his Army over in the ſight of *Gonſalvo*, who underſtanding that he had paſs'd the *Gariglian* to attack him, he retreated at *Cajeta*.

HERE *Gonſalvo* immediately beſieged him, and expecting a Famine more than any relief, he capitulated on *New-Year's-Day*, and put an end to all Diſputes between them.

IN the mean Time, *Lewis* was privately forming a Scheme againſt the *Venetians*, which was carried on ſo privately, that they ſooner found it by its Effects than by Intelligence; for the firſt Diſcovery they made of it, was *Lewis* on one Hand making War upon them with 40,000 Men; and the Pope on the other Hand, thundering out Excommunications againſt them; for the King having paſs'd the River *Adda*, came 1509. up with the *Venetian* Army, and fought and defeated them near *Caravaz*, where all their Infantry was cut off, and their General *Alviane* loſt an Eye and was taken Priſoner: The Pope had alſo an Army of upwards of 12000 Men in *Romagnia*, and *Ferdinand* had a ſmall Fleet in the Gulf, and all againſt the poor *Venetians*; which ſo ſtartled them, that deſpairing of Succeſs againſt ſuch a multiplicity of Enemies, they ſhut themſelves up in the Iſlands of their Gulf.

KING *Lewis*, now thinking that he had done all that could be done, retir'd to *Milan*; and upon this the *Venetians* reſum'd freſh Courage, and recover'd the important City of *Padua*; the Emperor, nettled at this, having with his Confederates laid Siege to it: His Army conſiſted of 36,000 Foot, 1800 Men at Arms, and a thouſand light Horſe; but there were 12,000 Foot in the Town, 2000 Horſe, and 200 young noble *Venetian* Volunteers, who every one of them were reſolv'd to be buried in the City in defence of it, rather than loſe their Privilege, becauſe the Preſervation or Loſs of it, would determine the Fate of the Republick, and ſo it prov'd; for they made ſo gallant a Defence, that the Emperor decamp'd on the ſeventeenth Day of the Siege, and diſbanding his Troops, retired in a great Rage againſt thoſe Confederates who diſappointed him.

BUT the Emperor was glad for his own Safety to be reconcil'd to *Lewis*, and their Alliance was renewed as ſtrong as ever; for the Difference between the Emperor and *Ferdinand* of *Spain* being referr'd to *Lewis*, it was not then the Emperor's Intereſt to fall out with *Lewis*; but in the mean Time the Pope was reconcil'd to the *Venetians*, and daily more and more alienated from King *Lewis*, and form'd continual Complaints againſt him, but commonly trifling and groundleſs, and

in

his Design againſt *Lewis* went ſo far, that he animated the King of *England*, *Henry* VIII. againſt him, who was very willing to embarraſs *Lewis*, that he might keep a more peaceable Poſſeſſion of the Kingdom of *Naples*.

1511. Pope *Julius* was eaſily provok'd to come into the Field, for the *Swiſs* being deny'd an Augmentation of their Penſions to 60,000 Livres a Year, grew inſolent, and fell directly in with the Pope, aſſuming jointly with him the Title of *Defender of the Holy See*; and on the other Hand *Lewis*, ſeeing a neceſſity of defending himſelf againſt the Pope, appointed an Aſſembly of the *Gallican Church* at *Tours*, in which he forbid his Subjects applying themſelves to the Pope for Benefices, or to carry any Money out of the Kingdom; and this prevailed ſo far, that an Univerſal Revolution was expected; at which they were ſo alarm'd at *Rome*, that the Cardinals implor'd the Pope to make Peace with *Lewis*; but he being Wife-ridden, his Army dwindled away, and he was forc'd to abandon the *Milaneſe*; and *Sforza*, Duke of *Milan*, was reſtor'd to that Dutchy by the *Swiſs*.

But about this time *Genoa* revolted; and, to add to the Misfortune, *Henry* VIII. King of *England*, ſent a Herald to proclaim War againſt *France*; and at the ſame Time the Emperor forſook *Lewis*, and enter'd into a new Alliance with Pope *Julius*: All theſe Articles ſeem'd to make very much againſt the *French* Intereſt, but upon a Diſguſt that the *Venetians* took againſt the Emperor, they fell in with *France*, by which means he thought he might recover the Dutchy of *Milan*; and accordingly he diſpatched 16000 Foot, 1000 Men at Arms, and 2000 Light Horſe, with whom the *Venetian* Army was to join in Caſe of Need.

This formidable Preparation of *France*, ſpread ſuch a Terror through *Italy*, that every Place ſurrendered to them as they went, except *Coma* and *Noverre*, into the laſt of which Places *Sforza* with 5000 *Swiſs* had retir'd. The *French* Fleet at the ſame Time upon the Coaſt of *Genoa* terrified that Territory to the Subjection of *France*; but their Enjoyment was very ſhort, for the *Swiſs* Army marching out againſt the *French*, took them unaware, and utterly defeated them.

At the ſame Time the Emperor, in Conjunction with the King of *England*, with 50,000 Men laid Siege to *Terovenne*, and the *French* were attack'd and routed near *Guinegaſte*; the Duke *Longueville*, and the Chevalier *Bayard*, being hemm'd in, were made Priſoners by the *Engliſh*; and to them *Terovenne* was ſurrendered about fifteen Days after; but the Emperor and the *Engliſh* not agreeing about the Prey they had taken, order'd it to be diſmantled and burnt, except only the Churches; and *Tournay* was afraid of the ſame Fate; but to prevent that, they ſurrendered to the King of *England*, who built a Citadel to defend it.

Queen *Ann*, Wife of *Lewis* of *France*, dy'd on the 9th of *January* 1514, and the King of *France* having no Son of his own, brought up the Duke of *Valois*, who by the Loſs of the Kingdom had a Right to ſucceed him; and he was married to *Claude* the Queen's Daughter in *May*, this Year 1514; his Name was *Francis*, who ſucceeded to the Crown at *Lewis*'s Death.

This ſame Year, *Lewis* was married to *Mary* the Siſter of King *Henry* VIII. of *England*, by which means a Peace was eſtabliſh'd between the two Crowns of *England* and *France*; but *Lewis* being advanc'd in Years, the young Queen was Amorouſly careſs'd by young *Valois*, and at the ſame Time *Charles Brandon*, Duke of *Suffolk*, was as much inflam'd with her; and *Lewis* drawing near his Grave, he was ſeiz'd with a Fit of Vomiting at *Paris*, and dy'd on the firſt of *January*, 1515.

CHAP. VI.

Of the Reigns of Francis I. *or the Great*, Henry II. Francis II. *and* Charles IX.

Francis I. Francis, as above obſerv'd, ſucceeded *Lewis* XII. His firſt Care was to Cultivate a good Underſtanding with his Neighbours; Queen *Mary* was ſent back to *England*, and married to the Duke of *Suffolk*.

In the mean Time *Ferdinand*, King of *Spain*, together with the Pope, the Emperor, the *Swiſs*, and *Sforza* Duke of *Milan*, laid a Scheme to compel *Francis* to renounce the Dutchy of *Milan*; but *Francis*, reſolute to defend his own Property, drew his Troops together about *Turin*, while his confederate Adverſaries abandon'd one Place after another, which fell eaſily into the King's Hands; and at laſt falling out among themſelves, they ſet up a Treaty by means of the Duke of *Savoy*, and they attack'd the *French* Army at *Marignan* near *Milan*, broke their Camp, and took ſome of their Cannon; but *Francis*, with the beſt of his Forces haſtened thither, and with his Horſe and Artillery broke their Forces, and a great many of them were cut to Pieces in an adjacent Wood, where they thought to ſhelter themſelves; the remainder were glad to retire towards *Milan*.

This brought King *Francis* into ſuch Favour with the Pope, that he took him under his Protection, together with the Eccleſiaſtical State and *Florence*; and to compleat the King's Succeſs, the Duke *Sforza*'s Prime Counſellor capitulated for the Caſtle of *Milan*, and reſign'd all his Right to the Dutchy for the Sake of a little Money to pay his Debts and a Cardinal's Cap; but they did not hold it long, for the *Spaniards* in *November* 1521, attack'd the Suburbs, which the *Venetians* gave up, as the Burghers of the *Gibelline* Faction did the City; which the *Spaniards* ranſack'd for eight Days together.

The *Spaniards* now reſting ſecure, *John de Medicis* began to have a deſign upon *Milan*, and accordingly join'd the *French* Forces with 5000 Men, under the Command of *Lautrec*, late Governor of *Milan*, and beſieged *Milan* in form; but hearing that *Sforza* and his Men were arriv'd at *Piacenza*, and that the Marquis of *Mantua* was to convoy him with his Horſe to *Parma*, and to go from thence by the firſt opportunity to *Milan*, he decamp'd and poſted himſelf upon the *Caſſine* to prevent it, and his Brother *Lefun* taking

taking *Navarre*; all this prolong'd the Time, and by the Favour of this Opportunity, *Sforza* got into poſſeſſion of *Milan*, which greatly pleaſed and encouraged the Inhabitants; and *Francis* being out of all hopes of Succeſs in the *Milaneſe*, this Year countermanded the Forces he was ſending thither.

Pope *Adrian*, who liv'd about this time, endeavoured to procure a Truce or Peace among the Chriſtian Princes, that they might be the better able to oppoſe the *Infidels*; but *Francis* would yield to nothing but a ſhort Truce, which not ſatisfying the Pope, he endeavour'd to compel him to it; and in order to that, engag'd the Emperor, the *Venetians*, and the King of *England*, to bring him to his Meaſures, or to drive him out of *Italy*; but all this would not have deterred the King of *France* from going into *Italy* in Perſon, if *Bourbon*'s Conſpiracy had not given him a Diverſion.

King *Francis*'s Forces of 6000 Men, under the Command of *Trimoville*, beſieg'd the Caſtle of *Milan*; and *Francis* thinking himſelf ſure of *Milan*, went himſelf to attack *Pavia*, and likewiſe made a Detachment of 10,000 Foot, and 600 Men at Arms, with ſome Horſe, to conquer the Kingdom of *Naples*.

At the ſame Time *Charles* of *Bourbon* return'd out of *Germany* with 10,000 Foot and 1000 Horſe, and join'd *Lanoy*'s Army near *Lodi*; with theſe Forces they endeavour'd to put ſome Relief into *Pavia*, which was not yet in ſo much Danger from the Enemy without, as from the Garriſon within, they being ready to mutiny for want of Pay, which made King *Francis* incline to raiſe the Siege; but *Bonnivet* was obſtinate, and having made ſo many florid Speeches, that he would take the Place or die before it, made him more reſolute to continue the Siege.

The Armies by this time drew very near together, and the Enemy obſerving the Confuſion of the *French*, they drew nigh the Park Wall of *Pavia*, and having thrown down about ſixty Fathom of it, march'd directly to *Mirabel* Caſtle, which was the King's Quarters; for it being dark, the King's Cannon could not do much Execution; but as ſoon as it grew light they ſhatter'd their Rear, and broke their Ranks; and at the ſame Time the Duke of *Alenſon* defeated a great Body of the *Spaniards*, and took four Pieces of their Cannon; but *Francis* now thinking the Enemy was quite routed, imprudently went out of his Camp to charge them; at firſt he broke in among their Horſe, but their *Harquebuſiers* having put his Men to a Stop, *Bourbon* and *Lanoy* gave a furious Charge; *Alenſon* fled and dy'd with Grief at *Lyons*; the *Swiſs* lying open made a poor Fight, and withdrew at laſt; but three or four thouſand *German* Foot ſtood it to the laſt, but were all cut to Pieces, ſo that now all the Storm fell upon King *Francis*; and his Horſe being kill'd under him, he among the dead Bodies met *Pomperan*, and knowing him, ſurrender'd to him and became his Priſoner: All the *French* Baggage and Cannon were taken, and 8000 of their Men ſlain upon the Spot; amongſt whom were *Trimoville*, *Police*, and other Great Men, beſides many that were taken Priſoners; and upon this Defeat of the *French*, *Milan* immediately ſubmitted to the *Imperialiſts*, and King *Francis* was carried and confin'd Priſoner in the Caſtle of *Piqueton*.

France was now in a bad Condition, and *England*, as well as other Parts of *Europe*, grew Jealous of the growing Power of the Houſe of *Auſtria*; the Emperor receiv'd the News with a great deal of Fortitude, without ſeeming to be elevated with his Succeſs; and when it was propoſed in Council how King *Francis*, as a Priſoner, ſhould be treated, the Emperor's Confeſſor inſiſted upon his being generouſly diſcharg'd without any Conditions; but the Duke *d'Alva* and other Members alledged that he ought not to be ſet free till they had weaken'd him ſo much, that he ſhould never be able to give them any further Diſturbance, and that the Abatement of the Power of *France* ſhould be made uſe of as a Means of the Re-eſtabliſhment of the antient Empire: The Emperor fell into theſe Sentiments, and propos'd to the King, that he ſhould renounce *Naples* and *Milan*, and ſurrender up *Burgundy* to him, and give *Provence*, *Dauphiné*, and *Lyonnois* to *Bourbon*, to be join'd to his other Land, to make them an Independant Kingdom, and to ſatisfy the King of *England*'s (*Henry* VIII's) Demands; but *Francis* reply'd, *they were things out of his Power, and contrary to the fundamental Laws of his Country.* However King *Francis* offer'd to marry the Emperor's Siſter *Eleonora*, to hold *Burgundy* in Power, and Hereditary to the Children of that Match, to reſtore *Bourbon*, and give him *Margaret* his Siſter, *Alenſon*'s Widow, to ſatisfy the *Engliſh*, to pay a Ranſom, ſuch as King *John*'s was, and to ſend the Emperor a Fleet and Army whenever he ſhould go to *Italy* to receive the Imperial Crown.

The *Spaniards* did not think King *Francis* ſafe at *Piqueton*, nor indeed at any other Part of *Italy*; *Lanoy* perſuaded him to go to *Spain*, which he agreed to, and was carried to *Madrid*, where he had more Liberty, and was allow'd to take the Air when he pleas'd.

The King's Siſter *Margaret* went to *Madrid*, where ſhe form'd an Intrigue for the King's Eſcape; and in order to that ſhe ſcattered Money amongſt the Council and Guards; but the Project getting Vent, the King was more cloſely confined, which he took ſo much to Heart that he fell Sick; the Emperor paid him a ſhort Viſit, and gave him hopes of Liberty; but the King recovering, the Emperor forgot his Promiſes, but came to this Agreement with him, *viz.* that the King ſhould marry *Eleonora* the Emperor's Siſter, with 200,000 Crowns for her Portion, and that the Daughter of that Princeſs ſhould be marry'd to the Dauphin when ſhe came to Age, that he ſhould be ſet at Liberty the 10th of *March*, and give Hoſtages for what he ſtipulated; to wit, that he ſhould ſurrender the Dutchy of *Burgundy*, with *Noyers*, *Chaſtel*, *Chinon*, the County of *Carolois*, the Viſcounty of *Auſonne*, and the Provoſtſhip of St. *Laurence*, all in intire Sovereignty to the Emperor; as alſo the Homage for *Flanders* and *Artois*, and his Pretenſions to *Naples*, *Milan*, *Genoa*, *Aſt*, *Tournay*, *Liſle*, and *Heſden*; to reſtore the Duke of *Bourbon* and his Family their Eſtates; and many other Articles beſides: He was at his Death to procure his Cities, to return to the Emperor, to pay the King of *England*'s Arrears of Penſion, which was 500,000 Crowns; and if the Emperor ſhould go to receive the Imperial Crown of *Italy*, that *Francis* ſhould lend him twelve Galleys and four great Ships, and to pay him 200,000 Crowns in lieu of the Land Army he promis'd him; and laſtly, that if after *Francis* had gone home, he found he could not perform theſe Conditions, he ſhould voluntarily return and ſurrender himſelf a Priſoner as before theſe Conditions were made; upon this he was ſet at Liberty, and his two Sons ſent as Hoſtages into *Spain*.

Treaty of Madrid 1526.

France ſet at Liberty.

In the mean Time the Duke of *Bourbon* undertook a ſecret Expedition into *Italy*, he firſt entered into *Tuſcany*, but not daring to attack *Florence*, as it was thought he intended, he made towards *Rome*, the Pope being ſtartled at his Approach,

proach, left his Temporal Affairs to the Conduct of *Rance de Cere*, who not being able to raise any regular Forces, *Bourbon* made bold to encamp in a Meadow near *Rome*, and being next Morning deny'd a Passage through that City, he made an Assault upon a Breach in the Wall, and though *Bourbon* himself was shot dead in the Attack, his Men continu'd resolute, gain'd their Passage into the City, and plunder'd where-ever they came, and used the Citizens with uncommon Barbarities, the Pope and thirteen Cardinals having at the same Time shut themselves up in the Castle of *St. Angelo*; immediately after which the Pope surrendered himself Prisoner to the Imperialists, and remain'd a Prisoner for full six Months.

The Pope a Prisoner.

The King of *France* having now strengthen'd his Interest by a new Alliance with the King of *England*, he not only refused to return to surrender himself Prisoner to the Emperor, but made a demand of his two Sons, who were sent as Hostages to secure his Performance of the Conditions he had agreed to; but on the other Hand, the Emperor would neither deliver up the King's Children, nor the Pope himself from their Confinement. *Francis* was very willing to treat with the Emperor about the Releasement of his Children, and offer'd his Council to go back to *Germany*, and resign himself to release them; but they told him it was not in his Power, nor was he at his own Disposal, that his Person was the Kingdom's, and not his own; but at the same Time they offer'd to advance him two Millions of Gold towards the ransom of his Children, or that if a War with *Germany* was unavoidable, they would not fail to stand by him with their Lives and Fortunes.

Lantrec, being General of the *French* and Confederate Army against the Emperor, soon took the Castles of *Bosco Alexandria*, and *Pavia*; the Duke of *Ferrara* also revolted from the Emperor and embrac'd the *French* Interest, and the rather, because *Francis* had promised him his Queen's Sister in Marriage; these Successes animated *Francis* to challenge the Emperor at a single Combat, and for that purpose he caused a Scaffold or Stage to be erected in his great Hall, and there, in the Presence of the *Spanish* Ambassador and others, caused a Challenge to be read, requiring the Emperor to fight him; and he required the Emperor's Ambassador to convey the News to his Master, which he refusing, it was sent by a Herald; and the King of *England* did the like by a Messenger of his own; but the Emperor neither accepted them, nor resented them, but indolently went on, and upon some hard Conditions set the Pope at Liberty. *Lantrec*'s Army lay before *Naples*; but they being sickly, had no Success, and *Lantrec* himself died *August* 16, 1529.

The Pope set at Liberty

1532. About this time the Reformation was on Foot in the Church of *England*, it being in the Time of King *Henry* VIII. And *John Calvin* preach'd in *France*, and the *French* King's Sister *Margaret*, Queen of *Navarre*, became a Proselyte to the Gospel Doctrine; by which Encouragement the Reform'd posted up Papers against the Popish Doctrine of Transubstantiation; whereupon King *Francis* made search after the Authors of these Papers, and finding some of them out, six of them were burnt for *Heretics*.

The first Motion made to the Reformation.

The Emperor in the mean Time march'd into *France*, and took *Cambray*, and sent to the King of *England* to acquaint him that he was marching towards *Paris*, but *Henry* VIII. had put on a Resolution not to move till he had taken *Boulogne* and *Montreuille*: The Emperor therefore came to Conditions of Peace with *France*. The *English* at the same Time lying before *Boulogne*, they attack'd it so close, that after a vigorous Resistance they surrendered, which it was supposed might have been prevented if the Dauphin had relieved it in Time; but as it was now too late, he was resolv'd to attempt a Reprisal, and knowing that the lower Town was enclosed only with a Ditch without a Wall, he fell upon it and easily gain'd it, though the *English* had entrusted their Cannon and Baggage there; but the *French* were soon drove out without the Plunder they expected, and with the Loss of 4 or 500 Men.

The Fr. Hist. of Bologne.

The *French* King *Francis*, being nettled at the loss of *Boulogne*, and not knowing which way to make himself Satisfaction, he thought the best Way would be to attack the King of *England* in his own Dominions; and sent *Annebaut* with a Fleet, who seiz'd the Isle of *White*, but neither had Time to fortify it, nor to keep it in Possession, till he could make any advantage of it; and so he bravely return'd home.

The King of France, *with forty thousand Men,*
Went up a Hill, and so came down again.

The Affairs of *Francis* bearing now but a dull Character, and his Health declining, he easily agreed to come to an Accommodation with the King of *England*, which was agreed upon *June* 8, 1546. whereby King *Henry* promised to restore *Boulogne* within eight Years; and *Francis* promis'd to pay to King *Henry* 800,000 Crowns of Gold, at 100,000 Crowns a Year till paid; but the two Kings did not long survive this Contract, for King *Henry* dy'd *Jan.* 28, 1547. and *Francis* dy'd the 31st of *March* following.

Francis was succeeded by his Son *Henry* II. 1547. Cotemporary with King *Edward* VI. of *England*, Henry II. who was at that time vigorously carrying on the Reformation in *England*; and at the same Time the Emperor publish'd an Edict call'd the Interim, concerning Religion; and King *Henry* of *France* not caring to contradict or disoblige the Emperor, or the King of *England*, under pretence of making a Progress through his Kingdom, went to visit *Champagne*, *Burgundy*, and *Lyonnois*, and so to *Piedmont*, securing his Frontiers, which was his chief Design.

During the King's Absence, a furious Flame of Sedition was kindled all over *Guyenne*, on Account of the Gabels and Garners of Salt, that had been set up among them by *Francis* late King of *France*, and the Violences committed upon that Account by the Officers upon the poor People. This Gabel was an Excise upon Salt, and these Officers were Excisemen, in extorting or collecting this Duty from the common People; and as they had got Authority from the Government for so doing, they committed abundance of Brutish Villanies where-ever they went; as indeed what better could be expected from such a Set of People, when protected by Authority in such Practices; and, which was worse, they being receiv'd into *Bourdeaux*, forc'd the Governor and Magistrates to march at the Head of them in Seamen's Habits, and inhumanly massacred *Monens* the Governor's Lieutenant; but the Parliament of *Bourdeaux* return'd their Authority, and by the help of an Army under the Constable and the Duke of *Aumal*, they soon suppress'd those riotous Promoters of Gabel or Excise, and punish'd *Bourdeaux* for admitting and encouraging them, by condemning them to maintain two Gallies; for the Governor to furnish two Castles with Ammunition, and to pay a Fine of 200,000 Livres, besides several other Penalties inflicted

inflicted upon them, which pretty well ſtay'd their Stomachs, as to Gabel or Exciſe.

But K. *Henry*, upon his being crown'd, gave way to exceſſive Diverſions, and all the Debaucheries that even Idleneſs could invent, and amongſt others of his cruel Diverſions, he cauſed a great many poor Proteſtants to be executed for their Religion, and the King took delight to indulge himſelf with the ſight of ſuch miſerable Spectacles.

1558. In *January* 1558, the Duke of *Guiſe* took *Calice*, whoſe Governor with fifty Perſons of Note were detain'd Priſoners; but the reſt, both Soldiers and Inhabitants, were ſet at Liberty, and the taking of *Calice* was of ſuch fatal Conſequence to *England*, that Queen *Mary* took it to Heart ſo much, that it was reported ſhe ſaid upon her Death-bed, that if they ſhould open her, they ſhould find CALICE *writ upon her Heart*; however, it may be ſuppoſed that this Loſs did the reform'd Religion ſome Service, becauſe it contributed to the Death of Queen *Mary*, whoſe Popiſh Principles when alive very much retarded the Reformation.

At this time a Reformation was begun in *France*, and eſpouſed by a great number of *French* Subjects; but the King order'd a ſevere Edict againſt them to be put in Execution; but like Queen *Mary*, or indeed any other crown'd Head, the Expiration of whoſe Life kept equal Date with the Commencement of their intended Severities, his Deſign was fruſtrated; for at the Tournaments inſtituted upon Occaſion of the Marriage of the King's Daughter, the King would needs tilt againſt the Earl of *Montgomery*, which the latter would have excus'd, but the King would not admit of it, and thereupon the Earl hit the King above the right Eye-brow with his Truncheon, wherewith he fell backwards to the Ground, and though he languiſh'd ſeveral Days, yet he never ſpoke more, but dy'd on the 10th of *July*, in the 13th Year of his Reign.

He had ten Children, five Sons and five Daughters: Three of his Sons reign'd Succeſſively; of whom the firſt was

Francis II. who was crown'd at *Rheims Sept.* 21, 1559. In his Time the Factions form'd in the late Reign began to appear, which with the Differences in Religion, created a great deal of Trouble, and occaſion'd Parties; on one ſide were the Princes of the Blood, and the Conſtable, and on the other ſide was the Family of the *Guiſes*; and the Conſtable, by the Advice of his Wife, came over to the *Guiſian* Faction, as perceiving the Queen to fall in with them, and that the oppoſite Party declin'd; the Conſtable would have perſuaded the King of *Navarre* to have come over, but he ſtanding his Ground, the *Guiſes* ſoon found Means to remove him, with a ſpecial Commiſſion, to carry the new Queen of *Spain* to the Frontiers, which he did, and deliver'd her at *Roncevaux* in *Navarre*.

The Reformation now gaining ground in *France*, and the King being averſe to it, there was in each Parliament a Court erected, which only took Cognizance of Affairs of Religion, and by whoſe Orders they without Mercy burnt almoſt all that were convicted of Hereſy, as they call'd the Reformation; theſe were remov'd from all Places of Truſt, and the moſt profligate Catholicks encourag'd.

The King had a *Quartan Ague*, which afterwards turn'd to a Leproſy, not to ſay worſe; his Face turn'd black, and Puſtles broke out of it; whereupon he was carry'd to *Blois* for Change of Air, and for a cruel Cure; for People were employ'd to procure Infants Blood to bathe him in; and to this Cruelty he added that of perſecuting the Proteſtants by Impriſonment, Baniſhment, Death, *&c.* And now the hot-headed Catholicks begun to be ſo pious, that they put up Images in the Corners of the Streets, and mobb'd and abus'd thoſe that paſs'd by without paying the due Veneration to them; at the ſame Time the *French* ſent 3000 Men to *Scotland* to aſſiſt the Queen of *Scots* againſt the Reformation; but Q. *Elizabeth* ſent ſome Forces into *Scotland*, who with the Proteſtants there, forc'd the *French* into *Leith*, and beſieg'd them there, and kept them there till it was agreed between *France* and *England*, that all Differences ſhould be determined by the *Scotch* Parliament, that the *French* Forces ſhould return home, and that both the *French* King and Queen ſhould quit both the Arms and Title of *England*.

The Perſecution of the Proteſtants continued 1560
more cruel than before; the Reform'd were till about this time call'd *Lutherans*, but this Year they diſtinguiſh'd them by the Name of *Hugonots*; ſome ſay from a Gate in *Tours* call'd *Hugon*, where they uſed to aſſemble in the Night; for ſo far had the perſecuting Power of the *Guiſes* prevail'd, that the Reform'd durſt not meet publickly; however Queen *Catherine*, ſeeing how things went on, form'd a political, as well as a religious View, and in order to eſtabliſh herſelf more firmly in the Government, tacitly encourag'd both Factions, that one might be a Check upon the others, and prevent either of them from being capable of forming any thing againſt her; and to ſuppreſs the exorbitant Power of the *Guiſes*, ſhe encouraged the *Hugonots*, and gave an Ear to ſome of their Writings, addreſs'd to her for their Juſtification.

But the Queen Mother and the *Guiſes* having the King's Authority to ſupport them, went to *Orleans* and diſarm'd the City, as being *Hugonots*, and ſuppoſed to have a Deſign to deliver it up to the Prince of *Conde*; who upon his Arrival with his Brother was ſeiz'd, confin'd, and condemn'd to loſe his Head; but the Sentence was not executed, and the King was then near his End, and dy'd at the Age of ſixteen Years and ſomething more than ten Months, having then reign'd about a Year and a Half.

Charles IX. 1560. Charles IX. ſucceeded to the Crown of *France*, and the Prince of *Conde* being then admitted into Council, he ask'd the Chancellor if there were any Proofs againſt him, who anſwered No, and all the Princes and Lords confirm'd the ſame; and thereupon the King commanded him to take his Seat in Parliament; and hereupon the King was crowned at *Rheims* the 15th of *May*, 1561. And now *Conde* had a leading Hand in the Government; and accordingly haſted with 2000 Horſe to *Orleans*, where he took an Oath of all the Party, and wrote to the *German* Princes, aſſigning a Cauſe for his taking up Arms; and having a pretty many of the military Powers on his ſide, the Parliament declared all thoſe Perſons Rebels, and guilty of Treaſon, who had ſeiz'd any Cities, *&c.* *Conde only excepted*: And *Conde* being now much in Favour, he was eaſily prevail'd upon by the Queen to deſiſt and diſarm; upon which his Party growing cool, the Enemies of the Reformation began to be uppermoſt, and 5000 Men being raiſed for *Conde*, were cut to Pieces in *Guyenne*, under the Command of *Montluc*, who, as Opportunity offer'd, us'd the *Hugonots* with the utmoſt Severity.

But the Prince of *Conde*'s Forces increaſing, by the Aſſiſtance of *Dandelot* and others, till his Army became 12000 ſtrong, he took the Field, reſolving

reſolving to march to *Paris*; but being diſappointed and beat back, he decamp'd and march'd for *Normandy* to join the *Engliſh*; but was ſo cloſely purſu'd, that the Armies met and engaged near *Dreux*, and *Conde* was taken Priſoner.

1563. THE Admiral having left *Dandelot* with 2000 Men in *Orleans*, march'd into *Normandy*, where he receiv'd Money from *England*, and muſter'd his Forces; but was forced to quit the Siege of *Caen*, upon the News of *Guiſe* having inveſted *Orleans*, the Suburbs of which were quickly loſt, and 800 of the Beſieged; but *John Paltrot Mere*, watching an Opportunity when *Guiſe* went out to meet his Wife, ſhot him in the Shoulder and kill'd him, for which the Duke's Children took the moſt bloody Revenge ever recorded in Hiſtory.

Havre de Grace taken from the *Engliſh*.

QUEEN *Elizabeth* of *England* refuſing to ſurrender *Havre de Grace* then in her Poſſeſſion, *Briſac* form'd the Siege of it, and took it from the *Engliſh*, which was a ſad Mortification to the Earl of *Warwick* the Governor; and the rather, becauſe the next Day after he had ſurrendred, a Reinforcement of 1800 Men arriv'd within Sight of the Port, as did in a few Days a great Fleet under Admiral *Clinton*; who were ſo enraged at the Port's being ſurrendred, that they did vaſt Miſchief by Sea to the *French* Merchants. But in the Year 1564, a Peace was agreed upon, wherein the Claim of the *Engliſh* to the City of *Calais* was own'd and juſtify'd.

1564 A Peace.

KING *Charles* being now arrived at the fourteenth Year of his Age, he was carried to *Roan*, and there declar'd Major; but the Edict was not without Difficulty regiſter'd in the Parliament of *Paris*, who would ſtill inſiſt that the King was a Minor; but he deny'd that they were now his Guardians or Tutors, Defenders of the Kingdom, Keepers of the City of *Paris*, &c. and at laſt the Edict paſs'd.

1565. THE Court the next Year took a Progreſs into *Champagne*, the Counties of *Bar*, *Burgundy*, *Lyons*, *Provence*, *Languedoc*, and *Bayonne*; but during the King's Abſence, the Cardinal of *Lorain* and *Montmerancy* Governor of *Paris*, had like to have created a new War: The Grudge was, becauſe the Cardinal's Men were allowed to wear Arms and the other's not; for upon his Return from *Trent*, the Cardinal enter'd *Paris* with an armed Guard, contrary to the Governor's Order, for which he was charg'd by the Governor, and had much ado to eſcape; upon which, both Parties arm'd in ſuch a Heat, that nothing but the King's expreſs Order could have made them lay down their Arms.

DURING the Reſidence of the Court at *Bayonne*, a ſecret Confederacy was carried on between the Kings of *France* and *Spain*, for extirpating the reform'd Proteſtant Religion, and reeſtabliſhing Popery; and the Court returning
1566 next Year to *Moulins*, the *Guiſe*'s Family and Admiral *Caligny* were reconcil'd, as was alſo the Cardinal of *Lorain* and the Mareſchal *de Montmerancy*.

Battle between the *Catholicks* and *Hugonots*.

THE King and the Catholicks ſtill continued more and more to oppreſs the *Hugonots*, who, not willing to bear it, aſſembled, and ſeiz'd the Bridges of *Poiſſy*, and *Argentual*, and a great many ſmall Caſtles on the other Side of the *Seine*, ſo that they commanded all the Roads to *Normandy*, *Maine*, and *Anjou*, and ſtopp'd Proviſions from coming to *Paris*; but they being but 3000, and the King's Forces 20000, the Conſtable at the Head of the latter fell upon them; but they were routed; and the Conſtable, after ſeveral Wounds, at laſt receiv'd a mortal one, and Night coming on, put an End to the Conflict. But *Dandelot* the Day after arriv'd from *Poiſſy*, and the *Hugonots* by his Advice rallying again, and with wonderful Reſolution, beat the Enemy to the Walls of *Paris*. The Conſtable dy'd next Day of his Wounds, and the Queen, glad to be rid of him, made her young Son, who was Duke of *Aujou*, General of the Army, but did not immediately fill up the Office of Conſtable. The *Hugonots* reſolving to follow their Stroke while the Iron was hot, march'd to *Montereau*, where they were join'd by a Body of *Germans*, under *Caſimir* the Elector *Palatine*'s Son, and ſtaid there fifteen Days to wait for the Troops that were raiſing for them in other Provinces; *Rochel* alſo declar'd in their Favour, and their Arms alſo prevail'd in *Languedoc*, and about *Avignon*. From *Montereau* they march'd to *Orleans*, and ſecur'd the Princeſs of *Conde*, and the Wives of the other chief Commanders, from the Danger they were in of being taken by the Enemy, there being but few Soldiers in the Place. Many other Succeſſes alſo attended the Arms of the Proteſtants at this Time, till at laſt it was a- 15
greed, That the King of *France* ſhould reſtore and confirm to them what had been enacted in their Favour for five Years laſt paſt without any Exception.

THE *Hugonots* were now in Poſſeſſion of *Sancerre*, *Vizelay*, *Montauban*, *Caſtres*, *Milaud*, and *Rochel*, which they fortify'd, keeping at the ſame Time a Correſpondence with Queen *Elizabeth* of *England*, and with the *German* Princes, while the Admiral kept up a Communication with the Prince of *Orange*. While on the other Hand the Catholicks, notwithſtanding what was paſt, waited for all Opportunities againſt the Proteſtants, denying them as they found it in their Power, that very Peace and Liberty of Conſcience they had juſt now confirm'd to them; or, if they inſiſted upon it, Maſſacrees and cruel Deaths were their Portions, as at *Ligny* in *Barrois*; where a *Hugonot* on a Holiday refuſing to comply with ſome of their ſuperſtitious Ceremonies, the Mobb dragg'd him out of his Houſe, and afterwards burnt him upon a Pile of Wood, which they fetch'd from his own Houſe.

THE Prince of *Conde* being now at *Noyers* in *Burgundy*, the Queen reſolved if poſſible to take him by Force, ſince ſhe could not take him by Craft, and ſent thoſe Forces to take him that were deſign'd for the Siege of *Rochel*; but he having News brought him that ſome ſecret Forces were drawn about *Noyers* to ſurround him, and *Coligny* coming to *Noyers* to him, they went from thence with only 150 Horſe, and amongſt them their Wives and Children, ſome of the latter being very young. The Prince the better to Ca
conceal his Retreat, wrote a long Letter to the Co
King, complaining of ſome Grievances, and petitioning for Redreſs, ſubjoining, that he would wait for the King's Anſwer, which clear'd them of all Suſpicion of his Deſign to make off, which made his abovemention'd Eſcape the eaſier. They paſs'd the *Loire* over-againſt *Sancerre*; but had ſcarce got aſhore, till they ſaw their Enemies Troops on the other Side of the River in Purſuit of them; and, which was very remarkable, though the River was fordable the Day they croſs'd it, yet it was ſo ſwell'd the next Day as to be impaſſable. And though natural Cauſes may be aſſign'd for the ſudden Swelling of the River, ſuch as Rains, Freſhes, &c. yet that it ſhould happen to be fordable when *Conde* paſs'd it, and impaſſable when his Purſuers attempted it, may better be deem'd a Miracle than ſome that the Popiſh Legends furniſh us with in favour of their Superſtitions. The Prince of *Conde* after this Deliverance, uſed ſuch Diligence in his March, that he ſoon arriv'd at *Rochel*, where the

Queen

King's Forces

Queen of *Navarre* join'd him with four thousand Men, and the *Protestant* Commanders flock'd to him from all Parts: *Dandelot* had also got a Body of Men together out of *Normandy*, *Maine*, and *Anjou*, and was join'd by *Montgomery la Noue* in *Bretagne*, which now made them again appear powerful; whereupon the King publish'd an Edict to prohibit the Exercise of any Religion, but the *Roman Catholick*; and further, that no Person should be admitted into any Office that did not first take an Oath to live and die in that Religion. But though it might seem to be an imposition upon the poor *Protestants* then, yet the Wonder ceases, if we consider that at this Day, many freeborn *Protestant* Subjects, who have approv'd themselves as sincere and hearty in the true *Protestant* Interest as ever those did, and yet are deny'd the Privilege of enjoying Places that themselves contribute to the Maintenance of, as well as to the Support of the *Protestant* Interest which they profess.

1567. The Prince of *Condé* was supported with Money by Queen *Elizabeth* and the *Rochellers*, who took a great many Ships belonging to *France* and *Flanders*; and now the Frost being over, both Armies took the Field, and the Prince of *Condé* being surrounded by the Enemy, was taken Prisoner, and his Leg being broke, he could no way help himself, *Montesquiou*, Captain of the Duke of *Anjou*'s Guard, barbarously shot him Dead with a Pistol, and in derision, carried his Corps upon a She-Ass to *Jarnac*.

The Protestant Interest now again declin'd, and nothing would now go down with the *Roman Catholicks* but a downright Massacree of the *Hugonots*, or *Protestants*; and the chief Consultations were about hastning it too; and it was intended to be Universal, only the King of *Navarre*, and the Prince of *Condé* were to be excepted from this general Sentence; and the Conducting of it, was wholly left to the Duke of *Guise*, a fit Person to manage such an intended Piece of Barbarity. The Signal for his butcherly Mobb to assemble, to go to work, was the Ringing the great Bell at the Palace. It was on a *Bartholomew-Day*, being *Sunday*. *The Cruel Massacree.*

The Signal was no sooner given, but the Admiral and *Feligni* were soon dispatch'd; and in the seven Days that it held, it was computed that no less than 5000 Persons perish'd by popish Cruelty. They spar'd neither Age nor Sex, nor even Women big with Child; but their Throats were cut one after another, and their naked Bodies expos'd in Publick; the Queen Mother at the Window feasting her Eyes with this cruel Spectacle. It was computed that through the whole Kingdom no less than 25000 perish'd by their Cruelty.

The *Hugonots* had many Struggles for their Religion and Liberty in King *Charles*'s Reign, but in vain; but the King's Death put an end to all his cruel Projects on the 13th of *May*, when he had reigned about thirteen Years and a Half. 1573

CHAP. VII.

Of the Reign of Henry *the Third.*

Henry III. crown'd 1575.

KING *Henry* the Third was crown'd at *Rheims* on the 12th of *February*, 1575. and soon after he was crown'd he married *Louisa* the Earl of *Vaudemont*'s Daughter; after which he made his publick Entry into *Paris*: But the King falling sick, they endeavour'd to make him believe that his Brother the Duke of *Alençon* had poison'd him; and though he recover'd, yet the Duke of *Alençon* and his Friends were order'd to be seiz'd and confin'd upon suspicion of the suppos'd intended Murder; but they were soon releas'd, and the King giving himself up to Pastime and Gallantry, *Alençon* got away to *Dreux*, where *Buffy*, who had left the Court, brought him a great deal of Company; he was also join'd by a great many Noblemen from several Quarters; *Condé* had finish'd his Treaty with the Palatine Prince *Casimir*, who agreed to raise 8000 Horse and 6000 *Swiss*, provided no Peace should be made without his Consent, and that he should have the Government of *Metz*, *Toul* and *Verdun*; other Supplies and Reinforcements were likewise sent to *Alençon*, but *Guise* defeated them, and *Alençon* made his Escape.

But the Prince of *Condé*'s Army join'd *Alençon* near *Moulins*, where *Casimir* offer'd to resign the Command of his Army of 30,000 Men to him; but means were found to draw *Alençon* to an Accommodation, and lest *Casimir* should oppose the Design, they stopp'd his Mouth with a Sum of Money, and so a Treaty was sign'd the tenth of *May*, whereby the *Hugonots* were allowed the free Exercise of their Religion, and had the Liberty granted them of being admitted into all Colleges, &c. and their Children, in their way of marrying, were allow'd to be legitimate, and all other Sentences against them were revok'd.

Notwithstanding the Money that *Casimir* was to have, it was with some Difficulty that he would express any Satisfaction; *Alençon* (now Duke of *Anjou*) was prevail'd with to go to Court, and was kindly receiv'd; and after many turns of Affairs, *Anjou*'s drawing from the *Hugonots* to the Court Party, unhing'd the intended Pacification, and the King forbid the Exercise of any Religion but that of the *Roman Catholick*.

The *Hugonots* thus wore out and dis-spirited, there were hardly any People of Figure or Character left among them (but only the common People and Consistorians) that had any Zeal for Religion, only the Prince of *Condé* remain'd firm to his Principles.

It falls naturally in the Way to observe, 1582 that in the Year 1582, the Calendar was re- *Calendar reform'd* form'd by Pope *Gregory* the thirteenth, which was thence call'd the *Gregorian* Account, in which Correction he retrenched ten Days out of *October*, 1582. and order'd that from that Time there should be three *Bissextile* or *Leap-Days* cut off in every four hundred Years; the First to be cut off from the Year 1700, which is the Reason that the *Roman* or *Gregorian* Account, which was ten Days before the *Julian* or *English*, till the Year 1700, has been eleven Days before it ever since, and the foreign Account is in that respect the truest; for the true tropical Year is but 365 Days, 5 Hours, 49 Minutes,

(not to regard a few Seconds:) but the *English*, for Evenness of Numbers, reckon the Year 365 Days, 6 Hours, without regarding the odd 11 Minutes that every Year wants, which has been the Occasion of our differing from the corrected Calendar; and I cannot help thinking it a Pity, that as we have reform'd our Religion, we should not reform our Account of Time too, and bring it to, or near the Truth. It is true, this Correction of the Calendar was perform'd by a Pope, but I hope Truth is no less Truth for a *Roman Catholick*'s embracing and establishing it.

Anjou dies 1584

But to proceed, the Duke of *Anjou* (the late Duke of *Alençon*) dy'd in the Year 1584, and his Death changed the whole Scene of Affairs at Court; and there being no Probability of the King ever having any Children, the Succession became matter of Dispute; some would have had the Duke of *Lorain*'s Children to succeed, but others were for the Cardinal of *Bourbon*, and that it should be enacted that all Heretical Princes should be excluded, and all Hereticks banished, and that the Council of *Trent* should be strictly observ'd.

This League, as it was call'd, was to the Prejudice, not only of the *Hugonots*, but of the States of *Holland*, whereby Civil Wars and Broils ensued; the Consequence of which was, that the *Protestants* in a great Assembly held at *Lunenburg*, resolv'd powerfully to assist the *Hugonots*, and upon a Review near *Strasburg*, they found they had drawn together 6000 Horse, 5000 Pikemen, and 16000 *Swiss*, and a great many more. This Inundation of Strangers made the King extremely uneasy, but he divided his Forces into three Armies, one commanded by *Montpesier*, another by the Duke of *Guise*, and the Third he kept near his own Person; the Confederate *German* Army broke into *Lorain* through the Straits of the Mountains of *Vosge*, and having ravaged that Country for a Month, they pass'd the *Loire*, and advancing towards the Head of the *Seine*, they pass'd it at *Mailly*, and descended to *Beausse*, where was the best Forage; the King in the mean Time lining the Banks of the *Loire*, to prevent their repassing that Way.

The King of *Navarre* having obtain'd a great Victory, return'd to *Guyenne*, and was thence by the King's Order pursued by *Joyeuse*, who was re-inforc'd with 10000 Men, and *Matignon* was likewise order'd to join him with all his Troops; but *Joyeuse* was so eager to overtake the King, that he had not patience to wait the coming of his other Forces, and accordingly came up with him, in a Plain near *Contras*, where they furiously engaged for about half an Hour; but *Joyeuse* was defeated, and himself fell into the Hands of two Captains of the Enemy, who kill'd him in cold Blood; though they were offer'd a Ransom for him of 100,000 Crowns; his Baggage was taken, and 5000 Men (of which were 400 Gentlemen and Officers) were kill'd upon the Spot; the King of *Navarre* did not lose above 25 or 30 Men; *Conde* was unhors'd and forc'd to surrender himself a Prisoner, but he did not long survive it, for on the fifth of *March* he was basely poisoned by his own Domesticks.

The King, who had all along an entire confidence in the Duke of *Guise*, began to grow cool upon him, and by Degrees entertain'd such a Prejudice against him, and Suspicion of him, that nothing but his Death would satisfy him: Some would have had him try'd, but the King would have him dispatch'd by Assassination and no otherwise; so full of Revenge was he against him; and accordingly the King sent for him in the Morning to speak with him in his Chamber, but in his Passage he was beset by nine of the *Gascoign* Guards set there for that purpose, and by them wounded and unmercifully slain, which done, the Cardinal and the Archbishop were seiz'd, as was also the Old Cardinal of *Bourbon*, the Dutchess of *Nemours*, the Prince of *Joinville*, the Dukes of *Nemours* and *Elbeuf*, and many others; and the Enemies of the *Guises* having thus far gain'd their End, they never would let the King rest till the Cardinal was also dispatch'd, and as if that was not enough, that his and his Brother's Body should be burnt to Ashes.

Death of Guise.

1588.

When the King and his Party had thus reveng'd themselves on the *Guisian* Party, they took fresh Courage, and made several Attempts, but did little Execution; upon which *Aumale* (an Enemy of the King's) made an attempt upon *Paris*; but the Duke of *Longueville*, with 10000 Men, attack'd *Aumale*'s Camp, and defeated him with the Loss of 2000 of his Men upon the Spot, and many more were knock'd o'the Head in the Woods of *Chantallon*, besides 1000 Prisoners taken with their Baggage and Artillery.

There was now a Design carrying on to murder King *Henry*, and a *Jacobin* Friar was employ'd to perpetrate that piece of Villany, and in order to that, he obtain'd a Passport from Count de *Brienne*, and counterfeit credential Letters from the President *Harlay*, to go to the King; and being met on the Road by Solicitor General *La Guesle*, and pretending Business of Importance with the King, *La Guesle* introduc'd him accordingly; and as the King was reading the Letters he deliver'd him, he thrust a Knife into the King's Belly; the King pull'd the Knife out himself, but dy'd the next Day, being the second of *August*, 1589. The Murderer was soon dispatch'd by two or three of the Guards. *Henry* dy'd in the 39th Year of his Age, and the 16th of his Reign.

King murder'd 1589

CHAP.

CHAP. VIII.

The Reign of King Henry *the Fourth.*

HENRY the Fourth was a very diſtant Relation to his Predeceſſor, but being the next in the Male Line, he ſucceeded to the Throne; but it was obſerv'd that the Night the late King was in his dying Agonies, the Succeſſor held tumultuous Councils, as if regardleſs of, and impatient for his Predeceſſor's Death; and as he behav'd with ſo little reſpect to the late King, ſo the Princes of the Blood, and Lords of the late King's Court, as little reſpected him, nor did the *Hugonots* care to truſt him, ſo that he did not know with whom to adviſe, or what to do: However, an Aſſembly of the Nobility ſent the Duke of *Longueville*, to deſire him to aſſume the Title of *Moſt Chriſtian*, as being peculiarly eſſential to the Kings of *France*; they alſo made it a Condition of his being crown'd, that he ſhould forbid the Exerciſe of the new Religion, as they call'd the *Proteſtants*, and that he ſhould not admit any to Places of Power or Truſt that profeſt it, with ſome other Articles; to moſt of which the King agreed, but not to all, as being willing to remit ſome of thoſe Severities that were in force againſt the *Proteſtants*, for which ſome of them call'd him a *Heretick*, and unfit to reign.

THE Duke of *Maine*, in this Confuſion, reſolved to proclaim *Charles*, Duke of *Bourbon*, King; whereupon King *Henry* march'd for *Normandy*, to receive the *Engliſh* Succours; and now the King and *Maine* became two Parties, the King ſummoned his Party to meet at *Tours*, and *Maine* his at *Paris*, and each made as many Friends as they could: The two Princes were both much alike, both for Age and Courage, but the King was the better belov'd of the Two.

As for the two Parties, that of the League, headed by the Duke of *Maine*, and the other by the King, the Duke of *Maine*'s was the ſtrongeſt, having on their ſide the beſt Cities, and all the Parliament, except *Rennes* and *Bourdeaux*; they had alſo the Eccleſiaſticks, with the Aſſiſtance of *Spain*, the Encouragement of *Rome* and all the *Catholick* Princes, *Florence* and *Vienna* only excepted. The Royal Party had moſt of the Common Gentry, the late King's Officers, all the *Proteſtant* Princes, and the *Hugonots* with their old Soldiers, who did the King ſignal Service; however, the King had at preſent but 3000 *French* Foot, two Regiments of *Swiſs*, and 1200 Horſe, with which he march'd into *Normandy*, and making himſelf ſure of *Diepe* and *Caen*, he went to beſiege *Roan*; but *Maine* haſtening thither with 4000 Horſe, and 13,000 Foot, the King decamp'd, and went and took the City of *Eu*; but in the mean Time *Maine* paſs'd the *Seine* at *Vernon*, which made the King retire under the Cannon of *Diepe*, and *Maine* thinking he had now got him faſt, ſent Word of it every where to his own Party, upon which the Parliament of *Tours* ſent Deputies to propoſe to the King, to admit the old Cardinal *Bourbon* as an Aſſociate to the Crown; the King thought to have gone over for *England*, but *Biron* diſſuaded him from it: The King's Quarters were at *Arques*, and *Maine* was poſted upon a Hill at the right Hand, and attempted the King's Retrenchments, but loſt 500 Men, and ſo march'd off for good and all towards *Picardy*.

MAINE having thus expoſed his Weakneſs, ſo elevated the Royaliſts, that they now found no difficulty in ſtanding their Ground any where, and not only ſo, but even purſu'd and chas'd them, and with inferior Numbers too. And thus ſucceſsful, King *Henry* with 4000 *Engliſh*, came to force the great Retrenchments of St. *James*'s and St. *Germains* (Suburbs of *Paris*) and then the Suburbs themſelves, which was manag'd with ſo much Vigour, that he might have enter'd the City, had his Cannon come up in Time; but *Maine* hearing of the King's Approach to *Paris*, diſpatch'd *Nemours* thither, and arriv'd the next Day himſelf with the Body of his Army, whereupon the King withdrew to *Vendoſme*, which he took with little Trouble, and order'd the Governor to be beheaded.

IN the mean Time Pope *Sixtus* ſent a Legate into *France*, where he publiſh'd a Brief, containing the Subſtance of his Commiſſion; but there being no mention made of the Cardinal of *Bourbon*, *Maine* was afraid, leſt the Pope and the *Spaniards* had agreed to make ſome other Perſon King, and conſequently that he ſhould loſe the Power he was inveſted with by *Bourbon*'s Authority, and therefore before the Legate's Arrival at *Paris*, he haſted thither to have *Bourbon* proclaim'd King, by the Name of *Charles* X. *Maine* ſtill retaining the Dignity of Lieutenant General.

NOR to name the ſeveral Factions now broke out at *Paris*, the King reduc'd almoſt all the chief Places in *Normandy*; but the Duke attacking *Menlane*, the King haſted to its Relief, and the better to divert the Duke, he attack'd *Pariſy*, and took *Eſcalado*, and began to batter the Bridge; the Duke haſting to defend the Place, could no way ſtop their Progreſs but by breaking down two Arches of the Bridge; but the King having gain'd his Point, went and laid Siege to *Dreux*; but the Duke with his Forces march'd to the Relief of it, whereupon the King poſted himſelf at *Nonancour*, and gave the Duke Battle in the Plains of *Ivry*, and utterly defeated the League, (as the Duke's Forces were then call'd.) However, the King ſhew'd himſelf very generous, by reſtoring their Pikes and Colours, and by writing a Civil Letter to him upon this Occaſion: *Maine* with the broken Remnant of his Army eſcap'd to *Mantes*, while *Nemours*, *Aumale*, and other Commanders, retired to *Chartres*; and in the mean Time the King being advanced to *Roſny*, *Maine* retired to St. *Denns*, ſo that *Mantes* and *Vernon* declined the Duke's Intereſt.

THE King in the mean Time having taken *Provence* and ſeveral other Places, and his Army growing ſtrong, he block'd up *Paris* when they had no Proviſion of Corn, or other Neceſſaries to anſwer ſuch an Occaſion, and ſeveral Princeſſes, Ladies, the Pope's Legate, the *Spaniſh* Ambaſſador and others, were hemm'd in, in that Blocade: The *Pariſians* did all they could for their own Defence, but the King made himſelf Maſter of all the Bridges, poſted Garriſons in all the ſtrong Places for 7 or 8 Leagues round, to obſtruct all Supplies coming to *Paris*, and ſo to reduce them by Famine.

MAINE

MAINE was now gone to *Flanders*, to desire Assistance from thence, which the *Spaniards* were not very willing to grant; and the old Cardinal *Bourbon* dying at this Juncture, left *Maine* in a confus'd Condition, lest the *Spaniards* should press him to chuse a New King; but he got Matters so contriv'd, that no great Alteration was occasion'd by his Death.

SOME of the King's Commanders were for Assaulting the City, but he declined it, as supposing they might yet carry the point by Famine; and depending upon that, he grew indolent, as supposing that under this Necessity they would surrender of themselves; but *Maine* hearing that the King and his Party were so remiss, rais'd five or six thousand Men to relieve *Paris*, and sent them an Account of his Design in their Favour, adding, that he hoped the Duke of *Parma* would soon arrive at *Meaux*, which he did with the Forces above-mention'd and more, for he brought 12000 Foot, 3500 Horse, and 1600 Waggons; upon which the King rais'd the Siege in order to fight the Duke, but the Duke not being prepar'd to meet him, intrench'd himself; upon which the King sent a Herald to challenge him, but yet he would not stir, but in a few Days afterwards the Duke, by the Advantage of a Fog, so suddenly attack'd *Leguy*, that he gain'd it before *Aumont* could come to succour it; by which means the Tables were turn'd, *Paris* supply'd with all Necessaries, and the King's Army so reduc'd, that for some Days they wanted Ammunition, and even Bread.

DURING this Variety of Affairs, the *Spaniards* observ'd the Interest of the League to decline, and therefore in a Council held with *Maine*, they declar'd the Duke of *Guise* King; he declin'd it, and at last desir'd eight Days to give notice of it to his Master the Duke of *Lorain*, who answer'd that he thank'd his *Catholick* Majesty for the Offer, and thankfully accepted of the Choice they had made. *Maine* was now willing to treat with the King for a Truce; but King *Henry*, after a Conference with some Popish Divines, had his Confession of Faith drawn up, and the following *Sunday* was appointed for him to declare it publickly in St. *Dennis*'s Church, at which the *Parisians* rejoic'd exceedingly; *Maine* seem'd also mightily pleased with it, as supposing that he had now gain'd even the King himself to his Interest, or at least from being an Enemy.

K. *Henry* turns Papist.

KING *Henry* now took a Tour to *Calais*, where he expected Agents from *Elizabeth*, Queen of *England*; but instead of that, he found nothing but severe Messages and bitter Reproaches, for apostatizing from the reform'd Religion he lately profest, and severe Threatnings that she would recal her Forces out of *Bretagne*; he had much ado to pacify her, and more to endure the Remonstrances from other reform'd Churches, tho' he offer'd them Satisfaction.

THE King now began to purchase Interest where it did not come voluntarily; he gave *Vitry*, afterwards Governor of *Meaux*, 20000 Crowns, with the Office of Bailiff, and Governor of the City, to come over to him, and many other Governors bargain'd for more or less to surrender to him, amongst which were the Cities of *Aix*, *Lyons*, &c.

1594 K. *Henry* crown'd

BUT all this while King *Henry* remain'd uncrown'd, though at his Desire they agreed to have it done; but he not having the holy Oil yet in Possession, nor being at the City of *Rheims*, he was crown'd at *Chartres*; which *Maine*'s Party seeing, they fell off daily and revolted to the King; and now all Matters grew ripe for the King's Reception into *Paris*, and the rather, because the King had given assurance beforehand, that in Case of a quiet Admission, no Violence should be offer'd to any in *Paris*, and that he would give a general Indemnity, both as to Body and Goods, to all without Exception.

THE Scheme being thus laid, the People were prepar'd to receive him, and the Night between the 21*st* and 22*d* of *March*, was the Time appointed to seize the Ramparts and Gates: The King's Troops march'd from St. *Dennis* to *Montartre*, and enter'd in half an Hour, some by *Port Neuf* and *Port St. Dennis*, and some by the great *Chastelet*, where they cut a Guard of *German* Foot to pieces, for not crying *Vive-le-Roy*, which the Citizens now cry'd round the Town, with a Bill of General Pardon in their Hand, which they distributed to every one they met; upon this, *Brisac* went to the King and deliver'd him the Keys, and about Ten in the Morning he enter'd the City by the New Gate nobly attended, and went to the Church of *Nostre Dame* to hear *Mass*; and *Te-Deum* was Sung upon that Occasion, and by Noon all Things were in profound Peace; the King dined at the *Louvre*, and all the House was as free from Tumult as if he had resided there a long Time.

PARIS being thus reduc'd, if I may so call it, other Cities seem'd to strive who should come in first, as *Rhone*, *Havre*, *Montevulliers*, and *Pont-Audemur*; also the City of *Vernueil*, besides many others, as *La Chappelle*, *Laon*, *Amiens*, *Beauvais* and *Peronne*; also *Noyon* after a short Siege surrendered, so that no part of *Picardy* now stood out, but *Soissons*, *Ham* and *La-fere*.

THE aspiring Cardinal of *Bourbon* ended his Hopes with his Life in *July*, 1594. and the King of *France*, from several Inducements, propos'd to make War with *Spain*; but approaching the Frontiers, the Severity of the Winter oblig'd him to return back to *Paris*, where a Design was form'd to put an End to his Life, and accordingly on the very Day that he arriv'd, which was *December* 27, as he stepp'd forward to embrace *Montigni*, one *John Chastel*, a young Fellow, struck him on the Lip with a Knife, and broke one of his Teeth; *Chastel* was seiz'd, and own'd, that he was so loaden with unpardonable Sins, that he thought it impossible to avoid the Torments of Hell, but thought they might be mitigated by his making Expiation by this meritorious Act as he suppos'd it, because the King not being perfectly reconcil'd to the Church, he could be nothing but a Tyrant; and this Opinion was first propagated by the Jesuits, who behind the Curtain were in the *Spanish* Interest; but that being discover'd, a Decree was made to punish *Chastel* as a Parricide, and to banish all the *Jesuits* out of the Kingdom in fifteen Days, which was accordingly executed.

THIS did not put a stop to *Henry*'s Expedition against *Spain*, but in the mean time *Velasco*, Constable of *Castile*, made a Descent into *Franche Comté* in *April*, with 15000 Foot, and 3000 Horse; King *Henry* went thither in Person with but a few Troops, depending upon the Forces of *Bouillon*, St. *Paul*, and *Villars*, to secure the Frontiers of *Picardy*, and gave the Command of these Forces to the Duke of *Nevers*, and made the Prince of *Conti* chief of the Council at *Paris*, at which *Soissons* was so disgusted, that the Army was divided into Factions, and did but little Execution.

THE Constable of *Castile* having drove the *Loraners* from their Possessions in *Franche Comte*, and forc'd *Vesoul* to capitulate in *Vesoul*, and attempting afterwards to build over the

Soame

Soame at *Gray*, to facilitate their Paſſage into *Burgundy*; the King and *Biron* advanced to retard that Undertaking, and being at *Fontane Francois*, he diſcover'd the Enemies whole Army coming from the *Seine*, and at the ſame Time found himſelf charg'd with *Maine's French* Troops; and *Biron* being repuls'd, the King nevertheleſs ſtood it out with about two hundred Horſe only, and making ſeveral brave Charges, drove four or five Squadrons of them back almoſt to *Maine*'s Army, who on his Part ſent thrice, and at laſt went himſelf to intreat the Conſtable to march; but he not ſtirring, anſwer'd he knew what he had to do. This brave Action of the King mightily advanc'd his Reputation, and drew the *French* quite off from the *Spaniſh* Intereſt; for *Maine* had retired upon an Aſſurance of the King's Favour to *Chalons*, and began to offer Terms of Peace.

When King *Henry* had ſettled the Affairs of *Burgundy*, he enter'd *French Compté* to fight the Conſtable of *Caſtile*, and to recover that Province; but the *Swiſs Cantons* interpoſing againſt him, his Army being very much harraſs'd, he took his Journey to *Lyons*, to treat with the Duke of *Savoy*, and if poſſible to ſettle the Affairs of *Provence* and *Dauphine*, and ſeveral Places made their Submiſſion to him, on account of his having now imbrac'd the *Roman Catholick* Religion, who had revolted from him before, on Account of his being a *Proteſtant*.

But in the midſt of King *Henry*'s Succeſs in one part of *France*, the *Spaniards* made bloody Work in another, to wit, in *Picardy*, where *Dariullers* took upon him the Command of the *French* Forces, and call'd *Humieres* to his Aſſiſtance. *Humieres* bravely charging the *Spaniards*, he was ſlain. The Parliament were ſo incens'd againſt *Aumale* for the Loſs of *Humieres*, that they made a Decree, pronouncing *Aumale* guilty of High-Treaſon, and the Parricide of *Henry* III. The *Spaniards* went on now with Succeſs againſt the *French*; the *Mareſchal* having the worſt, retreated, and the Admiral who ſtaid to make another Charge was taken Priſoner, kill'd in cold Blood, and all his Foot Forces cut to Pieces.

The *Spaniards* took other Places, and march'd towards *Cambray* as if they would take that; at which the King was very much caſt down; but it was ſome Conſolation to him, that he was inform'd his Affairs went on ſucceſsfully at *Rome*; and chuſing to drive the Nail that would go, he in this proper Conjuncture apply'd by his Deputies to the Pope, about the Terms of Abſolution, and if granted to receive it in his Name; the Perſons pitch'd upon, were *Perron* and *d'Oſſat*. This Deſign of the King's ſending to the Pope upon this Occaſion, ſoon reach'd the Pope's Ear; but the Multiplicity of Affairs in the King's Council, retarded *Perron*'s Journey ſome Months, which the *Spaniſh* Faction made a Handle of, to make the Pope believe that the King only made a Scoff of him, by which means when *Perron* and *d'Oſſat* arriv'd at *Rome*, it was with much Difficulty that they were admitted to an Audience, but that being obtain'd, the Conſiſtory were for allowing the King *Abſolution*, but it was upon Condition that the King would ſubmit both himſelf and his Kingdom to the Pope; but the Matter was compounded, and when the Articles were agreed upon, the Pope appointed a Day to declare publick Abſolution to the King, which was accordingly done on a Scaffold, at the Porch of St. *Peter*'s Church at *Rome*; and as ſoon as the News reach'd the King, he order'd publick Thanks all the Kingdom over, and ſent to the Parliament to take off the Prohibition he had made of ſending to *Rome*.

In the mean Time the *Spaniards* laid Siege to *Cambray*, whoſe Governor *Balagny* having uſed the Inhabitants with barbarous Severities, they were reſolv'd to take this opportunity to ſhake off the Yoke, and ſo ſent Guns, Money, Ammunition and Proviſion to the Beſiegers; and then it is an eaſy Matter to gueſs what a cool Defence the Beſieged would make, and accordingly upon the firſt Breach the Town ſurrendered, without ſo much as conſulting *Balagny* the Governor. *Cambray* taken.

The Duke of *Maine* having proteſted never to be reconcil'd to the King, ſo long as he was without the Pales of the Church, (as they deem all Proteſtants,) was now upon his Abſolution very willing to own him for his Sovereign: And accordingly *Maine* made his Peace with the King, and now the King growing more powerful, *Marſeilles* ſurrender'd to him; after which the Duke of *Guiſe* beat *Eſpernon*, and brought him to Terms; the Duke firſt accepted of a Truce, and then preſcrib'd Conditions, to which *Eſpernon* agreed. 1596

In the mean Time the *Spaniards* had an Eye upon *Calais*, upon which they fell ſuddenly, it being weakened by it's having been inveſted before by *Rhoſne*; the firſt Thing they did, was to force the Suburbs of *Courquet*; and then having made a Breach in the Rampart, the Beſieged capitulated to ſurrender the Town in eight Days, and the Citadel in ſix more, if they were not reliev'd in that Time, which by Reaſon of the high and contrary Winds was then impracticable. King *Henry* depended much upon *Elizabeth* Queen of *England* for Relief, but ſhe was quite out of Conceit with him, for relinquiſhing the *Proteſtant* Religion, and inſtead of ſending him help to relieve *Calais*, ſhe demanded *Calais* for her ſelf.

King *Henry* endeavour'd to unite all the *Proteſtant* Powers in Alliance with him in one League againſt the Houſe of *Auſtria*; but by Reaſon of the Diſcontent of the *Hugonots*, the *German* Princes excuſed themſelves, except the Count *Palatine* and Duke of *Wirtemburg*; but at length the Queen of *England* came in with *France*, obliging themſelves mutually to aſſiſt each other with 4000 Men in either's Country if attack'd, and that they ſhould make no Peace or Truce with the *Spaniards*, but by joint Conſent: The *Dutch* alſo came into it, and oblig'd themſelves to bring ten thouſand Foot, and fifteen hundred Horſe, upon Occaſion, to the Frontiers of *Picardy*.

At this Time *Tello*, Governor of *Dourlens*, form'd a ſtrange Deſign or Stratagem to ſurprize *Amiens*, in order to which, on the 10th of *March* in the Forenoon, when the People were at Church, ſixteen Soldiers in Country Habits entered the Gate of *Montrefat*, ſome carrying Nuts, others Apples, &c. while ſome of the reſt drove a Cart of Straw: One of the Firſt let fall a Bag of Nuts, and at the ſame Time the Cart advanc'd upon the Bridge of the ſecond Gate, and there ſtopp'd to hinder the Port-Cullis from Barring up the Way. The Signal being given by the Firing of a Piſtol, theſe Soldiers briskly charg'd the Court of Guards, upon which a Body of 200 Foot conceal'd in a Chapel, and after theſe another body of a Thouſand more, and after them a Body of Horſe that waited about a Quarter of a League from thence, advanc'd to ſecond the Foot, and ſoon took the City without much Reſiſtance. 1597 The *Spaniards* ſurprize *Amiens* by Stratagem

The King, ſtruck with Conſternation at the Loſs of *Amiens*, in ſuch a ſurprizing Manner,

forthwith ſent *Biron* to inveſt it with four thouſand Horſe. From near the Concluſion of *March*, *Biron* was ſcouring the Country round towards *Dourlens*, to prevent the *Spaniards* conveying Ammunition or Proviſion to *Amiens*. *Biron* maintain'd the Siege, and Queen *Elizabeth* ſent *Henry* 4000 Men according to Agreement. There were but five hundred Garriſon Soldiers in the Town, but having ſixty Cannon mounted, they ſo bravely defended themſelves, that it was three Months before the Beſiegers got to the Ditch; however *Tzilo* was ſo much ſtraitned, that he ſent to deſire the Arch-Duke to come to his Relief.

The Arch-Duke accordingly drew up 18000 Foot, and 4000 Horſe; but before he arriv'd *Tzilo* was ſlain with a Muſquet Ball, and the Marquis of *Montenegro* was made Governor in his room; and upon the Approach of the *French* the Beſieged capitulated to ſurrender in ſix Days, if not reliev'd in that Time, and it was ſurrender'd accordingly, and ſo return'd to the Poſſeſſion of its firſt Owners the *French*; the King taking care to re-people it, and re-eſtabliſh them in all their Privileges.

Edict of *Nantes*

While the King was at *Nantes*, he granted to the *Hugonots* the Edict, call'd therefore the Edict of *Nantes*: It contain'd ninety-two Articles, by which they were allow'd to be Officers of Judicature and of the Finances; there were alſo ſifty-ſix more added, call'd ſecret Articles, in the moſt Important of which they had ſeveral Places of Security left them beſides what they already held, but it was not confirm'd in the Parliament of *Paris* till ſome time afterwards.

Biron conſpires againſt the King.

By this Time *Biron*, who had reign'd a long time in Power, was not able to bear any Equal or Rival, and began rather to command than petition the King for any Favour he wanted, and to expreſs a Reſentment rather than a bare Diſappointment if deny'd, as in the two following evident Inſtances: The firſt was, becauſe he had not the ſole and abſolute Command of the War, but had *Leſdiguieres* as a Partner or Equal in Command, or indeed rather above him, though he was a *Hugonot*, and no Friend of *Biron's*; the other was, becauſe the King refuſed the Government of the Citadel of *Bourg* to a Friend of his at his Requeſt. It may eaſily be learn'd from the Sequel, what will be the Effect of unlimited Ambition if not curb'd in time: *Biron*, in Revenge for theſe Diſappointments, conceiv'd an Enterprize againſt the King's Perſon; but was aſham'd, or rather afraid to put it in Execution: But not reſting here, he ſet other Engines to work, and for the Management of this, he engag'd with the Duke of *Savoy* and *Fuentes*, but *Laſin* was a main Agent; their Agreement was to weaken the Kingdom, by dividing it into many Sovereignties, and to ſhelter all of them under the Protection of *Spain*, and they went ſo far as to divide them too among themſelves: Thus *Savoy's* Share was to be the *Lionnois*, *Dauphine*, and *Provence*, and *Biron* was to have the Dutchy of *Burgundy*, &c. But this Project came to the King's Ear, who call'd *Biron* to an Account, and he generouſly own'd he had ſome ſuch thoughts, but promis'd never to attempt to put them in Execution, whereupon the King pardon'd him, and promiſed him great Tokens of his Affection.

K. *Henry* married

The King was married to *Mary de Medicis* at *Lyons*, *Dec.* 18, 1600.

But notwithſtanding *Biron's* Cunning and Diſſimulation, his Villany in proceſs of Time diſcover'd itſelf; for the King, jealous of the Intrigues of the *Spaniards*, and of *Biron's* Honeſty, order'd *Laſin* to be brought before him, as gueſſing him to be in the Plot, and privy to the Secret. We ſhould have told you before, that *Biron* with his own Hand had drawn up a Scheme of the Conſpiracy, and given it to *Laſin* to copy in his Preſence; which being done, *Biron* wrap'd up the Original in a rough Manner like a Ball, and threw it in the Fire, turning his Foot without minding any more what become of it; but it not immediately taking Fire, *Laſin* ſnatch'd it up and ſecur'd it unknown to *Biron*.

Whether *Biron* found ſome Reaſon to be Jealous of *Laſin* is not certain, but he endeavoured to diſſuade him from going to Court; but finding that would not do, he requir'd him to burn all his Papers before he went; but neither did he regard that, but went and diſcover'd all to the King, and gave him all his Papers of the whole Scheme, with the Names of the Conſpirators, *&c.* But there being many Perſons of the higheſt Rank engaged, the King did not think fit to take notice of any Thing he had found, any further than it related to *Biron*, at leaſt for the preſent. A Noble Lord, a Friend of *Biron's*, ſeeing what Clouds hung over his Head, adviſed him to make off into *Franche Comte*, he being no longer ſafe in *Burgundy*; but being obſtinate, or whether it may be ſaid that divine Providence hurry'd him to his Fate, however he went *Fontainbleau*: His Siſter, the Counteſs of *Rouſſy*, adviſed him to make his Eſcape, but in vain; he continu'd obſtinate; he was therefore ſeized and examin'd before the King, with ſolemn Promiſes of Pardon, if he would diſcover the Truth, but all to no purpoſe. The King therefore reſolv'd to abandon him to Juſtice, and accordingly he was ſent next Day to *Paris*, and the Parliament order'd to proſecute him, and he was accordingly declar'd Guilty of High-Treaſon, and on the 31*ſt* of *July*, 1602. he was beheaded. The *Baron* of *Fontenelles*, and *Montbarot* Governor of *Rennes*, were apprehended as Confederate with *Biron*; the firſt was broke alive upon the Wheel, and ſeveral others ſuffer'd upon this Occaſion.

Biron executed

Elizabeth, Queen of *England*, dy'd *March* 24, 1602. and was ſucceeded by *James* VI. of *Scotland*, but the firſt of *England*, whereupon King *Henry* diſpatch'd *Rhoſny*, a *Proteſtant*, as Ambaſſador to King *James*, to aſſure of that Prince the Continuation of his Friendſhip; and another Deſign was to ſound King *James's* Temper with reſpect to the Houſe of *Auſtria*, and to ſecure an Alliance with him and his two Kingdoms of *England* and *Scotland*, and to confirm and continue the Alliance made between the late Queen *Elizabeth* and him, in which among other things, it was agreed that if *Spain* ſhould attack either *England* or *France*, the other Party ſhould aſſiſt with Forces, to the Number of 6000 Men, by Sea or Land, as the Party aſſaulted ſhould think proper, and that if they were both attack'd, they ſhould make a joint Defence.

The preſent eaſy Poſture of Affairs in *France*, gave the King an Opportunity to employ his Thoughts for the good of Trade, and the Circulation and Improvement of Money; and not being powerful enough at Sea, he ſet up divers Manufactures, as Tapeſtry, gilt Leather, Hangings, Glaſs, *&c.* but above all, he was intent upon the Silken Manufacture, ſending to *Spain* for the Eggs, and planting plenty of Mulberry Trees, whoſe Leaves ſerve the Silk-worms for Food.

Henrietta *Charlotte*, Daughter to the Conſtable of *Montmorency*, came to Court, and the

King;

King upon ſight of her, was ſo captivated with her Charms, that he put his Wits to work to have the Enjoyment of her, which he thought might be done more ſafely, by firſt marrying her to the Prince of *Conde*, to which, both *Conde* and ſhe agreed; but when the King made further Attempts upon her, ſhe repulſed him with the utmoſt Indignation, and acquainting the Prince her Husband with it, they fled to *Bruſſels*. The King enraged at his being thus both diſappointed and expos'd, ſent to the Arch-Duke to ſurrender them up, but he refuſed; the King therefore ſent again the ſame Meſſage, and to no purpoſe; whereupon he reſolv'd to ſteal her away; but ſhe was ſo well belov'd and ſo carefully guarded, that he found this alſo impracticable.

The King, after this Time of Peace, began to think himſelf a Match for the Houſe of *Auſtria*, he now having 30,000 Foot, and 6000 Horſe, all marching towards *Compeigne*; *Leſdeguieres*, a Mareſchal of *France*, had 12000 Foot and 2000 Horſe, and the Duke of *Savoy* and the *Venetians* were to join him with 30,000 more; the Princes of *Germany* had not much leſs, and the United Provinces had 16000, beſides their naval Force, and all in the *French* King's Pay; ſo that it was computed that this War would coſt the King 12,5000 Crowns a Month. While theſe Preparations were making, one *Ann Comans* gave out that there was a horrid Conſpiracy carrying on againſt the King, but ſhe was look'd upon as a Mad-woman and confin'd; however there were ſo many Deſigns againſt him, that it was next to impoſſible that he ſhould eſcape, and his Death was ſo much expected, that it was currently reported in Foreign Countries before it was Fact.

The King himſelf was at the ſame Time overwhelm'd with Melancholy and dreadful Conceits, for which he could aſſign no real Reaſon, but ſtill concluded them to be Preſages of his approaching Deſtiny; and to this we may add another Thing that was deem'd ominous, which was that the *May* Greens or Flowers that had been planted in the Court-yard of the *Louvre*, fell down and dy'd of themſelves. In 1608 a Comet appear'd, and in 1609 a Star appear'd at Noon Day; the *Loire* overflow'd exceſſively, as it had done before the Death of the two preceding *Henries*; and if what follows do not ſmell too ſtrong of Superſtition, I may add that the Inhabitants of *Angoulmois* ſaw an Army of 8 or 10000 Men, with a Commander at the Head, which made a grand Appearance, who having march'd a League or more upon the Earth, were loſt and vaniſh'd in a Wood. It was alſo reported that two Years before that, there was a Note found upon the Altar, intimating the King ſhould be aſſaſſinated; and this I ſhould readily believe, it being very conſiſtent with the Cruelty, as well as the Prieſtcraft of the *Jeſuits*, to invent and put in execution ſuch a piece of Barbarity.

But to leave off theſe Omens, and to come to Fact, this Scheme for Aſſaſſinating the King had been form'd a long Time before, by *Francis Ravaillac*. He was a whimſical Solicitor, and ſo prejudic'd againſt the *Hugonots*, that he could not hear the Name mention'd without being enrag'd; he was very oddly encouraged by the bigotted Popiſh Clergy to perpetrate this Villany, and at laſt went to *Paris* for that purpoſe, which was thus executed. It was appointed that the Day after the Queen's Entry, the King ſhould ſolemnize the Marriage of *Madamoiſelle de Vendoſme*, and next Day the Feaſt, and that next Morning he would go to the Army; but on the Evening of the Day of Entry, going to the *Arſenal* without Guards, the great Number of Carts block'd up the Road, that he could not get along; whether this was done for the purpoſe is not certain, but the Villain took this Opportunity to ſtep upon one of the Spokes of the hind Wheel of his Coach, and gave him two Stabs in the Breaſt, by the laſt of which he cut the arterial Vein above the Ventricle of the Heart, whereof he dy'd in a Moment. This Tragical Action occaſion'd ſuch a Conſternation, that on one Side *Ravaillac* had not power or preſence of Mind to drop his Knife, nor on the other Hand, had the People Courage immediately to ſeize him, though he was at laſt taken, but ſo little confin'd, that any Body might ſpeak to him.

The Gentlemen that were in the Coach with him ſent for a Surgeon and ſome Wine, to make it be believ'd that he was not dead; but afterwards, he was publickly, and even indecently, expos'd to any that would ſee him; he dy'd in the fifty-ſeventh Year of his Age, and the twenty-ſecond of his Reign, leaving three Sons; the eldeſt, named *Lewis*, ſucceeded him; the Second died before he was four Years Old; and the Third was *John Baptiſta Gaſton*, Duke of *Orleans*. There were alſo three Daughters; *Elizabeth* married to *Philip* IV. of *Spain*; *Chriſtiana* married to *Victor Amadeus*, Duke of *Savoy*, and *Henrietta Maria*, married to *Charles* I. King of *England*; theſe ſix by his Wife *Mary de Medices*.

Whatever other Failings he might be guilty of, it is obſerv'd that there were two Excellencies ſo juſtly poiz'd in him, that it was hard to determine whether he conquer'd by the Power of Fighting or the Clemency of Pardoning.

CHAP.

CHAP. IX.

The Reign of Lewis *the Thirteenth.*

LEWIS XIII. was the eldeſt Son of *Henry* IV. and *Mary de Medicis*, who, by the Conſent of both the Parliament and the young King himſelf, was choſe Regent that very Day the King was ſlain. The firſt three Things the Queen Regent propoſed, were, Firſt, the Security of the Kingdom: Second, the Puniſhment of the Aſſaſſin: Thirdly, the Funeral Obſequies of the King, her deceas'd Husband: And accordingly the firſt Act of State was the Reviving the Edict of *Nantes*, for the Encouragement of the *Proteſtants*, and to attach them more firmly to the Intereſt of the Crown.

Ravaillac executed. 1611

THE next was the Affair of *Ravaillac*, and his Puniſhment for his bold and barbarous Murder. He had firſt his Hand piere'd with the Knife, with which he perpetrated the Murder, and then the Places ſo piere'd were burnt with Fire of Sulphur publickly upon the Stage; in the next Place, he had Buskins of boiling Oil apply'd to him, and boiling Lead pour'd into Holes made in his Breaſt, Thighs, and Legs; and laſtly, his Body was torn to pieces by Horſes; and as an additional Puniſhment to his Family, his Father and Mother were order'd to depart the Kingdom, within fifteen Days after the Publication, or after the Execution of the Sentence, and never to return, and all the reſt of the Family were forbid ever to bear the Name of *Ravaillac*, upon pain of Death.

THERE need not be much ſaid upon the Funeral Obſequies of King *Henry*, only that they were perform'd with the utmoſt Pomp, &c. but before he was interr'd, a Debate aroſe in Council, about the Charge of maintaining the Armies he had raiſed, which they thought was needleſs, becauſe it was not now thought a proper Time to give any Umbrage to the Houſe of *Auſtria*. The King of *Spain* propos'd a double Marriage with *France*, viz. the Infanta to the Dauphin, and the Prince of *Spain* to the eldeſt Daughter of *France*; upon which the Council of *France* were for diſbanding thoſe of their Troops, that might give any Umbrage to *Spain*, and reſume the Negotiation of the two Marriages, in order to make a firm Alliance; but one of them ſaid, *Shall we make the World believe that we ſtand in awe of* Spain; *let us keep our Army at leaſt till the Return of the Prince of* Conde, *and till we have certain Information of the Diſpoſition of the Court of* Spain, *and till the King and Queen Regent be well eſtabliſh'd*, which laſt Advice was approv'd.

IN the mean Time the Prince of *Conde* returned from *Milan* to *Bruſſels*, and went from thence into *France*, where a ſtrong Party appeared for him, and the Duke of *Bouillon* would, for the further ſtrengthening it, have perſuaded him to embrace the *Proteſtant* Religion; but finding his Efforts unſucceſsful, the Duke was willing to undertake to manage the Prince, if the other would treat with *Soiſſons*, who at laſt conſenting, the Queen, to whom he had communicated the Accommodation propos'd, ſeem'd to be well ſatisfy'd with it; but that was only underhand, for ſhe knew that if the two Princes of the Blood, the Conſtable of *Montmorancy*, the Dukes of *Guiſe* and *Epernon*, the *Mareſchal de Bouillon*, and the Cardinal of *Joyeuſe*, were once agreed, it would ſhock her Authority. *Bouillon*'s Religion not permitting him to attend at the King's Coronation, he reſolv'd to retire to *Sedan*; but reſolv'd likewiſe to keep a powerful Friend near the Queen Regent, and pitch'd upon *Cochini*, a Confident of her's, to anſwer that purpoſe.

COCHINI being now firſt Gentleman of the Chamber, had a Diſpute with *Bellegarde*, Grand Eſquire, about Precedency at the King's publick Entry into *Paris*, after his Return from Inauguration; whereupon *Eſpernon*, a Kinſman of *Bellegarde*'s, declar'd againſt *Cochini*, and their Quarrel continuing, *Soiſſons* notwithſtanding his having previouſly engaged himſelf in the Intereſt of *Cochini*, reviv'd his Friendſhip with *Bellegarde*, and eſpouſed his Cauſe and Intereſt; but theſe Matters were ſoon made up again, and *Cochini* promiſ'd to do every thing that *Soiſſons* had deſired of him. 1616

THE Queen Regent of *France*, began now to be deſirous of having her ſecond Daughter *Chriſtina* married to the brave *Henry* Prince of *Wales*, which the *Engliſh* Ambaſſador ſoon gave King *James* to underſtand, who thereupon order'd the Lord *Rocheſter* to acquaint the Prince with it, who was then at *Richmond*; but the Prince having got Notice that the Lady was not yet nine years Old, and that her Eldeſt Siſter's Portion was but 500,000 Crowns of Gold, the Match came to nothing.

THE Prince of *Conde*, who was already powerful on the other ſide of the *Marn*, was making preparations to paſs the *Loire* alſo, and to advance towards *Poictou* and *Guienne*, where *Roan* and *Soubize* intended to join him with their Forces: The Prince immediately march'd towards *Paris*, with about five thouſand Foot, and half that Number of Horſe, and rendezvous'd at *Noyon* in *Picardy*: The *Pariſians* were much affrighted at the Prince's March, being afraid he was coming to attack *Paris*. At *Mori* upon the *Seine*, the Prince put forth a Declaration, contrary to that given by the King at *Poictiers*, and that iſſued out at *Paris* by the Parliament; he wholly juſtified himſelf, and charg'd all the Cauſe of his taking up Arms, upon his Enemies and the Court. 1616

WHEN the Prince with his Army had paſs'd the *Seine*, they advanc'd towards *Sens*, which the Prince deſign'd to have ſurpriz'd; but he was ſtrangely diſappointed, and his Meaſures broke; for *Piney Luxembourg* having join'd the Prince with three hundred Horſe, refuſed to accept of the Quarters aſſign'd him by *Bouillon*, who was chief Commander, next to the Prince himſelf: *Bois Dauphin* took the Advantage of this Difference, and took him and all his Men Priſoners, and might, doubtleſs with Succeſs, have fought the Prince and his Army, but was too faint-hearted; which the Prince and *Bouillon* ſeeing, made the beſt of their Way over the *Loire*, where being join'd by *Count Germains*, they march'd with all poſſible Speed to the Frontiers of *Tourayne* and *Poitou*.

THERE having been a double Marriage agreed upon between the Courts of *France* and *Spain*, one between the Princeſs *Elizabeth* and the Prin-

Prince of *Spain*, the other between the Infanta of *Spain* and a Prince of *France*; the Celebration of both, was appointed to be on one Day, *viz. October* 18; one at *Bourdeaux* in *Guienne*, and the other at *Burgos* in *Caſtile*; but their Mirth was damp'd by the Motions of the Prince of *Conde*'s Army, though they were but in a poor Condition; and what ſtill added to their Concern, was, that *Soubize* the great *Roan*'s Brother, as well as *Roan* himſelf, had declar'd for the Prince of *Conde*, as did the Duke of *Sully*, and the Town of *Rochel*; and ſo ſincere were the Reform'd to the Prince's Intereſt, that they mov'd to have a Treaty of Union between themſelves and him, which was made and ſolicited by the Duke of *Roan*: And this Treaty was concluded at the Camp at *Sauzai* in *Poictou*, *Nov.* 27, 1615. Amongſt others, were theſe Articles, *viz.* To endeavour jointly the Safety of the King's Perſon and Authority: To oppoſe the Publiſhing the Council of *Trent*: To prevent the Miſchievous Conſequences of the double Marriage with *Spain*: To inſiſt upon the Eſtabliſhment of a good Council: To adviſe his Majeſty to procure an exact Obſervance of the Edict of *Nantes*; and To inſiſt upon it, that the Reform'd might be maintain'd in the Poſſeſſion of all the Rights and Privileges granted them by the late King, *&c.* and that both Parties ſhould ſtand inſeparably united, and never make any Treaty of Peace without the mutual Conſent of each other.

1615.

The Queen Mother ſeeing *Conde*'s Intereſt flouriſh at this Rate, ſhe ſet her Engines to Work, to ſee if ſhe could make a Diviſion between the Prince and his Party, but in vain. In the mean Time King *James* I. of *England* offer'd his Mediation for adjuſting thoſe Differences, fearing they would otherwiſe break out into a Civil War. Both Parties (both the King and *Conde*) were diſpos'd for an Accommodation, and on the firſt Day of the Year, King *Lewis* ſent to *Conde*, that both he and the Queen his Mother, were both inclin'd to reform the Council, *&c.* according to the Tenor of the above-mention'd Articles. The Prince acquainted the Aſſembly at *Niſmes* with the Steps they took, and they agreed to preſent ſome Articles to the King, in the Name of the Prince and themſelves; which was accordingly done, and the King gave leave for the Prince and the Deputies of the Aſſembly to have a Place of Conference nearer the Court, and that the *Engliſh* Ambaſſador ſhould be allow'd to be preſent to take Cognizance of whatever Debates might happen.

London was the Place, and the Tenth of *February* the Time appointed for opening the Conference; the Deputies of *Niſmes* being to be admitted. *Conde* promiſed that as ſoon as the Conference was open'd, he would convince *France*, that he had no other Deſign but the Good of his Country; *Conde* preſented 30 Articles, ſome of which paſs'd without, and ſome with Amendments, and ſome were rejected or poſtpon'd; his firſt Article was, that an exact and ſpeedy Enquiry ſhould be made after thoſe who had been any way concern'd in the Murder of the late King, with ſeveral other Articles of the Treaty, which was ſign'd by both Parties and confirm'd by King *Lewis*, adding alſo a general Pardon for all what was paſt ſince the Prince of *Conde* had taken up Arms. Things being thus ſettled, *Conde* went to his Government of *Berry*; *Longueville* retired Home; *Roan* and *Sully* went to *Rochel*, and *Mayenne* and *Boullon* went to Court.

Conde's Articles.

Treaty ſign'd

The Queen Mother now began to contrive to gain *Conde* to her Intereſt, for which Purpoſe ſhe ſent *Richlieu*, Biſhop of *Luſſon*, twice to him: and *Conde* finding the Queen was ſo importunate, began to make his own Terms, and the Queen and *Conchini* agreed that he ſhould have the ſole Share in the Government, excluſive of all the Lords of his Party, and that he ſhould likewiſe be Head of the Council, or firſt Lord of the Treaſury, *&c.* Theſe Terms agreed upon, *Conde* went to Court, arriving at *Paris* the 20*th* of *June*, and was graciouſly receiv'd by both King and Queen.

Conde goes to Court.

Conde had not been long at Court, till the Dukes of *Guiſe* and *Mayenne*, with the *Mareſchal de Boüillon* (outwardly at leaſt) endeavour'd to draw *Conde* in, to conſpire the Ruin of *Conchini*; and after different Methods propos'd, the Prince thought the beſt Expedient would be to get the Queen turn'd out from the Head of Affairs, not doubting but *Conchini* would ſoon be expelled of Courſe. About this time the Lord *Haye* being come as Ambaſſador extraordinary from *England* to *France*, *Conde*, reſolv'd amongſt the reſt, to give him a Treat; and whether deſign'd or accidentally, *Conchini* made a viſit to *Conde* the ſame Day; and when *Conchini*'s Enemies heard it, they propoſed to murder him directly; but he being under *Conde*'s Roof, no Violence was allow'd to be uſed at that Time, and ſoon after he ſent the *Mareſchal Conchini* an Account of what was deſign'd againſt him; whereupon he retir'd to *Caen* in *Normandy*, but was ſo ungrateful as afterwards to ſignify to the Prince himſelf, that he was ſtill in a Capacity not only to withſtand all their Power, but if he ſet himſelf about it to overthrow all their Projects.

The Queen began to obſerve this Deſign to ſap her Foundation, and overturn her Authority, which ſhe already perceiv'd to ſink and decline, and that *Conde*'s Intereſt increas'd daily ſince *Conchini* had withdrawn from Court; of which the Duke of *Sully* gave her undeniable Intimation; whereupon ſhe procured *Conde* to be arreſted and impriſon'd; and being afraid that it would create great Diſturbance, ſhe took all poſſible precaution to prevent it.

On the other Hand, the diſcontented Lords were taking Meaſures for raiſing a powerful Army, which it was at laſt agreed ſhould rendezvous at *Noyon*; and the King, ſuppoſing that he ſhould be call'd to an Account for arreſting the firſt Prince of the Blood, reſolv'd that it was not conſiſtent with the Majeſty of a Sovereign, to anſwer any otherwiſe than by a Publick and ſolemn Declaration.

But not to dwell too long upon Particulars, let us return to *Conchini*, whom the King had conſented ſhould be aſſaſſinated, which was effected thus: He being come in the Morning of *April* 24, to the *Louvre*, the great Gate was open'd to him, but immediately ſhut after him; a Man plac'd upon the Gate for that purpoſe, gave three Flouriſhes with his Hat upon his Entrance, which was a Signal to *Vitri*, the chief Aſſaſſin, that he was enter'd. *Vitri* not knowing him perfectly, enquir'd in the Croud for him, and was anſwer'd, *There he is reading a Letter*, at the ſame Time pointing to him. Then ſeizing him by the right Arm, he ſaid, *I arreſt you Sir, by the King's Order*, and holding him by the Arm, beckon'd to *du Hallier*, *Perſan*, and others that were appointed to be the Murderers, who diſcharging their Piſtols cloſe at him, he dropp'd down dead upon the Ground, and as if that was not enough, they run him through with their Swords, kick'd him with their Feet, and expos'd him, by laying him at full Length upon the Ground, and then, as if they had done ſome great Exploit, cry'd, *God ſave the King*.

Conchini murdered.

When *Conchini* was thus diſpatch'd, the King ſaid to *Vitri*, *Now I am a King, I thank you.* But their Cruelty was not yet over with *Conchini*, for they hang'd his dead Body on a Gallows, pluck'd out his Eyes, cut off his Noſe, Ears, Privities, and then his Head and Arms, and then the Mob divided themſelves into ſeveral Bands, and every one dragg'd ſome part of his Body through the Streets; one took his Heart and broil'd it upon burning Coals, and eat it dipped in Vinegar; and when they had ſeemed to have had their Satisfaction, they burnt the reſt of the Body, and ſome out of a curious Revenge bought the Aſhes at ſo much per Ounce.

While the dreadful Murder was executing, the Queen Mother being ſurprized at hearing the Piſtols diſcharg'd, bid one of her Maids of Honour enquire what was the Matter; and a Captain of the Guards walking in the Court, ſhe enquir'd of him; but *Vitri* hearing her, he anſwered without any Concern, *Conchini is kill'd:* The Queen ask'd who was his Murderer. *My ſelf*, anſwered *Vitri*, void of Concern as before. The Maid returning the Anſwer to the Queen, ſhe ſeem'd concerned even to Diſtraction, but coming to herſelf, ſhe ſent to the King to deſire leave to come to ſee him; but he repuls'd her, and would not give her any Encouragement or Admittance, though ſhe contriv'd many Ways for it, but in vain; and when ſhe was thus in Diſgrace, *Vitri* diſarmed her Guards, and ſucceeded *Conchini* as Mareſchal of *France*.

But this did not do *Conde* any Service as to his Liberty; nor did he receive any Advantage by either the Death of *Conchini*, or the Diſgrace of the Queen; only his Confinement was leſs ſevere, and his Priſon was allow'd to be in the Priſon with him, and they were at laſt remov'd from the *Baſtile* to the *Tower* of *Vincennes*, where we leave them and return to the Affair of the King and Queen Mother.

The Q Eſcape.

The Queen being now confin'd, ſhe began to meditate an Eſcape, and the Duke of *Eſpernon* being at *Metz*, he ſent a Letter to the King not to take it ill, that he was going to his Government of *Angoulmois* and *Santoigne*, where being arriv'd, he was very uneaſy that he could hear no News from the Queen Mother; therefore he diſpatch'd *du Pleſſis* to *Blois*, to know how it far'd with her; and withal he ordered him to go by way of *Loches*, to bid *la Hiere*, who commanded there, to put every Thing in good order for a Reception upon occaſion. Some Lords, to whom the Queen had communicated her Deſign of Eſcaping, diſſuaded her very much from putting herſelf in the Power of ſuch a haughty Man as *Eſpernon*; but this was already determin'd, and *du Pleſſis* diſpos'd the Count of *Brienne*, her Maſter of the Horſe, to contribute to her Eſcape; he ſent to the Archbiſhop of *Thoulouſe*, who was advanc'd as far as *Loches* with the Duke his Father, to deſire him to come to *Montrichard*, that the Road might be ſecured, or at leaſt her Paſſage leſs dangerous.

The Queen, to avoid Diſcovery, got out at a Cloſet Window in the dead of the Night, being accompanied by a Maid, the Count of *Brienne*, and three or four other faſe Confidents. She had the height of two Ladders to deſcend, and when ſhe had got down the firſt, ſhe was ſo affrighted with it, that ſhe durſt not venture upon the Second, but they wrapp'd her up in a Cloak, and carefully convey'd her down, and *Brienne* and *Preſſis* ſupported her in walking beyond the Bridge of *Blois*, where her Coach waited for her, and carried her to *Montrichard*, whence they made all the haſte they could to get betimes to *Loches*; from whence ſhe ſent a Letter to the King, but did not ſtay there to receive an Anſwer, but after two Days Stay went to *Angouleſme*.

Luines adviſed the King forthwith to raiſe an Army, but the Queen being appriſed of it, wrote to the Chancellor and Keeper of the Seals, *&c.* deſiring them to acquaint the King that he would be guilty of the greateſt Error in the World if he march'd at the Head of his Troops, againſt an innocent unfortunate Woman; this mild Anſwer of the Queen, which was made publick, exaſperated the People againſt *Luines*, who put the King upon raiſing an Army againſt his own Mother: Upon this the King order'd the Count of *Bethune* to carry the Queen his Anſwer to her firſt Letter to him, and to aſſure her that he was willing to give her Satisfaction, and that ſhe ſhould have the Liberty of being in ſome other City than that of *Blois*; and furthermore, *Bethune* had private verbal Orders to adviſe and preſs the Queen to ſeparate from *Eſpernon*, and to offer her more advantageous Conditions in Caſe ſhe would abandon him to the King's juſt Reſentments; but ſhe rejected this laſt Article with Indignation, affirming that her Heart was not capable of ſo horrid a piece of Ingratitude.

Bethune made the beſt of this reſolute Anſwer, and did not tell the King the worſt, but adviſed him to deſiſt from his new Levies and warlike Preparations, as it would give the Queen too much Umbrage in a Time of Treaty; but however the King went on with his Preparations, but willing to gain his Mother rather than uſe Violence, he ſent to her by Father *Berulle*, Superior General of the Oratory, who was much eſteem'd for his Prudence and Sweetneſs of Temper; but little good was done that Way, for though ſhe was a Bigot to the Church of *Rome*, yet now in her Diſgrace ſhe was glad to ſue to the *Proteſtants* for Relief.

Notwithstanding the Preparations for War, both on the King and Queen's Part, yet neither Party was eager to go to War, but both willing to come to an Accommodation; and *Richlieu* being allow'd to return to the Queen, and the Pope's Nuncio to be Moderator, at laſt, Articles were agreed upon, and the Queen had liberty to go where ſhe pleas'd, and even to the King's Preſence. The Duke of *Eſpernon*, and others that had ſerv'd her, were to be reſtored to all their Offices, and to the King's Favour; the Queen was diſcharg'd from all the Debts ſhe had contracted ſince her Eſcape from *Blois*, and all her Revenues confirm'd to her, and beſides the Government of *Anjou*, the City and Caſtle of *Angers*, the Bridge of *Ce*, the King gave his Mother alſo the Caſtle of *Chinon* in *Touraine*.

Arti of A con dation

The Accommodation being thus far advanced, the next Thing to be done, was to procure an Interview between the Royal Son and the Mother; and in order to this, the Duke of *Savoy* went to make a Viſit to the Queen Mother at *Angouleſme*, in order to perſuade her to go to the King at *Tours*, who was advanc'd ſo far to receive her; ſhe made many Scruples and Excuſes upon it, but ſhe at laſt left *Angouleſme* on the 29*th* of *Auguſt*, and being attended by ten Coaches and ſix, and 500 Horſe, ſhe was conducted by *Eſpernon*, to the Frontiers of his Government of *Angoulmois*, where all parting, ſhe made him a preſent of a rich Diamond, and deſired him always to wear it as a Teſtimony of the Acknowledgment of a Princeſs who was beholding to him for her Liberty; ſhe was accompanied as far as *Poictiers* by her Ladies of Honour, the Duke of *Montbazon*, the Biſhop of *Lucon*, and other

Perſons

Perſons of Quality, where ſhe was receiv'd by the King's Coaches; and the Cardinal *de Retz*, and *Arnoux* the King's Confeſſor, accompany'd by a great Number of Gentlemen, were adorned to go and meet her; *Luines* alſo went to wait upon her, and ſhe proceeded to the King at *Tours*, where ſhe met with a kind Reception.

As *Conde* had been promiſed his Liberty as ſoon as Matters were accommodated with the Queen, he now impatiently expected it, and *Luines* purſued the ſame Deſign, not for the Reſpect he had for *Conde*, but becauſe he thought he ſhould not be able without the Aſſiſtance of the firſt Prince of the Blood to withſtand the Queen and her Intereſt: Some of the Great ones were diſpoſed to fall in with her againſt *Luines*, and ſome again would have perſuaded her to contribute her Intereſt for the Prince's Liberty; but as ſhe would not adhere to that, *Luines* purſued his Deſign, and at laſt going to *Paris*, carried the Prince a very obliging Letter from the King, who invited him to *Chantilli*, where he ſhould ſee him, and the King receiv'd him very kindly, and ſent a Declaration to the Parliament of *Paris* in his Favour.

But the Queen did not like either this Declaration, or the Prince's Liberty; which the King and *Luines* readily perceived; and that *Eſpernon* and other diſcontented Lords were concerting new Meaſures with the Queen againſt their Intereſt: And they might well be ſtartled, for the general Aſſembly now held at *London* by the King's Authority, ſent Deputies to the Queen to congratulate her upon her Arrival in the Neighbourhood, and to communicate to her the Demands the Reform'd made to the King; ſhe receiv'd them kindly, but told them ſhe did not care to meddle with the Propoſals, becauſe they belong'd to the King and his Council, and that ſhe would not engage in the King's Affairs.

In the mean Time ſhe engaged in a new Affair, for obtaining the Eaſe of the People, and the Reformation of the State, as ſhe call'd it. In this Party or League that ſhe form'd, there were no leſs than the ſecond Prince of the Blood, ſeventeen great Lords, Officers of the Crown, and Governors of Provinces that took her Part. *Longueville* the Grand Prior, and the Count *Torigny*, held all *Normandy*: *Soiſſons* took care of *Perche* and part of *Mayenne*: *Vendoſme* was Maſter of all the Cities upon the *Loire*; *Bos Daphin* held thoſe between the *Satre* and the *Mayenne*; the Queen had *Angers* and *Pont de Ce*; the Dukes of *Tremoville* and *Retz* had all the Places in *Poictou* and *Bretagne*; *Roan* commanded in *St. John de Angeli*; *Eſpernon* in *Angoulmois* and *Saintogne*. The City and Parliament of *Bourdeaux*, and all *Guyenne* were for the Duke of *Mayenne*, and his Intereſt; and in ſhort the Queen Mother had two hundred Leagues of the maritime Provinces of *France*, from *Diepe* to the Mouth of the *Garonne*, beſides a great many other Places within the Land; ſhe had able Generals, brave experienc'd Officers, and Lords very expert in Civil and Military Affairs. They did not pretend to attack any one particular Place, but to march in a Body towards *Paris*, to engage the People to fall in with them, in demanding a Redreſs of Grievances, and indeed the Scheme was ſo far very well concerted.

The Court was very much alarm'd at this Defection of the Coaſt and part of the Country, and the Queen's Succeſs in raiſing Forces for the redreſſing of Grievances; however the King ſent *Monthaſon*, and *Bellegarde*, Archbiſhop of *Sens*, to the Queen at *Angers*, with Propoſals of Peace. The Pope's Nuncio had ſeveral Times offered the good Offices of his Maſter the Pope, for reconciling the King and his Mother, and offered his Service to go himſelf to her; but the Prince of *Conde* not approving of that, he only deſired him to write to her by the Arch-biſhop of *Sens*; but when ſhe once underſtood that the King was reſolv'd upon an Expedition into *Normandy*, all this Talk of a Negotiation was dropp'd, and the Queen betook herſelf to adviſe, as to what was beſt to be done. The Duke of *Roan* adviſed her to go to *Bourdeaux* to the Duke of *Mayenne*, who had with him an Army of 18000 Men, and this, doubtleſs, had been the beſt Way, but the crafty and treacherous *Richlieu* oppos'd it, his Deſign being to betray the Queen without her perceiving it, and to bring all the Lords of her Party over to the King, under a Pretence of his Favour, or that of his *Minion Luines*.

The Reaſon of *Richlieu*'s acting thus, was becauſe he knew that if the Queen went to *Bourdeaux*, ſhe muſt be influenc'd by *Mayenne* and *Eſpernon*, and could not call herſelf Miſtreſs of her own Sentiments without their Concurrence; and therefore for him to diſſuade her from conſulting them, was to give himſelf the better Opportunity of forcing her to a Peace; and *Richlieu* purſued this the cloſer, becauſe *Luines* had promiſed him a Share in his Authority at Court, and that he would demand a Cardinal's Cap for him; and *Richlieu* thought if he once got to be a Cardinal, (the Queen deſirous to have her own Creatures in the Council,) he might come to be a further Favourite, by being uſeful to her, in aſſiſting to promote her Favourites.

The King in the mean Time, bent upon his Expedition to *Normandy*, acquainted the Magiſtrates of *Paris* with his Deſign, and recommended to them the Preſervation of the Peace of his Capital of *Paris*, where the Queen, (the King's Wife,) with the Chancellor, and part of the Council, ſhould be left for the Diſpatch of publick Affairs.

The King was receiv'd at *Roan* with extraordinary Acclamations of Joy, and went next Day to Parliament, where the Keeper of the Seals told him all that had been paſt ſince the Retreat of the Queen Mother to *Angouleſme*, of the Care that had been taken to content her; and the tender Sentiments yet retain'd for her, which done, he acquainted the King, that the Duke of *Longueville*, whom the King had order'd to meet him at his publick Entry into the Province, refuſed it; for which the Duke was immediately ſuſpended from being Governor of *Normandy*, as were ſeveral other Officers from their Places of Profit and Truſt, who had taken part with the Duke.

The Queen Mother, ſtartled at the Progreſs her Son's Arms made towards her, reſolv'd nevertheleſs to ſtand upon her own Defence, and to ſeize *Mens* and other Cities that lay in the King's Way to *Angers*; and in order to that, ſhe took the Field with 6000 Foot, and 1200 Horſe, ſeiz'd the Town of *La Fleche*, and advanc'd towards *Mans*; but ſhe loſt more than ſhe gain'd by this Expedition, and therefore retired immediately to *Angers*.

The King at the ſame Time having receiv'd new Inforcements, *Luines* began to be lifted up, and immediately adviſed the King to publiſh a Declaration againſt the Queen Mother, for taking up Arms againſt him; but ſtill the Blame therein was rather charg'd upon her evil Council, than upon herſelf; and the Grandees of her Party, ſuch as *Soiſſons*, *Vendoſme*, the Grand Prior, *Mayenne*, *Nemours*, *Longueville*, *Roan*, *Tremoville*, *Eſpernon*, *Retz*, *Roannes*, *Bois-Dau-phin*, King's Declaration.

phin, *Candale*, *La Valette*, the Arch-bishop of *Tholouse*, were all declared Rebels, and Guilty of High-Treason, especially if they did not quit their Arms in a Month's Time, and quit all Leagues and Associations, both within and without the Kingdom.

The Queen finding her Son march against her with such a Force, and so much Resolution, advised with her Council, whether she had better wait his coming with the 8000 Foot, and 1500 Horse, she had with her, till she could be further re-inforc'd, or that she should leave some Troops for the Defence of *Angers* and *Pont de Ce*, and go to join *Mayenne* and *Espernon*, who could make up 30,000 Men. This last was certainly the safest Way, and therefore the vile *Richlieu* dissuaded her from it, and in the mean Time took care that there should be neither Powder nor Ball in *Pont de Ce*, and got his Creatures into Place, to command her Troops, and by this means got into such Authority, that it was in his Power to deliver her up if he pleased.

The Queen began now to see what Condition she was in, and not much less than betray'd; she therefore sent to the King to desire to treat with him; but his Grand Preliminary Article was, that although he was willing to pardon the Count and Countess of *Soissons*, yet all the rest should be left to his Mercy; and the King's Troops having by this Time taken *Pont de Ce*, the Queen resolved to pass the *Loire*, and go to throw herself upon *Mayenne* and *Espernon*; which *Richlieu* perceiving, gave immediate Notice to the King's Minion, *Luines*, and he to the King, who dispatch'd a Body of Horse, to prevent the Queen's intended Passage; which when she found nothing but Treaty would then do, she dispatch'd *Bellegarde*, the Cardinal of *Sourdis*, the Archbishop of *Sens*, President *Jeannin*, *Richlieu*, and *Borrulle* to the King. They soon agreed upon Articles, whereby the Treaty of *Angoulesme* was confirm'd; King *Lewis* promised to testify his Mother's Innocence by a Declaration put forth according to Law, and to grant a general Pardon to all that took her Part, provided they return'd to their Duty in eight Days Time after the Accommodation was sign'd; but those whose Places and Employments the King had bestow'd upon others, were excepted, which struck particularly at the Grand Prior. *Richlieu*, by a secret Article, was promised a Cardinal's Cap; he gain'd his Ends, and all this vast Bustle terminated in a bare Interview between the King and Queen, and the Ceremony of *Espernon*, being the first that laid down his Arms.

After this the King besieged *Montauban* his Minion, *Luines* commanding the Army, and the King being present in Person; but he made a sorrowful piece of Work of it, for *Luines* was no Soldier, and tho' he might, like some others, even at this Day, serve well enough to make a Politician at home, yet when he came to be try'd, he made nothing on't; the Duke of *Mayne* was kill'd; *Luines* was despised and reproached for his Conduct, or rather Mis-conduct, and took it to Heart, and after all his Greatness, dy'd unlamented on the 14th of *December*, 1622. 1622.

Cardinal *Richlieu* being now such a Favourite, that he was introduc'd by the Queen into the Council of State, he thought it was his Business to manage every Thing, and amongst the Rest, the Match with *England*, *viz.* between the Prince of *Wales*, and Madam *Henrietta Maria*, which was concluded and agreed upon in the Year 1625.

To pursue *Richlieu* yet further, he was preferr'd by the King of *France* to be Lieutenant General of all the King's Armies in *Poitou*, *Saintogne*, *Angoulmois* and *Aunis*, with a full Power over all other Officers in the Army.

The King and *Richlieu* his General being now upon the Siege of *Rochel*, they endeavour'd to block it up; but that Attempt was vain, except they could have block'd it up by Sea too, which was the only Way the *English* had an Opportunity to relieve it; but the *English* failing in that, the *Rochellers* were very much exasperated against the Earl of *Denbigh* the *English* Governor there, and an Insurrection had like to have happen'd; and *Richlieu* seeing their Distress and Divisions, advis'd them to submit, but they stood it out, waiting still in Expectation of the *English* relieving them.

Another Accident contributed to the Misery of the *Rochellers*; for when the Duke of *Buckingham* was going aboard at *Portsmouth* to the Relief of *Rochel*, he was stabb'd by *Felton*; which as soon as *Richlieu* heard, he made fresh Proposals to them, as thinking that his Death might bring them to Terms; but all in vain, though they were reduced to such Extremity, that they had nothing to eat but Cockles and Roots, and the like, and these very scarce: Nay, they were reduc'd to that Distress, that they drove all useless People, as old Men, Women, and Children, out of the Town, to the Mercy of the Besiegers, where they lay in the Meadows, and liv'd upon Herbs, till the Besiegers by Musquet, shot and forc'd them to retire into the City.

The King aggravated by their Obstinacy, threatened that he would give them no Quarter, if they did not surrender immediately; and the *Rochellers* on the other Hand offer'd to beg Pardon with Ropes about their Necks, provided that upon Surrender they might have their Privileges, both in Relation to Religion and Magistracy continued to them; but amongst other Things, they required that Peace should be made with *England*; but that last was deny'd them, it not being allow'd for them to prescribe to the King what he had to do, and that they ought to be thankful that they were not punish'd for having drawn *France* into a War. The Siege was therefore continued, and the Besieged continued miserable, till at last the *English* Succours, under the Command of the Earl of *Lindsey*, appear'd in Sight of the Isle of *Rhee*, consisting of seventy Vessels, which next Day were follow'd by thirty more. The whole *French* Army was 20000 Foot and 3000 Horse, and not to enumerate Circumstances, *Rochel* surrendered on the 28*th* of *October*, 1628.

Queen *Ann* of *Austria* was deliver'd of a Son on the 5th of *September*, who became the famous *Lewis* XIV. of *France*, of whom more in his Place. *Lewis XIV. born.*

But now to pursue *Richlieu* towards his final Exit, (for both his Health, and that of the King, began sensibly to impair;) towards the End of *November* he was seiz'd with an exceeding Pain in his Side, and a high Fever; he lingered till the 4th of *December*, and then dy'd, in the 58th Year of his Age. *Richlieu dies.*

The King did not live long after him, and finding his Health decline, he made his Will, and settled his Affairs, leaving his Wife Regent; but he left the chief Power in the Hand of the Ministry. He committed the Lieutenancy of the Crown to his Brother, and to *Conde* the chief Place in Council, only subordinate to *Orleans*. He made *Mazarine* Prime Minister, and added to the Council *Seguier*, *Bettillier*, and *Chavigny*, and by this Council, the most weighty Affairs were to be determin'd; and the King having settled all his Affairs, he dy'd on the 10th of *May*, 1643. in the 43d year of his Age, and upon the very Day that he finish'd the 33d Year of his Reign.

CHAP.

CHAP. X.

The Reign of Lewis *the Fourteenth.*

1643. LEWIS XIV. began his Reign before he was five years of Age, and he was ſcarce ſooner fix'd upon the Throne, but *Melo* the *Spaniſh* General appear'd on the Frontiers with an Army of 17000 Foot, and 7 or 8000 Horſe, to ſee if any affecting Novelty would join him, and reſolved to invade *France*, as concluding that he ſhould find little Reſiſtance. The firſt Place that he attempted was *Rocroy*, a ſmall Town on the Frontiers of *Champagne*; as ſuppoſing that if he ſucceeded againſt that Place, it might facilitate his Approach to *Paris*, to join thoſe that were of his Party there, and to put the reſt in Confuſion; but he was diſappointed in the grand Deſign of taking *Rocroy*, and his Projects, that were to be the Conſequences of it, withered with it.

ory be ged.

THE Duke of *Enguien*, *Conde*'s Son, and but even a Minor, commanded the *French* Army, aſſiſted by the Mareſchal *de la Hoſpital* and M. *Gaſſion*; and upon News of the Siege, they aſſembled Troops to the Number of about 14000 Foot and 6000 Horſe. *Melo* preſuming he could take the Place without much Trouble, made very weak Proviſion, had a ſcanty Garriſon, and no Line of Circumvallation; which gave *Gaſſion* an opportunity of throwing Reinforcements into the Town, and enabled them to ſally upon the Beſiegers; and recovering the Half-Moon, gave time for the Body of the Army to come up; which was done with ſo much Reſolution, that *Enguien* was reſolved to ſee *Melo* out, not being afraid to meet him in the open Field, which he accordingly did.

...ſpa-...de-...ed

MELO, being ſuperior in Number of Forces, aſſured himſelf of a compleat Victory; and upon this Preſumption drew his Forces from the Siege to meet *Enguien* in a ſet Battle; but did not care to engage till a Reinforcement joined him, which was 4000 Men under General *Beck*. But on the other Hand, the *French*, by this Night's Delay of *Melo*, re-united themſelves, and *Gaſſion* with the right Wing, could now conveniently attack the *Spaniards* in Flank. Upon this *Melo* being now forced to beſtir himſelf, engaged and took from the *French* eight Pieces of Cannon; he alſo took *Sennetere* Priſoner, and wounded the Mareſchal *de la Hoſpital*: But *Enguien* would not deſiſt upon this Diſcouragement, but rallied again, and headed thoſe of the *French* who were yet moſt entire; while *Gaſſion* ſo ſhattered the left Wing of the *Spaniards*, that they were forced to give way. The General *Albequerque* was the firſt that betook to Flight, and he was eaſily and naturally followed by the reſt, and *Melo* himſelf fled at laſt; and the reſt of the *Spaniards* being hemmed in on all ſides by the *French*, who brought up their Cannon to force them if they would not otherwiſe ſubmit, they gave up their Arms, and were made Priſoners, to the Number of 6000 taken by the *French*, with Cannon, Baggage, and a great Number of Colours; the *French* not miſſing above 2000 of their Forces. This Succeſs encouraged *Enguien* to fall upon the Enemies Country, where burning and deſtroying wherever he went, he laid ſiege to *Thionville* and *Sirck*, which both ſoon ſurrendered.

The Queen Regent (the late King's Widow, and the preſent King's Mother) went with her two Sons from St. *Germains* to *Paris*, and entering with the new King into the Parliament, where *Orleans* and *Conde* aſſiſted, ſhe there delivered her mind; and ſhewing her Sons as Pledges of her Affection and the Kingdom's Felicity, reſigned herſelf to the late King's Diſpoſition of the Regency: Upon which *Orleans* and *Conde*, and after them all the reſt of the Members in Parliament, agreed to confirm her in the Regency, with an abſolute Power; only with this Condition, that the Queen Regent ſhould confirm *Orleans* and *Conde* in the Charges the King had conferred upon them, and that the ſame Miniſters ſhould be continued in Council; all which ſhe agreed to, and as a further Act of Generoſity, recalled the Exiled, and ſet the *Baſtile* open, and publickly expreſſed that her Intention was during her Regency to put in exerciſe all the Vertues, but none of the Defects, of the paſt Government.

Mazarine made Prime Miniſter.

THIS new Regency, or rather Confirmation of the old Regency, put a new Face upon ſeveral Affairs, which gave *Mazarine* an Opportunity of advancing himſelf to the Prime Miniſtry, tho' he was a Stranger, and none of the brighteſt Capacity, both which one would think would have been Arguments againſt his being admitted to a Place of ſuch Truſt. But his being a Stranger he uſed as an Argument in his own Favour, alledging that his being a Stranger was rather to be judged commodious for the Publick Good, for that Natives had Kindred to prefer, and Parties and Acquaintance to eſpouſe the Intereſt of. They had alſo great ones to excuſe their Overſights, or procure Pardon for their ſmaller Faults: But that he had no View but the Publick Good, nor any other Buſineſs or Intereſt to fill his Hands or employ his Thoughts, nor any thing to ſupport him, but his own Innocency. And indeed this Argument of his being a Stranger prevailed; to whom the Generality rather inclined, than to have their Equals, which were Neighbours, advanced.

Orleans, not very eaſy under the yet unſettled Poſture of Affairs, and the aſpiring Temper of *Mazarine*, nor yet knowing how to help himſelf, made himſelf as contented as he could; and chuſing to be imployed in the Army, he ſubmitted to *Mazarine*'s diſpoſing, becauſe he ſupply'd him with Money, and promiſed him that next Year he ſhould command the Army in *Flanders*. *Conde*, doubtful of the Regency, grew ſedate and inactive, while his brave Son *Enguien*, inſpired with a Martial Spirit, corroborated by his late Succeſs againſt *Spain*, fell in with *Mazarine* as a Favourite, who likewiſe ſupply'd him with what his Father's Patrimony fell ſhort of, and kept up his Heroick Spirit with a Promiſe of giving him the Command of an Army. And according to *Mazarine*'s Promiſe, the Duke of *Orleans*, and his Son, and the Duke of *Enguien*, with the Forces of *France* on the ſide of *Flanders* under their Command, beſieged and took *Courtray* in *June* 1646. in the Sight of the Duke of *Lorrain* and *Piccolomini*, who were come to re-

1646.

lieve it; and this was followed by their taking *Langue St. Vinock* the 24th of *August*, and *Furnes* the 6th of *September*; and lastly, by the *French* taking *Dunkirk* in *October*; *Enguien* besieging it by Land while the *Dutch* Admiral *Trump* blocked it up by Sea: So that the *Spaniards* this Year lost a great deal of footing in *France*. When these Transactions were finished, the Prince of *Conde* dy'd, and *Enguien* his Son succeeded to his Title and Dignity.

But after these Successes of the *French*, their intestine Broils sour'd their Enjoyments; for the Parliament became three Parties: The first, called *Frondeurs*, opposed the Court, and the Prime Minister *Mazarine*; not approving of his being invested with un-limited Power: The second were called *Mazarinians*, or such as were of the Court Party, and espoused the Prime Minister's Cause and Interest: The third were not bigotted for him, nor against him. The first were much the strongest Party, and so inveterate against *Mazarine*'s Administration, that the Court confined some of them: But this was so resented, that the Party sent a solemn Invitation to *Orleans*, *Conde*, and *Conti*, to join them, to redress the Grievances of the State. The Court was so much surprized at this Broil, that the King, Queen, *Orleans*, *Conde*, *Mazarine*, the Secretary of State, and others, thought fit to retire to St. *Germains*; which occasioned great Confusion in People's Minds, and discontented Persons began not only to mutiny, but actually to prepare for War, and the Siege of *Paris* was actually resolved upon; but it did not amount to a formal Siege, but a Treaty went on, and a Peace was concluded in *March* 1649. The Articles were, that all Hostilities should cease; That the Passages should be opened; That the Parliament should go to St. *Germains*; and that the King being seated on his Throne, the Declaration and Articles agreed upon should be verified and confirmed; and that then they would return to *Paris*, to perform their respective Functions, as before the Commotion happened.

1649. Siege of *Paris*.

But notwithstanding that things were seemingly amicably adjusted, there was not a hearty Understanding between the Court and Parliament of *Paris*, or rather between the *Mazarinians* and the *Anti-Mazarinians* in Parliament: So that the Court continued still some time in *Compagne*, but went at last to *Paris*. But this did not settle the Peace of the Kingdom; for *Provence*, *Guienne*, *&c.* were continually embroiled, if not by publick Differences, yet by private Piques; one of the Chief of which was, that *Conde* pretended the Cardinal *Mazarine* had promised the Government of *Pont l'Arche* to his Brother in Law the Duke of *Longueville*, and *Mazarine* denying it, *Conde* resolved never to come more to Court as long as *Mazarine* was Prime Minister; and accordingly he joined the *Frondeurs*, or Members that were against *Mazarine*; but soon recanted, and came over to the Court, at which he so much lost the Respect and Esteem of his Party, that it was privately reported that there was a Design to assassinate him. Several Complaints were exhibited, not only against him, but against all the three Princes, *Conde*, *Conti*, and *Longueville*, though it scarce was known from what Hand; but the Report run, that they were all to be committed. Upon these Apprehensions, they agreed never to appear all together at Court, but only one at a Time; that if any thing happened to one, the other two might be apprized of it, and avoid the Danger. But the 18th of *January* the Council being

1650.

to meet, and the Queen Regent and *Mazarine* pretending Business of Importance to be then tranlacted, *Conde*, *Conti*, and *Longueville*, were desired to be present at Court; and notwithstanding their former Resolution to the Contrary, they all appeared at once, and going up the great Stairs, which led into the Hall, the Door was clapt too, and their Attendants, which followed them, were shut out: The Princes were seized, and carried Prisoners to *Vincennes* Castle, and there confined till further Orders. Princes seized.

The Dutchess of *Longueville*, surpriz'd at the Confinement of her Husband, came to *Stenay*, where a Treaty was concluded with the Arch-Duke on the Part of *Spain*, importing that they should unite their Forces under the Protection of *Spain*, and employ them for obtaining a just and equal Peace between the two Crowns, and for obtaining the Liberty of the confined Princes, and that they should not lay down their Arms till both were done: That the *Spaniards* should pay 20000 Crowns to the Dutchess of *Turenne* (*Longueville*) and that the said Dutchess and Province of *Turenne* should pay for the Maintenance of their Troops 40000 Crowns a Month, and 60000 Crowns yearly beside for their own Expences. The *Spaniard* was also to add 2000 Foot and 3000 Horse, and all necessary Ammunition for the Army, that was to be commanded by *Turenne*, and to march into *France* to force *Mazarine* to a Compliance.

The Articles being settled, the Princess of *Conde* made the best of her way for *Bourdeaux*, where she was not only well received, but the Parliament resolv'd to take the Princes under their Protection, and to continue the War against the Duke of *Espernon*, who quickly had notice given him to draw together what Force he was able; and *Meilleray*, then in *Poictou* was also commanded to draw his Men towards *Bourdeaux*. *Espernon* quickly surpriz'd the Isle of St. *George*, about three Leagues from *Bourdeaux*; but the Citizens with a little Trouble soon bravely recovered it.

In the mean Time the King's Resolution of going to *Guienne* being divulged, *Orleans* and the *Frondeurs* were dissatisfy'd with *Mazarine* about it; but the Parliament of *Bourdeaux*, the better to strengthen their Interest, wrote to that of *Paris*, the Reasons upon which they would vindicate their Conduct. This gave some Perplexity to the Court, which was increased by the Agents of the *Swiss Cantons* coming to solicit the Payments of their Troops in the King's Pay, which came to a considerable Sum; and they were the more pressing, because many of the Officers and Soldiers had laid down their Arms for want of their Pay: But this Affair was accommodated by such Payments as the King offered, and they accepted.

Affairs being thus settled, the King pursued his Journey to *Guienne*; and the *French* Army under *Meilleray* having attack'd, and with much Opposition carried, part of the Suburbs of *Bourdeaux*, two Batteries were erected against the Dauphin's Gate, but to little Purpose; so that they at last came to Articles, *viz.* that a general Amnesty should be granted to all the Inhabitants and others in the City; that the Princess of *Conde* might retire with her Son to one of his or her Houses in *Anjou*, where she might enjoy all her Estate; with several other Articles then concluded upon.

Matters being thus accommodated, the King and Court entred *Bourdeaux October* 5. in great State, and from thence returned in a short

Time

Time to *Orleans*, and from thence to *Fountainbleau*. The Princes were removed on the 15th of *November* to *Havre de Grace*, and there kept close Prisoners.

Mazarine's ill Behaviour had incurr'd the Displeasure and Dislike of the Generality; his Domestick Enemies grew daily stronger against him, and the Parliament of *Paris* was much exasperated against him, by *Orleans*, the *Frondeurs*, and the *Malecontents*, and especially the imprison'd Princes, whose Friends had petitioned again and again for their Redress: And what was more than all, he began now to be affrighted at the Resentments of an enraged People, who ran storming in great Numbers to publick Places, after they had made humble Remonstrances to the Queen for the Liberty of the Princes, and the Removal of *Mazarine* from his exalted Station.

Mazarine's ...ices ...n ...ourt.

The People being thus exasperated, and the Cardinal hunted to this Degree, it was thought advisable for him to retire to *Havre de Grace*; and this was no sooner known in the City, but the *Frondeurs*, and their Party in Parliament, ordered humble Thanks to be returned to the Queen, and that she should be further petitioned to set the Princes at Liberty, and to make a Declaration that all Foreigners should be excluded from the King's Council. The Queen put them off with a favourable Answer; but that not satisfying them, a strict Guard was forced to be kept about the Court, and Troops of armed Men employ'd every Night to keep the Streets clear. But in the mean Time a more severe Decree was pass'd against *Mazarine*, strictly commanding that he and all his Kindred and foreign Domesticks should in fifteen Days leave the Kingdom, and all other Places within the King's Obedience; and failing therein, the Disobedient should be in an extraordinary Manner proceeded against; and that it should be lawful for all Men to fall upon them, and every Body was forbid to entertain them. This Decree was approv'd and confirm'd by most of the Parliaments of *France*.

Mazarine ...ished.

...e Prin... ...der- ...aged ...ast.

The next Thing now was the actual Releasment of the three Prisoners, *Conde*, *Conti*, and *Longueville*, without any Conditions. It has been observed before, that the last Place of Confinement of the Princes was *Havre de Grace*, and likewise that *Mazarine*'s Retirement when expell'd the Court was to *Havre de Grace*. Whether it was designed as a Mortification to *Mazarine* I shall not determine, but it was so order'd, that he was with his own Mouth to deliver the Message of Releasment to the three Princes themselves, which he did in these Words to each of the three Princes respectively: *I bring your Highness Orders from the Queen for your own Liberty, and the Liberty of your Brother and Brother in Law, freely, without any Terms: Yet her Majesty desires you to love the State, her, and me also.* *Mazarine* having delivered his Charge, was obliged, pursuant to his Sentence, to quit the Kingdom of *France*, and thought fit to hasten to *Sedan*, and thence, to compleat his Disgrace, to *Berles* in *Germany*. But the Princes returned with Glory to *Paris*, and they, with the Dutchess of *Longueville* and *Turenne*, were restored to Court in their full Splendor, while the Parliament increased their Severities against *Mazarine* and his Adherents.

After this the King and Court went to *Berry*, and so to *Guienne*; and the Prince, then at *Bourdeaux*, confirmed the Treaty of *Stenay* abovementioned, between the Arch-Duke, the Dutchess of *Longueville*, and *Turenne*. When the King left *Paris*, the Nation was embroiled, and *Conti*, *Nemours*, the Dutchess of *Longueville*, and others, being in the Castle of *Montraud*, were afraid it might prove rather a Trap to catch them in than a Place to defend them: They therefore made the best of their way to *Bourdeaux*, while the King being come to *Burges*, a Place belonging to *Conde*, and permitting the Demolishing the Tower, it was look'd upon as a Breach or Trespass upon *Conde*. On the other Hand, *Conde* secured *Dardoguia*, *St. Bergerack*, *St. Foy*, *Libourn*, and *Perigreu*; he also secured all the Towns upon the *Garonne*, as far as *Agen*; and then treating with *Ognone*, Governor of *Rochel*, *Brouage*, and the Isles of *Oleron* and *Rhee*, he brought him to his Party, and then he thought he had provided against all Emergencies.

When the Prince had thus strengthened himself, it created great Jealousies in the *French* Court; and the Queen, fearing the worst, thought it was best to recall *Mazarine*, and restore him to his Place in the Administration at the Head of Affairs as before. Then the King with the Court, and the Forces, marched towards *Poictiers*, from whence he wrote to the Duke of *Orleans*, complaining of *Conde*'s Proceedings [illegible] at the same Time secured *Agen*, *St. Lau...* *Montauban*, and *Cahors*, and then went to *Bourdeaux*, to settle Affairs with the *Spaniards* and *Ognone*, more particularly about securing *Rochel*; but the King found a Way to secure that City to himself.

Mazarine restored.

The King seeing *Conde* persist in strengthening himself against him, published a Declaration on the 16th of *November*, that the Prince was Guilty of High-Treason, for having taken up Arms against his Sovereign; and that he confederated with the *Spaniards*, to the Disturbance of the Peace of the Kingdom. And his Adherents as *Conti*, the Dutchess of *Longueville* *Nemours*, *Rochefoucault*, *&c.* were contained in the said Declaration. In the mean Time *Conde* being deny'd the Assistance of *Turenne*, gave the Command of his Forces in *Flanders* to *Nemours* while the King and Council of State confirmed *Mazarine* in Favour, annulling the Decree of the Parliament of *Paris*, and forbiding all Persons whatsoever to attempt any thing against him upon pain of Death.

France was now all embroil'd; *Conde*'s Interest declin'd; Armies were in the Field against each other; *Paris* was full of Parties, Libels, and Satires; the Princes were extolled in *Paris*, and there *Mazarine* and his Party were again as much lampooned: Whereupon the Parliament sent to the King, then at *Sully*, to acquaint him how necessary it was again to put *Mazarine* out of the Council; and they insisted the more upon it as the King had promised it. And a general Assembly met, that the sending the Cardinal away and the general Peace might be resolv'd on, and that in the mean Time all the Decrees in Force against him might be fully executed.

These Differences in *France* made out for the Advantage of *Spain*, who by the *French* thus busying and employing themselves against one another, besieged and took *Barcelona* and *Casal*, till then in the Possession of the *French*. The *Spaniards* afterwards laid siege to *Dunkirk*; and though the *French* attempted to relieve it from *Calice*, the Besiegers prevented them, and the Governor being wounded, the Town-Major sick, the King's Lieutenant dead, the Town sickly, and the Soldiers mutinous, they capitulated on the 10th of *September* 1652. though at the same Time the Duke of *Mercur* had got 18 Men

Barcelona, Casal, and Dunkirk, taken.

1652.

18 Men of War, 4 Fire-Ships, with 3000 Landmen for their Relief; but coming near the *Downs*, the *Engliſh* Admiral *Blake*, with ſeven *Engliſh* Men of War, took ten of theirs, and the *Spaniards* took four more of them; ſo that they left but four of the *French* Men of War to carry home the News.

1658. After this the Mareſchal *d'Aumont*, who thought to have taken *Oſtend* by Treachery, was himſelf betray'd and taken Priſoner, with all that accompanied him in an ill concerted and worſe executed Plot, wherein *Cromwell* and *Mazarine* were jointly concern'd, but were outwitted by the *Spaniards*. But a Repriſal was ſoon made: for *Dunkirk*, then in Poſſeſſion of the *Spaniards*, was ſoon inveſted by the *French* and *Engliſh* under *Turenne*, at which *Don John* being alarmed, he, with the Duke of *York*, and the *Engliſh* that follow'd his and his Brother's Fortune, reſolved at all adventures to relieve it; and having for that purpoſe drawn up 20000 Men, they march'd and encamp'd near the Enemy: Whereupon the *Engliſh* and *French* jointly reſolved to give them Battle next Morning. *Don John* the *Spaniard*, having the Advantage of the Ground, kept his Men upon the defenſive; but the *Engliſh* bravely advancing, ſoon gain'd the Hill, and put the *Spaniſh* Foot to Flight.

The *French* Horſe, who had as yet done nothing, ſeeing the Succeſs of the *Engliſh*, charg'd the *Spaniſh* Cavalry, who being diſpirited at the Flight of their Infantry, fled, while the *French* hotly purſu'd them, ſlew about 1000, and took 3000 Priſoners of War, beſides 800 Officers, with all their Artillery and Baggage. The *French* refuſed a Ranſom for their Priſoners, becauſe the Number of Officers were ſo great that *Don John* would be at Loſs to recruit his Army. After this Victory the *Engliſh* and *French* return'd to *Dunkirk*, which Town immediately capitulated, and was put into the Poſſeſſion of the *Engliſh*.

Upon this Succeſs againſt *Dunkirk*, other Places follow'd the Example. *Gravelin* ſurrendered, as did *Furnes*, *Bergue St. Vinock*, *Dixmuyde*, and *Ypres*, and this Year they continued to have the ſame Succeſs in *Italy*.

Lewis XIV married 1660. There was by this Time a Marriage propoſed between the *French* King and the Infanta of *Spain*, which gave *Philip* King of *Spain* an Opportunity of ſeeing his only Siſter, the Queen Mother of *France*. The Marriage was ſolemnized *Auguſt* 9, 1660.

Mazarine dies. The next Year after this Marriage *Mazarine* dy'd, and the People run into Parties and Confuſion, as ſcarce thinking that a Prince of two and twenty would take upon him the ſole Adminiſtration. But *Lewis* XIV. began now to exerciſe his Talent, call'd his Miniſters to account for every particular Tranſaction, and gave audience himſelf. His Son the young Dauphin was born *November* 1, 1661.

Dauphin born. 1661. Dunkirk being now in poſſeſſion of the *Engliſh*, as above obſerved, was, by the Fortifications added to it by *Oliver Cromwell*, become a Place of very great Conſequence; and (to proceed in my Author's own Words) "ſo weak was "our Government in *England* as to ſell it to "the *French* for four hundred thouſand Pound, "whereof one Moiety was detained for the Por-"tion of our King's Siſter the Lady *Henrietta* "*Maria*, married to the Duke of *Orleans*. In "Juſtification of our th n * King and Miniſtry, "I have heard it confidently aſſerted, that the "Thing was very juſt in King *Charles* II. ſince "it was an Agreement between *Cromwell* and "*Mazarine*, that the *French* ſhould have it up-"on paying of ſo much Money; but I don't find "the *French* pretend to any ſuch thing, but "plainly ſay it was a preſent Bargain, that had "no regard to any previous Conditions, &c."

* King *Charles* the II

The *French* King having thus gained his Point in the Recovery of *Dunkirk*, he vaſtly improv'd it's Fortifications, new diſciplin'd his Army, and augmented the Number of his well choſen Men; and the better to exerciſe them, he every Year ordered Encampments, where they repreſented Sieges, Battles, &c. The King now began to inſpect narrowly into the Courts of Judicature, and gave particular Marks of his Favour and Eſteem to thoſe Judges and others who were proof againſt Bribery and Corruption. He alſo encouraged Arts and Sciences, and drew into *France* the moſt excellent Hands in all Profeſſions from all Parts of *Europe*. The *Louvre* is a Specimen of his Encouraging of Architecture, the Front of which is reckon'd one of the beſt Pieces of Workmanſhip that the World can produce.

After the King's Example, the Subjects, eſpecially the Citizens of *Paris*, improv'd their Building; the Streets were wider, the Houſes were ſumptuous; Fountains, Canals, and the like, abounded; and, which was moſt commendable, foreign Trade, Manufactures, and Mechanicks, were encouraged. This occaſioned the Improvement of *France*, where if a Foreigner had a Talent that a Citizen was not Maſter of, he was encouraged in proportion to his Ingenuity, and not kick'd out by a Parcel of ignorant Freemen, for no other Reaſon but becauſe he was an ingenious Foreigner. Now it was the Encouragement of the Ingenious, whether Natives or Foreigners, that contributed to the Improvement of *France*, and I think we may ſay the ſame by our own Improvements in *England*: Witneſs our Silk Manufactures, as improv'd at this Time of Day in the City and Suburbs of *London*; a Branch of Trade which we had originally from Foreigners, from other Nations, though ſome People have now-a-days got ſuch narrow Conceptions of Freedom, as to call all People Foreigners who have not ſerv'd an Apprenticeſhip, or have been otherways made free of the ſame City or Town-Corporate with themſelves. I confeſs, I cannot help being ſurpriz'd, that People born in the ſame Nation, under the ſame Government, of the ſame Religion, Maſters of the ſame Buſineſs, whether Merchandize, Handicraft, &c. all ſubject to and protected by the ſame crown'd Head, and equally loyal, ſhould call one another Foreigners. Sure ſuch Perſons form very limited Ideas of Freedom.

But not to paſs by the Expedition againſt *Gigery* in *Barbary*, The Duke of *Beaufort*, Admiral of *France*, had a Fleet fitted out at *Marſeilles* and *Toulon*, conſiſting of fourteen Men of War, eight Gallies, five Fire-Ships, twenty Brigantines, and other ſmall Veſſels, and thirty Barks laden with Proviſion and Ammunition, with Lime, Bricks, and other Materials for Building, with fifteen hundred Seamen and five thouſand Land Soldiers, beſides five hundred Volunteers of Quality. The Admiral waited at *Port Mahon* till the *Malteſe* Gallies join'd him *July* 17, and then they ſailed together for the Coaſt of *Barbary*, and *July* 22 anchor'd before *Gigery*, about ſixty Leagues to the Eaſtward of *Algier*. The ſame Day they landed their Men, and at Night thirty Pieces of Cannon; which done they raiſed three Batteries, and played them upon the Place ſeven Days and Nights inceſſantly,

1664

geſſantly, in which Time they made themſelves Maſters of the Place, loſing only three hundred Men.

But alas! this Succeſs of theirs was owing more to the Surprize they gave the *Algerines* than to any Courage or Conduct of theirs. A naked Man is eaſily beat, as was at firſt the Caſe here. But this Place belonging to the *Algerines*, and the adjacent Country producing plenty of Cattle, they would not loſe it ſo ſillily; for having recover'd their Surprize, they drew twenty thouſand Men together, with which they appear'd before the Town *October* 20, and that very Night attack'd a Redoubt of the Caſtle. They were at firſt repuls'd by the Fire from the Ships and the Works, with the Loſs of a thouſand Men: Notwithſtanding which, the *Algerines* rally'd again, and with forty thouſand Men gave a third Attack *October* 27, and poſſeſſing themſelves of the Redoubt, they ſoon made themſelves Maſters of the Lines and Outworks, and the Duke of *Beaufort* finding it impoſſible to keep his new Conqueſt, if it might be call'd a Conqueſt, ſhipp'd off his Men the 30th of *October*, and return'd to *France*.

As to the reform'd Religion in *France* at this Time, it labour'd under great Oppreſſions, and was not ſo firmly eſtabliſh'd but that the neighbouring Proteſtant Princes were very ſenſible of the Grievances of its Profeſſors. But the *French* King made a Pretence in their Favour, and writ to the Marquiſs of *Brandenburg*, that he would take Care to maintain the Reform'd in all their Privileges, and that they ſhould live upon an equal Foot with the reſt of his Subjects; adding, that he was engaged by his Royal Word ſo to do, and by the Teſtimonies they had given him of their Fidelity during the late Commotions.

But notwithſtanding theſe Pretences, the Reform'd ſuffer'd by Reſtraints upon their Schools and Civil Offices; and even the more powerful Churches were not allow'd to aſſiſt the weaker. Theſe intolerable Grievances put the Reform'd under a Neceſſity to draw up a pathetick Petition to the King. But by this Time the *Engliſh* and *Dutch* were at open War againſt each other, and the States ſolicited the *French* King for Succour, or at leaſt for his Mediation, towards a Reconciliation between them: Whereupon he ſent an Embaſſy to *London*, to offer his Mediation upon that Occaſion, and the ſame being accepted by King *Charles* II. the Conferences were begun; but King *Charles* in the mean Time ſent his Fleet out in queſt of the *Dutch*, purſuing them to their own Coaſt, and even into their own Harbours.

The *French* King at the ſame Time march'd in Perſon, at the Head of thirty-five thouſand Men, into *Flanders*, giving the Command of them to the Mareſchal *de Turenne*, ordering two flying Camps, one to obſerve the Motions of the *Germans* on the Side of *Luxemburg*, the other to march along the Sea-Coaſt, under the Mareſchal *d'Aumont*, who took *Courtray* in two Days, *Dixmuyde* in one Day, and *Furnes* in one Day: *Armentiers* ſurrender'd as ſoon as they ſaw them before it. *Turenne*'s Army went on with the ſame Succeſs: *Charleroy* was demoliſh'd, *Ath* and *Alth* ſurrender'd immediately, *Tournay* did not hold out two Days, neither did *Douay*, and its Citadel: *Oudenard* did not hold out one Day, and *Aloſt* but a few Hours; and, in ſhort, in leſs than four Month's Time, they made themſelves Maſters of thirteen or fourteen Places of conſiderable Strength: But *Liſle* held out near a Fortnight after the Trenches were open'd. At the ſame Time a *French* Army, under the Prince of *Conde*, took *Dole*, *Bezanſon*, *Salines*, *Gray*, the Caſtle of *Joux*, and the Fort of *St. Anne*, and ſoon became Maſters of the whole Province of *Franche Comte*. The *Swiſs* Cantons hereupon recall'd their Subjects out of the *French* Service, and order'd ſixty thouſand Men to expel them out of *Burgundy*; ſo that *Dole* and *Bezanſon* were ſoon reſtored to the *Spaniards*.

This Succeſs of the *French* put the *Swiſs* and other neighbouring Powers upon their Guard, eſpecially the *Spaniſh Netherlands*. The States therefore concerted Meaſures with *England* and *Sweden*, and the three Parties agree to furniſh each fifteen thouſand Men for the Defence of *Flanders*. It was therefore call'd the Triple Alliance; and the *French*, fearing to bring three ſuch potent Enemies upon their Backs, agreed to the Peace of *Aix la Chapelle* on the Second of *May*, 1668, whereby *Franche Comte* was reſtor'd to the *Spaniard*, as hinted above. Peace of *Aix la Chapelle*.

The Peace being thus ſettled, and the King's Hands ſo far eaſed from other Incumbrances, they began afreſh to apply for a Redreſs of their Grievances, by *du Boſc* their then Spokeſman, to the King; and he repreſented their Sufferings to the King in the moſt affecting Terms in their Favour; but all his and their Efforts prov'd abortive, the Chambers of the Edict were aboliſh'd and ſuppreſt, and they left quite deſtitute of all future Hopes; and yet, even then, upon ſome Conſideration or other, the King put forth an Edict or Declaration, which contained ſome Articles in their Favour. But how far ſoever they might reap Benefit by it, the *French* King had another View; for he was in the mean Time conſulting and contriving the Ruin of the States of *Holland*, whoſe Power, and Succeſs in Trade, he looked upon as the only Obſtacle that hinder'd the Trade of *France*; and among other Things, the Triple League above-mention'd ſtuck moſt upon his Stomach.

But before we quit the Reform'd for the preſent, it muſt be obſerv'd, that the Court, under all Pretences in their Favour, were privately diſguſted at them, eſpecially about the Negociations of one *Marcelli*, whoſe Story, in a few Words, is this.

Marcelli was of the reform'd Religion, and was accuſed of having endeavoured to ſtir up all *Europe* againſt *France*, and particularly to make it known to the Proteſtants, that the *French* King had ſworn the Ruin of their Religion; and that, beſides the Negociations he had every where carried on among the Reform'd, chiefly in his own Country, he undertook alone, without any Accomplice or Council, to carry his Complaints to all the reformed States, or thoſe who had ſeparated from the Church of *Rome*, againſt the Violences which the *French* King authoriz'd under his Name, and to inſpire them with a Deſign of humbling that Power, which muſt be fatal to Religion and Liberty. He had traverſed the North with good Succeſs, and it was ſaid induced the *Swede* to enter into the Triple League. He uſed the ſame Artifice in *England*, and gave King *Charles* a Light into many things that had been kept under a Diſguiſe, either by the Agents of *France*, or the Infidelity of his Miniſters. The Marquiſs *Bacquoy*, the Procurator-General of the Reform'd, was then the *French* King's Envoy in *England*, whither he was ſent to take away the Umbrage that might be taken at the Conduct of the Council of *France*, he being choſen on purpoſe, not only on the Account of his Capacity, but alſo of his Religion, which render'd him a fitter Perſon than another to convince the *Engliſh* that his Maſter had no Deſign upon the Proteſtant 1669. *Marcelli's* remarkable Story

Protestant Religion, and consequently that he did Justice to his own reform'd Subjects. Indeed *Ruvigny* did his Business effectually, and prov'd so unserviceable to the Reform'd upon this Occasion, that he drew some Reproaches upon himself, even from the reform'd Churches, who were not satisfied with his Complaisance. However, he not only found King *Charles* possess'd of *Marcelli*'s Notions, but also got out of that Prince some secret Intrigues which had been communicated, not only to him, but to several Members of Parliament. But King *Charles* did not secure *Marcelli* in his own Dominions, but gave him Leave to depart the Kingdom, and provide elsewhere for his own Security.

Ruvigny giving the *French* King an Account of his Negociations in *England*, acquainted him also with the Discovery he had made of the Intrigue of *Marcelli*, and also that he was retired into *Switzerland* to carry on the same Design. Hereupon *Lewis* acquainted Mareschal *Turenne* with the Affair, and order'd him to pick out some resolute Fellows to go and bring him off if possible, without the least Noise. *Turenne* entrusted three Officers of the reform'd Religion, himself still professing the same, and these three cunningly got *Marcelli* into a Place where he could not be succour'd, and carried him off into *France*, where he was proceeded against, and cast; and tho' he deny'd all he was charg'd with, and justify'd himself to the very last, yet he was condemn'd, and broke alive upon the Wheel: Soon after which *Turenne*, notwithstanding his pretended Zeal, forsook the reform'd Religion, and turned Roman Catholick at last; and many following his Example, attempted the total Subversion and Destruction of the Reform'd Protestant Religion.

1671. The *French* King this Year prevailed upon King *Charles* to send Mr. *Coventry* into *Sweden* to dissolve the Triple League; which when done at *Lewis*'s Instigation, he thought he had brought King *Charles* to his Purpose and Interest; and the farther to involve King *Charles*, and keep himself clear, he declared that the Quarrel against the *Dutch* was none of his Concern, any farther than with respect to King *Charles* himself, and that *England* ought to break the Peace by falling upon the *Smyrna* Fleet.

The *Dutch* finding these Clouds hang over their Heads, would have been glad to have made it up both with the *English* and *French*; but all would not do, both Nations declared War against them; the *French* King charg'd them with acting in Diminution of his Glory, and King *Charles* charg'd them with not having yielded him the Honour due to his Flag. This heavy Charge falling upon them, when thus unprovided, they laid *Bois-le-duc* and *Lisle* all under Water, which was needless, for the *French* advanced towards *Maestricht*, and dividing their Forces into four Bodies, came to *Orsoy*, *Wesel*, *Rhimberg*, and *Burick*, in four or five Days Time; and besides, *Rees*, *Emmerick*, and *Doesburg*, with five or six Places more, opened their Gates upon the first Approach of the Enemy.

The next Step the *French* intended to take, was to cross the *Rhine*, it being then but low, by Reason of the hot and dry Weather; and they accordingly crossed it by the Direction of two Gentlemen, but some of them were drown'd in the Attempt. The *French* now began to make their Cannon play upon the Enemy, so that the *Dutch* could not come up to them, but halted and encamped at so great a Distance, that they did little or no Execution; which gave the *French* an Opportunity to form their Squadrons, and have further Reinforcements from the other Side. The *Dutch* Foot demanded Quarters, which *Conde* granted them; but the young Duke of *Longueville*, not knowing any Thing of it, advanced to the Brink of the *Dutch* Retrenchments, and fired his Pistol; at which the *Dutch* being surpriz'd after Quarters was granted, they fired a whole Volley of Shot upon the *French*, and killed a considerable Number of them, of whom the young Duke of *Longueville* was one. The *French* on the other Side, not suddenly knowing the Affair, or Cause of that Firing after Quarters granted, fell on and storm'd the *Dutch* Intrenchments, and put all to the Sword, except those who escaped by Flight, plunder'd the Castle of *Tolhuis*, and put *Below* under Contribution.

But this was not all the Misfortune of the *Dutch*; for their Forces which guarded the *Issel*, fearing the Enemy would fall upon them behind, abandon'd their Posts and the Passage to the Mercy of the *French*, who took *Doesburg*, *Arnheim*, *Shenkenschans*, *Wesel*, and *St. Andrew*. The City of *Utrecht* sent their Keys to the Enemy, while yet a good Distance off. All the Places of Note in the *Betuwe* did the same; so did most of the Cities upon the *Rhine*, *Waal*, *Meuse*, and the *Issel*: Nay, in the Province of *Holland* itself, the Cities of *Oudewater*, *Woerden*, *Naarden*, and *Amsterdam*, were very near coming to Terms of Capitulation. They also took *Deventer*, *Swoll*, *Campen*, and most of the capital Places in the Province of *Overyssel*.

While the Allies were concerting Measures against the common Enemy, *Lewis* was privately laying a Design to recover *Franche Comte*, to cover his Frontiers; and accordingly the King ordered his Troops to march into *Franche Comte*, who, though in *February*, made themselves Masters of *Gray* and *Vesel*, and several important Places. They also took *Besançon*, *Dole*, *Salins*, *St. Ann*, and other Places, which completed the Conquest of *Franche Comte*.

This done, *Lewis* divided his Army, sending one Part into *Germany* to reinforce *Turenne*, and the greatest Part into *Flanders* to join the Prince of *Conde*; *Lewis* himself returning into *France*, to suppress some Broils that had happened there.

The Confederate Army in *Flanders*, under the Command of the Prince of *Orange*, encamped towards the Prince of *Conde*'s Army, which was so advantageously posted, that they durst not continue to engage them. But the *Imperialists* finding means to come up to their Relief, they rally'd, and the Prince of *Orange* with the other Generals, having dextrously drawn their several Bodies into good Order, upon an Eminency, the Fight was renewed with more Vigour than before, and lasted from Noon till Moon-light, and near Midnight, when both Sides claimed the Victory. It was doubted who lost most, but it was allowed by a modest Computation that on both Sides there fell that Day above 20000 Men. The Confederates, about a Month afterwards, besieged *Oudenard*, but raised the Siege as soon as *Conde* approached.

The *Dutch* Forces, join'd by some *Lunenburghers*, laid Siege to *Grave*, a strong Place that might in some Respects be called the Storehouse or Magazine of the *French*. They had but little Success in attacking it, till the Prince of *Orange*, resolving to carry it whatever it cost him, joined the *Dutch* with 10000 Foot to reinforce the Besiegers, and took it, which in a manner totally expelled the *French* out of the *United Provinces*.

During

During this time Mareſchal *Turenne* commanded for the *French* in *Germany*; and after he had prevented the Duke of *Lorain*'s paſſing the *Rhine*, his next Buſineſs was to hinder his joining the 67? *Imperialiſts*: In order to which, he march'd three Days and Nights, and on the fourth came within ſight of the Enemy, who were drawn up on a riſing Ground that had a ſmall Town in front. *Turenne* ſoon took the Town, and then attack'd the Duke of *Lorain* with ſuch Fury, that in about eight Hours *Lorain* found himſelf obliged to retreat; and about three Weeks after *Bourneville*, the Imperial General, join'd the confederate Army with 7 or 8000 Men; but *Turenne* paſs'd the *Neckar* near *Ladenburg*, fell upon their Rear, routed their Foot, and diſpers'd them as far as *Frankford*.

The Confederate Army was afterwards reinforc'd to the Number of about 35000 Men; but being commanded by five Generals, independant of each other, they agreed ſo ill, and were ſo irreſolute in every thing except oppoſing one another, that they gave *Turenne* time enough not only to reinforce himſelf, but to attack them; which he accordingly did, and defeated them at *Sutsheimon* the fourth of *October*, and drove them out of the Field, with the Loſs of 3000 Men, ten pieces of Cannon, and thirty Colours and Standards.

But the *Brandenburg* and *Lunenburg* Troops joining the Confederates, they again became a conſiderable Army, and march'd into *Upper Alſatia* to winter; thinking in the Spring to go into *Lorain*, or *Franche Comte*, there to live at Diſcretion: But *Turenne* being re-inforc'd in *December*, march'd through *Lorain*, travers'd the Mountains, and enter'd the Plains, and quickly routed the Enemies Cavalry, with little Reſiſtance; ſo that when the Confederate Forces paſs'd the *Rhine* to return home, they found they had done nothing except one way or other loſing above half their Men. The Mareſchal commanded the *French* Army, and paſs'd the *Rhine* almoſt in ſight of the Confederate Army; but not ſatisfied with that, he drew ſo near and ſettled his Poſts ſo well, that it would be difficult for him to march off without Blows; in order to which he went out of the Camp to view a certain piece of Ground, where he intended to raiſe a Battery, the better to annoy the Enemy: But they being aware of it, planted ſome Cannon to bear directly upon that Ground, and when *Turenne* came there, the Gunner hit him with a Ball full upon the Breaſt, and laid him dead upon the Ground.

me
67

The *Dutch* and the *Spaniard* being now in Alliance, and their Fleet commanded by the famous *de Ruyter*, they engaged the *French* Fleet commanded by *du Queſne* near *Sicily*, and a terrible Fight follow'd: But the *Dutch* gave way, and retired to *Melazzo*, while the *French* went into *Meſſina*. After this the Confederate Fleet went to block up *Auguſta*; but *du Queſne* ſail'd to ſuccour the Place, and after a ſmart Engagement they were forced to retire to *Syracuſe*, where *Ruyter* died of a Fever occaſion'd by Wounds in his Legs. After this *du Queſne* ſail'd out of *Meſſina* with thirty Men of War, twenty-five Gallies, and nine Fireſhips; and off of *Palermo* he encounter'd the combin'd Fleet, burnt twelve Men of War and ſix Gallies: In the mean Time the Duke *de Noailles* ravaged *Catalonia*, and made the Viceroy *Serallo* retire with his Army into the Towns.

of

But not to dwell upon Particulars, the continued Succeſs of the *French* againſt the *Dutch*, put the Prince of *Orange* upon propoſing to the States the Levying of 16000 Men, and to bring all the Troops in the Country into the Field, to awe the *French*, and deter them from any farther Attempts: But this was oppoſed and utterly rejected by the City of *Amſterdam*. However, the Prince took the Field, and the *French* brought a great Army before *Luxemburg*, and took the Place *June* the 10th, 1684; and the *French* having now got what they deſired, they propoſed a Truce both with *Holland* and *Spain* for twenty Years. 1684

The *French* being thus clear of all Apprehenſions from the *Spaniards* and *Dutch*, they ſent a Fleet up the *Mediterranean* to bombard the City of *Genoa*, and lying before it, the Fort ſaluted them with eleven Guns. The Admiral anſwered with nine; the Fort then ſaluted them with twenty Chambers, and ten Guns. The Admiral returned ſeven. But the Governor not yet knowing what to think of theſe *French* Compliments, ſent ſix Deputies aboard the Admiral, to know the Occaſion of the Fleet's coming thither. His Anſwer was, that the King of *France* was very much diſſatisfy'd with the Conduct of the Republick, and that his Demands were, that they ſhould quit the Protection of *Spain*, and, amongſt ſeveral other Articles, that they ſhould ſend four Senators aboard, to beg the *French* King's Pardon for what they had already done. Bombardment of *Genoa*.

The Senate rejecting the Demand, with the utmoſt Reſentment, ſent the Admiral Word, that if he did not withdraw further off with his Fleet, they would look upon the *French* as Enemies; but the *French*, who were then within reach of the Guns of the Fort, did not regard them: Whereupon the Fort that Afternoon fired towards the Admiral, but without Ball; but he not regarding that, the ſeveral Forts in about an Hour afterwards fired Shot upon him, which made him withdraw his Men of War out of their reach. Ten Galliots however, were left in a Row, to fire on one Part of the City, who accordingly threw in their Bombs with ſo great Fury, that on the 21ſt of *May* the Doge's Palace was quite demoliſhed, and he and the Senate were forc'd to remove to *Albergho*, out of the Reach of the *French* Bombs. Next Morning (the 22d) the *French* ſent to let the Senate know, that rather than ruin ſo fine a City, they would give them 24 Hours more to conſider about complying with the King's Demands. But the Senate rejected their Offer, and the *Genoeſe* took courage and reſolved to reſiſt. The *French*, hereupon, renewed their Fire againſt the Town, and on the 23d their Ships and Gallies approaching very near, not only batter'd it for ſeven Hours together, but landed 500 Men to the Weſtward, and another Body to the Eaſtward of the City: But they were ſo warmly receiv'd, that they all eſcap'd to their Gallies except thoſe who were kill'd or taken Priſoners, and the *French* Fleet weigh'd from before *Genoa*. The *Genoeſe*, however, being dreadfully apprehenſive of a ſecond and more fatal Blow, ſent their Doge and four Senators to the *French* Court, to make Submiſſion for themſelves and the City of *Genoa*.

As to the Reform'd, they continu'd to live miſerable as to the Affairs of Religion, and at laſt, by the Inſtigation of the Clergy, the Edict of *Nantz* was finally revok'd, and the Chancellor *Tellier* being near his Exit, and eager to do the Church of *Rome* ſuch a ſignal Piece of Service, fix'd the Seal to the Revocation; which 1685, Edict of *Nantz* revok'd.

was

was the laſt Diſpatch that ever he ſeal'd, he dying ſoon after.

HERE is an Occurrence intervenes, that ought not to be forgot In the Year 1687 the famous *Lewis* II. Prince of *Conde* dy'd, *September* 11, in the 66th year of his Age. He was a brave Soldier, and a valiant Prince, as ſome particular Hints we have already given of his Life and Actions may ſufficiently evince.

KING *James* II. being now on the Throne of *England*, and deeply engaged in the *French* Intereſt, the Electors of *Saxony* and *Brandenburgh*, the and grave of *Heſs-Caſſel*, the Princes of the Houſe of *Lunenburg*, and the then Prince of *Orange*, (afterwards King *William*) perceived a Storm hanging over *Great Britain*, which could not well be diverted without diſjoining King *James* II. from the *French* Intereſt, and ſecuring the Religion and Liberties of *England*, and confining *France* to the Bounds ſet to it by former Stipulations and Treaties. In order to this, great Preparations were made in *Holland* by Sea and Land, but for what Expedition it was not known. This gave great Umbrage to the *French* King, who ſent a Memorial to the States of *Holland* by *d'Avaux*, intimating, *That the ſincere Deſire that the King his Maſter had to maintain the Tranquility of* Europe, *would not ſuffer him to ſee the great Preparations for War both by Sea and Land made by their Lordſhips, without taking the Meaſures that Prudence inſpired him with to prevent the Miſchiefs theſe warlike Preparations would certainly draw after them; and his Maſter believing that theſe Preparations threatened* England, *his Majeſty had commanded him to declare, that the Bands of Friendſhip and Alliance between him and the King of* Great Britain, *would oblige him to look upon the firſt Act of Hoſtility committed by the* Dutch *Fleet or Troops againſt the King of* England *as a manifeſt Rupture of the Peace, and a Breach with his Crown; and adviſed their Lordſhips to conſider what might be the Conſequence of ſuch an Expedition, or Breach of the Peace.*

But the Prince of *Orange*, without any regard to the Memorial, purſued the Deſign in the intended Expedition, which the Irruption made by the *French* on the Side of *Germany*, whither they had drawn moſt of their Troops, gave him a fair Opportunity for; and King *James* refuſing the Succours, both of Men and Ships, that the King of *France* offered him, ſoon after the Prince of *Orange* landed. Of this Expedition and Succeſs, with the crowning of him and his Princeſs King and Queen of *England*, I ſhall not engage in any farther Account here, but refer the Reader to the Hiſtory of the *Netherlands*, *Chap. VII. page 545 of this Book*; where you have all the Steps from the Prince of *Orange*'s embarking in *Holland* to his being crowned King of *England*, which was *April* 11. 1689. in which Year, *May* the 7th, he proclaimed War againſt *France*. Prince of Orange lands in England

Having thus brought down the Hiſtory of France *to the Reign of King* William *and the Wars with* France, *which continued about nine Years in his Reign, and afterwards eleven Years in Queen* Anne's *Reign, I ſhall not proſecute this Hiſtory any farther here, but continue and compleat the Account of the Battles, Seiges,* &c. *of* Liſle, Doway, *and other Places, which were the Scenes of Action in* France *or* Flanders, *and the War as carried on by thoſe two crown'd Heads, when we come to their Lives and Actions in the Hiſtory of* England; *ſo that that part of the Hiſtory of* France *will, to avoid Repetition, be included in that ſame Part of the Hiſtory of* England *where the above-mentioned Tranſactions are included.*

CHAP. XI.

Of the Antient and Preſent State of France.

THE Kings of *France* are entitled *Moſt Chriſtian* from the ſignal Services they have done to the See of *Rome*; for which Reaſon alſo they are called the eldeſt Sons of the Church, and as ſuch they have claimed the Precedency of all the Kings of Chriſtendom.

The eldeſt Son of the King of *France* is ſtiled *Dauphin*, and the ſecond *Monſieur*, if they have no Quality: But otherwiſe the younger Brothers of *France* are Dukes of *Burgundy*, *Orleans*, *Anjou*, *Alenſon*, *Valois*, *Touraine*, *Berry*. Theſe are Peers of *France*, and have other Appenages. They ſign by writing their own proper Names. If there is no Son, the Couſin ſucceeds, provided he be deſcended in a Male Line from him to whom the Appenage was given: And if there be any Daughters remaining, the King gives them Portions out of his own Eſtate, and marries them as he pleaſes.

Of Dukes or Peers of *France* there are five or ſix ſorts, or Degrees, 1. Six antient Eccleſiaſtical Dukes and Peers. They hold the firſt Rank. 2. Dukes and Peers verify'd in Parliament as ſuch. 3. Dukes barely verify'd as ſuch in the Parliament of *Paris*. 4. Dukes and Peers verify'd as ſuch in other Parliaments than that of *Paris*. 5. Dukes and Peers by Letters Patent under the Great Seal. 6. Dukes and Peers by *Brevet*. The ſix antient Eccleſiaſtical Peers are, 1. The Archbiſhop and Duke of *Rheims*. 2. The Duke of *Laon*. 3. The Biſhop and Duke of *Langres*. 4. The Biſhop and Count of *Beauvois*. 5. The Biſhop and Count of *Chalons*. 6. The Biſhop and Count of *Noyon*. The ſix ſecular Peers are the Dukes of *Burgundy*, *Normandy*, and *Guyenne*, and the Counts of *Tholouſe*, *Flanders*, and *Champagne*. The Biſhop of *Rheims* has the Primacy of the Eccleſiaſtical Peers, and crowns their Kings; and the Offices of the reſt at the Coronation are as follows: The Biſhop of *Laon* carries the holy Bottle: The Biſhop of *Langres* the Scepter: The Biſhop of *Beauvois* the Royal Mantle: The Biſhop of *Chalons* the Ring: The Biſhop of *Noyon* the Girdle: The Duke of *Burgundy* carries the Royal Crown, and puts the King's Sword on. The Duke of *Guyenne* carries the firſt ſquare Banner: The Duke of *Normandy* the ſecond: The Count of *Tholouſe* the Spurs: The Count of *Champagne* the Royal Banner, or Standard: And the Earl of *Flanders*, the King's Sword. On the Day of the King's Coronation, and during the Ceremony, theſe Peers have a Golden Of the King's Coronation

Golden Wreath upon their Heads, in the Form of a Crown: But becauſe the ſix Lay-Peerages are re-united to the Crown, except part of *Flanders*, they make choice of ſix Princes or Lords to execute their Function, and repreſent the Peers.

Of the French *King's ſeveral Orders of Knighthood.*

THE Dignity of the ſeveral Orders of Knighthood were generally beſtowed upon People for their Merit, as Rewards for Services done to their King. There are at preſent three Orders of Knights, *viz.* thoſe of *St. Michael*, the *Holy Ghoſt*, and *St. Lewis*. The firſt was inſtituted by *Lewis* XI. *Anno* 1469. There are thirty ſix Knights of this Order. The Order of the *Holy Ghoſt* was inſtituted by *Henry* III. *Anno* 1597, as an Acknowledgment of the Divine Favours he received on the Day of the Miſſion of the Holy Ghoſt, as being elected King of *Poland*, and ſucceeding his Brother *Charles* IX. to the Crown of *France*. When the *French* King confers this Order, it is always done in ſome Church or Chapel, where the King ſeats himſelf near the Altar, in the midſt of the Officers of the Orders; when the Grand Maſter of the Ceremonies of the Order, accompanied by the Uſher and Herald, goes to give Notice to the Princes or Lords that are to receive the Order, who going two after two, kneel down to take the Oath, placing both their Hands upon the Goſpels, held by the Chancellor; and then they ſign the Oath; which done, the Provoſt and Great Maſter of the Ceremonies of the Order gives the King a Robe and Mantlet, to cloath the Knights with. Then the High Treaſurer gives the King the Collar of the Order, who puts it about the Knight's Neck, ſaying, *Receive from our Hands the Collar of the Order of the Bleſſed Holy Ghoſt*, &c. *in the Name of the Father, Son, and Holy Spirit.* The Number of Knights of this Order are an hundred, and the Officers belonging to it are the Chancellor, the Provoſt, the Maſter of the Ceremonies, the Great Treaſurer, the Secretary, the Herald, and the Uſher of the Order.

The third is called the King's Order, or the Order of *St. Lewis*, being inſtituted by *Lewis* XIV. in the Year 1693. The King himſelf is the Sovereign and Grand Maſter; and the Dauphin, the preſumptive Heirs to the Crown, the Princes of the Blood, Mareſchals of *France*, the General of the Gallies, &c. are the only Perſons admitted into this Order, which is purely military. All the Knights of this Order wait on the King on the Feaſt of St. *Lewis*, attending him to Maſs; and in the Afternoon is held the Chapter of the Order.

Of the Conſtable, Mareſchals, Colonel General of France, *Maſter of the Ordnance, Admiral.*

THE Conſtable of *France* has of late been accounted the principal Officer of the Crown, and next to the King the chief Commander of the Armies of *France*. He takes Place, and has his Seat in Parliament, immediately after the Princes of the Blood. It was formerly no more than what the Maſter of the Horſe is at preſent, as appears by the Etymology of the Word *Comes Stabuli*.

As to the Antiquity or Original of the Office of Mareſchal of *France*, it is diſputed by Authors. However, according to their primitive Inſtitution, they were but two in Number: But the Neceſſity of Affairs cauſed a Neceſſity of encreaſing their Number; and at other Times they were encreaſed or diminiſhed as Occaſion required. *Lewis* XIV. had a greater Number than ever had been before his Time.

Colonel-General.

As for the Colonel-Generals, that of the Infantry was ſuppreſt at the Death of M. *d'Eſpernon*: But the Offices of Colonel-General of the Light *French* Horſe ſtill continue, as do thoſe of the *Swiſs* and *Griſons*, and alſo of the Dragoons.

Maſter of the Ordnance.

The Maſter of the Ordnance has been of different kinds, according to the different Circumſtances of Time: For before the Invention of Guns, there was a Grand Maſter of the Bows, and battering Inſtruments, whoſe Buſineſs it was to manage and direct the Officers belonging to theſe Machines of War. Theſe Things they called Cranequiers. With them they could beat down the Walls and Gates of Towns and Cities. It is ſaid this Command was inſtituted by St. *Lewis*, who began about the Year 1226; and that *Du Hangeſt* was Maſter of the Croſs-Bows *Anno* 1411, in the Reign of *Charles* VI. But ſince Guns came in Uſe, that Office is changed to Maſter of the Ordnance, who has under him the Maſter of the Artillery, the Maſter of the Bombardiers, &c.

Admiral

The next Grand Officer is the Admiral of *France*. But this Office has undergone many Mutations, according to the arbitrary Pleaſure of the Kings of *France*. This Office was inveſted with an extenſive Power by *Henry* III. in Favour of the Duke of *Joyeuſe*, one of his Minions, then in that Office: But *Lewis* XIII. in the Year 1626 ſuppreſſed both the Offices of Conſtable and Admiral. But in 1669, the Office of Admiral was reſtored, with the additional Epithet of being an Officer of the Crown: But ſtill the King retrenched its ancient Power, and reſerved to himſelf the Power of chuſing all Officers Civil and Military employ'd therein; as Vice-Admirals, Lieutenant-Generals, &c. The King alſo furniſhes the Navy with all Manner of Neceſſaries, and builds the Men of War, and keeps the Management of moſt of the Naval Affairs in his own Hand.

Arſenal.

There are five chief Arſenals in *France*, *viz.* at *Breſt*, *Rochefort*, *Dunkirk*, *Havre-De-Grace*, and *Toulon*. In each of theſe there is an Intendant of Juſtice, whoſe Buſineſs it is to manage and order the Funds, and provide all the Materials for building, repairing, and fitting out the King's Ships. There are alſo inferior Officers; as one Inſpector, one Secretary; alſo proper Perſons to inſtruct Youth in the Art of Navigation.

Court of Admiralty

The Court of Admiralty takes Cognizance of Affairs relating to the Sea, as Wrecks, Commerce, the Abuſe and Management of Officers in their Stations, &c. Appeals may be made to this Court from *Rochel*, *Olonne*, *Marans*, *Calais*, *Boulogne*, *Montreuille*, *Abbeville*, *St. Vallery*, *Eu*, and *Hault* in *Picardy*.

Gallies

I SHALL conclude with a Word or two about the *French* Gallies, who generally ſerve in the *Mediterranean*, and are laid up at *Marſeilles*. The General of the Gallies, and Lieutenant General of the *Levant*, is the Duke of *Vendoſme*, under whom there is one Lieutenant General, who is the Bailiff of *Noailles*, three Chiefs of the Galley-Squadrons, an Intendant that reſides at *Marſeilles*, a Captain of the Port, a Major of the Gallies, forty Captains, two Treaſurers General, and other Officers of leſs Note.

CHAP. XII.

Of the Government of the Provinces of France, *their Arch-biſhopricks, Biſhopricks, &c. Of the Inſtitution of their Parliaments. The Chamber of Accounts at* Paris. *The Court of* Aids. *The* Taillon, *Entries, Gabelle, and other Taxes. Concluding with a Word or two concerning the Royal Treaſury of* France.

THE King's preſent Governors and Lieutenants in the Provinces were formerly entitled Dukes, and the Governors of Cities were called Counts. There were twelve Counts under every Duke, and one Duke over all the reſt, called *The Duke of France.* He was Mayor of the Palace. But this Office was ſuppreſſed by *Hugh Capet,* who afterwards governed the Provinces and Cities by Bailiffs; and the Power of Governors and Lieutenant Generals of the Provinces, is the ſame as the antient Dukes and Counts.

The Government of the ſeveral Provinces and Towns of *France* are diſpoſed of as follows.

Note, G. *ſtands for Governor.*

1. *Paris.* G. Duke of *Greves.* One Lieutetenant under him.

2. *Iſle of France.* G. Duke *d'Eſtrees.* One Lieutenant under him.

3. *Picardy.* G. Duke of *Elbeuf.* He has three Lieutenant-Generals under him, *viz.* thoſe *Lower Picardy, Higher Picardy,* and *Artois.*

4. *Champagne* and *Brie.* G. Prince of *Soubize.* He has four Lieutenant-Generals under him; *viz.* in the Bailiwick of *Rheims*; of *Vitri* and *Chaumont*; of *Langres, Troyes,* and *Sens*; and the Bailiwick of *Brie.*

5. *Burgundy.* G. The Prince of *Conde*: The Survivorſhip to his Son the Duke of *Bourbon.* Under him are five Lieutenancies. 1. *Dijon* and *Chantillon,* with the Bailiwick of *Bar* upon the *Seine.* 2. *Chaalons.* 3. *Macon.* 4. *Auxerrois*; and 5. *Breſs, Bengey, Valromoy,* and Bailiwick of *Gex.*

6. *Dauphine.* G. the Duke of *Feuillade.* Only one Lieutenant-General under him.

7. *Provence.* G. Duke of *Vendoſme.* Only one Lieutenant-General under him.

8. *Languedoc.* G. is the Duke of *Main.* Three Lieutenant-Generals under him; *viz. Higher Languedoc, Lower Languedoc,* and *Sevennes.*

9. The County of *Foix, Donezan,* and *Andere.* G. the Marquefs of *Mirepoix.*

10. The *Lower Navarre* and *Bearne.* G. the Duke of *Grammont,* who is alſo Lieutenant-General of the Kingdom of *Navarre,* and Principality of *Bearne.*

11. *Guyenne* and *Gaſcoigne.* G. the Duke of *Chevreuſe.* There are two Lieutenant-Generals in *Guyenne.*

12. *Saintonge* and *Angoumois.* G. the Duke of *Uſes.* He has but one Lieutenant-General under him.

13. The Country of *Aunis, Rochel, Bourage*; the Iſles of *Rhee, Oleron,* and the adjacent Iſlands. G. is the Count *de Grace Matignon.*

14. *Poitou.* G. the Marquefs *de Vieuville.*

15. *Bretagne.* G. the Count *Tholouſe.*

16. *Normandy.* G. the Duke of *Luxemberg.*

17. *Havre de-Grace,* as comprehending the moſt Weſterly Part of the Country of *Caux,* in *Higher Normandy.* G. the Duke of *Beauvillier.*

18. *Main, Perche,* and the Country of *Laval.* G. Marquefs of *Bullion.*

19. *Orleannois,* as comprehending *Bauſſe,* or the Country of *Chartrain, Orleanoiſe,* with the Country of *Sologne,* the greateſt Part of *Galinois, Biaſois, Vendmoiſe, Dunois,* and *Perche-Gouet.* G. the Marquefs of *Sourdois.* Under him are divers Lieutenant-Generals.

20. *Nivernois.* G. the Duke of *Nevers.* Under him one Lieutenant-General.

21. *Bourbonois.* G. Marquefs of *Valiere.*

22. *Lionnois, Forets,* and *Beaujolois.* G. the Mareſchal *Villeroy.* His Lieutenant-General is his Son, the Duke of *Villeroy.*

23. *Avergne.* G. the Duke of *Bouillon,* with two Lieutenant-Generals.

24. *Limoſin.* G. Count *de Auvergne,* with one Lieutenant-General.

25. *Marche.* G. Marquefs of St. *German Beaupre,* with one Lieutenant-General.

26. *Berry.* G. the Count *d'Aubigny,* with one Lieutenant-General.

27. *Touraine.* G. Marquefs of *Dangeau,* with one Lieutenant-General.

28. *Anjou.* G. the Count of *Armanac,* with one Lieutenant-General.

29. *Saumurois* comprehends Part of the Province of *Anjou* about *Saumur,* above and to the South of the *Loire,* with the Country of *Mirebalais* in the *Higher Poiſtou.* G. is Count of *Cominges,* with one Lieutenant-General.

30. *French Flanders.* G. is the Mareſchal and Duke *Boufflers.* Under him only one Lieutenant-General.

31. *Dunkirk,* the City, Fortreſſes, and Dependencies thereof. G. is the Count *de Medavid de Grancey.*

32. The Province *La Serre,* which comprehends *Montmeddy, Bouillon,* and the Dutchy of *Bar,* the Town and Cittadel of *Stenay, Longwy, Sarlovis,* and *Marſal,* with each a particular Governor.

33. *Metz* and *Verdun.* G. the Duke of *Laferte Senneterre.*

34. *Toul.* G. the Marquefs *del Hoſpital.*

35. *Alſatia.* G. the Duke of *Mazarine,* with one Lieutenant-General.

36. *Franche Comte.* G. Mareſchal *de Duras:* Under him one Lieutenant-General.

37. The County of *Rouſſillon,* of which the Duke *de Noailles* is both Governor and Lieutenant-General.

Beſides theſe Governors and Lieutenant-Generals, and ſeveral Petty-Officers, there is one Perſon entitled the King's Lieutenant. He is a Man in great Power, and ſeems to be a Check upon, rather than an Aſſiſtant to, any of the above-mentioned Governors; and as ſuch there is one choſe who is rather an Enemy than a Friend to the Governor.

Of

Of the Archbiſhopricks and Biſhopricks of France.

IN *France* are eighteen Archbiſhopricks, and a hundred and nineteen Biſhopricks, near 750 Monaſteries, and 200 Nunneries. Of the Archbiſhopricks in Order:

1. The Archbiſhoprick of *Paris*, whoſe Archbiſhop is a Peer of *France*. It comprehends four Biſhopricks, *viz. Chartres*, *Meaux*, *Orleans*, and *Blois*.

2. The Archbiſhoprick of *Lyons*: Under it are four Biſhopricks, *viz.* of *Autun*, *Langres*, *Chaalons*, and *Macon*.

3. The Archbiſhoprick of *Roan*. The Archbiſhop is Primate of *Normandy*, and has ſix Suffragans, *viz. Bayeux*, *Auvraches*, *d' Evreux*, *de Sais*, *Lizieux*, and *Contances*.

4. The Archbiſhoprick of *Tours*, under which are eleven Biſhopricks, *viz. Mans*, *Angers*, *Rennes*, *Nantes*, *Comonaille*, *Vannes*, St. *Paul*, *de Leon*, *de Tregier*, St. *Brieu*, and St. *Malo*.

5. The Archbiſhop of *Sens* has only three Biſhops under him, *viz.* thoſe of *Troyes*, *Auxerre*, and *Nevers*.

6. The Archbiſhoprick of *Triers*: Under it are the Biſhopricks of *Metz*, *Toul*, and *Verdun*. They are ſituate in *Germany*, though ſubject to the Crown of *France*.

7. The Archbiſhoprick of *Rheims*, whoſe Archbiſhop is the firſt Peer of the Realm. He has ſeven Suffragans under him, *viz.* the Biſhops of *Soiſſons*, *Chalons* upon the *Maine*, *Laon*, *Senlis*, *Beauvais*, *Amiens*, and *Noyon*.

. *Cambray* was erected into an Archbiſhoprick in the Year 1558, and has under it four Biſhopricks, *viz. Arras*, *Tournay*, St. *Omer*, and *Ipres*.

9. The Archbiſhoprick of *Beſançon*, in *Franche Comte*, under which is only the Biſhoprick of *Bellay*.

10. Under the Archbiſhoprick of *Vienne*, are five Biſhopricks, *viz. Geneva* (but the Nomination is in the Duke of *Savoy* and the See at *Anecy*) alſo St. *Paul*, *Trois*, *Chateaux*, and the joint Biſhoprick of *Toulon* and *Orange*.

11. The Archbiſhop of *Bourges* is Patriarch and Primate of *Aquitain*; he has under him the five Biſhopricks of *Clermont*, *Limoges*, *du Roy*, *de Tulles*, and St. *Flour*.

12. Under the Archbiſhop of *Alby*, are the Biſhopricks of *Rodes*, *Caſtres*, *Cahors*, *de Vabres*, *de Mande*.

13. The Archbiſhop of *Bourdeaux*, whoſe Archbiſhop is Primate of *Aquitain*, has nine Biſhopricks under it, *viz.* thoſe of *Agen*, *Angouleſme*, *de Saintes*, *de Poictiers*, *Perigueux*, *Condon*, *Rochelle*, *Lacon*, and *Sarlat*.

14. The Archbiſhoprick of *Auch* has ten Suffragans under it, *viz. Dax*, *Lautoure*, *Comminges*, *Conserans*, *de Aire*, *Bazar*, *Tarbes*, *Oleron*, *Leſtor*, and *Bayonne*.

15. The Archbiſhop of *Narbonne* has under him the Biſhopricks of *Beziers*, *Ayde*, *Carcaſſon*, *Niſmes*, *Montpelier*, *Lodeve*, *de St. Pous*, *de Tomieres* and *Alet*; and as for the Biſhopricks of *Perpignan*, and that of *Urgel* in the County of *Rouſſillon*, which ſome would have to belong to the Archbiſhoprick of *Terragone*, they alſo belong to that of *Narbonne*.

16. *Tholouſe* is an Archbiſhoprick that has in its Province the Biſhopricks of *Pamiers*, *Montauban*, *Mirepoix*, *Lavoure*, *Rieux*, *Lombes*, and *de St. Papoul*.

17. Under the Archbiſhoprick of *Aix*, are the Biſhops of *d' Apte*, *Ries*, *Frejus*, *Cap*, and *Caſteron*.

18. Under the Archbiſhoprick of *Ambrun* are the Biſhopricks of *Digue*, *Grace*, *Vence*, *Glandeve*, *Senes*, *Nice*. *Strasburg* is an independant Biſhoprick of itſelf.

Of the Inſtitution of the Parliament of France.

JUSTICE was formerly adminiſter'd by the Kings themſelves; but that being a Buſineſs too extenſive for one Perſon, they began to content themſelves with only taking cognizance of the Affairs of State and for the Adminiſtration of Juſtice they eſtabliſh'd a certain Council, which they then call'd a Parliament, which finally decided both civil and criminal Matters, and amongſt them all the Peers of *France* both Spiritual and Temporal ſate. The Parliament of *France* were wont to follow the King wherever he went, till King *Philip* the Fair fix'd them at *Paris*. This Auguſt Aſſembly, by the Integrity of their Decrees, acquir'd ſo much Reputation in all Parts, that Popes, Emperors, Kings, and foreign Princes, have had their Differences determin'd by them, as was the caſe between the Emperor *Frederick* and Pope *Innocent* IV, whoſe Difference was accommodated by the Parliament of *Paris*; as was alſo the Difference between the King of *Portugal* and the King of *Caſtile*.

Philip the Fourth, ſirnamed the *Fair*, who began about the Year 1216, reduc'd the Parliament to two regular annual Meetings, *viz.* at *Eaſter* and *All-Saints*. He divided them into two Houſes, or Bodies; one call'd the Grand Chamber, and the other the Chamber of Inqueſt. And now we are to obſerve, that when there was but this one Parliament in *France*, all the Kingdom had recourſe to them for Deciſion and Determination of all weighty Affairs, according to their reſpective Chambers.

THE Court of Parliament of *Paris* conſiſts of ten Chambers, *viz.* the Grand Chamber, the *Tournelle* Civil, the *Tournelle* Criminal, five Chambers of Inqueſts, and two of Requeſts. The Archbiſhop of *Paris* and the Abbot of St. *Dennis* are Counſellors in Parliament, where they have their proper Seats and Votes; as have alſo all the Counſellors of Honour, and Maſters of the Requeſts, to the Number of four. Chambers Ten.

THE *Tournelle* Civil was conſtituted *Anno* 1667 and 1669. It takes Cognizance of Appeals in civil Matters to the Sum of 2000 Livres, or 100 Livres Rent. It conſiſts of a Preſident, four Counſellors of the Grand Chamber, and four Counſellors of each Chamber of Inqueſt, who take it by turns each three Months. *Tournelle* Civil.

THE *Tournelle* Criminal takes Cognizance of Criminal Appeals, and Prieſts, Gentlemen, and Perſons of Fortune have the Privilege of being judg'd there. It conſiſts of five Preſidents, nine Lay-Counſellors of the Grand Chamber, who take turns each ſix Months, and two Counſellors of each Chamber of Inqueſt, who take their turns each three Months. Juſtice was anciently adminiſtered by the Bailiff and Seneſchals, whom the King ſent into the Country for that purpoſe in former Times, when the Parliament was in Motion with the King as mention'd above: But when the Parliament became ſedentary, there was an Appeal to them from the Sentence of the Bailiffs and Seneſchals paſs'd before. *Tournelle* Criminal.

AFTER the Parliament of *France* was ſettled at *Paris*, there was another Parliament in *France* for ſome ſmall Time, when the ſame *Philip* the Fair inſtituted the Parliament of *Tholouſe* in the Year 1302, and it was made ſedentary in the Several

Year

Year 1443 by *Charles* VII. The Countries under its Jurisdiction are *Languedoc*, the *Sevennes*, which comprehends the Countries of *Vavarais*, *Velay*, *Gevandan*, and *Rovergue*; almost all *Quercy*, Part of *Condomois*, *Armagnac*, *Bigorn*, *Cominges*, the Country of *Couserans*, and the Country of *Foix*.

Roan. THE Parliament of *Roan*, the Sovereign Court of *Normandy*, was instituted in the Year 1302 by *Philip* the Fair, under the Name of the *Exchequer*. It was made perpetual by *Lewis* XII. *Anno* 1499; but it did not bear the Name of a Parliament till the Reign of *Francis* I. *Anno* 1515. All *Normandy* is under its Jurisdiction.

Grenoble. THE Parliament of *Grenoble* was instituted and made sedentary by *Charles* VII. *Anno* 1453: It comprehends all *Dauphine*.

Bourdeaux. THE Parliament of *Bourdeaux* was instituted and made sedentary *Anno* 1462 by *Lewis* XI. The Countries subject to it are *Saintonge*, *Perigord*, *Limosin*, Part of *La Marche*, *Agenois*, *Bazadois*, Part of *Condomois*, the right *Gascony*, the Countries of *Labourt*, *Landes*, and *Guyenne* in particular.

Dijon. The Parliament of *Dijon* was instituted and made sedentary by *Lewis* XI. in the Year 1476: It comprehends most of the Dutchy of *Burgundy*, *la Bresse*, *Beugey*, *Vabromey*, and the Bailiwick of *Gex*.

Aix. THE Parliament of *Aix* was instituted and made sedentary by *Lewis* XII. *Anno* 1505: All *Provence* is subject to it.

Rennes. The Parliament of *Rennes* was set up and made sedentary by *Henry* II. *Anno* 1553. The Parliament has all *Bretagne* under its Jurisdiction. One half of the Presidents and Counsellors serve one half Year, and the other half the other.

Pau. THE Parliament of *Pau* was instituted and made sedentary by *Henry* I. King of *Navarre* *Anno* 1510: It takes in the Province of *Bearn*, the County of *Soule*, and the lower *Navarre*.

Metz. THE Parliament of *Metz* was instituted and made sedentary by *Lewis* XIII. *Anno* 1663. It was intended for the Dutchy of *Lorain*, the three Bishopricks of *Metz*, *Toul*, and *Verdun*, the Dutchy of *Luxemburg*, and the *Netherlands*, &c. but by several Treaties and Concessions it is now reduced to a narrow Compass.

LEWIS XIV. established a Parliament for *Burgundy* at *Dole*, *Anno* 1674; but it is now remov'd to *Bezanson*. There is also a Parliament at *Tournay* for *French Flanders*; and lastly, there are some Sovereign Councils, from whence there is no Appeal, especially that noted one for *Rousillon*, or *French Catalonia*, held at *Perpignan*.

Bezanson. *Tournay*

Of the Chamber Accounts at Paris.

THIS Chamber was establish'd at *Paris* in the Reign of St. *Lewis* IX. and afterwards confirm'd by *Philip* the Fair, when he made the Parliament sedentary at *Paris*. This Chamber had at first two Presidents, and one being to be a Clergyman, was usually an Archbishop, or at least a Bishop: The other was generally a Layman, tho' sometimes they were both Clergymen. There were eight Clerks; two to keep the Accounts, one the Journal or Register, and the rest to examine the Accounts. 'Till the Reign of *Francis* I. the Chamber of Accounts consisted but of three Presidents, twelve Masters, and sixteen Clerks, who have since been call'd Auditors, and were by *Henry* II. advanc'd to the Dignity of being the King's Counsellors: But since that Time the Number of Officers are much increas'd; so that now it consists of a first President, with twelve others, seventy-four Masters, thirty-four Correctors, seventy-eight Auditors, the King's Advocate and Procurator General, and four of his Substitutes, a Comptroller General, two principal Secretaries, two Keepers of the Books, and a chief Usher, besides one and thirty Proctors, a Commissary, Receivers, and others.

IN this Chamber the most important Affairs of the Government have been debated, and upon Occasion the principal Officers of the Crown and the Parliament have been called hither, and it had not only a Power of judging Matters finally, relating to the Finances, as well Civil as Criminal, but also to the Policy, as the ordering Bridges, High-ways, Causeys, *&c.*

HERE they register the Oaths of Fidelity, taken by the Archbishops, Bishops, and Royal Abbots: Here they examine the Accounts of the Royal Treasury, those of the King's Houshold, and all the Officers that are accountable for Money: Here they receive the Fealty and Homage of the Vassals of Principalities, Dutchies, Peerages, Marquisates, Counties, Viscounties, Baronies, *&c.* Here they register Declarations of War, Treaties of Peace, and other Affairs of the Government; the Creation of Dutchies, Peerages, Principalities, *&c.*

THERE are other Chambers of Accounts in *France*, kept at *Dijon*, *Grenoble*, *Aix*, *Montpelier*, *Pau*, *Nantes*, and *Roan*.

Of the Court of Aids in France.

THIS Court is of longer standing than any Parliament in *France*, except *Paris* and *Tholouse*. It was set up about the Year 1315 by *Charles* V. then Dauphin, and by a peculiar Prerogative the Estates of the Royal Family and first Princes of the Blood are register'd in this Court. The Jurisdiction of the Court of Aids is to take Cognizance of, and finally to decide, Matters relating to the Tailles, Aid, Gabels, Impositions, and all Forms and Rights belonging to the King, and all Decrees made in reference to the Effects of such as are accountable to this Court.

THERE are other Courts of this kind in *France*, besides this at *Paris*; as at *Dijon*, which is united to the Parliament there; and the like at *Grenoble*, *Montpelier*, *Aix*, *Montauban*, and *Pau*, all united to their respective Parliaments.

BUT to make the word *Aids*, or the *French* word *les Aides*, more intelligible, you are to understand, that *Aids* is a particular Excise upon Wine, but different according to the different Parts of *France*. At *Bourdeaux* they have that call'd a *Tonneau*; but in *Paris*, and the Parts adjacent, they have *Muyds*, which is a third Part of a *Tonneau*, and contains about 280 Pints *Paris* Measure, which is near as many Quarts at *London*. Now when the Proprietors of the Vineyards about *Paris* have sold their Wines, they are obliged to declare it at a certain Office appointed for that purpose, and to tell the Officer at what Price they sold it by the *Muyd*, and to pay one Penny *per* Livre, which is about Eighteen-pence Sterling, besides an additional Duty of Six-pence Half-penny *per Muyd*. And the Wine-Coopers, or others, when they carry Wine to *Paris*, are obliged to make the like Declaration, and pay the like Sum at the Gates of *Paris*: Nay here they put what Price they please upon the Wine, which sometimes enhances the Duty very much; and there are other Duties payable to the King for Lodging, or selling Wine in *Paris*.

THESE

THESE Duties and Imports are not confin'd to *Paris* only, but extended all over the Kingdom, except in the Province of *Languedoc*, *Guienne*, *Limoſin*, and *Bretagne*. The Province of *Normandy*, inſtead of the eighth, pays Exciſe to the Value of the fourth Part of all the Liquor drank in the publick Houſes, whether Wine, Beer, Cyder, Aqua Vitæ, *&c.* In the Province of *Bretagne* there is an Exciſe call'd the great and little Duties of the States, which comes to 100 Livres *per Tonneau*, *Bourdeaux* Meaſure. This is laid upon Wine ſold only in publick Houſes; yet this Income of the Wine a dozen Years ago was farm'd at three Millions of Livres, of which the King had two Millions and five hundred Thouſand. There is alſo another Impoſt call'd the Billot paid to the King only, which alone brings him in 500000 Livres yearly. He hath alſo a Duty upon Wines brought to *Bretagne* by Sea, and ſeveral other Duties; to which in all it is allow'd by a modeſt Computation, that every Ton of Wine in *France* pays nine Pound four Shillings and Six-pence Duty.

Of the Taille, or Taillon, and how raiſed.

LEWIS XI. was the Firſt that openly invaded the Liberties of his Subjects; he was alſo the Firſt that impoſed this Tax without the Conſent of the three Eſtates, and alſo made it ſucceſſive. The *Taille* is threefold; Real, Perſonal, or Mix'd. *Real*, is when it is impos'd upon the Lands, where the Perſon pays ſo much to the King for every Acre of Land he is poſſeſs'd of. *Perſonal*, is when it is aſſeſſed upon any perſonal Eſtate; that is, among the *French*, the Money that a Man is ſuppoſed to have in his own Hand, or to be worth in Land or Houſes purchaſed. Laſtly, the *Mix'd* is ſo call'd, becauſe in ſome Parts of the Kingdom the Lands are not only aſſeſſed ſo much an Acre, but the Proprietor is alſo taxed for his Money, or his Art or Ability to get it.

THE real Taille is the leaſt burthenſome, becauſe a Man never pays for any thing but what he has; whereas the perſonal and mix'd may cauſe a Man to pay for what he has not as well as what he has. It is not certainly known what this Taille brings in Yearly to the Crown; but it has been known to raiſe forty Millions of Livres, which is about three Millions Sterling yearly; and that in a Time of profound Peace. It muſt be allow'd to bring in much more in a Time of War.

AS to the Way of levying this Tax, the King in Council firſt reſolves what Sum he will have raiſed upon his Subjects; then Commiſſions are iſſu'd out to the General Treaſurers of the Generalities of the Kingdom, to give them Power to levy the Money; in purſuance of which they make a Diviſion of the ſame, proportionable to the Extent of the ſeveral Elections under them. This Diviſion is ſent to the King, who thereupon ſends Commiſſioners to the Officers of each Election, by which they are empower'd to raiſe ſuch a Sum in their reſpective Diſtricts. Theſe meet and make the Regiſters of Taxes, wherein each Town, Borough, Hamlet, or Pariſh, is aſſeſſed; and each Pariſh has one of theſe Regiſters ſent to it; whereupon the Inhabitants make one of them the Collector to raiſe the Money, by taxing each Inhabitant according to his Eſtate, though, as obſerv'd above, in the perſonal or mix'd Taille, either Favour or Prejudice may govern; and yet they are very ſevere in Caſe their abſolute Demands are not ſtrictly and immediately comply'd with.

THE *Taillon* is an additional Tax, which was firſt rais'd by *Henry* II. *Anno* 1549, towards the Pay of his *Gens d' Arms*, who then lay billoted upon the Villages; but though that Cuſtom of billoting them be now laid aſide, the *Taillon* is ſtill continued.

Of the Tax call'd Entries.

THIS Tax is an Exciſe upon all cloven-footed Beaſts. The Cuſtom was, and I ſuppoſe is ſtill, if not more, for every Ox nine Shillings, for a Cow ſeven Shillings and Six-pence, for a Calf or Hog three Shillings and Four-pence, for a Sheep Half a Crown, for a Lamb Twenty-pence. Fowls pay Four-pence out of every Livre they ſell for. This Duty alone has been let to Farm at 20000 Pounds a Year. The Duty upon Timber, or Wood for Service, has been let for 15384 Pounds a Year; and Wood for Fuel pays Fifteen-pence a Load Duty; beſides Duties on Hay, Charcoal, Fiſh, Salt, freſh Eggs, Butter, and Cheeſe; and all manner of Herbs pay four Shillings in the Pound; nay, at *Paris* even the Aſhes and old Lees of Wine pay Duty.

AND theſe Entries are not confin'd to *Paris* only, but are impoſed upon other Places; but not to all alike; as for Inſtance, at *Caen* in *Normandy* they pay for every Pound of Butter one Half-penny, for a Load of Wood Fuel Ten-pence, for a Load of Timber Thirteen and Four-pence, for a Load of Hay one Shilling and Eight-pence, for a Horſe Load of Wood Two-pence Half-penny, for a Horſe Load of Fiſh Three and Five-pence, for a Man or Woman's Load of Fiſh Eight-pence, and for a Horſe Load of Corn one Shilling.

Of the Tax call'd the Gabelle.

GABELLE is the Right the King aſſumes in Salt. The Time of its firſt Impoſition is not known, but we find, as far back as *Philip the Long*, *Anno* 1318, that he took a Piece of Money call'd a Double, as Duty upon every Pound of Salt. But the Gabelle, as it now is, is not ſo much a Duty laid by the *French* King upon his Subjects, as it is engroſſing their Trade to himſelf; whereby his Subjects are oblig'd to buy their Salt of him, and at his own Price.

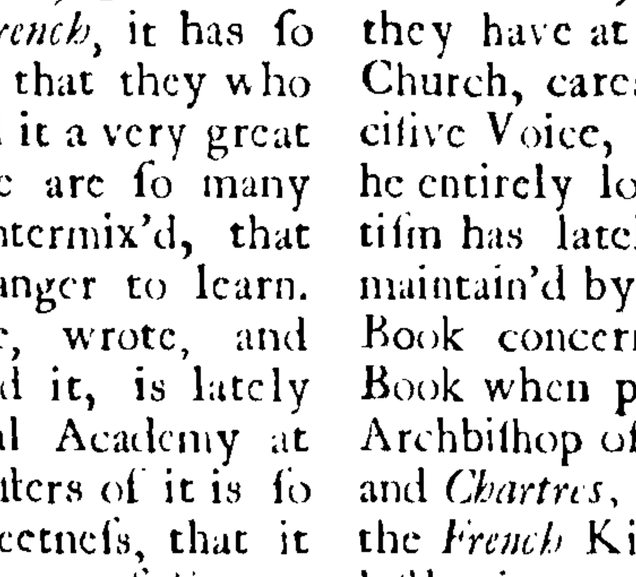
WE are next to conſider the vaſt Profits he makes of it. This Salt is chiefly produc'd in the Salt Marſhes of the Country of *Aunis* and *Xaintonge*; where a certain Meaſure, call'd *un Muyds de Boſs*, which weighs 5200 Pounds, is ſometimes bought for Three and Six-pence, but ſcarce ever exceeds to Four and Six pence *Engliſh* Money: And here the *French* King buys it, to ſell to his Subjects. He ſells it them by a Meaſure call'd the *Minot*, fifty-two of which make one *Muyds de Boſs*; and he ſells it to them at *Paris* as ſixty-four Livres the *Minot*, which is 3328 Livres the *Muyds de Boſs*: And if we reckon the *French* Livre at Eighteen-pence, 3328 Livres amount to above two hundred forty-nine Pounds Sterling the *Muyds de Boſs* of Salt, which coſt him but four Shillings and Six-pence at moſt; and though it does not bear that Price in ſome other Provinces, yet it falls but little ſhort of it; and it is often one third dearer in Times of War than in Times of Peace.

Of the Treaſury Royal.

THE Treaſury Royal, or *l'Eſpargne*, in *France* is the ſame which the *Romans* call'd *Ærarium Populi*. Into this Office are diſcharg'd

all the publick Receipts of all Duties of *Taille*, *Taillon*, and in short of all the King's Revenue; and therein also all the Treasurers, fix'd for distributing the King's Money, come to receive the Sums necessary for the Administration and Execution of their Places of Office or Trust. The Treasurer was put in the Place of the antient Receiver-General by *Francis* I. and after many Mutations, that Place is now managed by two Officers, under the Title of Keepers of the Royal Treasury; and they are honoured with the additional Dignity of Counsellors in his Council.

CHAP. XIII.



Of the Soil, Product, Language, and Religion of France.

Soil. THE Soil of *France* is generally extraordinary fruitful, not only in Corn and Fruit, but also in Hemp and Flax; which last is not only produc'd in great Quantities, but curiously manufactur'd; as witness the fine Linnen made at *Cambray*, call'd therefore Cambraick, or more commonly Cambrick; also the fine Lace made at *Mechlin*, *Brussels*, &c. which are so well known, that they are no otherwise distinguished than by the Names of the respective Places where they are made. But we must not forget the fine *French* Wines, so well known in *England*, that the best Way to get a true Description of them is to go to the Places where they are sold without Adulteration, if such a Place can be found, and let the impartial and undepray'd Taste be Judge.

But besides what has been already mention'd, *France* affords plenty of Salt; also Fish, Almonds Oade, Canvas, Coral, Paper, Skin, Verdigrise, and Cream-Tartar; and of Silks, Alamode, Lutestrings, and rich flower'd Silks, &c.

Language As to the Language of the *French*, it has so near an Affinity with the *Latin*, that they who are Masters of the Latter will find it a very great help to the Former. But there are so many *German* and *Gothick* Words intermix'd, that makes it more difficult for a Stranger to learn. But the *French*, as now spoke, wrote, and taught, by those that understand it, is lately very much refin'd by the Royal Academy at *Paris*; and by those that are Masters of it is so admir'd for its Elegancy and Sweetness, that it has now gain'd Ground in most Courts of *Europe*, so that a Person, however other-ways embellish'd with the Ornaments of Nature or Art, without the *French* Language is far from being qualify'd for a Traveller; whereas with it, and a few other necessary Endowments, he is fit to appear at any Court in *Europe*.

Rel. THE establish'd Religion of *France* is that of the Roman Catholicks; but the reform'd Protestants, commonly call'd *Hugonots*, were tolerated till the Reign of *Lewis* XIV, who by his Declaration in the Year 168; abolish'd the Edict of *Nantz*, extirpated the reform'd Religion, and enjoin'd the Profession of the Roman Catholick Religion under the severest Penalties. This caused great Confusion and Destruction in the Protestant Churches in the Dominions of *France*; Multitudes being driven from their Habitations, upon the Account of their Religion, and forc'd to seek for shelter amongst Strangers in Foreign Countries. But notwithstanding that their great Eye-sore the Protestants are so far suppress'd amongst them, yet they cannot agree amongst themselves; their Differences in some Points amounting so high, and in such weighty Points of Doctrine, that Infallibility itself, if such they have at the Head of the Roman Catholick Church, cares not to interfere, to give his decisive Voice, lest gaining a Friend of one Party, he entirely lose the other. The Sect of Quietism has lately crept in amongst them, and is maintain'd by the Archbishop of *Cambray* in his Book concerning the *Internal Life*; but that Book when publish'd was first censured by the Archbishop of *Paris*, and the Bishops of *Meaux* and *Chartres*, and next it was complain'd of by the *French* King in his Letter to the Pope; and lastly it was condemn'd, though the Author offer'd to maintain his Doctrine before the infallible Head of the Church at *Rome*, if he might have been suffered to appear before him.

A DE-

A DESCRIPTION

OF THE

Kingdom of *SPAIN*.

CHAP. I.

The Situation, Bounds, and Extent of Spain; *with an Account of it's Government, and Succession of Kings, from its first Peopling to the Birth of our Blessed Saviour.*

SPAIN was call'd *Iberia* and *Hesperia*, and by some *Spania*; most likely from the Name of some of their Kings, as I shall have Occasion to give some probable Conjectures in the Course and Succession of their Names.

SPAIN is bounded on the North with the Bay of *Biscay*; on the East with the *Mediterranean*; on the South with *Gibraltar*, and the *Straits-Mouth*; and on the West with *Portugal* and the *Atlantick* Ocean. It lies between Latitude 36 Degrees and 44 Degrees North; and the Easternmost Part of *Spain* being nearly under the Meridian of *London*, the Westermost extends to about 19 Degrees of Longitude West from *London*. It is something of a square Form, about 480 Miles from North to South, and 320 from East to West.

BECAUSE I would avoid both the Extreams, (*viz.* imposing Fiction upon the Belief of the Credulous on one Hand, or omitting the Relation of necessary Facts on the other,) I would premise, that it is evident *Spain*, as well as other Kingdoms of the World, were peopled by *Noah*, and consequently by some of his three Sons at first; and to come a little nearer, we have it in authentick History, that some part of *Asia*, and all *Europe*, was given to *Japhet*; and though it can scarce be suppos'd to be given him under that Name of *Europe*, with due Limits and Bounds affixed to it, as is the Case in Kingdoms and Principalities in this populous Age of the World, (there being but a small Part of the World then known,) yet his Inheritance being appointed to the Westward, it is natural to believe, that as his Family and Succession increas'd and grew populous, it would be an easy Matter for them to spread themselves still further, to the Westward to make more Room; and much more so as there were no Inhabitants to the Westward of them to obstruct their Progress; so that they might be said to make Acquisitions, not Conquests, as meeting with no body in Possession to refill them.

SOME, and not without good Reason, corroborate this Opinion from *Gen.* x. 5. Speaking of *Japhet* and his Sons, it is said, *By these were the Isles of the* Gentiles *divided in their Lands*, &c. Now all will allow that those remote Western Parts, or if they had any Knowledge of our Islands now call'd *England* and *Ireland*, they and the Continents upon which they border, are more likely than any other the *Isles and Gentiles*, said to be divided and possess'd by *Japhet* and those who descended from him; and as it is certain these, as well as all other Parts of the Earth, were peopled from *Shem*, *Ham*, or *Japhet*, those small Hints above may with the utmost Probability fix it upon *Japhet*.

NOT to enter into a detail of *Japhet*'s Progeny, I shall keep close to the Succession, as it relates to *Spain*. It is said *Japhet* had seven Sons, (some say Eight, but the Number is not material:) His Son *Tubal*, with his Wife *Noga*, were the first that began to people *Spain* in the Year before *Christ* 163, as in the Margin. He gave the *Spaniards* Laws written in Verse, in the *Chaldean* Tongue; and first calculated the Year to consist of 365 Days six Hours; but that Account was afterwards diluted, till *Julius Cæsar* renewed the Institution, which is since call'd the *Julian* Account. *Tubal* dy'd in the Year before *Christ* 2008. *Tubal.* B. C. 2163.

Note, the Years mention'd in the Margin, till we come to the Time of our Saviour's Birth, are the Year before Christ; *but those after that Time, will be the Year of* Christ, *as in other Christian Dates.*

The Second King of *Spain* was *Iberus*. From him *Spain* was called *Iberia*: The River *Ibro* also takes its Name from him. *Iberus.* 2008.

3. *Idubeda* gave Name to a Mountain in *Spain* of the same Name. 1971.

4. *Brigus*, who, it is said, was the first that made use of Coat Armory in *Spain*. 1917.

5. *Tagus*, Son of *Brigus*: He gave Name to the River *Tagus*, which runs by *Lisbon* into the *Atlantick* Ocean. In his time the People began to be much increas'd, and advance'd further into the Country. 1855.

6. *Betus* the Son of *Tagus*. 1825.

7. *Gerion*,

1764. 7. *Gerion*, or *Stranger*: He was rich, and the first that found Treasures of Gold and Silver in *Spain*. *Osiris* the *Ægyptian* came into *Spain*, vanquish'd *Gerion* in a Battle, and introduc'd into *Spain* the Lunary Calculation of the Year. He taught them the Use of Corn and Grain, and further improv'd them in cultivating the Earth. He invented the Plow, and the Pruning of Vines. The Battle above-mention'd, where *Osiris* kill'd *Gerion*, was fought near the Straits of *Gibraltar*, and *Gerion*'s three Sons buried him upon a Rock. He is said to be the first ever buried in *Spain*; their Custom having been to hang the dead Bodies upon Trees, or cast them into the Sea.

1759. 8, 9, 10. The three Sons of *Gerion* reign'd jointly, and the conquering *Hercules* coming to *Spain* at the same Time, they fought him, and he kill'd them all three.

1717. 11. *Hispalus*, the Son of *Hercules*, to whom *Hercules* gave the Kingdom, compleated the Conquest of it. From him the City of *Seville* was call'd *Hispalus*.

1700. 12. *Hispanus*, the Son of *Hispalus*: He gave this Kingdom its antient Name of *Hispania*, by which it is well known to this Day,

1668. 13. *Hercules*, call'd also *Orus Libicus*, was Grandson of *Hispanus* and Son of *Osiris*.

1649. 14. *Hesperus*, one of *Hercules*'s Captains, succeeded: It was from him that *Spain* was call'd *Hesperia*

1629. 15. *Atlas Palus*, Brother of *Hesperus*.

1628. 16. *Sicorus*, or *Orus*: It is said *Moses* was born in his Reign.

1583. 17. *Sicanus* Son of *Sicorus*.

1552. 18. *Siceleus* Son of *Sicanus*.

1508. 19. *Lusus* Son of *Siceleus*.

14[illegible]. 20. *Siculus* Son of *Lusus*.

1416 21. *Testa* the *African*: In his time the *Zacynthians* came into *Spain*, and built the City of *Saguntum*.

1442 22. *Romus* Son of *Testa*: He founded the City of *Valence*.

1309. 23. *Palatuus* Son of *Romus*: He had a peaceable Reign, till *Lucinius* a *Spaniard*, surnamed *Cacus*, a Robber, rebelled against him; and *Cacus* being follow'd by the Vulgar, he fought *Palatuus* and vanquish'd him; and

1291. 24. *Cacus* succeeded in the Kingdom. He first taught the *Spaniards* the Art of Casting, Founding, and Forging, and to make offensive Arms, &c but there yet remaining a Party of *Palatuus*'s Friends in *Spain*, he rais'd a strong Force, and drove *Cacus* out; and

1255. *Palatuus* recovered his Kingdom, and held it six Years and then he dy'd. In his time *Hercules* the *Theban* came into *Spain*, and plunder'd it of great Riches in Gold and Silver.

1249. 25. *Erithreus*, a Relation of *Palatuus*, succeeded. It is said *Troy* was destroy'd in his Time.

1182. 26. *Gargoris*,

1105. 27. *Abidis* the Grandson of *Gargoris*, being the natural Son of his Daughter; but being a Bastard, *Gargoris* was resolv'd to make him away; and in order to that, he expos'd him to Wild-Beasts, then to Mastif Dogs; but neither of these prevailing, he caused him to be thrown into the Sea: He escap'd that also, but he durst not appear where he was known, and so became Wild in the Woods, and happen'd to be taken in a Net like a Savage Beast, and brought to *Gargoris*, who knew him by some Marks, took him home, and caused him to be instructed; and he succeeding, was accounted one of the best of their Kings.

The Account we have of *Spain* is now for some time very uncertain; but I shall keep to what is most authentick and probable. After *Abidis* the *Celtæ Braccati* came into *Spain* from *France*; and as they were *Celtæ*, and the *Spaniards Iberians*, they call'd themselves *Celtiberians*, a People famous in After-Ages, and who inhabited chiefly near the River *Ebro*, between *Navarre* and old *Castile*.

But here to do Justice to the History, we find others of no less Authority than the former, who are of Opinion that *Spain* was not peopled by *Tubal*; and we would hence infer the Difficulty, if not Impossibility, of reconciling these two seeming inconsistent Accounts. First, say they who espouse the latter Opinion, *Tubal* could not reasonably be supposed to come to *Spain* by Sea, because Navigation (except bare Coasting) was not then known: But this I look upon as no Argument at all; for you see in the Beginning of this Chapter, the Probability of *Japhet*'s Progeny coming to *Spain* by Land. But Secondly, as *Spain* and *France* are both upon one Continent, and contiguous, and as *France* lies to the North-Eastward from *Spain*, or nearer the Scene or Place of Creation, from whence the first Inhabitants must of Course proceed, it is very probable they might in their Peregrination reach *France* before they reach'd *Spain*, or perhaps near the same Time; which is a plain Proof that as *Spain* was certainly peopled by the Progeny of *Noah*, so it might, for Reasons abovementioned, as probably be by the Race of *Japhet* and *Tubal* in their Progress to the Westward, which is no way inconsistent with their being peopled by way of *France*, since there was no other way of coming at *Spain* by Land, and we find in those times of the Infancy of Navigation so very little Probability of their arriving at *Spain* by Sea.

But to return to a farther Account of *Spain*: Horse-mills & Money. Some Years after the Reign of *Abidis*, the *Rodians* came into *Spain*, and built the City of *Roses*, in the Gulf of *Lyons*, near the *Pyrenian* Mountains: They brought in the Use of Horse-mills and Money. After them came the *Phenicians*, who understood Sea-Affairs much better than the *Rhodians*, and at that time of Day better than any other People; and they frequenting the Coast of *Spain* and *Portugal*, and finding it very rich, advanc'd as far as the antient *Erithrea*, now *Cadiz* or *Cales*, near the *Straits-mouth*. Here they establish'd a Colony, and then extended themselves further along the Coast of *Andalusia*, and there settled themselves about 822 Years before *Christ*, and continued there with little Opposition about 200 Years. But about the Year before *Christ* 622, the *Tartassians* (the Inhabitants of *Andalusia* and the South-west Parts of *Spain*,) drove the *Phenicians* from the Continent, when some that were expell'd remain'd in the Isle of *Cadiz*. B C 822 621

About the Year before *Christ* 547, the *Phocians* came in great Numbers from *Greece* to *Spain*, and in *Catalonia* built the City of *Emporia* or *Emporia*. The *Phenicians* were still troublesome to the *Andalusians*, and the better to execute their Design, call'd to their Assistance the *Athenians*, who (the latter especially) fitted out a great Fleet of Ships, as it might be call'd at that Day, under the Command of *Mavelal*, who landed in *Andalusia*, and pillaged the Coast, and built many Forts. The *Carthaginians* now growing strong, and having got good Footing in *Andalusia*, they began to contrive to get rid of their Masters the *Phenicians*, who sent for them, and to whose Assistance they came to *Spain*, and quarrelling with them accordingly, the *Carthaginians* drove the *Phenicians* quite out of *Spain*, and made 54 4

themselves

themſelves Maſters of the Iſland of *Cadiz*. *Sapho* was then Chief or Commander of the *Carthaginians*, after *Marerbel*, and *Sapho* was ſucceeded by *Hanno* and *Hamilco*, who going upon Diſcoveries, one upon the *Spaniſh*, and the other upon the *African* Coaſt, left *Giſco* to govern *Spain*. His chief Care was to extort Riches from the Subjects for himſelf, which when he had got to his Mind, he was making off towards *Carthage*; but in his Paſſage was caſt away and loſt all.

Hannibal ſucceeded. He built the City of *Alvor*, near *Cape St. Vincent*, in the Kingdom of *Algarve*. The *Spaniards* of *Andaluſia* being at that time at variance with the *Portugueſe*, (call'd then the *Luſitanians*) *Hannibal* himſelf engaging in the Battle in the *Portugueſe*'s Intereſt, was ſlain, abundance being kill'd on both Sides.

B C. 428. *Mago* the *Carthaginian* ſucceeded. He was in the Iſland of *Majorca*, when he heard of the Death of *Hannibal*; but haſting to the Relief of his Country-Men, he govern'd three Years.

Hanno ſucceeded him in the Government of *Spain*; but he was ſo covetous and cruel, that his Subjects aroſe againſt him. But he calling for Succour from *Carthage*, uſed the *Spaniards* worſe than before, whereupon he was recall'd.

263. About 263 Years before *Chriſt*, the firſt War between the *Romans* and *Carthaginians* began; in which the latter having ſuffered very much, made Peace, and to repair their Loſs by the *Romans*, reſolv'd upon an abſolute Conqueſt of *Spain*: To effect which, they ſent *Hamilcar*, with a powerful Army, and abſolute Authority, into *Spain*. He took with him his Son *Hannibal*,

B C. 236 yet but nine Years of Age. He built a City on the Banks of the River *Ibro*, which he call'd *Carthage*; and having made an Alliance with his Neighbours, he built *Barcelona*; but he was kill'd in a Battle with the *Edetans*, a People of

228. *Catalonia*, in the Year before *Chriſt* 228.

Aſdrubal, Son in Law to *Hamilcar*, ſucceeded. He was well belov'd, and conſequently powerful. In the Year *B. C.* 225. he laid the Foundation of the City which he then call'd *New Carthage*, but is now call'd *Carthagena*, on the South-Eaſt Coaſt of *Spain*. The *Romans*, jealous of the Progreſs of the *Carthaginians* in *Spain*, ſent to *Aſdrubal* to deſire him not to diſturb the *Saguntines*, or any other their Confederates, nor to croſs the River *Ibro*; to all which he ſwore: But ſpent the three following Years in Preparations for War, without any regard to his Oath. But he having cauſed a Perſon of Character to be aſſaſſinated, one of the murder'd Perſon's

220 Slaves kill'd *Aſdrubal B. C.* 220.

Hannibal then ſucceeded to the Government of *Spain*; and as he mortally hated the *Romans*, he was glad of this firſt Opportunity to make War upon them; but it prov'd the Ruin of him and his Country. His firſt Work was to ſubdue the *Carpetans*, or People of the Kingdom of *Toledo*; and he puſhed his Conqueſt to the City of *Toledo* the Capital. He then laid Siege to *Saguntum*, took it, and demoliſh'd it to the Ground; and then paſs'd the *Alps* towards *Rome*; where we muſt leave him, his Tranſactions at *Rome* not belonging to the Hiſtory of *Spain*: But ſhall refer the Reader to the former Part of this Book, the Deſcription of the Pope's Dominions in *Italy*, where Chap II. is the Hiſtory of antient *Rome*, and in Page 596 is the ſecond *Punick* War under *Hannibal*, that we are now ſpeaking of.

Cneus Scipio was then ſent from *Rome*, by way of *France*, to *Spain*. He made himſelf Maſter of all the Coaſt as far as the River *Ebro*. He afterwards defeated *Hanno*, and deſtroy'd the Fleet of *Carthage* ravaging the Coaſt as far as *Cadiz*, and taking an incredible Number of Places.

Cornelius Scipio, Brother to the aforeſaid *Cneius Scipio*, join'd his Brother with Recruits, and took the *Spaniſh* Hoſtages, which the *Carthaginians* kept at *Saguntum*, and generouſly return'd them to their Friends, which very much gain'd the Affection of the People.

Scipio. The two *Scipio's*, elevated with their Succeſs, attack'd and beat *Aſdrubal*, who was on his March for *France*. They beat him alſo a ſecond Time at *Iturtugam*; a third at *Jucibiles*, or *Traguera*; and fourthly, at *Auriga*: But notwithſtanding their great Succeſs, they were both kill'd near the River *Segura*, in the Kingdom of *Murcia*.

Lucius Marcius. *Lucius Marcius* ſucceeded: He was a *Roman Tribune*, and gather'd together the diſconſolate Remnants of the *Roman* Army, with which he repuls'd the *Carthaginian* Forces, and cut down the Troops of *Aſdrubal* in their Retrenchments; by which the *Carthaginians* loſt above thirty-ſeven thouſand Men.

Claudius Nero. Upon this the Senate ſent *Claudius Nero*, with ten thouſand Infantry, and a thouſand Horſe; and the Year following, *Publius Cornelius Scipio*, in Quality of Pro-conſul, with a Number equal to that of *Claudius Nero*, took the City of *Carthagena*, defeated *Aſdrubal*, and engaging the *Africans* to his Side, made himſelf Maſter of *Spain*.

Cato. *Cato* the Cenſor came to *Spain*, in the Quality of Conſul: He was the firſt that ever *Rome* ſent thither inveſted with that Dignity; he took two Places, *Roſes* and *Empurias* in *Catalonia*, ſubdu'd the *Spaniards*, and then return'd to *Rome*, and left *Spain* to be govern'd by *Prætors*, which held many Years.

Pompey. *Numantia* having revolted, *Pompey* beſieged it; but his Succeſſor *Pompilius* was routed, and *Mancinus* concluded a ſhameful Peace. *Lepidus* and *Piſo* were afterwards beaten: But, at laſt, *Scipio Africanus* compleated the Ruin of this Kingdom.

Thus *Spain* was reduc'd under the Power of the *Romans*; and *Sertorius*, who had ſeveral Times beat the *Romans*, was at laſt vanquiſh'd by *Pompey* and *Metellus*: And *Pompey*, after he had ſettled his Affairs in *Spain*, return'd to *Rome*.

Soon after this *Julius Cæſar* came into *Spain*, in Quality of Queſtor; but not liking that Poſt, he return'd to *Rome*. He came back, however, with the Title of *Prætor*, and having done ſomething in Feats of Arms that added to his Honour, he return'd to *Rome* to make Intereſt for the Conſulſhip. In his Abſence fifty thouſand *Spaniards* paſs'd the *Pyrenians*, to aſſiſt the *Gauls*; but *Craſſus* routed them, and *Cecilius* Pro-conſul of *Spain* being defeated by the *Vaces*, the Senate gave the Government to *Pompey* for five Years; in which time *Pompey*'s Wife, Siſter to *Cæſar*, dy'd, which diſſolv'd the Union, and created a Civil War between them, inſomuch that when *Cæſar* had ſettled the Affairs of *Rome*, he came to *Spain* and ſubdu'd *Pompey*'s Lieutenants or Deputy-Governors, and took the Government upon himſelf.

Julius Cæſar alſo ſubdu'd *Varro*, another of *Pompey*'s Generals, and after all this Succeſs he return'd to *Rome*; and, in ſhort, *Pompey* being thus defeated, was treacherouſly kill'd in *Egypt*: But his Sons coming into *Spain*, became ſo formidable, that *Cæſar* found himſelf under a Neceſſity to return to *Spain* to ſuppreſs them, and

accordingly they had a great Battle at *Munda* in *Granada*, where *Cæsar* gain'd a compleat Victory, and then return'd to *Rome*, where he assum'd Sovereign Authority, and was call'd the *Roman* Emperor, and Sovereign of *Spain*. But this great *Cæsar* was afterwards assassinated in the Senate-House by *Brutus* and *Cassius*, forty-two Years before the Birth of *Christ*.

After him *Sextus Pompey* renew'd the War in *Spain*, and took possession of *Andalusia*; but *Augustus Cæsar*, having made himself so famous as to be deem'd Master of the known World, went to *Spain* in the Year before *Christ* 25, and reducing the Country to his Obedience, left it in perfect Peace, and return'd to *Rome*.

CHAP. II.

This brings us down in the History of Spain *to the Birth of* Jesus Christ, *and from thence to the Arrival of the Barbarous Nations in* Spain, *which was about the Beginning of the fifth Century.*

IN the Time of *Augustus Cæsar*, *Jesus Christ*, the Lord of Life, and Prince of Peace, was born of the *Virgin Mary*. The Emperor *Augustus Cæsar* was Nephew to *Julius Cæsar*, and Son of *Octavius*, who had been *Prætor* in *Macedonia*: He reign'd 56 Years, and died in the Year of our blessed Saviour 15.

Tiberius Nero, Son in-Law to *Augustus*, succeeded: He was a cruel avaritious Prince. In his Reign *Christ* was crucified: He died *Anno Christi* 38.

Caius Caligula succeeded, but he reign'd not four Years, and was succeeded in the Year 42 by *Caius Claudius*, Uncle to *Caligula*: In his Time St. *James* the Great came into *Spain*, and preached the Gospel at *Sarragossa*, which is to this Day call'd the Church of the Pillar. *Claudius* died *Anno Christi* 55.

Nero Son of *Agrippina* succeeded: He caused his own Mother to be put to Death, as also two of his Wives, and his Preceptor *Seneca*. He excited the first Persecution against the Christians, for which, and other Enormities, the Senate declar'd him an Enemy to his Country; and when he found himself abandon'd by every Body, he kill'd himself, when he was but about 32 years of Age.

Galba succeeded, but he enjoy'd the Empire but about seven Months, and was assassinated by the Prætorian Bands; and

Otho, who murder'd *Galba*, succeeded him, but he did not hold it half a Year; for being defeated by *Vitellius*, he kill'd himself, and the said *Vitellius* was rais'd to the Empire: But he being very vicious, held it but nine Months, till he was assassinated at *Rome*, and

Flavius Vespasian succeeded him. He was a virtuous Prince, and after the Destruction of *Jerusalem* sent *Jews* into *Spain*, who built the City of *Merida* upon the River *Guadiana*. He dy'd at *Rome* in the Year 80.

Titus, surnamed *Vespasian*, succeeded his Father, and inherited his Virtues; but he reign'd but little more than two Years, and was succeeded by his Brother,

Domitian, who persecuted the Christians, and was kill'd in his Palace for his Cruelty.

Caius Nerva succeeded, and held it not above 16 Months; and then *Marcus Ulpius Trajanus*, a *Spaniard*, who had before been adopted by *Nerva*, reign'd 19 Years. He was a great Persecutor of the Christians, and dy'd *Anno* 118 in *Cilicia*.

Ælius Adrianus succeeded *Trajan*: He divided *Spain* into six Provinces, *viz. Betica*, *Lusitania*, *Carthaginia*, *Tarragonia*, *Gallicia*, and *Mauritania*.

Ælius Antoninus succeeded *Adrian*, *Anno* 139. There was a general Peace through the whole Empire during his whole Reign, which was above 22 Years. He forbid the *Spaniards* to use their own Language, and order'd them to learn the *Latin*. He dy'd in the Year 162.

Two joint Emperors succeeded him at one Time, and both upon the Throne together, *viz. M. Aurelius Antoninus*, and *Antoninus Verus*. They were not the only joint Emperors ever known. The latter mention'd liv'd but nine Years, but *Marcus Antoninus* liv'd above nineteen Years, and dy'd *Anno* 181.

Commodus, the Son of *Antoninus*, succeeded, a Man remarkable for nothing but his Vices, some of which were too abominable to be named. He was so detested that he was poison'd by one of his Concubines, in the Year 193.

It is scarce worth the while to mention *Helvius Pertinax*, and *Didius Julianus*; but after them came *Septimus Severus*, who in the ninth Year of his Reign caused the Christians to be persecuted. He reign'd near eighteen Years, and dy'd at *York*. He built the Wall between *England* and *Scotland*, the Ruins of which are yet to be seen in *Northumberland*, and now go by the Name of the *Roman* Wall.

Aurelius Antoninus Caracalla succeeded him. He was his Eldest Son, and was to have succeeded a Co-partner in the Empire with his Brother *Geta*, but he caus'd him to be murder'd, which so exasperated the People, that he was assassinated by a Soldier after a Reign of little more than six Years.

Opilius Macrinus succeeded; but he did not hold it quite four Months, till he was kill'd by his Soldiers in the Year 219, and was succeeded by

Heliogabalus, Priest of the Sun, whose Vices were summ'd up in this one short Character, That he was the greatest Monster upon Earth for all Crimes, tho' Lust was, if possible, his predominant Vice. He was so hated, that after a Reign of about four Years, he was assassinated by his Guards, *Anno* 223.

Alexander Severus succeeded, and reigned 13 Years; but though a good Emperor, he was assassinated *Anno* 236.

Maximi-

Maximinus firſt, and
Balbinus and *Pupianus* after him, were elected Emperors; but all aſſaſſinated in their firſt Year.

Gordian, a young Prince of about 15 Years old, ſucceeded to the Empire; but he had not reign'd above ſix Years before he was aſſaſſinated by *Philip* the Captain of his Guards, and was ſucceeded by

Philip, who obtain'd the Empire by Treaſon, but after five Years War was murder'd by his Soldiers, and ſucceeded by

Decius, a cruel Perſecutor of the Chriſtians: He perſecuted the Chriſtians *Anno* 250, but was kill'd after a Reign of about two Years.

Trebonius Gallus, who had cut *Decius* off, aſſum'd the Empire; but he had not had it above a Year and a Half when he was kill'd by

Emilian: He enjoy'd the Empire but four Months, and was kill'd by his Soldiers, and ſucceeded by

Lucius Valerian, who, after he had reign'd ſeven Years, was taken Priſoner by the *Perſians*; and next came

Gallienus. But all theſe of late, who were both *Roman* Emperors and Sovereigns of *Spain*, had ſo little Care of the Affairs of *Spain*, that one *Tetricus* ſeiz'd it; and calling the *Germans* to his Aſſiſtance, they put all to Fire and Sword as they came through *France*. *Gallienus* was kill'd by his Soldiers, *Anno* 269.

Flavius Claudius reign'd almoſt two Years, and, what was a Wonder at that Time, he dy'd a natural Death.

Quintilus was next elected; but in leſs than a Month kill'd himſelf, becauſe the Legions had choſen

Lucius Domitius Aurelian: He was a bitter Enemy to the Chriſtians, but reign'd only about five Years, and then was murder'd by his favourite *Mneſtheus*.

Claudius Tacitus was next elected, but he reign'd not quite ſeven Months, and his Brother

Florian ſucceeded by Uſurpation; for which his Conſcience checking him, he caus'd himſelf to have his Veins open'd, which was the Occaſion of his Death.

Probus reign'd near ſix Years, and was then kill'd by thoſe who choſe him; and

Carus ſucceeded in the Year 282. He took in his two Sons as Partners with him in the Government; but *Carus* was ſlain by a Thunderbolt, and *Numerianus* was murder'd, and all in two years Time.

Diocleſian having obtain'd the Empire, defeated and kill'd *Carus*: and being eſtabliſh'd, he vigorouſly perſecuted the Chriſtians; and ſo inveterate was he againſt them, that when he could not gratify his Malice in totally extirpating them, he abdicated the Empire, and perſuaded *Maximian* to do the ſame.

All theſe mention'd from the Beginning of this Chapter which have been rank'd under the Denomination of Kings of Spain, *were alſo Emperors of* Rome; Spain *being at this Time, and ſome Time afterwards, a Part of, and ſubject to, the* Roman *Monarchy*.

Galerius and *Conſtantius*, having married the Daughters of the two laſt perſecuting Emperors, jointly ſucceeded in the Empire; but not ſatisfy'd with equal Authority, they agreed to divide it. *Conſtantius* had for his Share *France*, *Spain*, and *Britain*; and as it is *Spain* that we are to purſue in this Hiſtory, we are to follow the Race of *Conſtantius* as Kings of *Spain*, without any regard to their being Emperors of *Rome*. *Conſtantius* dy'd at *York* in the Year 306.

Conſtantine the Great was the Son of *Conſtantius*, by *Helena* Daughter of a King of *England*. He ſoon made himſelf Maſter of the whole Empire, and was the firſt Chriſtian Emperor. But it was in his Time that the *Arian* Hereſy was firſt broach'd; to ſuppreſs which *Conſtantine* call'd the Council of *Nice*, where it was condemn'd, and the *Nicene* Creed eſtabliſh'd. This Emperor tranſlated the Seat of the *Roman* Empire to *Byzantium*, which he call'd after his own Name *Conſtantinople*, by which Name it is known to this Day. He reign'd above thirty Years.

Conſtantine, *Conſtantius*, and *Conſtans*, ſucceeded jointly to the Empire: They were the Sons of *Conſtantine* the Great, but the Firſt and Laſt being ſhort-liv'd, *Conſtantius* remain'd ſole Monarch, and dy'd *Anno* 361.

Julian the Apoſtate was named by his Predeceſſor *Conſtantius* to ſucceed; but he abandon'd the Chriſtian Religion: He was kill'd by an Arrow in a War againſt the *Perſians*. After him came,

Jovinian, or *Jovian*; but he did not reign a Year before he was ſuffocated, and was ſucceeded by

Valentinian, who aſſociated his Brother *Valens* in the Empire. He was a bitter *Arian*, but reign'd till the Year 379.

Gratian ſucceeded next: In his Time was held the Council of *Conſtantinople*, when all Hereſies, then deem'd ſo, were condemn'd.

Theodoſius, a *Spaniard*, next ſucceeded, and dy'd in the Year 395.

Honorius ſucceeded in the Weſtern Part of the Empire, and he encouraged the *Goths* ſo much, that we may well lay the *Roman* Empire in *Spain* ceas'd from that Day. It was at laſt totally ſubdu'd by the *Goths*, whoſe Race of Kings have made ſo little a Figure in Hiſtory, that I ſhall little more than name them. They came in the following Order.

CHAP.

CHAP. III.

Of the Names and Order of the Gothick *Kings that reigned in* Spain, *until they were ſubdued by the* Moors.

WHETHER the Reader pleaſe to call it an Introduction, or a Digreſſion, I think it proper to obſerve, that when the *Saxons* ſeiz'd *England*, the *French* *Gaul*, and the *Lombards Italy*, the *Goths* ſeiz'd *Spain*, whoſe Inhabitants before had different Kings, as the ſeveral Provinces of *Spain*, which ſtill bear the Names of Kingdoms, do ſtill teſtify; but theſe being all Contemporaries, like the *Saxon* Heptarchy in *England*, I ſhall paſs them by, and proceed to the *Gothick* Kings that governed *Spain*, of which the firſt was,

First *Gothick* King of *Spain*. *Ataulphus*, who married *Placida*, Siſter to the Emperor *Honorius*, (the laſt mentioned in the laſt Chapter) and by that Settlement, the Neighbourhood of the *Pyrenians* were given to *Ataulphus*. He was a peaceable Prince, but his People not liking his mild Diſpoſition, murdered him at *Barcelona*, *Anno* 417.

Second. *Sigeric*, the ſecond *Gothick* King of *Spain*, came to the Throne by Election; but he was likewiſe of too peaceable a Diſpoſition for the Temper of his Subjects: He was aſſaſſinated by thoſe who elected him, and buried at *Barcelona*; and all his Sons were aſſaſſinated with him. He reigned not one Year.

Third. *Walia*, or *Urbalia*, was the 3d *Gothick* King of *Spain*. He began in the Year 417. Being a turbulent Man, he ſent a powerful Army into *Africa* againſt the *Romans*; but they were moſtly ſhip-wreck'd in their Paſſage, which ſo weakned him, that he was obliged to make Peace with the Emperor *Honorius*, who compell'd him to ſend back his Siſter *Placida*, whom *Ataulphus* had married, and to join *Honorius*'s General *Conſtance* againſt the *Vandals*, whom they ſubdued; for which Service *Honorius* gave *Walia* the City of *Thoulouſe*, and all *Guyenne*; whereupon he reſided in *France* till he dy'd, which was *Anno* 420.

Fourth *Theodored* was the fourth *Gothick* King, as being the neareſt of Kin to *Ataulphus*, who was the firſt *Gothick* King. He reign'd thirty Years with great Succeſs; but *Attila* the *Hun* having conquered *Italy*, and a great Part of *France*, *Theodored* join'd his Forces to the *Romans* and *French*, who defeated *Attila* with the Loſs of 180,000 Men. However, *Theodored* was thrown down in the Action, and trod to Death by his own Men, in the Year 451. He left three Sons, *Toriſmond*, *Theodoric*, and *Euric*, who reign'd after him ſucceſſively.

Fifth. *Toriſmond*, the fifth *Gothick* King of *Spain* ſucceeded. He join'd the famous *Roman* General *Aëtius*, and they together defeated *Attila* the ſecond Time, and drove him out of *France*: But his Succeſs did not ſave his Life; for he was murdered at the Inſtigation of his two Brothers, in the Year 454.

Sixth. *Theodoric* the 6th *Gothick* King, ſucceeded. He largely extended his Dominions in *Spain* but was aſſaſſinated by his Brother *Euric*, *Anno* 467, having reign'd thirteen Years.

Seventh. *Euric* was the 7th. He extended his Dominions in *France* and *Spain*. This Prince gave the firſt written Laws to the *Goths*, and drove the *Romans* out of *Spain*, where they had maintained their Ground near 700 Years. He died *Anno* 483.

Alaric, the 8th *Gothick* King, ſucceeded his Father. He had bloody Wars with the *French*, and was kill'd in a Battle, *Anno* 506. Eight.

Geſalic, Son of *Alaric*, ſucceeded, becauſe his Brother *Amalaric* was but a Child. *Geſalic* went into *Africa*, to deſire Succours of *Trasimond*, King of the *Vandals*; which having obtained, he returned to *France* and attacked *Ilba*, near *Barcelona*; but was defeated; whereupon he withdrew to *France*, and dy'd *Anno* 510. Nine.

Amalaric, Son of *Alaric*, ſucceeded, and making Peace with the *French*, married *Clotilda*, Daughter of King *Clovis*; but he treated her with ſo much Inhumanity, that ſhe complained to her Brothers, *Childebert* King of *Paris*, *Clotair* of *Soiſſons*, *Clodamir* of *Orleans*, and *Thierri* of *Metz*, who join'd their Forces, and marched againſt *Amalaric*, and kill'd him at *Barcelona*, *Anno* 531. Ten.

Theudis govern'd the State in the Minority of *Amalaric*, and behaved ſo well, that he gained the Affection of the Nobility; and the Royal Line being extinct in *Amalaric*, he was elected to the Throne; but was aſſaſſinated by a Man who counterfeited a Mad-man, in the Year 548. Elev.

Theodegeſilus ſucceeded: He had been a General under *Theudis*, and was choſe for his Valour: But no ſooner came he upon the Throne, but he abandoned himſelf to Vice and Senſuality, putting ſeveral Men to death, that he might more freely enjoy their Wives. He reign'd, however, but one Year, and then was murdered by his Subjects, *Anno* 549. Twe

Agilus was next elected, a Man of an obſcure Family. Beſieging *Cordula*, they made a vigorous Sally upon him, and defeated his Army; and he, to ſave himſelf, fled to *Merida*, which made him contemptible in the Eyes of his Subjects, who murdered him in the Year 554. Thi tee

Athanagildus aſcended the Throne without Oppoſition, by the Aſſiſtance of the *Romans*. But ſetting aſide all Obligations to them, he endeavoured to drive them out of *Spain*. Tho' we ſcarce read of any one particular Action done by him, yet he is reported to be the Original of the Houſe of *Auſtria*. He dy'd *Anno* 567, leaving no Son, but two Daughters; *Galaſuinda* the Eldeſt, and *Brunehaut* the Younger; which laſt was married to *Sigebert*, King of *Lorrain*. Fou tee

From Sigebert *and* Brunehaut, *the Royal Family of* Spain *deſcended, as low as* Philip *the fifth, in the following Order.*

SIGEBERT and *Brunehaut* had *Childebert*, *Ingonda*, and *Chlodoſinnda*. *Childebert* ſucceeded as King of *Lorrain*, and had *Theodebert* who ſucceeded him. *Theodebert* married *Baſtilda* and by her had *Sigebert*, who was Father of *Optaris*, firſt Earl of *Harpsbourg*. *Optaris* had *Rodus* the ſecond

ſecond Earl: *Rebus* had *Robert* the third Earl: *Robert* had *Amphitrus* the Fourth: *Amphitrus* had *Guritramus* the Fifth; and he had *Lubardus* the Sixth, and he had *Betrus* the Seventh. *Betrus* had *Roptus* the Eighth, and he had *Berengarius* the Ninth, and he again had *Otho* the Tenth. *Otho* had *Wemberus* the Eleventh: *Wemberus* had *Albert* the Twelfth. *Albert* had a Son, *Albert* the Second, who was the thirteenth Earl, and his Son *Rodulphus* was in an uninterrupted Succeſſion the fourteenth Earl of *Habsbourg*, and afterwards Emperor. He married *Anne* Countess of *Hohenbourg*, and had by her *Albert* Duke of *Auſtria*, who married *Elizabeth* of *Corinthia*, and had *Albert* the ſecond Duke of *Auſtria*, whoſe Son was *Leopold* the third Duke, who had *Ernestus* the fourth Duke, and he *Frederick* the fifth Duke. *Frederick* was alſo Emperor. He married the Infanta *Eleonora*, Daughter of *Edward* King of *Portugal*, and had by her the Emperor *Maximilian* the ſixth Duke, who marrying the Empreſs *Mary*, Dutcheſs of *Brabant* and *Burgundy*, and Countess of *Flanders*, had by her *Philip* Arch-Duke of *Austria*, Duke of *Brabant* and *Burgundy*, Earl of *Flanders*, and King of *Caſtile* and *Leon*. This Prince was Father of the invincible *Charles* V. Emperor of *Germany*, who had *Philip* the Second King of *Spain*, Father of *Philip* the Third, who had *Philip* the Fourth, Father of *Mary Thereſa*, married to *Lewis* the fourteenth King of *France*, and Mother of the Dauphin, Father of *Philip* the Fifth King of *Spain* above-mentioned. ——— But to return to the *Gothick* Race.

Leuva, who had been Vice-roy of *Gothick Gaul*, was proclaim'd King at *Narbonne*; but it is not certain that he was of the Family of *Athanagildus*, for he obtain'd the Crown by Election. He took his Brother *Leuvigildus* in Partnerſhip upon the Throne, and dy'd in the Year 572.

Leuvigildus above-mention'd ſucceeded as ſole Monarch. He was the Firſt of the *Goths* who wore a Crown, Scepter, or particular Robes, or uſed Royal Standards. He beat the *Romans* near *Baza*, driving them almoſt quite out of *Spain*. His Predeceſſors uſed to keep their Court at *Seuil*, but he remov'd his to *Toledo* near *Madrid*, where he dy'd *Anno* 586.

Recaredus the Son of *Leuvigildus* mounted the Throne after him. He beat the *French* in *Gothick Gaul* twice, and dy'd at *Toledo Anno* 601.

Leuva the Son of *Recaredus* ſucceeded. He was a Religious Prince, but was murder'd in his Youth, *Anno* 603, by

Witeric, who was not of the Royal Family. He totally routed the *Romans* that remain'd in *Spain*; but a Report being ſpread that he deſign'd to eſtabliſh Arianiſm, the People broke into his Palace, and murder'd him in the Year 610.

Gundemar ſucceeded. He was a religious Prince, and ſucceſsful in his War againſt *Navarre*. He dy'd at *Toledo Anno* 612.

Sigebut came next to the Throne. He was both a religious and learned Prince: He conquered the *Iſturians*, and brought them to Obedience; he defeated the *Romans*, baniſh'd the *Jews*, and at laſt dy'd at *Toledo Anno* 621.

Recaredus the Second, the Son of *Sigebut*, ſucceeded. He reign'd but three Months, and dy'd *Anno* 621.

Sanctila, Son of *Recaredus* the Firſt, was choſen for his Courage, Conduct, Charity, and other Virtues. He drove the *Romans* quite out of *Spain*, and reduc'd the revolting *Navarrians* to Obedience; and being willing to ſecure the Crown to his Family, he took his Son *Reduimirus* as Partner on the Throne with him; at which the *Goths* were ſo diſguſted, as being depriv'd of chuſing a Succeſſor themſelves, that calling the *French* to their Aid, they drove *Sanctila* and his Son away, or rather murder'd them, in the Year 631.

Sizenand, after having compleated the Ruin, or rather Murder, of *Sanctila*, as above, aſcended the Throne; and to confirm himſelf the better, he appear'd very religious, till he had got a Confirmation of the Power he had ſo wickedly acquir'd; but his Reign was ſhort, for he dy'd in the Year 635.

Chintila ſucceeded, by Election of the Nobility and Prelates; which was confirm'd by two Synods, one of twenty-two Biſhops, the other of Fifty: But he reign'd only four Years, and dy'd in the Year 639.

Tuga ſucceeded alſo by Election. He was young, and reign'd but two Years; dying in the Year 641.

Chindaſuintus ſucceeded without Oppoſition, becauſe the Gentlemen who pretended to the Right of Election durſt not oppoſe him. He conven'd a Council of Biſhops, and eſtabliſh'd many good Laws. He took his Son *Recaſuintus* with him in Partnerſhip, or rather reſign'd the Royalty to him, in the Year 648, and from that Time is computed the Reign of

Recaſuintus. This Prince was religious; he corrected the Laws of the *Goths*, and gain'd a famous Victory over the *Gaſcoigns*, who had made an Inroad into *Spain*. He conven'd the 8th, 9th, and 10th Synods of *Toledo*. He reign'd 24 Years after his Father advanc'd him, and reſign'd the Power to him. He dy'd in the Year 672.

Wamba was elected by the Nobility, but would not be crown'd till threaten'd to it, ſo great was his Modeſty: He rebuilt the Walls of *Toledo*, and conven'd the 11th Synod; but was poiſon'd by *Ervigius*, of which Poiſon though he did not immediately die, yet it ſo incapacitated him that he was depoſ'd in the Year 680.

Ervigius ſucceeded, which doubtleſs was his deſign in poiſoning *Wamba*. He put on a Shew of Religion to ſtrengthen his ill got Power, but dy'd at *Toledo* in the Year 687.

Egica, who had married *Cixilona* the Daughter of *Ervigius*, came next to the Throne; but he no ſooner ſecured Poſſeſſion, but he divorc'd his Wife on account of the Hatred he bore her Father for his Cruelty to *Wamba*. Thus one Barbarity in one was puniſh'd by a Barbarity to another. His Army was three times beaten by the *French*. He held three Synods at *Toledo*, dy'd in the Year 701, and was ſucceeded by a Son which he had by *Cixilona*, whoſe Name was

Witeric, a cruel impious Man. He entertain'd Concubines like Queens, perſecuted *Pelagius* and *Roderic*, but dy'd, or rather was murder'd, in the Year 711. He left two Sons, *Iewin* and *Sifibut*, who fearing to fall into the Hands of *Roderic*, fled to *Africa*.

Roderic, the laſt *Gothic* King of *Spain*, ſucceeded *Witeric*. He was thought a wiſe and virtuous Prince before he came to the Crown, but afterwards he abandon'd himſelf to all ſorts of Vice and Debaucheries. Earl *Julian* being a Favourite, he gave him the Government of all the Neighbourhood of *Gibraltar*, and all the Territories the *Goths* had in *Africa*; and *Julian*'s being inveſted with ſo great Power by *Roderic*, gave him the Opportunity of betraying his Country. For *Florinda* Earl *Julian*'s Daughter, being at Court, King *Roderic* fell deeply in Love

with her, or rather was determined to have his Luſt ſatisfied upon her; which ſhe conſtantly refuſing, he violated her Chaſtity by Force; at which Earl *Culian* was ſo enraged, that he abandoned Religion itſelf for the Sake of Revenge, and invited the *Moors* into *Spain*; promiſing them all the Aſſiſtance he was capable of to deſtroy the Country, and reduce *Roderic* to the laſt Extremity.

PURSUANT to this Propoſal, *Tarif Abenmarca* came from *Africa*, and attack'd *Spain* with 12000 Men, defeated *Roderic*, ravaged the whole Country, and took *Seville*, once the Capital of *Spain*, in the Year 713.

THE *Moors*, elevated with this Succeſs, crowded over to *Spain*; in the mean Time *Roderic*, having raiſed an Army of 100,000 ill arm'd and undiſciplin'd Men, at the Head of them march'd to *Xeres* in *Andaluſia*, where the two Armies joyn'd: But inſtead of a favourable Iſſue, *Oppas*, the Son of *Ejica* above-mention'd, went over to the Moors with his Body of Troops, and attack'd the Chriſtians, who were defeated and left the Field; which *Roderic* ſeeing, he fled alſo, and it is not known what became of him: However it put an end to his Reign over the Chriſtians, in the Year 714.

THE *Moors* now ſpread themſelves all over *Spain*, made an entire Conqueſt of it, prophan'd the Churches, and made the Country deſolate; and the Chriſtian Inhabitants that remain'd, laboured under a heavy Yoke of Bondage. *Spain* may now be ſaid to be entirely reduc'd to the Subjection of a Heathen Nation, by means of one Act of Debauchery, which was that of *Rotheric* with Earl *Julian*'s Daughter above-mentioned, the true Occaſion of all the Deſolation that follow'd.

CHAP. IV.

Contains the Spaniſh *Hiſtory from the Year* 718, *when* Spain *was conquer'd by the* Moors, *till the* 1027, *when the two Kingdoms of* Caſtile *and* Leon *were United under one King.*

PELAGIUS was the firſt King of *Spain* after it was conquer'd by the *Moors*; but not one of their Nation or People, but one of the *Gothic* Line. Struggling to ſupport and maintain the *Spaniards* in their Rights, Privileges and Religion, and being well belov'd, he rais'd a ſmall Body of Troops to ſuppreſs the *Moors*; but they overcame him, and he retired with 1000 Men into a Cave for Safety. They purſuing him, he defeated them by a Miracle, and deſtroy'd 20000 of their Men; which Succeſs ſo animated the poor Chriſtians, that they reinforc'd him from all Parts, and gain'd many Victories, and took many Cities from the *Moors*, of which *Leon* was one, which was afterwards for ſome time the Seat of the Chriſtian Kings. He dy'd in an advanc'd Age at *Cangas*, in the Year 737.

Favila, the Son of *Pelagius*, aſcended the Throne by Succeſſion; but little is ſaid of him: Nor could there be much done in a Reign of two Years, for he dy'd *Anno* 739, leaving no Children behind him.

Alphonſo, who married *Ermeſenda*, Daughter of *Pelagius*, and Siſter of *Favila*, ſucceeded by default of Male Heirs of the Line of *Favila*. He was a religious and ſucceſsful Prince; he defeated the *Moors* in thirty-four Battles, recovered good Part of old *Seville*, and many Places in *Galicia* and *Portugal*, and dy'd *Anno* 757, aged 64.

Fruela Son of *Alphonſo* ſucceeded: He built the City of *Oviedo* in *Spain*, and obtain'd a great Victory over the *Moors*, in which he put 45000 of them to the Sword; but he was kill'd by his Brother *Aurelio Anno* 768, and the ſame

Aurelio ſucceeded to the Government, but dy'd without any thing remarkable at *Cangas* in the Year 774, leaving no Iſſue.

Silon came next to the Throne, in the Right of his Wife *Adoſinda*, the Daughter of *Alphonſo*. He made Peace with the *Moors*, and reduc'd the People of *Galicia* to Obedience, who had revolted from him. He dy'd *Anno* 783.

Mauregat ſucceeded: He was the Son of King *Alphonſo*, but a Baſtard, and one that uſurped the Crown, which was the Right of his legitimate Brother *Alphonſo* the Second. *Mauregat* did nothing remarkable, except his buying the Aſſiſtance of the *Moors* with his Subjects Money, to ſupport himſelf on his Throne. He died without Iſſue, in the Year 788.

Bermudus was the next, call'd alſo the Deacon, he having entred into holy Orders. His Parentage or Original is uncertain: He was a virtuous quiet Prince, and declar'd *Alphonſo* (afterwards *Alphonſo* II.) his Heir; and accordingly when *Bermudus* dy'd, which was in the Year 795, he was ſucceeded by the ſaid

Alphonſo II. who was the firſt King of *Oviedo*. He many times vanquiſh'd the *Moors*, and took from them the City of *Lisbon*, and ſeveral other Places. He dy'd *Anno* 843.

Ramirus, Son of *Bermudus*, ſucceeded. He gain'd a Victory over the *Moors*, and kill'd 60000 of them: He alſo freed the Chriſtians from the yearly Tribute of 100 young Virgins, which the *Spaniſh* Chriſtians were every Year oblig'd to pay. *Ramirus* won many other great Victories, and particularly he defeated the *Normans*, who invaded *Spain*. He dy'd at *Oviedo Anno* 850.

Ordonius came next to the Crown: He was the Son of *Ramirus*; he brought the *Mooriſh* Kings of *Maul*, *Toledo*, *Saragoſſa*, and *Hueſca*, under Tribute. He dy'd *Anno* 862, at *Oviedo*, and was ſucceeded by his Son,

Alphonſo III. who was a valiant, virtuous, and juſt Prince. He gain'd ſeveral ſignal Victories over the *Moors*, in one of which they loſt 40000 Men. He reduc'd his rebellious Subjects, after three ſucceſſive Attempts againſt him. He reſign'd the Crown to his Son *Garcias*; and yet a Year after that, he, with the Approbation of his Son, made a ſucceſsful Expedition againſt the *Moors*. He dy'd at *Zamora Anno* 910.

Garcias, eldeſt Son of *Alphonſo*, ſucceeding, he took *Ayola* King of the *Moors* Priſoner, and had other great Succeſſes againſt them. He dy'd at *Zamora*

Zamora in the Year 913, leaving no Iſſue, and was ſucceeded by

Ordonius II. This Prince invaded the *Moors*; and they, to be revenged, invaded the Chriſtian Territories: But *Ordonius* defeated them and impoveriſh'd their Country, ſo that they were glad of a Peace. King *Ordonius* made his Reſidence at *Leon*, and not having yet been crown'd, that Ceremony was perform'd in the great Church there; ſo that *Oviedo* muſt decline of Courſe. He dy'd at *Zamora* in the Year 923.

Frucla II, another Son of *Alphonſo*, got the Crown next; but he was a Tyrant. He reign'd but fourteen Months, and dy'd at *Leon*, *Anno* 924.

Alphonſo IV, the Son of *Ordonius* II, mounted the Throne: But ſo remarkable was he for his Vice, that he became odious to his Subjects; whereupon calling his Brother *Ramirus* to him, he put the Crown upon his Head with his own Hand, and retired into a Monaſtery in the Year 930. But recanting his Reſignation, he endeavoured to recover the Crown; for which his Brother cauſed his Eyes to be put out. He dy'd *Anno* 933.

Ramirus II, was the ſecond Son of *Ordonius* II, and Brother to *Alphonſo* IV. Soon after his Acceſſion a Rebellion broke out in the *Aſturias*; but he quickly ſuppreſt it, and then turn'd his Force againſt the *Moors*, and took from them the City of *Madrid*, kill'd 80000 of the *Moriſh* King of *Sarragoſſa*'s Men, and brought him under Tribute. He defeated the King of *Corduba*, and gain'd many other Victories, and dy'd *Anno* 950; when his Son

Ordonius III, ſucceeded. He was a powerful Prince; but his ſhort Reign diſappointed the Expectation People had from him: However, in his five Years Reign he ravaged the *Moors* even to *Lisbon*, and gain'd ſeveral Victories over his rebellious Subjects; after which he dy'd at *Zamora*, in the Year 955, and was ſucceeded by

Sancho the Son of *Ramirus* II. But *Ordonius* the Naughty, the Son of King *Alphonſo* IV, drove him from his Kingdom. However, by the Aſſiſtance of *Abderamus* King of the *Moors*, he was reſtor'd to it again. He was poiſon'd by an Apple, *Anno* 976, and was ſucceeded by his Son

Ramirus III, who being but ſix years of Age, was left to the Guardianſhip of his Mother and his Aunt: But as little could be expected from two Women and a Child, the *Normans* ſoon inſulted them, and ravaged the Coaſt of *Galicia*; but the General of the young King's Forces cut them to pieces, loaded his Men with Plunder, and then ſet Fire to their Ships. As King *Ramirus* grew up, he gave himſelf to Idleneſs and Debauchery, and dy'd in the Year 982. He was ſucceeded by

Bermudus II, Son of *Ordonius* III, who reviv'd and confirm'd the antient Laws of the *Goths*. The Earl of *Caſtile* attempting now to be abſolute, the King oppoſed it, and this Civil Breach gave the *Moors*, as they thought, an Opportunity to deſtroy them both when thus divided; in order to which they join'd ſome fugitive Chriſtians, and paſs'd the River *Duero*, which had till now been the Boundary of the two Nations. The King muſter'd up a Force to oppoſe them, and went to attack them, but was defeated, and moſt of his Men kill'd; and the next Year the *Moors* finding little Oppoſition, ruin'd the City of *Leon*, and ſeveral Places in *Portugal* and *Galicia*, while other of their Forces took *Barcelona* itſelf. In the Year 983, *Almanzor* King of *Corduba* ravaged the whole Country as far as *Compoſtella*, deſtroying that City amongſt the Reſt. *Bermudus* having loſt *Leon*, made *Oviedo* his Reſidence, and he adviſing the King of *Navarre* and the Earl of *Caſtile* to join him, they entirely defeated the *Moors*, near *Calacanamor*. *Bermudus* dy'd of the Gout in the Year 999.

Alphonſo VI. Son of *Bermudus*, ſucceeded. He was but five years of Age when his Father dy'd, but he was left under the Guardianſhip of the Earl of *Galicia* and his Wife, who faithfully diſcharg'd their Truſt; and when *Alphonſo* came to Maturity, he requited them by marrying their Daughter *Elvira*. He repair'd the City of *Leon*, and kept his Court there; and then thinking to enlarge his Dominions, he beſieged the City of *Viſeo* in *Portugal*, but was kill'd by an Arrow from thence *Anno* 1028, having reign'd 29 Years. He was ſucceeded by

Bermudus III, who was very young. This Prince ſettled good Laws, and gain'd the Love of his Subjects. But this Peace was interrupted by *Sancho* King of *Navarre*, who had married *Nuna* the Eldeſt of the two Siſters of *Garcias* Earl of *Caſtile*, who having been traiterouſly murdered, *Sancho* inherited *Caſtile* in the right of his Wife; but not content with this, he form'd a Deſign to add the Crown of *Leon* to his other Dominions; but not being able to accompliſh this by fair Means, he invaded the Kingdom of *Leon*, and made himſelf Maſter of all the Country beyond the River *Cea*. *Bermudus*, not being in a Condition to ſtop his Progreſs, gave his Siſter *Sancha* in Marriage to his Son *Ferdinand*, and ſettled on her as a Dowry the conquer'd Countries, and all the reſt of his Kingdom after his Death; whereupon the King of *Navarre* gave *Caſtile* to his Son *Ferdinand*, and erected it into a Kingdom. But the Nobility of *Leon*, not contented with *Ferdinand*, the new King of *Caſtile* urged *Bermudus* to declare War againſt him, which indeed he did, and they fought a bloody Battle near the River *Carrion*, which turn'd to the Ruin of *Bermudus*; for advancing too far amongſt his Enemies, in the Heat of the Engagement he was mortally wounded by a Lance, and dy'd on the Spot. This happened in the Year 1037, and in him his Race and Succeſſion was extinct, and the two Kingdoms of *Caſtile* and *Leon* were now united under one crown'd Head, *viz. Ferdinand*, as will appear in the next Chapter.

CHAP.

CHAP. V.

Contains the History of Spain, *from the Union of the two Kingdoms of* Caſtile *and* Leon, *to the Erecting of* Portugal *into an independent Kingdom, and from thence to the Death of King* Alphonſo X, *taking up the Space of two Hundred Forty Seven Years.*

FErdinand having kill'd his Brother-in-law, and routed his Army, as above, marched towards *Leon*, and making himſelf Maſter of it, he cauſed himſelf to be crowned in the right of *Sancha* his Wife; who, as ſhe was Siſter to the deceaſed King, and Daughter of *Alphonſo*, was lawful Heireſs to both. He was a pious Prince, but being perplex'd with the Incurſions of the *Moors* on the Side of *Eſtramadura*, he marched his Forces thither, routed them, retook their Body, and ſeized their Lands. He deſtroyed the Country about *Merida* and *Badajox*, and other Places of Importance, and went afterwards into *Portugal*, where he made himſelf Maſter of *Viſeo*, and taking the *Moor* who had kill'd King *Alphonſo*, he had his Eyes put out, and both his Hands and one Foot cut off. He had ſo much Succeſs, that he ſcarce ever failed in any Attempt. The *Moors* rebell'd twice, and he as oft overcame and ſuppreſt them, and reduced them to Obedience and Tribute; but being advanced in Years he dy'd *Anno* 1067. He had three Sons and two Daughters, and alotted

To *Sancho*, his eldeſt Son, the Kingdom of *Caſtile*.

To *Alphonſo*, his ſecond, that of *Leon*.

To *Garcias*, the third, that of *Gallicia*.

To *Ouraqua*, his eldeſt Daughter, the City of *Zamora*.

To *Elvira*, the youngeſt, *Toro*.

Sancho II. the eldeſt Son, ſucceeded, who looked upon it as a Piece of Injuſtice to be confined to *Caſtile* only; but *Leon* being his Mother's Inheritance, ſhe would not admit of any Rival during her Life. *Sancho* therefore attempted the Siege of *Zamora*, his eldeſt Siſter's Dowry; which having undertaken, a Deſerter, as he pretended to be, came to the King, under Pretence of ſhewing him a weak Place in the Wall: But the King ſtepping along with him, the Wretch ſtabb'd him, and made his Eſcape to the City. This happened *Anno* 1073.

Alphonſo VI. of *Leon*, and firſt of *Caſtile*, ſucceeded. He was the Second Son of *Ferdinand*. *Caſtile* made Conditions, as to receiving him; the chief of which was, That he ſhould ſwear that he was not directly nor indirectly concerned in the Murder of King *Sancho*, which he having done, they received him without any further Scruple; and having lived ſeventy nine Years, of which he reigned thirty five, he dy'd *Anno* 1108. He left a Daughter named *Ouraqua*, who being Heireſs of all the Eſtates of the King her Father, and marrying, *Alphonſo* King of *Aragon*, the Iſſue

Alphonſo VII. King of *Aragon*, in the right of his Wife, ſucceeded. King *Alphonſo*, though his Queen *Ouraqua* was a diſſolute Woman, in his own Perſon behaved ſo well, that he gained the Affection of all his Subjects. But as for the Queen, he not ſuiting her laſcivious Temper, ſhe required a Divorce; alledging as a Reaſon, that he was her Couſin in the third Degree. But the Pope rejected her Requeſt, and the King impriſoned her for her Inſolence; and though ſhe made her Eſcape, the Nobles of *Caſtile* ſent her back to her Husband. But the People of *Gallicia* not liking this Diſtraction, proclaimed her Son *Alphonſo* King, which ſhe had by her firſt Husband *Raimond* Earl of *Burgundy*, King *Alphonſo* being but her ſecond Husband; and now began a Civil, or rather Family War; for the King divorced his Queen *Ouraqua*, and likewiſe diſcharged her from Priſon. But ſhe raiſed a Force againſt him, commanded by her Miniſters *Gomez* and *Lara*, whom the King defeated in *Caſtile*; whence marching into *Leon*, he defeated them a ſecond Time; and the Queen being drove into the Caſtle of *Leon*, young *Alphonſo* her Son beſieged her there, and obliged her to ſettle the Crown upon him, in the Year 1123. But her Husband the King of *Aragon*, lived till the Year 1134, when the Succeſſion came to *Alphonſo*, Son of Queen *Ouraqua*, by her Husband *Raimond* Earl of *Burgundy*, by the Name of

Alphonſo VIII. He was inaugurated at *Toledo*, took the Title of Emperor, and confirmed to that City the Name of imperial. He reigned thirty four Years, accounting from the Time that his Mother ſettled the Crown upon him, and dy'd *Anno* 1157.

Sancho III ſucceeded. He inſtituted the military Order of *Calatrava*, in the Year 1158. He reigned but one Year, and dy'd at *Toledo*, *Anno* 1158.

Alphonſo IX. ſucceeded his Father *Sancho* at four Years of Age; and tho' he had Tutors aſſigned him, yet diſcontented Perſons took the Advantage of his Minority, and created great Diſturbances and Diſtractions, which the Subjects being weary of, deſired him to take the Adminiſtration into his own Hand, in order to which he went from *Seville* with about one hundred and fifty Horſe, and ſeveral Places joyfully receiv'd him, eſpecially the City of *Toledo*, and his Power increaſed daily: And when he arrived, the Parliament made an Act to declare all Traytors that refuſed to put into his Poſſeſſion the Cities they had been entruſted with, according to the Will of the King his Father. He married *Eleonora*, Daughter of King *Henry* the Second of *England*; and not chuſing to be idle, he employed his Forces againſt the Infidels, and took ſeveral Places from them, in the Year 1177. In 1195, *Miramolin* came from *Africa* into *Spain*, with a prodigious Number of *Moors*, and paſſing the Mountains of *Sierra Morena*, encamped near *Alarcos*. King *Alphonſo* raſhly attacked them, without ſtaying for the Succours that were coming up to his Aſſiſtance, and

and by that Means he was entirely defeated; and the Infidels, upon this, deſtroy'd all the Country to within ſix Leagues of *Toledo*. King *Alphonſo* reſenting this Loſs, made Peace with all the Chriſtian Powers in *Spain*, and prevailed upon them to join him againſt the Infidels; and many Strangers alſo joined in this holy War. The Kings of *Arragon* and *Navarre* came in Perſon, and advanced together towards the Mountains near *Toloſa*, of which the Infidels had ſecured the Paſſages: But a Shepherd ſhewing the Chriſtians another Way, they attack'd the *Moors*, and quite defeated them, and kill'd not leſs than 200000 of them; and after this Battle the Chriſtians took many of the moſt conſiderable Cities. *Alphonſo* reign'd 56 Years, and dy'd *Anno* 1214. He was ſucceeded by his Son,

Henry, whom he had by *Eleonora* Daughter of *Henry* the Second King of *England*. He was but eleven years of Age when he came to the Crown; and his Mother Queen *Eleonora*, in whoſe Hand the Adminiſtration was left, dying a few Months after her Husband *Alphonſo*, ſhe left the Tutorſhip of *Henry* to her Daughter *Berengaria*, who had been Queen of *Leon*, but divorc'd. She govern'd with great Mildneſs and Prudence; but as ſhe lov'd Tranquility and Retirement, the Houſe of *Lara* corrupted one of her chief Favourites to perſuade her to put the King's Perſon and the Government of Affairs into their Hands, which when they had obtain'd, they oppreſs'd the Nobility, and not only ſeiz'd the Queen's Lands, but oblig'd her to quit the Kingdom; whereupon the young King endeavour'd to eſcape from his *Laran* Tutors, but they watch'd him too cloſe, and diverted him with Companions, Play, and a Propoſal of Marriage with the King of *Portugal*'s Siſter. But being at Play with ſome of the Lords of his Age, a Tile fell from the Houſe, and kill'd him in the fourteenth year of his Age, and the third of his Reign, in the Year 1217. He was ſucceeded by

Ferdinand II, Eldeſt Son of *Alphonſo* VIII, who had War with the King of *Portugal* for the frontier Town of *Badajox*. He fought two Battles, in the firſt of which he took *Sancho* Prince of *Portugal* Priſoner, and in the next he took the King of *Portugal* himſelf. He dy'd, and left neither Child nor Brother.

Ferdinand III came next, but we do not find in his long Reign any thing of Moment tranſacted. He dy'd *Anno* 1252; his Succeſſor was

Alphonſo X, the Son of *Ferdinand*, who was a great Maſter of *Aſtronomy*, and compos'd the *Aſtronomical* Tables call'd to this Day the *Alphonſine* Tables. The Originals are preſerv'd in the Cathedral Church at *Seville*. He was famous for his Knowledge in *Aſtrology*; but, as my Author juſtly obſerves, *all his Knowledge and* Aſtrology *was of no Uſe to him, either in the Foreſeeing or Prevention of the Misfortunes which happen'd to him*; as is indeed the Caſe with moſt of thoſe otherwiſe call'd cunning Men. He took from the *Moors* many Places of Note; but the Rebellion of his Subjects put a ſtop to his Conqueſts abroad. He dy'd in the midſt of the Diviſions and Confuſion of his Kingdom, in the Year 1284. He declared by his Will his Grandſon *Alphonſo* to be his Succeſſor; but without any regard to right of Succeſſion.

Sancho IV uſurp'd the Crown, and ſucceeded in the Throne, contrary to all Juſtice and Equity. He made himſelf odious to his Subjects; and as he liv'd ſo he dy'd, in the Year 1295, and was ſucceeded by his Son.

Ferdinand IV ſucceeded his Father *Sancho*; but his Minority occaſion'd great Confuſion in the Kingdom. *Dennis* King of *Portugal* declar'd for Prince *John*, Uncle of the young King. The King of *Arragon* promiſed *Alphonſo de la Cerda* to ſet him upon the Throne, he being the only ſurviving lawful Heir; and Prince *John* join'd them, who was afterwards proclaim'd King of *Leon* and *Galicia*. The *Arragonians*, who were to have the Kingdom of *Murcia*, entered it, and took its Capital of the ſame Name. The King of *Portugal* advanced as far as *Salamanca*; but the Nobility of *Caſtile* deſerting him, he return'd without Succeſs. The following Year 1298, a Peace was concluded between *Caſtile* and *Portugal*, whereupon King *Ferdinand* married *Conſtance* the Daughter of *Dennis* King of *Portugal*, and Prince *Alphonſo* Son of *Dennis* married *Blanche* Siſter to *Ferdinand*. The City of *Bilboa* in *Biſcay* was built *Anno* 1300. King *Ferdinand* having appeaſed the Diſturbances of his Kingdom, march'd at the Head of a powerful Army againſt the *Moors*; but was found dead in his Bed, *Anno* 1312, and was ſucceeded by his Son,

Alphonſo XI, who being but eleven Months old, his tender Age cauſed great Diviſions among the Nobility, as to who ſhould have the Tutorage and Government of the young King; and conſequently, as they thought, of the Kingdom. *Conſtantia* Mother to the King, and *Mary* his Grandmother, pretended to it; as did Prince *Peter* his Uncle, and Prince *John* his great Uncle, and many others: But in the Year 1314 the Parliament order'd, that the principal Management of Affairs ſhould be in the Hands of a Council of State, and the Reſt in the Hands of the Princes *John* and *Peter*; and the Education of the King ſhould be at the Care of the Queen his Mother. But ſtill the Government being in ſo many Hands, every one ſtriving to be uppermoſt, cauſed great Confuſion; to put an End to which the King, at the Age of fifteen, took the Adminiſtration of the Government upon himſelf, and wiſely diſappointed the Expectation of ſome of the mercenary Nobles, who every one, if poſſible, wanted to be King, or act as ſuch. Notwithſtanding this, *Don John Manuel*, and *Don John* Lord of *Biſcay*, jointly rebelled; to appeaſe which Commotion the King married *Don John Manuel*'s Daughter, by which means *Don John* was eaſily and naturally drawn over to the King's Party; and *Biſcay* being left alone could do nothing, ſo that now all was quiet: And the better to ſecure this Tranquility, he beheaded *Biſcay*. But this Sunſhine was ſoon beclouded; for *Alphonſo* ſoon divorced *Don John Manuel*'s Daughter, and married *Maria* Daughter of the King of *Portugal*; which *Don John* ſo much reſented, that he join'd the *Moors*, and brought in the *Arragonians* to his Aſſiſtance. Several Cities join'd *Don John*'s Forces againſt the King; but *Alphonſo* offering his Siſter *Eleonora* in Marriage to the King of *Arragon*, made him quit *Don John*'s Party, and King *Alphonſo*, with the Kings of *Portugal* and *Arragon*, entered into an Alliance againſt the *Moors*: And now the Province of *Alava* in *Biſcay* ſent Deputies to the King, to offer their Submiſſion to him; whereupon he went, and was receiv'd as their Sovereign, and gave them ſpecial Privileges. But the *Moors* advancing from *Africa* to *Spain* with a great Force, took *Gibraltar*; which *Alphonſo* had no Opportunity to retake, becauſe the *Spaniſh* Lords again rebelled, and brought the *Arragonians* into *Caſtile* to their Aſſiſtance. *Alphonſo* now concluded a Truce with the *Moors*, and turning all his Force againſt his rebellious Subjects, took the greateſt Part of their Cities, obliged *Biſcay* to take the Oath of Fealty to him, and cauſed *Don John* the Lord of it to be beheaded as a Traitor. *Don John*

Manuel, frighted at this Example of Justice, submitted to the King. After this all the Christian Kings in *Spain* quarrelled; but a Peace being made among them, they turned their Force once more against the *Moors*, whom they beat, and killed 1000 of their Men; which the *African* General resolving to revenge, came into *Spain* with the greatest Army that ever attack'd *Spain*, *viz.* 70000 Horse, and 300000 Foot. The Admiral *Tenorco* was blamed for suffering them to pass the *Straits*, though he could no way prevent it; wherefore he so lightly resented those Reflections upon his Conduct, that he desperately attack'd the *Moorish* Fleet, much superior to his own in Number, and lost all except five Galleys, which sav'd themselves by Flight. This terrible Overthrow made all the Christian Powers unite against the common Enemy, and go to relieve *Tarifa*, which the *Moors* had then besieged; and though the whole Christian Army was but 14000 Horse and 25000 Foot, they routed that prodigious Army, and kill'd above 200000 of them. The *Moorish* Kings sav'd themselves by Flight. Such vast Riches were found in the *Moors* Camp, chiefly in Gold and Silver, that it lessen'd the Value of the Specie: This Victory was gained in the Year 1340, and *Anno* 1342 their Fleet was totally destroy'd.

Alphonso dies.

After this, King *Alphonso* besieged *Algier*, and took it, in the Year 1344, and in the Year 1349, he laid Siege to *Gibraltar*; but the Plague raging there, it affected *Alphonso*, and cost him his Life. He died *March* the 26, 1350, in the 39th Year of his Age. He married *Maria* Daughter of *Alphonso* IV. King of *Portugal*, and had by her his Successor,

Peter

Peter, whom some call *the Cruel*; but what Blood he shed was chiefly to punish his unruly Subjects: He ascended the Throne at the Age of Fifteen, but was suddenly seiz'd with a Sickness so dangerous, that they began to look out for a Successor; but he deceived them all, and recovered, and united *Biscay* to the Crown of *Castile*. But in the midst of this Success, he found himself surrounded with Traitors; and not knowing in whom to trust, he embarqu'd at *Seville* for *Portugal*, and from thence to *Galicia*, where he got twenty two Vessels, and sailed with them to *Bayonne*, then in Possession of the *English*. But upon his Absence all *Castile* received *Henry* his Bastard Brother as King, in the Year 1366. At this Time *Edward* Prince of *Wales*, surnamed the *Black-Prince*, governed *Guienne* for his Father, King of *England*, and made an Alliance with King *Peter*, to re-establish *Peter* on the Throne: Whereupon the Prince of *Wales* met *Henry*, at *Najara* in *Castile*, where he beat him on the 13th of *April*, 1367; so that he was never able to rally again; and by this Means, King *Peter* was re-placed upon the Throne, and punished many of the Rebels with Death: But after a Reign of nineteen Years, attended with various Success, he was assassinated by *Henry*, by stabbing him to Death upon the Ground; and after this inhuman Murder, the said

Henry.

Henry, the Bastard Son of *Alphonso*, succeeded to the Kingdom of *Castile*; but he was rejected and disowned by the Foreign Princes, as being illegitimate; and they severally, for themselves, form'd Pretensions to the Crown, and especially the Kings of *Aragon* and *Navarre*, pretended a Lawful Right. The King of *Portugal* demanded the Crown, in Right of his Grandmother *Beatrix*. *John* of *Gaunt* Duke of *Lancaster*, having married *Constance*, the Daughter of King *Peter*, claim'd the Crown in the Right of his Wife. *Henry* seeing all these impending Storms, endeavoured to secure the Affection of his Nobility, by distributing Sums of Money amongst them; and amongst the rest, *Bertrand du Guesclin* had 120000 Doubloons for betraying King *Peter*. *Carmona* refusing to receive King *Henry*, he besieged and took it, and caused the Governor to be murdered: Here *Henry* found and seiz'd all *Peter's* Treasure, and some of his poor Children, which were kept in Prison as long as they liv'd. *Henry* also besieged *Bayonne*, then in Possession of the *English*, but in vain, for he was forc'd to raise the Siege and retire: He dy'd in the Year 1379, aged 46, and was succeeded by his Son.

John

John was crown'd at *Burgos* 1379; but the King of *Castile* assuming a greater Power than was his Due, the King of *Portugal* prepar'd a Fleet to meet the Fleet of *Castile* at Sea; but was beat, and the *Castile* Fleet took twenty of the *Portuguese* Gallies. The *English* Fleet, however, immediately arriving at *Lisbon* with Forces, reliev'd them; but Winter approaching, no Execution was done. But next Year, as soon as the Season permitted, they took to the Field again, when the Difference was soon adjusted by betrothing *Beatrix*, then Heiress to the Crown of *Portugal*, to Prince *Ferdinand*, youngest Son to the King of *Castile*. In the Year 1390 King *John* died by a Fall from his Horse, and was succeeded by his Son,

Henry

Henry the Third, who married the Daughter of *John* of *Gaunt* Duke of *Lancaster*. She was also Grand-Daughter to *Peter* King of *Castile*. He died when he had reigned sixteen Years, and was succeeded by his Son,

John

John the Second, who was not two Years old when his Father died. The Nobility thinking to take the Advantage of his Youth, attempted to reject him without any Regard to Succession, and have a King of their own chusing, and fix'd upon Prince *Ferdinand*, the deceas'd King's Brother, for that Purpose: But he having more Regard to Justice and Honour than to his own private Interest, refused it, and calling an Assembly, they confirm'd King *John* the Second upon the Throne: *Ferdinand* was content with being General of the Army against the *Moors*, over whom he had great Success. King *John* died in the forty ninth Year of his Reign at *Valladolid*, in the Year 1454. He was succeeded by his Son,

Henry

Henry the Fourth, in the Beginning of whose Reign the *Moors* or Infidels, taking the Advantage of his Clemency and tender Disposition, raised an Army of 5000 Horse, and a very great Number of Foot, who burnt and ravaged the Country as far as the very Gates of *Granada* and *Malaga*. King *Henry*, though he had an Army of 14000 Horse and 40000 Foot, would not move to give them Battle; pretending to destroy them by Famine, in ravaging his own Country to starve his Enemies; at which weak Action his Army mutiny'd, and conspired against him; whereupon he discharged his Army, and gave the Commissions of his Officers to other Persons, some of mean Extraction: Upon which the discarded Commissioners, and the new promoted ones, became Parties, raised Forces, and fought a Battle near *Olmedo*: But the Victory was uncertain. King *Henry* went to *Madrid*, and meeting with some Provocation, he besieged *Buenaventura*. But being indisposed before, and his Illness increasing, he made his Will, making his Daughter *Jane* his Heiress. But she was depriv'd of that Dignity, and after *Henry* died, which was in the Year 1474, the next Successor (instead of *Jane* the rightful Heiress) was

Ferdinand

Ferdinand V

Ferdinand V, Son of *John* the Second King of *Arragon*. He obtained the Crown of *Castile* in the Right of his Wife *Elizabeth*, Daughter of King *John* the Second. There was at this Time so great a Corruption in *Spain*, occasioned by the Mixture of Christians, *Jews*, *Moors*, *Infidels*, &c. that was the first Occasion of the Inquisition, which began in the Year 1478. For though it is not lik'd by the Protestants, it was then thought necessary to suppress the Infidelity and Heresy which then prevailed there, and such enormous Crimes as Blasphemy, Sodomy, Polygamy, Witchcraft, &c.

The Inquisition.

Union of *Castile* and *Arragon*.

As to the Union of the Kingdom of *Arragon* and *Castile*, King *John* of *Arragon* died in the Year 1479, and by his Death *Ferdinand* King of *Castile* inherited the Crown of *Arragon*; by which Means these two Kingdoms, which contain the most considerable Part of *Spain*, were united, and have continued so ever since.

King *Ferdinand*'s Queen *Elizabeth*, in whose Right he held the Crown, died in the Year 1504; and though *Ferdinand* surviv'd, yet her Death put an End to his Reign, and he was succeeded by

Philip, who succeeded to the Crown in the Right of his Wife *Jane*, who was the Daughter of *Ferdinand* V, and his Wife *Elizabeth*; who falling weak, and disordered in her Senses, *Ferdinand*, who was loth to lose his Kingdom for no other Reason but because he had lost his Wife, strove hard for the Guardianship of the Kingdom, and to be made Regent in the Name of his indisposed Daughter, and in opposition to her Husband. But *Philip* having Possession, had the best Interest, and maintained it; though *Ferdinand*, whose Pretensions were founded upon his Wife's last Will and Testament, had a powerful Interest in the State. *Philip*, and his Father *Maximilian*, the Emperor, that they might more powerfully oppose *Ferdinand*, made a Peace with *France*; and though *Ferdinand* employed his Politicks to draw *France* from *Philip*'s Interest, by marrying *Germaine de Foix* Niece to the King of *France*, it avail'd not; but in the midst of all these Broils and Contrivances for Interest, King *Philip* died, after a Reign of only two Years, in the twenty-eighth Year of his Age, and in the Year of our Lord 1506.

King *Philip* is

Queen *Jane*.

Queen *Jane*, Daughter of the late *Ferdinand*, by whose Title only *Philip* had reigned, assumed the Regal Title and Dignity at his Decease, though in the midst of abundance of Heats and Divisions: But it was so brought about by her Party, that her Father *Ferdinand* was made Regent of the Kingdom, and continued so till he died, which was in the Year 1516, when he left Queen *Jane* his Daughter Heiress of all his Estates, and Prince *Charles* his Grandson was made Regent. *Ferdinand* was no sooner dead, but (though his Daughter Queen *Jane* was alive) Prince *Charles* was immediately proclaimed King, and the rather because of his Mother's Incapacity, as abovementioned; so that the next King was

Charles, Son of King *Philip* and Queen *Jane*. He was born at *Ghent*, and upon the News of the Death of his Grandfather *Ferdinand*, he passed into *Spain*, and was proclaimed King, in the Year 1517; and in the Year 1519 the Electors of the Empire unanimously chose the same *Charles*, who was now King of *Spain*, to be Emperor of *Germany*, by the Name and Title of *Charles* V Emperor of *Germany*. He was the greatest Prince that ever had then enjoyed the Imperial Dignity. He was crown'd at *Aix la Chapelle*, in *May*, 1520; and in the Year 1548 the three States assembled at *Madrid*, and declared Prince *Philip* the Emperor's Son, Heir to the Crown.

On the twenty fifth of *July* 1553, Prince *Philip*, to whom the Emperor had given the Kingdoms of *Naples* and *Sicily*, was married at *Winchester* to *Mary* Queen of *England*; and now the Emperor, tired with the Fatigues of Government, and the Vanities of the World, chose to retire from Business, and resigned his Kingdom of *Spain* to his Son *Philip*; and, the Year after, the Empire to his Brother *Ferdinand*. And passing into *Spain*, chose for his Retirement the Monastery of St. *Just*, where he lived two Years, and then died, leaving Issue *Philip* his Successor; *Ferdinand* and *John*, who died young; *Mary*, who espoused the Emperor *Maximilian*, her Cousin *German*, Son of the Emperor *Ferdinand*; and *Jane*, married to Prince *John* of *Portugal*. The next Successor was his Son,

Philip II.

Philip the Second, who began his Reign in the Year 1556; and this Year he concluded a Truce with *France*, for five Years; but it did not continue; for that Prince resolving, in Conjunction with *France*, to protect the House of *Colonna* against the Pope, sent an Army to *Naples*, the greatest Part of which perished by the Plague. Soon after this a War broke out between the two late United Allies, *France* and *Spain*, and was carried on with various Success to the respective Parties; one besieging and taking, and the other making Reprisals. The *Spaniards* besieged *St. Quintin* in *Flanders*; and the *French* hastening to relieve it, were defeated by *Philibert* Duke of *Savoy*, General of the *Spanish* Army, who destroyed a great Number of his Men. But King *Philip* soon after coming in Person to the Siege, carried the Town by Assault, and took the Governor *Coligni*, Admiral of *France*, who became afterwards the Chief of the Reformed of the Kingdom. However, in 1559 a Peace was concluded between *France* and *Spain*. In the Year 1566 King *Philip* put to Death his eldest Son *Charles*, upon a Suspicion that the Prince had an unlawful Love for the Queen his Mother-in-law, with a Design thereby to aspire to his Crown as well as his Bed.

Sebastian King of *Portugal* having been killed in *Africa*, Cardinal *Henry* his Great Uncle, aged eighty, succeeded to the Crown. But he being very old, all the Princes that had any Pretence to the Crown of *Portugal*, exhibited their respective Claims; and amongst the rest, *Philip* King of *Spain*, in the Right of his Mother *Elizabeth*, the Daughter of *Emanuel* King of *Portugal*, sent the Duke of *Alva* his General, at the Head of 1500 Cavalry and 12000 Infantry, who entered *Portugal*, and taking their Rout towards *Lisbon*, met *Anthony the Bastard*, who stiled himself King, and routed him, by which Means *Portugal* was easily reduced to King *Philip*'s Obedience.

In the Year 1588 King *Philip* caused a formidable Fleet or *Armada* to be equipp'd in *Lisbon* River, under the Command of *Medina Sidonia*, the *Spanish* Admiral. They put to Sea in *June* the same Year, and had no sooner doubled *Cape Finisterre*, but they met a violent Tempest off the Bay of *Biscay*, which dispersed the Fleet, and so disabled them, that they were forced to return to re-fit, and could not set sail till *September* following. But he arriv'd at last in the *English* Channel, where the *English* Fleet met him, took many of his Ships, and burnt others; and the rest endeavouring to make their Escape, by that tedious Trip of sailing North about to *Spain*, were so shattered with a Tempest, that but very few escaped home to tell the ill Success of their Adventure.

Spanish Armada.

In

In 1598 King *Philip* gave all the *Low-Countries* to the Princeſs *Elizabeth*, his eldeſt Daughter; ſoon after which he made Peace with *France*, and died *September* the thirteenth, aged ſeventy one, and having reigned forty two Years. He had four Wives; the firſt was *Mary* Daughter of *John* IV King of *Portugal*; the ſecond was *Mary* Queen of *England*, Daughter of King *Henry* the Eighth; the third *Elizabeth*, Daughter of *Henry* II; and the fourth *Anne*, Daughter of the Emperor *Maximilian* II, by whom he had his Succeſſor,

Philip III. *Philip* III. He was declared Heir to the Crown of *Portugal* in the Year 1583; to thoſe of *Caſtile* and *Leon* in the Year 1584; of *Arragon*, *Catalonia*, and *Valence*, 1585; and of *Navarre* 1586. He was the firſt abſolute King of *Spain*, or to whom all the Kingdoms and States of *Spain* took the Oaths of Fealty. He married *Margaret*, Daughter of the Arch-duke *Charles*. The Marriage was conſummated at *Valence*, in the Year 1599.

King *Philip* finding *Spain* infeſted by the *Moors*, like ſo many Snakes in his Boſom, reſolved to expel them Root and Branch; and in order thereto cauſed an Edict to be publiſhed, commanding all *Moors* without Exception to leave his Dominions on a certain Day therein mentioned. They were allowed to carry off their perſonal Eſtates; but their Lands were to eſcheat to the Crown, or to the Lords in whoſe Juriſdiction they were ſituate.

King *Philip* reſolving to viſit his Kingdom of *Portugal*, ſet forward to that Kingdom in *April* 1619, accompanied by his Son Prince *Philip*, and the Princeſſes *Elizabeth* and *Mary*. He made his publick Entry into *Lisbon* on St *Peter*'s Day, and his Reception was the moſt grand and magnificent that had ever been ſeen in that Country. He ſpent ſeven Months upon this Expedition.

But after all this Pomp and Grandeur, King *Philip* died *March* the fifteenth, 1621. He had but one Wife, *Margaret* above-mentioned, by whom he had his Succeſſor,

Philip IV. *Philip* IV. Though this King was but ſixteen Years of Age, yet the firſt Thing he did was to order that every Miniſter of State ſhould give an Account of his Eſtate at his firſt Entrance upon his Office, that he might not afterwards enrich himſelf, and get the Reins into his Hand by the Plunder of his Country. This was a very proper Method to prevent himſelf or his Subjects being rid by any Miniſtry or Miniſter whatſoever; and when he had ſecured that Point, he conven'd the Parliament in *June* following.

The *Spaniards* now reſolved to follow their Blow againſt the *Moors*; and having a Fleet at Sea, ſunk nine and took two of the Infidels Ships; out of thirteen the other two only eſcaping.

Brazil conquer'd by the *Dutch*. The *Dutch*, always cunning enough to take all Advantages, and hearing that *Brazil* was not in a Condition to defend itſelf, reſolved to attack it; and for that Expedition equipp'd thirty five Ships, under the Command of *John Van Dort* Admiral. They had 3000 Land Soldiers on Board, and a good Train of Artillery. They ſet Sail in *December* 1624; and being entered to ſteer for *Todos Santos*, or *All Saints*, in *Brazil*, they ſteered to that Place accordingly, with Orders to ſeize the City of St. *Salvador*, the Capital of that Country: And accordingly the Fleet having entered the Bay, began to batter the Place; and landing 1000 Men, ſeized one of the Suburbs; upon which the Inhabitants quitted the City in the Night, and the *Dutch* entered it next Day, and found an inexpreſſible Booty.

But had the *Dutch* had ſuch juſt Repriſals made upon them in the *Eaſt-Indies*, for their Cruelties at *Amboyna*, &c. [*See the Deſcription of the* Phillipine Iſlands] as they had here, the *Engliſh* had not been ſuch Sufferers by them; for as ſoon as the News of this *Dutch* Expedition came to *Spain*, the *Portugueſe* equipped a Fleet of twenty ſix Ships, with 4000 Land Soldiers; and the *Spaniſh* Fleet, which was more formidable, carried 8000 Land Forces: But not being ſo ſoon ready, the two Squadrons could not join till *January* 1626, when they all ſet ſail together, under the Command of *Frederic de Toledo*, and arrived in the Bay of *Todos Santos* on *Good-Friday*, and landed 4000 Men under the Command of *Peter Roiz*, who advanced towards the City of *St. Salvador*, while the Fleet in the Bay ranged itſelf into a Creſcent, or Half Moon, to prevent the Eſcape of the *Dutch* Conquerors (or rather Invaders) of the Place. The *Spaniſh* Cannon being planted, fired furiouſly upon the Place; and a Battery, which they erected on Shore, ſunk ſeveral *Dutch* Ships; which the *Dutch* Soldiers ſeeing, they mutiny'd againſt their Officers, and ſurrender'd *Nolens Volens*; making only this Condition for themſelves, That their Lives ſhould be ſpared, and they ſent Home; which was accordingly done. When the *Dutch* quitted the Town, the Booty which the *Spaniards* found in the Town (beſides ready Money which amounted to 300000 Ducats) was eſtimated at three Millions. They found likewiſe 2000 Quintals of Powder, Plenty of Bullets, 230 Pieces of Cannon, 3000 Muskets, 800 Corſlets, as many Saddles, 600 *Moors*, 6000 Buſhels of Flower, 50000 Ox Hides, and 2000 Bariques of Wine, each ſomewhat bigger than our Barrel in *England*. And thus the voracious *Dutch* were paid in their own Coin, for thinking to plunder the *Spaniards* of their juſt Property. They had only Time to take Poſſeſſion, and lay in a freſh Supply, before the *Spaniards* made Repriſals, and not only recovered what they had loſt, but plundered their new Invaders the *Dutch*, and ſent them Home by the way of *weeping Croſs*. But the *Dutch* reſolving to have the other Bruſh, fitted out another Fleet in the Year 1632; and as they had rather play at ſmall Game than ſtand out, they took *Pernambuco*.

Maſſaniello. In the Year 1647 was the memorable Rebellion in *Naples*, under *Thomas Amello*, or *Maſſaniello*, a poor Fellow who ſold Fiſh in the Market. He excited the People to a Rebellion on account of the Taxes, and had ſo much Succeſs, that the firſt Day he had collected 50000 Men; upon which the Viceroy thought it neceſſary to make his Eſcape; and the next Day the Rebels, to the Number of 100000, declared *Maſſaniello* their General, and inveſted him with abſolute Power. Upon this he immediately ordered them to arm, and then he put a Price upon Corn, and upon every Thing ſold in the Market. He alſo burnt all the Places appointed for Taxgatherers, and the Goods and Houſes of the Farmers of the King's Revenues. The Viceroy, who had ſhut himſelf up in the Caſtle, was in Danger of ſtarving, *Maſſaniello* having cut off both his Proviſion and Water. Archbiſhop *Piſlomarin* offering *Maſſaniello* whatever he deſired to relieve him, *Maſſaniello* demanded the Reſtoration of the Antient Charters, and the Abolition of the New Taxes, and would not lay down his Arms till the Ratification of this Treaty ſhould arrive from *Spain*. But whether by his ſudden and extravagant Succeſs, or by too much Liquor, or want of Sleep &c. he became frantick, and conſequently not only uſeleſs, but odious to his

his Followers; and the Rabble, who four Days before had given him Regal Honour, now ſtuck his Head upon a Pole, and dragged his Body about the Streets: And thus, with little more Trouble, this Rebellion was ſuppreſſed.

King *Philip* died *September* the ſeventeenth, 1665, and left the Crown to his Son,

Charles the Second, who was proclaimed *October* the eighth, 1665; and in 1668 a Peace was concluded between the Crowns of *Spain* and *Portugal*.

Many being jealous of the growing Greatneſs of *France*, *Lewis* the Fourteenth, to keep himſelf in a Poſture of Defence againſt all Aſſaults, concluded a Peace at *Aix la Chapelle*, by which he agreed to give back *Franche Compte*, but was to retain what he had taken in *Flanders*.

Spain being now in perfect Peace, the Queen Mother, who governed the young King and State, willing to gratify the aſpiring Spirit of Don *John* of *Auſtria*, made him Viceroy and Captain General of *Arragon*, with more other grand Titles than had ever been beſtowed upon any one Man at the ſame Time. But this, inſtead of ſatisfying his Ambition, only increaſed it, and he now began to think himſelf in a fair Way to the Crown itſelf: And as a Step thereto, he brought up the young King in the moſt profound Ignorance as to any Affairs of State. The Court Paraſites managed all at Court; and Father *Nard*, a Jeſuit and a Foreigner, provided for himſelf and his Friends as he pleaſed; which great Power made Don *John* jealous of a Rival, inſomuch that he never let the Queen reſt till ſhe diſcarded him. Don *John* having got this Miniſter removed, he began to think himſelf a Match for the Queen, and accordingly perſuaded her to entruſt the Government in his Hands alone, which ſhe did. He then ſeized the King's Perſon, and carried him to *Arragon*; but many Lords, jealous of Don *John*'s Deſign, combined together, and made a Party againſt him, and took away his Power; and his Life did not long ſurvive. Upon his Death the Council took the Government into their own Hands, and ſo kept it till the King came at Age.

But not to ſtand longer upon Particulars, we come now down to the famous Year 1688, which gave Riſe to the long and expenſive War in King *William*'s Time.

A Project had been long concerted of a powerful Alliance againſt *France*, which was at laſt concluded at *Auxburg*; and the Emperor, the King of *Spain*, the States of *Holland*, and the *German* Princes, joined their Forces, to reduce to Reaſon ſuch a powerful and formidable Enemy.

The Prince of *Orange* (afterward King *William* the Third) whom the People of *England* had called to their Aſſiſtance againſt King *James*, becauſe he refuſed to come into the Alliance above-mentioned, went into *England* at the Head of an Army, and was there proclaimed King in the Beginning of the Year 1689, and ſwayed the *Engliſh* Scepter the Remainder of his Life.

France on one Part, and the Confederates on the other Part, being thus embroiled, the combined Fleets of *England* and *Holland*, under the Command of Admiral *Ruſſel*, deſtroyed the *French* Fleet, or at leaſt burnt all their capital Ships; amongſt which the *Riſing Sun*, aboard of which the *French* Admiral had his Flag, was one, and the chief.

In the Year 1694 the *French* Marſhal *de Noailles* defeated the *Spaniſh* Troops, and then paſſed the River *Ter*, and made himſelf Maſter of *Palamas*, *Girone*, and *Oſtalric*: But Admiral *Ruſſel* coming into the *Mediterranean*, with the *Engliſh* and *Dutch* Fleets under his Command, ſoon put a Stop to his Progreſs.

Barcelona beſieged.

In the Year 1697, the Duke *de Vendoſme* laid Siege to *Barcelona*, with a Body of 35000 Men; and the Duke of *Vendoſme* being informed that the Beſieged were reſolved to make a Sally, and that at the ſame Time the Viceroy's two little Camps were to attack him, he put himſelf upon his Guard, and got before-hand with them; for inſtead of being ſurpriz'd, he ſurpriz'd the two *Spaniſh* Camps, and routed them, killing great Numbers of them, beſides a great many that were drowned in making their Eſcape through the River *Lobregat*. He ſeized all their Baggage; and on the fifteenth, the Town of *Barcelona* capitulated and ſurrendered.

This Year came on the Treaty of *Ryſwick*, in which the King of *France* agreed to ſurrender to the King of *Spain* the City and Dukedom of *Luxemburg*, and ſeveral other Places therein mentioned, and then in Poſſeſſion of the *French*: The Priſoners on both Sides to be releaſed without Ranſom, and *Spain* to reſtore to the Duke of *Parma* the Iſle of *Ponza* in the *Mediterranean*.

After this Treaty of *Ryſwick Anno* 1697, all being quiet and eaſy, nothing material occurred in *Spain*; only King *Charles*, of whom we are now writing, began to be of a very weak Conſtitution, and had ſuch dangerous Fits that he was often reported for Dead. His Death at laſt happened at *Madrid Nov.* 1, 1700, in the thirty ninth Year of his Age, and thirty fifth of his Reign. He, though twice married, left no Child, but declared *Philip* Duke of *Anjou*, ſecond Son of the Dauphin of *France*, his full and ſole Heir, and he was accordingly proclaimed King of *Spain*, and of all the Dominions pertaining to that Monarchy in *Europe*, under the Titles of *Philip* V, by the Grace of God King of *Caſtile* and *Leon*, *Arragon*, *the two Sicilies*, *Jeruſalem*, *Portugal*, *Navarre*, *Granada*, *Toledo*, *Valencia*, *Galicia*, *Majorca*, *Seville*, *Sardinia*, *Cordoba*, *Corſica*, *Murcia*, *Jaen*, *the Algarves*, *Algazira*, *Gibraltar*, *the Canaries*, *the Eaſt and Weſt-Indies*, &c. (obſerve how they pleaſed themſelves with the empty Titles of the *Eaſt* and *Weſt-Indies*,) with ſeveral other Titles of little more than a bare Name.

CHAP. VI.

Of the Soil, Product, Language, Government, and Religion of Spain; *concluding with an Account of the Extent of the* Spaniſh *Dominions.*

Soil. THE Mountainous Parts of *Spain* are either ſandy and rocky, or elſe covered with Woods; not but that the Soil in ſome Parts is ſuch that it might be cultivated, to bring Plenty of good Corn, if it was not for the wretched Lazineſs of the Inhabitants, who will not be at the Pains; and they are the more preſumptuous, becauſe they find this Defect of Corn, and other Grain, ſupplied by a Plenty of excellent Fruits and Wines, produced in a Way conſiſtent with the proud, lazy Temper of the *Spaniards*, *viz.* with little Art, and leſs Labour.

Produce. The chief Product of this Country are Wines, Oils, Sugars, Metals, Honey, Liquorice, Silk, Rice, Saffron, Flax, Anniſeed, Lemons, Oranges, Raiſons, Almonds, Cork, Anchovies, Soap, Sumach, Wool, Tobacco, and Lamb-Skins.

THE general Character of the *Spaniards*, as to their Complexion, Manners, and Behaviour, is given us by Doctor *Heylen*, in a Manner the moſt agreeable to what the *Engliſh* and other Travellers have obſerv'd of them, *viz.* That they are of a ſwarthy Complexion, well-proportioned, and generally with black Hair; but remarkable for a majeſtick Gait and Deportment, and very obſtinate in their Opinions. As to their Language, it is not only derived from the *Latin*, but comes neareſt the Original of any Language in [illegible]. The *Spaniſh* is ſpoke in *New Caſtile*, [illegible] moſt corrupt in *Valencia* and *Catalonia*.

THE Kingdom of *Spain*, as it now ſtands, has taken in fourteen different Kingdoms: But they are all now compriſed in three, *viz.* thoſe of *Arragon*, *Caſtile*, and *Portugal*. The two former were united in the Year 1474, by the Marriage of *Ferdinand* of *Arragon* with *Iſabel* Heireſs of *Caſtile*; and *Portugal* was afterwards annexed to the Kingdom of *Spain* by Conqueſt in the Year 1578; when the whole Continent of *Spain* was united under one King. The *Portugueſe*, however, revolted, in leſs than a Century. The King of *Spain* is called his Catholick Majeſty. The *Spaniards* fail not to give out, that, as they lay claim to Part of *Europe*, *Aſia*, *Africa*, and *America*, the Sun always ſhines upon ſome of their Dominions.

Government. THERE are in *Spain* fifteen different Councils: 1. The Council of State; 2. The Council Royal; 3. The Council of War; 4. The Council of *Arragon*; 5. The Council of *Italy*; 6. The Council of the *Indies*; 7. The Council of Orders; 8. The Council of the Treaſury; 9. The Council of the Chamber; 10. The Council of Croſade; 11. The Council of Diſcharges; 12. The Council of Inquiſition; 13. The Council of *Navarre*; 14. The Council of Conſcience; and, laſtly, the Council of Policy.

Religion. THE *Spaniards* are great Bigots to the *Roman* Catholick Religion, and follow it ſo ſtrictly, that there are no Errors too hard for them to ſwallow; though indeed of late the King of *Spain* has called the Infallibility of his Holineſs into Queſtion, and brought him to Terms that he is willing to comply with, ſince Don *Carlos* was ſettled in *Italy*. But ſtill the King of *Spain* is ſo tenacious, that he will not ſuffer any to live in his Dominions, who do not entirely believe the Doctrine of the *Romiſh* Church; as a Reward for which Care, it is, that the Pope has dignified him with the Title of Catholick Majeſty; and the Edge of the Inquiſition is now chiefly turned againſt the Proteſtants, by them called Hereticks.

Extent of the Spaniſh Dominions. AS to the Extent of its Dominion, it poſſeſſeth a Part of every Quarter of the World: And firſt, to begin with *America*: The Parts of *America* which belong to *Spain*, are *Mexico*, or *New-Spain*, which contains the Provinces of *Flaxcala*, *Guaxaca*, *Mechoacan*, *Zacatula*, *Coluna*, *Yutacan*, *Tabaſco*, *Tuteperque*, and *Zapotecas*. On the Weſt of *Mexico*, or *New-Spain*, are ſeveral Provinces; and towards the North they have *New-Mexico*, bounded by the Weſt by the Iſland of *Califernia*, the weſtermoſt Land in all *North America*.

ON the South of *Yutacan* lie *Honduras*, *Nicaragua*, and ſeveral other Provinces, extending as far as the *Iſthmus* of *Panama*, which joins the two *Peninſula*'s of *North* and *South America* together. *South America* contains the Provinces of *Cartagena* and *St. Martha*, or *New-Granada*, *Venezula*, the *New-Andaluzia*, *Guaiana* &c. To the Southward of them lies *Peru*, which gives Title to all *South America* as a Kingdom, as *Mexico* doth to *North-America*. To this is annexed the Kingdom of *Chili*, to the Eaſtward of which lies the great River *Plata*, which empties itſelf into the *Ethiopic* Ocean on the Eaſt Coaſt of *South America*. In theſe Weſtern Countries are ſix Archbiſhopricks, and thirty one Biſhopricks: But our Room will not permit a further Enlargement about them.

Europe. THE *Spaniſh* Dominions in *Europe*, or at leaſt what that Crown claims a Title to, are as follows: 1*ſt*, The Kingdom of *Spain*, as conſiſting of the Provinces of *Caſtile*, *Leon*, *Arragon*, *Navarre*, *Catalonia*, *Gallicia*, *Valencia*, *Murcia*, *Biſcay*, *Granada*, *Andaluſia*, and *Eſtramadura*; which contain 16700 Towns, eleven Archbiſhopricks, forty ſeven Biſhopricks, and fourteen Univerſities. The Revenue of the Crown amounts yearly to 2800000 Ducats: That of the Archbiſhops and Biſhops, to 1900000.

2. THIS Crown poſſeſſeth in the *Mediterranean* forty four inhabited Iſlands; the Chief is *Sicily*, which brings to the Crown 1000000 of Ducats yearly. In *Sicily* are three Archbiſhopricks and nine Biſhopricks. And beſides this, there are the Iſlands of *Sardinia*, *Majorca*, &c. and on the Continent the Kingdom of *Naples*, the State of *Milan*, the *Low-Countries*; but theſe are ſometimes in a fluctuating Condition in the Time of an *European* War.

ON the North Coaſt of *Africa*, in the *Mediterranean*, they have the Ports of *Oran*, *Marzalquiver*, *Penon*, *Melilla*, and *Ceuta*. On the Weſt Continent of *Africa* are the nine *Canary-Iſlands*; *viz.* *Ferro*, *Palmo*, *Gomero*, *Tenariff*, *Madera*, *Porto Sancto*, *Conaria*, *Fortaventura*, and *Lancerota*.

IN *Aſia* the *Philippine* Iſlands: The Chief of which is called *Luzon*, two hundred Leagues in Length, but not broad. The chief Town is *Manila*. Theſe Iſlands produce Gold, Cinnamon, and other valuable Commodities.

A BRIEF DESCRIPTION OF THE KINGDOM OF *PORTUGAL.*

CHAP. I.

Of the first establishing Portugal *into a Kingdom, and of the Reign of* Alphonso I. *the first King of* Portugal; *and of his Successors the Kings of* Portugal.

WHEN the *Roman* Empire began to decline, they with-held their Protection from *Portugal*, as well as from other Parts of their decaying Empire: The *Portugueſe* were ſubject to all the Misfortunes of their Mother Empire, before they were ſettled under a Prince of their own. The firſt that Hiſtory gives Account of that attacked them, were the *Alani*; but they had ſcarce begun to do ſo, till themſelves were driven out by the *Sweuans*, and conſtrained to go ſeek another Habitation. Theſe for ſome Time enjoyed it peaceably, making *Braga* their imperial City; till in the general Inundation of the *Goths* and *Vandals*, they, with the reſt of that Part of the Continent, which is circumſcribed by the Sea, and the *Pyrenian* Mountains, became Vaſſals to theſe irreſiſtible Conquerors, who living a long Time in quiet, enjoyed their Conqueſt, and were the firſt that in theſe Parts entertained the Chriſtian Religion, till the *Moors*, like a more violent Flood, fell in upon them, and with the greateſt Part of *Spain*, poſſeſſed themſelves likewiſe of that Kingdom.

But ſome Parts of *Spain*, after many Years Slavery, ſtruggling for their Liberty, this Kingdom was in Part recovered by the Kings of *Caſtile*, and by them enjoyed; till at length it gained a King of its own; the Manner thus:

Henry the ſecond Duke of *Lorrain*, whom ſome affirm to be Nephew to *Godfrey* of *Bullogne*, flying from the Fury of *Henry* the fifth Emperor, came into *Spain*, where (moved with a generous Emulation of his Uncle, who was gone to the Conqueſt of *Jeruſalem*) he offered his Service for the Subjection of the *Moors*; and in ſhort Time, by his valorous Atchievements againſt thoſe Enemies of the Chriſtian Religion, grew into ſo much Repute with *Alphonſo* the VIth, King of *Caſtile*, that he gave him his baſe Daughter *Teraſia* in Marriage, with his whole Acquiſts in *Portugal* for her Dower; though with no other Title than that of Count, or Earl. Some further Addition he made to his Dominions, and in the Year 1094 had a Son, who, after his Grandfather, was named *Alphonſo*. At laſt, overborn with the Burden of ſeventy ſeven Years, he died in the Year 1112, and left the Government of *Portugal* to his ſaid Son,

Alphonſo I. the firſt King of *Portugal*. He had been from his Childhood brought up under his Father in military Exerciſes, after whoſe Death he proſecuted the Victory over the *Moors*, and againſt the Kings of *Leon*. He alſo fought ſeveral Battles againſt his Grandfather *Alphonſo* VI, King of *Caſtile*, and in one Battle took him Priſoner, and would not releaſe him till his ſaid Grandfather had conferred upon him the Title of Duke of *Portugal*; which was one further Confirmation in his Kingdom. But King *Iſmaurus*, the moſt powerful of the *Mauritanians*, called other four Kings to his Aſſiſtance, and with a large Army invaded *Alphonſo*, and his Kingdom of *Portugal*; but he overcame the five Kings, and ſlew or took them Priſoners: Upon which great Victory his Soldiers and Officers thinking the Title of Duke too mean for ſo great a Conqueror, conferr'd on him, and he accepted, the Title of *King of* Portugal, he being the firſt of that Title. Then returning home, enriched with Spoils, and ſtudying to requite his Soldiers and People, for his Advancement to a new-erected Throne, he exerted his Regal Power for the publick Advantage, and called a general Council of the three Eſtates, the Nobility, Clergy, and Commons, who immediately, with one Voice, voted for his being their King; and not only ſo, but that after his Deceaſe his Progeny ſhould ſucceed to the Crown. Upon which they gave him the Royal Enſigns in the Name of *Alphonſo* I.

God

God, and therewithal the Archbishop of *Braga* placed the Crown upon the King's Head, and put the Scepter into his Hand; which done his Majesty rose up, and drawing his Sword, said, *Blessed be God that hath been my Helper. With this Sword I have delivered you, and overcome our Enemies; and now that you have made me your King, let us make Laws for the Government of the Kingdom.* To which they answered in the Affirmative, for themselves, and their Children, and Posterity.

As this was the first King, and Laws were made in his Reign to regulate the Succession of the Crown for future Ages, I shall insert the particular Articles, then solemnly concluded, and agreed upon, which were as follow,

1. *That King* Alphonso *should be Master of the Kingdom; and that after him there might be no Trouble in the chusing a King, his Son should reign after him, and his Grandchild, and so from Father to Son in* secula seculorum.

2. *That if the eldest Son should die during the Life of the Father, the next Brother should be King, and so forward.*

3. *That if the King should die without Issue, having a Brother, that Brother should succeed, but not his Sons without Consent of the Estates.*

4. *That if the King should have only Daughters, the eldest should be Queen after her Father, upon condition that she be married to a Native of the Kingdom, and that he be a Nobleman, who should not have the Power to take upon him the Name of King, until he had a Son born, nor should be till then wear a Crown on his Head, or take the Right-hand of his Wife.*

5. *That it should be forever held for a Law among the* Portuguese, *that the King's eldest Daughter should marry a Native of the Country, that so the Crown might never descend to Foreigners; and that in case she should marry a foreign Prince, she should be excluded from her Right of Succession; for they would not have that Kingdom, which themselves, by their own Valour, and by the Effusion of their own Blood, without the Aid or Assistance of any Strangers, had made so, to go out of the Race of the* Portuguese.

These Statutes, thus confirmed, increased *Alphonso*'s Power and Dignity; which putting him upon higher Enterprizes, he undertook the Siege of *Lisbon*, and in five Months Time annexed it to the Crown of *Portugal*. This was the first Time of its belonging to that Kingdom, though now its Capital. He gained likewise many other Conquests on both Sides the *Tagus*: But at length, having been wounded in a Battle, and being worn out with Age, he relinquished the Wars, and gave himself up entirely to Works of Piety and Devotion. He died in *December* 1185, aged ninety-one, and was succeeded by his Son,

Sancho *Sancho*, the second King of *Portugal*, the only legitimate surviving Son of *Alphonso*. He was above thirty Years of Age when he came to the Crown, which was in the Year 1185; and being now freed from the Incursions of the *Moors*, he applied himself wholly to the improving of the present Peace of the Kingdom, to the common Advantage of his Subjects. He employed vast Numbers of otherwise idle, useless People, in tilling and cultivating great Quantities of Ground, otherwise useless as well as the People that till'd it; and by that Means, in some Measure, banished the wild Beasts from their Habitations.

He also applied himself with the same Assiduity to repair the Castles and other publick Edifices, and restored all the Cities and Towns to their pristine Splendor. As he was doing this, a Fleet of thirteen Men of War, belonging all to Christian Princes, were drove into *Lisbon* by a Storm, as they were going to the Holy War. *Sancho* agreed with their Commanders, that if they would go with his Forces to invade the Kingdom of *Algarve*, then in possession of the *Moors*, if they succeeded, they should have all the Plunder, and whatever they found upon the Spot; only leaving him the plundered Kingdom, and Cities, Towns, &c. to his Share. The *Moors* strongly resisted, and had probably been too hard for him and his united Forces, had not a raging Pestilence swept off above 200000 of their Forces; which made the rest glad to get home. After which *Sancho*, following his Blow, assaulted the *Moors* with so much Fury, when they least expected it, that he expelled them out of *Portugal* and *Algarve*.

Sancho had nine Children; three Sons and five Daughters surviv'd the Father, who died in the fifty-ninth Year of his Age, and was succeeded in the Kingdom by his Son,

Alphonso II. This King of *Portugal* was crown'd at twenty seven Years of Age; but so envied by his Brothers, though younger than himself, that they would not come within the Bounds of Allegiance: Nor indeed were they without sufficient Provocation; for *Alphonso* detained from them a great Part of the Legacies left them by his Father; and indeed *Sancho*, in his Life Time, perceiving something of this in *Alphonso*'s Temper, provided against it, and left some Cities and Castles, and 500000 Crowns, to his younger Sons. *Sancho* was no sooner dead, but the Brothers accordingly retired to their respective Castles: But *Alphonso*, pretending these Estates should not be alienated from the Crown, sent an Army and dispossessed them, they not being in the least able to resist nor defend themselves. *Alphonso* II.

When his Brothers were thus drove out of the Kingdom, they sued to the Pope for Redress; who commanded *Alphonso* to settle the Affair, by remitting the Decision to indifferent Judges. After which he engaged against the *Moors*, and very much weakened them; and this continued till he grew to exceeding fat, that he could scarce move his Body. However, he applied himself with all Diligence to the Affairs of State. He married *Uracca* Daughter of *Alphonso* VIII or IX, King of *Castile*. He also married *Eleanor* Daughter of *Henry* II, of *England*, and had by her divers Children; of whom the first was *Sancho*: His second Son was *Alphonso*; his third was *Ferdinand*; the last was a Daughter, *Leonora*, married to the King of *Dacia*. In the Year 1233 *Alphonso* died, in the fortieth Year of his Age, and the one and twentieth of his Reign; and was succeeded in his Kingdom by his above-mentioned eldest Son,

Sancho II, who took the Administration of the Government upon him at twenty six Years of Age. *Sancho* II. But he so weakened himself with hot Baths and Bagnio's, that he impaired both his Health and his Senses; insomuch that he resigned the Government of both his Kingdom and himself to his Ministers, who governed as they pleased, and left him nothing but the bare Name of a King.

He married *Mecia Lopez*, the Widow of *Alfonso de Castra*, of an antient royal Family, but inferior to that of *Portugal*. The Court Minions by

by Means of the new Queen, and of the King's Weakneſs, ſtudied Means to oppreſs the Subjects, to the Prejudice of Juſtice, and the Deſtruction of the State; which the Nobles ſeeing, repreſented the Caſe to the King; adding, that if he did not put a Stop to this Inundation of Oppreſſion, it would entail incurable Miſery and Ruin upon his whole Dominion. The King, extremely moved by this, promiſed Redreſs; but the Queen and the Court Sycophants, ſoon overturned his well-intended Schemes, by making him believe that all thoſe Complaints were only the Effect of Malice and Prejudice.

THE Nobles, reſolving not to let it reſt here, complained to the Pope of the Weakneſs of the King, and the Plots of the Queen; and added, that the Marriage was unlawful by reaſon of too near a Conſanguinity; and the more ſo, becauſe they did not ſeek for a Diſpenſation from the Pope for that unlawful Marriage. Whereupon the Pope, then *Gregory* IX, ordered the Biſhop of *Sabina* to diſcharge King *Sancho* from his Wife; which he at firſt ſeemed to obey, while the Biſhop was preſent; but as ſoon as he was gone, they lived together in every Reſpect as formerly: The Queen's Favourites were reſtored, and every Thing was upon the ſame corrupt Foundation as before; and the Cruelty of the Queen's Favourites as much turned to the Ruin of the Subjects as it had ever before.

THE Commonalty, not able longer to bear this, went another Way to work; and, with one *Rannondo Viego* at their Head, took up Arms, and coming in a full Body to the Palace, let the Queen know, that notwithſtanding what Steps ſhe had taken to rule abſolute, to the Detriment or rather Ruin of the Subjects, it ſhould not be in her Power; and therefore they ſeized her, and carried her away Priſoner to a Caſtle on the Confines of the Kingdom, where they did not fear either the Authority or Force of the King; eſpecially as he was ſo uncapable of governing, and ſhewed his Weakneſs ſo much in the ſuffering the Reins of Government to be lodged in the Queen's Hands.

THE Nobility, obſerving that all this Diſturbance was occaſioned by the Licentiouſneſs of the Queen, and the weak Spirit of the King, they had Recourſe again to the Pope; who, upon mature Conſideration of the dangerous Conſequences of an ambitious Queen and a weak King, did, with the unanimous Conſent of a Synod then ſitting, agree, that *Sancho* ſhould be depoſed, and that his Brother *Alphonſo* ſhould be called from *Bologna* to take upon him the Government, and remedy the Diſorders the Nation laboured under. Whereupon *Sancho*, ſenſible of his own Weakneſs, and ſeeing himſelf abandoned, retired to *Toledo*, where he ſeemed entirely ſatisfied with his private Life. He died in the Year 1245, aged thirty nine, and in the thirteenth Year of his Reign, (ſetting aſide the unfortunate Part of the latter End of it.) He left

Alphonſo III, who married at the Age of twenty ſeven. He was ſtrong, large of Stature, and of an invincible Courage; and at his firſt aſcending the Throne, he appeaſed the Tumults which the Populace were provoked into by the Wickedneſs of thoſe Miniſters, who taking the Advantage of his Brother's Weakneſs, perverted and corrupted the Government. He married *Beatrice*, the illegitimate Daughter of *Alphonſo* IX, King of *Caſtile*; who being crowned Queen, and the Succeſſion confirmed by the Birth of two Children, *Alphonſo* was willing at all Opportunities to purſue the Wars againſt the *Moors*, and drove them from the Confines of his Kingdom, to the Increaſe of his Dominions, and of his own Reputation.

HE had three Sons by *Beatrice*, (not to mention baſe Children, which he had pretty Plenty.) The youngeſt died in his Infancy, and was named *Ferdinand*; *Alphonſo* was the ſecond Son; but his eldeſt, who ſucceeded him, was

Dioniſio, born in the Year 1260. He took Education very well, and could ſpeak many foreign Languages. When he was about twenty Years old, his Father died, and his Mother put up for Queen Regent; pretending, that by her Intereſt and Induſtry, ſhe had united ſeveral Cities to the Crown of *Portugal*, and alſo that ſhe was afraid that her Son, for want of Experience and Fortitude, might be perſuaded or drawn away by Courtiers, or conſume his Subſtance and the Riches of his Kingdom: But all her Attempts and Pretences were vain; he would not allow her any Share in the Government, holding it as a Maxim, that *That Man was blame-worthy, who being above eleven Years of Age, could not moderate himſelf without the Help of others; but that of all Things it was moſt baſe to deſire the Aſſiſtance of a Woman.* *Dioniſio*

Dioniſio was a liberal Prince: He commanded that the waſte Ground ſhould be diſtributed amongſt the poor Country People, clear from all Taxes; ſo that if they could but work, and cultivate their Lands, or if their Children or young Relations would join with them in doing it, there was a Certainty of a Livelihood. But thoſe who were ſo ſick or aged, that Land could not be of any Uſe to them, the King maintained them at his own Charge. He never oppreſt his Subjects with Taxes, and yet left his Heirs a full Exchequer. He made many wholſome Laws, amongſt which was one to prevent tedious and vexatious Law-Suits; aſſigning certain Days to have them determined, without the Expence that formerly attended them. He firſt inſtituted the Univerſity at *Conimbria*, and planted in it the moſt learned Men of the Age.

Dioniſio married *Elizabeth*, Daughter to *Peter* King of *Arragon*, by whom he had *Alphonſo* his Succeſſor, and *Conſtance*, who was married to *Ferdinand* King of *Caſtile*. He died *Anno* 1325, when he had reign'd forty ſix Years. He left by his Will a very large Sum to be diſtributed amongſt religious Men and Orphans, or Children unprovided for. He left alſo a Maintenance for five hundred Cavaliers, thereby enjoining them to be ready to fight againſt the *Turks*, whenever Occaſion ſhould offer. He was ſucceeded by his Son

Alphonſo IV, who married *Beatrice*, Daughter to *Sancho* the fourth King of *Caſtile*: He at firſt was much addicted to Hunting, even to the Neglect of his Government; but being told that it was better to be called a juſt prudent Prince, than to have it ſaid, that he had taken 10000 Stags or wild Boars, he accepted the Advice, and preferred them as his beſt Friends who had given it him. *Alphonſo* IV

ABOUT the Beginning of this Reign Don *Juan Emanuel*, Son to the Prince *Emanuel*, the Nephew of *Ferdinando the Holy*, was famous amongſt the *Spaniards*, both for his noble Birth and his Riches. He had a Daughter called *Conſtance*, who though yet in her Minority, was betrothed to King *Alphonſo* XI of *Caſtile*, but he went from the Contract, and eſpouſed *Mary* Daughter of *Alphonſo* King of *Portugal*: Upon which the King of *Portugal* thinking *Conſtance* to be a fit Match for his Son Prince *Pedro*,

firſt writ to his Son-in-law *Alphonſo*, and afterwards began to treat with *Juan Emanuel*. They both returned Anſwers, the King of *Caſtile* with Diſſimulation, and *Emanuel* with Sincerity offering his Daughter.

The King of *Caſtile*, vexed that *Conſtance*, whom he had ſo deſpiſed and ſlighted, ſhould ſtill be a Queen, and envying Don *Piedro* the Enjoyment of ſo worthy a Woman, after many Artifices to hinder the Marriage, fell to Violence, and put himſelf in Arms to hinder the Paſſage of *Conſtance* into *Portugal*. This War occaſioned the Effuſion of much Blood; but *Benedict* XII put an End to it, and *Conſtance* was married to Prince *Piedro*.

About the Year 1340, *Alboacen*, that potent *Miramamolin* of *Morocco* and *Granata*, with a mighty Army of 470000 Men, came againſt *Alphonſo* King of *Caſtile*, threatening indeed the Ruin of all *Spain*; when *Alphonſo*, by the Advice of his Council, ſent to deſire Aſſiſtance of his Father-in-Law the King of *Portugal*; and that he might the better ſpeed, he made his Wife, the Daughter of *Alphonſo*, the Meſſenger; who willingly heard and liſtened to the Embaſſy, and not only promiſed Aſſiſtance of Men to further this Expedition, but to go himſelf in Perſon.

Being arrived according to his Promiſe, it was determined that they ſhould on both Sides aſſault the *Moors*, which accordingly they did, and that with ſo proſperous Succeſs to the Chriſtians, that after an innumerable Slaughter of the *Saracens*, they gained one of the moſt rich and moſt glorious Victories that has been in the Memory of Man. So great Quantities of Silver and Gold they found in the *Mooriſh* Tents, that one would have imagined all the Riches of *Africa* had been tranſported into *Spain*.

The Reaſon of the Barbarians tranſporting over ſo great Treaſure, was ſuppoſed to be out of the Aſſurance of Victory, which they flattered themſelves withal: They had deſigned *Spain* for their Country, and thereupon all thoſe who had Thoughts of planting there, brought over all that could either better, or conſerve their Fortune.

King *Alphonſo* had ſix Children by his Wife *Beatrice*: Four Sons, three of whom died in their Infancy; a Daughter named *Maria*, who was married to *Alphonſo* King of *Caſtile*; and *Eleanora*, married to *Piedro*, the fourth King of *Arragon*. But his Son

Piedro. *Piedro* ſucceeded in the Kingdom. He was born at *Liſbon Anno* 1325, and was crowned about the Age of thirty three. He was very ſickly till he was about eighteen, and about twenty one he married *Conſtance*, the Daughter of Don *Juan Emanuel*, by whom he had only one Son, *Ferdinand*, who ſucceeded in the Kingdom; and ſhe, as if ſhe had been ſent into the World only to bring him in, as ſoon as ſhe had performed that Task, died.

After her Death Don *Piedro* married *Agneſa de Caſtro*, a moſt beautiful Woman, and deſcended of the Blood Royal; by her he had many Children, amongſt whom one was *John*, who afterward was the firſt of that Name King of *Portugal*. This Lady being accuſed to King *Alphonſo*, at his Return from his great Victory over the *Moors* nigh the River *Saledo*, was by him (for what Crimes is unknown) put to Death; which ſo incenſed *Piedro*, that he took up Arms againſt his Father, which he laid not down till his Death.

As ſoon as he was come to the Crown, he brought to condign Puniſhment thoſe who had wrongfully accuſed and counſelled the Lady *Agneſa*'s Death: He afterwards renewed the old War betwixt his Father and the King of *Caſtile*, about the ſtopping of his eſpouſed Wife *Conſtance*.

But becauſe the Pope had before made up this Breach, he by his Letters commands *Piedro* to deſiſt from further proſecuting the War, which he for the preſent obeys: But ſoon after, upon a ſlight Pretence, again enters into *Caſtile* with his Army; whereupon an Excommunication was thundered out againſt him, which forced him to retire; and to gain his Pardon, turn his Army upon the *Moors*, from whom he took the ſtrong Port Town of *Pharo*, in the Kingdom of *Algarve*.

At his Return Home he fell ſick, and in the tenth Year of his Kingdom, and about the three and fortieth of his Age, in *September* 1367, he died.

Ferdinand, the firſt of that Name, ſucceeded his Father *Piedro*, in the Kingdoms of *Portugal* and *Algarve*. He was born at *Liſbon*, in the Year 1347, and was the only Child of *Conſtance*, Daughter of Don *Juan Emanuel*: He arrived at the Crown at the Age of about two and twenty Years, in the Year 1369. As ſoon as he had finiſhed the Ceremonies of his Coronation, he proſecuted the War his Father had begun againſt the *Moors*, and in ſeveral Battles drove them quite out of *Algarve*; he built a Monaſtery upon a Promontory of Land, called *Cape St. Vincent*, now by us the *Southern Cape*, which ſtretcheth itſelf out into the *Atlantic* Sea. *Ferdinand*

He addicted himſelf to the planting and peopling of that Kingdom, diſtributing the waſte Lands amongſt the Inhabitants; he repaired many Cities, Towns and Caſtles, which had been deſtroyed by the Fury of the War; he built ſeveral Churches and Monaſteries in that Kingdom, all which he enriched with great Revenues; but particularly a Monaſtery for *Franciſcan* Friars, erected in *Silva*, the chief City of that Territory.

About this Time it was that *Piedro*, Son of *Alphonſo*, the eleventh King of *Caſtile*, having committed ſeveral tyrannical Outrages, intolerable to his Subjects, oppreſſing and deſtroying them, putting away and after murdering his Wife, Daughter to *Peter* Duke of *Bourbon*, was by his Baſtard Brother *Henry*, chaſed out of his Kingdom, and forced to live an Exile.

He at firſt ſeeked for Aid to *Ferdinand* King of *Portugal*, but in vain; he next addreſſed himſelf to *Edward the Black Prince*, of *Wales*, who was then at *Bourdeaux* with an Army of 30000 Men; he conſents to aſſiſt him, and encountring *Henry* on the Borders of *Caſtile* with near 100000 Men, utterly diſcomfits him, and eſtabliſh'd *Piedro* in the Throne, who ſhortly after falling again to his former tyrannical Courſes, is deſerted by his Subjects, taken by his Brother *Henry*, and put to Death.

Ferdinand had but one only Daughter that ſurvived, named *Beatrice*, who was married to *Henry* King of *Caſtile*, and thereby excluded from the Right of Succeſſion, according to the Law made in the firſt Aſſembly Eſtates held at *Lamego*, in the Reign of *Alphonſo* the firſt King; ſo that in this King ended the legitimate Line of *Henry* Duke of *Lorrain*.

This King had now reigned eighteen Years, and lived forty, when ſeized by a violent Sickneſs, he gave up the Ghoſt, in the Year of our Lord God, 1387, and was buried by his Anceſtors in the Cathedral Church of *Liſbon*; he was ſucceeded by

John the Firſt, Baſtard Son to *Piedro* the Firſt, by *Agneſa de Caſtro*, who ſucceeded *Ferdinand* in the

the Kingdom; he was born in *Lisbon* in the Year 1356; he was in his Minority educated in the famous *Conimbricenſe* Univerſity, where he addicted himſelf to all thoſe Studies which became a Prince, though it is to be ſuppoſed at that Time he thought not to have arrived at ſo great a Height as to be King of *Portugal*.

When he was grown to the Age of about three and twenty Years, he was by his Brother made Chief Commander of his Armies, in which Military Employment he behaved himſelf with ſo much Courage and Magnanimity, as was admirable; his Valour ſoon gained the Love of the Soldiers, and his Courteſy and Affability the Affection of the People; the very *Moors* his Enemies would applaud him, as both a perfect Soldier and a Courtier.

His Brother being dead, and his Nephew *Beatrice* uncapable of Succeſſion, by reaſon of her having married a foreign Prince, he claimed the Crown, as next of the Blood; but his Claim was at firſt made void, by reaſon of his being illegitimate; when afterwards the Council of Eſtates, finding that if they ſhould refuſe him, they might perchance chuſe one leſs deſerving, conferred the Crown upon him, yet ſo as he ſhould receive it not as his indubitable Right by Birth, but as given him by Election; becauſe he was at the Time of his Brother's Death General of the Armies in *Algarve*; and having gained ſo much upon the Soldiers and People, preſuming upon their Affection, and his Deſert, laid claim to the Crown, which they being no way able to reſiſt, were forced to reſt content, and permit him to enjoy what was likewiſe willingly conferred upon him by the People, ſo that he came to the Crowu partly by Force, and partly by Election.

But howſoever he came by it, enjoy it he did, and entered into his Government about the two and thirtieth Year of his Age, and in the Beginning of the Year 1388 received with great Applauſes the whole Kingdom, as a Prince from whom they expected great and good Things, having already had ſo large Experience of him.

Soon after his Coronation, he married *Philippa*, Daughter to *John* of *Gaunt*, Duke of *Lancaſter*, which Match he the rather inclined to, becauſe *Henry* the Baſtard King of *Caſtile*, in right of his Wife *Beatrice*, pretended a Title to the Crown of *Portugal*, which he hoped he might the better oppoſe by matching into that Family, which had equal, if not more, indubitable Right to the Kingdom of *Caſtile*.

For *John* Duke of *Lancaſter* having married *Conſtance*, the eldeſt Daughter to *Peter*, the depoſed and murthered King of *Caſtile* and *Leon*, claimed a Right to, and was a great Stickler for, thoſe Kingdoms, yet never enjoyed any other but the bare Title.

King *John* having ſettled his Kingdom, applied himſelf to the proſecuting the War againſt the *Moors*, who being quite driven out of his Confines, he reſolves to follow into their own Country, and be the firſt King of his Nation that ever paſt the Sea: To this Purpoſe he mans out a potent Fleet, and having freighted it with a ſufficient Army, puts to Sea, and lands in *Mauritania*, where in ſeveral Battles he diſcomfits the Barbarians, waſtes their Country, burns their Villages, and poſſeſſes himſelf of a Sea-Port Town, called *Ceuta*, whereby he gained both a retiring Place, and an Inlet into the Country when he pleaſed.

By his Queen *Philippa*, King *John* had a noble and numerous Iſſue; firſt *Edward* (ſo named from King *Edward* the third of *England*, his Godfather) who ſucceeded in the Kingdom; ſecondly, *Ferdinand*, a Man of ſo great Abſtinence, and ſo devoutly religious, that the *Portugueſe* added him to the Calendar of their Saints; he was in the Wars againſt the *Moors* taken Priſoner, and during his Captivity behaved himſelf with ſuch an admirable Patience, as worthily deſerves our Wonder, never murmuring to be linked together with one of his meaneſt Servants, and with him forced for his Living to grind in a Mill; though ſuch was the Piety of the Servant, that he would willingly have performed the Task himſelf, and excuſed his Lord from the Toil, if it had been poſſible: At length he was ranſomed, and returning, ended his Days in a Recluſe; the third Son of King *John* was named after his own Name; the fourth *Piedro*; but the fifth, who moſt worthily deſerves to be recorded, was the Infant *Henry*.

This Prince, whether emulating the great Actions of his Father, or out of a natural Inclination in himſelf, was the firſt that encouraged the *Portugueſe* to affect foreign Voyages; he firſt ſet out with a great Fleet in or about the Year 1425, and made Diſcovery of the Iſlands in the *Atlantic* Sea, which at firſt were called from their being newly found out, *Inſulæ Novæ*, or the *New Iſlands*, afterwards, and now vulgarly called the *Azores*; he likewiſe in many other Voyages made Diſcovery of the Iſlands of *Madeira*, *Holy Port*, and *Cape Verde*; and ſailing farther along the Coaſt of *Africa*, was the firſt that found out the Way by Sea to *Guinea*: At length wearied with Travel, and over-preſſed with Age, he retired, and lived upon Cape *St. Vincent*, which Place he choſe, becauſe of the conſtant Sereneneſs of the Air, being a great Lover of Aſtrology, and the Mathematicks; he died about the Year 1465, and was buried in the Chapel of that Monaſtery, built by *Ferdinand* the Firſt.

King *John* reigned in all forty ſeven Years, having from the King of *England* received the Honour of being Knight of the Garter; as likewiſe did his two Sons Prince *Edward*, and the Infant *Henry*. He died in the Year 1436, in the eightieth Year of his Age, and was ſucceeded by

Edward; the firſt of that Name, King of *Portugal*, who was born at the City of *Braga*, in or about the Year of our Lord 1392; he was educated during his Youth in all thoſe Exerciſes befitting a Prince under the Tutorage of the Archbiſhop of *Lisbon*, in which he profited ſo, that in his moſt tender Years, his great Judgment was deſervedly wondered at: After he had paſſed his Minority in Studies, he ſeveral Times accompanied his Father in the Wars of *Africa*, where he ſhewed great Proofs of his Magnanimity and Courage.

He came to the Crown at the Age of forty four Years, or thereabouts, but was married long before he came to the Crown, and had four Children, to wit, two Males, *Ferdinand*, who died an Infant; *Alphonſo*, who ſucceeded him in the Kingdom; and two Females, *Joan*, married to the King of *Caſtile* and *Leon*; and *Leonora*, married to the Emperor *Ferdinand*, and Mother to the Emperor *Maximilian*.

He died after he had reigned five Years, and thoſe with ſuch bad Succeſs, that it was thought by many to have accelerated his End. He was ſucceeded by

Alphonſo V, his Son, and the twelfth King of *Portugal*; he was born at *Lisbon*, in or about the Year of our Lord 1420; a Prince in whom appeared evident Tokens of Courage, Greatneſs, and Magnanimity, even in his youngeſt Years; he came to the Crown about the Age of one and twenty, in the Year of our Lord 1441, and was

no ſooner ſettled in the Kingdom, but rigging out a potent Fleet, with an Army of about thirty thouſand Men, he paſſed into *Barbary*, to prove if by his better Fortune, he could regain that Honour which his Father moſt unfortunately had loſt.

Nor was his Succeſs leſs than his Deſires, or than what his Valour merited; for having in ſeveral Battles overthrown the *Moors*, he at length took from them the ſtrong Towns of *Tangier*, *Alcazar*, and *Arzilla*, which he ſtrongly fortified, and engariſoned with *Portugueſe* Forces.

During his Reign, ſeveral Voyages were made to the *New Iſlands*, or *Azores*, where the *Portugueſe* now began to fortify, and inhabit, as they did likewiſe in the Iſlands of *Madeira*, *Holy-Port*, and *Cape Verde*. Thus began this Nation by Degrees to grow famous at Sea, by reaſon of their new Diſcoveries, and of the great Trafic they began to have.

King *Alphonſo* left behind him ſeveral Children, two of which came to be Kings after him, to wit, *John* his eldeſt Son, who ſucceeded him, and *Emannel* his ſecond, who reigned after his Brother.

He died at *Lisbon* in the forty third Year of his Reign, and ſixty fourth of his Life, in the Year of our Lord 1484, and was ſucceeded by his Son

John the Second, who was born about the Year 1456, and entered into the Government of his Kingdom at the Age of about twenty eight Years; a Prince who being educated under his Father's Arms, could not but be Partaker of ſome of his Virtues; an honourable Emulation of which he ſhewed in his firſt coming to the Crown, by a proſperous Expedition againſt the *Moors*.

At his Return from *Barbary*, crowned with Victory, he ſent out two *Armada's* to Sea, the gallanteſt and beſt accounted that ever *Portugal* had before that Day ſeen; the one directed its Courſe to the *Azores*, which Iſlands were then indifferently well peopled, and began to afford a Trafic to the *Portugueſe* Nation; from thence this Fleet was to go and touch at the other Iſlands diſcovered by the Infant Don *Henry*, in the *Atlantic* Sea, and ſupply them with Neceſſaries.

The other Fleet, more warlikely fitted and ſupplied with all Sorts of Neceſſaries, both for War and Peace, as deſigned both for a Conqueſt and Plantation, ſteered its Courſe along the Coaſt of *Africa* to *Guinea*, where landing the Soldiers and Planters, they ſoon drove away the heathen Inhabitants, fortified themſelves, and made an abſolute Conqueſt of the Realms of *Congo*. The Fleet afterwards made Diſcovery of that Coaſt, as far as the Cape of *Good-Hope*, and planting and fortifying as they went.

King *John* having now reigned fourteen Years, with happy Succeſs in all the Enterprizes he undertook, by an unfortunate Accident came by his End; for he very much delighting in Hunting, which Sport he was very eager at, purſuing a Stag, his Horſe leaping over a Ditch, gave him a violent Fall, of which in three Days he died, in the forty ſecond Year of his Age, and fourteenth of his Reign, leaving his Kingdom, by reaſon of his dying without any legitimate Iſſue, to his Brother,

Emanuel, who was born in or about the Year 1462. He took Poſſeſſion of the Crown of *Portugal* at the Age of about thirty two Years; a Prince who had been bred up in all Sorts of Learning, that might make him either a Divine or a Stateſman.

At his firſt Entrance in the Government, he addicted himſelf ſo wholly to Religion, that he took little care of the Management of the Kingdom's Affairs, ſo that whilſt he was never from Church Duties, both Church and State were likely to go to Ruin by the evil Adminiſtration of thoſe Miniſters whom he had entruſted.

The Archbiſhop of *Lisbon*, who foreſaw the Ruin which approached to the Kingdom by the Tyranny of the Officers of State, preſumed freely to tell the King, that though he could not blame his Zeal and Devotion, yet he muſt needs adviſe him, that God had placed him as King and Governor over his People; that the divine Majeſty would be better pleaſed if he would with his Prayers to the Almighty for their Welfare, add his Care for their Protection; that it was a Duty incumbent upon him to provide for his Subjects Felicity, as of Parents for their Children, whilſt according to the Apoſtle, *He that does not take Care for his Family, was worſe than an Infidel*; that for want of his Superintendency, the Kingdom was going into the Road of Deſtruction, by reaſon of the ill Adminiſtration of his Miniſters; that according to his Duty he could not but adviſe him to free them from Oppreſſion, &c.

These Speeches of the Archbiſhop extremely ſtirred up the King's Affections to his People, becauſe he was ſenſible of the great Love the Archbiſhop bore him, and becauſe he knew what he had ſpoken was Truth; he therefore takes the Helm of State into his own Hands, calls thoſe unjuſt Stewards to account, frees the People from their Oppreſſions, where he finds Cauſe puniſhes them ſeverely, and finally, makes ſeveral Laws for the Good and Benefit of the People, whoſe Affections he in a ſhort Time ſo far gained, that they ſurnamed him *the Good*.

And having thus ſettled his Kingdom to the Content of his Subjects at Home, he next applied his Mind to the aggrandizing of it; to which Purpoſe in the Year 1500 he fitted out a great Number of Ships, which he divided into three Fleets, ſending one towards the Eaſt, the ſecond towards the Weſt, and the third towards the South, to make Diſcoveries.

That which ſteered their Courſe towards the Eaſt, were the firſt Chriſtian Fleet that ever paſſed the Cape of *Good Hope*, and found out the Paſſage by Sea into the *Eaſt-Indies*; that towards the Weſt, made Diſcovery and took Poſſeſſion of *Brazil* in *America*; that towards the South, re-inforced and added to their former Conqueſts in the Kingdoms of *Conga* and *Angola*.

These happy Diſcoveries thus made at the Return of the Fleet from the *Eaſt-Indies*, a more potent was ſent out with a convenient Land Army, to take Poſſeſſion of ſome Places in the Country; theſe diſcomfitted the great Armies of the *Turks* and Sultan of *Egypt*, poſſeſſed themſelves of the Iſland of *Ormus* in the *Perſian* Gulf, an Iſland ſo rich and well ſituated, that the *Arabians* uſed to ſay, that if the whole World were a Ring, that would be like the Diamond in it; many other Forts and Places upon the Sea Coaſt they likewiſe ſubjected, and fortified, and returned Home richly laden.

Thus the Riches of *India*, which before had been brought over the vaſt *Arabian* Deſarts upon the Backs of Camels, to *Grand Cairo* in *Egypt*, and from thence by Sea tranſported to *Venice*, and ſo diſperſed over theſe Parts of the World, were now brought home by Sea, a longer, but leſs chargeable, and far quicker Way.

Emanuel, while his Fleets were performing theſe glorious Services abroad, governed his Kingdoms in Peace and Proſperity at home, Hedle

blessed with a noble and numerous Issue, to wit, six Sons and two Daughters; the Sons were, first, Prince *John*, who succeeded him in the Kingdom; secondly, the Infant D. *Lewis*; thirdly, the Infant D. *Alphonso*, who was after a Cardinal, Archbishop of *Lisbon*, and Abbot of *Alcobaza*; fourthly, the Infant D. *Henry*, Cardinal and Archbishop of *Braga*; fifthly, the Infant D. *Fernando*; sixthly, the Infant D. *Edward*. The Daughters were, first, the Infant *Isabella*, who was married to *Charles* the Fifth, that famous Emperor, and King of *Spain*; and secondly, the Infant *Beatrice*, married to *Emanuel* Duke of *Savoy*.

Emanuel having long governed this Nation to his great Glory and Renown, at last, in the seventy third Year of his Life, and forty first of his Empire, yielded to Fate at *Lisbon*, in, or about the Year 1435, and was buried in the Cathedral of that City amongst many of his Ancestors, and was succeeded by

John III. *John*, the third of that Name, who was born in the Year 1504, and educated in the University of *Conimbria*, in all those Sciences befitting a Prince; he arrived to the Crown at the Age of one and thirty Years, Heir as well to his Father's Virtues, as Kingdoms.

He prosecuted those Discoveries made by the Fleets of his Father in the *East* and *West-Indies*, in the first of which he took and possessed many Islands and Towns; his Armies encountered and overthrew the potent and formidable Kings of *Bengala*, *Pegu*, and *Siam*, and likewise obtained many signal Victories over the *Moors* of *Malacca*, *Sumatra*, and *Morocco*, who were as well provided of Artillery as any Princes of *Europe*: His Armies in *West-Indies* had no worse Success, taking and fortifying divers Places, nor was Fortune less favourable to him in *Guinea*.

During his Father's Life time, being about the Age of three and twenty Years, he was married to *Catherine*, Sister to *Charles* the Fifth Emperor, and King of *Spain*, by whom he had Issue Prince *John*, who died during his Reign, but left behind him a Son named *Sebastian*, who succeeded this *John* his Grandfather in the Kingdom.

John the Third reigned in all eight and thirty Years, making many Laws for the increasing and Encouragement of Traffic, to the great enriching of his Subjects; he died in the sixty ninth Year of his Reign, and in the Year of our Lord 1573; being buried in the Cathedral at *Lisbon*.

Sebastian, Grandchild of King *John* the Third, was his Successor in the Kingdom, which he entered into at about three and twenty Years of Age.

Scarce was he well seated in his Throne, or had sat in it much above a Year and a half, when he was by Ambassadors from *Muly Mahamet*, then turned out of his Kingdoms of *Fesse*, and *Morocco*, by his Uncle *Abdemelech*, implored him to aid him in the Recovery of his Kingdom, with Promise that if by his Means he could drive out *Abdemelech*, he would freely resign to *Sebastian* the Kingdom of *Morocco*, and content himself with that of *Fesse*.

Ambition of Glory, and Hopes to propagate the Christian Religion, makes *Sebastian* readily undertake the Enterprize, and to that Purpose makes all possible Speed to levy Men and Arms; he sends to *Philip* the Second King of *Spain*, who promises him the Assistance of 10000 Men, but fails; yet *Sebastian*, not discouraged, resolves with his own Forces to proceed, to which by an Accident he got some Addition, for he was almost ready to go, *Stukely* an *Englishman*, created by the Pope Marquis of *Ireland*, as he was going with a small Fleet of Ships, and about six thousand *Italian* Soldiers, to assist the *Irish* Rebels against the Queen of *England*, was by Tempest driven into *Lisbon*, who with much Entreaty he persuades to desist from his intended Design, and accompany him into *Barbary*.

Thus set forth, he arrives at *Tangier* with an Army of about 30000 Men; here he meets *Muly Mahamet*, with a very small Addition of Forces, and much less than he expected; yet he marches forwards towards *Abdemelech*, who by Letters would have advised him to have returned in Peace, but in vain; so the two Armies meet in the Plains of *Alcazar*, where *Sebastian* is utterly discomfitted, himself, *Muly Mahamet*, *Stukely*, and several Persons of Quality, slain: Three Kings fell in this Field, for *Abdemelech* was killed in the hottest of the Battle: This was fought in *August* 1578.

Henry, the Cardinal, third Son to *Emanuel* the First, succeeded *Sebastian* in the Kingdom, being both by reason of his Age, to wit, sixty seven Years old, and his Function (being a Churchman) deprived of all Means to give the People any Hopes of Issue: It was during his short Reign of two Years, the whole Discourse and Debate, not only of *Portugal*, but of all *Christendom*, who of Right ought, and who probably might, succeed King *Henry* in that Crown and Kingdom; several Pretenders there were, whose several Titles the ensuing Account will make clear. *Henry*

Emanuel the First, had eight Children:

1. *John* King of *Portugal*, who had Issue *John*, Prince of *Portugal*, Father to *Sebastian* King of *Portugal*.

2. *Lewis*, Infant, who had Issue D. *Alphonso* the Bastard; *Christopher*, and others.

3. Infant D. *Alphonso*, who died without Issue.

4. *Henry*, the Cardinal, King of *Portugal*, who died without Issue.

5. *Fernando*, Infant, who died without Issue.

6. *Edward*, Infant, who had Issue, 1. *Mary*, who married *Alexander Farnese*, Prince of *Parma*, a Foreigner; 2. *Katherine*, who married *John*, Duke of *Bragance*, and afterwards *Reinuce*, Prince of *Parma*.

7. *Mary*, married to *Charles* V, King of *Castile*, and Emperor, who had Issue *Philip* the Second, King of *Spain*.

8. *Beatrix*, married to *Charles* Duke of *Savoy*, who had Issue *Philbert* Duke of *Savoy*.

The several Claims to the Crown were in all eight, and all the Pretenders endeavoured, by the most weighty Arguments they could, to justify their several Titles; first, the People claimed *Jure Regni*, a Privilege to elect their own Kings; but it was soon answered, that until the Royal Line of a Kingdom were quite extinct, they could claim no Right in the Election; for if they could, they might by the same Reason at any Time depose the lawful Heir. The Pope's Challenge to be *Jure Divino* Arbitrator (if not Donor) in all Controversies for Crowns, but especially in this, because *Alphonso* the first King, to obtain that Title, became tributary to the See of *Rome*, was slighted and disregarded. The third Claim was that of *Antonio*, the Bastard Son of *Lewis*, Infant, who alledged, that his Mother was lawfully wedded to his Father, and endeavoured by all Means to clear the Aspersion of his being illegitimate; some Strugglings he made for the Crown, as hereafter shall be spoken more at large. *Katherina de Medices*, the Widow of *Henry*, the second King of *France*, was the fourth that pretended a Right and Title to the Crown, as being descended legitimately from *Alphonso*,

phonso, the third King of *Portugal*, charging all that had reigned since to be Usurpers: To this it was readily answered, that all Lawyers had ever allowed one hundred Years sufficient to clear and make firm the Title of any Kingdom, and that there being the Prescription of 300 Years against her, her Claim was utterly void. The fifth that pretended to this Crown was *Philibert* Duke of *Savoy*, as Son to *Beatrice*, the younger Daughter of *Emanuel*, though it is to be supposed that he laid not his Claim out of any Hopes to prevail, whilst he was descended but of the youngest Daughter, and *Philip* II of *Spain* of the eldest: But it is rather to be thought that he was incited to put in his Claim by the rest of the Pretenders, who knew that of the Claimers who were not Natives, he was the fittest Person of all others to resist and annoy King *Philip*, not only by reason of his personal Valour, but also because of his Countries bordering upon the Dutchy of *Milan*, which, with the Assistance of the *French*, his Neighbours on the other Side, and Pretenders to that Dukedom, he might with Ease at all Times invade.

The sixth who presumed a Right to this Kingdom, was *Reinuce*, the young Prince of *Parma*, who demanded it in Right of his Mother, the eldest Daughter to the Infant *Edward*, alledging, that *Jure Primogenituræ*, the Male Line was to be served before the Female; so that until the Line of his Grandfather Prince *Edward*, were wholly extinct, neither *Philip* the Second, nor the Duke of *Savoy*, could have any Pretence to that Kingdom.

Katherine, Dutchess of *Braganza*, and youngest Daughter to the Infant Don *Edward*, was the seventh that laid Claim to this Crown, who alledged, that in all Successions whatsoever, these four Qualities were to be considered, *viz.* the *Line*, the *Degree*, the *Sex*, and the *Age*; that the better Line ought in Justice first to take Place, although others should have Advantage in the other three Qualities; that in all Successions of Crowns, the last Possessor was to be succeeded *Jure Hereditatis*, which allowed the Benefit of Representation; that she representing the Infant Don *Edward*, the better Line did by Representation precede *Reinuce* (the Law never allowing a Grandchild that Benefit,) and that by her better Line she did exclude King *Philip*, who descended of a Daughter, but especially by the prime and fundamental Laws of the Kingdom, (put in Execution against *Beatrice*, Daughter of *Ferdinand* the ninth King of *Portugal*, who having married out of the Kingdom to the King of *Castile*, her Right of succeeding was utterly lost, and King *John* chosen in her stead) she was to be preferred before all other Claimers whatsoever, in regard of her both being born and married within the Kingdom.

But *Philip* II, King of *Spain*, who was the eighth Pretender, having employed all the best Wits in *Christendom*, to confute and disprove all other Claims, and prove and maintain his, wanted not some Objections against this; alledging, That the Successions of Crowns were to be decided by the Law of Nations, not of the Empire, upon which only her *Jus representandi Patrem* was grounded; that the nearest Male in Degree to the late Possessor ought to succeed; that the Infant Don *Edward* being deceased before his Brother *Henry* was King, could have no Right in himself, and therefore could derive none to his Posterity, for *nemo dat quod in se non habet*; that it was very unreasonable that *Katherine* should be less prejudiced in herself for her Sex, than King *Philip* should be for his Mother.

But it was no Arguments could confute, or annul the certain and indubitable Right of the Dutchess of *Braganza*, which was clear to the World, both by her Descent, and by the fundamental Laws of the Nation, and this King *Philip* knew well; and therefore, though he carried on his Affairs very candidly to the Eyes of Men, and seemed unbiassed with proper Interest, by offering to submit his Title to a Disputation, professing that the Laws of *Portugal* were more favourable to him, than the Laws of *Castile*, and openly acknowledging, that if he should chance to die before King *Henry*, his eldest Son, being a Degree farther off, would come behind some of the Pretenders, of whom himself had the Precedence. Though he carried himself thus fair to the World, yet he clandestinely wrought with Father *Leon Henrices*, a Jesuit, and Confessor to King *Henry*, and *Ferdinando Castillo*, a Dominican, and of the King's Bosom Counsel, to endeavour by all Means possible to divert all Designs in Prejudice of his Claims, and especially that *Katherine* Dutchess of *Braganza* might not by *Henry* be declared to be the next Heir apparent; which he, conscious of the Justice of the Title, was very willing to have done.

And whilst these two Fathers prosecuted his Interest there with the old, and almost doting King *Henry*, the vigilant *Philip* provided an Army in Readiness, with which he resolved to enter into *Portugal*, and with his Sword make good his disputable Title, as soon as that old King's Death should give him the Warning-Piece to fall on.

Yet when that was given, and *Philip* ready to march with an Army of 20000 Men into *Portugal*, he had like to have been prevented; for Pope *Gregory* the Thirteenth pretending still his Right to dispose, or at least to arbitrate all Difference concerning that Crown, had sent Cardinal *Riario*, Legate Apostolick, with Order to dissuade the Catholick King from raising Arms, and that done, to pass into *Portugal*, and in his Holiness's Name and Behalf, to arbitrate the Right between all Pretenders; which Designs of the Pope, this crafty *Spanish* Fox circumvented; for having Pre-advice of it, and resolving to pursue his own Intentions of assuring to himself the Kingdom of *Portugal*, and yet approve himself an obedient Son of the Church, he gave Order in all Places where the Legate was to pass, he should be most magnificently entertained; so that by such sumptuous Treatments, the Time might be dexterously protracted, and he possessed of that Kingdom before the Legate arrived at Court; which was accordingly done, and the Legate returned Thanks for his magnificent Entertainments, though he was displeased at the ill Success of his Negotiation.

But to proceed to the Manner of his possessing himself of this Kingdom: No sooner did the News arrive at the *Spanish* Court of the Death of King *Henry*, but *Ferdinand de Toledo*, Duke *D'Alva*, was commanded, with an Army of 20000 Men, to march toward *Lisbon*, and in the Name and Right of his Catholick Majesty, to make Conquest of the Kingdom, if he found Opposition.

But all the Appearance of Oppositon which he found, was made by Don *Antonio*, the Ballard Son of *Lewis* the Infant, who having got into *Lisbon* at the Head of a tumultuary Rabble, rather than a well-formed Army, endeavoured at first to make some Resistance, but was soon discomfitted, and the Suburbs of *Lisbon* being sacked to satisfy the Soldiers, the City was surrendered to him, whither soon after the King came, and

and ſo by a mixt Title of Deſcent and Arms, took Poſſeſſion of the Kingdom, *Anno* 1510. *Katherine*, Dutcheſs of *Braganza*, being forced to ſurrender to him all her Intereſt and Pretenſions.

THE Nobility and People of *Portugal* were without doubt extremely amazed to ſee themſelves ſo ſuddenly ſurprized, and made ſubject to a foreign Prince, and eſpecially to a Prince of that Nation againſt whom they had a natural Antipathy; but finding themſelves in a Condition not able to make any Reſiſtance, they thought they ſhould gain more by ſubmitting freely to that King, than by being forced to it; and therefore they made their humble Submiſſion, which *Philip* met as it were half-way, and condeſcended in the General Aſſembly of Eſtates to be ſworn to theſe Articles or Capitulations following:

1. *That the ſaid* Philip, *King of* Spain, *&c. ſhould obſerve all the Laws, Liberties, Privileges, granted to the People by the former Kings of* Portugal.

2. *That the Vice-King, or Governor, ſhould be always the Son, Brother, Uncle, or Nephew of the King, or elſe a Native of* Portugal.

3. *That all Chief Offices of the Church, or State, ſhould be beſtowed upon the Natives of* Portugal, *and not upon Strangers; likewiſe the Governments of all Towns and Places.*

4. *That all Countries now belonging to the* Portugueſe, *ſhould ſo continue, to the Commodity and Benefit of the Nation.*

4. *That the* Portugueſe *Nation ſhould be admitted to all Offices in the King's Houſe, as well as the* Caſtilians.

6. *That becauſe the King could not conveniently be always in* Portugal, *he ſhould ſend the Prince to be bred up amongſt them.*

THESE Articles were concluded, with a Bleſſing upon ſuch Kings as ſhould obſerve and keep them, and a Curſe on thoſe who ſhould break or violate them.

THOUGH theſe Articles were thus ſworn to, and the Cardinal *Albertus*, Archduke of *Auſtria*, Son to the Emperor, and Nephew to the King of *Spain*, appointed Vice-King of *Portugal*, *Philip* the Second durſt not in Perſon yet leave the Kingdom; for he perceived by their Murmurs and viſible Diſcontents, that their Submiſſion to him proceeded more out of Fear than Love, and that as he had in a Moment gained that Kingdom, ſo he ſhould as ſoon loſe it, if he ſhould but give them the leaſt Opportunity.

FOR that the People were highly diſcontented, might eaſily appear by their attentive liſtening after old Prophecies, which put them in hopes of a Deliverance; and many of them flattered themſelves that Don *Sebaſtian* was yet alive, and would come and deliver them; nay, ſo fooliſh were ſome of them, that though they believed him ſlain at the Battle of *Alcazar* in *Barbary*, yet they thought he ſhould live again, and miraculouſly come to redeem them.

BUT that which moſt of all expreſſed the People's Diſcontents, was what was publickly ſpoken by the Mouths of their Orators the Prieſts, in their Pulpits, who would ordinarily in their Sermons utter Speeches much in prejudice of the *Spaniards* Title, and in favour of the Dutcheſs of *Braganza*; nor were they ſparing to do ſo in the Preſence of the King himſelf, who would therefore often ſay, *That the* Portugueſe *Clergy had made the ſharpeſt War with him.*

FATHER *Lewis Alvarez* a Jeſuit, preaching one Day before the Viceroy, took his Text, *Surge, tolle Grabatum tuum, & ambula*; and turning himſelf to the Duke, ſaid, Sir, the Meaning of that is, *Ariſe, take up your Pack, and be gone home.* But above all this, might the Diſcontents be perceived in the Noblemen's Chapels, eſpecially in the Duke of *Braganza's*, where they were wont to ſing the *Lamentations of* Jeremy, applying all the Scorn and Reproach of the *Iſraelites* to themſelves, as *Aquam noſtram pecunia bibimus*, becauſe of the Exciſe put by the *Spaniards* upon Wine, and other Neceſſaries: And that, *Servi Dominati ſunt in nos*; and that, *Cecidit Corona Capitis noſtri*, moſt commonly ending with this Invocation, *Recordare Domine; quid acciderit nobis intuere, & reſpice opprobrium noſtrum: Hereditas noſtra verſa eſt ad alienos.*

YET did King *Philip* bear all theſe Affronts with an incomparable Patience, diſſembling with an admirable Prudence his Paſſion (if he had any) for theſe Diſcontents; for he knew the only Way to win this Nation to an Obedience and Compliance, muſt be Lenity at firſt, whatever he intended to practiſe afterwards, and that he had by his exact keeping of his Word and Oath, won much upon this People, appears, in that during his whole Reign, and the Reign of his Succeſſor *Philip* the Third, who followed his Father's Foot-ſteps, though not with that Craft and Diſſimulation, they made no Attempts, nor were inclinable to a Revolt, which the enſuing Story will evince.

DON *Antonio*, Prior of *Crato*, the baſe born Son of *Lewis* the Infant, who had by the tumultuary Rabble, on the Death of King *Henry*, been elected King, being expulſed *Lisbon* by the Forces of the Duke *D'Alva*, fled from thence into *France*, to the Protection of that Queen, who (in regard that her Claim was exploded both by the *Spaniards* and the *Portugueſe*, as an worn-out Title, and injurious to all the Kings of *Portugal* ever ſince, as unjuſt Poſſeſſors) had long endeavoured to excite Queen *Elizabeth* of *England* againſt the *Spaniard*, and to forewarn her and other Princes to beware of his increaſing Power, who, now enriched with the Addition of *Portugal*, *Eaſt-India*, and many Iſles in the *Atlantic* Sea, might in Time overſhadow all his neighbouring Princes, and therefore adviſed that it behoved them to think of ſome Way to curb his Ambition betimes, and reſtrain his too far extending Power into ſome reaſonable Limits.

WHICH Advice of her's Queen *Elizabeth* eaſily liſtned to, being always providently careful of her own, and her Subjects Safety, foreſeeing how dangerous the over-ſwelling Power of that Prince would be, both to her and her Dominions, and therefore though ſhe then entered not into a preſent War with him, yet when Don *Antonio* came over to her with Recommendations from the *French* Queen, ſhe bountifully relieved him, which ſhe then thought ſhe might do without Offence, conſidering that ſhe acknowledged him her Kinſman, deſcended of the Blood Royal of *England*, and of the Houſe of *Lancaſter*; nor was there ever any Promiſe made in any League between the *Engliſh* and the *Spaniards*, that the *Portugueſe* ſhould not be received into *England*.

HERE then Don *Antonio* reſided, till (the Wars breaking forth between *Spain* and *England*) after the *Spaniard* had received that notable Overthrow of his *Invincible Armada*, to whoſe Power and Puiſſance the whole World thought *England* would have been but a Morſel. Queen *Elizabeth*

judging

judging it more honourable to assail her Enemy, than again to be assailed by him, sent out a Fleet against *Spain*, which Sir *John Norris*, and Sir *Francis Drake*, with some other private Persons, to their eternal Honour, rigged and set out at their own Charge, requiring nothing of the Queen but some few Ships of War; and she granted to them, that the Ships and Spoils taken should be divided amongst them. The *Hollanders* likewise to this Fleet joined some Ships, so that the Number of the whole Fleet was about eleven thousand Soldiers, and fifteen hundred Mariners.

With this Fleet Don *Antonio*, with some few *Portuguese*, set sail out of *England*, having before loaden the *English* with great Promises of the Recovery of this Kingdom, assuring them that the *Portuguese* would be ready upon his Appearance to revolt from the *Spaniard*, and that *Muley Hamet*, King of *Morocco*, would assist him with twenty thousand Men.

The first Place that the *English* Fleet put into, was the *Groyne* in *Gallicia*, the lower Town of which they easily took, but attempting the higher Town, were twice repulsed, and forced to raise their Siege, upon Advice, that the *Conde di Andrada* had gathered Forces at *Bruges Bridge*, and that the *Conde di Altemira* was coming with more, purposing to besiege them in the lower Town, and so cut off their Way to the Ships; which *Norris* resolved to prevent, and therefore, with a sufficient Force, marched against them, overthrew them, and had the Slaughter of them for three Miles together; and two Days after, having burnt and pillaged the Villages, they put to Sea, steering their Course towards *Portugal*.

But whilst they laboured with contrary Winds, plying to and fro at Sea, *Robert* Earl of *Essex* fell in amongst them, who being very young, had, out of the Heat of military Glory, his Hatred of the *Spaniards*, and Commiseration of Don *Antonio*, declined the Pleasures of the Court, and committed himself to Sea, without the Knowledge, and absolutely against the Queen's Mind, in hopes, by Reason of the Influence he had over most of the Commanders of the Land Forces, to be made their General.

Two Days after his being joined with them, they with much Trouble arrived in *Penicha*, a Town of *Portugal*, which, with the Loss of some drowned in landing, they became Masters of; the Castle being likewise immediately surrendered to Don *Antonio*.

Hence the Land-Forces under the Command of Sir *John Norris* marched directly, and with all possible Speed, towards *Lisbon*, about sixty Miles distant; *Drake* promising to follow with the Fleet by the Way of the River *Tagus*. The Army being arrived at *Lisbon*, though they had before, at a Council of War, determined to encamp on the East Side of the Town, the better to bar Succours from coming out of *Spain*, now contrary to their own Resolutions, sat down before *St. Katharine*'s Suburbs on the West Side, whereas, at first, they found no Resistance, so they found little Help, but what the Prayers of some few disarmed Men gave them, who now and then cried out, *God save the King* Antonio: And indeed other Help they could not afford him, *Albertus* Archduke of *Austria*, the Viceroy, having before disarmed the *Portuguese*.

The next Day, when the *English*, weary with their long March, betook themselves to their Rest, the *Spanish* Garrison sallied out upon them, who were at first resisted by *Bret* and his Companies, till more coming up to their Assistance, forced the *Spaniards* to give back, the valiant Earl of *Essex* chasing them to the very Gates; but the *English* had several Commanders of Note, and no small Quantity of private Soldiers, slain.

In fine, when they had now stayed two Days before the Town, and perceived that the *Portuguese*, notwithstanding the great Brags and fair Promises of Don *Antonio*, did not at all incline to a Revolt, and that no Advice came of any Assistance from *Muley Hamet* King of *Morocco*; but that, instead of them, fresh Forces flocked in great Numbers from the East Parts into the City, whilst their Army was lessened by a violent Sickness, their Provision and Amunition failed, and their great Guns for Battery arrived not, they raised their Siege, and took their Way towards *Cascais*, a small Town at the Mouth of the River, the *Spaniards* following them at a Distance, but not ever daring to fall into their Rear. The Town of *Cascais* they took, blew up the Castle, and so, notwithstanding all the Intreaties of Don *Antonio*, set sail for *England*, firing in their Way *Vigo*, a Port-Town deserted of its Inhabitants.

This, and some small Bustles with one or two counterfeit *Sebastians*, not worth mentioning, were the only Storms that happened in this Kingdom, during the Reigns of *Philip* the Second and Third; for they keeping their Words in most Things, though some of their Privileges they had infringed, had almost brought the People to a Willingness to be their Slaves; whereas *Philip* the Fourth committing the whole Charge of the Government to Count *Olivarez*, lost the whole Kingdom, and all its Territories.

For such were the new rigorous Ways which he would prescribe in the Government of *Catalonia* and *Portugal*, both People very tender of their Privileges, that the least Breach of them should have been seconded by a potent Force to have suppressed them, in case they should attempt an Insurrection; when, instead of having such Power in Readiness, the *Catalonians* had rather Opportunity given them to rebel, and Spurs to provoke them to make use of the Opportunity; for some Soldiers being scatteringly quartered among them, but too few to curb them, they looked upon that as a greater Intrenchment upon their Liberties than any before, and a Design utterly to enslave them; wherefore converting their Patience into Fury, they took up Arms, massacred those Soldiers, slew their Viceroy, and put themselves under the *French* Protection.

This Revolt of the *Catalonians* was a Precedent to the *Portuguese*, who had extremely suffered under the Breach of their Privileges: For, contrary to the second Article sworn to by King *Philip* the Second, which said, *That the Viceroy, or Governor, should be either Son, Brother, Uncle, or Nephew to the King of* Spain; the *Infanta Margarita di Mantoua*, who had no Relation at all to the Kings of *Castile*, was made Governess; which they might, and perhaps would have borne, had they not been incensed by a more feeling Injury *Anno* 1636. when the Tax of a fifth Part was imposed upon all the Subjects of that Kingdom: an intolerable Grievance, and thought so insufferable by the Southern Parts of the Nation, that they rose in Arms to oppose it, and had set the whole Kingdom in a Combustion, had it not been timely quenched by the Care and Industry of the then Governess, the *Infanta Margarita* of *Mantoua*.

Yet this small Stir gave an Item to the Court of *Spain*, of the Readiness of the People to revolt, which made *Olivarez* endeavour by all Ways possible to cut off the Means of their being able to do it; but whilst he endeavoured to prevent them, he gave them the Means to do it, though he failed not to make use of those Courses which in probability might entire that Kingdom; the chief

chief of which was, the endeavouring to allure from thence the Duke of *Braganza*, whom the People of *Portugal* look'd upon as the Perſon who of right ought to be their King, and who was the only Native of the Kingdom who might reſtore again the Line of *Alphonſo*; beſides, he was a Prince, who for Power, Riches, and Number of Tenants, not only exceeded all the Nobles of *Portugal*, but even of *Spain* itſelf.

And indeed the Duke of *Braganza* was one of the moſt glorious Subjects in *Europe*, being allied to moſt Kings in *Chriſtendom*; which made the King of *Spain*, though they were Competitors for the Crown of *Portugal*, treat this Family with more Honour than any other of his Grandees, receiving them almoſt with as much Reſpect, as if they were ſovereign Princes; which appeared in *Philip* the Second, who moſt of all deſired to abaſe this Family, yet would always, when the Duke of *Braganza* came to viſit him, meet him in the Middle of the Room, and not permitting him to kiſs his Hand, ſeat him with himſelf under the Canopy of State.

To draw him therefore out of that Kingdom, *Olivarez* firſt politickly offered him the Government of *Milan*, a Place of great Truſt and Honour; but he modeſtly refuſed it, as not in a Condition at that preſent to undertake ſo great a Command, and indeed expreſſing an Unwillingneſs to go out of *Portugal*.

But his Unwillingneſs to go from thence, made the King of *Spain* and Count *Olivarez* the more willing to draw him from thence; it was therefore given out, That the King himſelf was reſolved to go in Perſon, to reduce the revolted *Catalonians*, and that therefore all the Nobility ſhould be in a Readineſs in four Months Time to attend his Majeſty in that Expedition. But the Duke of *Braganza*, being ſuſpicious of the *Spaniards*, becauſe he knew himſelf ſuſpected by them, and likely to be, whilſt the *Portugueſe* ſo much affected him; to aſſure himſelf of the one's Love, and to avoid, if poſſible, the other's Suſpicion, retires himſelf to his Country-Houſe, at *Villa Vitioſa*, and there follows his Sports of Hunting, *&c.* not at all regarding Matters of State; withal ſending an Excuſe to Count *Olivarez*, that his Affairs at preſent were in ſo low and mean a Condition, that he could not appear to attend his Majeſty in that Pomp and Splendor that became a Perſon of his Quality; and that therefore he ſhould do his Majeſty more Service in ſtaying at home, when the other Nobles were abroad, than he could poſſibly do by attending him.

This Plot thus failing, made the Court of *Spain* more ſuſpicious of the Duke than ever before: Count *Olivarez* therefore reſolved to employ his utmoſt Art of Diſſimulation to entrap him, which he ſet upon by a Fetch ſo far about, that to the Eye of Reaſon it might put the Duke into ambitious Thoughts of endeavouring to aſſume the Throne, and in a Way to accompliſh thoſe Thoughts, rather than any Way to prejudice him; But it appeared afterwards that *Olivarez*'s Deſign, in ſo far truſting the Duke, was only becauſe the Duke ſhould truſt him.

In anſwer to *Braganza*'s Letter of Excuſe, the *Conde* aſſures him, that his Majeſty was very well ſatisfied with his Reaſons of not attending him in the intended Expedition againſt *Catalonia*, and that he was very ſenſible of his good Inclinations to his Service; that for his own Part, he was very ſorry that his Affairs were in ſo low a Condition, for he could not but commiſerate his Intereſt as his own: That his Majeſty, to let him know how great Confidence he repoſed in his Fidelity, had appointed him General of the Militia of that Kingdom, and had for his preſent Supply ſent him ſixty thouſand Crowns, leaving it to his Choice to reſide in what Place near *Lisbon* he pleaſed.

This ſtrange Confidence put in the Duke by the King of *Spain*, much amazed the greateſt Politicians, who thought it reaſonable that the *Spaniard* ſhould have permitted the Duke ſtill to have kept retired in the Country, rather than have given him ſuch a Command, and called him to *Lisbon*, into the continual View of the People, who looking upon him as the Heir of that Houſe which had been ever repreſented to have the only Right to the Crown, might eaſily be enflamed with a Deſire to have a King of their own.

And theſe Things was the Princeſs of *Mantua* very ſenſible of, and therefore continually ſolicited the King to know his Reaſon, or to deſire him to remove thoſe apparent Opportunities which he had given the Duke of *Braganza* to effect a Revolt. But ſhe not only received intricate and enigmatical Anſwers from the King and Count *Olivarez*, but likewiſe had the former Actions ſeconded with one, which made her of Opinion that his Catholick Majeſty had a Mind to toſs the Kingdom into *Braganza*'s Hands, whether he would or no; for on a ſudden, without any Notice given to her, all the *Spaniſh* Garriſon in St. *John*'s Caſtle, which commanded the City of *Lisbon*, and indeed upon the Strength of which the whole Safety and Security of the Kingdom depended, were ſuddenly drawn forth, and the Caſtle left to the Diſpoſure of Don *John* of *Braganza*.

But this was the laſt Act of Count *Olivarez*'s Confidence in the Duke; for by truſting him ſo much, he now thought that he could not but reciprocally repoſe Confidence in him; and therefore next Summer, *Anno* 1640, he again, by Letters, ſolicites him to leave *Portugal*, and come to *Madrid*, firſt telling him, that his Catholick Majeſty gave him many Thanks, and greatly applauded his Loyalty in the Exerciſe of the Office of General, and was very ſenſible of the good Effects which his Authority had wrought over the *Portugueſe*: Next he repreſented unto him the preſent declining Condition of the *Spaniſh* Monarchy, not only by Reaſon of the Diſorders in *Flanders* and *Italy*, and the Preparations of the *Turk*, but more eſpecially for that their moſt potent Enemies, the *French*, were now, in Aſſiſtance of the revolted *Catalonians*, entered into *Spain*: That it highly concerned his Catholick Majeſty to drive theſe out of his Territories, which could not be effected but by a powerful Force; that he being one of the prime Grandees of the Kingdom, might by his Preſence, in the Head of a good Number of his Tenants, encourage others to a ſuitable Aſſiſtance: That to that Purpoſe his Catholick Majeſty expected him every Moment, having deſigned for him great Honours, Privileges, and Dignities ſuitable to his Merit.

But as cunning an Angler as *Olivarez* was, yet he failed of his Mark; the Bait would not yet hook in the Fiſh; for though the Duke of *Braganza* was accounted no very great Politician, yet his own Safety taught him to know that all theſe Truſts, and fair Promiſes, were but gilded Allurements to draw him to his Deſtruction: Having therefore ſupplied the King with a conſiderable Number of his Tenants and Friends, he found Excuſes for his own not going in Perſon; and to take off all Suſpicion of Jealouſy, or Thoughts that he had any Deſign againſt the State, he retired again to his Country-Houſe. Thus did theſe two great Perſonages, by Craft and Diſſimulation, endeavour to ſupplant each

other; only the one ſtrove the other's Deſtruction; the other only ſtudied his own Safety and Preſervation.

DURING all theſe Paſſages, the Vice-Queen *Margarita* of *Mantua* was very vigilant in her Government, and foreſeeing what in reaſon might be the Iſſue of theſe Proceedings, wrote very importunately to the King, aſſuring him, that if it were not ſuddenly prevented, the Kingdom would infallibly be loſt. To which his Majeſty returned no Anſwer; and *Olivarez*, in his Anſwer (ſlighting her Judgment, as fitter to govern a private Houſe than a Kingdom,) deſired her, that if her, Capacity would not reach to the Height and Drift of thoſe Myſteries of State, yet that her Wiſdom would prompt her not to diſcover them.

YET without doubt *Olivarez* was inwardly perplexed to ſee all his Plots thus fail; and foul Means he durſt not openly attempt, ſuch was both the Duke's Potency, and the great Love the People bore him: He therefore at laſt has recourſe to Treachery, and to that Intent gives ſecret Advice to Don *Lopez d'Oſſis*, and Don *Antonio D'Oquendo*, that when they had relieved *Flanders* with Men and Money, they ſhould with the whole Fleet put into *Portugal*; and then, as ſoon as the Duke, ſhould according to the Duty of his new Place and Office, come aboard, they ſhould immediately ſet ſail, and bring him away to *Calais*; but this Plot was by a ſtrange divine Providence prevented, for that Fleet was totally routed by the *Hollanders* upon the Coaſt of *England*.

John IV ſucceeded next to the Crown of *Portugal*; and now was the Time come wherein, according to St. *Bernard*'s Prophecy, the Kingdom of *Portugal* was to be releaſed from the Tyranny of Strangers, and reſtored again to the Government of its native King, to which all Things ſeemed ſo well to quadrate, that we cannot imagine there was a leſs than a divine Hand in it; for though (all Plots failing againſt the Duke of *Braganza*,) the *Spaniards* beginning to fear ſomewhat, drew as many of the native Soldiers out of the Kingdom as conveniently they could, thinking thereby to leſſen the ill Humours which began now to appear, yet they did thereby only the more ſtir up and enflame thoſe Diſcontents, which were taken at *Vaſconſellos* managing all Affairs of State.

FOR although the moſt illuſtrious *Infanta Margarita* of *Mantua* was a Princeſs of great Judgment and Knowledge in State Affairs, yet ſhe permitted herſelf to be ſo much over ruled by *Vaſconſellos* Secretary of State, or at leaſt was ſo much over-ruled by him whether ſhe would or no, that he either by ſome ſecret Conſent of his Catholick Majeſty, or led on by his own ambitious Spirit, confiding in the great Favour he had at Court, never permitted the *Infanta* to enjoy any other Title than Vice-Queen.

AND inſufferable was the Government of *Vaſconſellos* to the *Portugueſe*, who as much hated his obſcure Birth, as they did his evil Cuſtoms: He was a Man wholly compoſed of Pride, Cruelty, and Avarice, that knew no Moderation, but ran wholly into Exceſſes: Small Lapſes were by him made capital Crimes; chaſtiſing with all Severity thoſe whom he did but ſuppoſe diſſatisfied with his Government; and exerciſing with all Rigour the *Spaniſh* Inquiſition, puniſhed not only the Actions, but the very Thoughts of Men. The infringing of the greateſt Privileges of the *Portugal* Nation ſeemed to him but a Trifle; which continued Oppreſſions, in the End ſo exaſperated the whole People, that animated by the Knowledge of their own Strength, by the many Diverſions of the *Spaniſh* Nation, by the late Example of the *Catalonians*, and incited by the abſolute Ruin which they ſaw hung over their Heads, whilſt ſix thouſand of them were yearly liſted and forced to ſerve the *Spaniard* in his foreign Wars, they reſolved to looſe his Yoke from off their Necks, and to diſclaim his Obedience, by the Election of a King of their own; as follows:

ON *Saturday* the firſt of *February*, *Anno* 1640, (and *Saturdays* have been often obſerved to be propitious to the *Portugal* Nation,) all the Nobility of the Kingdom, led on by the Marquiſs of *Ferreira*, and the Count of *Vimioſo*, took Arms, and accompanied with a great Multitude of the Inhabitants of *Lisbon*, and ſome *Portugueſe* Soldiers, came to the Caſtle, which, being ſituate in the midſt of *Lisbon*, ſerves both for a Palace and a Caſtle: This was the Reſidence of the Vice-Queen, and hither aſſembled all the Magiſtrates for governing of the Kingdom. The Guards, which were two Companies of *Spaniards* and two of High *Dutch*, either before gained by ſecret Intelligence, or frighted with the great Numbers of the *Portugueſe*, or Deſire of Novelty, or elſe perhaps unwilling to make Reſiſtance againſt thoſe to whom they were moſt of them joined by Friendſhip or Marriage, without the leaſt Oppoſition, abandoning their Poſt, gave them free Admittance.

WHILST theſe Things had happened, the Secretary *Vaſconſellos* was in the Chambers of his Office (upon ſome Reaſons he had, by the Diſcontents of the People, to ſuſpect an Inſurrection) at that Inſtant writing into *Spain*, of the Alienation of the Minds of the Nobility from the *Spaniſh* Government, and earneſtly preſſing that ſome rigorous Reſolution might be taken to prevent it; which Letters, afterwards taken, did ſufficiently demonſtrate his ill Will to the *Portugueſe* Nation.

WHILST he was thus buſied, the confuſed Noiſe of the Soldiers pierced his Ears; at which, wondering not ſo much at the Tumult as at what ſhould be the Cauſe of it, being accompanied only with a *Dutch* Man, and another of the Guard, he would have gone down, but was hindered by the *Portugueſe*, who came running up, and crying, *Kill the Traytor, Kill the Enemy of our Blood:* Whereupon not knowing where to ſave himſelf, he fled, with thoſe two accompanying him, into an inner Chamber, and there with his Sword in his Hand, aſſiſted by thoſe two that were with him, diſpoſed himſelf to ſell his Life at the deareſt Rate he could: But his Valour ſtood him in no Stead, for thoſe two who endeavoured to defend him, being ſlain with two Muſquet-Shot, he ſeeing it vain to defend himſelf there longer, leaped deſperately out of the Window, rather to ſeek his Death, than out of any Hopes to ſave his Life; for no ſooner was he down, but numberleſs Swords were embrued in his Blood, the very Women and Children running to tear in Pieces his dead Body, with the ſame Alacrity as he uſed to torment them, when alive.

IN the mean Time the Marquiſs of *Ferrera* was gone to ſecure the Vice-Queen; whom having committed to the Guard of 200 Muſqueteers, he calls a Council, and in a ſhort Diſcourſe ſets forth the Miſeries the Kingdom had endured whilſt it lay ſubject to the *Spaniſh* Government, who had fought no other End but their Deſtruction: Then putting them in Mind of the Valour and Merits of their Nation, he exhorts them to proceed to the Election of a new King; nominating to them the Duke of *Braganza*, as the moſt worthy of the Crown, not ſo much for his

Power,

Power, Riches, or the Greatneſs of his Houſe; as becauſe the Kingdom was his indubitable Right; he being the only Perſon left of that Stock, which for ſo many Years had glorioufly governed *Portugal.*

A long Diſcourſe was ſuperfluous to thoſe who were before perſuaded. A publick Shout interrupted the Marquiſs's Speech, all of them crying with a loud Voice, *That they would have* John *Duke of* Braganza *for their King.* In the whole Multitude there was not a Face, much leſs a Voice, that did gainſay this general Vote; either becauſe they did all really rejoice to ſee that they ſhould again have a King of their own Nation, or becauſe none could without Danger oppoſe themſelves to the Torrent of ſo publick a Will.

The Duke was at this Time at his Country Houſe at *Villa Vitioſa*, whether by Accident, or becauſe he would always have had Occaſion to excuſe himſelf, if the Buſineſs ſhould not have ſucceeded, I cannot gueſs; but by reaſon of his Abſence they thought fit to make Choice of two Governors, whom, to avoid the Pretences of others, they nominated to be the Archbiſhops of *Lisbon* and *Braganza.*

These began immediately to exerciſe their Command, and were obeyed with ſo much Quiet, that in all that great and populous City of *Lisbon* there was none ſlain, but only thoſe beforementioned; the Priſons were opened, nor were there any that ſuffered any Wrong, either in their Goods or Life: All the Shops were opened, as if there had not happened any Change of Government.

Only the Houſe of *Vaſconſellos* was ſacked, with ſo much Anger and Deſpite, that they did not pardon the very Doors and Windows; nay, ſuch was the Fury of the People, that had they not been hindered by the Soldiers of the Guard, they had levelled it with the Ground. As for his Carcaſs, it ſuffered all thoſe Diſgraces which a People wronged both in their Liberties and Eſtates, could inflict: They ran like mad Men to expreſs living Sentiments of Revenge upon his dead and ſenſeleſs Corpſe, vaunting who could invent the neweſt Ways of Diſgrace and Scorn; till at length, almoſt wearied with their inhuman Sport, they left it in the Street ſo mangled, that it did not ſeem to have the leaſt Reſemblance of a Man; from whence it was the next Day carried by the Fraternity *Della Miſericordia*, and thrown into the Burying-Place of the *Moors.*

The Marquiſs of *Alemquer*, after he had by Command from the Governor aſſured the ſtrongeſt Poſts of the City, ſent ſeveral Soldiers into the Streets, crying, *Long live King* John *the Fourth*; which the People hearing, diſtracted as it were with very Joy, leaving their Trades, run up and down proclaiming him with Voices of *Jubilee*; the greateſt Part, through Exceſs of Paſſion, not being able to refrain from Tears.

The Meſſengers did not run, but fly to the Duke of *Braganza*, to give him Notice of his Promotion to the Crown: The firſt arrived on *Sunday* Morning before Day. He feigned a great Alteration at this Advice; whereupon ſome have preſumed to ſay, that he had not any Knowledge of the Deſign. He ſeemed at firſt not to believe it, but told the Meſſengers, that though he might have Deſert, and a Spirit fit for the Crown of *Portugal*, yet he had neither Will nor Ambition to deſire it: That his Enemies wronged him, by tempting him with Stratagems as far from his Genius as his Faith. But at the Arrival of the Count of *Monte Santo*, who came to accompany him to *Lisbon*, he ſeemed of another Mind; and having been with him in private Diſcourſe for the Space of about two Hours, without any further Delay, than what the relating the Buſineſs to his Wife, and to the Prince his Son, made, he departed with the Count from *Villa Vitioſa*, accompanied with about 500 Perſons.

Yet others there are that affirm, that he was not only acquainted with the Deſign of the Revolt, but of Council about it, and that ſome Time before the Nobility having had a private Meeting at *Lisbon*, it was at firſt propounded, That they ſhould reduce the Kingdom into the Form of a Commonwealth; but that not being approved of by the major Part, the Archbiſhop of *Lisbon* ſtood up, and in a moſt eloquent Speech having laid before them the Miſeries they had endured under the *Spaniſh* Yoke, recommended unto them *John* Duke of *Braganza*, as the indubitable Heir of the Crown, and their rightful Sovereign.

This Motion needed not to be ſeconded with many Arguments, to induce a general Conſent; they all moſt willingly aſſented to it, and concluded to ſend *Gaſton Cotigno*, a Man of fluent and voluble Tongue, to acquaint the Duke with their Intentions, and perſuade him to accept the Crown, and free his Country.

Gaſton being arived, with many well-couched Words acquaints him, That there was now a pregnant Opportunity offered, to recover the indubitable Right of his Anceſtors to the Crown of *Portugal:* That the Nobility and Clergy were wholly inclined to redeem themſelves from the Tyranny of the *Caſtilians*, by ſecuring the Crown upon his Head: That the univerſal Odium of the whole People to the *Spaniſh* Government, the preſent low Condition of the Houſe of *Auſtria*, diſtracted on every Side with War, the aſſured Aſſiſtance that *France* and other Nations, emulating the Greatneſs of *Spain*, would lend, were as ſo many Motives to perſuade them not to let ſlip ſo fair an Opportunity to regain their Liberty: That if he, by Refuſal, ſhould be the ſole Enemy to his Country's Freedom, they would effect it themſelves, and reduce it into a Commonwealth. Many other Arguments uſed he, which his Love to the Houſe of *Braganza*, his Hatred to the *Caſtilians*, or his own Ingenuity, prompted to him.

The Duke's Amazement permitted him not to return a ſudden Anſwer; but after a little Pauſe, he replied, That he was highly obliged both to him and all the Nobility, for their Affections to him; but that this was a Buſineſs which required great Deliberation: That there was no *Medium* between a Throne and a Chair of Execution; that therefore he would firſt adviſe with himſelf, and not raſhly attempt ſo hazardous a Buſineſs.

He therefore communicates the whole Buſineſs to his Dutcheſs *Donna Luiza*, Siſter to the Duke of *Medina Sidonia*, a Woman of a noble, heroic, and maſculine Spirit; with her he conſults, whether he were beſt accept of the Propoſitions of the Nobility, or, to prevent all Hazards, go to *Madrid:* And being anxious what Courſe to take, his Wife nobly told him: *My Friend, if thou goeſt to* Madrid, *thou doſt incur the Danger of loſing thy Life; and if thou accepteſt the Crown, thou doſt no more; conſider then whether it be not better to die nobly at home, than baſely abroad.*

These Words of his Lady animated him to a Reſolution to accept the Crown; ſo he returned *Gaſton* this Anſwer, That he would conform

form himself to the Counsel of the Nobility, resolving to live and run all Hazards whatever with them, for the Regaining of his Country's Liberty.

In the mean Time the Marquis of *Ferreira* used his utmost Endeavours for the reducing of those Castles which still held out for his Catholick Majesty. The first Day the Castle of *Colline* was surrender'd, which for its Situation was judged impregnable; yet the Captain of it no sooner saw it besieged, but, moved either with Gold or Fear, he delivered it up on Articles. The Tower of *Belem*, and that of *De la Cabera*, were suddenly surprized, before they within had any Notice of what was done. The strong Fortress of *St. Gulliano*, a modern Fortification, and built to defend the Mouth of the River, was ready to surrender, when a *Castellane*, who was there a Prisoner, and under Sentence of Death, for the Surrender of a Fort in *Brazil*, shut out the Captain, who was gone to parly with the *Portuguese*, and resolved to defend it many Days: He might have held out the Siege, but found neither Ammunition nor Provision; which were consumed, as was believed, on Purpose by the Captain; who, unwilling to have the Blot of a Traytor cast upon him, for so suddenly a Delivery, thought it fitter to be forced by Necessity to open the Gates to the Marquis.

After the Surrender of Fort *San Giliano*, the Marquis of *Ferreira*, in the Name of the King, gave the Sacrament of Fidelity, or an Oath of Allegiance, to all the Orders, *viz.* to the Clergy, Nobility, and Commons; which was received with so much Readiness, that had not the Marquis seen the necessary Orders observed, the People had run into certain Inconveniences, so much they strived to prevent one another in Willingness to perform this Duty.

On *Thursday* the Sixth of *February*, his Majesty made his Entrance into *Lisbon*, with all the Applauses that a beloved King can expect from his most loving Subjects. The rich Liveries given by the Nobles, the Triumphal Arches, the Streets hung with Tapestry, the Multitudes of People flocking to see him, made a beautiful Appearance; and so great was the Concourse to see their new King, that, though his Majesty entered into the City by Noon, he could not, through the Throng, arrive at the Palace till two Hours after Sun-set: Curiosity and Love, which usually have the Force to stir up all Affections, made this People flock so fast to the Sight of their Prince; and even those who, either for Envy, or some other Cause, hated the House of *Braganza*, did not cease to make some Demonstration of Reverence and Mirth.

His Majesty being arrived at the Palace, instead of reposing himself, addicted himself wholly to consult about carrying on the War; knowing well that only Labour produces true Rest. The first Consultations were concerning the Expugnation of the Tower of St. *John*, which, of all the Forts of the Kingdom, only held out for the Catholick King: To reduce this Citadel, the Marquis of *Ferreira* was sent in Person with a numerous Army, though for the most Part tumultuary and ill ordered; but what they wanted in Discipline they supplied in Affection, not refusing to engage themselves in the extremest Dangers: For two Days the Marquis found strong Resistance, but on the third Day it yielded, as it is supposed, forced rather by Bullets of Gold than of Iron. Don *Antonio de Mascarendas*, with a *Portuguese* Garrison, was appointed Commander of this Fortress, which he very diligently repaired, not only of the Damages now received by Battery, but with other necessary Fortifications, to bring it to greater Perfection.

The Kingdom thus suddenly reduced to the Devotion of King *John* the Fourth, the several Governors were commanded to their Countries to levy Forces, who listed the Inhabitants indifferently, from the Age of Eighteen to Sixty; in whom they found so much Disposition, that many offered their Estates, and their Lives, and would follow the Colours, although they had Licence to depart.

On the Twenty-fifth of the same Month followed the Coronation of his Majesty, accompanied with all those Applauses and Demonstrations of Joy, which could proceed from a People of infinite Riches, who weary of the Command of Strangers, were consequently ambitious of a King of their own Nation.

In the publick Place before the Palace, upon a most sumptuous Theatre, was erected a great Stage, and upon that a less: upon the Top of which, but three Steps higher, stood a Chair of State, under a Canopy, all covered over with Cloth of Gold. About Noon his Majesty came forth from his Palace Royal, in a Suit of Chesnut-colour'd Velvet, embroidered with Gold, and Buttons richly set with Diamonds; about his Neck was a Collar of great Value, whereunto hung the Badge of the chief Order of Knighthood, called *El Ordine di Christo*; he was girded with a gilt Sword; his Robe was Cloth of Gold, lined with white, wrought with Gold and Flowers; the Sword was borne before him by Don *Francisco De Alello*, Marquis of *Ferreira*, High Constable of the Kingdom; and before him was the King's Banner displayed by *Fernando Telles de Menesses*, Earl Marshal; before him went Don *Manrique de Siva*, Marquis of *Govea*, Steward of the King's Houshold; and so in Order the Nobles and Grandees of his Realm, one before another; before all went *Portugal* King at Arms, with the Heralds, Pursuivants, *&c.*

His Majesty being ascended the Stage, and having placed himself in the Chair of State, had the Crown set upon his Head, and the Sceptre delivered to him, with the accustomed Ceremonies, by the Archbishop of *Lisbon*. After which *Lucia*, then Queen of *Portugal*, Sister to the Duke of *Medina Sidonia*, with her Son the Prince *Theodosio*, arrived at *Lisbon*, who were received with all imaginable Expressions of Joy: The Queen was soon after solemnly crowned, and the Prince installed at *Lisbon*.

Thus was this Kingdom utterly lost to the *Spanish* Monarchy, and with it all that they enjoyed by that Kingdom in the *East-Indies*, the *Tercera Islands*, and other Islands in the *Atlantick Sea*, the Kingdom of *Algarve*, *Brazil*, together with all they had in *Africa*, except the Town of *Ceuta*, which was the whole of what remained to the *Spanish* Nation of all those great Dominions.

But that all Men might know the Greatness of their Loss, and what the Crown of *Portugal* enjoys abroad, take here a brief Narration.

First, those Islands of the *Tercera*, *Madeira*, and *St. Michael*, so long Time possessed by the *Portugal* Nation; which though inconsiderable to their other Dominions, yet deserve to be mentioned. Next those many strong Places of which they have made themselves Masters in *Africa*; as in *Guinea*, in the Kingdoms of *Congo* and *Angola*, the great Island of *St. Laurence*, of *Soffola*, and *Mozambique*. On the Continent thence passing the Mouth of the *Red Sea*, they have settled a Trade with *Socatra* and *Calaite*: Thence passing the Bay of *Persia*, to the Mouth of the River *Indus*, they subdued *Calecute*, *Coetum*, &c. the Island of *Goa*, *Craul*, *Daman*, &c. Thence toward the River

Ganges,

Ganges, they poſſeſſed *Ceilan*, *Malacca*, *Sumatra*, *Solon*, *Larantuca*, &c. Thence farther they were entered into the Kingdom of *Pegu*, into *Java Major*, and *Minor*, into the Kingdom of *China*, where they fortified *Macoa*. In ſhort, the Kingdoms, Iſlands, and Cities, that the *Portugueſe* Nation had conquered, and were poſſeſſed of abroad, may, in ſome Meaſure, be compared to the antient *Roman* Empire; nor was their Valour much inferior to the *Romans*, if we conſider the War they made with the King of *Cambaia*, who for Puiſſance and military Courage, or Numbers of Men of War, did exceed *Xerxes*, *Darius*, or *Pyrrhus*; the Battles they had with *Iſmalucco*, and *Idaliam*, in the Kingdom of *Decam*, both equal to mighty Kings and their Armies, conſiſting of the beſt Warriors of the Eaſt; the War they have waged with the *Moors* of *Malacca*, *Sumatra*, and *Moluccо*; as alſo with the Kings of *Bengala*, *Pegu*, and *Siam*, &c. with many other formidable Powers. Many of thoſe Places, moſt certain it is, were loſt whilſt the Catholick King had Poſſeſſion of *Portugal*; but with it he likewiſe loſt, and King *John* IV. had Poſſeſſion of, above fifty Towns and Forts, accounted impregnable; ſuch were, *Mozambique*, *Cuama*, *Monomotaſia*, *Mombaza*, *Maſiala*, *Dui*, *Damam*, *Bazaine*, *Chaul*, *Onor*, *Barcelor*, *Mangalor*, *Cananor*, *Cranganor*, *Cochim Coulan*, *Negapatan*, *Meliapor*, the Iſle of *Ceilan*, the Kingdom of *Jaſanapalan*, the Cities of *Manac* and *Nombre de Jeſu*; then more Northward, *Azarim*, *Danuc Agazim*, *Maim Trapor*, and many other Places, in all which were maintained Governors and Soldiers, and a Viceroy, reſiding at *Goa*, with Courts of Juſtice, &c. Hither many Kings of the Eaſt uſed to ſend Ambaſſadors, to maintain Amity with the King of *Portugal*, and to bring Tribute to him. Thus the *Portugal* Trade in the Eaſt extended itſelf no leſs than four thouſand Leagues, by which Trade all the Garriſons are maintained, and all the Ships, (whereof there are oftentimes two or three Fleets) and much Wealth ſent home every Year. Beſides thoſe afore-mentioned, the Crown of *Portugal* has ſeveral Towns on the Coaſt of *Africa*, ſo ſtrongly fortified, that the *Moors* of the Country could never yet recover them; ſuch as *Tangier*, &c.

In *America* they poſſeſs the famous Country of *Brazil*, which ſtretcheth itſelf one thouſand four hundred Leagues upon the Sea-Coaſt, containing fourteen Governments, and many principal Cities, *St. Salvador*, *Penambuco*, &c.

Thus great a Loſs did the *Spaniſh* Monarchy ſuffer by the Revolt of *Portugal*, which the Catholick King, *Philip* the Fourth, was very ſolicitous to recover; and to that End and Purpoſe did not only conſult with the greateſt Statesmen at Home, but likewiſe with thoſe abroad.

The Grand Aſſembly of the States of *Portugal* reſolved to diſpatch Ambaſſadors to all the States of Chriſtendom, to enter into Confederacies, for the better Defence and Eſtabliſhment of the Kingdom, and for the Glory and Reputation of the King.

In the firſt Place the Father *Ignatius Maſcarenas*, a Jeſuit, with another Father of the ſame Order, was ſent into *Catalonia*, to offer them all Aſſiſtance and Supplies for their Maintenance and Defence againſt the Catholick King; for very well did the King of *Portugal* know, that it highly did import his Intereſt to correſpond with them, that ſo they might jointly, not only defend, but alſo offend the King of *Spain*, whoſe Country lying between them both, they might at Pleaſure invade or moleſt it, either by Sea or Land.

This Embaſſy of King *John*'s ſo rejoiced and encouraged the *Catalonians*, that the very next Day after the Ambaſſadors had Audience, they obtained a moſt ſignal Victory in their own Defence againſt the *Spaniards*, who had aſſaulted them with an Army of twenty-five thouſand Men, under the Command of the Marquis *De los Veles*.

Shortly after the Father *Ignatius Maſcarenas* was diſpatched to the *Catalonians*, *D. Franciſco de Mello*, and Don *Antonio Caelle Carravallio*, (Perſons both of excellent and admired Abilities, the one for his great Experience and Judgment in State Affairs, and the other for his noble Spirit, and eminent Knowledge of the Civil Law) were ſent on a ſolemn Embaſſy to the moſt Chriſtian King, *Lewis* the Thirteenth of *France*.

These, attended with a ſtately and moſt magnificent Train, landed ſoon after at *Rochelle*, and on the Fifteenth of *March* 1641, made a ſolemn Entrance into *Paris*, being met and conducted in by a great Number of Coaches, filled with the Grandees of the Kingdom, beſides Numbers of *French* Nobility, who came to attend them on Horſeback.

Thus accompanied, they were conducted to the Palace appointed for the Entertainment of the Extraordinary Ambaſſadors, where they were, in a ſumptuous and magnificent Manner, feaſted at the King's Charges.

From thence they were, by the Duke of *Chevereux* and the Count *de Brulon*, conducted in the King's Coaches unto his Majeſty, then at *St. Germains*, to receive the firſt Audience; which was performed with extraordinary Shews of Love and Reſpect; for upon the Entrance of the Ambaſſadors into the Place appointed for their Audience, the King roſe out of his Chair of State, and went forward three Steps to receive them; nor would he permit them to deliver their Embaſſy with their Hats off, or to deſcend ſo low as to kiſs his Hands at their Departure; but inſtead of that Ceremony, he affectionately embraced them in his Arms, promiſing them the greateſt Aſſiſtance his Power was able to give.

They were from the King's Preſence conducted to a ſumptuous Dinner, provided for them; and after that brought to the Queen's Lodging, who was ſet to expect their coming: At their Entrance ſhe likewiſe roſe, and advanced three Steps to meet them, receiving them with a cheerful and courteous Countenance, and not permitting them to be uncovered.

Amongst other Diſcourſes which they had with her, Don *Franciſco de Mello* told her, That he feared his Embaſſy might not be acceptable, becauſe the King his Maſter had deprived her Brother of one of his Kingdoms: Whereunto ſhe readily replied, *That though ſhe was Siſter to the King of* Spain, *yet ſhe was Wife to the King of* France.

After ſome Diſcourſe in *French*, her Majeſty began to ſpeak to them in *Spaniſh*; which they obſerving, deſired to know wherefore her Majeſty had not vouchſafed them that Favour ſooner, it being a Language by them better underſtood? To which the Queen jeſtingly anſwered, *For fear they ſhould be frighted to hear her ſpeak* Spaniſh; and the Ambaſſador, to improve the Jeſt, replied, *Como a tam Grand Signora ſi, pero como a Caſtillana no*; *That it was true, conſidering her Greatneſs, but not her Country*: The Queen ſmilingly went on, promiſing them all Aſſiſtance poſſible, and wiſhing all Proſperity to King *John* and his Queen; and ſo they having delivered her Majeſty a Letter from the Queen of *Portugal*, took their Leave.

FROM her Majesty they went to visit his Eminence the Cardinal *Richlieu*, who being advertised of their coming, came forward to the third Chamber to meet them, where he received them with Expressions of great Affection, and Promises and Proffers of Services, and from thence conducted them to his own Chamber.

BEING all three sate, the Cardinal (who was the most experienced and greatest Statesman of his Time) discoursed with them of divers Affairs of great Importance, and they endeavoured to explain to his Eminence what was before his Sentiment, that it very much imported the two Crowns of *France* and *Portugal* to be united by an indissoluble League, considering that it was the chief and principal End and Aim of the House of *Austria*, (whose Branches were spread over almost all *Europe*) not only to establish the greatest, but the sole and only Monarchy of *Christendom*: That to effect those ambitious Desires, they had never made scruple to usurp and seize upon Kingdoms and States, upon the least Pretences imaginable, as had appeared in the Kingdoms of *Naples*, *Sicily*, *Navarre*, the Dutchy of *Milan*, and lately several States in *Germany*, and seizing upon the *Valtoline*, whereby they had a Passage open to lead an Army of *Germans* into *Italy* at Pleasure.

THAT considering the vast Power and Interest that this Family had, not only in *Europe*, but also in *America*, it could not but be confessed that they had a large Foundation of their imaginary universal Monarchy; but that nothing gave them so great Hopes, as the Possession of *Portugal*.

FOR by the Addition of that Kingdom to the Crown of *Castile*, they became absolute Masters not only of all *Spain*, but of all the *East-Indies*, of all the Eastern Trade of *Ethiopia*, *Persia*, *Arabia*, *China*, *Japan*, and all that incredible Wealth that was raised out of the *Portuguese* Traffic; whereby the *Austrian* Greatness (if not their Monarchy) was principally sustained: That therefore it concerned all States whatsoever, not only to put a Stop to the raving Tyranny of this devouring Monster, but to suppress and lessen his Power by all Means possible.

THAT to do this, none was more concerned, or more able, than the Kingdom of *France* united with that of *Portugal*: That this having been called the right Arm (as *Catalonia* the Left) of that great *Austrian Colossus*, now both being separated from it, and united to *France*, will be able to do greater Service against it, than they were ever forced to do for it, not only by assaulting the *Spaniard* within his own Doors, but by intercepting the *Plate-Fleet*; which in its Return from the *West-Indies*, it being necessarily forced to pass by the *Tercera* Islands, must run in Danger of the *Portuguese* Fleet, or be forced to be at the Charge of an extraordinary Convoy.

THESE were the Sum of the Ambassadors Discourses to the Cardinal: In answer to which, his Eminence made Offer, not only of all the Assistance of the most Christian King his Master, but that he would disburse himself for the Service of the King of *Portugal*, promising that he would presently send thither a Fleet of twenty Sail, with his Nephew, Admiral and Ambassador Extraordinary.

THIS Treatment thus ended, the Ambassadors took their Leaves, his Eminence waiting upon them as far as the Stairs; which when they endeavoured to hinder, he replied, That the Ambassadors of the King of *Portugal* were to be treated with as much Respect as those of the Emperor or Pope.

FEW Days after, a *Junto* of the King of *France*'s Council, were appointed to treat with the Ambassadors in the House of the Lord High Chancellor of the Kingdom, where a Peace was fully concluded between the two Kingdoms of *France* and *Portugal*.

OTHER Ambassadors were (about the same Time that the afore-mentioned were sent into *France*) dispatched into *England*; for it very much concerned the Kingdom of *Portugal* to maintain a good Correspondence with the Crown of *England*, both in regard of the Navigation and Commerce of both States, and also the better to break that Amity and good Understanding which was now held between the Crown of *Spain* and that State. Hither therefore were sent Don *Antonio D'Almado*, and Don *Francisco D'Averado Leilon*, both Persons of exquisite Parts; who, notwithstanding that the *Dunkirkers* chased them, arrived safe in *England*.

AND for all the sturdy Endeavours of the *Spanish* Ambassadors, they were received on Shore with Abundance of Respect: But his Majesty of *England* would not give them Audience, or accept of the Embassy from the King of *Portugal*; so tender was he of his Honour and Conscience, till Don *Antonio de Sosa*, their Secretary, had drawn up a Paper, to satisfy him of the Right and Title of the Duke of *Braganza* to the Crown of *Portugal*. The Contents of which was:

Upon the Death of King Henry *the Cardinal, without Issue, many pretended (together with the* Infanta Donna Katherina *Dutchess of* Braganza, *and Grandmother to this present King) to the Crown of* Portugal; *but all their Pretences wanting Foundation, soon fell, except that of* Philip *the Second, King of* Spain, *who maintained his by Force.*

King Henry *was Uncle, equally near to both, but with this Difference*; Katherine *was the Daughter of a Son named* Edward, *and* Philip *was the Son of a Daughter named* Isabella, *Brother and Sister to King* Henry.

King Philip *pleaded, That he being in equal Degree with* Katherine, *was to be preferred for his Sex.*

Katherine *replied, That the Constitution of that Kingdom allowing Females to succeed, and with all the Benefit of Representation in all Inheritances, she representing* Edward, *must exclude* Philip *by the very same Right that her Father (if he were living) would exclude* Philip's *Mother.*

This Conclusion is infallible in Jure: *Whereto* Philip *answered, That Succession of Kingdoms descending* Jure Sanguinis, *there was allowed no Representation.*

Katherine *destroyed that Foundation, alledging, That the Succession by the Death of the last King, was derived* Jure Hæreditatis, & non Sanguinis, *because the Succession of Kingdoms was to be regulated by that antient Way, whereby all Things descended by Inheritance; the other Way of Succession being not known until later Ages, nor ever practised either in* Spain *or* Portugal *in such Cases.*

Briefly, in Behalf of Katherine *it was urged, (which by the* Castilians *can never be denied, or answered) That she was no Stranger, but a Native of the Kingdom, to whom alone (according to the Laws of* Lamego) *the Crown of* Portugal *can appertain.*

THE King having perused and deliberated upon this Paper, gave immediate Order they should be presently conducted to *London*, which was done with all convenient Solemnity, and they lodged in a Palace ready prepared for them: Soon after with great Ceremony they received Audience of his Majesty, in a fair and stately Hall prepared for that Purpose, where his Majesty sat upon a Throne raised two Steps; and at the

the Entrance off the Ambaſſadors he pulled of his Hat, nor would be covered till they were ſo too.

To the Propoſitions made in the Speech of Don *Antonio D'Almoda*, concerning a Peace between *Portugal* and *England*, his Majeſty replied, That he ſhould be very glad if an Expedient might be found out to renew the antient Leagues of Friendſhip between the two Crowns, without the breaking with *Spain*.

Some few Days after, the Ambaſſadors were conducted to give a Viſit to the Queen of *England*, who ſat in a Chair of State ready to entertain them: When they came into her Preſence, ſhe roſe out of the Chair, and came as far as the Carpeting, making low Reverence as the Ambaſſadors bowed; when they came near, her Majeſty made them be covered, but afterwards they ſpoke with their Hats off. In Concluſion the Queen told them, that ſhe much deſired to hold Correſpondence with her Majeſty of *Portugal*.

In fine, on the thirteenth of *June* 1641, a Peace was abſolutely concluded with the *Portugueſe*, notwithſtanding the earneſt Endeavours of Don *Alonzo Cardenas*, Legier Ambaſſador for *Spain*, who by Gifts and Promiſes, even as far as the Reſtitution of the *Palatinate*, endeavoured to hinder it.

The Ambaſſadors that were ſent to the King of *Denmark* (notwithſtanding the great Traffic and Commerce that had formerly been held between that Kingdom and *Portugal*) were not, by reaſon of the great Intereſt the Houſe of *Auſtria* had with thoſe Kings, received; yet the King gave all poſſible Reſpect otherwiſe to them. From thence they paſſed into *Sweden*, and were magnificently entertained at the young Queen's Court at *Stockholm*, where a League was ſoon concluded, and the Ambaſſadors diſmiſſed, according to the Cuſtom of that Nation, with gold Chains, and the Queen's Portraiture in a Medal of Gold.

The Ambaſſador Don *Triſtano de Mendoza Hurtada*, that was ſent to the States of the *United Provinces*, was received with the like Magnificence and ſeeming Affection, and a Truce concluded with the Kingdom of *Portugal* for ten Years; for a Peace the States would not aſſent to, becauſe they having conquered many Places in *Braſil*, *Angola*, &c. which belonged to the Crown and Kingdom of *Portugal*, could not make Reſtitution of them, by reaſon they now belonged to the *Weſt-India* Company; nor could the King of *Portugal* allow the Conqueſt, as Things of Right belonging to his Crown, and depending on it.

But now we come to treat of a more ſolemn Embaſſy, to wit, that to the Pope: Long was it debated in the Aſſembly of Eſtates, whether an Ambaſſador ſhould be ſent to *Rome* immediately, or a more opportune Conjuncture of Time be expected. Some were of the Opinion, that the ſending an Ambaſſador without further Delay, would be a Teſtification of their Duty, and incline the Pope's Holineſs to acknowledge Don *John* the lawful Heir, and rightful King of *Portugal*, which would extremely further and advance the Affairs of the Kingdom.

But others there were who conceived thoſe Things rather deſirable than feaſible, and were of the Opinion they ſhould rather ſtay till a fitter Opportunity; alledging, That the King of *Spain*'s preſent Power at *Rome*, might probably oppoſe the Reception of their Ambaſſador: That altho' the Pope never was in his Heart a *Spaniard*, yet he would never yield to ſhew himſelf an Enemy to the Catholick King: That the *Spaniards* cunningly fomenting the Opinion which all the World had entertained, that his Holineſs did in all Things favour the *French* Intereſt, would, from ſuch a Reception, draw as much as ever they could ask or deſire. That for this Cauſe the Pope (that he might not ſeem their Enemy) had always granted them whatever they deſired; that therefore they thought it convenient firſt to ſound his Holineſs, before they run the Hazard of the Diſgrace and Affront which might fall upon his Majeſty, and the whole Kingdom; that in caſe the Pope ſhould decline the Reception of the Ambaſſador, to whom could they repair or appeal to vindicate the Injury done to the Crown? That many Popes had been ſo faſcinated to the Intereſt of their own Family, that the World had very great Occaſion to believe, that their Deſigns tended rather to what was beſt for themſelves, than to what was beſt indeed: That the *Portugal* Nation had as much Reaſon to diſtruſt the See of *Rome* as any, whilſt they had to their Coſt had Examples how they only purſued their own Ends; as particularly *Gregory* the Thirteenth, who at firſt ſeemed ſo affectionate to the Kingdom of *Portugal*, that he employed the utmoſt of his Power for the Intereſt of his own Family, and approved of all that King had done: That there were none who had more to give, or at leaſt who had more to promiſe, than the Catholick King, ſo that in any Buſineſs of Competition he muſt neceſſarily gain the better.

But notwithſtanding all theſe Arguments to the contrary, upon the Promiſes of the Kings of *France*, to be a Mediator at the See of *Rome* for the Reception of their Ambaſſadors, by the Suffrage of ſome few Voices to make the major Part, it was concluded, that Ambaſſadors ſhould immediately be ſent to *Rome*.

And in purſuance of this Vote, the King immediately made choice of two reverend and able Perſons, to wit, *Michael de Portogallo*, Son to the Count *Vimioſo* of the Blood Royal, Biſhop of *Lamego*, and Don *Patablcone Rodriguez*, Biſhop of *Eluas*: No ſooner was the News arrived at *Rome* of their being landed in *Italy*, but the *Spaniards* in *Rome* muſtered themſelves together, with Reſolution either to oppoſe their Entrance, or at leaſt hinder their Reception; whilſt on the other Side the *French*, *Portugueſe*, and *Catalonians*, aſſembled themſelves together, reſolving to hazard their deareſt Blood in their Cauſe.

His Holineſs ſeeing theſe Preparations on both Sides, feared leſt his Country ſhould be made the Seat of a petty War; and conſidering that in any Caſe the Diſhonour would accrue to him, if whilſt under his Command and Protection, the Perſon of an Ambaſſador ſhould be violated, ſtrictly commanded all his Guards to take ſpecial Care to prevent the Violences intended.

The *Spaniards* by this Order being hindered from what they purpoſed, their Ambaſſadors openly proteſted, that if his Holineſs did receive the *Portugueſe* Ambaſſadors, they would immediately leave *Rome*. But notwithſtanding theſe Proteſtations, and all other Oppoſition they could poſſibly make, in *November* 1641 the *Portugal* Ambaſſadors, being met by divers Cardinals, Princes, and Cavaliers, well armed, entered into *Rome*, and were conducted to the Palace of the *French* Ambaſſador, who received them with all Reſpect poſſible, ſtill giving them the Precedence.

Hereupon ſeveral Manifeſto's were ſcattered abroad by the two *Spaniſh* Ambaſſadors, the Marquis *De los Veles*, and Don *John Chumarrero*, labouring to prove that his Holineſs ought not to receive the Ambaſſadors of the Duke of *Braganza*, as they ſtiled him: Firſt becauſe he was a Tyrant, and Uſurper of that Kingdom, which

had

had been in the quiet Poſſeſſion of the Catholick King theſe ſixty Years. Secondly, becauſe he was a Rebel, and a perjured Perſon, having ſworn Allegiance to the Catholick King. Thirdly, that the Reception of theſe Ambaſſadors would animate other Subjects of the Catholick King to Rebellion.

But whilſt the *Spaniſh* Ambaſſadors were violently ſhooting ſuch Paper Bullets, the *Portugueſe* uſed all their Endeavours, both by themſelves and the *French* Ambaſſador, (who had expreſs Order from the moſt Chriſtian King his Maſter to that Purpoſe,) to prevail with the Pope to give them Audience, and admit their Embaſſy: But his Holineſs was ſo fearful to diſpleaſe the *Spaniard*, leſt he ſhould afterwards take Occaſion to revenge himſelf upon his Nephews, that he utterly declined their Reception; yet not out of regard to any of the *Spaniards* Allegations, but upon Pretence that certain of the Church Rites had been violated in *Portugal*; the Archbiſhop of *Braga*, and other eccleſiaſtical Perſons, being kept in Durance, though it was for very good Reaſons, as hereafter ſhall appear.

Yet the *Spaniards* were not content with this Reſolution of his Holineſs, but (whilſt the *Portugueſe* were endeavouring to prove their Cauſe, by both Political and Legal Declarations, Allegations, and Arguments,) fearing leſt the Pope might chance to alter his Mind, reſolved to make a quick Diſpatch of the Buſineſs; and to that Purpoſe two hundred Banditti were hired, to ſeize upon the Biſhop of *Lamego*, and carry him to *Naples*, as the Prince of *Sans* had been before ſerved by them, and there put to Death.

But this Deſign themſelves at Length could not agree upon; for the Marquis *De Los Velos* thought it would be better, and leſs dangerous, to give the *Portugueſe* a publick Affront in the City; which was concluded to be put in Effect, and to that Purpoſe it was communicated to the reſt of the Nation, (whereof, upon ſeveral Occaſions, there are always many in *Rome*,) who aſſembled together well armed, at the Ambaſſador's Palace; and ſo great is the Power of Revenge, that to the End they might the better effect their Deſign, and yet not appear as Soldiers, though there were many Gentlemen of Quality amongſt them, they condeſcended to go under the Name of Footmen to the Marquis.

The Pope's Holineſs hearing of the great Preparations of the *Spaniards*, ſent to them, to let them know, that he could not but be very much diſtaſted, to ſee ſuch Diſorders attempted in a peaceable City; and therefore deſiring them, for his Honour's Sake, to deſiſt; and withal ſent a a Meſſenger to the Biſhop of *Lamego*, to aſſure him that he need not fear any Thing, for upon the Word of his Holineſs, he ſhould walk the Streets undiſturbed.

But do the Pope what he could, either by Threats, Deſires, or Perſuations, the *Spaniards* were reſolved to proſecute their Deſign; which they put in Execution to their own Coſt, on the Twentieth of *Auguſt*, 1642. On which Day the Biſhop of *Lamego* going to viſit the *French* Ambaſſador, one of his Retinue obſerved, that he was dog'd by a *Spaniſh* Spy; whereupon a Counterſpy was ſent to the Marquis's, to bring Intelligence what they were doing there; who brought Word to the *French* Ambaſſador's, that there was great Preparations of Coaches and Men; whereupon the *French*, *Portugueſe*, and *Catalonians*, aſſembled, and armed themſelves with Piſtols and Fireloks, to convoy home the Biſhop.

By the Way they were met by the *Spaniſh* Ambaſſador, accompanied with about eight Coaches, full of Captains and Officers come from *Naples*, and guarded with about ſixty Footmen, beſides divers others of that Nation. No ſooner came they in Sight of the Biſhop's Coach, but they cried aloud, *That they ſhould ſtop for the Ambaſſador of* Spain; but the *Portugueſe* driving on, anſwered, *That they ſhould ſtop themſelves.*

Hereupon both Sides, with their Swords drawn, leap'd out of the Coaches, and making a Stand, one Gun was firſt fired by the *Spaniards* Side, and immediately ſeconded with a brave Volley on both Sides. They then fell in to cloſe Quarter, the Biſhop's Side ſoon getting the better of it: Yet there was ſlain a Knight of *Malta*, an *Italian*, and a *French* and *Portugal* Page; but on the *Spaniſh* Marquis's Side, there were eight killed upon the Place, and above twenty wounded. The Marquis, leaving his Coach-Horſes dead, eſcaped out of the Back of the Coach, which ſtood upon the Place till next Day, and got into the next Shop, without his Hat, and trembling for Fear, from whence he was carried to the *Spaniſh* Cardinal *Albornoz*'s Palace. The *Portugueſe* Ambaſſador returned firſt to the *French* Palace, and from thence went ſafely home.

His Holineſs the Pope was extremely perplexed at theſe Diſturbances, and therefore, to prevent the like for the future, commanded a Guard of Soldiers to be put upon the Houſes, both of the Biſhop and the Marquis. But ſhortly after, when the Biſhop of *Lamego* had again preſſed the Pope, by a large Memorial of the Reaſons why he ſhould be received, and was abſolutely refuſed, he was by his Maſter, the King of *Portugal*, called home.

Whilst theſe Things were acting abroad, the *Caſtilians* began to make continual Inroads into the Borders of *Portugal*, which made King *John* look more narrowly into the Defence of his Kingdom, fortify all the Frontiers, and train up his Subjects to military Exerciſes.

The *Spaniards*, in one Inroad which they made into *Portugal*; laid waſte all before them, ſparing neither Sex nor Age whereſoever they came; which made the *Portugueſe*, in Revenge, commit the like Outrages, in an Inroad they made into *Galicia*.

These were publick Enmities, and therefore more eaſy to be oppoſed; but there was a private Serpent that lay lurking at Home, which was ſo much the likelier to do Miſchief, by how much it was more ſecretly hidden. Some few there were who thought themſelves ſo highly obliged to the Catholick King, as to endeavour the re-uniting of the Crown of *Portugal* to his vaſt Dominions, and again inſlave their Country to Foreigners.

The Principal of theſe was the Archbiſhop of *Braga*, always a great Creature and Favourite of the Count *Olivarez*; who had, at the Beginning of the Revolt, ſhew'd himſelf ſo oppoſite to the Freedom of his Country, that many Gentlemen were once reſolved to make him ſuffer the ſame Fate with *Vaſconſellos* the Secretary; nor had he ceaſed ever ſince to ſhew viſible Signs of his Diſcontentment at the Government.

In this Archbiſhop's Head was the whole Conſpiracy firſt hatch'd, and by him communicated to Don *Lewis de Meneſes*, Marquis of *Villa Reale*, and the Duke of *Camigna* his Son; two Perſons ſufficiently ambitious, and both diſcontented, as not thinking themſelves ſufficiently rewarded according to their Merit: Theſe the Archbiſhop tampered with, perſuading them, That it was a low and unworthy Thing, much beneath their Birth and Greatneſs, to ſuffer themſelves to be ſubject to a Fellow-Subject; that it would be much

much more noble and generous in them, to return to their Allegiance to the King of *Spain* their antient Sovereign, who was able to beſtow more upon a Perſon deſerving in one Day, than the Duke of *Braganza* could in a hundred Years. Theſe and few other Arguments were ſufficient to draw thoſe, who before, out of their Envy to the Houſe of *Braganza*, were inclinable to a Change.

THESE made ſure, the Archbiſhop next draws into this Plot a Gentleman of noble Blood, named, Don *Auguſtine Manuele*, a Man of excellent Parts, but ſomewhat neceſſitated, nor had ever been looked upon, or put into any Employment, which without any other Incentives, were Motives ſufficient to move a Man to any deſperate Deſign. Next him was added to this Conſpiracy, *Pietro Baeza*, a lately converted *Jew*, whom the *Portugueſe* call New Chriſtians: He was famous for nothing, but his vaſt Riches; being a great Creature of the Count *Olivarez*, whoſe Favour, he uſed often to ſay, would one Day advance him to high Honour, or to a high Pair of Gallows, which laſt proved very true.

MANY private Meetings had theſe, and ſome few other Conſpirators, where they debated to bring their Deſigns to effect: Some were of Opinion that before they could bring it to Perfection, more ſhould be acquainted with it, for it was impoſſible that ſo few ſhould ever be able to compaſs it: But in this Courſe there aroſe many Fears and Doubts, leſt too many being acquainted with it, ſome ſhould diſcover it, as had often happened in Deſigns of that high Nature: Yet at length it was found neceſſary to draw more into the Plot, for whilſt they were ſo few, the Buſineſs only reſted in Imagination, but could never be put in Execution.

HAVING therefore added ſome more to the Number, their next Debates were of the Manner how to bring it to Effect; ſome adviſed that a Power of the Catholick King's was to be got in a Readineſs, but they then thought that the King of *Portugal* would raiſe as great a Force, and ſo prevent a ſudden Invaſion: Yet in anſwer to that Objection, it was by ſome alledged, that the *Spaniard* by way of Intelligence might be let in, which ſeemed again as difficult, the Militia being in the Hands of Perſons moſt loyal and truſty to the King: Others propoſed, that the only Way to effect it was by ſudden and violent making away of the King; but this Advice was oppoſed by moſt, who inclined to a Mediocrity, and would rather have found out a Way to make his Majeſty renounce his own Right and Title to the Crown, and retire himſelf from the Dangers which ſhould be preſented unto him.

BUT whilſt they thus wavered in Opinions, and inclined to that Moderation, which is the Ruin of all Deſigns of this Nature, they gave the King Time and Occaſion to ſearch out their Plots; for his Majeſty having always had a ſuſpicious Eye upon the Archbiſhop of *Braga*, and the Marquiſs of *Villa Real*, and having received now private Notice, that they had ſundry Meetings, and were obſerved daily to converſe with Perſons as diſcontented as themſelves, endeavoured by all Means poſſible to know the Depth of their Counſel, and at length intercepted ſome of their Letters to *Madrid*, which diſcovered not only the whole Plot, but even the Names of all the Conſpirators.

THE Act of holding Correſpondence with the *Spaniard* was Treaſon in itſelf, ſufficient to take away their Lives, being contrary to his Majeſty's expreſs Command; it being to this Intent, made it but ſo much the more heinous: His Majeſty therefore, not knowing how far it might have proceeded, made no Delays, but preſently by the Sound of Drum and Trumpet (as the Cuſtom is) cauſed to be proclaimed, That he intended to go forth of the City; upon which all the Nobles and Gentry, according to the uſual Manner, aſſembled at the Palace, to accompany his Majeſty; who when he ſaw them all ready, commanded firſt that a Council of State ſhould be called; which was done, many of the Conſpirators being aſſiſtant in it, who being ſate, his Majeſty without any Noiſe cauſed them to be arreſted one by one, which without the taking of this Courſe, he could never have effected; for if the Conſpiracy had been detected before their Perſons had been ſeized, they had either been torn in Pieces by the Fury of the People, or elſe ſome of them had eſcaped.

IT was very ſtrange that of all the Plotters in this Conſpiracy, not one ſhould, either by Accident, or otherwiſe, eſcape; for the Perſons of theſe now taken, were no ſooner impriſoned, but his Majeſty publiſhed a Proclamation, declaring a free Pardon to all the Accomplices in this Conſpiracy, that ſhould within four Days come and beg it, acknowledging their Fault; but the King's Diligence had been ſuch before, that there was not one left to accept of this Grace.

SHORTLY after, thoſe who had been taken, were arraigned according to Law, found guilty of High Treaſon, and in Manner following executed.

ON the laſt Day of *Auguſt*, 1641, the Marquiſs of *Villa Reale*, the Duke of *Camigna*, his Son, the Count *De Armamac*, and Don *Auguſtine Manuele*, were led along a Gallery to a Scaffold erected for the Purpoſe, with two Stories, on the uppermoſt of which ſtood two Chairs, on the next one, and on the Scaffold itſelf the fourth.

THE firſt that was conducted forth to Execution, was the Marquiſs of *Villa Reale*, who was clothed in a long black Bayes Cloak, and his Servants attending him in Mourning; being mounted to the uppermoſt Part of the Scaffold, he prayed for a good Space upon his Knees, and then riſing up, asked, If there were no Hopes of Pardon? Which made the People with one Voice cry out, *No, let him die, let him die for a Traytor.*

THE next Part of the Ceremony of his Execution, was the Proclamation, which according to the uſual Manner was made by the Executioner, in theſe Words; *This is the Juſtice that the King, our Sovereign Lord, commands to be executed upon the Perſon of Don* Lewis de Meneſes, *ſome time Marquiſs of* Villa Reale, *that his Throat be cut, as a Traytor to his Majeſty, the Nobility and People of this Kingdom, that for his Crime his Goods be confiſcated, and his Memory baniſhed out of the World.* Whereat all the People cried out, *Juſtice, Juſtice.*

THE Marquiſs thereupon ſeeing no Hopes of any Reprieve, with a ſober and becoming Gravity demanded Pardon of all the Spectators, deſiring them to aſſiſt him with their Prayers to God for the Pardon of this, and all his other Sins; then turning to a Father Jeſuit his Confeſſor, he prayed him in his Behalf to preſent himſelf at his Majeſty's Feet, and beſeech him, out of his wonted Goodneſs, to forgive him that heinous Offence committed againſt him and the whole Kingdom.

HAVING ended this Speech, he very patiently sat down in the Chair, and the Executioner having tied his Arms and Legs, to the Arms and Legs of the Chair, he leaned his Neck over the back of the Chair, and the Executioner with his Knife cut his Throat, covering him afterwards with a black Scarf.

IN the same Manner his Son the Duke of *Camigna* came to the Scaffold, his Servants all attending him in Mourning; as he came to his Father's Corps he kneeled down, and several Times kissed his Feet, begging of the People the Suffrage of one *Pater noster* for his Father's Soul; then after some Prayers, and Proclamation made by the Executioner, he received the same Punishment.

THE next that suffered was the Count of *Armamac*, in the Chair seated upon the lower Story; and after him Don *Augustin Manuel*, upon the Scaffold itself. The Judges would have had all their Necks cut behind, but his Majesty would not consent thereto, as a Punishment too ignominous for Persons of their Quality.

THE same Day *Pietro de Baeza*, and *Melchior Correa de Franca*, were drawn at a Horse Tail to an extraordinary high Gallows, and there hanged; whilst *Diego de Brito Nabo*, and *Antonio Valente*, were executed upon a lower; the Quarters of these four were set up at the Gates of the City, and their Heads placed upon several Frontier Towns.

IN the Month of *September* following, for the same Offence *Antonio*, *Cogamine*, and *Antonio Correa*, were likewise executed; the first of which during the whole Time of his Imprisonment, was an Example of Penitence, feeding only upon Bread and Water, and whipping himself very often, with continual Prayers to God for Pardon of that, and all his other Sins.

AS for the Archbishop of *Braga*, and the Bishops of *Martiria* and *Malacca*, and Fryar *Emanuel de Macedo*, though they were the Persons that had the greatest Hand in the Conspiracy; yet in regard they were ecclesiastical Persons, they suffered not Death, according to their Deserts, but was kept in Prison, till the Pope's Pleasure were known concerning them.

HERE must not be forgot a great Example of Humility and Repentance in the Archbishop of *Braga*, not only in his Life-time (when he often writ to the King, that he might suffer, and others be spared, who were rather drawn in, in Compliance and Obedience to him, than out of any Ill-will to the King and Kingdom) but also at his Death (which happened about three Years after his Imprisonment) when he gave Order that as soon as he was dead, his last Will and Testament should be carried to the King, wherein he humbly intreated his Majesty to pardon the Treason committed against him, and his Native Country, and that he would permit his Body to be buried without the Church of any Parish in *Lisbon*, and that without any Inscription or Tomb-Stone, that there might remain no Memory of a Man who had been a Traytor to his King and Country.

THIS exemplary Punishment and rigorous Execution of Justice upon the fore-mentioned traiterous Delinquents, established the King in his Kingdom, struck a Terror into his Enemies, increased his Subjects Love and Care of him, and engaged them more diligently to watch his royal Family, and the Kingdom's Safety.

BUT in the mean Time daily Incursions were made upon the Frontiers between the *Castilians* and *Portuguese*, with the same Violence, Cruelty, and Animosity, as formerly.

BUT now we come to relate the most shameful Piece of Treachery ever yet heard of, acted upon that most noble and gallant Prince the Infante Don *Duarte*, Brother to the King of *Portugal*, who had served the Emperor in his Wars, with much Gallantry, and no less Success, long before his Brother Don *John* had any Thoughts of a Crown; nor did he shew any Endeavours to desert the Emperor's Service, after the News arrived of the Revolt of *Portugal*; but seemed resolved to continue there, till he was betrayed by *Francisco de Mello* a *Portuguese*, at that Time Ambassador to the Catholick King in the Imperial Court.

THIS *Mello*, notwithstanding he was bound by many strong Obligations to the House of *Braganza*, yet like an ungrateful Villian, having Opportunity offered, now resolves to build his Fortunes upon their Ruin, or at least Displeasure; he therefore earnestly solicits the Emperor to seize upon the Person of Don *Duarte*, and deliver him up to the King of *Spain*; alledging, of what great Concernment the securing of his Person would be to the Catholick King; that it much behoved his Imperial Majesty to shew his Affection to his Brother the Catholick King in this Particular, which would not only prove of Interest to *Spain*, but the whole House of *Austria*: That this Prince was the only Prop of the House of *Braganza*; that this was the only Means God had left in the Hands of the House of *Austria* to recover the Kingdom of *Portugal*; that it would be a great Error both in Prudence and Policy to let slip so fair an Occasion, for that if he should escape out of their Hands, and get to the Assistance of his Brother, both his personal Valour, and Experience in warlike Affairs, would very much infest the Catholick King.

THE Emperor was not only not perswaded by this Discourse of *Mello*'s, but extremely offended at it; returning him in Answer, that he did abhor and detest so great a Breach of publick Faith, and Violation of all Laws of Hospitality; that it would be both against the Liberty of the Empire, and against his own Honour, to imprison a Prince who had committed no Fault to the Empire, but rather had laid innumerable Obligations both upon it, and himself.

NOR was the Detestation of the Arch-Duke *Leopold* to an Act so foul and shameful, less than that of his Brother's the Emperor; notwithstanding all which, *Mello* was not at all discouraged, but still prosecutes his villainous Design, by corrupting with great Sums of Money the Count of *Tratsmandorf*, and several other Pensioners of the Crown of *Spain*; but they were soon weary of so base and shameful an Employment; which made *Mello* think of a more cunning Artifice, which was to perswade the Emperor to hearken to the Allurements of one *Diego di Quiroga*, who of a Soldier was turned Monk, and was now Confessor to the Empress: This Father, who had often been called to give his Judgment in Affairs of State, endeavoured by all Means possible to perswade the Emperor that he might not only with a good Conscience secure the Infante, but that according to the best Rules of Interest of State, he ought to do it.

HIS Imperial Majesty, notwithstanding all these Perswasions, was very much unsatisfied in the Action, and once fully resolved not to do it; but at length, overcome by *Mello*'s Importunities, and the ghostly Perswasions of *Quiroga*, he was as it were constrained to alter his Resolution, and to give Order to Don *Lewis Gonzaga*, to go to the Prince's Quarters at *Leipen*, and summon him to *Ratisbone*.

IN

In the mean time, to endeavour to prevent all ill Impreſſions, which an Action ſo heinouſly wicked might ſtrike into all Boſoms that had either Honour and Honeſty; it was given out abroad, that the Infante Don *Duarte* was ſecretly fled for ſome Miſdemeanor from *Leipen*, (when he, confident of his own Innocency, was in his Journey to *Ratisbone*, according to the Summons;) and thereupon a Propoſal made of 16000 Crowns, as a Reward to any Man that could bring him either dead or alive; ſo that the Prince being ignorant of any ſuch Thing, very hardly eſcaped their Hands, who out of Hopes of the Money, had gone in Search of him; but miſſing them, he came to *Ratisbone*; where he was no ſooner arrived, but, without any Reaſon given, he was caſt into a common Goal, and all his Servants impriſoned.

Don *Franciſco de Mello* having thus far brought his Deſires to Effect, ſtops not here, but afreſh ſolicits the Emperor, that the Prince might be delivered into the *Spaniards* Hands, and ſent Priſoner to *Milan*; but inſtead of aſſenting to this, he ſends a Meſſenger to the Infante, aſſuring him upon his Word, that he would not deliver him into the Hands of the *Spaniards*, but would ſpeedily procure his Liberty and Intranchiſement.

Yet notwithſtanding theſe fair Promiſes of the Emperor, Don *Duarte*'s ill Uſage in Priſon daily and hourly increaſed, nor could he by any Means poſſible get Audience of the Emperor; not without any Reaſon, for, *No Face is more terrible to the Offender than the Face offended*; which made the Prince make this Proteſtation, calling God and Man to witneſs of the Injury done him by the Emperor, to whom he was neither ſubject by Obligation, nor Birth; that when his Brother was made King of *Portugal*, he was in the Emperor's Service, and wholly ignorant of any Deſign of his Brother's; that if the King of *Spain* were offended, he ſhould revenge himſelf upon the Perſon offending; that the Buſineſs no way concerned the Emperor, &c.

All theſe Allegations the Emperor confeſſed to be true, by a Meſſenger ſent to the Infante in Priſon, again aſſuring him that he would not deliver him up to his Enemies, but that he could not releaſe him for ſome Reaſon of State: Which made Don *Franciſco de Soſa Contigno*, Ambaſſador Extraordinary from *Portugal* to the King of *Sweden*, in the Name of the King his Maſter, repreſent at large to the Diet at *Ratiſbon* the whole Proceedings, requiring Juſtice and Liberty for the Infante: But it is in vain to plead againſt Intereſt; all the Manifeſto's, Proteſtations, Petitions, and Intereſſions made, produced no other Effect than the Removal of the Infante from Place to Place, that ſtill, as he was farther off, he might have the harder Uſage.

But hitherto the Emperor ſeemed immoveable in his Reſolution of not delivering up the Infante into the Hands of the *Spaniards*, till tempted with what made *Judas* betray his Maſter, and our bleſſed Saviour, to Death, Money, he conſented to the Breach of his Reſolve; for upon the Promiſe of 40000 Crowns (contrary to the Immunities of the Empire, to the Privileges of free Princes, to the Law of Nations, and to his Word and Promiſe ſo often reiterated) he conſented that that noble and innocent Prince ſhould be ſent whither the Catholick King ſhould think fit; to away he was hurried towards the Caſtle of *Milan*, there to remain a Priſoner.

By the Way, as he entered into the *Spaniſh* Territories, he was received by the Count *de Siruela*, Governor of that Dukedom, where the Emperor's Commiſſary took Leave to return; to whom Don *Duarte* openly ſaid, *Tell thy Maſter that I am more ſorry I have ſerved ſo unworthy a Prince, than to ſee myſelf ſold a Priſoner into the Hands of my Enemies; but the juſt Judge of the World will one Day ſuffer the like Dealing towards his Children, who are no more privileged for being of the Houſe of* Auſtria, *than myſelf that am of the Blood Royal of* Portugal; *and Poſterity will judge of him and me.*

The Emperor had given Inſtruction to thoſe that convoyed the Infante, that in caſe their Priſoner made an Attempt to eſcape, they ſhould kill him upon the Place: Being arrived in *Milan* he was clapped in the common Gate, with all the Rogues and Banditti, having a Guard lodged with him in his Chamber, ſo rude that they would ſcarce admit him to take his Reſt.

Thus was this generous, but unfortunate Prince, rewarded; for having, at his own proper Coſt and Charges, ſerved the Empire eight Years; for having always, and upon all Occaſions, ventured his Life with the moſt Daring, and yet expecting no other Pay but Thanks, nor other Recompence but Honour.

King *John* was extremely perplexed at this inhuman Barbariſm uſed to his Brother, which he vowed fully to revenge with Arms; but he could for the preſent do it no otherwiſe than defenſively, by reaſon of the continual Inroads the *Caſtilians* made into *Portugal*.

About the Beginning of the Year 1642, (notwithſtanding the Truce that had been concluded between *Portugal* and *Holland*, and that a great Fleet of *Hollanders* had been ſent to aſſiſt the *Portugueſe* againſt the *Spaniard*) there paſſed very high Acts of Hoſtility between the two Nations in *Africa* and *America*, beyond the Line; for the *Hollanders* ſeeing the Diſ-union of *Portugal* from *Caſtile*, made all Speed poſſible to perfect the Conqueſt of thoſe Parts before a perfect Peace ſhould be concluded with *Portugal*, that ſo in the Treaty they might pretend Reaſon, that all Things ſhould continue in the State they were then found.

To this Purpoſe, that is, the expediting their Conqueſt, the *Hollanders* treacherouſly whilſt there was all quiet and peaceable Commerce held between the two Nations in the Kingdom of *Angola*, ſurprized the *Portugueſe* that were Governors of the Place, killed divers, and robbed all of the great Wealth they there found; of which Perfidiouſneſs, as alſo of the barbarous Uſage of the Priſoners there taken, Complaints were made to the States General at the *Hague*, but no Redreſs granted; nor was the King of *Portugal* of Ability to force it.

In the mean time the Affairs in *Portugal* were a little diſcompoſed by the general Diſcontent and Diſtaſte taken at the Secretary of State Don *Francisco de Lucena*: This Man had lived a long Time in the Court of *Spain*, till he was by *Olivares* made Under-Secretary to *Vaſconſellos*; his Readineſs to proclaim King *John*, and his Abilities in the Place, made the King continue him in it, repoſing in him ſo great a Confidence, that though ſome had advertiſed his Majeſty that he kept Correſpondence with the Court at *Madrid*, yet the King would not ſuſpect him, nor permit him to be brought to a Trial.

But about the middle of the Year 1643, the urgent Affairs of the Kingdom requiring a Convention of the three Eſtates, they openly refuſed all Acts that ſhould paſs the Hands of Secretary *Lucena*, poſitively telling his Majeſty, that unleſs he were brought to a Trial, no Act ſhould paſs in

the

the Aſſembly of Eſtates, nor any farther Proceedings be made.

His Majeſty was very much grieved hereat, yet prudently reſolved to give his Subjects Satisfaction, by delivering up his Secretary to Juſtice; yet reſolving he ſhould have a fair Trial, and to that Purpoſe ſitting himſelf to hear the Witneſſes examined. Whilſt Proceſs was framed againſt the Secretary, ſome ſecret Advice came to his Majeſty, which cauſed the Impriſonment of the Brother, and three Servants of the Secretary, together with an *Engliſh* Monk, and a Cavalier of the Habit: Not long after the Secretary was arraigned and condemned for betraying his Truth, in holding Correſpondence with the Enemy, and in neglecting timely to advertiſe the Infante *Duarte* to retire out of *Germany*, &c. and according to his Sentence executed in a public Place in *Lisbon*, where at his Death he proteſted his Innocency touching any Treachery towards his Majeſty.

The Death of the Secretary both pleaſed the People, and ſatisfied the Aſſembly of Eſtates, who now according to his Majeſty's Command met on *September* the eighteenth 1643, and being all ſate, and his Majeſty ſeated in his Throne, Don *Emanuel D'Acugna* Dean of his Majeſty's Chapel, roſe up, and after Reverence made to the King, harangu'd them with ſo much Eloquence and Affection, that he ſtirred up and encouraged the States readily to give all Aſſiſtance imaginable, both for redreſſing of Grievances, and for the levying Arms; ſo that within a ſmall Time after, the King was at the Head of 20,000 Foot, and 3000 Horſe, marching towards the Frontiers of *Caſtile*.

Whilst theſe great Preparations for Hoſtility were made, the Queen brought forth into the World a ſecond Son to his Majeſty; but the firſt Child after he came to the Crown, which added to the Magnificence of his Chriſtening: He was named *Alphonſo*, and his Brother *Theodoſio* dying before his Father, ſucceeded in the Kingdom.

Many Skirmiſhes had paſſed between the *Caſtilians* and *Portugueſe*, many Towns had been ſurpriſed, many Lands waſted, but never happened a ſet Battle between them, till in the Year 1644, when both Armies met upon the Border of *Portugal* in a Field called *Campo-Major*. The *Spaniſh* Army, which for the moſt Part conſiſted of Strangers, was under the Command of the Marquiſs of *Torrecuſa*; and the *Portugueſe* Army, conſiſting of Natives, and ſome few *Hollanders*, were commanded by *Matthias de Albuquerque*. This Fight was maintained with all poſſible Courage and Reſolution on both Sides; but the *Spaniards* being more numerous, eſpecially in Horſe, at length put the whole *Portugueſe* Army into Diſorder, ſeized on their whole Artillery and Baggage, and flew *Albuquerque*'s Horſe under him, took many Priſoners, and aſſured themſelves of an abſolute Victory. But Fortune, which had thus favourably ſmiled upon them in the Beginning of the Day, frowned as harſhly upon them in the Concluſion; for *Albuquerque* being remounted, rallied again his ſcattered Forces, and recharging the purſuing *Spaniards*, put them to a total Rout, and purſued the Chaſe for above three Miles.

In this Battle the *Caſtilians* loſt 1600 Men upon the Place, amongſt which were the Lieutenant General, the General of the Horſe, the General of the Artillery, the Count *de Alontixo*, three Camp-Maſters, two Adjutants of Horſe, three Serjeant-Majors, three and twenty Cornets, together with many Knights of the Order of St. *James*, *Calatrava*, and *Alcantara*: There were taken about 4000 Arms, and 1000 Horſe.

On the *Portugueſe* Side there were not above 300 ſlain, among which were two Camp-Maſters, one Serjeant-Major, a Captain of Horſe, and eight of Foot; but many Noblemen, Commanders, and Officers, taken Priſoners in the firſt Encounter, were carried away by the *Spaniards* in their Flight.

It was not long after this Battle, that the Marquiſs *De Montalban*, Don *George Maſcarenas* Lord-Treaſurer, Preſident of the Council of the *Indies*, and Counſellor of Eſtate, with ſome others, were impriſoned upon Suſpicion of a Conſpiracy againſt the King of *Portugal*: But it being upon Examination found that the Suſpicion was by the *Spaniards* cunningly raiſed, to deprive King *John* of his moſt able Miniſters, and to make the World believe the *Portugueſe* Nobility were diſcontented with their King, they were ſet at Liberty, and their Honours fully repaired by a Proclamation of the King's.

For the *Spaniards* ceaſed not by all Means and Devices, which the Will and Policy of the moſt wicked Statesmen could invent, not only to weaken the *Portugueſe* Nation within itſelf, by breeding Diſcontents (if poſſible) between the King and the other Eſtates, but likewiſe to undervalue them, and make their Credit be ſlighted and diſregarded by other Kingdoms and States, their Confederates and Allies.

Yet beſides theſe ſubtile Ambages, the King of *Caſtile* did not deſiſt the endeavouring to oppreſs this Kingdom by Force of Arms; but not only the reſolved and immutable Unity of the *Portugueſe* Nation, was a ſtrong Tower and invincible Fortreſs againſt the *Spaniſh* Power, but ſo extremely was the Houſe of *Auſtria* involved in Wars and Diſaſters on every Side, that that vaſt Body was rather in a Condition to crave Help and Aſſiſtance from others, than indeed to oppreſs them. For beſides the Wars in *Catalonia*, which had put itſelf under the Protection of the moſt potent King of *France*; in the *Low-Countries*, which had proved ſo tedious and ſo chargeable a War to *Spain*; in *Italy*, in this Kingdom, and in *Germany*; there happened ſeveral Commotions and popular Tumults in ſome of the King of *Spain*'s Dominions, which not only robbed the King of a preſent Supply of Treaſure, but were otherwiſe Retardments to the Proſecution of his Wars in other Places.

The firſt of theſe Commotions began in the Iſland of *Sicily*, where the People gathering together in a tumultuous Manner, forced the Vice-roy to take off all new Impoſts and Taxes which the King's preſent Neceſſities had enforced him to lay upon them. This encouraged their Neighbours on the adjacent Continent, the Inhabitants of the famous City of *Naples*, in hopes to rid themſelves of their Oppreſſions, to riſe in like Manner in Arms; which they did, encouraged and commanded by one *Thomas Aniello*, or vulgarly *Maſaniello*; who though of ſo mean and obſcure a Birth as a poor Fiſher Boy, yet to the Wonder of the World for ten Days commanded this mighty City, and freed it from all Gabels; ſo that ever ſince theſe two Kingdoms of *Naples* and *Sicily* have rather been a great Charge, than any Benefit to the *Spaniſh* Monarchy.

These Troubles, and the *Auſtrian* Family's being every where encompaſſed and embroiled in Wars, together with the earneſt Deſire of the King of *Caſtile* to proſecute a vigorous War againſt *Catalonia* and *Portugal*, were, I ſuppoſe, the Motives which perſuaded the Catholick King to end thoſe Wars, which had laſted in the *Low-Countries* for above ninety Years, by owning now at laſt (what he had ſo long refuſed) the United Provinces free States: So an abſolute Peace

Peace was concluded on, and proclaimed at all the chief Towns in the *Netherlands*, on the fifth of *June* 1648; a Peace no less advantageous to the *Spaniards*, than disadvantageous to the *Portugueſe*, by reaſon of the Pretences the *Dutch* had to *Brazil*, and other Places in the *Weſt-Indies*. King *John* of *Portugal* about the Beginning of the Year 1649 thought his Son the Prince *Theodoſio* arrived at an Age fitting to keep a Court of himſelf, Lodgings were therefore appointed for him, divided from the Royal Palace, and Officers of his Houſhold nominated and appointed by the King, amongſt whom the Counts of *Villa-Nova*, of *Miranda*, of *Valdereis*, and *Fernando Tellez de Menezez*, (who had formerly been Governor of the City of *Port*,) were entruſted as the principal Gentlemen of his Chamber.

The King likewiſe thought fit to add a third to the two former Superintendents of his Revenue, whom he nominated and appointed to be Don *Rey de Mour de Tellez*, whoſe former Office of Steward to the Queen, was at the ſame Time conferred on Don *Antonio de Silva* Lord of *Bilas*.

Notwithſtanding the Truce, the *Hollanders* ſtill continued their Outrages in the other Side the Line, but principally in *Brazil*, where they ſeized upon many of the *Portugueſe* Forts, impeded the Traffic, abuſed and murdered the Subjects; which made his Majeſty reſolve to call the Count of *Caſt e-Mellor* from his Charge of being General of the *Portugueſe* Forces upon the Frontiers of *Gallicia*, and commit that to the young Viſcount *de Villa Nova de Servera*, that the Count might be imployed as Viceroy to *Brazil*: And to curb the *Flemmings* Inſolencies, and to ſecure the *Portugueſe* Merchants Ships from their Piracies, the King appointed a Fleet of forty Ships of War, and 6000 Men, to attend that Service as Convoys.

His Holineſs the Pope's Anger as yet continued towards the Kingdom of *Portugal*; for he had not only hitherto refuſed to receive Ambaſſadors from thence, but to ſupply thoſe Archbiſhopricks, Biſhopricks, and other eccleſiaſtical Offices of the Kingdom, which by the Death of the former Poſſeſſors were vacant: This the King found a great Inconvenience, and therefore thought fit once more to attempt his Holineſs; and to preſent him the Names of ſuch of his own Subjects, whoſe Piety, Learning, or other Sufficiencies, he thought might make them capable of ſuch Dignities; as firſt, for the Archbiſhoprick of *Braga*, (formerly acknowledged to be the Primacy of all *Spain*, notwithſtanding the Pretenſions of *Toledo*) he nominated *Don Pedro de Lamaſtro*, Preſident of the Juſtice of the Palace of the Houſe of *Aveiro*, and deſcended from *John* the Second, King of *Portugal*. For the Archbiſhoprick of *Evora*, his Majeſty nominated Don *Franciſco Barrez* Biſhop of the *Algarves*, whoſe Biſhoprick he beſtowed upon the Father *Dennis de Agnes* an *Auguſtine* Monk, and Confeſſor to his Majeſty. For the Biſhoprick of *Guarda*, was appointed Don *Antonio Pobo*, great Prior of the military Order of St. *James*; for the Biſhoprick of *Lamego* Don *Antonio de Mendoza*, Commiſſary of the *Bulla de la Croiſada*; for the Biſhoprick of *Lerida*, Don *Diego de Souza* Inquiſitor of the Holy Office; for that of *Coimbria*, Don *Sebaſtian Caſar de Menezes*, who was before nominated for the Biſhoprick of *Porto*, but that was given by his Majeſty to Don *Pedro de Menezes*, once named Biſhop of *Miranda*; of which laſt Place Don *Pedro de Porros*, Tutor of the Prince Don *Theodoſio*, was now named Biſhop. Theſe Choices of his Majeſty, the Pope, after ſome Time, confirmed. Don *Franciſco de Souza*, who was ſent as extraordinary Ambaſſador, notwithſtanding the Oppoſition of the *Spaniards*, was received; not unlikely out of a Fear that they would officiate without his Confirmation, and ſo in a Manner renounce the Power of the See of *Rome*.

But in the midſt of this ſettling eccleſiaſtical Affairs, Arms were not ſilent; for upon the Borders, there happened a Skirmiſh between the *Caſtilians* and *Portugueſe* about the latter End of *April*, 1649. The Lord of *Themiricourt*, Lieutenant-General of the *Portugueſe* Horſe, and Monſieur *Du Queſne* the Commiſſary-General, gained a Victory over a ſmall Army of the *Spaniards*, defeating 700 of them, and taking divers Priſoners, among whom was the Nephew of the Marquiſs of *Mejiguen*, Lieutenant-General of the *Caſtilian* Army at *Badajox*; who was after exchanged for the Count *Frieſque Lavagna*, who for ſome Years paſt had been Priſoner in *Caſtile*: In this Conflict the *Portugueſe* loſt but twenty five Men, the Chief of whom was *Sieur de la Touche*, a *French* Captain, who had behaved himſelf moſt valourouſly.

The Commotions of the *Pariſians* againſt the King of *France*, had given the *Spaniard* great Hopes of better Succeſs than they had many Years had; but the middle of the Year 1649, happily concluding them, the News of their Pacification, and that a great Victory was gained by the *Portugueſe* againſt the *Hollanders* in *Brazil*, cauſed a general Joy over all *Portugal*; for the King appointed public Thanks to be given, and *Te Deum* to be ſung in all Churches.

Hopes to revenge the late Defeat given by the Lord *Themiricourt*, and Deſire to do ſome valiant Act before he departed from his Government, made the Marquiſs of *Leganez*, Governor of the *Spaniſh* Forces at *Eſtramadura*, give an Alarum to the *Portugueſe* Frontiers, and enter into the Country, with 2000 Horſe, and 6000 Foot; but the valiant Count of St. *Laurence* aſſaulting him, forced him to retire with Shame, and excuſe himſelf that he marched out only to meet the Marquiſs of *Mortare*, who was appointed to ſucceed him in the Government.

Yet this ſmall and worthleſs Alarum, made the King of *Portugal*, who knew that too much Care could not be had of the Safety of his Kingdom, to ſend Orders to the Governors to look more exactly to the Countries committed to their Charges than formerly, and ſtrictly to give Charge to Don *Juan de Menezes* Governor of *Porto*, to the Viſcount *Ponte de Lima* Governor of the Countries between *Douro* and *Minho*, to the Count of *Arogna* Governor of *Traſmontes*, and Don *Roderigo de Caſtro* Governor of *Beira*, to repair with all Expedition to their ſeveral Commands.

Nor was his Majeſty leſs careful of his Dominions abroad than of thoſe near Home, which made him diſpatch the Baron of *Alvito* to be Governor of *Tangier*, and Don *Franciſco de Noragna* to *Mazagan*, both ſtrong Forts in *Africa*; the laſt of which had been near ſurprized by the *Moors* of *Barbary*, but the Commander of that Party which aſſaulted it being ſlain by a valiant *Frenchman*, they were beaten off with Loſs; for which Service the King beſtowed upon the *Frenchman* a Penſion of 600 Crowns *per Annum*.

And whilſt his Majeſty was diſtributing his Bounties, he could not forget the Lady *Donna Maria Manuele*, Widow to the ſome-time before deceaſed Don *Antonio Coello Caravallio*, who had ever ſince his Majeſty's coming to the Crown, been one of his Privy-Councellors, and was one of the chief Perſons that went Ambaſſa-

dors into *France*, to renew the Alliance, and conclude a firm League between the King of *Portugal*, and *Lewis* the Thirteenth King of *France*: His Majesty therefore, in consideration of his Services, bestowed a valuable Pension on his aforesaid Widow.

THERE was almost daily Inroads made upon the Frontiers in some Places or other; among the rest the Baron of *Themiricourt* entered with a strong Party into the *Spanish* Territories, surprised the Suburbs of the City of *Albuquerque*, and brought away a very rich Booty, without the Loss of so much as one Soldier upon the Place, and not above twenty wounded.

THE Succour of the distressed Subjects of the more distressed King of *England*, about the Year 1650, gave Occasion to the King of *Portugal* to manifest his Affection to the *English* Nation; which he did, by giving Assistance to the gallant Prince *Rupert*; who being by his Majesty of *England* made Admiral of those few Ships which in the Year 1648, returned to their Allegiance, had ever since been pursued by the more potent Fleets of the *English* Rebels, and was now by them driven to seek the Protection of his *Portuguese* Majesty; who, notwithstanding that the Fleet of the Rebels, with threatning Bravado's, demanded the said King's Leave, either to assault them in his Port, or to force them to come out bravely, protected them under his Castles.

IN revenge of which the Rebels of *England*, who stiled themselves a Parliament, proclaimed an open War with the *Portuguese* Nation; which his Majesty, notwithstanding his great Engagement at that present, both against the *Spaniards* at Home, and the *Hollanders* on the other Side the Line, resolved to endure, rather than deliver up the faithful Subjects of *England* into the Hands of Murder, Tyranny, and Treason; and therefore, in part to cry Quittance with the *English*, who had taken several Ships belonging to this Nation, he made Seizure of all the *English* Ships and Goods within his whole Dominions, but only those he had before protected.

BUT at length, Prince *Rupert* finding a clear Passage from out his Ports, where he had for many Months been blocked up, the King, by reason of his other large Expences in Defence of his Kingdom, finding himself unable to maintain a War against the *English*, resolved, more moved out of Necessity than Inclination, to send an Agent into *England* to conclude a Peace.

THE Person deputed to go on this unpleasant Employment, (*viz.* to court Rebels) was Don *Suarez de Gimeraines*, who had for his Assistance an Interpreter, Mr. *Myles* an *English* Merchant: These two embarked upon a *Hamburgher*, hired for that Purpose by the King of *Portugal*, and arrived in *England* in *January* 1650. About the Beginning of *February*, Don *Suarez* had Audience, before a Committee of the pretended Parliament, to whom he made a Speech in *Latin*, setting forth his Master's Desire of living in Amity with the Commonwealth of *England*: To which the Rebels answered with a large Harangue of the Injuries they supposed done them by the Protection of Prince *Rupert*'s Fleet, and Seizure of the *English* Merchants Ships and Goods; concluding that they must have Reparation made for the publick Damage of the Commonwealth, which they would be willing to accept of in any honourable Manner, and were willing to that Purpose, if the Ambassador had sufficient Power, to treat with him to that Effect.

IN fine, after some Time the Count *Del Sa* Lord Chamberlain of the Kingdom of *Portugal*, arrived in *England*, in the Quality of an Ambassador Extraordinary, who after many Conferences, Addresses, and large Offers made, obtained a Peace, upon Condition to repay great Sums of Money towards the Satisfaction of the Losses of the *English* Merchants.

DURING the Stay of this Ambassador, his Brother Don *Pantaleon Sa*, Knight of *Malta*, led by I know not what frantick Humour, made a great Uproar upon the *New-Exchange* in *London*, where some *English* were by him and his Followers murdered; for which several of his Retinue were hanged, and himself, notwithstanding the earnest Sollicitations of his Brother, afterwards beheaded upon *Tower-Hill*, when the Government of *England* was changed from a strange Kind of Commonwealth to a stranger Kind of Monarchy, under a Protector.

BUT to return back again to the Affairs of the Kingdom of *Portugal*. The Earl of *Castle-Melhor*, who had been sent Viceroy into *Brazil*, had so good Success, that with the Assistance of those *Portuguese* before in the Kingdom, he expulsed the *Hollanders* out of all their Garrisons there, except the strong Fortress of *Recif*, which was built upon a Rock wholly environed by the Sea. This animated the United States of the *Netherlands*, to endeavour a Revenge and Recovery of that Country; and to that End, a potent Fleet was set out; and notwithstanding the earnest Endeavours, and large Offers of the *Portuguese* Ambassador at the *Hague*, set sail to conquer that Kingdom; but the Expedition proved wholly fruitless, and after so great an Expence, the States were so highly discontented, that the Admiral *Whittison* was arrested at the *Hague*, to answer such Things as should be objected against him concerning that Voyage.

ABOUT the Beginning of the Year 1655, Don *Francisco de Ferrara Rebella* arrived in *England*, with Commission from the King of *Portugal* as Agent to *Oliver Cromwel*, who then swayed here under the Title of Protector, to make a more firm Confirmation of the Peace with *England*, and to advise, I suppose, about carrying on the War with *Spain*. *Cromwel* had given some Reasons to make the World believe he would commence a War against the *Catholick* Monarch; and how much such a War was for the Interest of *Portugal*, none will doubt who have read the foregoing Story. This made King *John* court *Oliver*, with more Submissnes and Complacency, by both harbouring his Fleets, and sending Presents to his Generals, than otherwise his Genius would have permitted him to have done, any Way in prejudice of *England*'s lawful King. In the mean Time the Death of Pope *Innocent* the Tenth, made Don *Francisco de Souza*, Ambassador at *Rome* for the King of *Portugal*, make new Addresses to *Alexander* the Seventh his Successor, for Confirmation of the Church-Officers in that Kingdom; for he had never had any full Grant from *Innocent*: But now the *Spanish* Ambassadors opposed themselves more than ever, and by Means of the Queen of *Sweden*, who wholly imployed her Interest for the Benefit of that Nation, endeavoured to frustrate even the *Portuguese* Hopes: Nay so desperate was the *Spaniards* Malice, that they laid several Designs to murder the *Portuguese* Ambassador; but all proved ineffectual. In fine, after Don *Francisco de Sousa* had spent some Years in the Court of *Rome* to very little Purpose, he was, upon the Death of King *John* the Fourth, called Home to be Governor of the young King *Alphonso*.

THE proffered interchangeable Match with *Savoy* not taking Effect, Father *Du Rosaire*, a *Dominican*, and Archbishop of *Goa*, was sent Agent to *France*, to treat about a Marriage between that King, and the Infanta *Donna Catharina*, with Propolals of 3,000,000 of Gold for her Portion,

Portion, and that the King of *Portugal* would for ſeven Years maintain eighteen Men of War at Sea, for the Defence and Service of the *French* Crown.

Long was this Buſineſs in Negotiation, and by many thought likely to have taken Effect, the Agent being very highly careſſed both by the King and Queen-Mother of *France*; but whether by Reaſon of Cardinal *Mazarine*'s Diſlike of it, or other Reaſons of State, it was prolonged by continual Demurs, till after the King of *Portugal*'s Death, and then wholly broken off.

For King *John*, being now arrived to about fifty Years of Age, in the ſixteenth Year of his Reign, and in the Year of our Lord 1656. on the Sixth of *November*, N. S. paid his laſt Debt to Nature, having a long Time been troubled with an Obſtruction in the Kidneys, occaſioned by the Stone and Gravel, which was ſo ſharp all the Time of his Sickneſs, that he ſeldom urined, and when he did, in ſo little Quantity, that it did ſcarce at all caſe him. This violent Pain put him into a Burning-Fever, which in ten Days overpreſſed his Vitals.

Before his Death, he appointed *Donna Lucia* his Queen, to be Regent of the Kingdom during the Minority of Don *Alphonſo* her Son; recommending to her, for Aſſiſtants in the Management of ſo great a Burden as a Crown, the Reverend Don *Emanuel* Archbiſhop of *Liſbon*, Don *Runlio* Marquis of *Niſa*, the Earl of *Canvandake*, and ſome others, whoſe Abilities, Love, and Fidelity he had Experience of.

He had by his Queen *Donna Lucia*, Daughter of the Duke of *Medina Sidonia*, four Children; the eldeſt Son, *Alphonſo*, ſucceeded in the Kingdom, as King of *Portugal*.

When King *John* IV. died, his Son *Alphonſo*, the Sixth of that Name, ſucceeded, who was about the Age of fourteen Years; his Mother, during his Minority, adminiſtered the Affairs of the Kingdom, and cauſed him to be crowned on the Fourteenth of *November*, eight Days after his Father's Death.

The Queen, being ſenſible, that upon this Occaſion of the King's Death, ſhe ſhould have moſt Occaſion to uſe the Soldiery, by the Advice of her Council, ordered that all the Infantry of the Kingdom ſhould have half a Year's Pay, the better to encourage them, who were of themſelves ready enough to fight againſt their common and inveterate Enemy, the *Caſtilians*.

And becauſe ſhe knew that the King of *Spain* would loſe no Opportunity to oppreſs the Kingdom of *Portugal*, ſhe thought it imprudent to let any Occaſion ſlip where any Advantage might be gained upon him; and therefore, all the *Spaniſh* Forces being drawn out of *Andaluzia* to oppoſe the *Engliſh*, in caſe they ſhould attempt to land at *Cadiz*, (for they then blocked up that Port with a potent Fleet;) ſhe commanded four thouſand Horſe to make an Inroad into that Country, who plunder'd and laid waſte all before them, bringing away between forty and fifty thouſand Head of Cattle, and leaving the whole Soil in a Manner deſolate.

This ſo exaſperated the *Spaniards*, that draining moſt of the Garriſons of his Kingdom, he raiſed a potent Army, and with ten thouſand Foot, and five thouſand Horſe, enter'd *Portugal*, and laid Siege to the ſtrong City of *Olivenza*, which at length they reduced to that Neceſſity that the Defendants were willing to capitulate, and ſounded a Parly; but when they came to treat, the *Spaniards* would not admit the King of *Portugal* any other Title than that of Duke of *Braganza*, which made the *Portugueſe* renounce any farther treating.

But at length the *Spaniards* condeſcending to treat, the Town was deliver'd upon Articles; but ſo much did the Queen Regent and Council of *Portugal* reſent it, that they immediately gave Orders to arreſt the Perſon of Don *Mandiol de Saldagna* the Governor, who (with ſeveral of his chief Officers,) was by the Count *de St. Lorenze*, General of the *Portugueſe* Forces in thoſe Parts, ſent Priſoner to *Liſbon*, there to anſwer their ill defending of that Town; it appearing that, at the ſurrendering of it, there marched out two thouſand two hundred well armed Foot, and one hundred Horſe; nor were they reduced to that Neceſſity that was pretended, there remaining in Stores of Ammunition and Proviſion, ſufficient to have defended the Town a great while longer.

The Loſs of this Place was a great Blow to the *Portugueſe*, it being a ſtrong Frontier Town, and giving the *Spaniards* abſolute Command a great Way into the Country: But this the King of *Spain* reſolved ſhould be but a Beginning of his Conqueſt (if poſſible) of this Kingdom; for he ſtill made all Preparations he could to aſſault it with a greater Force, and not only endeavoured this, with might and main to oppreſs it himſelf, but, by his Ambaſſadors, ſolicited the States-General of the United Provinces to ſend their Vice-Admiral *Opdam*, with the Fleet he then had before *Dantzick*, into *Portugal*, to demand Satisfaction for the Damage the *Portugueſe* had done to the *Weſt-India* Company in *Brazil*, and in Caſe the King of *Portugal* ſhould deny to comply with their Deſires, to force them to a Compoſition.

The High and Mighty States eaſily liſtened to this Counſel, and Vice-Admiral *Opdam* with a potent Fleet was ſent to *Liſbon*, carrying with him ſome Commiſſioners from the States to make their Demands, which the Queen-Regent and Council thought ſo unreaſonable, that they could not return any ſatisfactory Anſwer to them, whereupon the Commiſſioners departed. But *Opdam* ſtill ſtay'd with his Fleet, to wait an Opportunity of catching the *Brazil* Fleet in their Return home; many of which, notwithſtanding the Care and Endeavours of the *Portugueſe* to prevent it, he made Prize of, and ſent into *Holland*.

By this Means was the War, which for many Years had been maintained between the *Hollanders* and *Portugueſe* on the other Side of the Line, transferred to this Side; which the King of *France* endeavoured by all Means poſſible, before its Eruption, to prevent, and afterwards to compoſe by his Ambaſſadors, Monſieur *de Thou* in *Holland*, and the Sieur *de Comings* in *Portugal*, but to no Effect.

Thus aſſaulted by two potent Nations, both by Sea and Land, were the *Portugueſe*, which yet made them not at all falter in their Courage and Reſolution; the Queen-Regent cauſing all poſſible Levies to be made to oppoſe the *Caſtilians*, ſending into *Barbary* to buy Horſes, and by Leagues abroad endeavouring to ſtrengthen the Intereſt of the Kingdom: An Ambaſſador was ſent to that Purpoſe into *England*, to renew and confirm the Amity before concluded on; and many Conferences there were between the Archbiſhop of *Ora*, who had before been Ambaſſador into *France*, and the Sieur *de Comings*, ſo that many were in Hopes that the Match between the King of *France* and the Infanta would have gone forward, and an indiſſoluble League, both defenſive and offenſive, been concluded between the two Nations.

And to join Force to Policy, a gallant Army of about 16000 Foot, and 3000 Horſe, all *Portugueſe*, took the Field, and in Revenge for the Loſs of *Olivenza*, laid Siege to *Mouron*, which in three or four Days they took by Storm, putting

1500 *Spaniards* to the Sword, and resolved to proceed to the regaining of *Badajox*, and *Olivenza*; and to that Purpose marching without Opposition by *Caya*, (which they left fortified) they came to the Fort of St. *Christopher*, the strongest Hold of the City of *Badajox*, which they several Days battered, and thrice stormed, but were beaten off; yet at length they took it, and so securely entrenched themselves about the whole City.

The Duke of *Ossima* General of the *Castilian* Horse, having Notice of this streight Siege of the City, endeavoured with 1600 Horse to cut off their Convoys and Provisions; but the Count *del Prado* Governor of *Elvas*, receiving Advice of his Design, sallied out of the City with three Companies of Horse, and all the Foot he had, to prevent him, by which Means *Ossima* was encompassed on both Sides, for at the same Time he was on the other Part charged by Don *Andrea D'Albuquerque*, General of the *Portuguese* Horse, and that with so much Gallantry that they presently discomfitted their Enemies, slew 400 upon the Place, took 300 Prisoners, and forced the Duke of *Ossima* to save himself by swimming.

This happy Success encouraged them to return with more Alacrity to the Siege, which they prosecuted with all Vigour possible, and on the three and twentieth of *June*, stormed and took a Redoubt which was palisado'd; but at length when they had spent much Time, Blood, and Treasure, they were forced by the powerful Army of Don *Lewis de Haro* to raise their Siege.

For the King of *Spain* exasperated with the Loss of *Mouron*, and fearing likewise to lose *Badajox*, had rallied a great Army, which he committed to the Care of his Favourite Don *Lewis de Haro*, who not only with it raised the Siege from before *Badajox*, but likewise so streightly besieged *Elvas*, one of the *Portuguese* strongest Frontier Towns, (the taking of which might have endangered the whole Kingdom,) and reduced it to such Necessity, that it was even upon the Point of yielding.

But the *Portuguese*, who knew of how much Importance it was to them, had ever been anxious for its Relief; and therefore having at length bravely recruited their Army, they advanced with full Resolution to drive the *Spaniards* out of their Trenches, nor did they effect it less bravely than they had resolved it, for they totally routed them, their General Don *Lewis de Haro* very hardly escaping; but in this Battle the *Portuguese* lost the worthy *Albuquerque*, General of the Horse.

And to counterpoise this Victory, the strong Fortress of *Mounson* upon the Borders of *Gallicia*, was surrendered to the *Spaniards*; and a Party of the *Portuguese*, not having Advice that it was already possessed by the *Castilians*, going to relieve it, were surprised and forced shamefully to retreat, with the Loss of some Hundreds; and this Success encouraged the *Spaniards* under the Command of the Marquis of *Vienna*, to besiege the only City the *Portuguese* were possest of on the River *Minho*, but it was relieved by the *Portuguese*. The *Spaniards* likewise gained a signal Victory over a Party of the *Portuguese* Horse nigh *Alcantara*; for Advice being brought to the Governor of that Town, that the *Portuguese* with a Party of 400 Horse were entering upon the Frontiers in two Bodies, he taking 500 Horse, and a select Party of Foot, went to meet them, and so handsomly managed his Business, that he surprised one whole Body, scarce a Man escaping; a Commissary-General, five Captains, and several other Officers, being taken Prisoners.

But these Things were inconsiderable Disadvantages to the Interest of *Portugal*, in respect of what it was like to feel by the Peace which was treating of between those two mighty Monarchs of *France* and *Spain*: This the Queen Regent and Council were sensible of, and therefore dispatched Don *John D'Acosta* Ambassador Extraordinary to the *French* Court, to represent unto his most Christian Majesty the State of the Kingdom of *Portugal*, and to insist that there might be a due Consideration had of the Interest of his Master in the concluding of the Peace with *Spain*, seeing he had formerly approved himself so good an Ally to the Crown of *France*. But this Embassy could produce no other Effect, than a Promise to endeavour a Mediation for them with the King of *Spain*, and procure them good Terms upon Submission, which by the magnanimous *Portuguese* was rejected with Indignation.

Nor were they at all daunted with the great Power of the *Spaniard*, which he intended to employ against them, but manfully resolved to endure all Hazards; yet would they willingly have concluded a Peace with the *Hollanders*, and to that Purpose Don *Fernando Tellez de Faro*, Duke of *Alvero*, was sent Ambassador to the States-General; but he, like a treacherous Villain, revolted from them to the King of *Spain*, carrying along with him the Papers of his Embassy; for which, according to his Desert, his Effigies was executed at *Lisbon* as a Traytor, his Goods confiscated, his House razed to the Ground, and his Children banished and degraded of Nobility. His Brother Don *Diego de Silva*, who had served the King of *Portugal* in the Quality of General at Sea, was likewise upon this Occasion commanded to retire to one of his Houses, and deprived of all publick Employment.

After him was sent Don *Henry de Susa*, Count of *Miranda*, to negotiate an Accomodation with the *Netherland* States; yet he prevailed little; for the pertinacious *Hollanders* were still resolute in their unreasonable Demands, computing their Losses in *Brazil* (where they had no Right to be) to amount to no less then thirty Millions.

The *Spaniards* in the mean Time were forced to give the *Portuguese* some Respite in the Summer, 1659; but Preparations were made to assault them, with the whole Power of that Monarchy in the Spring, 1660. Don *John D'Austria* being called out of *Flanders* to be Generalissimo of the *Spanish* Forces, and having Orders given him in *April*, 1660, to march directly to *Merida*, on the Frontiers of *Portugal*, though he went not that Summer.

But the *Portuguese* resolved not to be behindhand with their Enemies, and therefore made several Inroads into the *Spanish* Territories, depopulating all before them; which made the *Spaniards*, to be revenged, resolve to do the like to them: Order was therefore given to fall into the Kingdom on all Sides; the Marquis of *Vienna*, Governor of *Gallicia*, marching in that Way with eight thousand Foot, and eight hundred Horse; and the Governor of *Caceara* invading that Part which was adjacent to his Government.

In this Condition was the Kingdom of *Portugal* when his Majesty *Charles* II. King of *England* was restored to his Crowns and Kingdoms, welcomed by his Subjects with all gratulatory and submissive Obedience; the News of which was no sooner, by Advice from Don *Francisco de Mello*, Ambassador from the King of *Portugal* to *England*, convey'd to the Ears of his Master, but he caused all the Guns of the Town, Castle, and Ships in the Road to be fired, and for three Days and Nights kept solemn and magnificent Rejoicings: The *Portuguese* Nation, as well by this their Joy at the

Restora-

Reſtoration of the King of *England*, as by their ſteady Obſervance of the Treaties ſubſiſting between the two Kingdoms, proved, that they conſidered the State of this Nation as a Matter of the utmoſt Conſequence to themſelves. And a very few Years after ſhewed that they were much in the Right; for being aſſiſted by the King of *England*, who had married the Princeſs *Katherine*, and by the *French* King under-hand, notwithſtanding he had ſtipulated by the *Pyrenean* Treaty not to afford them any Aſſiſtance, they defeated their Enemies in ſeveral Engagements, the moſt important Victory being that of *Villa Vicioſa*. This Train of ill Succeſs, with their Loſſes in the *Low Countries*, induced the *Spaniards* to make a Peace with *Portugal*, and renounce all their Pretenſions to that Crown.

KING *Alphonſo* coming to Age, the Queen Dowager, who did not approve of his Conduct, retir'd into a Cloyſter, where ſhe died. *Alphonſo* afterwards married the Princeſs of *Nemours*, of the Houſe of *Savoy*, who upon Pretence of her Husband's Impotence, retired alſo into a Convent, and obtained a Divorce from him; while Don *Pedro*, his younger Brother, was ſo fortunate to perſuade the People that Don *Alphonſo* was a weak Man, and incapable of governing the Kingdom, and procur'd him to be depoſed by an Aſſembly of the States, and baniſhed to the Iſlands of *Tercera*, *Anno* 1668; from whence he was brought back ſome time after, and died in the Caſtle of *Cintra* on the twelfth of *December* 1683; till when Don *Pedro* took upon him only the Title of Regent of the Kingdom, but upon the Death of *Alphonſo* he was proclaimed King. Bro- ther Whether Don *Alphonſo* was really that weak Prince the Friends of Don *Pedro* gave out, when they procured him to be depoſed, is not eaſy to determine; but when we ſee the Wife and Brother in a Confederacy againſt him, and even contracting Marriage in his Life-time, and making Intereſt to deprive him of the Regal Power, it is very natural to ſuſpect that the late King had foul Play.

SOME Writers however, I find, give Don *Pedro* a fine Character. They relate, that he was a Prince of excellent Parts, and applied himſelf with all imaginable Diligence to render his Subjects eaſy and happy: And it is indeed become a Proverb, *The worſe Title, the better King*: Abundance of popular Acts muſt be done to take off the People's Attention, and keep them quiet. But the Sum of their Policy, both here and in *Spain*, ſeems to be the bribing the Nobility and leading Men, who willingly contribute to the Slavery and Oppreſſion of their Fellow-Subjects, that they may ſhare the Plunder with the Tyrant.

TO return, as the Revenues of the Crown of *Portugal* are not the largeſt, and the greateſt Part of them is employed in Penſions among the Grandees and Nobility, and conſequently the Court in no Condition to maintain a foreign War, it has been the Wiſdom of their Princes, and particularly of Don *Pedro*, to promote Peace with all Chriſtian Princes and States: Accordingly, in the firſt long War between the Allies and *Lewis* the Fourteenth, we find the *Portugueſe* ſtood Neuters; nor did they come into the laſt War in Queen *Ann*'s Reign till the Year 1703, and then it is evident the whole Weight of the War on that Side was borne by their Allies.

THE cautious *Portugueſe*, before they entered into the Grand Alliance, inſiſted, That the Archduke *Charles*, who was to be proclaimed King of *Spain*, ſhould be ſent to *Portugal* with an Army of 12000 *Engliſh* and *Dutch* Troops; that the Allies alſo ſhould take into their Pay 13000 of the Troops of *Portugal*; and that a large Fleet ſhould be fitted out to protect their Coaſts and Trade againſt the Inſults of the *French*. Accordingly Sir *Cloudeſly Shovel*, with thirty five *Engliſh* Men of War and fourteen *Dutch*, arrived at the Mouth of the *Tagus* the latter End of *July*, from whence the Confederate Fleet ſailed into the *Streights*, and having alarmed the Coaſt of *Spain*, made a Deſcent with two or three thouſand Men near *Altea* in *Valencia*, inviting the *Spaniards* to join them, declaring they were coming to protect them from the Tyranny of the *French*, and aſſiſt them in ſetting their lawful Sovereign the Archduke *Charles* upon the Throne. Nor did the People ſeem averſe to the Propoſal, but brought in Proviſions to the Fleet, and many of them drank the Archduke's Health. However, Things not being yet ripe for a general Revolt, the Troops reimbarked, and the Fleet having in vain endeavoured to relieve the *Cevenoiſe* in *Languedoc*, and cruiſed in the *Mediterranean* till the latter End of the Year, the Admiral viſited the Coaſt of *Portugal* again, and afterwards returned to *England*, not having been able to meet with the *French* Fleet, which kept cloſe in their Harbours this Year.

1703. The Terms on which the *Portugueſe* came into the Grand Alliance.

ON the twelfth of *September* the Emperor and the King of the *Romans* ſign'd an Act, whereby they relinquiſhed all their Right to the *Spaniſh* Monarchy in Favour of the Archduke *Charles*: The Emperor at the ſame Time declaring, that the Male Branch of the Houſe of *Auſtria* being extinct in *Spain*, that Monarchy with the Dominions thereto belonging, was devolv'd upon him; and being importuned by his Illuſtrious Confederates, particularly the King of *Portugal*, to provide a Succeſſor to that Monarchy, he thought proper to ſend over his ſecond Son, the Archduke *Charles*, to *Spain*, in order to put him in Poſſeſſion of that Kingdom. Then the Archduke was proclaimed King of *Spain*, and received the Compliments of the Court thereupon. The Emperor afterwards wrote a Letter to the King of *Portugal*, notifying his proclaiming the Archduke King of *Spain*, and that he deſigned he ſhould ſhortly viſit *Portugal*. Another Letter was wrote to the Queen of *England*, recommending the new-made King to her Protection: Upon the Receipt thereof the Queen wrote to King *Charles*, aſſuring him ſhe would employ all the Strength of her Arms in his Favour.

The Archduke declared King of *Spain*.

THE Archduke, now ſtiled King *Charles* the Third, ſoon after ſet out from *Vienna* for *Holland*, where he arrived the ſecond of *November*; and having continued at the *Hague* till the twenty third of *December*, embarked for *England*. He arrived at *Spithead* the twenty ſixth of the ſame Month, where the Duke of *Somerſet*, Maſter of the Horſe to the Queen of *England*, waited on him on Ship-board, with a Letter and a Compliment from her Majeſty, inviting him to *Windſor*. His Catholick Majeſty thereupon came on Shore, and went to *Petworth*, the Duke of *Somerſet*'s Seat in *Suſſex*; where the Prince of *Denmark*, her Majeſty's Conſort, was come to receive him. On the twenty ninth his Catholick Majeſty, with the Prince, came to *Windſor*; the Queen received him at the Head of the Stairs, and after ſome Compliments of Courſe, he thanked her for her generous Aſſiſtance towards ſetting him on the Throne of *Spain*. His Majeſty ſupped with the Queen and Prince of *Denmark* that Evening; her Majeſty giving the King the

He comes to *England*

Right-Hand at Table, and the Prince ſitting at the End. His Catholick Majeſty lay but two Nights at *Windſor*, where the *Engliſh* Court appeared in all its Luſtre; nothing was wanting that might render the Entertainment agreeable or magnificent: The King took the Napkin from the Dutcheſs of *Marlborough*, and would hold it while the Queen waſh'd; after which he returned it to her Grace with his Diamond Ring wrapped up in it; but the reſt of the Queen's Servants were ſtrictly prohibited to take any thing of the King, who did not abound in Treaſure at this Time.

His Majeſty having taken Leave of the Queen, returned to *Petworth* the thirty-firſt of *December*, and the next Day went on Board to Admiral *Rook* in the *Royal Katherine* at *Spithead*. The *Dutch* Squadron having joined the Fleet, they ſet Sail the fifth of *January*; but meeting with a terrible Storm in the Latitude of 46, they returned to *St. Hellens* the twentieth to refit. The twelfth of *February* the Fleet ſet Sail again, and on the twenty-fifth arrived in the River of *Lisbon*, where the King of *Portugal* with his two eldeſt Sons came on Board the *Royal Katherine*, and after a ſhort Stay the two Kings went on Shore, where *Te Deum* was ſung for his Majeſty's ſafe Arrival; and in the Beginning of *March* all the *Engliſh* and *Dutch* auxiliary Troops arrived in *Portugal*, being commanded by Duke *Schomberg*. Whereupon the Marquiſs of *Chateaunauf*, Ambaſſador of *France* to the King of *Portugal*, retired from thence.

He arrives at *Portugal* with a Detachment of *Engliſh* and *Dutch* Forces.

But the *Engliſh* and *Dutch*, who had promiſed themſelves ſuch mighty Advantages from the King of *Portugal*'s coming into the Grand Alliance, found themſelves miſerably diſappointed: Not a third Part of the Horſes were provided for remounting their Cavalry that had been promiſed them, and thoſe under Size, and not fit for Service. Then the *Portugueſe* Generals, and every Governor of a Province who had the ſupreme military Command lodged in him, inſiſted on commanding the Confederate Generals, and that their Troops ſhould take the Right upon all Occaſions; nor would they ſuffer the *Engliſh* and *Dutch* to march in a Body, but diſtributed them into their little ragged Frontier Towns that were not tenable, where many of them were made Priſoners by the Duke of *Anjou*, who invaded
1704 *Portugal* this Year with an Army of 22000 Men. The Marquiſs *das Minas* pretended indeed to give a Diverſion by marching into *Caſtile*; but the Duke of *Berwick*, who commanded the *Spaniſh* Army, perfectly contemned him, and having ſat down before *Caſtle David*, made the Garriſon Priſoners of War. Duke *Schomberg*, who commanded the *Engliſh*, being weary of his Command in ſuch Circumſtances, deſired to be recalled; and the Earl of *Galway*, a *French* Refugee, commanded on that Side in his Room.

In the mean time the *Engliſh* Admiral Sir *George Rook*, having diſembarked the Confederate Troops, ſailed from the River of *Lisbon* and cruiſed off of *Cape St. Vincent*, for the Security of the *Turky* and *Levant* Fleets, and then returned to *Lisbon*. He ſet Sail again the latter End of *April*, with forty Ships of the Line, and ſome Land Forces on Board, commanded by the Prince of *Heſſe*, for *Barcelona*; where they ſummoned the Governor: But he paying no Regard to their Summons, and ſome *Catalans* aſſuring the Admiral and the Prince that there were five to one in the City for King *Charles*, they landed ſome Forces and ſent a ſecond Summons, but with no better Succeſs. Whereupon having thrown about threeſcore Bombs into the City, the Forces were reimbarked, and the Fleet ſailed towards *Toulon*; near which Place the Admiral received Advice from *Lisbon* that the Count *de Tholouſe* was come into the *Mediterranean* with the *Breſt* Squadron, in order to join that of *Toulon*; and on the ſeventh of *June* the Scouts made the Signal of ſeeing the *French* Fleet. The Admiral thereupon ſtood after them, but could not bring them to an Engagement. Having loſt Sight of the *French* Fleet, he made the beſt of his Way to the *Streights*, where he was joined by another Squadron of *Engliſh* Men of War, commanded by Sir *Cloudeſly Shovel*, and it was reſolved to attack *Gibraltar* with their united Force. The Fleet got into the Bay the twenty-firſt of *July*, and at three in the Afternoon the Marines, to the Number of 1800, with the Prince of *Heſſe* at the Head of them, were put on Shore on the Neck of Land to the Northward of the Town, to cut off any Communication with the Country. The Admiral on the twenty-ſecond in the Morning ordered ſome Ships, to cannonade the Town, under the Command of Rear-Admiral *Byng* and Rear-Admiral *Vanderduſſen*; and Captain *Hicks* in the *Yarmouth* with ſome other Ships were to batter the South Mole-Head: But the Wind blowing contrary, it was put off till the twenty-third, when the Ships being all in their Places by Break of Day, the Cannonade begun, and was performed with great Fury, above 15000 Shot being made in five or ſix Hours Time againſt the Town. The Enemy being beat from their Guns, eſpecially at the South Mole-Head, and the Admiral conſidering that the gaining that Work would probably reduce the Town, ordered Captain *Whitacre* with all the Boats armed to poſſeſs himſelf of it, which was performed with great Expedition: Whereupon the Enemy ſprung a Mine, that blew up the Fortifications upon the Mole, killed two Lieutenants and forty Men, and wounded ſixty more. However, they kept Poſſeſſion of the great Platform, and advancing to a Redoubt between the Mole and the Town, made themſelves Maſters of it, with a great many of the Enemy's Cannon. Then they ſent the Governor a peremptory Summons, who on the twenty-fourth in the Morning deſired to capitulate. Hoſtages therefore being exchanged, and the Treaty concluded, the Prince of *Heſſe* took Poſſeſſion of the Town the ſame Evening.

Gibraltar taken.

Soon after the taking *Gibraltar*, the *Breſt* and *Toulon* Squadrons being joined, and amounting to two and fifty Ships of the Line of Battle, and twenty-four Gallies, commanded by the Count *de Tholouſe*, encountered the Confederate Fleet, conſiſting of fifty three Ships of the Line, commanded by Sir *George Rook*, on the thirteenth of *Auguſt*, N. S. off of *Malaga*. The *French* Ships were generally much larger, and being but juſt come out of Harbour, much cleaner, than thoſe of the Confederates. The Fight continued till Night, and the Fleets remained in Sight of each other a Day or two afterwards; but neither Side, it is evident, cared to renew the Engagement.

The Confederate Fleet being returned to their Ports, the *French* and *Spaniards* the following Winter laid Siege to *Gibraltar* by Land, while Admiral *Pointi*, with a Squadron of thirteen *French* Men of War, blocked it up by Sea; of which Admiral *Leak*, who commanded the *Engliſh* Squadron left for the Protection of the *Portugueſe* at *Lisbon*, having Intelligence, ſet Sail for the *Streights*, and ſurprizing *Pointi* with his Squadron in the Bay of *Gibraltar*, took three Men of War, and ran two of the largeſt on

Shore,

Shore, which the Enemy immediately quitted and ſet Fire to. Whereupon the Beſiegers, after they had lain ſix Months before the Place, and ruined the beſt Part of their Army, thought fit to draw off their Batteries and raiſe the Siege.

1705. King Charles ails to Barcelona with the Confederate Fleets

THE Confederates receiving repeated Intelligence that the *Spaniards*, and particularly the *Catalans*, were ready to revolt on the Appearance of King *Charles* with a Body of Troops on their Coaſt, the Grand Fleet, commanded by Sir *Cloudeſly Shovel*, with a Detachment of Land Forces under the Command of the Earl of *Peterborough*, ſet Sail from *Spithead* to *Lisbon*, where they arrived the twentieth of *June*; and his Catholick Majeſty coming on Board them, they ſailed to *Gibraltar*, where they took up the Prince of *Heſſe Darmſtadt*; and watering afterwards at the Bay of *Altea* in *Valencia*, they found the People of that Kingdom generally diſpoſed to declare for King *Charles* III. From thence the Fleet ſteered for *Barcelona*, where they did not arrive till the twenty-ſecond of *Auguſt*, having been hindered by Calms, contrary Winds, and other Accidents.

THE Earl of *Peterborough* ordered the Trenches to be opened againſt the City, which was begun on the nineteenth of *September*, and the Fleet bombarded it from the Sea, ſetting Fire to the Town in ſeveral Places, which put the People into a great Conſternation: Whereupon Don *Velaſco* the Governor, gave Leave to the Friars and the reſt of the Clergy, with the Women and Nuns, to retire out of the Place, and they were kindly received by King *Charles*.

WHILE the Confederates lay before the Place, the *Catalans* came and offered their Service to his Catholick Majeſty; of whom 2000 were mounted and armed, the reſt brought in Proviſions and Neceſſaries, and contributed very much towards taking the Town, which ſurrendered on the fourteenth of *October*, N. S. and the next Day the Shops in *Barcelona* were opened as in Time of Peace, and all was in a profound Tranquility. Not only *Barcelona*, but *Terragona*, *Lerida*, *Tortoſa*, and all the Towns in *Catalonia*, except *Roſes*, immediately ſurrendered to the Allies.

Barcelona taken

THE *Catalans* upon theſe Succeſſes raiſed ſix Regiments for King *Charles*, beſides a Regiment of 500 Dragoons which his Majeſty formed out of the late Garriſon of *Barcelona* that took Service under him, and conſtituted his Guard; theſe were commanded by Count *Zinzendorf*. At the ſame Time Don *Raphael Nebot*, a *Catalan*, came over to the King with his whole Regiment, conſiſting of 500 Horſe, who were joined by 150 other Horſe on the Way. And a Declaration being publiſhed, inviting all good *Spaniards* to aſſiſt his Majeſty in the Recovery of his Throne, Deputies came from ſeveral Towns in *Valencia* to make their Submiſſion. Whereupon the Earl of *Peterborough* with 1000 Horſe, 500 Foot, and a Body of Miquelets, marched to the Capital City of *Valencia*, and by the Aſſiſtance of the Inhabitants made himſelf Maſter of it, making the Viceroy and the Archbiſhop Priſoners; and thereupon the whole Kingdom of *Valencia*, except *Alicant* and *Peniſcola*, revolted to King *Charles*: And had the *Portugueſe* made any Diverſion, as they promiſed, or but permitted their Allies the *Engliſh* and *Dutch* to advance to the Frontiers of *Spain* at this Time, it is not improbable but all *Spain* had ſubmitted to King *Charles*: But notwithſtanding the moſt preſſing Inſtances of the Confederate Generals, the *Portugueſe* could not be drawn out of their Quarters till the Beginning of *October*, when they laid Siege to *Badajox*, and one would think only with a Deſign to raiſe it, for they ſuffered themſelves to be ſurprized by Marſhal *Theſſe*, who drew a Supply of Troops and Proviſions into the Town, after ſome Progreſs had been made in the Siege; whereupon the *Portugueſe* retired, and marched into Winter Quarters.

Badajox beſieged.

THE *Portugueſe* being retreated into their own Country, the Earl of *Peterborough* marched with 1500 Men to *Valencia*, and the City of *Barcelona* drain'd of Soldiers, by ſending Detachments to *Tartoſa*, *Lerida*, *Gironne*, &c. King *Philip* on a ſudden drew all the Troops he could together, both *French* and *Spaniards*, and inveſted *Barcelona* on the ſecond of *April* N.S. 1706, before that City had any Notice of his Motions, or the Breaches were well repaired: But the Lord *Peterborough* having found Means to reinforce the Garriſon, and harraſſing the Enemies Camp with perpetual Alarms, the Town held out till the ſecond of *May*, when the Confederate Fleet approaching, the Earl joined it off *Tarragona* with ſeveral Barks, and 1400 Land Forces in them, and went on Board the *Prince George*, hoiſting the Union Flag; and on the eighth the Fleet came to an Anchor in *Barcelona* Bay, to the inexpreſſible Joy of the Garriſon and Inhabitants; who no longer apprehended themſelves in any Danger; and on the twelfth of *May*, N. S. King *Philip* raiſed the Siege with the utmoſt Precipitation, leaving behind him 106 Braſs Cannon, twenty-three Mortars, all his Sick and Wounded, and prodigious Quantities of Proviſion and Ammunition; and it was obſerved, that the ſame Morning about nine there was a great Eclipſe of the Sun, which being the *French* Device, ſuperſtitious People imagined portended no Good to their Nation. King *Philip* with his Army retired into *France*, and the *French* Fleet commanded by the Count *de Tholouſe* had retired before, on Notice of the Arrival of the Confederates on the Coaſt of *Catalonia*.

Barcelona beſieged by King *Philip*.

Barcelona relieved

WHILE King *Philip* was beſieging *Barcelona*, and had withdrawn moſt of his Forces from the Side of *Portugal*, the *Portugueſe* with the Confederate Troops ventured to enter *Caſtile*, and lay Siege to *Alcantara* the tenth of *April*, which being a Place of no great Strength, capitulated the fourteenth, when it was expected the *Portugueſe* would have marched directly to *Madrid*, where King *Philip*'s Queen and Court were in the utmoſt Conſternation; but notwithſtanding all the Remonſtrances of the *Britiſh* and *Dutch* Generals for marching to *Madrid*, the *Portugueſe* abſolutely refuſed to leave their own Frontiers till they ſaw the Fate of *Barcelona* determined: However, on the Intelligence that the Confederate Fleet had entered the *Streights* in their Way to *Barcelona*, they laid Siege to *Ciudad Rodrigo* the twenty-firſt of *May*, which Place ſurrendered the twenty-ſixth; and on the twenty-ſeventh the News of the raiſing the Siege of *Barcelona* was brought into their Camp, where upon it was unanimouſly agreed by the *Portugueſe* and the reſt of the Confederate Generals to march to *Madrid*, from which they were not fifty Miles diſtant. On the eighteenth of *June* they came to *Eſpinal*, where Deputies from the *Eſcurial* came to make their Submiſſion. Here they had Advice of the Victory obtained by the Allies at *Ramillies* in *Flanders* the twelfth Inſtant, and underſtood that the *Spaniards* generally looked upon King *Philip*'s Affairs as deſperate. That Prince however, after his Diſgrace at *Barcelona*, arrived at *Madrid* by the Way of *France*, and finding the *Portugueſe* bent their March towards that Capital, he retired again, and joined his Troops that were returning through *Navarre*,

Alcantara taken.

Ciudad Rodrigo taken.

com-

commanding the reſt of his Forces that were diſperſed through *Spain* to follow him.

Before he left *Madrid*, he propoſed it to the Grandees and the reſt of the Nobility, that they would take the Field with him; but they deſired to be excuſed, and moſt of them retired to their Country Seats. The *Spaniards* ſeemed very indifferent which Party ſucceeded, at leaſt they did not think it worth their while to hazard any thing for either Prince. They did not approve of *French* Councils, but were made to believe their Religion was in Danger from thoſe Armies of Hereticks in Confederacy with King *Charles*.

The Allies take Poſſeſſion of Madrid.

The Allies being encamped at *Nueſtra Signora de Ratamal*, on the twenty-fourth of *June* a Detachment of Horſe was ſent to take Poſſeſſion of *Madrid*, from whence there came a Deputation the next Day to make their Submiſſion in Form, and moſt of the Nobility and Perſons of Diſtinction came into the Camp, to expreſs their Devotions for the Houſe of *Auſtria*. The Army moving nearer to *Madrid*, the twenty-ſeventh King *Charles* was proclaimed in that City; whereupon *Toledo* and many other conſiderable Towns, declared for him; and even Cardinal *Portocarero* wrote to the *Portugueſe* General, the Marquiſs *das Minas*, offering his Submiſſion to King *Charles*, in whoſe Name Juſtice was adminiſtred in all Courts of Judicature at *Madrid*.

Toledo, &c. declare for King Charles.

The Confederate Generals upon this Succeſs, ſent Courier after Courier to King *Charles*, to haſten his March to *Madrid*, which at firſt he ſeemed enclined to; but the Kingdom of *Arragon* declaring for him at the ſame Time, he marched to the Capital City of that Province, under Pretence of receiving the Submiſſion of that People, where he triſled away ſo much Time, that the Duke of *Berwick* being reinforced, appeared in Sight of the Allies, and on the third of *Auguſt* ſent a Detachment to take Poſſeſſion of *Madrid* again, which the Confederates had quitted a little before, and withdrawn to a more advantagious Camp, for they were now obliged to be upon the Defenſive. But at length, on the ſixth of *Auguſt*, King *Charles* and the Lord *Peterborough* arrived in the Camp of the Allies at *Guadalaxara*, bringing with them no more than five Battalions and thirteen Squadrons, which though it did not put them in a Capacity of acting offenſively, enabled them to make a handſome Retreat.

Madrid loſt again.

The Duke of *Berwick* having poſſeſſed himſelf of *Madrid* again, *Toledo*, *Salamanca*, and all the Towns almoſt that had declared for the Allies in *Caſtile*, eſpouſed the Part of King *Philip* again; whereby the Retreat of the *Portugueſe* to their own Country was cut off, and it was thereupon agreed to retreat into *Valencia*, to ſecure that Country, *Arragon*, and *Catalonia*, in the Intereſt of King *Charles*, and preſerve a Communication with the Sea Coaſts: The Army accordingly made their Retreat in good Order, paſſing the *Tagus* at *Fuente Duenas*, without any conſiderable Loſs, though the Duke of *Berwick* attended their Rear during the whole March.

The Allies retire out of Caſtile

Whilst King *Charles* was retreating from *Caſtile* towards *Valencia*, a Body of 10000 *Engliſh* and *Dutch* arrived in the River of *Lisbon*, commanded by the Earl of *Rivers*. Theſe Troops were at firſt deſigned to have made a Deſcent in *France* the preceding Summer, but having been detained ſeveral Months by contrary Winds, the Enterprize was laid aſide, and they were ſent to reinforce the Allies in *Spain*. The Court of *Portugal* on their Arrival at *Lisbon*, propoſed to join a Body of their national Troops with them, and that they ſhould march directly to *Madrid* through their Country; but the *Engliſh* and *Dutch* having been on Board ſix Months, ſuffered incredible Hardſhips in the Voyage, and loſt moſt of their Horſes, were in no Condition to undertake ſuch an Enterprize: Nor had the *Portugueſe* any ſuch Troops as they mentioned ready to join them, or Artillery or Ammunition provided for ſuch an Undertaking. The Earl of *Rivers* however thought fit to land his Men, as well to refreſh them as to encourage the *Portugueſe*, whoſe Frontiers lay pretty much expoſed on the Retreat of the Allies towards *Valencia*.

But to return to King *Charles*. His Army having gained the Frontiers of *Valencia* and *Murcia*, he put Garriſons into *Cuenca*, *Requena*, and *Cefuentes*, ſent a Detachment of his Troops to *Arragon*, and diſpoſed the reſt in ſuch a Manner, as to protect thoſe Countries which continued in his Intereſt.

We find the Conduct both of King *Charles*, and the Confederate Generals that took Poſſeſſion of *Madrid*, exceedingly blamed by ſome Writers. Thoſe about him who were for his going thither by the Way of *Arragon*, alledged, That it was not for his Majeſty's Honour to go to *Madrid* in a Hurry, without his Equipage and Retinue. To which, they ſay, Mr. *Stanhope* replied, That King *William*, when he made his Deſcent on *England*, went to *London* in a Hackney, attended with a few Dragoons, otherwiſe he had loſt the Crown. However, the other Councils prevailed, and King *Charles* purſued their Advice, of going by the Way of *Arragon*. When the Earl of *Peterborough* heard of theſe Meaſures, he ſent ſeveral Letters with the unanimous Opinion of his Councils of War, that it would be beſt for his Majeſty to return and go by the Way of *Valencia*: But his Lordſhip's Letters, and the Opinion of the Councils of War, had no Effect; his Majeſty went on to *Saragoſſa*, where the great Expectations of thoſe who adviſed him to that Road, terminated in being complimented with a *Torridore*, or Bull-Feaſt. When they ſaw too late that Danger approached, and that the direct Way from thence to *Madrid* was not practicable, then they altered their Meaſures again, took the Road towards *Valencia*, and ſent to deſire that the Earl of *Peterborough* would meet them with all poſſible Haſte.

The Confederate Army then in *Caſtile* ſeemed at the ſame Time to have been under a ſtrange Reſtraint. The Duke of *Anjou* had no more than 6000 Horſe, and ſcarce any regular Foot on that Side, when the Confederate Army came to *Madrid*; ſo that it was thought they might have forced the Enemy to repaſs the *Ebro*, where they would ſoon have been in Want of Proviſions; or the Confederate Troops might have encamped and fortified themſelves, ſo as to have covered *Madrid*, and laid up Magazines of Corn: But inſtead of doing either of theſe, they marched and encamped at *Guadalaxara*, where in leſs than a Month they were reduced to Want of Proviſions. And it ſeems their Intelligence was not very good, ſince one Morning they were ſurprized to ſee an Army of 20000 Men encamped on the other Side of the River over-againſt them, though they were informed that there was no Enemy within thirty Miles of them; and all this while, the *French* Troops that retired from before *Barcelona* had Time to march round through *France* into *Spain*, ſo that they were ſuperior to the Confederates in Horſe, and well nigh a Match to them in Foot. Perceiving this Advantage, they detached a Body of Horſe to poſſeſs themſelves of *Madrid*, where they killed many of the *Germans* and others of King *Charles*'s Party: Upon this *Segovia*, *Toledo*, *Salamanca*,

Jamaica, and other Places which had ſubmitted to his Catholick Majeſty, revolted again to the Duke of *Anjou*, and our Communication with *Portugal* was cut off.

When Matters came to this Paſs, moſt of the Generals were for fighting, in order to recover that Advantage which had been ſo unhappily loſt; but of forty five General Officers, the Earl of *Peterborough* alone was againſt running ſuch a Riſque: His Lordſhip gave his Opinion in Writing againſt it, and convinced them that it was not ſafe to venture upon the Iſſue of a Battle; ſince in caſe we ſhould be worſted, there could be no Hopes of a Retreat in a Country where we had ſo many Enemies.

This was the State of Affairs when the Earl of *Peterborough* came to *Guadalaxara*. His Lordſhip was for retaking *Alcala*, as a proper Place for covering *Madrid*, and offered to attempt it with 5000 Men, by poſſeſſing himſelf of the Paſs of *Henarez*, and either to fight ſuch of the Enemy as oppoſed him, or to make a good Retreat. His Propoſal was approved by every one; but by the Delays laid in his Way, the Opportunity was loſt, ſo that the Confederate Army was forced to break up, and to march higher into the Country towards *Madrid*, for the Convenience of Proviſions. His Lordſhip's Baggage was taken by the Enemy at *Huet*: The Town offered to make good the Damage, which he was too generous to accept of; yet he impoſed it upon them by way of Puniſhment, to bring in all the Corn of that Diſtrict to the Army; which was ſo conſiderable, that it ſerved them for Bread for ſix Weeks.

The *Engliſh* Admiral *Leak* it ſeems was no leſs ſucceſsful in the *Mediterranean* than the Confederate Generals had been by Land; for after he had relieved *Barcelona*, he attacked *Carthagena*, which ſurrendered to him about the middle of *June*; and on the eighth of *Auguſt* he took *Alicant* by Storm, after which the Caſtle ſurrendered. About the middle of *September* he reduced the Iſlands of *Majorca* and *Ivica* to the Obedience of King *Charles* III. But the Confederate Army being retired out of *Caſtile*, *Carthagena* was retaken by King *Philip*'s Forces the following Winter; and the Duke of *Berwick* alſo retook *Cuenca* on the Confines of *Caſtile*, being a conſiderable Frontier Town in the Poſſeſſion of the Allies, and made the Garriſon, conſiſting of 2000 Men, Priſoners of War.

Whilst Affairs were in this Situation, and Sir *Cloudſly Shovel* and the Earl of *Rivers* remained at *Lisbon* with the Troops abovementioned, Don *Pedro* King of *Portugal* died, *viz*, on the eleventh of *December* 1706, in the fifty-eighth Year of his Age. He had been married three Times: His firſt Wife was the Princeſs *Louiſa de Guſman*, Daughter to the Duke of *Medina Sidonia*, who died *Anno* 1666. He had by her the Infanta *Iſabella*, who was declared Heireſs of the Kingdom in 1674, and contracted to the Duke of *Savoy* in 1680, but died unmarried on the twenty-firſt of *October* 1690. His ſecond Wife was *Mary Frances Iſabella* of *Savoy*, Daughter of the Duke of *Nemours*, who had been divorced from his Brother the late King *Alphonſo*. He married her the ſecond of *April* 1668, and ſhe died the ſeventeenth of *December* 1683. His third Wife was *Maria Sophia Elizabeth*, Daughter of *Philip William* Elector *Palatine*. He married her in 1687, and ſhe died in 1699, by whom he had Iſſue, 1. A Son born the thirtieth of *Auguſt* 1688, who died a few Days after. 2. Don *John Francis Joſeph Antonio*, &c. his preſent Majeſty, born the twenty ſecond of *October* 1689, and declared Heir apparent to the Crown by the three Eſtates aſſembled at *Lisbon* the firſt of *December* 1697. 3. *Francis Xavier Antonio Urban*, *May* the twenty-fifth 1691. 4. *Anthony Francis*, born *March* the fifteenth 1695. 5. *Tereſa Frances Joſepha*, born *February* the twenty fourth 1696: She was contracted to the preſent Emperor, but died in 1704. 6. *Emanuel*, born *Auguſt* the third, 1697. And, 7. *Franciſca Xaviera Joſepha*, born *January* the thirtieth, 1699. And beſides theſe he had a natural Daughter, married to the eldeſt Son of the Duke of *Cadaval*, *Anno* 1695.

Peter, and his Death by Don *John*.

As to the Infanta, the Princeſs *Catharine*, Siſter of King *Peter*, born the fourteenth of *November* 1638, ſhe was married, as hath been intimated already, to *Charles* II. King of *England*, by a Treaty concluded the twelfth of *May* 1662; the Marriage being firſt magnificently ſolemnized by Proxy at *Lisbon*, and afterwards conſummated at *Portſmouth* in *England*, whither the King went to meet her. The Queen Regent of *Portugal*, her Mother, gave her as a Dower *Tangier* in *Africa*, and the Iſland of *Bombay* in the *Eaſt-Indies*: The firſt of which was kept for ſome Years at a great Expence; but the Miniſtry of *England* being of Opinion the Advantages they ſhould reap by it would not countervail the Charge of maintaining it, thought fit to demoliſh the Works and leave it, *Anno* 1684; and King *Charles* conferred the Iſland of *Bombay* on the *Engliſh Eaſt-India* Company, which they ſtill retain, it being the Seat of the principal Governor they have in *India*. Beſides theſe Places the Infanta had a Fortune of 3,000,000 of Livres, or 300000 Pounds, according to ſome Writers, but according to others 250,000 Pounds. She continued in *England* about ſeven or eight Years after the Death of King *Charles*, but in 1692 retired to *Portugal*, where ſhe died on the thirty-firſt of *December* 1705.

On the Death of King *Peter*, his eldeſt Son Don *John* ſucceeded to the Crown, as has been intimated already. The *French* had great Hopes on this Event to have withdrawn *Portugal* from the Grand Alliance, and Things were carried ſo far that ſome Acts of Hoſtility paſſed between the Royal Navy of *England* and the Forts in the River of *Lisbon*, which were ordered to fire on the Cruiſers Admiral *Shovel* ſent out of that River. But partly by the Influence of the *Engliſh* Fleet and Forces, and partly by *Engliſh* Treaſure, the *Portugueſe* were kept ſteady to the Allies; they were pleaſed to ſuffer the *Engliſh* to continue the War on that Side at their own Expence.

Earl Rivers's Memorial on his leaving *Lisbon* with the *Britiſh* Troops.

The Men of War and Tranſports being provided with Water and other Neceſſaries to continue their Voyage, the Troops under the Command of the Earl *Rivers* were imbarked and deſigned to ſail the ſecond of *January* for *Alicant*, according to the Deſire of the King of *Spain*; but the Night before the General received Orders from *England* to the contrary. His Excellency held a Council of War, and therein it was reſolved that my Lord ſhould preſent a Memorial to acquaint him with the conditional Orders he had received. His Excellency had accordingly Audience the 4th of his *Portugueſe* Majeſty, who received him with all poſſible Marks of Eſteem, and delivered his Memorial, which the Court of *Portugal* not thinking fit to comply with, Sir *Cloudſly Shovel* and the Earl, with the *Engliſh* Troops abroad, ſailed from *Lisbon* the eighteenth of *January*, and arrived at *Alicant* the eighth of *February*. The Earl of *Rivers* having landed theſe Forces, and left them under the Command of the Earl of *Galway*, returned to *England*, together with the Earl of *Peterborough* and Brigadier *Gorges*, who were embarked in the firſt Deſign, but for Reaſons beſt known to themſelves, declined remaining in

Valencia. King *Charles* also not approving the Conduct of the Generals the Marquis *das Minas* and the Earl of *Galway*, thought fit the latter End of *February* to declare his Resolution of leaving the Army and retiring into *Catalonia*; which he did soon after, taking with him a Regiment of Dragoons and another of *Dutch* Foot. It was reported however that the Army of the Allies still amounted to 30000 Men, though it appears that at the Battle of *Almanza*, which happened but a very little while afterwards, they were not 18000 effective Men. Nor was the Deficiency in Point of Troops their only Misfortune; it is evident there were great Misunderstandings between King *Charles*'s Court and the Generals, which gave but a melancholy Prospect of the following Campaign.

The Marquis *das Minas* and the Earl of *Galway* took the Field the sixth of *April* N. S. and having destroyed some of the Enemy's Magazines on the Frontiers of *Castile*, laid Siege to the Castle of *Villena*. Before the Breach was accessible, they received Intelligence that the Duke of *Berwick* was advanced as far as the Plains of *Almanza*, with seventy-six Squadrons of Horse, and fifty-four Batalions of Foot, and that the Duke of *Orleans* was on the March to join him with seven or eight thousand *French*, while the Allies had no Prospect of being reinforced by the Troops from *Catalonia*. However, it was agreed in a Council of War to march and attack the Enemy, who waited for them in the Plains of *Almanza*, the most advantageous Ground they could have chosen, on Account of their Superiority in Horse: But the Earl of *Galway* having supplied his Want of Cavalry, as he thought, by interlining a Brigade of Foot with each Wing of Horse, ventured to engage the Enemy on the twenty fifth of *April* N. S. about three in the Afternoon. The Earl posted himself at the Head of the *English* Dragoons on the Left, and marched to attack the Enemy's Right Wing of Horse; the *Portuguese* being ordered to take the Charge, as it should come to them gradually from the Left.

Battle of Almanza.

The Enemy observing that the *Portuguese* Cavalry on the Right did not advance with the Left Wing, detach'd some Squadrons to attack them, their Line following slowly to sustain them; but the *Portuguese* did not stay to receive them, for upon the first Charge of the detached Squadrons the whole Right Wing of the *Portuguese* Cavalry run away and abandoned their Infantry, who were most of them either killed or made Prisoners.

Neither of the Generals, the Marquis *das Minas* or the Earl of *Galway*, staid to see the End of the Engagement, but left their Men to the Mercy of the Enemy. The Colonels *Dormer*, *Roper*, *Lawrence*, *Green*, and *de Loche*, were killed at the Head of their Squadrons, after having behaved with the utmost Gallantry; and Colonel *Pierce*, and Mr. *Hara*, Son to the Lord *Tyrawley*, were wounded. Of the Foot, the Colonels *Hamilton*, *Woollet*, and *Neal*, who commanded Regiments, were killed, and the Lord *Mark Kerr* and Colonel *Clayton* wounded.

The Day after the Battle the Duke of *Orleans* joined the Duke of *Berwick* with a Reinforcement of eight or ten thousand Men; and the Enemy having taken *Xativa*, *Alcyra*, and some other Places which the Allies had garrisoned on the Frontiers of *Valencia*, the Cities of *Saragossa* and *Valencia*, with the rest of the Towns in *Arragon* and *Valencia*, submitted to the Conquerors, were obliged to pay large Sums for their Revolt, deprived of their Privileges, disarmed and treated in a very barbarous Manner, and the Town of *Xativa* in particular, was burnt and razed to the Ground, and many of the Inhabitants massacred for their Disaffection to King *Philip*. The *Spanish* Generals on the Side of *Portugal* took *Serpa* and *Moura* this Campaign, and nothing remaining in the Hands of the Allies but *Alicant* and *Denia* in *Valencia*, the Duke of *Orleans* marched to the Frontiers of *Catalonia*, where the Confederate Generals having thrown their Troops into the strong Towns, burnt the Country that the Enemy might find no Subsistance. The Campaign ended on the Side of *Catalonia* with the taking of *Lerida* by the Duke of *Orleans*; and on the Frontiers of *Portugal* King *Philip*'s Forces took *Cividad Rodrigo* by Storm. And the Dukes of *Orleans* and *Noailles* had probably made an entire Conquest of *Catalonia*, if they had not been obliged to detach Part of their Troops to *France* upon the Duke of *Savoy*'s laying Siege to *Toulon*.

Lerida taken by the D. of *Orleans*.

The following Year, 1708, the Duke of *Orleans* made himself Master of *Tortosa*, in *Catalonia*, and of *Denia* in *Valencia*. But the Imperialists having sent Count *Staremberg* to *Spain* from *Italy* with a Reinforcement of eight or ten thousand Men, the Forces of *France* and King *Philip* were content to be upon the Defensive afterwards in that Country. With these Forces Sir *John Leake*, the *English* Admiral, convoyed the Queen of *Spain*, the late Princess of *Wolfembuttle*, from *Vado* in *Italy* to *Catalonia*, where the Marriage was consummated between her and King *Charles*. After which Sir *John Leake* taking some Land Forces on Board, reduced the Island of *Sardinia* to the Obedience of King *Charles*: And before the End of *September* the Island of *Minorca*, with the fine Harbour of *Port-Mahon*, surrendered to that Admiral and General *Stanhope*. In the mean time a Contract of Marriage was made between the King of *Portugal* and the Archdutchess *Mary Anne* of *Austria*, second Sister to the Emperor and King *Charles*; and her Majesty arriving from *Holland* at *Spithead* the twenty fourth of *September*, was convoyed to *Lisbon* by Admiral *Byng*, where she arrived the sixteenth of *October*, N. S. And though King *Charles*'s Forces as well as the King of *Portugal*'s had been considerably recruited and augmented this Campaign, yet those Courts were so taken up with the Preparations for solemnizing these Marriages, and Rejoicings afterwards, that the military Operations in these Countries seemed to be at a Stand.

D. of *Orleans* retires.

K. *Charles* goes on board the Fleet at *Lisbon*.

The Campaign of 1709 begun unfortunately for the Allies on the Side of *Portugal*: For the *Portuguese* and *Spanish* Armies being encamped on the Banks of the River *Caya* opposite to each other, and the Marquis *de Bay* making a Motion towards *Campo Mayor*, the *Portuguese* Generals resolved to attack him, contrary to the Opinion of the Earl of *Galway*. But the *Spanish* Cavalry no sooner charged the *Portuguese* Horse but they fled and abandoned their Foot, as they had done at the Battle of *Almanza*. Brigadier *Pierce*'s *English* Brigade was ordered to march and favour the Retreat of the *Portuguese* Foot. The *Portuguese* Generals however were so far from supporting them, that they quitted the Field, leaving this fine Brigade to be surrounded by the Enemy's whole Army, and made Prisoners, together with Major General *Sankey*, the Earl of *Barrymore*, and Brigadier *Pierce* himself. The Earl of *Galway* had a Horse shot under him, but he made a Shift to escape out of the Field with the *Portuguese* Generals, as he had done at *Almanza*. The Marquis *de Bay* afterwards pursued the

Portu-

Portuguese Army; but they retreated beyond *Elvas*.

Balaguer taken by King Charles.

In *Catalonia* King *Charles*'s Army being superior to that of his Rival's, passed the *Segra*, and made themselves Masters of *Balaguer*. There happened no farther Action in *Spain* or *Portugal* this Year, unless the Siege of the Castle of *Alicant*, which continued, with some Intermissions, from the Time the Town was taken last Year, till the middle of *April* 1709. The *Spaniards* finding it impossible to reduce it any other Way, were resolved to blow it up by a great Mine, in which they lodged 12000 Barrels of Powder. They summoned the Governor and acquainted him with his Danger, and proposed that two of his Officers should come out and view the Mine, which they did accordingly. It was resolved not to surrender, and the *French* sprang their Mine, which made an incredible Noise, but had no great Effect upon the Castle, only the Governor Major General *Richards*, and Colonel *Syburgh*, were unfortunately buried in the Ruins, with several other Officers. On the fifteenth of *April* Sir *George Byng* and Major General *Stanhope* appeared before *Alicant* with a Squadron of Men of War and 4000 Land-men on Board; but the *Spanish* Army being reinforced, and the Coast very tempestuous, it was not thought advisable to land, and they contented themselves with sending a Flag of Truce on Shore, and capitulating to withdraw the Garrison from the Castle and deliver it up, which the *Spaniards* agreed to.

Alicant surrendred by the English.

1710. A further Reinforcement of Troops being sent from *Italy* to *Catalonia* in the Year 1710, King *Charles* advanced with his Army to attack King *Philip*, who was then also at the Head of his Troops in *Arragon*; and coming up with the Enemy on the twenty-seventh of *July* in the Evening near *Almenara*, he gained a considerable Advantage over King *Philip*'s Horse, but the Foot retired by Favour of the Night.

Battle of Almenara.

King *Philip* after this Defeat retired under the Cannon of *Lerida*, where not being able to subsist his Army, he retreated to *Saragossa*, and being pursued thither by King *Charles*, he could not avoid coming to an Engagement. At break of Day both Armies play'd their Cannon; and at twelve o' Clock at Noon our Signal of Battle was made, and our whole Army being drawn up in two Lines, marched at once to attack the Enemy in full Front, except four Battalions which General *Stanhope* had interlined with the Horse, whom he ordered to advance and take Post on the Brow of the Hill, by which Means he gained Time for his Wing of Horse to form after they were got up. Our Left Wing from their Situation coming first to the Enemy begun the Battle, which increased towards the Center, and so continued to the Right till the whole was ingaged. But notwithstanding a Disposition so properly made, and the Goodness of our Troops, the Enemies with their superior Numbers and Advantage of Ground seemed at first to have the better of the Day, which probably they would have maintained if all our Generals commanding on the Left had not seasonably led on fresh Troops to support, and rally such as they saw pushed or disordered, by which the Advantage soon began to incline to the Arms of his Catholick Majesty. While the Affair was obstinately disputed on the Left, our Foot being deeply engaged, made a great Slaughter of the Enemy: And at the same Time their Left Wing of Horse making little Resistance, within the Space of two Hours we gained a compleat and glorious Victory. We took all their Cannon and most of their Colours; so that out of forty Battalions not above 4000 escaped, and of sixty Squadrons about the like Number; all the rest being killed or taken Prisoners. The King during the whole Action gave the necessary Orders, and with his Royal Presence continued to encourage the Troops. His Majesty entered the Town of *Saragossa* the same Night, where he was received with the Acclamations of the People, and all imaginable Expressions of Joy. The same Night the Citadel of *Saragossa* capitulated, and the Garrison surrendered themselves Prisoners of War.

Battle of Saragossa.

This Victory cost the Allies 2000 Men, and the Enemy at least 3000, as was given out, besides five or six thousand that were made Prisoners. The Allies also took seventy-two Colours and Standards, two and twenty Pieces of Cannon, and Part of the Enemy's Baggage. King *Philip* made all the Haste he could to *Madrid*, where he arrived the twenty-fourth of *August*; and notwithstanding this Misfortune, the *Castilians* gave him still fresh Proofs of their Loyalty and Affection. But apprehending the Allies would bend their March that Way, he thought fit to send the Queen and the Prince of the *Asturia's* to *Valladolid*, whither all the Grandees and Officers of State attended them, though he offered to dispense with their Attendance.

The Affection of the Castilians for King Philip.

After the Battle of *Saragossa*, the *Portuguese* General the Count *de Villaverde* was ordered to take the Field, which he did, and in his March wrote to the Army of his Catholick Majesty that he would move to join them by the Way of *Alcala* and *Truxillo*. He marched first to *Barcarota*, and then to *Xeres de los Cavelleros*, the last of which Places being of no Defence he possessed himself of it; but without attempting any thing further retired to the Frontiers of *Portugal*. At the same Time came Letters from the Counts of *Assumar* and *Attalaya*, soliciting that the *Portuguese* Army might advance to the Bridge of *Almaraz*. And these Letters were accompanied by others from General *Stanhope* to the Earl of *Galway*, pressing to be joined by him at *Almaraz*, where he would be with 4000 Horse. Upon the Arrival of these Sollicitations, all the Ministers met together, and agreed to make their joint Application to the King, that he would be pleased forthwith to cause his Army to march and join that of his Catholick Majesty. But the Ministers of this Court answered them, that the Junction propos'd was utterly impracticable, not only because of the Perplexity given them by the Enemies 4000 Horse on the Frontiers, but likewise because the *Portuguese* Cavalry was in no Condition for Service, wanting all Necessaries. Another Letter came from General *Stanhope*. Whereupon the Ministers of the Allies renewed their Sollicitations; and to procure the speedier Answer, went all in a Body to the Secretary of State, and had a Conference with him and other of the *Portuguese* Ministers; but notwithstanding all the Arguments they could use, the *Portuguese* Ministry refused absolutely to comply with their Desires.

They refuse to join King Charles

King *Charles* however having staid some Time at *Saragossa* to refresh his Troops, set out for *Madrid*, and on the twentieth of *September* arrived in the Neighbourhood of *Alcalade Henares*, and the next Day General *Stanhope*, with a Detachment of the Army, took Possession of *Madrid*. On the twenty eighth King *Charles* made his triumphant Entry into that City, and having performed his Devotions at the Church of *Nuestra Signora d'Atocha*, his Majesty took up his Quarters at a Country-Seat belonging to the *Conde d'Aguilar*. The City of *Madrid* having agreed to furnish his Majesty with a Subsidy of 40000 Crowns a Month for the Subsistence of his Army, a Detachment was sent to take Possession

The Allies take Possession of Madrid.

of

of *Toledo*, which lying upon the *Tagus*, was looked upon as an advantageous Post for facilitating the intended Conjunction with the *Portugueſe*.

In the mean time King *Philip* having ſent a Detachment of his Troops to take Poſſeſſion of *Almaraz*, and thereby rendered the Conjunction of the *Portugueſe* and the Confederates impracticable, General *Stanhope* rejoined the Confederate Army that had been employed in fortifying *Toledo*, deſigning to have taken up Winter Quarters in *Caſtile*; but King *Philip*'s Army being reinforced from all Parts, and become ſuperior to that of the Allies, it was thought adviſable to retreat to *Arragon*; and King *Charles* taking with him a Regiment of Dragoons and another of Foot, marched away to *Barcelona*, in order to obſerve the Motions of the *French* on the Side of *Rouſſillon*. His Majeſty arrived at *Barcelona* the ſixteenth of *December*, and a few Days after he underſtood that the Duke *de Noailles* had laid Siege to *Gironne*.

King Charles retiresagain to *Barcelona*.

The Army of the Allies in their March from *Caſtile* towards *Arragon*, divided themſelves into two Bodies, the better to ſubſiſt the Troops in their March, as is generally ſaid; but others impute it to *Stanhope*'s Pride, who did not care to be commanded by *Staremberg*. The eighth Inſtant, General *Stanhope* with the *Britiſh* Troops, conſiſting of eight Battalions and as many Squadrons, halted at *Brihuega*, where he was ſurpriz'd the ninth by King *Philip*'s Army, which ſurrounded the Place: The *Engliſh* defended themſelves with great Obſtinacy till the tenth in the Morning, and then having ſpent all their Ammunition, were forced to ſurrender Priſoners of War.

Battle of Brihuega.

Count *Staremberg* having Advice of the Diſtreſs the *Britiſh* Troops were in at *Brihuega*, marched to their Relief; but was met by King *Philip* and the Duke of *Vendoſme* at *Villa Viciosa*, about a League from *Brihuega*, the tenth Inſtant in the Evening, whereupon a Battle was fought, and General *Staremberg* gave ſufficient Demonſtration of his Military Skill, by defeating the *Spaniards* when he was not half the Number. However, underſtanding that the *Britiſh* Troops in *Brihuega* were made Priſoners of War that Morning before, and not being in a Condition with the ſmall Body of Troops he had with him to proſecute his Victory, he continued his March towards *Arragon*, and having withdrawn the Confederate Troops out of the Garriſons in that Kingdom, he marched afterwards into *Catalonia*, and arrived at *Barcelona* the Beginning of *February*, with about 11000 effective Men. A little after, Advice came that *Gironne* had ſurrendered to the Duke of *Noailles*; and the Garriſon Count *Staremberg* had left in *Balaguer*, conſiſting of two Battalions and an hundred Horſe, abandoned that Place alſo upon the Approach of the Enemy, and retired to *Barcelona*; ſo that King *Charles*, who a little before was Maſter of the greateſt Part of the Kingdom of *Spain*, had now no more in his Poſſeſſion than the Province of *Catalonia*, and that not entire.

Gironne ſurrendered to the *French* and *Balaguer*.

This was the laſt conſiderable Action that happened in *Spain* during the late War; for the Duke of *Savoy*, (now King of *Sardinia*) having ſome Diſputes with the Emperor concerning the Extent of his Dominions in *Italy*, refuſed to make any Diverſion on that Side: The States General never recruited or re-eſtabliſhed the Troops they had agreed to maintain in *Spain* and *Portugal* in Conjunction with *Britain*; and neither the Imperialiſts or *Portugueſe* had any Troops ſcarce on Foot in either of thoſe Kingdoms, but what were maintained by the Queen of *England*; ſo that the War was become an inſupportable Burden to *Great Britain*, and the fixing King *Charles* upon the *Spaniſh* Throne in theſe Circumſtances, altogether impracticable. Add to this, that King *Charles* was ſoon after elected Emperor, which very much altered the State of Affairs; for it is evident from the Grand Alliance, and all our Treaties with the late Emperors on this Subject, that it never was intended the Empire and *Spain* ſhould be united under one Head. Upon all theſe Conſiderations therefore, the Queen of *England* was induced to liſten to Propoſals of Peace made her by the *French* King, and to enter into a Treaty for the Evacuation of *Catalonia* and the reſt of *Spain*.

By the Treaty of Peace concluded at *Utrecht* the thirty-firſt of *March* O. S. or the eleventh of *April* N. S. 1713, between the Allies and *France*, the moſt material Articles relating to *Portugal* were, That the *French* King ſhould relinquiſh both Sides of the River of *Amazons* in *South America* to his *Portugueſe* Majeſty, and quit all Claim to the Navigation of the ſaid River, and never ſuffer any *French* Miſſionaries to come into the ſaid Territories, or any other belonging to the Crown of *Portugal*; and the Queen of *Great Britain* was by both Parties accepted as Guarantee of the ſaid Articles. And by another Treaty made between *Spain* and *Portugal* in *February* 1714-15, the *Spaniards* and *Portugueſe* mutually agreed to relinquiſh all Places that had been taken by the Forces on either Side during the War; but as to Prizes, each Party was to remain in Poſſeſſion of what they had reſpectively acquired; which Treaty was in like Manner guaranted by the Crown of *Great Britain*.

1713 Peace of Utrecht.

1714

The War between the Confederates and the *French* was ſcarce ended, when another was begun between the *Turks* and *Venetians*, in which the latter loſt the *Morea*. The *Portugueſe* aſſiſted the Pope and the *Venetians* with a Squadron of Men of War, and the *Spaniards* promiſed another Squadron, but employed them afterwards in the Reduction of *Sardinia*; ſo that the *Turks* were Maſters at Sea during the whole Courſe of the War, and were very near making themſelves Maſters of the Iſland of *Corfu*; but the Emperor gaining two conſiderable Victories over the Infidels by Land, and taking *Temeſwaer* and *Belgrade*, the *Turks* were glad to accept of Peace, being permitted however to retain their Conqueſt in the *Morea*, whereby the *Venetians* loſt great Part of their Territories on the *Terra Firma*, while the Imperialiſts kept Poſſeſſion of their Conqueſts, which they had extended upwards of 100 Miles into the Enemies Country.

1715 The *Turks* attack the *Venetians*.

The Readineſs the *Portugueſe* had ſhewn in reinforcing the *Venetian* Fleet, and defending the Coaſts of *Italy* in the late War with the *Turks*, probably induced his Holineſs to oblige his *Portugueſe* Majeſty in dividing the Archbiſhoprick of *Liſbon*, and erecting the Chapel Royal into a Patriarchal and Metropolitical Church; ever ſince which the City of *Liſbon* has been divided into two grand Diſtricts, the one called *Eaſt*, and the other *Weſt Liſbon*.

A Pa

Don *Emanuel*, Brother to the King of *Portugal*, having privately withdrawn himſelf from that Court about this Time, went on Board a Ship and ſailed to *Holland*. He afterwards entered into the Emperor's Service againſt the *Turks*; nor did he return again to *Liſbon* till the Year 1726. His *Portugueſe* Majeſty ſo ſoon as he had Notice that Don *Manuel* was gone, prevailed on the Captain of an *Engliſh* Man of War to

Don and a Kn Boo kno

to purſue the Ship he was in; but the Veſſel being two Days Sail before the *Engliſh* Captain, he was obliged to return back without him. The Reaſon of this Prince's leaving the Court ſo abruptly, was ſaid to be to prevent his being forc'd to enter into Orders; for it was uſual formerly, both in the Courts of *Spain* and *Portugal*, to procure ſome eccleſiaſtical Preferment for the Princes of the Blood, whereby they were eaſily maintained at the Charge of the Church, and rendered in a great Meaſure incapable of forming Deſigns againſt the State.

Academies of Sciences eſtabliſhed

Portugal now remaining in a profound Peace, the King, in Imitation of *France* and other polite Nations, thought fit to eſtabliſh Academies for the Improvement of Arts and Sciences, having a particular Regard to Hiſtory, in which that People have made great Advances of late Years, though the Court of Inquiſition, which dreads nothing more than the reſcuing the Nation from Ignorance and Superſtition, has been a great Obſtacle in their Way: Truth is an Hereſy which thoſe pious Fathers ever proſecute with the greateſt Rage.

1722. Engliſh Merchants condemned for exporting Gold.

I don't meet with any thing elſe remarkable in *Portugal* till the Year 1722, unleſs it be the Arrival of their Fleets from *India* and *Brazil* annually, with vaſt Treaſures of Gold and Silver on Board, beſides other rich Merchandizes; but this Year I find two *Britiſh* Merchants, Mr. *Wingfield* and Mr. *Roberts*, proſecuted at *Lisbon*, and condemned to die for exporting Gold to *England*, which it ſeems is Capital by the Laws of *Portugal*: However, upon the Interpoſition of Mr. *Worſely*, the *Britiſh* Envoy, and the Court of *Great Britain*, they were pardoned, and their Effects reſtored them. But ſince it is ſo very hazardous to export Gold from *Portugal* to *England*, it is ſomething ſtrange that we meet with ſo much *Portugueſe* Gold here as we do.

1723. Earthquake.

In the Month of *December* 1723, there happened a terrible Earthquake in the Province or Kingdom of *Algarves*, which though it laſted but three Minutes, did incredible Miſchief: They relate, that ſeveral Towns were demoliſhed, and a River entirely ſwallowed up for ſome Hours by the gaping of the Earth.

1724. A Company for ſupplying Brazil with Slaves

A Company was erected in *Portugal* in the Year 1724, compoſed of Men of Quality and Fortunes, for ſupplying their Settlements in *Brazil* with Negroes; to whom his Majeſty granted the Space of 200 Miles and upwards on the Coaſt of *Africa*, for the purchaſing of Slaves, prohibiting the *Portugueſe*, or any other Nation, to trade within thoſe Limits.

The ſame Year Don *Miguel* and Don *Joſeph*, two baſe Sons of his late *Portugueſe* Majeſty, whom he had naturalized, croſſing the River of *Lisbon* with their Attendants in a Boat, were overſet by a ſudden Guſt of Wind: Don *Joſeph* had the good Fortune to ſave himſelf by getting upon the Keel, but his Brother and moſt of the Servants were drowned.

A great Storm.

In the ſame River on the nineteenth of *November* this Year, aroſe ſuch a violent Storm about ſix in the Evening, that before eight, ſixty Ships were driven on Shore, of which twenty were rendered unfit for the Sea; all the Wharfs of *Lisbon* were damaged by the Storm, and the Cuſtom-Houſe Key, with the Goods upon it, was waſhed away: The Houſes of *Lisbon* ſuffered very much, and moſt of the Churches loſt their Steeples or Towers: The Havock in the neighbouring Country was inexpreſſible; many Houſes were blown down, and almoſt all the Trees that ſtood expoſed to the Wind torn up by the Roots.

1725. Priſoners of the Inquiſition allowed Council.

The Court of *Rome*, to the Surprize of the Inquiſitors in *Portugal*, was about this Time pleaſed to order, that the Priſoners in the Inquiſition ſhould be allowed Council and Solicitors to defend them, as in other Courts; whereupon thoſe Fathers had the Aſſurance to libel his Holineſs moſt unmercifully.

A Diſpute of another Nature happened about the ſame Time, between the Courts of *France* and *Lisbon*. It ſeems the Abbot *de Livry*, the *French* Ambaſſador at *Lisbon*, inſiſted that the Secretary of State, who is uſually Prime Miniſter in that Kingdom, ſhould pay his Excellency the firſt Viſit; which the Secretary refuſing to comply with, the Ambaſſador was ordered to leave *Lisbon*, without having an Audience of his *Portugueſe* Majeſty.

Double Marriage between *Spain* and *Portugal*

In *December* 1727, a Contract of Marriage was ſigned between Don *Joſeph*, Prince of *Brazil*, and the eldeſt Infanta of *Spain*, *Donna Maria Anna Victoria*, (formerly contracted to *Lewis* XV of *France*;) and a few Days after another Contract of Marriage was concluded between Don *Ferdinand*, Prince of the *Aſturias*, and Donna *Maria*, Infanta of *Portugal*; and on the twenty-ſeventh of *January* following the Ceremony of the Eſpouſals of the laſt Couple was performed at *Madrid*, the King of *Spain* repreſenting the Prince of *Brazil* here, as the King of *Portugal* did the Prince of the *Aſturias* in the other that was celebrated at *Lisbon* the ſixth of the ſame Month.

1728. Diſputes between the Courts of *Rome* and *Portugal*.

About the ſame Time there aroſe warm Diſputes between the Courts of *Rome* and *Portugal*, on the Pope's refuſing to give a Cap to Monſieur *Bichi*, who had reſided ſome Time as a Nuncio in *Portugal*, and ſhewn more Complaiſance for his *Portugueſe* Majeſty than for his Holineſs; and the Contention grew ſo hot at length, that it was expected the King of *Portugal* would have thrown off the Pope's Supremacy; for he actually prohibited all the Clergy of his Dominions, to apply any more to the Datary of *Rome* for their Bulls of Confirmation, *&c.* The Patriarch of *Lisbon* gave Diſpenſations for Marriages, and final Judgment in all eccleſiaſtical Cauſes which were brought before him by way of Appeal. The King ſet many of the Priſoners in the Inquiſition at Liberty, and prohibited the Inquiſitors to proceed in any Cauſe without the Concurrence of Commiſſioners appointed by his Majeſty: Which Steps ſo alarmed the Court of *Rome*, that I am informed Means have been found to ſoften his *Portugueſe* Majeſty's Reſentment, and prevent his throwing off the Pope's Supremacy.

1729. The Double Marriages ſolemnized in Perſon.

About the middle of *January* 1728-9, the Exchange of the contracted Princeſſes above-named being agreed on, the King and Queen of *Spain*, with the Royal Family and a vaſt Retinue, came to *Badajox*, as the King and Queen of *Portugal*, with their Court, did to *Elvas*. Theſe Cities are on the Confines of the two Kingdoms, which are ſeparated by the little River *Caya*, that runs from North to South, and falls into the *Guadiana* near *Badajox*. A Building was erected on the *Caya*, having one large Door on the Side of *Spain*, and another on the Side of *Portugal*. At one and the ſame Inſtant the King of *Spain* entered the Eaſtern Door, as the King of *Portugal* did that on the Weſt, with their reſpective Royal Families. After reciprocal Compliments, and hearing the Articles of both Marriages read, the King of *Portugal* and his Party took the Princeſs of *Brazil*, and returned to *Elvas*, where the Prince and Princeſs of *Brazil* ſolemnized their Marriage in Perſon the ſame Evening. The King of *Spain* alſo having received the Prince of the *Aſturias* of her

Father, returned to *Badajox*, where the Prince and Princeſs of *Aſturias* celebrated their Marriage alſo in Perſon that Evening.

The two Kings, their Queens, the Princes and Princeſſes, had two Interviews afterwards at the Houſe of Exchange, *viz.* on the twenty-third and twenty-fifth of *January*, at the laſt of which they took Leave of each other, and returned to their reſpective Capitals, where Rejoicings were made ſuitable to the Occaſion. At the Return of the King and Royal Family to *Lisbon*, all the Streets through which they paſſed were hung with Tapeſtry, and there were no leſs than twenty Triumphal Arches erected there, five of which were prepared at the Expence of the *Engliſh*, *French*, *Dutch* and *Hamburgh* Merchants, the other fifteen being erected at the Charges of the ſeveral Companies of Tradeſmen, and the King's Officers. That of the *Engliſh* was far the moſt magnificent, in which they laid out above 2000 Pounds Sterling. The Coaches, moſt of which belonged to the Nobility, were eighty-four in Number, the greateſt Part of them covered with embroidered Velvet, trimmed with Gold Fringe; and one of them was of maſſy Silver, adorned with Jewels. The Rejoicings continued three Days ſucceſſively; and every Evening Fireworks were play'd off, and the Houſes illuminated; and ſome Days after the People were entertained with a Bull-Feaſt. And here we ſhall have an Opportunity of giving ſome Account of the Royal Family of *Portugal*.

The preſent Royal Family.

His preſent Majeſty, King *John* V, was born the twenty-ſecond of *October* 1689, and ſucceeded his Father in *January* 1707. He married *Mary Anne* of *Auſtria*, the Daughter of the late Emperor *Leopold*, and Siſter of the preſent Emperor *Charles*, on the twenty-ſeventh of *October* 1708; by whom he had Iſſue, 1. *Mary Magdalen Joſepha Tereſa Barba*, born the fourth of *December* 1711, and married to the Prince of *Aſturias* as above related. 2. Don *Pedro*, born the nineteenth of *October* 1712, who died the twenty-ninth of *October* 1714. 3. Don *Joſeph Pedro John Lewis*, the preſent Prince of *Brazil*, born the ninth of *June* 1715, and married to the Infanta of *Spain Anno* 1729, as above. 4. Don *Carlos*, born the ſecond of *May* 1716. 5. Don———born the fifth of *July* 1717. 6. Don *Alexander*, born *Anno* 1724, who died in 1728: And another Infanta ſtill living, the Time of whoſe Birth I do not meet with. His *Portugueſe* Majeſty has ſtill three Brothers living, *viz.* Don *Antonio*, Don *Franciſco* and Don *Emanuel*, the laſt of whom loſt the King's Favour on his retiring out of the Kingdom without his Conſent, as has been related above. Notwithſtanding which, he ventured to leave the Court again, this preſent Year, 1736.

CHAP. II.

Of the Civil and Eccleſiaſtical Government of Portugal.

The Court of *Portugal* as well as *Spain* became abſolute by purchaſing the leading Men in the Cortes, or three Eſtates.

THE King of *Portugal*, as well as the King of *Spain*, is looked upon to be an abſolute Prince. The Cortes or three Eſtates have long ſince ſold their Part in the Legiſlature to the Crown, and only ſerve to confirm or record ſuch Acts of States as the Court reſolves upon, to declare the next Heir to the Crown when the King is pleaſed to nominate him, or to ratify Treaties with foreign Princes who ſtill eſteem their Conſent of any Weight. The Courts of *Spain* and *Portugal* for many Years have kept their People in Subjection by purchaſing their Leaders; which was the Reaſon that tho' the Revenues of each Crown were very conſiderable, the State in both Nations was very poor. But ſince King *Philip* the Fifth aſcended the Throne of *Spain*, and the Court has been governed by *French* Councils, the Salaries of Abundance of Officers, and a Multitude of Penſions, have been ſtruck off; and that Prince, in Imitation of his Grandfather *Lewis* XIV, has of late Years tyrannized over the Nobility as well as the Commons by the Aſſiſtance of a ſtanding Army, and entirely deprived every Province in that Kingdom of their Liberties and Privileges. This Reformation, as it is ſtiled in the Court of *Spain*, has not yet been imitated in that of *Portugal*; great Part of the Revenues of this Crown are ſtill diſtributed among the Nobility and Grandees, which renders the Government as well as the People exceeding poor and neceſſitous, though the King, conſidered in his private Capacity, may be very rich.

A rich Court, but a poor State.

The publick Revenues.

Cuſtoms very high.

The Cuſtoms and Duties on Goods exported and imported, are a conſiderable Part of the publick Revenues, and are uſually farmed out by the Crown from three Years to three Years. Theſe Duties are very high in *Portugal*, and could not be advanced without the utter Ruin of the People. Foreign Merchandizes pay twenty-three *per Cent.* on Importation, and Fiſh from *Newfoundland* twenty-five *per Cent.* Fiſh taken in the neighbouring Seas and Rivers pay forty-ſeven *per Cent.* and the Tax upon Lands and Cattle that are ſold is ten *per Cent.* The Duty on Snuff alone amounts to 5000 Crowns. Beſides the King draws a conſiderable Revenue from the ſeveral Orders of Knighthood, of which he is Grand Maſter. And the Pope, in Conſideration of the large Sums he draws out of this Kingdom on other Accounts, gives the King the Money ariſing by ſeveral Bulls from the Holy See, as thoſe for granting Indulgences, Licenſes to eat Fleſh at Times prohibited, *&c.* And it is computed that the Royal Revenues, clear of all Penſions and Salaries, may amount to 3,500,000 Crowns. The Nobility are not taxed but upon extraordinary Emergencies, and then not very high. From all which it may very well be preſumed, that the *Portugueſe* are not able to raiſe great Fleets and Armies: If they have five and twenty Men of War of the Line, they are ſcarce able to man or pay them, and a Squadron of *Engliſh* or *Dutch* of half the Number would not be afraid to engage them. They ſerve chiefly for Convoys to their *Brazil* Fleets, and are very often uſed as Merchant Ships to import Goods or Treaſure from thence. As to their Troops on Shore, that ſerve to garriſon their wretched Frontier Towns, they may amount to fourteen or fifteen thouſand Men; but ſuch a miſerable Militia ſure were never ſeen, half ſtarved and not half cloathed: In the late War you might ſee them begging an Alms of a common Soldier belonging to their Confederates the *Engliſh* and *Dutch*; and yet ſo intolerably proud were theſe poor deſpicable

Creatures

Creatures, that they inſiſted on taking the Right Hand of the *Engliſh*, and commanding their Generals: Such bleſſed Confederates they did prove in the late War; nor were the *Spaniards* much better Troops, till a *French* Prince aſcended the Throne; but they have of late been ſo well diſciplin'd, clothed and paid, that they are not only much ſuperior to thoſe of *Portugal*, but perhaps at preſent equal to any Soldiers in *Europe*. It ſeems therefore to be the Intereſt of *Portugal* always to remain in Peace with *Spain*. Should the *French* or the maritime Powers engage in their Behalf, it might be difficult to prevent their being made a Province to *Spain* again, in caſe a War ſhould break out between thoſe two Crowns; the *Spaniards* being ſo much improved of late Years, and the *Portugueſe* ſo much ſunk in their Courage, Diſcipline, and Conduct. And they will certainly avoid falling out with the *French* and the Maritime Powers, who might any of them cut off their Communication with *Brazil*, *Africa*, and the *Indies*, from whence their Gold and other rich Merchandizes are imported. On the other hand, it can never be to the Advantage of *England*, *France*, or the States General to be in a State of War either with *Spain* or *Portugal*, which take off ſo much of the Manufactures of their reſpective Countries. It is indeed the Intereſt of each of theſe Powers that the other ſhould be in no good Terms with *Spain* and *Portugal*, for what the one loſes in this Commerce, the other gains. If the *Engliſh* do not ſerve the *Spaniards* and *Portugueſe* with Woollen Manufactures, the *Dutch* and *French* will, though perhaps much worſe, or at a dearer Rate; nay, theſe Nations will buy our Goods, and get a larger Gain by ſelling them to *Spain* and *Portugal*, and their *American* Plantations and Settlements, than we do by the firſt Sale of them. But tho' it ſeems neceſſary that we ſhould be cautious not to quarrel with theſe two Nations, yet it is alſo our Intereſt to prevent the Weaker of them from being ſwallowed up by the Greater, as we are thought to have done lately by ſending our Fleet into their Seas.

Intereſt of Portugal to live at Peace with all Nations

The Intereſt of the Maritime Powers and the Inability of both at Peace with Spain and Portugal.

It ought to be conſidered further, that the *French* having of late taken Poſſeſſion of *Florida*, to which they have given the Name of *Louiſiana*, and being before Maſters of *Canada* or *New France*, they now lie on the Back of all our *American* Plantations and Settlements from *Carolina* in the South to *Nova Scotia* on the North, and by the Aſſiſtance of the *Spaniards* and the *Indians*, their Friends, may, and probably will, in time deprive us of our Settlements there, and ruin our Plantation Trade, if we have not our Eyes about us.

Danger to Britain from the Union of the French and Spaniards in America.

The great Officers of State being the ſame as in *Spain*, I ſhall not trouble the Reader with a tedious Account of them; or of the ſeveral Degrees of Nobility, in which the Kingdom of *Portugal* exactly reſembles that of *Spain*.

They have ſeveral Councils or Courts eſtabliſhed for ſeveral Branches of Buſineſs; as the Council of State, which takes Cognizance of all Matters foreign and domeſtic which relate to the State. 2. The Council called the *Deſembargo de Paco*, which receives Appeals from all inferior Courts, and has alſo a Power of enacting, repealing, and altering the Laws. 3. The Court of Treaſury, or *Da Fazenda*. 4. The Council for foreign Affairs, which determines all Matters relating to the foreign Plantations. 5. The Council of War, which takes Cognizance of all military Affairs and Operations by Sea or Land. 6. The *Caſa dos Contos*, which Court has the Juriſdiction of all Officers and others concerned in collecting or farming the publick Revenues. Beſides theſe they have two ſupreme Courts for Civil Affairs, the one eſtabliſhed at *Lisbon* and the other at *Porto*. Though as the Kingdom is divided into twenty-four *Comarca's* or Diſtricts, each *Comarca* has its peculiar Judges for civil and criminal Cauſes, and every conſiderable Town its Regidor, Corregidor, or Alcaid, as in *Spain*. But the Viceroy or Governor of each Province preſides in all the Courts within his Juriſdiction, and is the ſupreme Civil as well in Military Officer there. There is alſo a Viceroy of *Goa* in the *Eaſt-Indies*, and another of *Brazil* in *America*, who are inveſted with almoſt Regal Power.

Eccleſiaſtical Government.

The Eccleſiaſtical Government here, does not differ much from that of other *Roman Catholick* Countries. The Kings of *Portugal*, by a Grant of the Popes, nominate to all Archbiſhopricks and Biſhopricks; of which there are in *Portugal* three Archbiſhopricks and ten Biſhopricks, as appears by the Table at the End of this Chapter.

Inquiſition

The Inquiſition reigns here, it muſt be confeſſed, with a more uncontroulable Power than in any other Kingdom or State. It was firſt inſtituted in the Thirteenth Century, for ſuppreſſing the Hereſy of the *Vaudois* and *Albigenſes*, as it was called; and was received in *Portugal* for the ſame End about the Year 1523, in the Reign of King *John* III. It is called, *The Holy Office*, and *The Holy Houſe*; and conſiſts of an Inquiſitor-General, the ſupreme Council, Inquiſitors, Aſſeſſors, Qualificators, a Secretary, an Advocate-Fiſcal, a Treaſurer, Familiars, and Goalers.

All Men ſubject to it.

The Inquiſitor-General is named by the King, and confirmed by the Pope, acting as his Delegate: His Juriſdiction is ſo abſolute and extenſive, that no Subject is exempted from it: The Members of the ſupreme Court or Council are all named by him, but approved by the King before they can act, and are uſually ſecular Prieſts; and their Aſſeſſors, Divines, Civilians, and Canoniſts, with whom they adviſe. The Qualificators are employed in reviling and altering Books that are publiſhed, and are uſually *Dominican* Friars. The Secretary is properly the Regiſter; and the Advocate Fiſcal the Attorney or Proſecutor. The Treaſurer takes into his Cuſtody all the Priſoner's Goods and perſonal Eſtate when he is apprehended; and the Familiars are properly the Serjeants and Bailiffs belonging to this Office; though the Nobility and Perſons of the beſt Quality uſually enter themſelves of the Number of Familiars, as it is a Protection againſt the Civil Magiſtrate, and entitles them to the ſame plenary Indulgences as Perſons engaged in a Cruſade againſt Infidels and Enemies of the Chriſtian Name. As to the *Alguazils* or Goalers, they are forbidden to permit their Priſoners to ſend to their Friends, or receive any Manner of Support or Intelligence from them, or indeed to converſe with any Mortal but their Tormentors. The Inquiſitors and their Officers take an Oath never to diſcover any Thing tranſacted in that Court, and puniſh nothing more ſeverely than the Breach of that Oath.

The Manner of proceeding with thoſe who are apprehended by the Inquiſition.

This Court proceeds in a ſummary Way, on an Information brought by any Perſon whatever: If the Informer names any Witneſſes beſides himſelf, they are ſent for privately, and before they are examined, take an Oath not to diſcover to any their having been with the Inquiſitors, nor to ſpeak of any Thing they ſaid, ſaw, or heard, within that Court.

All People, though never ſo infamous, and though they ſtand convicted of Perjury, are, in Favour of the Faith, and in Deteſtation of Heretics,

ticks, admitted by the Inquiſition to be Witneſſes; mortal Enemies only excepted.

This Exception is of little Benefit to the Priſoner, by Reaſon of his not knowing who they are that have informed and witneſſed againſt him.

The Depoſitions of the Informer and Witneſſes, if there be any, being thus privately taken, a Familiar is ſent for; and being come, he has the following Order put into his Hands.

"By the Command of the Reverend Father *N.* an Inquiſitor of Heretical Pravity, let *N.* be apprehended and committed to the Priſons of this Holy Office, and out of which he ſhall not be releaſed, but by the expreſs Order of the ſaid Reverend Inquiſitor."

If ſeveral Perſons are taken up at the ſame Time, the Familiars are commanded ſo to order Things, that they may know nothing of one another's being apprehended; and at this the Familiars are ſo expert, that a Father, and his three Sons, and three Daughters, who lived together at the ſame Houſe, were all carried Priſoners to the Inquiſition, without knowing any thing of one another's being there, until ſeven Years afterwards, when they that were alive came forth in an Act of Faith.

The Priſons of the Inquiſition are little dark Rooms, and which have no other Furniture but a hard Quilt and a uſeful Pot. The Priſoners are not ſuffered to ſee any Perſon beſides their Keeper, who brings them their Diet, and with it a lighted Lamp, which burns about half an Hour; neither muſt their Keeper, without Leave from the Inquiſitors, entertain any Diſcourſe with them.

After the Priſoner has ſpent two or three Days and Nights in this melancholy Apartment, he is carried by the Keeper before the Inquiſitors, who before they ask him a Queſtion, make him take an Oath to return true Anſwers to all their Interrogatories; and if he has been ever guilty of any Hereſy, to confeſs it to them.

The firſt Queſtion the Priſoner is asked, is, Whether he knows why he was taken up by the Inquiſition? And if he anſwers that he does not know, he is then asked, Whether he knows for what Crimes the Inquiſition uſed to impriſon People? If he anſwers for Hereſy, he is admoniſhed, upon the Oath he has taken, to confeſs all his Hereſies, and to diſcover all his Teachers and Accomplices. If the Priſoner denies he ever held any Hereſy, or had ever any Communication with any Hereticks, he is gravely told, That the Holy Office does not uſe to impriſon People raſhly, or without any good Grounds for what they do; and that therefore he would do well to confeſs his Guilt; and that the rather, becauſe the Holy Office, contrary to the Cuſtom of all other Courts, is ſevere to thoſe that deny, and merciful to all thoſe that confeſs their Guilt.

If the Priſoner perſiſts in denying that he ever held any Hereſies, his Goaler is called in, and commanded to carry him back to the Place from whence he came; and the Priſoner is admoniſhed ſtrictly to examine his own Conſcience, that the next Time they ſend for him he may be prepared to make a true and full Confeſſion of all his Hereſies, Teachers, and Accomplices. The Priſoner having been allowed two or three Days more to do this in, he is brought before the Inquiſitors a ſecond Time, and is asked whether he comes prepared to confeſs, and if he anſwers that he cannot, without accuſing himſelf or others falſly, make any ſuch Confeſſion as they deſire of him; they do then ask him where he was born, and what his Parents were, and where he went to School, and who were his School-Maſters, and where he has lived all this Time, and with whom he has converſed moſt, and who has been his Confeſſor, and when he was laſt at Confeſſion, and at the Sacrament, with twenty more ſuch Queſtions. And being told, that they have ſufficient Proof of his being a Heretick, they command him, ſince he cannot repent of his Hereſies unleſs he confeſſeth them all, to go back to his Priſon, and there pray to God for Grace to diſpoſe him to make a true and full Confeſſion, to the ſaving of his Soul, which is all they ſeek after.

And being again allowed two or three Days to pray and conſider on what the Inquiſitors have ſaid to him, he is brought before them a third Time; and in caſe he perſiſts in pleading Not Guilty, he is then asked ſome Queſtions concerning the Heretical Doctrines he ſtands charged withal; for Example, Whether he believes *Chriſt* to be bodily preſent in the Sacrament, and that it is lawful to adore Images, and to pray to Saints and Angels? And if he affirms that he did always firmly believe theſe and all the other Doctrines of the *Romiſh* Church, he is asked, If he always believed theſe Doctrines, how came he to ſpeak againſt them? and if he denies that he ever did, he is then told, That ſince he is ſo obſtinate in his Hereſies, of which they have a ſufficient Proof before them, they will order their Advocate-Fiſcal to form his Proceſs and convict him of them.

But in caſe the Inquiſitors have not ſufficient Evidence, to draw a Confeſſion from the Priſoner, notwithſtanding they have told him oftner than once that they had, they then fall a Note lower, and tell the Priſoner, That though they may not have ſufficient Proof of his heretical Words and Actions to convict him of them, that they have ſufficient to put him to the Rack to make him confeſs them. And having fixed the Day when he is to undergo the Tortures, he, when that diſmal Day comes, if he does not prevent it by ſuch a Confeſſion as is expected from him, is led to the Place where the Rack is, attended by an Inquiſitor and a Publick Notary, who is to write down the Anſwers the Priſoner returns to the Queſtions which ſhall be put to him by the Inquiſitor while he is upon the Rack: During the Time the Executioner is preparing that Engine of unſpeakable Cruelty, and is taking off the Priſoner's Clothes to his Shirt and Drawers, the Inquiſitor is ſtill exhorting the Priſoner to have Compaſſion both on his Body and Soul, and by making a true and full Confeſſion of all his Hereſies to prevent his being tortured; but if the Priſoner ſaith, that he will ſuffer any thing rather than accuſe himſelf or others falſly, the Inquiſitor commands the Executioner to do his Duty, and to begin the Torture; which in the Inquiſition is given by twiſting a ſmall Cord hard about the Priſoner's naked Arms and hoiſting him up from the Ground by an Engine to which the Cord is faſtened; and, as if the miſerable Priſoner's hanging in the Air by his Arms were not Torment enough, he has ſeveral Quaſſations or Shakes given him, which is done by ſcrewing up his Body higher, and letting it down again with a Jirk; which diſjoints his Arms, and after that the Torture is much more exquiſite than it was before.

When the Priſoner is firſt hoiſted from the Ground, an Hour-Glaſs is turned up, and which, if he does not prevent it, by making ſuch a Confeſſion

ſeſſion of his Hereſies as the Inquiſitor that is preſent all the while, and is continually asking him Queſtions, expects from him, muſt run out before hs is taken down; to promiſe to make ſuch a Confeſſion if they will take him off the Rack not being ſufficient to procure him that Mercy, no more than his crying out that he ſhall expire immediately, if they do not give him ſome Eaſe; that, as the Inquiſitors tell us, being no more than all that are upon the Rack do think they are ready to do.

If the Priſoner endures the Rack without confeſſing any Thing, which few or none, though never ſo innocent, are able to do, ſo ſoon as the Hour-Glaſs is out he is taken down, and carried back to his Priſon, where there is a Surgeon ready to put his Bones in Joint. And though in all other Courts the Priſoner's having endured the Rack without confeſſing the Crimes for which he was tortured, clears him, and makes void all the Evidence that was againſt him; yet in the Inquiſition, where whatſoever Humanity and right Reaſon have eſtabliſhed in Favour of the Priſoner is left to the Diſcretion of the Judge, it is commonly otherwiſe; the Priſoners that will not confeſs any thing being uſually racked twice, and if they ſtand it out, though few of them can do that, thrice.

But if the Priſoner makes the Confeſſion the Inquiſitor expects he ſhould on the Rack, it is writ down Word for Word by the Notary, and is, after the Priſoner has had a Day or two's Reſt, carried to him to ſet his Hand to it; which if the Priſoner does, it puts an End to his Proceſs, the Want of ſufficient Evidence to have convicted him, being abundantly ſupplied by this extorted Confeſſion thus ſigned by him. But in Caſe the Priſoner when it is brought to him refuſeth to ſign it, affirming it to be falſe, and to have been extorted from him by the Extremity of the Torture, he is then carried to the Rack a ſecond Time, to oblige him to repeat and ſign the ſame Confeſſion.

It is a very hard Matter for any one that is a Priſoner in the Inquiſition for Herely to eſcape the Rack, ſince neither the profeſſing and maintaining the Doctrines to be true wherewith he is charged, nor the denying of them, can ſecure him from it; the firſt being commonly racked to make them diſcover their Teachers and Accomplices, and the ſecond to oblige them to confeſs their own Guilt; and if a Priſoner does confeſs his having ſpoke ſome heretical Words, but to ſave his Eſtate ſtands in his having ſpoken them rathly and in a Paſſion, without an heretical Mind, he is racked to make him diſcover whether it was ſo or not, or whether his Thoughts were not the ſame with his Words. If a Priſoner either makes no Confeſſion at all, or does not confeſs the particular heretical Words or Facts wherewith he ſtands charged, and with which the Inquiſitors will never acquaint him, he is asked, whether he has any thing beſides his Denial to offer in his own Defence, and if he has, to make uſe of it: For now the Advocate-Fiſcal, upon their having Evidence enough againſt him, is ordered to form his Proceſs. Here if the Priſoner alledgeth, that unleſs they will be pleaſed to let him know the particular Words or Facts he ſtands charged withal, and who the Perſons are that have informed and witneſſed againſt him, that it will not be poſſible for him to make any Defence; he is told, that cannot be done, becauſe to let him know the particular heretical Words or Facts might lead him to the Knowledge of the Informers and Witneſſes, who by the fundamental Laws of the Inquiſition muſt never directly or indirectly be diſcovered to him.

The Priſoner being thus denied the Knowledge of the Things and Perſons, without which it is ſcarce poſſible for him, though never ſo innocent, to make any Defence, he is, notwithſtanding that, graciouſly asked by the Inquiſitors, whether he deſires to have an Advocate and Proctor to help him to make it? If he ſaith he would, he is not to name them, but muſt take thoſe the Inquiſitors ſhall appoint, and who before they have ſeen their Client, muſt take an Oath to defend and maintain the Cauſe of *N.* a Priſoner in the Priſons of this Holy Office; but ſo as not to uſe any Trick or Cavil, or to inſtruct his ſaid Client to conceal the Truth in Judgment: That if he ſhall by any Way diſcover his ſaid Client to be guilty of the Crime or Crimes wherewith he ſtands charged, will thereupon immediately diſmiſs his Cauſe: And if by having ſearched narrowly into his Caſe he ſhall diſcover that he has had Accomplices in his Hereſies, that he will inform againſt them to the Holy Office.

The ſame Oath is taken by the Priſoner's Proctor, as the Inquiſitors call him; though in Truth both he and the Advocate are the Inquiſitors Engines, made uſe of to fiſh what they can out of the Priſoner, againſt himſelf and his Friends, rather than any thing elſe.

The Priſoner being thus fitted with an Advocate and Proctor, and who are not ſuffered to know any thing more of his Accuſers, and of the Witneſſes againſt him than he himſelf knows; he is asked by them whether he would have any Queſtions put by the Inquiſitors to thoſe that have informed and witneſſed againſt him, or would have them examined upon any Points. And in caſe the Priſoner furniſheth his Advocate with any ſuch Queſtions or Points, they are put by him into Form and delivered to the Inquiſitors.

The Priſoner is asked whether he has any Witneſſes of his Orthodoxy; and if he names any, they are ſent for, and heard by the Inquiſitors. And as theſe Witneſſes do go to the Inquiſition with trembling Hearts, ſo they are extremely cautious not to ſay any Thing of the Priſoner that ſhall imply their having lived in any Intimacy with him, for Fear of bringing themſelves under a Suſpicion of Herely; and by the Laws of the Inquiſition no Relation of the Priſoner's within the fourth Degree can be a Witneſs for him. When the Priſoner's Advocate and Proctor are diſmiſſed, they take an Oath that they have no Copy of the Defence the Priſoner made for himſelf, and that they ſhall never ſpeak of it to any Perſon whatſoever; neither is the Priſoner ever ſuffered to ſee the Depoſitions of his own fearful Witneſſes, no more than the Depoſitions of thoſe that are againſt him.

Beside the forementioned, there is another common Proceſs in the Inquiſition, which is againſt thoſe that have murdered themſelves, or died a natural Death in their Priſons. The Proceſs againſt the firſt is ſhort, his having murdered himſelf being judged ſuch an Evidence of his Guilt as is ſufficient to convict him of the Hereſies wherewith he was charged. The Proceſs againſt the ſecond is carried on by the Advocate-Fiſcal in the ſame Manner as it would have been had the Priſoner been alive; and the Priſoner's Relations and Friends, or any other that have any thing to offer in Defence of the Deceaſed, are by a publick Edict ſummoned to appear before the Inquiſitors within forty Days to give their Evidence; and if upon this Summons none do appear to offer any thing in Vindication of the Deceaſed, the Deceaſed after the Expiration of that Term of Days, is acquitted or condemned in the

ſame Manner that he would have been had he been alive; and if he is condemned, his whole Eſtate is forfeited, and his Body and Effigies are burnt at the next Act of the Faith, as are the Body and Effigies of thoſe that had murdered themſelves.

But the Power of the Inquiſition extends not only to thoſe that died in the Priſons, but to the Bodies, Eſtates, and good Names, of all that after their Deceaſe ſhall be convicted of having died Hereticks: And though as to the Eſtates of thoſe that are convicted of having died Hereticks, they can go no farther than forty Years; as to the taking their Bones out of the Grave and burning them, and depriving them of their good Name, there is no Limitation of Time.

When a competent Number of Priſoners are convicted of Hereſy, either by their own voluntary or extorted Confeſſion, or upon the Evidence of certain Witneſſes, a Day is fixed by their chief Inquiſitor for a Goal Delivery, which is called by them an *Act of the Faith*, and which is always upon a *Sunday*. In the Morning of the Day the Priſoners are all brought into a great Hall, where they have the Habits put on they are to wear in the Proceſſion, which begins to come out of the Inquiſition about nine of the Clock in the Morning.

Auto de Fe. The firſt in the Proceſſion are the *Dominican* Friars, who carry the Standard of the Inquiſition, which on the one Side hath their Founder *Dominic*'s Picture, and on the other Side a Croſs betwixt an Olive-Tree and a Sword, with this Motto, *Juſtitia & Miſericordia*. Next after the *Dominicans* come the Penitents, ſome with Benitoes and ſome without, according to the Nature of their Crimes; they are all in black Coats without Sleeves, and bare-footed, with a Wax Candle in their Hands. Next come the Penitents who have narrowly eſcaped being burnt, who over their black Coats have Flames painted with their Points turned downward, to ſignify their having been ſaved but ſo as by Fire. This Habit is called by the *Portugueſe*, *Fuego revolto*, or Flames turned up-ſide-down. Next come the Negative and Relapſed, that are to be burnt, with Flames upon their Habit pointing upwards: And next come thoſe who profeſs Doctrines contrary to the Faith of the *Roman* Church, and who beſides Flames on their Habit pointing upward, have their Picture, which is drawn two or three Days before, upon their Breaſts, with Dogs, Serpents, and Devils, all with open Mouths painted about it.

The Priſoners that are to be burnt alive, beſides a Familiar, which all the reſt have, have a Jeſuit on each Hand of them, who are continually preaching to them to abjure their Hereſies; but if they offer to ſpeak any Thing in Defence of the Doctrines they are going to ſuffer Death for profeſſing, they are immediately gagged, and not ſuffered to ſpeak a Word more.

After the Priſoners come a Troop of Familiars on Horſeback; and after them the Inquiſitors and other Officers of the Court upon Mules; and laſt of all comes the Inquiſitor-General upon a white Horſe led by two Men, with a black Hat and a green Hatband, and attended by all the Nobles that are not employed as Familiars in the Proceſſion.

In the *Terreiro de Paco*, which may be as far from the Inquiſition as *White-Hall* is from *Temple-Bar*, there is a Scaffold erected, which may hold two or three thouſand People. At the one End ſits the Inquiſitors, and at the other End the Priſoners, and in the ſame Order as they walked in the Proceſſion; thoſe that are to be burnt being ſeated on the higheſt Benches behind the reſt, and which may be ten Foot above the Floor of the Scaffold.

After ſome Prayers and a Sermon, which is made up of Encomiums on the Inquiſition, and Invectives againſt Hereticks, a ſecular Prieſt aſcends a Desk, which ſtands near the middle of the Scaffold; who having firſt taken all the Abjurations of the Penitents, who kneel before him one by one in the ſame Order they walked in the Proceſſion, at laſt recites the final Sentence of the Inquiſition upon thoſe that are to be put to Death, in the Words following.

We the Inquiſitors of heretical Pravity, having with the Concurrence of the moſt illuſtrious N. *Lord Archbiſhop of* Lisbon, *or of his Deputy* N. *called on the Name of the Lord* Jeſus Chriſt, *and of his glorious Mother the Virgin* Mary, *and ſitting on our Tribunal, and judging with the holy Goſpels lying before us, that ſo our Judgment may be in the Sight of God, and our Eyes might behold what is juſt, in all Matters between the magnifick Doctor* N. *Advocate-Fiſcal, on the one Part, and you* N. *now before us, on the other, we have ordained, that in this Place and on this Day you ſhould receive your definitive Sentence.*

We do therefore by this our Sentence put in Writing, define, pronounce, declare, and ſentence, Thee N. *of the City of* Lisbon, *to be a Convicted, Confeſſing, Affirmative, and Profeſſed Heretick, and to be delivered and left by us as ſuch, to the Secular Arm, and we by this our Sentence do caſt thee out of the Eccleſiaſtical Court, as a Convicted, Confeſſing, Affirmative, and Profeſs'd Heretick, and we do leave and deliver thee to the Secular Arm, and to the Power of the Secular Court; but at the ſame Time do moſt earneſtly beſeech that Court ſo to moderate its Sentence, as not to touch thy Blood, or to put thy Life in any Danger.*

The Priſoners are no ſooner in the Hands of the Civil Magiſtrate, than they are loaded with Chains before the Eyes of the Inquiſitors, and being firſt carried to the ſecular Goals, are within an Hour or two brought from thence before the Lord Chief Juſtice, who without knowing any thing of their particular Crimes, or of the Evidence that was againſt them, asks them one by one in what Religion they do intend to die. If they anſwer that they will die in the Communion of the *Roman* Church, they are condemned by him to be carried forthwith to the Place of Execution, and there to be firſt ſtrangled, and afterwards burnt to Aſhes: But if they ſay they will die in the Proteſtant, or in any other Faith that is contrary to the *Roman*, they are then ſentenced by him to be carried forthwith to the Place of Execution, and there to be burnt alive.

At the Place of Execution, which at *Lisbon* is the *Ribera*, there are ſo many Stakes ſet up as there are Priſoners to be burnt, with a good Quantity of dry Furz about them: The Stakes of the Profeſs'd, as the Inquiſitors call them, may be about four Yards high, and have a ſmall Board, whereon the Priſoner is to be ſeated, within half a Yard of the Top. The Negative and Relapſed being firſt ſtrangled and burnt, the Profeſt go up a Ladder betwixt the two Jeſuits that have attended them all Day, and when they are come even with the forementioned Board, they turn about to the People, and the Jeſuits ſpend near a quarter of an Hour in exhorting the Profeſt to be reconciled to the *Church of Rome*; which if the Profeſt refuſe to be, the Jeſuits come down, and the Executioner aſcends, and having turned the Profeſt off the Ladder upon the Seat, and chained their Bodies cloſe to the Stake, he leaves them, and the Jeſuits go up to them a ſecond Time, to renew their Exhortation to them, and at parting tell them, *How they*

ſuf-

leave them to the Devil, who is ſtanding at their Elbows, to receive their Souls, and carry them with him into the Flames of Hell-Fire, ſo ſoon as they are out of their Bodies. Upon this a great Shout is raiſed; and as ſoon as the Jeſuits are off the Ladders, the Cry is, *Let the Dogs Beards be made, Let the Dogs Beards be made.* Which is done by thruſting flaming Furzes faſtened to a long Pole againſt their Faces. And this Inhumanity is commonly continued until their Faces are burnt to a Coal, and is always accompanied with ſuch loud Acclamations of Joy, as are not to be heard upon any other Occaſion; a Bull-Feaſt or a Farce being dull Entertainments to the uſing a Profeſſed Heretick thus inhumanly.

THE Beards of the Profeſt having been thus made, as they call it in Jollity, Fire is ſet to the Furz which are at the bottom of the Stake, and above which the Profeſt are chained ſo high, that the Top of the Flame ſeldom reacheth higher than the Seat they ſit upon; and if there happen to be a Wind, to which that Place is much expoſed, it ſeldom reacheth ſo high as their Knees; ſo that though there be a Calm, the Profeſt are commonly dead in about half an Hour after the Furz is ſet on Fire; yet if the Weather prove windy, they are not after that dead in an Hour and a half, or two Hours, and ſo are really roaſted, and not burnt to Death. But though out of Hell there cannot poſſibly be a more lamentable Spectacle than this, yet it is beheld by People of both Sexes, and of all Ages, with ſuch Tranſports of Joy and Satisfaction, as are not on any other Occaſion to be met with.

AND that the Reader may not think that this inhuman Joy may be the Effect of a natural Cruelty that is in thoſe People's Diſpoſitions, and not of the Spirit of their Religion, he may reſt aſſured, that all publick Malefactors beſides Hereticks, have their violent Deaths no where more tenderly lamented than among the ſame People, and even when there is nothing in the Manner of their Deaths that appears inhuman or cruel.

WITHIN a few Days after the Execution, the Pictures of all that have been burnt, and which were taken off their Breaſts when they were brought to the Stake, are hung up in St. *Domingo's* Church, whoſe Weſt End, though very high, is all covered over with theſe Trophies of the Inquiſition, hung up there in Honour to *Dominic*, who to fulfil his Mother's Dream, was the firſt Inventor of that Court: *Dominic's* Mother, when ſhe was ready to be brought to Bed of him, having dreamed, that ſhe was delivered, not of a human Creature, but of a fierce Dog, with a burning Torch in his Mouth.

I proceed next to enumerate the ſeveral Archbiſhopricks and Biſhopricks in *Portugal*, and enquire into their reſpective Revenues.

1. THE Archbiſhoprick of *Liſbon*; the Revenue whereof is 40,000 Cruſadoes. The Suffragans are, 1. *Miranda*, the Revenue whereof is 10,000 Cruſadoes *per Annum*. 2. *Portalegre*, the Revenue whereof is 500 Pounds *per Annum*. But the late Patriarchate eſtabliſhed at *Liſbon* has made a great Alteration in the Eccleſiaſtical Government of this Archbiſhoprick.

2. THE Archbiſhoprick of *Braga*; the Revenue whereof is 40,000 Cruſadoes *per Annum*. The Suffragans are, 1. *Coimbra*, the Revenue whereof is 40,000 Cruſadoes *per Annum*. 2. *Lamego*, the Revenue whereof is 18,000 Cruſadoes *per Annum*. 3. *Viſeu*, the Revenue whereof is 16,000 Cruſadoes *per Annum*. 4. *Porto*, the Revenue whereof is 15,000 Cruſadoes *per Annum*.

3. THE Archbiſhoprick of *Evora*; the Revenue whereof is 60,000 Cruſadoes *per Annum*. The Suffragans are, 1. *Elvas*, the Revenue whereof is 10,000 Cruſadoes *per Annum*. 2. *Leira*, the Revenue whereof is 18,000 Cruſadoes *per Annum*. 3. *Faro*, the Revenue whereof is 5000 Cruſadoes *per Annum*. And, 4. *Tavira*, the Revenue whereof I have not met with.

THE Univerſity of *Coimbra* is much the moſt conſiderable in *Portugal*, ſaid to conſiſt of 5000 Students: But then they admit Children before they can well read; ſo that our Grammar Schools may be reckoned equal to any of their Colleges.

THEY do not apply themſelves ſo much to Philoſophy, Divinity, or Phyſick, in theſe Univerſities, as to the Civil and Canon Law, which prevails very much in theſe Countries. And beſides theſe, every one ſtudies the Cuſtoms of his particular Province, by which the Magiſtrates are often govern'd in their Deciſions.

CHAP. III.

A brief Geographical Deſcription of all the Dominions of Portugal.

THAT Part of the Dominions of the King of *Portugal*, which are upon the Continent of *Europe*, contain *Firſt*, the Kingdom of *Portugal*, and, *Secondly*, the Kingdom of *Algarve*, or *Regnum Algarbiorum*. The Kingdom of *Portugal* is bounded on the North, with the Rivers *Minho* and *Leyra*, which part it from *Gallicia*; on the South, with the Kingdom of *Algarve*; on the Weſt, with the *Atlantick* Ocean; and on the Eaſt, with the two *Caſtiles* and *Eſtramadura*; from which it is deduced by a Line drawn from *Ribadonia*, ſtanding on the *Avia* to *Badajos* on the *Anas* or *Guadiana*; it extendeth on the Sea Coaſt from North to South, 400 Miles; the Breadth of it in the broadeſt Place, is 100 Miles, in the narroweſt, eighty; the whole Circumference is about 879 Miles; in which Compaſs it containeth about 1460 Pariſhes.

IT was firſt called *Luſitania*, from the *Luſitans* its Inhabitants; and had the Name of *Portugal* either from the Port of *Cale*, now called *Cata*, ſometimes a rich Empory or Mart-Town, or more likely from the Haven of *Porto*, a Town ſtanding on the Mouth of the River *Duero*, where the *Gauls*, or *French*, uſed to land their Merchandize, and ſo was called *Portus Gallorum*, and by Contraction *Portugal*. This Town was given in Dower to *Henry* Duke of *Lorrain*, with *Tereſa* baſe Daughter to *Alphonſo* the Sixth, King of *Caſtile*, with the Title of *Earl of* Portugal, whoſe Succeſſors coming to be Kings, called all thoſe Countries they gained from the *Moors*, by the ſame Name.

THE Air of the Country is healthy, the Country is hilly, and bare of Corn, with which it is ſupplied from *France*, and other Northern Parts; yet that which they have is as good, if not better, than any *Europe* affords. The Soil and Peo-

ple

ple are in all Parts not rich alike; for where the Soil is richeſt, the People are pooreſt, not benefited by the Trade of the too far diſtant *Lisbon*; and where the Soil is pooreſt, the People are richeſt, helped by Traffic and Manufactures, the chief of which are making Salt and Silk, which they export in great Abundance; and where there is Want of Corn, that Defect is ſupplied with Abundance of Honey, Wine, Oil, Alum, Fruit, Fiſh, Salt, white Marble, and ſome Mines of Silver, *&c.*

The People are of a more plain, ſimple Behaviour than the reſt of *Spain*, and (if we may believe the *Spaniſh* Proverb) neither numerous, nor wiſe; but they have found them both. They have a Kind of natural Animoſity, if not Antipathy, againſt the *Caſtilians*, for depriving them of their native Government and Liberties, although they have now recovered both. They were always accounted good Sea-faring Men, and fortunate in the Diſcovery of foreign Countries.

It aboundeth with Rivers of all Sorts, having near 200 great and ſmall. The chief are, 1. *Minius*, full of red Lead, (thence called *Minium* by the *Latins*,) navigable with ſmall Veſſels near 100 Miles. 2. *Lethes*, now *Lavada*. 3. *Mulnadas*, now *Mondego*. 4. *Tagus*. 5. *Duero*. And 6. *Anas*. Theſe three laſt, common to all the reſt of *Spain*; *Anas* or *Guadiana* paſſing by *Portugal* only for ſeven Leagues, *Tagus* for eighteen, and *Duero* for eighty: None of theſe are navigable for any long Space, by Ships of any great Burthen; all the Rivers of *Spain* being generally ſwift of Courſe, reſtrained within narrow Channels between ſharp Rocks, and therefore incommodious for Navigation: But that Want is ſupplied by three excellent Havens, 1. That of *Lisbon* upon *Tagus*. 2. *Porto* upon *Duero*, to the North of *Liſbon*. 3. That of *Setaval*, South of *Lisbon*, ſituate on a Gulf, twenty Miles in Length, and three in Breadth, a Place of great Importance.

The principal Cities of this Country are, 1. *Lisbon*, ſeated upon *Tagus*, a City famous for Commerce, called by the *Latins Ulyſippo*, or *Ulyſippo*, and, as ſome have fabulouſly imagined, built by *Ulyſſes* in his ten Years Travel. It is in Compaſs ſeven Miles, and contains upwards of thirty Pariſhes, in which are at leaſt 20000 Houſes, neat and comely Fabricks: There are on the Walls ſeventy ſix Turrets and Towers, and twenty two Gates to the Sea Side. Towards the Continent it is ſituate upon five ſmall Hills, betwixt which is a Valley which runs down to the River. On the higheſt Hill ſtands an antient Caſtle, not ſtrong; but by Reaſon of its Vicinity to the Palace, ſerving now only for a Priſon for great Men. The Entrance of the River is defended by the Caſtle of *Caſtus*, and nearer the City by the Fort of St. *Julian's*, and the *Rock of* Belem, munitioned by twenty Pieces of Ordnance: This is the Chamber of the Kings of *Portugal*, the See of an Archbiſhop, the Staple of Commodities for all the Kingdom, and thought more worth than all the Realm beſides.

2. The ſecond City of Note is *Santaren*, ſeated on the *Tagus*, ſo called from *Santta Irene*, a Nun of *Tomar* (a Monaſtery wherein the old Kings of *Portugal* uſed to be crowned) martyred here by the *Moors*: This City is called by *Ptolomy Scarabiſcus*, then a *Roman* Colony. 3. *Sintra*, upon the main *Atlantick*, at the End of high Mountains, called *Montes Lunæ*: Hither by reaſon of the cool Refreſhings of the Sea, and Pleaſure of the Woods adjoining, the Kings of *Portugal* uſe to retire in the Heat of Summer. 4. *Coimbra*, ſeated on both Sides the River *Mondego*, a pleaſant Situation, among the Vineyards and Woods of Olives; a Biſhop's See, an Univerſity, and ſome time the Reſidence of the Kings. 5. On the North Side of the River *Duero*, betwixt that and *Minio*, is placed the City of *Braga*, once the Royal Seat of the *Swevian* Kings, now the See of an Archbiſhop, contending for the Supremacy with *Toledo*. 6. *Porto*, the Haven of the *Gauls* before-mentioned, ſtanding on the Mouth of *Duero*, now vulgarly called *Porto-port*. 7. *Miranda*, a Biſhop's See, ſeated alſo on the *Duero*. 8. *Braganza*, the Dukes whereof, now Kings of *Portugal*, were accounted ſo great Princes, that it was thought one third Part of *Portugal* were their Vaſſals, and lived on their Lands: They are originally deſcended from *Alphonſo*, natural Son to *John* the Firſt, who was firſt by his Father created Earl of *Borcellos*, and after Duke of *Braganza*; they after came to have Right to the Crown by the Marriage of *Katherine*, Daughter to *Emanuel*. 9. On the South of *Tagus*, and betwixt it and *Algarve*, is ſeated in the midſt of a large and ſpacious Plain, the City of *Evora*, the See of an Archbiſhop, and an Univerſity, the laſt founded by King *Henry* the Cardinal. 10. Is *Portolegre*, a Biſhop's See. 11. *Olivenza*, on the *Guadiana*. 12. *Beja*, called by *Pliny* antiently *Pax Julia*, now mean, not very well inhabited, but antiently a *Roman* Colony, and one of the three Juridicial Reſorts of *Luſitania*.

The Kingdom of *Algarve* lieth South of *Portugal*, from which it is divided by a Line drawn from *Aſchorin*, on the Weſtern Sea, to *Odochere*, a Caſtle on the *Guadiana*; on the Eaſt bounded by *Andaluſia*, on the Weſt and South by the main *Atlantick*. More wild and barren it is than the Kingdom of *Portugal*, peopled with few Towns, and thoſe not very populous; hilly and mountainous, but by the Benefit of the Sea, yielding a great Trade of Fiſhing, eſpecially of Tunny, of which there is Abundance caught. The Kingdom of Algarve

It took its Name from its Weſtern Situation, for ſo *Algarve* ſignifieth in the *Arabick*. The utmoſt End of it was antiently called *Promontorium Sacrum*, now *Cape St. Vincent*; becauſe the Bones of St. *Vincent*, religiouſly preſerved by the Chriſtians, were here burnt, and ſcattered by the *Moors*; but it is vulgarly by Mariners called the *Southern Cape*: The Places of moſt Importance in this Kingdom, are 1. *Nubla*, the Seat of *Albed Meſad*, once King of this Country. 2. *Silvia*, an Inland City, the Seat of a Biſhop. 3. *Villa Maona*, ſituate beyond the Cape. 4. *Tavila*. 5. *Faro*. 6. *Lagos*. All Haven Towns.

This Country, conquered by the *Moors*, with the reſt of *Spain*, in the Diſtractions of their Power, was for a Time under the Sovereignty and Command of the Kings of *Seval* by the Kings of *Morocco*: It became ſubject unto them till they left this Country, and was after parcelled among many Kings, one of which was *Aben Meſad*, reigning in *Niebla*, and the Parts adjoining. He being diſpoſſeſſed of his Eſtate by *Alphonſo the Wiſe*, moſt of the other Towns and Princes ſubmitted unto him, and became his Vaſſals, *Anno* 1257. It was more abſolutely ſubdued, and made ſubject to the Crown of *Portugal* by *Alphonſo* the Third, *Anno* 1260; to whom the ſaid *Alphonſo*, the Tenth of that Name in *Leon*, and Seventh in *Caſtile*, had given the ſame in Dowry with *Beatrix* his Daughter.

The *Azores*, or *Tercera* Iſlands, are certain Iſlands belonging to the Crown of *Portugal*, ſeated in the *Atlantick* Ocean, directly oppoſite to *Lisbon*, and diſtant from it 250 Leagues, firſt found

tude, and one of them in the first Longitude, which is commonly reckoned from these Islands, being the most Western Parts of the World, before the Discovery of *America*.

They were called *Azores*, from the Multitude of *Gosshawks*, at first found there, (*Azor* in the *Spanish* Tongue, signifying a *Gosshawk*) tho' at this Time there are few or none found: They were called also the *Flemish* Islands, because first discovered by them; and in the Isle of *Fial*, one of the Chief, there are some Families still resemble *Flemings*, both in Complexion and Habit; and not far from their Abode is a Torrent, call'd by the *Portuguese*, *Ribera dos Flemingos*, or the River of *Flemings*; they were also called *Tercera's*, from *Tercera* the Chief of them.

The Air here is healthful, subject to few Diseases; they all abound with Flesh, Fish, and other Necessaries; except Salt and Oil, supplied from *Portugal*. Wines they have for their own Use, but not fit for Exportation, by reason of their Weakness; of like Nature is their Wheat, and also their Fruits, which seldom hold good above Twelve Months. They are subject to Earthquakes; and their chief Commodities for Exportation, are Canary-birds, Wood for Dyers, Joiners-Work, *&c.* and Beeves for such Ships as come to be victualled.

The Inhabitants are generally laborious, excellent Husbands of their Grounds; insomuch, that they make Vines grow out of the Rocks; much given to Joinery-work, making pretty Knacks: In Customs, they conform to the *Portuguese*, having some smattering of the *Flemings*, which Nation they seem to affect. The Islands are Nine in Number, whose Names are as follow, *viz.*

1. *Tercera*, the Chief of all the rest; 18 Miles in Compass, well stored with Peaches, Apples, Lemons, and Oranges; and for the Kitchen, Turnips, Cabbages, with Plenty of Pot-herbs, and the best Potatoes in the World, being the principal Food of the Inhabitants. They have great Quantities of the best Woad, called hence, *Island Woad*, used by Dyers; they have Fowl for the Use of Man, but no Birds of Prey: The whole Island is begirt with sharp Rocks; the Places of most Importance, are, 1. *Praye*, on the Sea-side, well wall'd, but not very populous. 2. *Santa Barbara*. 3. *St. Sebastian*. 4. *Ghalue*. And 5. *Villa Nova:* All Towns of good Note. 6. *Angra*, the Chief, not only of this Island, but of all the Nine; the Residence of the Governor, and an Archbishop's See, who hath in it his Cathedral: 'Tis fortified with two Castles; the Town is likewise well wall'd, the only Port Town of the Island, and secured rather by Art than Nature.

2. St. *Mary's*, so call'd, from that Saint (as St. *George's*, and St. *Michael's* are) unto whom it is dedicated; the most Southern of the Isles, and next to *Spain*, twelve Miles in Circuit, inhabited only by *Spaniards*, and those much given to making Earthen Ware; this Island is so well fortify'd by Nature with Rocks, that it requires no other Defence; the chief Town is likewise call'd St. *Mary's*, giving to, or taking it's Name from the Island.

3. St. *Michael's*, lying directly North from St. *Mary's*, and little distant, is the largest of the Nine, being 20 Miles in Length, but not answerable in Breadth; very subject to Earthquakes and fiery Eruptions: 'Tis particularly remarkable among Modern *Geographers*, who have taken their first Meridian (by which they divide the World into East and West) from the *Canaries*, or *Fortunate Islands*, where it was fix'd by *Ptolomy* and other ancient Writers. The chief Town hereof, besides many Boroughs and lesser Hamlets, is call'd *Punta del Gada*; seated upon a dangerous Sea, and without any Port; yet more frequented by Strangers than the Port of *Angra*, because here they may go in and out as they please, but cannot do so in the other with Safety.

4. *Fial*, which is 17 or 18 Miles in Length; provided with all Things necessary for the Use of Man; and well furnished with Woad, for which Commodity, it is much frequented by the Merchants of *England*. The chief Town of it is *Dorta*, defended with a Castle; both Town and Island were taken by Sir *Walter Raleigh*, Anno 1597, in the famous Action called the *Island Voyage*.

5. *Gratiosa*, not above 5 or 6 Leagues in Circumference; but so well furnished with Fruits, that they send much yearly to *Tercera*; inhabited by *Portuguese* only; but so poor, that they are not able to bear the Charge of a Garrison: The chief Town is called *la Plaia*.

6. St. *George's*, 12 Miles in Length, and about 3 in Breadth; mountainous and full of Forests, but those Forests are well stored with Cedars; they use them many times for Shipping, and sometimes for Fuel; the chief Town is also called St. *George's*.

7. *Pico*, which lies on the South of the Isle St. *George*, and took it's Name from a high Hill in the Form of a Pyramid, which the *Portuguese* generally call a *Pike* or *Pico*; replenished with Fruits, some Cedars, and a Tree called *Teixo*, of great Bulk, and much Beauty; the Wood exceeding hard within, and so very curiously veined, that it is allowed only to the King's Officers, the other Subjects being forbidden the Use of it, but upon special License, by a publick Edict. It is in Bigness second only to the Island of St. *Michael*, if not equal to it; being scarcely so long, tho' somewhat broader; the chief Towns of it are, 1. St. *Sebastian's*. 2. *Callota de Nesquin*; both upon the Sea, and in the East Parts of the Island.

8. *Flores*, directly East from *Fial*; so called from its Abundance of Flowers, as is *Gratiosa* for it's flourishing Verdure; it is about 8 Miles in Circumference, plentifully furnished with Cattle, and good Pasturage for feeding; the chief Town is *Santa Cruz*.

9. *Corvo*, the least of the Nine, and scarcely half so large as *Flores*; from which it is situate to the North, and but a little distant; and is thus called from it's Abundance of Crows; it is very unsafe, and miserably poor, by reason of the many Pirates which lie between the Islands, and intercept such Ships as trade to *America*: These Islands were the last of the *Portuguese* Dominions, which held out for Don *Antonio* the Bastard, against *Philip* II. King of *Spain*; against whom the Island of *Tercera* was for a while gallantly defended by *Emanuel De Sylva*, with the Help of the *French*; but was taken at last by the Marquis of *Santa Cruz*; and the *French*, after a Promise of Life, cruelly murder'd him in cold Blood.

The Portuguese Possessions in Asia.

So many are the Forts and Places possessed by the *Portuguese* in *Asia*, but especially in *India*, that to give a Description of them all, would be impossible; it will be sufficient to mention some few of the chiefest; and 1. *Diu*, a Peninsula, in the Province of *Guzurate*, in the Kingdom of *Cambaia*; looking towards *Persia*, but on the East Side thereof near the Mouth of the *Indus*: Here the *Portuguese* built an impregnable Citadel, by the Leave and Consent of King *Bacurines*, thereby to gain their Aid against *Mahommed* the *Mogul*, who had newly vanquished him: A Matter of such Consequence to the Crown of *Portugal*, that *John Bottelmes*, confined to *India* for some Crimes by him committed, undertook, in hopes by the Merit of that Service to obtain his Pardon, to carry the first News of it in a small Vessel not above 18 Foot long, and but six Foot broad, (the best which for

the present could be provided) which with great Courage he performed; and thro' that large, wide, and tempestuous Ocean, came in Safety with his News to *Lisbon*, to the great Joy of the King, but greater Admiration of all Sorts of People. Scarce was it settled in their new Possession, when besieged by *Solyman Bassa*, Admiral to *Solyman* the *Magnificent*, with a Fleet of 80 Ships and Gallies, *Anno* 1537. offended with the *Portuguese* for aiding the King of *Persia*, but rather for diverting the Spice-trade from *Alexandria*; in which he had such ill Success, that having assaulted it in vain with his Land-forces, he was fain to raise his Siege in such Haste and Tumult, that he left his great Ordnance behind him.

2. Over against *Diu* upon the Sea-side, they are possessed of *Daman*, a beautiful and pleasant Town, fortified with a strong Castle at the North End of it, with white chalky Stone, well planted with Ordnance; opposite whereunto, on the South-side of the Town, is a goodly Church, edged on the Top with white; which with the Houses, for the most part of the same Colour also, affords a pleasant Prospect to the Sailors passing by.

3. The next Place of Consequence which they possess, and, indeed, the chief of all their Possessions in *India*, is, the City of *Goa*, in the Kingdom of *Decan*; a Sea-port Town, situate in a little, but most pleasant Island, call'd *Tickvarinum*; 15 Miles in Compass, opposite to the Mouth or Outlet of the River *Mundavo*, a noted Market, and one of the Keys which unlock the *Indies*; for Number of Inhabitants, Pleasantness of Situation, and magnificent Buildings, the chiefest of the Country. Here the *Portuguese* have their Arsenals, and Harbour for the *Indian* Fleet; by which they command these Seas; and it is so strongly fortify'd, that tho' beleaguer'd by the Great *Idalcan*, with 35,000 Horse, 6000 Elephants, and 250 Pieces of Cannon, yet he could not force it. In regard of the convenient Situation and Strength of the Place, it was made the ordinary Residence of the *Portugal* Vice-Roy; who hath here his Council, Chancellor, and other Officers, for the Government of such Parts of *India* as belong to that Crown. It is also the Seat of the Archbishop or Primate of the *Indian* Church, planted by that Nation, who is hence called the Archbishop of *Goa*.

4. To this, we may add *Chiaul*, a Sea-port, in the Possession of the *Portuguese* also, and by them well fortify'd; insomuch, as a *Nizamalocco* having assaulted it with a numerous Army, was forc'd to leave it as he found it.

5. *Solsette*, with a Peninsula about 20 Miles in Circumference, possess'd likewise by the *Portuguese*; about 9 Miles distant from *Goa*; the whole containing 30 Villages, and 80,000 Inhabitants; this stands in the Province of *Canara*.

6. We may add, the Citadel the *Portuguese* have built and fortify'd by Consent of the King, near the great City of *Canamar*, with many other Fortresses and Places; among the rest, the City of *Macao* in *China* deserves mention, a famous and known Mart of Trade.

The *Portuguese* Possessions in *Africa*.

The *Portuguese* had large Possessions in the Kingdoms of *Congo* and *Angola* in *Africa*; which were first discovered under the Conduct of Don *Diego Cam* in the Year 1486; and had fortify'd themselves in the Kingdom of *Angola*, from whence and *Congo*, they used yearly to transport 28,000 Slaves into *Brazil*, till by the Treachery of the *Hollanders*, they were *Anno* 1641, or thereabout, dispossessed thereof; for the *Portuguese* having cast off the *Spanish* Yoke, a Cessation from Hostility with them was proclaimed in *Holland*; and not long after a firm Peace made between the two Nations: In the Articles whereof it was conditioned, That this Peace should not begin in the *East-Indies* till the End of a Year,; nor in *Brazil*, till the End of half a Year from the making thereof; which being observed, they gave Orders to their Fleets and Forces which were Abroad, to make themselves Masters of any Thing belonging to the *Portuguese*, which they could lay hold of; who following their Instructions, and anchoring near the Fort of *Angola*, were by the *Portuguese* received with Joy into their Castle, as their special Friends; which presently they possessed themselves of, turning the poor *Portuguese* in a weak Bark to seek new Adventures. Nor were they less kind to them in the Island of St. *Thomas* and *Princes Island*. The Islands of *Cape de Verd* are still possessed by the *Portuguese*; and so called, because situate just opposite to *Promontorium Capitis Viridis*, in the Land of *Negroes*: They are Nine in Number, *viz.* 1. St. *Anthony*. 2. St. *Vincent*. 3. *Bueno Vista*. 4. St. *Lucies*. 5. *Insula Salis*, or the *Isle of Salt*. 6. *Del Fogo*, or the *Isle of Fire*. 7. St. *Nicholas*. 8. *Maggio*, or *Majo*. 9. St. *Jago*. But some have added a Tenth, called *Brava*. Of these only Three are inhabited, *viz.* *Majo*, *Del Fogo*, and St. *Jago*; of which the last is the Chief; yet but 7 Miles long, rocky and mountainous; but full of very pleasant Vallies, and well peopled; the chief Town of it, called *Ribiero*, or *Ribiera la Grande*, a Colony of *Portuguese*, situate on a fine River, and a beautiful Haven: It was taken and plunder'd by Sir *Francis Drake*, in the Year 1585; and after by Sir *Anthony Shirly*, *Anno* 1596.

The Provinces and Possessions in *Brazil*.

Brazil is bounded on the East with *Mare del Nort*, or the *Atlantick Sea*; on the West, with *Terra Incognita*, lying betwixt it and the *Andes*; on the North with *Guiana*, from which it is parted by the great River *Maragnon*; on the South with *Paraguay*, or the Province of *Rio de la Plata*. It takes its Name from the great Abundance of *Brazil Wood*, with which this Country is plentifully stor'd; as the Island of *Cyprus* from its Plenty of *Cypress Trees*.

It reaches from the 29th to the 39th Degree of South Latitude; containing 1500 Miles from North to South; and 500 Miles from East to West, or from the Sea to the *Andes*; which must be understood with Reference to the whole Extent of it; for otherwise, all that which is possessed by the *Portuguese*, is so far short of taking up the whole Breadth thereof, that they possess nothing but the Sea Coasts, and some few Leagues comparatively within the Land; the greatest Part of it being conquered, that it hath not hitherto been discovered.

The Country is full of Mountains, Rivers, and Forests; diversify'd into Hills and Plains, always pleasant and green. The Air for the most part sweet and wholesome, by reason of the fresh Winds which reign amongst them; yet in regard of its Moisture, it is reckon'd more healthful to old Men than Young. The Soil exceeding fruitful, were it not for their great Rains; however it produces Sugar-Canes in such liberal Quantities, that they yearly export from *Brazil* to *Portugal*, 150,000 Arrobes of Sugar, every Arrobe containing twenty five Bushels of our *English* Measure. There is also infinite Quantities of that Red-wood used for dying, called *Brazil* Wood; the Trees whereof are of that incredible Greatness, that whole Families live on an Arm of them, every Tree being as populous, as the most of our Villages.

The People are endowed with a pretty natural Understanding, yet generally barbarous; the Men and Women go stark naked, and on high Festival Days, hang Jewels in their Lips. Those Festival Days are, when a Company of good Neighbours come to be merry over the roasted Body of a fat

Man,

Man, which they cut in Collops, called *Boucon*, and eat with Greedineſs and Delectation. They have two vile Qualities, as being mindful of Injuries, and forgetful of Benefits. They cannot pronounce the Letters *L*, *F*, *R*; the Reaſon of which, one, being demanded, made Anſwer, was becauſe they had amongſt them, neither *Law*, *Faith*, nor *Reaſon*.

THE Country is not divided into Provinces or Counties, as in other Places; but into Prefectures, or Captainſhips, as the *Portugueſe* call them; of which there are Thirteen in Number, from the Province of *Rio de la Plata*, to that of *Guiana*; viz.

1. THE Captainſhip of St. *Vincent*, bordering on *Rio de la Plata*, inhabited by the moſt civil People of all *Brazil*; the chief Towns of which are, 1. *Santo*, at the Bottom of an Arm of the Sea, whoſe Harbour is capable of receiving Ships of Burthen; but diſtant from the Main three Leagues; a Town of no more than 120 Houſes; yet the beſt of this Prefecture is, its being beautified with a Pariſh Church, and two Convents of Friars. It was taken and held two Months by Sir *Thomas Cavendiſh*, in the Year 1695; ſince which, the *Portugueſe* have built a Wall round it, and fortified it with two Caſtles. 2. St *Vincent's*, better built, but not ſo well accommodated with a good Haven; it contains about ſeventy Houſes, and 100 Inhabitants. 3. *Iſange*. 4. *Canarea*, containing two open Boroughs, but a Harbour for ſmall Veſſels only. 5. St. *Paul*, ſituated upon a little Mountain, at the Foot whereof run two pleaſant Rivers, which empty themſelves into an adjacent River called *Iniambis*; this is furniſh'd with about 100 Houſes, a Church, two Convents, and a College of Jeſuits; nearly adjacent to which, are Mines of Gold, found in the Mountains of *Pernabiacaba*. 6. St. *Philip's*, a ſmall Town, ſeated on the Banks of the River *Iniambis*, which there begins to enlarge itſelf, and paſſing thence, falleth at laſt into the River *Parana*, one of the greateſt Tributaries to *Rio de la Plata*.

2. OF *Rio de Janeiro*, or the River of *January*; ſo called, becauſe it was poſſeſſed that Month, in the Year 1555, by *John Diaz de Solis*; but being neglected by the *Portugueſe*, it was ſeiſed on by the *French*, under the Conduct of *Villagagnone*, employed herein by Admiral *Chaſtillon*, a great Friend of the *Hugonots*, to whom it was intended as a Place of Refuge (as *New England* afterwards for the like); but within three Years after their firſt coming thither, *viz. Anno* 1558, it was regained by the *Portugueſe*, and the *French* put to the Sword. The Places of moſt Conſideration in it, are, 1. *Coligna*, the Fort and Colony of the *French*; ſo named in Honour of *Caſpar Coligni*, commonly called *Chaſtillon*, by whoſe Encouragement it was founded; ſituated on the Bay of the River *Janeiro*, which the *French* called *Ganabara*. 2. St. *Sebaſtian's*, built at the Mouth of the ſame Bay, by the *Portugueſe*, and fortified with four ſtrong Bulwarks. 3. *Angra des Reyes*, diſtant twelve Leagues Weſtward from the Mouth of the Bay, not long ſince made a *Portugueſe* Colony; beſides theſe, there are two great Boroughs of the natural *Brazilians*, in which are ſaid to be 2000 Inhabitants.

3. OF the *Holy Ghoſt*, (*del Spiritu Santo*,) one of the moſt fertile Provinces of all *Brazil*; well ſtored with Cotton, Wool, and watered with the River *Parayba*, large and full of Fiſh. The only Town of Note in it, is *Spiritu Santo*, inhabited by about 200 *Portugueſe*; the chief Buildings are a Church, dedicated to St. *Francis*, a Monaſtery of *Benedictines*, and a College of Jeſuits; the chief Conveniency, a ſafe and commodious Haven, capable of the largeſt Veſſels.

4. OF *Porto Seguro*, the ſecure Haven; ſo called by *Capralis*, who firſt diſcovered it, when being toſs'd at Sea by a terrible Tempeſt, he had here refreſhed himſelf: The chief Towns hereof, are, 1. *Porto Seguro*, built on the Top of a white Cliff which commands the Haven; of more Antiquity than Fame; of more Fame than Bigneſs; as not containing fully 200 Families. 2. *Santa Cruz*, three Leagues from the other; a poor Town, with as poor an Harbour: The Patrimony and Inheritance of the Dukes of *Aveiro*, in the Kingdom of *Portugal*. 3. *Santa Amaro*, or St. *Omers*, once of great Note for making Sugars, for which Uſe here were five *Ingenios*, or Sugar-Engines. It was deſerted by the *Portugueſe* for fear of the Natives, againſt whom they had not Power ſufficient to defend the Place; and the Sugars were purpoſely deſtroyed, that they might not come into the Hands of the barbarous People.

5. OF *Des Ilees*, or the Iſles; ſo named from certain Iſlands lying againſt the Bay, on which the principal Town is ſeated; called alſo *Itheos*, or the Iſle; the Town conſiſting of about 150 or 200 Families, contiguous to a great Lake of 12 Leagues in Compaſs, out of which that River doth ariſe, full of great, but wholſome Fiſh, which they call *Monatos*, ſome of which are affirmed to weigh 28 Pounds: This Colony was much endangered by the *Guaymuri*, a Race of Savages, more rapacious than any of their Fellows; who being driven out of their own Country, fell into this Prefecture, and had utterly deſtroyed it, if ſome of St. *George's* Relicks (as the Jeſuits ſay) ſent by their General from *Rome*, in the Year 1581, had not ſtayed their Fury, and given the *Portugueſe* the better.

6. OF *Todos los Santos*, or all Saints; ſo called from a large Bay of that Name, upon which it hath in Breadth two Leagues and a half; eighteen Fathom deep, and full of many little Iſlands, but flouriſhing and pleaſant, and well ſtored with Cotton Wool: The chief Towns hereof are, 1. *San Salvador*, built on a little Hill, on the North-ſide of the Bay, by *Thomas de Souza*: adorned with many Churches, and fortified, beſides the Wall, with three ſtrong Caſtles, the one called St. *Anthony*, the other St. *Philip*, and the third *Topoſippe*. 2. *Paripe*, which lies farther within Land, four Leagues from S. *Saviours*. 3. *Sergippe del Rey*, a ſmall Town, and ſeated on as ſmall a River; but amongſt many rich Paſtures, and ſome Veins of Silver.

7. OF *Pernambuco*, one of the richeſt Prefectures for Tobacco, Sugar, and the great Quantities of Brazil Wood, which is brought hence yearly for the Dyers, in all this Country; but deſtitute of Corn, and moſt other Neceſſaries, with which it is ſupplied from *Portugal*. The chief Towns hereof, are, 1. *Olinda*, the largeſt and beſt peopled of all *Brazil*, containing above 2000 Perſons, not reckoning Eccleſiaſticks, nor taking in the Number of Slaves, which they keep for their Sugar-works, in this Account; there are in it eight Parochial Churches, five religious Houſes, and ſome Hoſpitals; ſituate near the Sea, but on ſo uneven a Piece of Ground, as makes it not capable of a regular Fortification; the Haven being little, and not very commodious; but defended at the Entrance by a well built Caſtle, and that well planted with Pieces of Braſs Cannon. 2. *Amatta di Brazil*, ten Miles from *Olinda*; the Inhabitants whereof live by ſelling *Brazil* Wood. 3. *San Lorenzo*, a well frequented Village, but as yet unwalled. 4. *Ponair*, built on the Side of a River ſo named. 5. *Antonio de Cabo*, near the Cape of St. *Anthony*; both of good Note for the great Quantity of Sugars which are made in each. 6. *Garaſu*, about five Miles from *Olinda*; inhabited

inhabited for the moſt part by poor and mechanical People.

8. Of *Tamaraca*, ſo called from an Iſland of that Name, about five Miles Diſtance from *Olinda*; of no great Note, but for the Haven, and an impregnable Caſtle, built on the Top of a Hill for the Defence thereof: This is the leaſt Prefecture in *Brazil*, but withal the ancienteſt, extending three Leagues only in Length, and but two in Breadth.

9. Of *Paraiba*, ſo called from a River of that Name, on whoſe Banks ſtands *Paraiba* the chief Town, inhabited by about 500 *Portugueſe*, beſides Slaves and Negros; the Town is not walled, but ſecured by a ſtrong Caſtle on the Promontory called *Capo Delo*, which the *Hollanders* often in vain attempted.

10. Of *Rio Grande*, ſo called likewiſe from a River, but lately made a Prefecture, to exclude firſt the *French*, and alſo the Savages from poſſeſſing it; it is ſtrongly fortified by an impregnable Caſtle.

11. Of *Siarra*, ſo called from the Haven of *Siarra* adjoining; of no great Note, being alſo but lately made a Prefecture; the *Portugueſe* enjoying no more here but a Caſtle, and about a dozen Houſes.

12. Of *Maragnon*, an Iſland lying in the Mouth of the River ſo called; a Prefecture not inferior to any in *Brazil*, if it were well manured, the Soil being very fruitful, and well inhabited both by Natives and *Portugueſe*.

13. Of *Para*, the moſt Northern Prefecture of *Brazil*, towards *Guiana*; ſo called from the River of *Para*, ſuppoſed a Branch of the River of *Amazons*, which runneth through it; the River at the Mouth of it being two Miles in Breadth, and in the Midle of the Channel fifteen Fathoms deep: On the Banks thereof, but on an higher Ground than the reſt, the *Portugueſe* have built the Caſtle of *Para*, of a quadrangular Form, and well walled, except towards the River; the Country thereabouts is inhabited by 300 *Portugueſe*, beſides the Garriſon.

Thus much for the particular Governments of this Country; for itſelf, in general it has ſuffered the ſame Fortune with Countries of more antient Diſcovery, *viz.* to have many Maſters; the *Spaniſh*, *Dutch* and *Portugueſe*, all claiming Right to it; but the laſt however, worried by the other Two, have hitherto kept the ſureſt Foot in it, and are ſtill like to continue it in their Poſſeſſion.

Its Diviſions and Sub-Diviſions; the Perſons and Habits of the People; their Buildings, Manners, Laws, and Cuſtoms; their Religion and Policy: Alſo their Arts and Sciences; Trades, Manufactures, and Husbandry; with their Plants Animals, Minerals, *&c.*

CHAP. I.

Of the Situation, Extent, and Boundaries of Africa, *with the antient Hiſtory thereof; the Building of* Carthage, *and the ſeverai Mutations of that State,* &c. *Deſigned for the better underſtanding of the modern Hiſtory of* Africa, *which follows.*

AFRICA is bounded by the *Mediterranean* Sea, which ſeparates it from *Europe* on the North; by the great *Atlantick* Ocean, which ſeparates it from *America* on the Weſt: On the Eaſt it is ſeparated from *Aſia* by the *Iſthmus* of *Suez*, the *Red Sea*, and the *Eaſt-Indian* Ocean; and its Southern Boundary, is the Southern Ocean; the South Cape, called *Cape Bona Eſperanza*, or, in *Engliſh*, *The Cape of Good Hope*, being the ſouthermoſt Point of Land in *Africa*.

Africa is a *Peninſula*, the Sea waſhing on every Side, and all round it, except at that ſmall Piece of Land called the *Iſthmus* of *Suez*: For if that was cut, and a Communication by Sea made between the *Red Sea* and the *Mediterranean*, *Africa* would be entirely an Iſland.

As for the Situation of *Africa*, it extends in Latitude from *Cape Bona* near *Tunis*, in Latitude thirty-ſeven Degrees and five Minutes North, to *Cape Bona Eſperanza*, in Latitude thirty four Degrees and twenty-five Minutes South; which makes in all ſeventy-one Degrees and thirty Minutes in Latitude; which at ſixty Miles to a Degree, makes 4,290 Miles from North to South. The greateſt Dimention of *Africa* from Eaſt to Weſt, is from *Cape de Verd* to *Cape Gardefoy*, near the Streights of *Babel-Mandel*; whoſe Difference of Longitude is near ſixty-nine Degrees, and the middle Latitude between them is thirteen Degrees and ten Minutes; where there is fifty-eight Miles to a Degree of Longitude, and this brings out the Breadth of *Africa* to 4,140 Miles from Eaſt to Weſt.

Africa was once eminent for Kingdoms and States, of Wealth, Power, and extenſive Commerce; as *Egypt*, *Ethiopia*, the rich and powerful State of *Carthage*; to which we may add the Kingdoms of *Numidia* and *Mauritania*, then ſubject to *Carthage*; for the Sake of whoſe Power, Wars, and Trade, it may not be amiſs to give an Abſtract of the antient Hiſtory of *Africa*, as a proper Introduction to give Light to the reſt.

The antient Hiſtory of AFRICA.

Note. *As for the Hiſtory of* Egypt, *which is the North-Eaſt Part of* Africa, *it is touched upon in the Deſcription of the* Turkiſh *Empire, where the Pyramids, and other Curioſities and Antiquities, are deſcribed, and for the Deſcription of which I ſhall refer the Reader to Chap.* I. *and* II. *of the* Turkiſh *Empire in* Africa, *Page* 319. *I ſhall now proceed to the Weſtward, and furniſh the antient Hiſtory of* Africa.

AFTER the *Egyptians*, the next People that made any Figure in *Africa*, were the *Phœnicians* or *Canaanites*. The North Coaſt, next

to the *Mediterranean*, was at first all peopled by the *Egyptians*, all the Way to the *Streights* Mouth, and to the *Atlantick* Ocean: And when the *Phœnicians* arrived upon that Coast, after they were driven out of their own Country by *Joshua* and the *Israelites*, they found those *Egyptian* Inhabitants in Possession: Whereupon, by fair Means, they obtained an Opportunity to traffick, and at last to settle, where *Carthage* afterwards stood; which is now the Kingdom of *Tunis*, or, according to the *Romans*, *Africa Proper*. To that Place where *Carthage* since stood, the *Phœnicians* sent a Colony that built the Town of *Utica*; and afterwards another Colony of them laid the Foundation of *Carthage*, about 883 Years before *Christ*: But *Carthage* was built and finished by *Dido*, a *Tyrian* or *Phœnician* Princess, and Sister to *Pigmalion* King of *Tyre*. It is said, and indeed with good Probability, that the first Occasion of her going to settle in *Africa*, was as follows.

Queen *Dido*

Dido married a very rich Relation, named *Acerbas*; and *Pigmalion* King of *Tyre*, who was her Brother, caused him to be assassinated, thinking to seize his great Wealth: But *Dido* was too sharp for him; for perceiving what he aimed at by what he had done, she privately and expeditiously got some Ships, and transported herself and her Husband's Effects to *Africa*, and disappointed *Pygmalion* of his wicked Design; and being settled here among her Country People, she built the once famous City of *Carthage*. She called it *Carthada*, or the New Town, in Opposition to *Utica*, or the Old Town, built before by her Countrymen.

Builds *Carthage*

We have different Accounts of Queen *Dido*'s Death. One is, that *Iarbas* King of *Getulia* made Love to her; but she, having made a Vow never to marry, hated his Addresses, and prepared her Funeral Pile; and when *Iarbas* came next to visit her, she ascended the Pile with a Poniard, and so concluded his Courtship with her own Life.

Kills herself

I dare not assert this for Fact; for these extravagant heroick Actions taste so high-seasoned of Heathen Poetry, that they will not relish in every thinking Person's Palate. It is pity that our Histories, which should set us to Rights in real Facts, should have their genuine Sense so murdered by the Adulteration of Heathen Poetry, that the Truth must either be lost, or if Truth happens to be interspersed you do not know it from Falshood. But no Wonder at this, when even our School Books, which should be the Path-way to sound and wholesome Literature, are so deeply allayed with heathenish Notions, that he would be a School Atheist, that should not profess to believe that *Mars* is the God of War, *Apollo* the God of Wisdom, *&c.* Not to mention others of those Fictions, so much more ridiculous that they are not fit to be mentioned here, or in any Book where only Fact is the grand Subject.

Wars.

The first War that we hear *Carthage* was ingaged in, was with the *Africans*, who fought them for refusing to pay the annual Tribute, which they agreed to pay for Leave to build *Carthage*: But, by Supplies and Reinforcements from *Tyre*, they were soon able, not only to dispute the Tribute, but to spread their Arms and Conquests further in *Africa*.

The next War was with the City of *Cyrene*, which stood in *Barca*, between *Carthage* and *Egypt*: They differed about the Limits of their respective Territories, and to determine that, two Men set out, one from *Carthage* to *Cyrene*, the other from *Cyrene* to *Carthage*, both at the same Moment of Time, and where they met was to determine the Bounds that Way. Some, by I do not know what superstitious Argument, alledged that the two young Men, each as a Testimony of his Fidelity in walking, agreed to be buried alive where they met: But I shall suspend my Belief of this last Part of the Story, as to their being buried alive, and rank it amongst the Heathen Poetry or *Romish* Legends, and think it sufficient to observe, that there were two Altars erected at these Boundaries, which stood many Years; and it is not improbable that they might be upon the Graves of those two young Men too, if they were buried there upon the said Occasion of bounding the two Empires.

When they had subdued *Barca*, they extended their Conquests further to the Westward, as far as the *Atlantick* Ocean; and some say as far as *Cape de Verd* to the Southward. They also subdued *Majorca*, *Minorca*, and *Ivica*; and thence found themselves an easy Passage to *Spain*. Here they first settled at *Cadiz*, an antient Colony of their old Countrymen the *Tyrians*. *Cadiz* was then at War with *Spain*, and not being able to maintain their Ground, called the *Carthaginians* to their Assistance; who not only defended *Cadiz*, but carried on an offensive War in the *Spanish* Dominions against *Spain*. The *Spaniards* being divided, South *Spain* became an easy Conquest to them; and even *Cadiz*, that called them in, was now forced to submit to their Laws and Government. But this is not the first, nor probably will it be the last Instance of a People being subdued, by introducing Crowds and Armies of Foreigners into their Country. It is fresh in History how the antient *Britons*, being overpowered by the *Picts* and *Scots*, sent for the *Saxons to their Aid*: But they, seeing the Fatness of their Land, took Possession of it for themselves, and sent the antient *Britons*, the first Possessors, to seek Shelter elsewhere.

About 484 Years before *Christ*, the *Carthaginians* entered into an Alliance with *Xerxes* King of *Persia*, against *Greece*; and while he marched with a very powerful Army to attack *Greece* upon the Continent, the *Carthaginians* transported an Army of (some say) 300,000 Men into *Sicily*, thinking to reduce all the *Grecian* Cities in that Island: But this Attempt miscarried, the Army being cut to Pieces; as did another Attempt afterwards upon the said *Grecian* Cities in *Sicily*, when the *Carthaginian* Army having attacked *Syracuse*, and were in Hopes to carry all before them, a Plague broke out in the Army, and destroyed a great Part of them. They that escaped the Plague, died mostly by the Sword of the *Syracusians*. This caused an Insurrection in *Africa*, and the Malecontents laid Siege to *Carthage* itself: But being destitute of Provision, and contending about Superiority, they soon dispersed, and the Cloud that hung over *Carthage* immediately disappeared: But a darker and more threatning one soon sprung up; for *Agathocles* the *Syracusan* General, in Confederacy with some of the *African* Princes, laid so hot a Siege to *Carthage*, that they bid fair for the total Subversion of the State and Government.

Carthage besieged

The *Carthaginians*, in this Distress, began to conclude that all this Affliction came upon them for the Neglect of some of their diabolical Pieces of Worship; especially in their not sacrificing a certain Number of Children, and those of the best Rank, to *Saturn*: Therefore, to atone for this Omission, they at once sacrificed 200 Children to the inraged Deity. But even here was enough to deter them from such bloody Sacrifices for the future; for notwithstanding their pretended Atonement, the Affairs of the *Carthaginians* grew still more desperate. *Bomilcar* then General thought

thought, by taking Advantage of their Diſtreſs, to get himſelf inveſted with Sovereign Power over them; in order to which he fomented an Inſurrection to weaken them within the City, while the Enemy kept them employed from without: But he was ſoon deſerted, and crucified for his Villany, which by this Means was brought to an End.

Soon after this, *Agathocles* the *Grecian* General happened to have a Miſunderſtanding between him and his *African* Allies, and in a Rage, luckily for *Carthage*, raiſed the Siege, and went over into *Sicily*; giving the *Carthaginians* an Opportunity to recover the Places they had loſt, and to eſtabliſh their Empire again in *Africa*.

But at this Time both *Italy* and *Sicily* were threatned with an Invaſion by *Pyrrhus* King of *Epirus*: The *Carthaginians* therefore renewed their Confederacy with the *Romans*, for the Security of their Territories in *Sicily*. But *Pyrrhus* made a Deſcent there with his Forces, and reduced all the *Carthaginian* Towns, except *Lilybæum*, which made a vigorous Defence. At laſt the *Romans* gaining Advantage of *Pyrrhus* in *Italy*, he was forced to abandon all his Conqueſts in *Sicily*, to go and ſecure thoſe on the Continent. But after eight Times being defeated by the *Romans* in *Italy*, he was forced to quit his Attempts in that Country alſo.

The *Romans* having now expelled all their Enemies out of *Italy*, they began to think of inlarging their Empire by new Conqueſts; and firſt they thought of invading *Sicily*, which was ſeparated from them only by the *Fare of Meſſina*, about three Miles over; and to forward his Deſign, ſome *Sicilian* Malecontents ſeized *Meſſina*, and offered to deliver it to the *Romans*; which they thankfully, though villainouſly, accepted, and ſent Forces to ſupport thoſe Rebels. This occaſioned that War between the *Romans* and *Carthaginians*, called the firſt *Punick* War, begun in the Year before *Chriſt* 266, and after the building of *Rome* 488.

The *Sicilians* were not able to ſtand before the *Romans*, who were ſuch expert Soldiers, nor to meet them in the Field, but retired into the ſtrong Towns near the Sea, where they could be relieved by their Fleets, the *Romans* as yet having no Shipping to oppoſe them. The *Carthaginians'* Navigation flouriſhing, they enriched themſelves by this War, while the *Romans* grew poor, exhauſting both Men and Money, and being deſtitute of all freſh Supplies of either by Sea.

The *Romans* thus hemmed in, and confined to the Land, plucked up their Spirits, and reſolved to diſpute the Dominion of the Sea with the *Carthaginians*; and in order thereto, collected naval Stores and Ship-Builders from all Quarters, and Foreign Mariners alſo; ſo that in a few Months Time, they built, rigged, and manned, a Fleet bold enough to meet the *Carthaginians*: which accordingly they did, and, to the great Surprize of the *Carthaginians*, the *Roman* Galleys had Machines or Engines, by which they could grapple the Enemies Ships, and deprive them of all the Advantage of their Sails. The Machine it was a great Piece of Timber armed with Hooks and Chains, which when the Enemy's Ship approached them they let down into her with Pullies; and it grappled her ſo faſt, that it was impoſſible for the Veſſel ſo grappled to diſengage herſelf, till the firſt beat the Enemy's Crew.

Thus equipped, the *Roman* new Fleet put to Sea, under the Command of their Admiral *Duilius*, with 120 Gallies. The *Carthaginian* Fleet of 130 Veſſels, commanded by *Hannibal*, waited their Motion, longing to meet thoſe raw undiſciplined *Romans*, as they thought them. In a Word, both Sides being eagerly willing, they ſoon came to an Engagement. The *Carthaginians* at firſt looked upon the *Romans* with the utmoſt Contempt: But ſoon, to their great Surprize, they found themſelves ſo grappled and entangled, that they could neither fight nor run away: Only the two Ships that were faſt together, could fight as upon firm Land. In the mean time the *Romans*, the firſt Inventors of this new Way of fighting, ſo provided for ſuch very cloſe Quarters, gained an entire Victory, took four-ſcore Sail of *Hannibal's* Gallies, of which his own was one, only he himſelf narrowly eſcaped with his Boat.

The *Carthaginians* were ſo diſcouraged by this Defeat, that they could not help ſuffering the *Romans* to lord it in the *Mediterranean* for two Years without Oppoſition; but awaking out of their Lethargy, they fitted out a Fleet of 150 Gallies, full and well-manned; and with them they met the *Roman* Fleet of 130 Gallies: And although one would think the *Carthaginians* might, by their firſt late Experiment, have been ſufficiently provided againſt the *Roman* grappling Irons; yet the *Romans* had got more Experience in maritime Affairs, or had more *Grecians* in their Service; for in this Engagement they took no leſs than ſixty of the *Carthaginian* Gallies. But in this Fight twenty-four *Roman* Galleys were deſtroyed, which takes off ſomething of the vaſt Glory of the Victory.

The *Romans*, elevated with this Succeſs, invaded *Africa* by Land with a ſtrong Army, under the Command of *M. Atilius Regulus* and *L. Manlius*, their Conſuls; and the *Carthaginians* quiting the Field, and retiring to their ſtrong Towns, the *Romans* took *Clypea*, a Sea Port; ravaged the Country; took 20,000 Priſoners; beſides large Flocks and Herds: Whereupon *Manlius* was ordered Home, and *Regulus* to remain in *Africa*, with 15,000 Men and 500 Horſe, alſo forty Gallies to attend his Motion by Sea. Theſe ſmall Numbers were now thought ſufficient, in the preſent low State of *Carthage*, to make Head againſt what Force they could procure.

Regulus now took *Adis*, a ſtrong fortified Town in *Africa*, and 200 Towns more; of which *Tunis* was one, a Place near *Carthage*. And offering Terms to *Carthage*, he would allow them no other than that they ſhould abſolutely ſurrender themſelves to be a Province of *Rome*. But they rejected his Offer, and prepared for a vigorous Defence; and by Help of ſome Reinforcements from *Greece*, they entirely defeated the *Romans*; whole General *Regulus*, with 500 more were taken Priſoners, and only 2,000 eſcaped to *Clypea*, all the reſt of the *Romans* being killed upon the Spot.

In the mean time the *Romans* obtained a great Victory over the *Carthaginians* in *Sicily*, and took from them above 120 Elephants. In ſhort, finding the *Romans* too ſtrong for them, *Amilcar* the *Carthaginian* General was ordered to make it up with them upon the beſt Terms he could; Which were, 1. That the *Carthaginians* ſhould evacuate *Sicily*, and never more make War with the *Syracuſans* or their Allies. 2. That they ſhould releaſe all the *Roman* Priſoners, without Ranſom, and pay them 3,200 *Euboic* Talents (more than half a Million Sterling) within ten Years. And this concluded the firſt *Punick* War, after a Continuation of more than twenty-four Years.

The *Carthaginians* being poor, and ſtill obliged to pay great Sums to the *Romans*, they could not well pay off and diſband the mercenary Troops in their Service; but only, on their Re-

turn

turn from *Sicily*, put them into Quarters of Refreshment, and desired them for the present to accept of a bare Subsistence, till they could pay them off. This so incensed the Soldiers, that it caused a Mutiny, and 20,000 of them assembled at *Tunis*, inviting the rest to meet them there and join them. The *Carthaginians*, seeing the Soldiers thus exasperated for Want of their Wages, deputed *Gisgo* their General to treat with the chief Mutineers, and to offer them Terms: But two of the chief of them, *Spendius* and *Matho*, thinking they had offended beyond the Reach of Pardon or Reconciliation, dissuaded all the rest from submitting; insinuating, that as they were deemed open Rebels, they had nothing now to expect but Victory or Death, and that they had better die like brave Men, Sword in Hand, than to be disarmed like Sheep, and throw themselves at the Feet of an incensed Government, from whom no Mercy could be expected.

This Speech spirited up the Rebels, insomuch that they resolved to form themselves into a Body, and accordingly they chose the above-mentioned *Spendius* and *Matho* for their Generals, who immediately seized all the Money that *Gisgo* brought to compound with the Army, and pay them in Part, to make them easy: And having thus plundered *Gisgo*, they made him and his Attendants Prisoners. The Taxes in *Africa* being now very heavy, and no Hopes of Redress, all the great Towns, except *Utica* and *Hippacra*, declare for the Rebels.

But the *Carthaginians* Treasure not being quite exhausted, they armed all their Citizens, and took other Mercenaries into their Pay: And creating *Amilcar* their General, he soon raised the Siege that the Rebels had laid to *Carthage*, and defeated a great Body of their Forces. Then cutting off their Provisions, they were reduced to the Necessity of eating one another. But continuing still obstinate, they resolved to make the best of their Lives, and fight it out; and consequently a Battle ensued, in which most of the Rebels were cut to Pieces, or trod to Death with Elephants. Part of them, however, escaped to *Tunis*, resolving to defend it to the last Extremity; the two grand Rebels, *Spendius* and *Matho*, being also then in *Tunis*, amongst their own Party.

Spendius *and* Matho *executed.*

Amilcar having this Opportunity, invested *Tunis*, and soon found Means to fetch *Spendius* out of his Sanctuary, and caused him, with several other Rebels whom he had taken, to be crucified in Sight of the Town. This Sight so inraged *Matho*, the other grand Rebel, that he, resolute and impatient of Revenge at any Price, made a Sally, surprized *Hannibal*, one of the *Carthaginian* Generals, took several of his Men, and caused them to be crucified upon the Walls, in Return for the Death of *Spendius*, and before *Amilcar* and his Army. But *Matho*'s Triumph was but short; for *Amilcar*'s Forces took *Tunis*, and in it *Matho*; where they first put him to the most exquisite Torments, and then executed him, and put an End to his miserable Life. This finished the *African* War, the most cruel that ever was known in any Age, and which continued between three and four Years.

The *Carthaginians* still laboured under the Injustice and Oppression of the *Romans*; always, but hitherto in vain, struggling to extricate themselves; in order to which, they first secured their Territories in *Spain*, and formed Alliances with the Princes of *Gaul* as well as *Spain*, before they would pretend to attack the *Romans*. At this Time *Amilcar* was made Viceroy of all their *European* Dominions, and had great Success against the Allies of *Rome*, and in bringing others to the Interest of *Carthage*: But here a sudden Stop was put to his Progress, he being killed in an Engagement with the Enemy. *Anno Mundi*

Asdrubal succeeded his Father-in-Law; and not only defended, but enlarged his Predecessor's Acquisitions in *Spain*. He built *New Carthage*, now called *Carthagena*, in *Spain*; the *Spaniards* all the while endeavouring to subvert his Designs, and destroy his Interest, but in vain: And as they found themselves pretty equally matched, the two States, *Rome* and *Carthage*, to prevent more Blood-shed, came to the following Agreement, *viz.* That the River *Iberus*, or *Ebro* in *Spain*, should be the Boundary between the *Carthaginians* and *Romans*, and their respective Allies; only the City of *Saguntum*, on the West Side of the *Ebro*, being in Alliance with the *Romans*, was included on their Part in the Treaty.

Asdrubal having been General in *Spain* eight Years, was assassinated; and *Hannibal* the Son of *Amilcar*, being now about three and twenty Years of Age, and having served in *Spain* some Years under *Asdrubal*, was made General on that Side, and his first Work was to reduce such *Spanish* Princes as he thought necessary; which done, he besieged *Saguntum*, who sent to the *Romans* for Succour; but they only sent Orders to *Hannibal* to raise the Siege; but he, eager for his Prey, took the Town, and divided the Plunder among his Soldiers.

The *Romans*, thinking this a Violation of the Peace then subsisting between them and the *Carthaginians*, demanded that *Hannibal* might be delivered up to them: But so far from that, that the Senate of *Carthage* justified what he had done; which so irritated the *Romans*, that they declared War against them; and thus began the second *Punic* War, in the Year before *Christ* 201. *Of which see more in the former Part of this Book, Page* 596.

CHAP

CHAP. II.

Of the modern History and present State of Africa, *as to its grand Divisions and Subdivisions; with the Customs, Manners, and Dress of the several Inhabitants: And first, of* Ethiopia Superior, *and* Zanguebar.

BY what has been said, we find that *Africa*, even in its antient State, was a populous Country; especially the North Part of it, where *Carthage* stood, whose Commerce was extended to most Part of the then known World: But that State declining, the *Carthaginians* not only neglected their Trade, but even the Cultivation of their Land; not from a Principle of Slothfulness as knowing that they were become a Province of *Rome*, they were liable to be plundered at the Pleasure of the voracious Viceroys, sent from *Rome* and set over them. Therefore they improved no more Land than for present Subsistance; and thus the Decay of Trade, and Neglect of improving their Land, was one of the first Steps to their Ruin.

From decline.

BUT that was not all; for in the fifth Century, in the Decline of the *Roman* Empire, the North of *Africa* was over-run with the *Vandals*, a rude Northern People, who destroyed Arts and Sciences wherever they came: And, as if Ruin and Destruction still attended this Country, the *Saracens* in the seventh Century made an easy and sudden Conquest of *Egypt* and *Barbary*: And, lastly, these were succeeded by the *Turks*, by whom we may say the Ruin of that once flourishing Part of the World was compleated.

BUT all this did not alter the natural Fruitfulness of the Soil, which is not that barren desart Part of the World that People take it to be; but the Idleness of the wretched Inhabitants hath got it that Character, who not cultivating their Land, live upon the Plunder of one another, or of them who have most Industry, for which there is at this Rate no Encouragement. This alone makes the Country lie in Ruins; for not only the North Part is fruitful, where improved, but the South Part also produceth good Corn and Wine, and Herds of fine Cattle; and even between the Tropicks, there are Multitudes of People, fine Rivers, and a rich Soil; and here it is that we meet with the best Gold and Ivory, besides above 200,000 Negro Slaves sent yearly from hence to *America*; which is a sufficient Proof that *Africa*, between the Tropicks, is very populous, as well as rich. Their Trade by Sea is but of little Consequence; and their Men of War, or rather Pirates, from *Sallee*, *Algier*, *Tunis*, and *Tripoli*, are so inconsiderable, that, taken all together, they would not be able to resist a Squadron of five *English* Men of War; though singly meeting the *European* Merchant Ships, they often do us considerable Damage.

Divided into ten.

Africa, according to the present Geography, falls under these ten grand Divisions. 1. *Egypt*, 2. *Ethiopia Superior*. 3. *Zanguebar*. (These in the East Part of *Africa*.) 4. The lower *Ethiopia*, consisting of *Monomugi*, *Monomopotapa*, and *Caffraria* (the South Part of *Africa*.) 5. *Congo* and *Guinea*, on the South-West. 6. *Negroland*, or *Nigritia*, the middle of *Africa*, between North and South, but extending almost quite cross the Country from East to West, on both Sides the great River *Niger*. 7. *Zaara*, or the Desart North of *Nigritia*. 8. *Biledulegrid* (the antient *Numidia*) on the North of *Zaara*. 9. The Empire of *Fez* and *Morocco*, being the North-West Part of *Africa*, extending to the *Mediterranean* on the North, and to the *Atlantick* Ocean on the West. And, 10. *Barbary*, East of *Fez* and *Morocco*, extending North to the *Mediterranean*, including the Country of *Algier*, *Tunis*, *Tripoli*, and *Barca*.

1. *Egypt* has been already described. (*See the* Turkish *Empire in* Africa, *Chap.* I & II, *Page* 319 *of this History.*) *Egypt.*

2. *Ethiopia Superior*, as comprehending *Abyssina*, and in it *Nubia*, *Abex*, and *Aian*, is bounded on the North by *Egypt* and the Desart of *Barca*, and on the East by the *Red-Sea* and the Eastern Ocean; by *Zanguebar* and Part of *Nigritia* on the South, and by *Zaara* and another Part of *Nigritia* on the West; extending from Latitude 5 to 20 North, and from the Eastern Ocean to *Nigritia* East and West. Some think, and not without good Probability, that this is the Kingdom antiently governed by the Queen of *Sheba*, called the Queen of the South; and afterwards by Queen *Candace*, whose Eunuch was converted and baptized by *Philip*.

Abyssina, thus considered, is a Country of near 1,000 Miles Extent, and mostly to the Northward of the Equinoctial. The River *Nile* rises near the Middle of this Country, and after various Courses, enriching the Soil of the Country as it goes by its overflowing, as also being very commodious for their Inland Commerce by Water-Carriage (though after its entring *Egypt*, there are so many Cataracts, or steep Falls, that no Water-Carriage can be performed upon it; it runs through *Grand Cairo*, and falls by several Mouths into the *Mediterranean*, one of the Westermost Branches falling into the Sea at *Alexandria*. There is another great River, called the *Hauache*, which rises in this Country, and falls into the *Red-Sea*. The great Rivers *Morabi* and *Albara* rise also in this Country, and running to the Northward fall into the *Nile* in the Province of *Semar*. Head of *Nile*.

THIS Country, especially where the fruitful Moisture of the overflowing *Nile* bestows its Influence, produceth Plenty of Dates, Corn, Rice, Millet, Grapes, Flax, Cotton, Sugar, Salt, and Sulphur. Their Flax is deemed the best in the World, as is very probable; because when the fine Linnen spoke of in Scripture, was to have a proper Epithet annexed to express its Excellency, it was called *the fine Linnen of* Egypt.

HERE is Plenty of Mines of Silver and Copper; the last of which they work, and have Abundance of the Metal. They have the largest Emeralds in the World. They have Plenty of very large Oxen, Sheep, and Cattle; as also of wild Beasts, Crocodiles, &c. But above all, the Country abounds in such fine Horses, that it is thought those fine Horses, distinguished by the Name of *Arabian* Horses, are really bred in *Abyssina*. Mines.

Ethiopia was a mighty Empire under one Sovereign, who then commanded the Sea Coast as

well as the Inland Country; but since their Territories are divided into so little Principalities, and they seldom united, the *Turks* govern them as they please, and confine them from trading with other Parts of the World.

Division. THE Kingdom of *Abissina* is divided into Provinces: I shall just name them. *Ambara*, whose chief Town *Ambara* is the Capital of *Abissina*. 2. *Bagamedri*. 3. *Dambea*. 4. *Shoa*. 5. *Gojam*. 6. *Bugna*. 7. *Samen*. 8. *Gonga*. 9. *Walaka*. The King of *Abissina* doth not keep his Court in any of those great Towns, but in the Camp: But he is follow'd by so many Nobility, Officers, Tradesmen, Suttlers, &c. that the Camp is like a Market Town, dispos'd in Streets, and well supply'd with Provisions and Necessaries of all Kinds. The King's Tent is in the midst of the Camp, and all the rest nearer or more remote, according to their Dignity or Rank.

Stature and Complexion. THE *Ethiopians* are of a good Stature, a deep black Complexion; but have not such thick Lips and flat Noses as the *Guinea* Negroes. The better Sort of them wear Vests of Silk, Stuffs, or Cotton; but the Poor make shift with a Piece of Skin, or any coarse Stuff, to throw about their Middle. Their Bread is thin Cakes, bak'd upon the Hearth. They eat all Sorts of Flesh, but that of Swine, and the others that were prohibited the *Jews*. The common People live mostly upon Milk, Butter, Cheese, Roots, Herbs, and what their Flocks and Herds produce. They seldom roast their Meat, but boil or stew it; being very fond of the Broth or Soup. Honey being very plenty, they drink Abundance of Mead, or Metheglin; but they have also Liquors made of Wheat and Rice, and the Quality drink some Wine.

Mechanicks THE *Jews* are the only Weavers and Smiths amongst them: But as for Carpenters and Taylors, and other Handicrafts, they are always of the the same Trade as their Fathers; and every Trade forms a Sort of a separate Colony or Neighbourhood, and mixes not with any other Trade or Tribe, either by Marriage or otherwise.

Buildings THEIR Buildings are mostly poor Huts, built of Clay and Splinters. They are the less ambitious of stately Houses, because, as above observ'd, most of the People of Rank and Dignity, follow the King in the Camp. Their Furniture is of Silk, Stuff, Callicoes, and Linnen for Cloathing, and Carpets which they have from the *Turks* by the *Red-Sea*, who take in Exchange the Gold, Emeralds, and fine Horses of *Abissina*; which confirms the former Conjecture, of the *Arabian* fine Horses coming from thence.

IN travelling they ride upon Mules or Camels; the former being the fittest to climb the Mountains, and the latter to travel their sandy hot Plains. But in fighting they use Horses. The Troopers however in their Marches, ride on Mules, to keep their Horses vigorous against the Day of Battle. Their Arms are Bows, Arrows, Launces, and Swords, and some few Fire Arms. The Wars of the King of *Abissina* are chiefly with the *Ethiopian* Princes, whom the *Turks* have assisted to suppress that Prince's Power: And indeed while they weakened one another, the *Turks* encroached upon both, and possessed themselves of that Part of the Country bordering upon the *Red-Sea*, thereby gaining and securing a Trade with *Abissina*, and restraining that King from Trade or Communication with that, or any other Part of the World, but what they pleased.

Titles of the Prince THE King of *Abissina*, according to the *Portuguese*, who visited this Country in the 16th Century, was then call'd *Presser John*, and the Kingdom, *Presser John's* Land. Some of the *Europeans* stile him Emperor. The *Persians* stile him *Padsha*, the Dispoter of Kingdoms, which is the highest Title in *Asia*.

THE King's Revenues are paid in Kind, Revenue not in Money; that being very scarce: But they have pure Gold, which is cast up in the Sands of the Rivers, or washed out of the Sides of the Mountains: For *though they have Gold Mines, yet they do not work one. The King also lays a Duty upon all Merchandize, brought from *Turkey* by the *Red-Sea*; the Farmers give a thirtieth Part of all the Produce of their Land, as Grain, Cattle, &c. which plentifully furnishes his Table, and that of his Court and Guards; every Weaver, and other Mechanick, presents him with Part of his Manufacture; which furnishes his Officers and Servants with Cloaths, and other Necessaries. To this we may add, his creating Knights of the Order of St. *Anthony*, every one of whom pays him a Fine upon his being knighted; and it is said, he has no less than 12,000 Knights of that Order in his Army.

THIS Emperor is crown'd with a Coronet, set with glittering Stones. It is plac'd upon his Head by the Primate, or Metropolitan, in Presence of the Nobility and Clergy, with proper Rejoicing upon the Occasion; but his intended Successor is kept in Prison, in the most profound Ignorance, till he is sent for from thence to be advanced to the Imperial Dignity. They have no written Laws, but certain Customs which they Laws. remember; by which, and the Standard of their own Reason, they determine Causes, and punish Offenders. But in the latter Case, sometimes the King grants, or some great Lord procures, a Reprieve; Capital Criminals are beheaded, hang'd, stoned, or sometimes drubb'd to Death with Clubs: But Murderers are deliver'd into the Hand of the Relations of the murder'd Persons, to torture or make a Slave of him, or execute him by what Death they think fit. For Theft the Offender is whipp'd; but Adultery is punish'd with Death. In Civil Cases, every Man may plead his own Cause before their respective Lords. There are no Lawyers there, to wrest a Cause in Favour of him that has got the most Money, and ruin the poor Man who has Justice on his Side. But Justice, as impartially influenced by Merit or Demerit, determines the final Sentence.

THEIR Religion is a Mixture of Christianity Religion and Judaism; for they keep both Sabbaths. As *Jews* they circumcise their Children, and as Christians they baptize them; and when such come to Years of Maturity, they receive the holy Communion. If a Person is not baptis'd till he is an Adult, he is brought to some River or Pond, and plunged three Times in the Water by two Deacons, and *baptis'd in the Name of the Father, Son, and Holy Ghost*, &c. And when the Ceremony of Baptism is over, he is introduc'd to the Church, and receives the holy Communion, which they give in both Kinds; only instead of Wine they use Water, in which the bruis'd Stones of Raisons have been infus'd, which, after the Bread, the Deacon delivers to both Laity and Clergy, with a Spoon to each Person singly. They acknowledge the same Books of Scripture for a Rule of Faith, as we do; they use the *Nicene Creed*, but not the *Apostles' Creed*.

THEY formerly acknowledg'd the Bishop of *Rome* to be first Patriarch, but deny'd his Supremacy over the Church: But when the *Portuguese* Missionaries came there, under a Pretence of converting them to Christianity, they had almost made good Catholicks of them, and perswaded their Emperors to acknowledge the Pope's Supremacy; to admit a Patriarch from *Rome*, to abolish their ancient religious Rites and Ceremonies, and to conform intirely to those of the Church of *Rome*. This was the Way of the Popish Missionaries making Converts; and such is their Way yet, where their Emissaries find Opportunity to delude the

Ignorant,

Ignorant, and to exerciſe their Power to draw them over to their corrupt Principles; but the People were ſo well grounded in their religious Principles, that with the utmoſt Abhorrence of Popery, they roſe in Arms againſt the Emperor, which occaſion'd a long Civil War: But the Emperors ſtill ſucceſſively profeſſing the Popiſh Religion, the Jeſuits thought they had gain'd their Point, and thereupon, under Pretence of maintaining the Pope's Eccleſiaſtical Supremacy, took upon them to direct almoſt all ſecular Affairs, and began to look upon the King as Viceroy to his Holineſs, rather than as Sovereign of the Country: And they having erected and garriſon'd ſeveral Fortreſſes, ſent for *European* Forces to maintain their uſurp'd Power. This thoroughly awak'd the Emperor, and ſo open'd his Eyes, as well as thoſe of the Nobility, *&c.* that they reſolv'd one and all to aboliſh Popery, and reſtore their ancient Religion; and to put this Reſolution in immediate Execution, the Romiſh Prieſts were ſacrificed to the People's Fury, and the Patriarch himſelf narrowly eſcap'd with his Life. And the Emperor continu'd ſo incens'd, that afterwards, when three Capuchins came as far as *Squaquena*, upon the *Red-Sea*, and ſent Letters to the Emperor to deſire Leave to come into his Country again, he, without any Anſwer to them, ſent to the *Turkiſh* Baſſa, who commanded on that Coaſt, to ſend him the Heads of thoſe Capuchins; which he not only did, but ſtuff'd their Skins, and ſent them alſo; that he might ſee they were *Franks* by their Colour, and might by their ſhav'd Crowns know them to be Prieſts, or Fryars. Such Contempt they were held in, when the Deſigns of thoſe pretended Reformers were diſcover'd,

Marriages

THE Law forbids any more Wives than one; and ſeveral poor People are excommunicated that are guilty of Polygamy: But the Emperor diſpenſes with it, and allows himſelf a Hundred at leaſt. Their Marriages are only Contracts before Friends, bleſs'd afterwards by the Prieſt. When any one dies, the Corpſe is wrapp'd up in a Cloth, and carried upon a Bier to the Burying-place, by ſome of the Clergy, who read ſome Paſſages in the *Pſalms* upon that Occaſion. The Relations and Friends appear for ſome Time afterwards in Rags and torn Cloaths, that being a Way whereby they think they beſt expreſs their Sorrow for their deceaſed Friends; and this indeed ſeems to conform to the Cuſtom of the Ancients, who upon any Surpriſe of exceſſive Grief, *Rent their Cloaths*, &c.

Language.

THE *Arabick* Language is that wherein the Scriptures, Liturgy, and Acts of State are written; the Nobility uſe a Language call'd the *Amarick*, from its being ſpoken chiefly in *Amara*: The common People ſpeak the *Ethiopick*. Both theſe are compos'd of a Mixture of *Arabick*, *Hebrew*, and *Chaldee*.

Nubia

Nubia is an inland Country, bounded on the North by *Egypt* and the Deſarts of *Barca*; and on the Eaſt by *Abyſſina*: By the lower *Ethiopia* on the South, and by *Zaara* on the Weſt. But this, as well as *Abex* and *Aian*, are inland Countries, and conſequently we can have but very imperfect Accounts of them: Beſides, they being Parts of *Ethiopia*, need not any particular Deſcription.

Zanguebar

Zanguebar includes all the Eaſt Coaſt of *Africa*, from 5 Degrees North, to 28 South. It is bounded on the Eaſt, by the Eaſtern Ocean; by *Aian* on the North; on the Weſt by the unknown Countries call'd *Ethiopia Inferior*; and by *Caffraria* on the South. It contains the Countries of *Magadoxa*, *Melinda*, *Quiloa*, *Mozambique*, and *Zofala*.

Magadoxa

THE Country of *Magadoxa* lies to the Northward of the Equator. The chief Town, of the ſame Name, ſtands upon the Mouth of a River, which falls into the Eaſtern Ocean in 3 Degrees North Latitude. The People here, eſpecially upon this Coaſt, are ſubject to the *Portugueſe*. This Country affords very little Merchandize or Cattle, except a Breed of fine Horſes, which the *Portugueſe* deal in, and ſell to the *Arabs*; whence, as above obſerv'd, they are call'd *Arabian* Horſes. The People are Blacks, with flat Noſes and thick Lips, like the Negroes in *Guinea*.

Melinda.

THE Country of *Melinda* lies on the South of the Line. Its chief Town is of the ſame Name, on an Iſland at the Mouth of the River *Melinda*, in near 3 Degrees South Latitude. It is the Capital of the *Portugueſe* Dominions in *Africa*, and is a large populous City; has a good Harbour, and is defended by a ſtrong Citadel. It has ſeventeen Churches, and Plenty of Ware-houſes, ſtock'd with *European* Goods; with which they trade with the Natives for Gold, Elephants Teeth, Slaves, Oſtrich Feathers, Wax, and Drugs; ſuch as Senna, Aloes, Malegetta, Civet, Ambergreaſe and Frankincenſe; alſo Rice, Millet, Sugar and Fruit. The City of *Melinda* and the Iſland on which it ſtands, are ſaid to contain 200,000 Soul.

Religion.

THEIR King is a *Mahometan*; but the People moſtly *Pagans*, except thoſe deſcended of the *Portugueſe*. All the Inhabitants here, as in *Magadoxa*, are ſubject to the *Portugueſe*: The chief publick Buildings are the Churches and Monaſteries, the Governor's Palace, the Town-Hall, *&c.* all which are ſumptuouſly built, conſidering the Country they are in; and though we are not comparing them with *Engliſh* Buildings, yet they exceed any that are to be found elſewhere in *Africa*.

Quiloa.

THE Country of *Quiloa* lies Southward of *Melinda*, contiguous to it, and on the ſame Coaſt. The *Portugueſe* have it in Poſſeſſion, but make little of it, by reaſon of its unwholſom Air and Situation: Only they hold the King tributary to them, as the reſt of the Princes upon this Coaſt are; he paying them a Tribute in Gold, to the Value of 100,000 Cruſadoes yearly. Here are excellent Sugar Canes; but the *Portugueſe* will not be at the Pains to improve them, becauſe they have great Quantities of Sugar brought over every Year from *Brazil*, by their Countrymen who come hither for Slaves.

Mozambique

Mozambique lies on the ſame Eaſt Coaſt, and next Southward of *Quiloa*. The chief Town, and the River on whoſe Mouth it ſtands, are both of the ſame Name with the Province; the Town is ſituated in 15 Degrees South Latitude. Here is a good Harbour, a ſtrong Citadel, the Town regularly fortified. The Iſland on which it ſtands, is 30 Miles in Circumference, and, as well as the Town, extremely populous, having ſix Churches, and ſeveral Monaſteries. Here the *Portugueſe*, as at *Melinda*, barter *European* Goods for Gold, Elephants Teeth, *&c.* but this Place likewiſe produces Plenty of Cattle, which creates a great Trade; the Ships to and from *India*, calling here for Beef, and other Proviſions.

Mongale

Mongale in this Country is the chief Staple for *European* Goods; for which they return Gold, which they find near the Surface of the Earth, or in the Sands in the Rivers; for there are no Gold Mines wrought here, or indeed any where in *Africa*.

IN *Zofala*, to the Southward of *Mozambique*, the *Portugueſe* have ſome little Settlements; as indeed they have the Trade of the whole Coaſt moſtly to themſelves, as far to the Southward as the Tropick of *Capricorn*.

CHAP. III.

A Description of Caffraria ; *especially, the South Part of it, the Country of the* Hottentots.

Caffraria

CAFFRARIA is the Southermoſt Land of *Africa*. It contains the Eaſt, South, and Weſt Coaſts of the South Part of *Africa*, and incloſes the Inland Country of *Monomotopa* ; being therefore bounded by the Ocean on the Eaſt, South, and Weſt, as *Monomotopa* is by it. This Country extends from the Tropick of *Capricorn* on the Eaſt Coaſt, to Cape *Lagullas*, in the 36th Degeee of South Latitude; and thence to Cape *Bona Eſperance*, and all the Southermoſt Land of *Africa*; and ſo along the Weſt Coaſt, to the Northward of the Tropick of *Capricorn*.

THE Country of the *Hottentots* is the Southermoſt Part of *Caffraria*, beginning about Latitude 28 Degrees South, and including all the Land of *Africa* to the Southward of that Parallel; *Cape Bona Eſperance* lying in 34, 25 South, and Longitude Eaſt from *London*, 17 Degrees 25 Minutes.

THIS Country was firſt diſcover'd by the *Portugueſe* Admiral *Diaz*, in his Attempt to find a Way to the *Eaſt-Indies* by going round the South Part of *Africa* ; but attempting to ſettle there, the Inhabitants fell upon him and his Companions, and cut them to Pieces. But the *Dutch*, who never fail to watch for the Hare, when another Man has beat the Buſh, ſeeing it a plentiful Country, ſettled themſelves there, in the Year 1651, as thinking it a uſeful Place to ſupply them with Proviſions, as they go to and from the *Eaſt-Indies* : And there they have not only kept Poſſeſſion ever ſince, but enlarg'd their Territories for above 200 Miles along the Coaſt, having good Settlements, well planted and cultivated, of which more hereafter.

THE Country of the *Hottentots* is mountainous, yet generally fruitful both in the Hills and Valleys. On approaching the *Cape of Good Hope*, you diſcover three remarkable Hills, *viz. Table-Hill*, the *Lion's-Hill*, and the *Devil's-Hill*, which may be ſeen 40 or 50 Miles at Sea. There is a Flag on *Lion's-Hill*, kept by *Dutch* Soldiers, who thereby give notice of the Approach of Shipping, and ſignify their Number by ſo often hoiſting and lowering the Flag.

THE *Dutch* are acquainted with theſe ſixteen Nations or Provinces of the *Hottentots* : 1. The *Gongeman* Nation. 2. The *Kochaqua*. 3. The *Suſſaqua*. 4. The *Odiqua*. 5. *Chirigriqua*. 6. *Namaqua*. 7. The *Attaqua*. 8. The *Koopman*. 9. The *Heſſaqua*. 10. The *Sonqua*. 11. The *Danqua*. 12. The *Damaqua*. 13. The *Gauros*. 14. *Houteniqua*. 15. The *Chametour* : And, 16. The *Heykom*.

1. The *Gongemans* were the firſt that traffick'd with the *Dutch* : But when they ſaw the *Dutch* erecting a Fortreſs, and encloſing the beſt of their Land before their Faces, and excluding them from the Benefit of it, the poor Natives reſented it, but in vain ; for the *Dutch* grew ſo ſtrong, and were naturally ſo voraciouſly covetous, that when the poor Natives complain'd of their Encroachments, all the Redreſs they had was, that the *Dutch* generouſly offer'd them Liberty to graze their Cattle upon that worſt out-caſt Land, which they (the *Dutch*) had not encloſed, nor thought it worth their while to take the Trouble of encloſing.

2. THE *Kochoqua* Nation lies to the Northward of the *Gongemans*. Here is alſo good Paſture, but the beſt of it encloſ'd by the *Dutch*. ——3. The *Suſſaqua's*, a poor Country, ſcarce habitable for want of Water.——4. The *Odiqua's*, remarkable for nothing but being always in Confederacy with the *Suſſaqua's*, againſt——5. The *Chirigriqua's*, a numerous and dextrous People, who inhabit a mountainous Country upon the Sea Coaſt, but which produces good Paſture. Thro' the Middle of it runs the large River, call'd the *Elephant River*, which takes it's Name from the vaſt Number of Elephants reſorting to it. Here are large Woods, which harbour Lions, Tygers, and other wild Beaſts in Abundance.

6. *Greater* and *Leſſer Namaqua* : The *Leſſer* extends along the Sea Coaſt, and the other contiguous to it on the Eaſt. This is the moſt polite (if I may be allow'd ſo high an Expreſſion) of any of the *Hottentot Nations*. They can produce an Army of 20,000 Men in the Field ; but their Country is barren, and has no Water, except one Spring, and the *Elephant River*, which runs thro' one Part of it.——7. The *Attaqua's* lie to the Northward of the *Namaqua's*, and inhabit a poor barren Place not worth any further Account. ——8. The *Koopman's* are Eaſt of the *Gongeman's* and the *Cape Towns*. Here the *Dutch* have a great many Settlements and Plantations, and a rich Tract of Land encloſed ; and here, as in the *Gongeman's*, the Natives are ſuffer'd to occupy the Land, the *Dutch* have no Occaſion for. This Country is well wooded and water'd. Here is alſo a Hot Bath, and ſeveral Salt-pits.

9. THE *Heſſaqua's* join alſo to the *Gongeman's*. They abound in Cattle above all the *Hottentot* Nations, and trade more with the *Dutch* for Brandy, Tobacco, Coral, &c. giving their Cattle in Exchange.——10. The *Souqua's* lie to the Eaſtward of the *Koopman's*. They have a mountainous Country, but are dextrous People at Arms, and, like the *Swiſs* in *Europe*, are hir'd to fight for Bread.

11. THE *Danqua's* lie next to the *Sonqua's*, in a level Country, which affords good Cattle, Paſturage, and Game.——12. The *Damaqua's*, who have ſome Salt-pits; but being far from the *Dutch*, and the *Hottentots* eating no Salt, they are but of little Uſe.——13. The next are the *Gauro's*, they lie next the *Damaqua's* ; it is a ſmall but rich and populous Country, well ſupply'd with Wood and Water, Plenty of Cattle, and no leſs of Wild-Beaſts, at the taking of which they are ſo dextrous, that they are moſtly cloth'd in Skins of Tygers and other Wild-beaſts of their Country's Breed, and of their own killing.

14. THE *Houteniqua's*, a Sea Coaſt, but of little Note.——15. The *Chametours* are next ; They have a plentiful Country for Proviſions, Wood, Water, Fiſh, and Game. —— 16. North-Eaſt from them are the *Heykoms*. It is a poor Country, and is the Northermoſt of the *Hottentots*, on the Eaſt Coaſt of *Africa*.

As to the Derivation of the Name of the *Hottentots*, as well as the Deſcent of the People, Authors equally differ in their Opinions ; but Mr. *Colben* draws a pretty fair Concluſion as to

their

their Descent, he says, the Name of their Male Ancestor was *N'oh*; *this he looks upon as a certain Evidence of their being descended from* Noah: This Discovery might naturally have been made, without any great Knowledge in Genealogy; for who knows not that all the human Race now existing, descended not only from *Adam*, but were again reduced to one Original in *Noah* also.

Religion. They resemble the *Jews* in their Offerings, in observing the new Moons, and abstaining from several Sorts of Food, especially Swines Flesh, undergoing a Sort of Circumcision, *&c.* But they have a cruel Custom of exposing their Parents when superannuated, leaving them without Food, and so by starving put an End to their Lives, for no other Reason, but because they are become so old that they are useless.

Persons. As to their Persons, there is nothing remarkable, being from five to six Foot high, as in *England*, and scarce any crooked or deformed among them; only they have thick Lips, black Hair, white Teeth, tawny Complexions, which they darken with Grease and Soot, as liking the black Colour best; but one painful Ornament they give their Children when in their Infancy, for they break the Griffles of their Noses, thinking it adds to their Beauty to have broad flat Noses like the Negroes.

They wear flat Caps of Cat-Skin, or Lamb-Skin half dried, and tie them with a Thong of the same under their Chins. The Men wear a Mantle of Sheep-Skins, Tyger Skins, *&c.* and longer or shorter according to their Ability; and this serves them for a Day Garment, a Bed, and a winding Sheet, one after another, in their Turns, as there is Occasion.

They wear a greasy Pouch, and in it several Trinkets, as Pipes and Tobacco, and *Dacha*, which intoxicates like Tobacco, and three Ivory Rings on their Left Arm, to which they fasten their Bag of Provisions when they travel; but the principal Ornaments of both Sexes are Brass and Glass Beads, with thin Plates of the same, and of Mother of Pearl, which they wear about their Hair, Ears, Necks, and Arms; these they have of the *Dutch*, and give them their Cattle in Return for them.

To make Butter they put the Milk into a hairy Skin, made up like a Soldiers Knapsack, the hairy Side inward; and two of them, one at each End, roll and toss it till the Butter comes; and then, hairy as it is, they put it up for their own Use in anointing; they eat none, but the *Dutch* eat it. The Butter-Milk serve the *Hottentots* for Drink; but they more commonly drink Cows Milk, Water, or Ewes Milk, especially the Women: For the Men, since the Arrival of the *Dutch*, are very fond of Wine, Brandy, and other strong Liquors; for which they give their Cattle in Exchange; they seldom eating any of them themselves, but what die a natural Death, or for Age, their Food being chiefly Herbs, Fruits, or Milk.

They have Tents rather than Houses, and Camps rather than Towns; which they remove as Conveniency of Water, and fresh Pasture requires: And these Rows or Clusters of Tents they call *Kraals*. Their Tents are of slender Poles, like Hoop-Sticks bent in an Arch, with both Ends in the Ground, in the Form of a half Cask, when cut down the Middle from End to End, each Head being cut in two equal Parts: For a Cask so cut, and the open Side set upon the Ground, would resemble two of their Tents; the half Heads of the Cask representing the Doors of the Tent, and the Middle of the Cask the Middle of the Tent, which is likewise broader and higher than the Ends or Doors, and some, but not all, have a Hole in the Middle to let out the Smoak, which may be fitly represented by the Bung of the Cask. The middle Diameter of the Tent is about twelve or fourteen Foot, but the Ends or Doors are not above three Foot high: They are covered with Matts, or Skins, or sometimes both. The People are lazy, and would as soon starve as work, or hunt for Victuals themselves; and yet they are so hospitable, that when they have a Dram, or a nice Dish of Fish, they had rather call in their Neighbours to participate than enjoy it alone.

Govern-ment. As for their Government, every Nation has its King, or Chief, called *Konquer*. He presides in all their Councils, and Courts of Justice, and has the Power of making Peace and War. The Captain of every *Kraal* is a Leader in Time of War, and Chief Magistrate of his *Kraal* in Time of Peace. He, with the Head of every Family in the *Kraal*, determines all Causes both Civil and Criminal in it; but the Differences between one *Kraal* and another, and Matters of State, are determined by the King and Senate. But the Dignity of their Kings or Chiefs consists in only their Authority; for they have no Revenue, but their own Stock of Cattle, or what they get by Hunting.

They punish Murder, Adultery, and Robbery, with Death; but upon the Trial, the Offender is allowed to plead for himself, and the Captain collects the Opinions of the Judges: If he is condemned by a Majority, he is executed upon the Spot, in this rude Manner. The Captain first strikes him with his Truncheon, and then the rest of the Judges fall on, and drub him to Death: Which done, he is wrapped up in his Mantle as a winding Sheet, which is the last Office it performs, and is so carried to be buried. As for a particular Property in Lands, no Man has any; for their whole Country is common to them all, and they feed their Cattle promiscuously, and move as fresh Pasture, and Water makes it become necessary.

Arms. The Arms of a *Hottentot* are his Launce and his Bow, with Arrows bearded and poisoned; as is the Head of his Launce, if intended against an Enemy, or a wild Beast not intended for Food. Their Bows are made of Iron, or Olive Wood; and the Strings are made of the Guts of some Animal. They throw Stones with Dexterity and Success, when Darts and Arrows fail; all which Time they skip from Side to Side, probably to break the Aims, and miss the Stones and Darts of the Enemy. They have Plenty of large Elephants, but have none disciplined for the War, as in the *East-Indies*. Their Officers and Soldiers have no Pay; their Ambition after Honour, and publick Service to their Country, being the chief Inducement upon which they venture.

Hunting. Hunting of wild Beasts is a great Exercise with them in Companies, but more are taken by the Stratagem of digging Holes in the beaten Path, by which they go to Water; in which they fix sharp Stakes pointed with Iron, and the Points upwards, and then cover the Pit with Sticks or Turf, that it cannot be discovered; and when they come upon their old Road, the Pit breaks, and the first Animal falls in; where not missing of being stabbed upon the Stake, he becomes an easy Prey to those who prepared the Pit, and are upon the Watch for his Life: And this is the most frequent Way of taking the Elephant, the Elk, and the Rhinoceros: But when any Person kills a Lion, Leopard, or Tyger, singly, he is honoured with great Compliments and Ceremonies; and, as a visible Badge of his memorable Victory, has the Bladder of the furious

rious Beast he killed fixed to his Hair, and is thought a brave Man, and a Benefactor to his Country. But the killing of a Tyger is thought the best Piece of Service; not only because they are such a dangerous and destructive Species, but because their Flesh is a more delicious Morsel to them than that of any other Animal whatsoever.

Not to mention some Articles of less Credit, if not quite fictitious, let us next consider their Weddings; in which we are to observe, that the young Man that inclines to marry, must first consult his Father, if alive, even before he proposes any Thing to the Woman; and if the Father approves the Match, he goes with his Son to the Girl's Father, and opens the Matter to him; who consults his Wife, and then the final Answer is immediately given. If it be rejected, there is no Solicitation used, nor scarce a Word more said about it: But if the old People approve it, the Girl must submit to the following odd Determination; which is, the two Lovers are put into a Room together, and no other Company; and if she loves him it is an easy Conquest, for the Condition is, that he must at that Time get her Maidenhead; and if upon Sight she does not like him, she resists with the utmost Hatred, because it determines her Fate during one of their Lives; he struggles, she resists, and scratching, pinching, or any Thing but Blows are allow'd, during this amorous conjugal Quarrel; and if at last he indeed overcomes her, and gains that Battle, she is his own for ever; and good Reason, for Nobody else will have her; and there is no other Ceremony used in marrying them, but they and their Friends feast and rejoice together, according to their Ability, as other People do on the like Occasions. The *Hottentots* allow of Polygamy, but not to exceed three Wives at a Time; and 'tis Death to marry, or lie with a first or second Cousin, or any nearer Relation.

When a Woman lies in, if she have Twins, and both Girls, the Man proposes to the *Kraal*, that he may expose one of them, either under Pretence of Poverty, or that the Wife has not Milk for both; and if they have a Boy and a Girl, they commonly save the Boy and expose the Girl; which is thus: They carry it some Distance from the *Kraal*, till they can find some Hole or Cave, made by some Wild-Beast, and put the Child alive into it; and stopping up the Mouth of the Hole, they leave the Child to starve; but if they have two Sons at a Birth, they kill as many Bullocks, and invite their Neighbours to great Feasting, Merriment, and Entertainment upon that Occasion.

Sometimes the *Dutch* find their expos'd Females before they are dead, probably by seeing them going about the Ceremony, and following them at a Distance: When this happens, they take Care of them, and bring them up as Christians: But so innate are their *Hottentot* Principles, if they may be call'd Principles, that they no sooner find out their own Extraction, but they renounce their Christianity, cast off their *European* Habit, and running to some *Hottentots* Camp, conform to the Dress, Customs, &c. of those from whom they descended.

Religion. As to their Religion, they believe that there is one God, who is the supreme Being, and commands all inferior Deities; that he made Heaven and Earth, and all Things therein, &c. but they pay no divine Worship to him (though they do to the subordinate Deities); the Reason they give for it is, that their first Parents grievously offended the supreme God, whereupon he cursed them and all their Posterity with Hardness of Heart, so that now they know little of him, and consequently do not care to pay divine Worship to him; but they adore the Moon, and at the Appearance of her, they assemble in great Numbers, crying, raving and dancing, and crossing their Foreheads with a red Stone, which those who have seen them take to be all Acts of Religion. They salute the Moon, and pray to her for Pasture for the Cattle, and Plenty of Milk, with other Prayers, dancing and clapping their Hands all the while.

There is a Fly, about as big as a Hornet, which they adore; and when they see it approach the *Kraal*, they all assemble about it, and sing and dance round it, while it is there. They also sacrifice two Sheep upon the Fly's Approach, assuring themselves they shall prosper upon this Visit; and if the Fly happens to light upon a Tent, the Master of that Tent is ever after reputed a Saint, and wears a Badge of Distinction some Time afterwards. If the Fly alights upon a Woman, she is dignify'd and distinguish'd in the same Manner. The *Hottentots* express the most dreadful Agonies if a Christian offers to kill one of these Insects; and will sometimes collect a Shilling or two to give the Person to save his Life.

They have one Ceremony, which some think, is a Part of their Religion; they deprive the Male Children of their Left Testicle, at eight or nine Years of Age; which some think they do in Imitation of Circumcision, or to supply the Place of it, and they scarce ever miscarry under this Operation.

There is a great Ceremony at removing the *Kraal*, which they always do when any in it die, or when their Pasture is spent and eat up. When they remove, they kill a Sheep by Way of rejoicing; but the Men eat it all, and allow the Wives only the Soup: But when they come to the new Camp, the Wives come even with the Men; for they serve them the same Sauce, killing a Sheep, and eating all the Meat, and leaving the Men nothing but the Soup.

But what is most barbarous, is, that when the Father of a Family becomes so superannuated, that he is perfectly useless, he is obliged to resign his Stock of Cattle, which is commonly all his Substance. If he has any thing else, it is the same, he must resign all to his eldest Son, or if he have no Son, to the next Male Heir: Which done, the said Heir erects a Tent a good Distance from the *Kraal* he belongs to, and calling the Men of the *Kraal* together, he acquaints them with the weak Condition of his superannuated Father, and desires their Consent to have him expos'd in the distant Tent that he has made for that Purpose; and they commonly set so little Value upon the poor old Man's Life, that they readily allow him to be expos'd, rather than contribute any Thing to support him alive.

When all are agreed that the poor old Man shall be expos'd, a Day is appointed for the Execution; and when it comes, the Heir kills an Ox, and two or three Sheep, and invites the Neighbourhood to feast and be merry with him; (one would think the poor Old Man could not be very merry amongst them). When they have eat and drank plentifully, they come severally and take a formal Leave of him; and he is immediately laid upon one of the Carriage Oxen, and carried to the Tent or Pit, his Neighbours accompanying him, and there he is shut up, and never sees a human Face more. A superannuated Woman is the same, only that as she has nothing that she can call her own, she has no Trouble of disposing her Effects.

As to their Manner of burying; When a Man dies, he is immediately bundled up Neck and Heels in his Mantle; (commonly of Sheep skin, as observed before): Then the Captain, with some of

of the Seniors, ſearch the neighbouring Country for ſome Hole in a Rock, or the Den of a Wild-Beaſt, to bury it in; for if they can find one of theſe Conveniencies, they never dig a Grave; and being thus provided, all the *Kraal*, Men and Women, aſſemble at the Door of the Deceas'd, to attend the Corpſe to the Grave, if I may ſo call it; and when they have put the Corpſe into it, they fill it up with Earth and Stones, *&c.* But they would fill it up with Ants-Hills, if they could have enough of them, as ſuppoſing the Ants will feed on the Corpſe, and ſoon conſume it.

As to the ridiculous Stories we have about their Prieſts, and Phyſicians, *&c.* I ſhall not think them worth relating; but proceed to the Management of their Cattle, which is their chief Riches. It has been obſerv'd, that they have no Encloſures belonging to one particular Perſon, but the whole Country is one great Common; and between ſix and ſeven every Morning, after the Women have milk'd the Cows, four or five Men of the *Kraal* drive the Cattle to the beſt Paſture they can find in the Neighbourhood; and there guard them all Day, againſt the Attacks of Wild-Beaſts, bringing them Home in the Evening. The whole *Kraal*, as conſiſting of ſo many Tents, forms a round Figure; and the Tents are join'd cloſe to one another quite round, except only in one Place, which ſerves as a Gate or Paſſage for them into the *Kraal*, and to drive the Cattle in at Night and out in the Morning; for they always ſecure their Cattle in the Area of the *Kraal* all Night; but have no other Shelter or Houſing for them, except only a Hut in the Middle of the *Kraal* for young Calves and Lambs.

For the Security of the Cattle from the Wild-Beaſts, that are without the *Kraal*, and only ty'd to the Tents, they can pretty well truſt to the Warning given by the Cattle themſelves; for the Approach of the Wild-Beaſt is but ſlow, dreading at once to attack them, as being ſo near the *Kraal*; and the Cattle ſeeing him, whether Lion, Tiger, or Leopard, long before he comes at them, make ſuch a lowing and bellowing, that the Maſter has generally Time enough to call his Neighbours, and all arm'd run and plant themſelves between the Wild-Beaſt and the Cattle: But if the Wild-Beaſt has got any of their Cattle away, they all purſue, and ſeldom give up the Chaſe, till the Blood of the Wild-Beaſt has made an Atonement for the Robbery and Murder he has committed.

Though the *Hottentots* Riches conſiſt chiefly in their Cattle, yet they do not bewail much the Death of a Cow or an Ox; they look upon Cattle that die of themſelves, as more choice eating than what are kill'd by a Butcher. But he whoſe Beaſt dies of itſelf, makes no Store of it, but invites all the *Kraal*, and makes only one Feaſt of it, (for he has as many as will eat it up). But, though he has but one Meal out of his own Ox or Cow, in this Caſe; yet he has a Meal out of every Neighbour's Ox or Cow that dies, which makes him Amends.

Their Smiths not only faſhion the Iron, but melt it from the Ore; for having Plenty of Iron Stones, they put a great Quantity of them into a Hole in the Ground, which is firſt heated and prepared for the Purpoſe; then they make a Fire over the Stones, and keep it up to an intenſe Heat till the Iron melts, and runs into another Hole or Receiver, a little lower than the firſt. When it is cold the firſt Time, it is brittle like Ice or Glaſs, and they break it in Pieces; which being again heated, they make Heads of Launces, Arrows, Darts, *&c.* of them. Their Anvil is only a flat Stone, and a round Stone ſerves them for a Hammer. When they have brought it to the Form propoſed, they poliſh it upon the flat Stone as finely (ſays my Author) as any *European* Artificer can do with his Tools. However true this Aſſertion may be, it is certain they are not altogether thoſe ignorant unhandy Creatures, that a great many *Engliſh* would repreſent moſt remote Nations to be; as appears by their Butchers, Taylors, Potters, and eſpecially the Makers of Ivory Toys; ſuch as Rings, Tobacco-Stoppers, *&c.* which they cut out of an Elephant's Tooth, and form and poliſh to Admiration, without any other Tool but a common Knife.

Their Trade is very inconſiderable; for having no Money, they can only truck one Thing for another. The Poor make Bows, Arrows, *&c.* and give them to the Rich in Exchange for their Cattle; and by this Means get a little Stock, which they improve by Induſtry. Trade

The Natives that are able, all travel on Foot; but the Weak and Aged are carried on their Bagage Oxen: And as there are no Inns, the Traveller calls at the *Kraals*, where he generally receives hoſpitable Entertainment, whether he be of their own Country or *Europe*. Travelling.

Having given a Deſcription of the People, Manufactures, *&c.* I ſhall proceed to give an Account of ſome of the *Dutch* Colonies and Settlements, eſpecially at the *Cape*, where the chief Town is call'd the *Cape Town*. It extends by the Sea-ſhore, along the Table Valley, to the Company's Gardens, and contains between 2 and 300 handſome Houſes, regularly diſpoſed in handſome Streets, with Courts before, and large Gardens behind the Houſes. The Houſes are of Stone, but thatch'd, and ſeldom exceed one Story high, that the high Winds, which are frequent there, may not have ſo much Power over them: And for the ſame Reaſon they thatch them, becauſe the Tiles ſhould not blow off, and kill the People in the Streets as they go along.

A little from the Town is a noble Fort, with about 200 Men in Garriſon. It contains alſo Storehouſes, *&c.* belonging to the Government, with proper Officers and Servants.

Their Church at the *Cape* is ſpacious and handſome, but plain within and without, and both Church and Steeple are thatch'd. There are no Seats in it, only Forms, and a large Table before the Pulpit, where they ſit round to receive the Sacrament of the Lord's Supper.

They have a very convenient handſome Hoſpital, where they put their ſick Seamen aſhore, going to or coming from the *Indies*. This, and ſupplying other Ships as well as their own with freſh Proviſions, are the chief Advantages the *Dutch* reap by having Poſſeſſion of the *Cape*; for here is ſcarce a good Harbour, nor any Merchandize, except we allow Proviſions to be Merchandize. Hoſpital

The Company's Gardens are a beautiful Sight, producing at the proper Seaſon almoſt all Kinds of Flowers and Fruits, that *Europe*, *Aſia*, or *Africa* affords, and moſt of them improv'd beyond what they are in the Countries they originally came from, both in Beauty and Deliciouſneſs. Here are Lemons, Oranges, Citrons, Figs, *&c.* and vaſt Plenty of other the moſt excellent Fruits. The Gardens are water'd by Springs, deſcending from the Table Mountains, and artfully divided into ſmall Streams, which are convey'd to the ſeveral Parts of the Gardens, as they reſpectively want Water. Gardens.

The Government of the *Cape* is manag'd by Eight Councils. 1. The Grand Council, which has the Direction of Trade and Navigation, making Peace and War with the *Hottentots*, and managing every Thing upon which the Security and Intereſt of the Settlement depends. 2. The Court Govern-ment.

Court of Justice for Criminal Cases. 3. An inferior Court of Justice, for Assaults, Trespasses, *&c.* 4. The Court of Marriages; which examines into every Marriage Contract before it be celebrated; as whether it be by the Consent of Parents or Guardians, and whether there be no Pre-contract; and in all other Cases, to prevent unlawful and clandestine Marriages. There is no *Fleet* allow'd there, to tie People together for a Frolick, without any regard to the Authority of Parents, or the real Welfare of the Parties so inadvertently contracted. But if no just Objection to a Marriage is found, then the Banns are publish'd, and a proper Time is fixed for its Celebration. There are no Licenses, to enable a Man for the Charge of thirty or forty Shillings, clandestinely to marry an Heiress of 5 or 600*l.* a Year, if any such could be found there: The Bride and Bridegroom must go in Person themselves, and express their Willingness to the Contract, or there can be no Wedding. 5. The Court of Orphans, without whose Consent no Orphan can marry under Five and twenty. 6. The Ecclesiastical Court, for the Government of the reform'd Churches; for here is a Colony of *French* Protestants, which the *Dutch* brought over to the *Cape*, not upon the Account of Religion, but to assist in cultivating their Vines, and other hard Labour, which the *Dutch* themselves never delighted in. 7. The Common Council, which has but little Business. 8. The Board of Militia, to muster and review the Militia once a Year, both Horse and Foot; for they have now Plenty of fine Horses from *Persia*.

So much for the Description of the *Cape* and *Town*; come we now to the Soil about the *Cape*, which is exceeding fruitful: One Bushel of Wheat brings thirty or forty; one of Barley, fifty or sixty; and other Corn in proportion to the Size of the Grain.

Vineyards. IT was a great while before they produc'd any considerable Vineyards or good Wine, but the first Rise of their Plenty of Wine came by a *German*, who advised them to take the Prunings of Vines about a Foot long, and sow them in a plough'd Field; which they did, and they naturally sent out a Shoot at every Knot, by which means they were soon furnished with a sufficient Quantity of Vine Stocks, or Plants, which they transplanted into other Fields plough'd and prepar'd for that Purpose. They planted them in Rows, every Vine two Foot and a half asunder, and every Row three Foot or three Foot and a half; and this Method has furnish'd almost every Cottage about the *Cape*'s Settlements with Vineyards, so that every Family generally has Wine enough for their own Use, and some to sell. They have both Red and White Wine, but they have the greatest Plenty of the White.

EVERY House has generally a Kitchen Garden to furnish them with Roots and Herbs, as in *Europe*, and mostly of the same Sort. They have scarce any Fruit-trees that the *Europeans* care to taste the Fruit of; but Trees brought from *Europe* or *Asia*, commonly produce better Fruit than they did where they were fetch'd from. The *Hottentots* Country produces the *Aloe* of various Kinds upon the Rocks, some of which blossom all the Year.

BUT not to dwell upon Plants peculiar to that Country, (which no *Englishmen* have seen grow, but those who have been there;) there are Plenty of Lions, Tigers, Elephants, and wild Dogs, almost like *English* Hounds; also Wolves and very large Buffaloes; likewise Elks, wild Asses, Porcupines, Monkeys, and Sea-Cows: But what is most surprising is the Stinkhingsem: It is peculiar to this Country, and has this strange nauseous Quality, that if it is pursu'd, it sends such a Stink from its Posteriors, that neither Man nor Beast can bear it, or be able to follow him. This is his best Defence when pursued; for as soon as ever he emits this Stink, no Dogs are able to hold the Chase, but rub their Noses and howl when he gives them this stinking Salute. If they shoot it, No-Body dare take it up; or if they do but touch it, all the washing in the World will not sweeten the Person for a long Time, nor can any living Man bear him in his Company. The Stinkhingsem.

FROM this stinking Quadruped, we proceed to the Fowls; and First of the Eagle, of which one Sort is call'd the Dung-bird; because if these Eagles find an Ox or a Cow laid down, they fall upon the Beast in great Numbers, make a Hole in his Belly with their Bills and Talons, and perfectly scoop out all the Guts and Entrails clean, leaving only the Carcass and the Hide. These Eagles fly in such Numbers, that when they see an Animal that they think worth making a Prey of, they drop down upon it, and destroy even one of the largest Cattle in a Moment.

THERE is another Sort of an Eagle, that preys most upon the Land Tortoise; but their Shells being beyond his Strength to break, he supplies that Defect with Policy; for he soars aloft with them into the Air over some hard Rock, and letting them fall upon it, their own Weight from such a Height breaks them open, and the Eagle descends and enjoys his Prey.

NEAR the *Cape* are Abundance of Ostriches: They are the largest Fowl we know of; their Feathers are of great Value in *Europe*. When she lays her Eggs, she covers them in the Sand till she has got a sufficient Number to sit upon; and then the Cock and Hen take it by Turns to sit upon the Eggs, and not only attend them till they are hatch'd, but take care to feed them till they can provide for themselves; contrary to the weak Notion of those who report that they bury their Eggs in the Sand as they lay them, and never look more after them.

THEY have other Fowls, such as are common in *England*, as Ducks, Larks, *&c.* which we need not mention here; also Reptiles and Insects, as Serpents, Flies, Grashoppers, Scorpions, *&c.* but they being scarce worth mentioning, except for the Mischief and Danger of them, I shall say no more about them.

CHAP.

CHAP. IV.

A Description of the Kingdom of Congo, *including* Angola, Congo Proper, *and* Loango.

Congo.

CONGO is on the West Coast of *Africa*, under the Line, and extends from four Degrees and a half to sixteen South Latitude. Its Length from North to South is above 1200 Miles along the Coast: But it is not above 200 Miles East and West from the Sea into the Land where it is broadest. It has *Benin* and *Nigritia* on the North; the Inland, and to us unknown, Countries in the middle of *Africa* on the East; *Matapan* on the South; and the *Atlantick* Ocean on the West.

Angola.

THE Kingdom of *Angola* is the first Division, and continues from Latitude sixteen to eight South. The Chief Town is *Loando*, upon a small Island near the Continent, about Latitude twelve South. From hence the *English* transport Abundance of Slaves to *America* every Year.

Congo Proper.

Congo Proper is to the Northward of *Angola*. Its chief Town is *St. Salvadore*, in Latitude six Degrees, upon the River *Congo*, but 150 Miles up from the Sea. This is a very large Town, or rather it possesseth a great Space of Ground; for the Houses are not regular nor contiguous. The Negro King has a sumptuous Palace in the Middle of the Town; but he is tributary to the King of *Portugal*. There are also three Christian Churches in it, besides a very sumptuous Cathedral; and there are twelve Churches in the Suburbs. 'Tis said the Inhabitants amount to 100,000.

Loango.

THE next Division is *Loango*: The chief Town, of the same Name, is in two Degrees South Latitude. The noted *Cape Lopaz* is about thirty Miles to the Southward of the *Equator*. The Town of *Loango* is situate at the Mouth of the River *Congo*; and further to the Southward is *Fort St. Philip*, near which the *Dutch* have a Factory. Most of the rest are Negro Towns, consisting of Huts built with Clay, and Reeds; very irregular for their Order, and poorly built: But it is observed, that most of these Towns, or rather Clusters of Houses, are among, or near, Groves of Trees: And these are Palms, Cocoa-Trees, Oranges, Lemons, and other delicious Fruit-trees, that retain their Verdure all the Year. These Negro Towns are very populous, and the Negroes that inhabit them are so civilized, that they clothe themselves like Christians, and consequently take off great Quantities of the *European* Manufactures.

THE chief Trade here is for Slaves, Elephants Teeth, Wax, Peltry, which is the Skins of Buffaloes and other Beasts, and for which they give the Natives, in Return, Clothing of Cotton, Linnen, or slight Stuff; also Tools, Tobacco, Brandy, *&c.* and there being no Gold found in *Congo*, the *Portuguese* purchase Slaves and Teeth with Gold they bring from *Brazil*, to which Place they do not send less than 100,000 Slaves yearly. The *English* and *Dutch* also drive the same Trade with those Natives, to purchase Slaves there to carry to *America*, where in their Passage they stow them to the best Advantage, seven or eight hundred of them in a small Ship; and in carrying such vast Numbers, their Profit must be very great; for one that costs but three or four Pounds at *Angola*, will fetch twenty or twenty-five Pounds in *America*.

CHAP. V.

A Description of Guinea.

GUINEA extends from Latitude four Degrees and a half South, to Latitude ten Degrees and a half North, or 360 Miles North and South; and from East to West it is reckoned 1800 Miles. It is bounded with *Nigritia* or *Negroland* on the North; by the undiscovered Inland Countries in *Africa* on the East; by *Congo*, and partly by the *Atlantick* Ocean, on the South; and by the same Ocean on the West. This large Tract of Sea-Coast (for that is the chief that we know of the Country) is known under these several Names: The Coast of *Benin*, The *Gold Coast*, The *Ivory Coast*, and The *Grain Coast*.

We shall not trouble the Reader with the original Derivation of the Name; these Attempts when made, and the Matter disputed, being generally obliged to be determined, or at least concluded, with a Conjecture at last.

The first Subdivision of this Country is *Benin*, in which is included the Slave Coast. It is bounded by *Nigritia* on the North; by the unknown inland Parts of *Africa* on the East; by *Congo* and the Bight of *Guinea* on the South; and by the *Gold Coast* on the West. The River *Camarone* bounds it on the South-East. The other chief Rivers are, *Del Rey*, or *King's River*, the Rivers *Forcados*, *Formosa*, and *Lagos*, as you proceed to the Westward, till the great River *Volta* comes as in the Westermost Boundary of this Province.

Benin.

The Chief Towns are, first *Benin*, on the River *Formosa*, in seven and a half North Latitude. It is eleven Miles in Circumference, and contains 100,000 Negro Inhabitants; but the Houses are but Clay Walls and Thatched Roofs. 2. *Awerri*, at the Mouth of the River *Forcados*, subject to the *Portuguese*, who also have Settlements 150 Miles up the River *Formosa*. 3. *Arebo*, on the East Side of the Mouth of *Formosa*, a good Place to trade for Slaves. 4, and 5. *Great* and *Little Ardra*, near the River *Lagos*, on the Slave Coast; the former extremely large and populous, but both inhabited by Negroes. 6. *Whidah*, on the Slave Coast, between the Rivers *Lagos* and *Volta*. This is a populous Town, but consists of

poor Buildings. 7. *Alampo*, where the *Engliſh* have a Factory; as alſo another at *Whidah*; where the *Portugueſe*, *French* and *Dutch* have likewiſe each a Settlement: But no *European* Nation has any Colony or Settlement in *Benin Proper*, except the *Portugueſe*.

Gold Coaſt. THE *Gold Coaſt*, ſo called from the Plenty of Gold taken up there, lies between the *Slave Coaſt* on the Eaſt, and the *Tooth* or *Ivory Coaſt* on the Weſt: The chief River is *Cobra*, or *Gold River*, which falls into the Sea a little to the Weſtward of *Cape Three Points*. On this Coaſt are ſeveral *European* Forts and Settlements: The Eaſtermoſt is *Chriſtianburg*, belonging to the *Danes*; the next Weſtward is *Crevecæ*, which belongs to the *Dutch*; and the Weſtermoſt is *Acra*, belonging to the *Engliſh*. Other Forts on that Coaſt are as follows: In *Agonna* is *Fort Simpas*, belonging to the *Engliſh*; in *Acra*, *Fort Patience*, to the *Dutch*; in *Fantim*, *Amaboa*, to the *Engliſh*; and *Amſterdam*, to the *Dutch*: In *Saboe*, *Fort Naſſau*, to the *Dutch*; in *Fetu Conradsburg*, to the *Dutch*; and *Carolsburg*, to the *Engliſh*; in *Commany Vredenburg* and *Delmina*, to the *Dutch*: In *Hante*, *Fort Inſuma* to the *Engliſh*; and *Batenſtern*, *Orange*, and *St. Sebaſtian*, to the *Dutch*: In *Axim*, *Fort Axim* and *St. Anthony*, to the *Dutch*; and *Fort Fredericksburg* and *Dorothea*, to the *Pruſſians*: And this is the Weſtermoſt *European* Settlement on all the *Gold Coaſt*.

Ivory Coaſt. THE next Diviſion to the Weſtward is the *Ivory* or *Tooth Coaſt*; ſo called from the Number of Elephants Teeth found here. The moſt remarkable Places on this Coaſt are *Jaque*, *Cape Lahoe*, *Cape Palmas*, *Seſtre*, and *Bottowa*. The chief Rivers are *Rio de Suemo*, and *Rio Eſcrovos*. We find no other Rivers of any Note on this Coaſt.

Grain or Pepper Coaſt. THE moſt Weſterly Diviſion of *Guinea* is the *Grain* or *Pepper Coaſt*, next Weſt of the *Ivory Coaſt*. The principal Rivers are *Seſtro*, St. *Paul*, and *Sierra de Leon*. The chief Towns are *Baſſo*, *Sanguin*, *Seſtro*, *Gorco*, *Buga*, and *Tomba*. On this Coaſt are two *Engliſh* Settlements, *viz. St. Anne*, at the Mouth of the River *Sierra de Leon*; and *Sherbo Fort*, on the Eaſt of it.

UPON the *Guinea* Coaſt their Winter or rainy Seaſon is from *April* to *September* inclusive: The reſt is called Summer, as being the hotteſt, as well as the drieſt Weather, though the Sun is then furtheſt from them. Yet thoſe Seaſons do not begin always exactly at the Times abovementioned, but ſometimes a Month or ſix Weeks ſooner or later. In general however they have the exceſſive Rains between the Vernal and the Autumnal *Equinox*, and thoſe Rains are attended with Storms of Wind, Thunder, and Lightning; which, as the Wind blows from the Southward, do always a great deal of Damage to the Shipping upon that Coaſt, except they can reach *Sierra de Leon*, when they perceive them coming on. Theſe Storms are reckoned the moſt violent in *July* and *Auguſt*.

THE Face of the Country is diverſified with Mountains, Valleys, Woods, and open Fields; and the Country is exceeding populous, eſpecially about *Whidah*; yet unhealthy to *European* Conſtitutions. Here is likewiſe a great deal of barren deſart Ground; and ſome ſo overflowed in the wet Seaſons, that it will produce little, except Rice: But the Fertility of *Whidah* in a great Meaſure ſupplies the Defect of the reſt.

THE *Guinea* Negroes, or Blacks, are ſo well known to us, that they need no Deſcription: Only they differ remarkably from the *Indian* Blacks; the former having curled Hair, like Wool; and the *Indians'* Hair being only wavingly curled, like the *Engliſh*, but black. The Molattoes are a Breed proceeding originally from the mixed Propagation of *Europeans* and *Negroes*. They are of a tawny Complexion, and dreſs like the *Portugueſe*. The Men are drunken, lewd, and thieviſh to the laſt Degree; and the Women the greateſt Proſtitutes in the Univerſe, both publickly and privately.

THEIR Quadrupedes, Fowls, and Reptiles, are much of the ſame Sort with thoſe of other Parts of *Africa*. Here is a Sort of Monkey ſo large, that Mr. *Boſman* affirms he ſaw one five Feet high. That Sort are ſo bold, that they will attack a Man. There is another Sort about two Feet high, Coal-black, only with white Beards. Theſe will plunder Gardens and Corn Fields; but they chuſe only the beſt of every Grain and Fruit. Here is the Camelion, between the Bigneſs of a Rat and a Mouſe. It will live ſeveral Months, ſome ſay Years, without Food, except for ſome little Flies it catches; and even they muſt come and light upon his Tongue, or elſe he cannot catch them, his Motion is ſo ſlow.

As for Vegetables, the Palm-tree is remarkable. Its Body, at full Growth, is about as thick as a Man, and about ſix Foot high: But from the Trunk its Branches ſhoot upwards above twenty Foot. The Leaves are an Ell long, and about two Inches broad. But ſome Palm-trees are not ſo thick; and the Liquor drawn from theſe differ from the other both in Strength and Flavour. When a Tree is old enough to yield a Quantity of Wine, they cut off its Branches, and make a Hole in the thickeſt Part of the Trunk; and therein putting a Reed, or Pipe, the Wine ouzes out into a Pot ſet to receive it; but it does not afford above two Quarts in twenty-four Hours. However, it will continue to run for twenty or thirty Days ſucceſſively, or more or leſs according to the Richneſs of the Plant; and when it has almoſt done running, ſome make a Fire at the Bottom of the Tree, to force out more Wine, even to the laſt Drop: Whereas if they content themſelves with what comes naturally, it will produce Wine next Seaſon again; but thoſe that are forced by Fire die, and are fit for no other Uſe than to be burnt. The Palm is in its Prime at ten or twelve Years Growth, and will then yield ten or twenty Gallons of Wine. *Palm-tree*

WHAT *Guinea* is moſt famous for is the *Guinea* Pepper. It is produced chiefly on the Grain or Pepper Coaſt, on a Shrub, in long, ſlender, red Shells, or Pods. There is alſo another Sort of it, which we call *Spaniſh* Pepper, that likewiſe grows on Shrubs like Gooſeberry-Buſhes, and is hotter than common Pepper. There are very fine Timber Trees on this Coaſt, ſo large that they cut large Canoes out of their Bodies, and uſe them as we uſe Boats. *Gui* *Pep*

THEY have ſeveral Sorts of Minerals; as Iron, Copper, Silver, and Gold; but they work none of their Mines; which gives ſome Reaſon to queſtion whether there be any Silver in the Country. But as to Gold, it certainly contains more than any other Part of the World, as is evident from ſuch vaſt Quantities being waſhed out of the Country, and brought by the Rivers to the Sand near the Sea: And this happens eſpecially in the rainy Seaſons, when the Water falls in Torrents from the Hills, and ſometimes undermines the Earth, and great Lumps thereof roll down the Stream; for the Earth being thus removed, the Gold is diſcovered in great Quantities; and large Pieces of Metal are often picked out of the Holes in the Rock; but much more waſhed down like Sand. The former is called Rock Gold, the other Gold Duſt. *Gol*

THE chief Articles in which their Trade with other Nations conſiſts, are; 1. Gold; 2. Slaves; 3. Elephant's Teeth; and, 4. Drugs, Wax, and Red-wood. It is hard to get pure Gold among them,

them, they have got such a dextrous Way of adulterating it; and for this the *English* may thank themselves, some of whom, for a Trifle of private Interest or Reward, taught them this Piece of Artifice. The Gold is chiefly found on that Part of the Coast called *Guinea Proper*; and is also found on the *Tooth Coast* and *Slave Coast*, and more or less from one End of the Coast to the other.

Gold.

The Factors have a Way to distinguish the pure Gold from the adulterated; for if it be in large Pieces they cut it through, and so they can see if it be all alike, or if the Outside only be pure Gold and the Inside baser Metal; but if it be Gold Dust, they winnow it, and blow it, and the like; and the false Gold, being lightest, flies away, and leaves the pure Gold behind.

In the Slave Trade, the Negro Factors and Merchants bring their Slaves down to the Coast, where they agree with the *Europeans* for a Price. As *Guinea* has a multitude of Petty Sovereigns, there are frequently Civil Wars among them; and then one Party taking Slaves, and the other making Reprizals, they take Slaves on both Sides, and bring all to Market. Some sell Wives and Children, if they offend. There are also Slaves for Debt and Misdemeanors, in which Cases not only themselves, but sometimes their Descendants and Relations, are made Slaves, and sold to attone for the Offence, or satisfy the Debt: And some sell their Families, or Part of them, under Pretence they shall not be able to maintain them; and in great Scarcity they sell themselves to one another for Bread; but any Defect, even the Want of a Tooth, renders them unfit for Sale.

Slave Trade.

The next Article is Elephants' Teeth, or Ivory, got chiefly on the Tooth Coast. Some think the Elephants shed them at a certain Age: Others, that they are the Teeth of Elephants that die naturally, or are killed by Travellers, that know not the Value of their Teeth. They will live to a great Age, as appears by some of their tame Elephants, who have been known to continue in some Families, for several Generations, the present Proprietors only knowing that they belong'd to the Family in their Fathers and Grandfathers Time.

Ivory.

The last Article is Drugs; and these come chiefly from the Grain Coast. It is computed, that the *English*, *Dutch*, *French*, *Danes*, and *Brandenburghers*, import from *Africa* in Gold, Slaves, Ivory, Pepper, and Drugs, to the Value of three Millions Sterling yearly. The *Portuguese* have such vast Tracts of Lands, both on the East and West Coast of *Africa*, that they trade for more Slaves and Teeth, than all the Nations in *Europe* put together; and the *Europeans* in Return for what they purchase, barter Calicoes, Linnens, Cottons; also Tools, as Swords, Knives, Hatchets, Nails, Hammers, and other Things of that Kind.

It is observed, that every Tribe or Family make their own Tools and Instruments. They may be said to be all Smiths, Carpenters, or Masons. They build and thatch their own Houses; they make their own Arms, such as Darts, Arrows, Launces, and broad Swords; only Fire-Arms, Gun-powder, and Bullets, they purchase of the *Europeans*. It is surprizing to see how dextrously they make and polish their Swords, and Heads of Darts. Their Anvil was only a flat Stone, and their Hammer another Stone, till they were better instructed by the *Europeans*: But their Bellows are an Invention of their own, and will blow a Fire very quick.

Their Watermen and Fishermen are all of one Tribe: They have Canoes of thirty Foot long, and six broad, all of a Piece, cut out of a large Tree. These they use to carry Merchants Goods: But they have a lesser Sort for Fishing. They are row'd, the largest of them by fifteen Watermen, the smallest only by three; and so according to their Size. They have always an odd Man to steer. As they look forward in rowing, they cross our *English* Proverb, of *looking one Way and rowing another.*

Their Women dig, sow, plant, and manage most of the Husbandry. The Men manage the Fishery. They sell their Rice and Millet without the Foresight of leaving enough till next Season; so that they are sometimes forced to sell Wives and Families to supply themselves, though they have had large Crops.

Not to make a long Detail of the first Rise of the Trade of *Africa*, it is sufficient to observe, that the *Portuguese* soon got the Substance of it by a Grant from the Pope about the Year 1442: Whereupon they erected Forts, and improv'd their Trade: But *England* and *Holland*, paying no sacred Regard to the Pope's Authority, after the Reformation, they sent out several Ships to partake of the Gold Trade in *Africa*, exchanging Toys and Trifles for the Gold, and making very advantageous Returns. But the *Portuguese* being now the most powerful, obstructed their Trade with the *English*; whereupon the Negroes invited the *English* to settle among them, and assigned them Places to erect Forts and Factories upon, to defend themselves from the Insults of the *Portuguese*; the *Dutch* at the same Time weakning the *Portuguese*, by first falling upon them, and taking away their Capital of *Elmina*; and then driving them from their Settlement on the Gold Coast. The *Portuguese*, upon this, removed further East, and gained a vast Tract of Land; but there was little or no Gold there.

The *Dutch* and *English* thus prevailed over the *Portuguese* for a joint Advantage, as the *English* intended: But the voracious *Dutch* had other Views, and cunningly endeavoured to engross to themselves the joint Acquisitions of both: In order to which, they spirited up the Natives against the *English*, and took several of them aboard of their Squadron, which was then come to join the *English*, to suppress the *Portuguese*. And the *Dutch* Admiral pretending to an Order to separate from the *English* Fleet, went upon the Coast of *Guinea*, and took several of the *English* Forts, and then sail'd to their Islands in the *West-Indies*, which, agreeable to their old *Dutch* Generosity, they ransack'd and plunder'd; and all this in a Time of perfect Peace between the two Nations; but the *English* made Reprisals of a Fleet of *Dutch* Ships in the Channel, and paid them home for their Villainy and Ingratitude: For doubtless they intended to have brought a Force exclusive of us, and all other *European* Nations, to open those Gold Mines, and engross them entirely to themselves. The Gold Weights made use of on the *Guinea* Coast, are 1. the Peso, 2. The Angel. 3. The Bendo. 4. The Ounce. 5. The Mark. And 6. the Pound. The Peso is four Angels, the Bendo two Ounces; four Bendoes make one Mark, which is eight Ounces; and two Marks is one Pound.

Weights.

In Numbring, they go but to Ten, and then lay down a Finger; and when all their ten Fingers are down, it makes a Hundred; and so they begin again.

Numbers.

Some of the *Guinea* Princes are powerful and arbitrary; and to come in particular to the Prince of *Whidah*, he is fear'd as a Demi-God, by those who come before him. They always, in approaching his Presence, either kneel, or prostrate themselves to the Ground. He has Viceroys, Governors, Generals, *&c.* as *European* Princes have; but his Wives are, as it were, his

Sovereigns.

Late-

Life-Guards, and his Executioners, where a Number is required. When the Punishment due to a Crime is demolishing the Criminal's House, an undisciplin'd Posse of the King's Wives are sent to execute the Sentence; as was once the Case of a Negro Officer, who, upon Charge, at least of a Misdemeanor, was condemn'd to have his House pull'd down; and accordingly the King's Mob of Female Executioners, alias his Wives, were sent to do the Execution: But upon their Approach they found the Criminal sitting in a Heap of Gun-powder, with a lighted Match in his Hand. He insisted upon his Innocence, but at the same Time threatned to blow up himself, and whoever should approach to hurt him, or his House: Whereupon they desisted, and the Sentence was revers'd for that Time.

When the King goes abroad, five or six Hundred of his Wives run before him; but not a Man in his whole Train. However he goes but little abroad, but stays at home to attend the Service of the Government; conversing with the *European* Merchants and Factors, and making himself Master of the Nature of the Trade of his own Country.

The King's Chief Magistrates are the Cabiceroes, a Sort of Council whom the King consults in Affairs of Importance, as Peace and War, &c. The King wears no Crown; nor is there any Ceremony at the Inauguration of a new King, but only that of shewing him to the People. The succeeding Son possesseth his Father's Wives. His Revenues are very great; for there is scarce any thing but what is tax'd. Though there be no written Laws in *Guinea*, yet they have Punishments very proportionably adapted to each Kind of Crime. Murder is punish'd with Death, if the Person kill'd was a Freeman; but if a Slave, the Murderer is only fin'd. Adultery with one of the King's Wives, or the Wife of a great Man, is Death. Theft is punish'd by a heavy Fine, and Restitution of the stolen Goods: But if the Offender has nothing, he either dies for it, or is made a Slave to the injur'd Person: And the same in Case of Debt; for if a Man is insolvent himself, his Wife and Children are liable to be sold, to make Satisfaction to his Creditors.

Before the *Europeans* arriv'd in *Africa*, the Natives knew nothing of Fire-Arms, Bows, Arrows, &c. But as soon as they got any Notion of them, they took to forging them themselves, with only a Stone for their Anvil, and another for a Hammer. In some Parts of the Country they use their Shields chiefly for Defence; which Office they perform very well against Swords, Launces, and Darts, but not against Musket-Balls. They are of an oval Form, four Foot long, and three broad, made of light Basket-Work, and cover'd with the Skin of a Tyger, or some thick Leather gilt. It has been thought very wrong in the *Dutch* to furnish the Negroes with Fire-Arms and Powder. But it is the Principle of those our Neighbours, (if they have any Principle at all) to set aside all publick Common Interest, if they can any way promote their own private Advantage by it: Witness their sweet Trade with our *English* Butter, Lead, and Corn, in the Wars with *France*, in Queen *Anne*'s time; we and the *French* being Agents in that War, as Enemies, the *English* must not supply the *French* with their Product, but the cunning *Dutch* warily kept their Trade going with both Nations, and thereby gave themselves the Opportunity of furnishing the *French* with our Goods at extravagant Prices. Indeed this Trade of Fire-Arms and Ammunition is one of the best Articles depending between *Europe* and *Guinea*; and for *England*, in particular, to stand off, while the *Dutch* are gratifying their avaritious Temper, and at the same Time laughing at our squeamish Honour, would be indeed ridiculous, especially as our Fire-Arms are now become so common among the Negroes, that they are as good Marks-men as most *Europeans*.

As to the Dress or Habit of their Soldiers, in their March to the Wars, they stick their Sword in the Cloth wrapp'd about them. Every Soldier has a Belt of Bandaleers for his Musket, and a Pouch for his Bullets; a Cap on his Head, made of the Skin of a Crocodile, or some wild frightful Animal, adorn'd with red Shells; a Bunch of Horse-Hair, and a bright Chain bound about his Head like a Coronet: His Body is painted white; and all this being done to him, he makes a very awful terrible Figure.

Every able body'd Man is oblig'd to take the Field, if the Safety of his Prince or his Country requires it: But some there are indeed who make Arms their Profession, and let themselves out for Hire. Their chief Motive to War is the Hopes of Plunder and Prisoners; upon both which they set an excessive Value; and to this we may add, extending their Territories; which must be the Consequence, when the poor Sufferer's Ability falls short of the Captor's Demand.

It seems evident from the Practice of the *Dutch*, that they intended to have open'd the Mines of *Guinea*, exclusive of any other Nation; for they actually attempted to open a Mine in the Year 1695, in a Mountain near the *Dutch* Fort of *Vredenburgh*, in the Kingdom of *Commany*. But the Negroes let the Miners know, that this Hill was dedicated to one of their Gods, and must not be touched; and, that they had only given the *Dutch* leave to erect Forts for the Security of their Effects, not to take Possession of the Country, and carry away their Gold. The Miners still persisting, the Natives rose on them, wounding some, and making Prisoners of others. Of this the *Hollanders* complained to the King of *Commany*, but received no Redress; whereupon they marched a Party of Soldiers into his Country, who were driven back by the Natives. The *Commanians* now entred into a Confederacy with the *English*, who had a Fort about a Mile from the *Dutch*. The *English*, indeed, concerned themselves no farther than to influence some other Negro Powers to join the King of *Commany*; at the same Time that the *Dutch* hired two Nations on their Side. They soon proceeded to Action, and the *Dutch* received two of the most memorable Defeats that ever were known in that Country; after which they drop'd their Design of monopolizing the golden Mountains, and made Peace with the Natives.

The *Guinea* Negroes generally acknowledge [illegible] one Supreme Almighty Being, and yet pay him no manner of Worship. As they believe him too exalted to take any notice of poor Mortals, they pray and sacrifice to a great Number of inferior Deities. Every Man has one God, or more, of his own chusing; tho' some are in common to whole Nations. The chief Deity of *Whidah*, is a Serpent of a particular Species, whose Bite is not mortal. To this Animal they address themselves for seasonable Weather, the Preservation of the State, and on other important Occasions: A grand Temple is dedicated to him at *Ardra*, and a lesser in almost every Village, with Priests and Priestesses to officiate in them. In the great Temple, they always keep a Serpent, of a monstrous Size, worshipping the Creature in Person, and not in Effigy. The King annually sends hither Presents and Offerings of many valuable Thing-

Things. He used formerly to go in Person every Year, with his whole Court, to adore this Serpent; but of late deputes a certain Number of his Wives to perform that Ceremony in his stead. Once every Year, it is pretended, the young Women of the Country are seiz'd by this Species of Serpents, and work'd up to a Kind of Frenzy: Upon which they are carried to the Temples in their respective Villages, and kept there till they return to their Senses. That this is merely a pious Fraud to draw Money from the People, is evident; because these frantic Women are usually the Wives or Daughters of their principal Men, who pay largely for their keeping in the Temples; and because the Women are not allow'd to divulge what happens during their Confinement. Indeed there is not much Occasion for this Restriction, because, as the Women take greater Freedoms in these Temples than they dare out of them, it would not be much to their Credit were they to tell. A Man that should refuse to let his Wife or Daughter go to the Temple on these Occasions, would, however, be treated as an Enemy to Religion. The King, it seems, shares the Profit of these Pretensions, and therefore countenances the Fraud. As to the idolized Serpents, they are held so sacred, that a Person would be condemn'd to the Flames who should hurt one of them, or even touch it with a Stick. In a Word, the whole Country is ready to rise, when one of these Idols is attack'd either by Man or Beast. The largest of these Creatures are about two Yards long, of the Bigness of a Man's Arm, and adorned with white, brown, and yellow Streaks. The Natives will not so much as hear any thing spoken in Derision of them. A Proclamation was once issued for destroying all the Hogs in the Country, because a Hog happen'd to devour one of them: And so many of those Creatures were slaughter'd on this Occasion, that Swine's Flesh became very dear.

Lofty Trees ador'd.

The *Fidaians* also pay Divine Honours to fine lofty Trees and Groves. To these they apply in their Sickness, or on any private Misfortune; and all the Serpents Temples are in some Grove, or under some spreading Tree.

And the Sea.

The Sea is another of the principal Gods, to whom they sacrifice when their Winds and Waves are tempestous, which usually happens in *July* or *August*.

Besides these publick Objects of Adoration, every Man has a Set of Gods, of his own chusing, at *Fida*. Every thing they meet with on going abroad, animate or inanimate, they introduce into the Number, after it has undergone the following Trial: They pray to it for something they stand in need of; and, if they obtain their Desire by any means, they ascribe their Success to the Influence of this new God; but, if they are disappointed, they conclude that it cannot or will not help them, and treat it with Contempt, addressing to it no more.

Both Priests and Priestesses have an uncommon Respect shewn them in *Fida*: Their Persons, and all that belongs to them, are held sacred and inviolable; and tho' the Wives of other Men are little better than Slaves to their Husbands, the Husband of a Priestess is obliged to be all Obedience at his Peril: This makes the Natives very cautious of marrying a Priestess: Nor would they ever consent that their Wives should be admitted into the Order of Priesthood, if they could help it.

They have imperfect and confus'd Notions of Heaven and a future State; and some of them mention a local Hell for the Punishment of the Wicked, but seem to regard it as little as Christians do.

Religion of the *Negroes* on the *Gold Coast*.

The People of the *Gold Coast* also believe in one Supreme, Almighty Being; but look upon him to be too much above them, to regard their Affairs; and therefore address their Prayers to some inferior Deities or Demi-gods, as the *Greeks* usually did of old: Some of them believe, that Men were created by the Supreme God; while others ascribe the Creation to a great Spider they call *Ananse*. Every thing relating to Religion they denominate *Fetiche*; but to the Idol of their Hearts, or Favourite God, they give the Title of *Bossum*; and to this God the beloved Wife is always dedicated.

Every Priest hath a different God, to whom the People under his Care apply. When they are debating on War and Peace, they bring Sacrifices, and consult the God by their Priest, who throws up some Nuts or small Pieces of Leather, and, as they fall nearer or further from each other, he foretells good or bad Success to the Undertaking. They take every solemn Oath also before an Idol, drinking a Draught after it, and praying that their God may strike them dead, or the Liquor may burst them, if they do not perform their Engagements, or if the Thing be not true which they attest: However, it seems, the Priest has Power to absolve them from these Oaths: To prevent which, upon great Occasions, they make the Priest swear, that he will not absolve the Party, or dispense with his Oath.

When the Weather is unseasonable, the whole Town, or Country, consult their Priest, how the Vengeance of Heaven may be appeas'd; and he generally advises them to offer certain Sacrifices. Every Village has a sacred Grove set apart, where the Sacrifices are killed, and Divine Worship perform'd: But, besides the Idol that belongs to the Priest, every Person has his particular Houshold-God, before which he constantly performs his Devotions on the Day of the Week he was born. They drink no Wine or strong Liquor on that Day, before Sun-set: They are also then habited in White, or their Skins colour'd with a whitish Earth or Paint. There is another Day of the Week set apart for Divine Worship; when the Poor sacrifice Poultry, and the Rich a Sheep, without the Assistance of a Priest. There are few Families in *Guinea*, but what are obliged, by ancient Custom, to abstain from certain Kinds of Meat; and their respective Children and Posterity never deviate from the Rules prescrib'd by their Ancestors. At *Acra*, on the *Gold Coast*, Circumcision is one of their Customs; but from whence they received it, or how long they have used this Rite, none amongst them know; nor is it used by any other Nation of *Guinea*.

They look upon their Deities, as Beings vested with great Power, and that reward and punish them in this Life, according to their Demerits. They have not any great Expectations, or Dread of Futurity. The Rewards they expect, are a Multitude of Wives and Slaves, Health and Wealth, and other prosperous Circumstances in this World; and the Punishments they apprehend, are a Deprivation of these. The greatest Calamity that can befal them, and what they dread most, is Death. Murder, Adultery, and Theft, are venial Crimes, and may be aton'd for with Gold: But their eating forbidden Meats, and drinking prohibited Liquors, and a Neglect of their Holidays, they think can never be pardon'd. Some few of them talk of a Paradise, not unlike the *Elysian* Fields, whither good Spirits are sent; that is, such as have kept their Holidays, inviolably abstain'd from forbidden Meats, and observed their Oaths: And those that

have been deficient in any of these Particulars, are drown'd in a certain River, and a Period put to their Existence.

Tho' all the *Negroes* worship some Creature or other, yet they have not all Idols or Images in their Houses: Some of the Natives of the mountainous inland Country worship a living Man, as the *Tartars* near *China* do; of whom they relate ten thousand Miracles, and believe he dooms them to Happiness or Misery after Death, according to their Deserts. They are charged also with worshipping the Devil, and keeping a solemn Festival, of eight Days Continuance, annually to his Honour. This, however, is a Mistake; for tho' they hold such a Festival, it is not to the Devil's Honour, but in order to drive him out of their Country. They have no other annual Festivals but this, and another after Harvest, when they sacrifice to their Gods for affording them the Fruits of the Earth. As to their Weekly Sabbath, some keep it on a *Tuesday*, and others on a *Friday*, when no Person is permitted to go a fishing, or to drink any Wine.

They certainly believe, that their Souls survive after Death; which appears by the numerous Stories they entertain the *Europeans* with of Apparitions or Spirits: Nay, they seem to believe Spectres and Apparitions more firmly than any Article of their Religion, terrifying themselves and others with an Apprehension of them. Never any Person dies, especially if he be a Man of Figure, but they believe he appears for several Nights about the Place where he died; and they ascribe a great Power to such unimbodied Spirits. One of their Kings happening to be killed, who was a profess'd Enemy to the *Dutch*, and the chief Factor of the *Hollanders* Fort dying some few Days after, they concluded he had been snatch'd away by their deceas'd King, who had a Power of punishing him in the other World, tho' he could not subdue the *Dutch* while he was in this mortal State. They seem to have a great deal of Faith in Magick or Witchcraft, or something like it. Their Priests act in a triple Capacity, as Prophets, Conjurers, and Physicians; and, when Medicine does not answer their Expectations, they have recourse to Sacrifices and Charms; and the People have so good an Opinion of them, that, if the Priest does not recover the Patient, they impute it to some Defect in the Sacrifice, or themselves, or to any thing, rather than the Inability of the Priest.

The Diet of the *Negroes*.

They eat but poorly upon the *Gold Coast*. Millet, boil'd to the Consistence of Bread, is their common Food; or Potatoes, Yams, and other Roots in the room of it, well drench'd in Palm Oil; and, if to this they add a few boil'd Herbs and stinking Fish, the common People think they live luxuriously that Day: Nor do their Superiors eat better, only they allow themselves a greater Quantity of Fish and Herbs than the Poor can afford. They have also a Mixture of Corn, Paste, and Palm Oil boil'd together, to which they give the Name of *Malaget*, and which is in some Esteem with the *Dutch*, possibly because it may resemble their own Grout. They have also Variety of Garden Beans and Pulse, with Banana's and other Fruits, that serve them for Food.

At *Benin* and the *Slave Coast*, the better sort of People eat Beef, Mutton, and Fowls; and are so good to their Poor, that they are always welcome to their Tables when they want Employment, and cannot provide for themselves. They are also extremely hospitable to Strangers, being proud of nothing more than the Character of generous free-hearted People. Dried Fish and Roots are the principal Food of the common People at *Benin*: But, there is no Part of the *Guinea* Coast where they don't drink Drams in the Morning, and Palm Wine in the Afternoon; and their petty Kings will meet the meanest of their Subjects in the Market-place of an Evening, and, forming a Circle upon the Ground, drink to a very great Excess, being attended by their Women, who are no less addicted to drinking than the Men. The Conversation is usually smutty, which does not at all offend the Modesty of the *Negro* Females, who maintain their Ground, and sit drinking and smoaking with the Men frequently till Morning. Besides Wine, they have a Sort of Beer made of Millet, some of it very strong: Few of them drink Water, it being esteem'd very unwholesome here: And they have also the Milk of young Cocoa-Nuts, which is an exceeding cooling and refreshing Liquor; but, as for Cows Milk, they never drink of it.

Diseases of the *Negroes*.

Notwithstanding this Country is so unhealthful for *European* Constitutions, the Natives have but very few Distempers: The Small-Pox is the most fatal to them of any. This, indeed, sweeps them away like the Plague; as it generally does all other People in *warm* Climates. Another epidemical Distemper is that of Worms, which are found between the Skin and the Flesh, and give the Patient inexpressible Torment till they are drawn out.

When the Head of the Worm is come a little Way out of itself, they draw it further, winding it about a Stick, a little at a Time: When they find it come hard, they desist, for fear of breaking it; and then try at it again another Day; and so on till they have got it quite out, and then the Patient is at ease: But, if the Worm breaks, he endures a great deal of Pain; for it either rots in the Flesh, or breaks out at another Place: Some of the *Negroes* have nine or ten of these Worms in them at once, and the *Europeans* are not entirely free from them. They are a Yard long, and sometimes as much more: Nor is this the Distemper of *Guinea* only: Our People, as well as the Natives, are afflicted with it in the *East-Indies*. A greedy ravenous Appetite is also reckon'd among the Diseases of the *Guinea Negroes*, which proceeds, as some imagine, from drinking Palm Wine to Excess. The *Venereal* Distemper is also fatal to many of them, and few of them escape it amidst such Numbers of common Women. They can cure nothing but ordinary Flesh Wounds, which they do by applying Pultesses of some salutary Herbs to them. Tho' the *Negroes* are generally healthful, they seldom live to a great Age; one of Fifty is esteemed an old Man in this Country. The Distempers *Europeans* are most subject to here, are Fevers, Dysenteries, and the Colick; which are ascribed to the excessive Heat of the Day, and the Coldness of the Night; and also to the thick stinking Fogs, that arise from the Valleys between the Hills, and from the Salt-Marshes near the Sea, and at the Mouths of the Rivers where their Factories are usually situated: Nor does the stinking Fish, which the Natives lay to rot upon the Shore, contribute a little to infect the Air: It is a Matter of Fact not to be contested, that few arrive here, but are immediately seiz'd with a Fit of Sickness, of which abundance die. But this is due, in a great measure, to the Want of good Kitchen Physick and good Medicines. The *Portuguese*, who come from a warmer Climate, and are used to another sort of Diet than the *English* and *Dutch*, have their Health on all the Coasts of *Africa* almost as well as the Natives. But, among other

Diseases of the *Europeans* there

Cattle

Cauſes aſſign'd for the ill Health of the *Europeans*, is the Plague of Flies: Such Swarms of Gnats or Musketo's are perpetually buzzing about and ſtinging them, that they can get no Reſt Night or Day: And this is the Caſe of all Countries that are hot and moiſt. Theſe and a thouſand other Inſects are perpetually feaſting upon the Blood and Fleſh of Foreigners, who are ſo ſwelled up at their Arrival, that they can ſcarce be known by their Friends: It is obſerved alſo, that warm woody Countries, where the Winds have not a free Paſſage, are much the worſt.

As to their Marriage-Ceremonies, the Lover or his Friends contract with the Father of the Virgin, frequently before either Party is capable of making any Choice. No Son or Daughter ever pretends to diſpute the Authority of the Father in this Matter, when they grow up. As ſoon as the Bride is deemed capable of Marriage-Joys, ſhe is taken home by her Husband, without any other Fortune to recommend her, than her native Charms: For the Husband preſents her with her very Clothes and Ornaments; of which, if ſhe misbehaves herſelf, ſhe is ſtripp'd, and returned naked to her Friends; but, if the Man divorces her without any Fault of her's, ſhe carries off her Wedding Clothes and Jewels. There is an Entertainment for the Friends and Relations when the Wife is taken home, and ſhe is ſuffered to dreſs and live at Eaſe for ſome few Days; but then ſhe is forced to work amongſt the reſt of his Wives, to dig, plant, and ſow the Ground; for the Men leave the Husbandry, as well as the Buſineſs of the Houſe, entirely to the Women. Thoſe that live the eaſieſt amongſt them, are the Wives of the Merchants, the Dealers in Wine, and the Fiſhermen, who have no Lands to manure; for the Men of Eſtates, the more Wives they have, the greater is their Stock of Corn, Rice, and Plants, which makes them multiply their Wives as faſt as they can. In the Kingdom of *Whidah*, they take ſome hundreds, and the King ſeveral thouſands, who are no more exempted from Drudgeries, than thoſe of private Men, except ſome few of his Favourites. They have alſo one Wife they call their *Boſſum*, dedicated to their Houſhold-God, who is exempted from working; but it is expected ſhe ſhould follow her Lord into the other World, like ſome *Indian* Wives; but this is not much practiſed of late. There is alſo another Wife, to whom the Affairs of the Houſe are entruſted, and the Government of the reſt is committed, who is exempted from Labour: And theſe two the *Negroes* are very jealous of; but, for the reſt, they are not ſo much concerned. The common People will, 'tis ſaid, contrive with their Wives how to draw young Fellows into the Snare, for the Sake of the Damages they are entitled to, when another invades their Property.

Upon the *Gold Coaſt*, the Goods the Man leaves, go to his eldeſt Brother and his Children; and thoſe of the Women to her eldeſt Brother and his Iſſue: Their reſpective Children do not inherit the Goods of either Father or Mother. However, if the Father be a Sovereign Prince, the eldeſt Son ſucceeds his Father in his Commands, tho' he has none of his Effects, but his Arms: But at *Whidah*, and other Parts of *Guinea*, the eldeſt Son ſucceeds to his Father's Eſtate and Effects, as well as in the Governments he held. Tho' the *Negroes* uſe their Concubines and Female-Slaves frequently, as well as their Wives by Contract; yet are their Children illegitimate, and Slaves to the Heir. The multitude of Wives, Concubines, and Slaves theſe People keep, is for the State and Grandeur of the Matter, as well as on account of the Profit of them. There is one Inconvenience in a Man's having a large Family, and numerous Dependants, in *Guinea*: That he is anſwerable for all the Miſchief and Damage they do any one, and obliged to make it good: Nor do the People here wait till they can have Juſtice done them in Courts of Law; but, where a Man's Slave has done them an Injury, they immediately make Reprifals on the Maſter.

The *Negroes* of the inland Country, if any one is familiar with their Wives, are content with nothing leſs than his Ruin: If the Offender be a Slave, his Death muſt attone for the Crime, and his Maſter is obliged to pay a conſiderable Fine beſides. The Woman alſo pays for her Wantonneſs with the Forfeit of her Life, unleſs her Relations will redeem her; and where ſhe has committed the Crime with a Slave, no Money will purchaſe her Peace: She is put to Death without Mercy, and the Maſter of the Slave obliged to pay the Husband very conſiderable Damages: There have been Inſtances of thoſe, who have been obliged to pay two or three thouſand Pounds for the Offence of a Slave, where a Prince or great Man is injur'd. But, if the Man goes aſtray, the Wife has no Redreſs; ſhe muſt not murmur whenever he ranges.

They have a great Regard to their Women when they are with Child, and make Sacrifices and Offerings to their Gods when a Woman is firſt found pregnant. At the Birth of the Child, the Prieſt binds up the Head, puts on ſome Rings and Spells to protect the Infant againſt Enchantments, and performs ſome religious Ceremonies upon the Occaſion. There are two Names beſtowed upon it, the Day of the Week on which it is born; the Grandfather's Name if a Boy, and the Grandmother's if a Girl; and, as they grow up, they gain a third by their Employment, or ſome great Action they perform. In ſome Places they circumciſe their Children; but this is not perform'd till they are five or ſix Years of Age, or more. They alſo oblige their Women to live ſeparately from them at certain Times; and, in ſome Parts of *Guinea*, make it a Forfeiture of their Liberties to come into any Man's Houſe in ſuch Circumſtances.

The inferior Women that are unmarried, take very great Liberties, which is no Reproach to them upon this Coaſt; and, as theſe ſell their Favours as dear as they can, there are others purchas'd by every Townſhip almoſt, to ſupply the Neceſſities of unmarried Men: Theſe are obliged to admit of the Mens Company, whether Slaves or others, for the Value of a Farthing. They have Huts by the Way-ſides, where they entertain thoſe that are diſpoſed to become their Gallants: The *Dutch* tell us, that, when they would bring any of the neighbouring Towns to their Terms, they ſeize theſe Ladies of Pleaſure, and carry them to their Forts, being aſſured the Natives will ſubmit to any thing to obtain their Liberty. People here look upon it as an Act of Charity to purchaſe ſuch young Female-Slaves, to relieve the Neceſſities of the Publick; and the rich *Negroe* Women frequently leave ſome Legacies of this kind when they die.

When a Perſon of any Figure dies, his Wives, Relations, Slaves, and Dependants, immediately ſet up a dismal Howl: His Wives ſhave their Heads, clothe ſuch Parts of their Bodies with Rags, as are uſually clothed; and, for the reſt, colour their black Skins with a white Paint or Clay; running about the Streets, and bewailing themſelves like ſo many diſtracted Creatures: As the People of *Guinea* ſcarce look upon Death

Their Funerals

to

to be natural, but that it is always a Puniſhment inflicted on them by their Gods: The Prieſt is therefore ſent for, and a very ſtrict Enquiry is made into the Life of the Deceas'd; as Whether he was ever perjur'd? Whether he was guilty of eating prohibited Meats? Whether he obſerved their Sabbaths and Holidays, or the like? There is, however, another Way they uſually imagine he may have been taken off; and that is, by the Charms or Spells of his Enemies: And accordingly, if any of his Enemies have been ſuſpected of practiſing Magick, they make no ſcruple of charging him with the Death of their Friend, and perhaps endeavour to revenge it.

While the Corpſe remains unburied, all the Relations, Friends, and Neighbours, attend it, and join in the Lamentations of the Family: It is cuſtomary alſo to bring Preſents with them of Gold, Linnen, Good Liquors, Fruits, and other Eatables. At length the Corpſe, being richly habited, is put into a Coffin, with a conſiderable Quantity of valuable Effects, ſuitable to the Circumſtances of the Deceas'd: He is carried to the Burying-place, preceded by great Numbers of Musketeers, who fire their Guns all the Way; and the reſt of the People follow the Corpſe, making the Air ring with their Lamentations, but obſerve no manner of Order in the Proceſſion.

So ſoon as the Corpſe is interr'd, moſt of the Company return to the Houſe of the Deceas'd, where they drink and feaſt for ſeveral Days ſucceſſively, congratulating the Heir on his coming to the Poſſeſſion of his Eſtate.

Slaves ſacrificed on the Death of a King.

When a King is buried, ſeveral of his Slaves are ſacrificed, in order to ſerve him in the other World; as are his *Boſſums*, or Wives dedicated to his Gods. What is more to be lamented than the putting theſe miſerable Wretches to Death, is the Pain they endure in the Execution. They pierce and cut them, as in ſport, for ſeveral Hours. *Boſman* ſays, he ſaw one, who had endured the moſt exquiſite Torture, deliver'd to a little Child to cut off his Head, which he was an Hour a doing.

Inſtead of a Tomb, the *Negroes* uſually build a Houſe, or plant a Garden over the Grave; and, at *Axim*, they ſet Images of Clay upon it, which they waſh and clean every Year on the Anniverſary of the Funeral.

They are not leſs deſirous of being interr'd among their Anceſtors, than the People of *Europe*; and, when they die at too great a Diſtance from home to be removed thither, their Relations will bring home their Friend's Head, and ſome of his Limbs.

Language. Their Language is ſuch a very diſagreeable, brutal Sound, that tho' the *Europeans* have often endeavour'd to expreſs their Words in Writing, they have never been able to do it. However, of this Sort of Language there are many Dialects, ſo different from each other, that, in the Space of ſixty Miles, there are ſix or ſeven People that don't underſtand one another: As for Learning, nothing of that Kind can be expected from them: They are perfectly ignorant when their Country was firſt peopled, and from what Nation they derive their Original; but ſeem to have a pretty general Tradition, that both black and white Men were created ſo at firſt by God. To which ſome add, that God, ſoon after the Creation, gave them their Choice of Wiſdom or Wealth; and that their Anceſtors choſe the latter: Whereupon God placed them in *Africa*; but doomed them to be Slaves to the white Men, on whom he beſtowed Wiſdom, Learning, Arts, and Sciences, and gave the *Blacks* the Treaſures of Gold. They believe, that there is no Gold to be had out of their Country, nor any Learning among thoſe who inhabit it. A *Popiſh* Prieſt once uſed great Endeavours to ſet theſe People right in their Notions, and, at laſt, threatened them with the Flames of Hell for perſiſting in their Superſtitions: To which they anſwer'd, that they ſhould be in as good a Condition as their Anceſtors, who had, for Time immemorial, worſhipped the ſame Gods, and obſerved the ſame Cuſtoms.

Their muſical Inſtruments at *Axim* are Trumpets, made of Elephants Teeth bor'd through, with which they make a loud, but diſagreeable Noiſe. They have alſo a kind of Drum, made of a wooden Bowl, with a Sheep-skin ſtretch'd over it in the Form of a Kettle-drum, having two wooden Hammers for Drum-ſticks, which afford no great Harmony neither, in the Opinion of any but *Negroes*; nor is the hollow Iron Bell they beat upon at the ſame time much more agreeable: The leaſt ſhocking of any part of their Muſick, is an Inſtrument made in the Shape of a Harp, which makes a Noiſe that may be borne with Patience. They ſing and dance to their Muſick, ſuch as it is; and ſeem to be as much charmed with it, as *Europeans* are with the beſt Voices and Inſtruments.

Some Tribes of the *Negroes* are mightily given to Gaming, and will ſtake all they have upon the Event of a Game: But their only Game was Draughts, or ſomething like it, in which they uſed large Beans, till the *Europeans* taught them to play with Cards and Dice: Their rural Sports are either Hunting, Shooting, or Fiſhing; at either of which a Man may load himſelf in a few Hours. They have no Dogs to hunt or ſpring the Game for them, or Horſes to ride after it, as with us. Guns, Nets, and Snares, are what they uſe on theſe Occaſions: But, in Fiſhing, they want no Tackle that the *Europeans* uſe: And, indeed, Fiſhing is the principal Employment, as well as Diverſion, of thoſe Tribes that lie near the Coaſt.

CHAP

CHAP. VI.

A Deſcription of Nigritia, Zaara *and* Biledulgerid.

Negroeland.

NIGRITIA, or *Negroeland*, receives its Name from the dark Complexion of the Natives, or from the River *Niger*, that runs through the middle of it. It extends from ten Degrees to twenty North; and, in Longitude, about three thouſand Miles. All the Deſcriptions we have of this Country, above three hundred Miles to the Weſtward of Cape *Verd* and the *Atlantick* Ocean, are imperfect. There may be forty Kingdoms and Nations of different People, for aught we know, comprehended in that vaſt Tract aſſign'd to *Negroeland*, which our Geographers continue under that Name, for no other Reaſon, than that they are very much in the dark, as to all beyond the Mouths of the *Niger*.

The River

This mighty River empties itſelf into the *Atlantick* Ocean by ſeveral Mouths, of which the three largeſt are, 1. The *Rio Grande*, or *Great River*; 2. The *Gambia*; and, 3. The *Senegal*: It is upwards of three hundred Miles between the two moſt diſtant Mouths of this River; and all the Country between, except the riſing Grounds, are annually overflow'd, as the *Delta* in *Egypt* is by the *Nile*, and much about the ſame time. The *Portugueſe*, on the firſt Diſcovery of Cape *Verd*, fix'd ſeveral Colonies and Settlements on the River *Niger*; of which they ſtill retain thoſe of *Cathaco* and *Biſſeo*, on the River *Grande*: The *Engliſh* have, at this Day, two Settlements, one on *Charles* Iſland, and another on *James* Iſland, in the Mouth of the River *Gambia*: The *French* have two Settlements, one on the South, and the other on the North of Cape *Verd*, near the Mouth of the *Senega*, or *Senegal*: The *Dutch* alſo have ſome Settlements: All which formerly belong'd to the *Portugueſe*.

Forts and Settlements on the Mouth of the River.

Chief Town of Negroeland, its Situation.

The chief *Negroe* Town is *Tombut*, ſituate in fifteen Degrees North Latitude, ſix Degrees and a Half to the Weſtward of *London*: It conſiſts of no better Buildings than our ordinary Cottages, having clay Walls and thatch'd Roofs. Such Towns or Villages as thoſe, ſtand pretty thick in that part of the Country which the *Europeans* are acquainted with: And, 'tis thought, if their Lands were as well cultivated, they would yield as good Crops of Grain, as thoſe of *Egypt* do, which have the like Advantage of being annually overflow'd. However, as it is, the Soil of *Negroeland* yields great Plenty of Rice and Millet, Palm-trees, Cocoa-nuts, and other Fruits, Herbs, and Roots, with Fleſh, Fiſh, and Fowl; ſo that the Natives live very plentifully.

Fruitful Country.

Perſons of the Natives.

As to their Perſons, they are generally of a good Stature, and of hail, robuſt Conſtitutions; their Complexions the deepeſt black; their Hair black, ſhort, and curl'd like Wool; their Noſes flat; their Lips thick; and ſcarce differing in any thing from thoſe of their Neighbours in *Guinea*; only, as they are much leſs verſ'd in Traffick, they are a plainer honeſter People. There are ſome *Mahometans*, and a few Chriſtians, which the *Portugueſe* have made Proſelytes of, upon the Coaſt, and near the Mouths of the River: But all the inland *Negroes* are ſtill Pagans, as thoſe of *Guinea* are; and probably their Cuſtoms, Rites, and Ceremonies not very different from theirs.

Trade.

The *European* Nations, that are ſettled on this Coaſt, deal with the Natives chiefly for Slaves; tho' they may ſometimes meet with Gold, Elephants Teeth, and Drugs.

Cape Verd.

Cape *Verd*, which lies near the River *Senega*, is the moſt weſterly Promontory of *Africa*, and obtained the Name of *Verd*, from the Verdure of its Groves of Palm-trees, and other Ever-Greens.

An Enquiry into the Reaſon of different Complexions and Features.

It was long the Opinion of Chriſtians in general, and perhaps of the *Jews* before them, that all Men were White till after the Flood; but that *Ham*, the ſecond Son of *Noah*, was converted from a white Man, to a black Man, by his Father's Curſing him; and that *Africa*, falling to the Lot of this Son, all his Poſterity, who poſſeſs'd this part of the World, have remained black ever ſince.

But that this Curſe of *Noah*'s was not the Occaſion of ſuch a Change of Complexion is pretty evident: For firſt, the Poſterity of *Ham*, if they poſſeſs'd *Africa*, are not all black: The entire Northern Coaſt, and Southward, as far as the Tropick of *Cancer*, are not black, any more than thoſe who inhabit to the Southward of the Tropick of *Capricorn*.

2. The People in ſome parts of *Aſia*, particularly in the Peninſula of *India*, on this Side the River *Ganges*, and who are ſuppoſed to be the Poſterity of *Seth*, the favourite Son, are full as black within the Tropick of *Cancer*, as any of the *Negroes* in *Africa*: Nor is there, in the inland Country of *India*, at a Diſtance from the Coaſt, a ſingle Perſon to be found, that is not black. Indeed, the *Indian Blacks* have not the flat Noſes, and thick Lips, or the ſhort frizzled Hair of the *Negroes*. But theſe have never been reckon'd part of *Noah*'s Curſe.

Another Reaſon aſſign'd for the Blackneſs of the *Negroes*, is the Heat of the Climate; their Country being ſituated within the *Torrid Zone*. But neither can this be admitted as the *ſole* Reaſon of it: For great part of the Continent of *America* alſo lies within the *Torrid Zone*; and yet there never was a black Man there, till the *Europeans* tranſported them thither from *Africa*.

Others have ſuggeſted, that the People of *Africa*, being of tawny Complexion, between black and white originally, and not able to make themſelves as white as their Northern Neighbours, took great Pains to make themſelves black, as a more deſirable Colour than the Olive. It is obſerved by all Travellers, that the *Negroes* greaſe or anoint themſelves, and their Children, continually from the Hour they are born; and that many of them mix black Ingredients with the Ointment: That the *Hottentots*, who are not naturally of ſo dark a Complexion as the *Negroes*, do actually darken their Skins pretty much, by rubbing them with Fat and Soot.

Others obſerve, that not only the Complexion, but the very Features, Hair, Make, and Stature of People differ, as the Country and Climate differs, wherein they were ſeverally born: And as to the *Negroes* in particular; their Hair, their Lips and Noſes, are not at all like thoſe of *Aſia* or *Europe*, or even thoſe who live in the North of *Africa*. The *Scythians* of old, and the *Tar-*

tars and *Laplanders* at present, are of a very different Make from the People of the Southern Parts of *Europe* and *Asia*. And not only the Persons, but the very Genius and Temper of Men differ, as the Soil and Climate differ where they were born. The *Spaniard* is grave and sedate, mighty slow and circumspect in his Actions; while the *French* are gay and airy, perpetually dancing and singing: But if the *Spaniards* and *French* were to change Countries, they would, in a few Generations, alter their Persons and Humours; the *French* would be *Spaniards*, and the *Spaniards French*.

Does not every body see a remarkable Difference between the *French* and the *English*, when the *French* first come over hither? And yet, in two or three Generations, 'tis impossible to distinguish the one from the other. It is the same in Complexion, as in Features and Humours: *Blacks*, in a few Generations, would become white, if brought over hither; and white Men might become black, or very near it, if they were planted a few Generations in the Heart of *Africa*; especially if Pains were taken to make them so, by rubbing their Children with Grease and Soot from the Time they were born.

In fine, The Sun, no doubt, goes a great way towards the darkening the Complexion of the People that inhabit the *Torrid Zone*; but then the Soil they live upon, the Pains they take to make their Children blacker, and their Women converting altogether with black Men, may all contribute something towards making them so exceeding black. As to the Effect of the Soil, we may remember, that the *Turks*, *Persians*, *Indians*, and *Chinese*, all come originally from *Tartary*, and yet they do not at all resemble the *Tartars*, from whence they descended, but the People of those Countries they respectively possess, which must be admitted to amount to a Demonstration of what has been advanc'd.

Zaara and Biledulgerid.

Zaara and *Biledulgerid*, are supposed to extend from the *Atlantick* Ocean, as far as *Ethiopia Superior*; to run all along parallel to *Nigritia*; and to lie between the 20th and 28th Degrees of North Latitude; being bounded by the Territories of the Emperor of *Morocco* and *Barbary*, on the North; by *Ethiopia*, on the East; by *Nigritia*, on the South; and by the *Atlantick* Ocean, on the West. The North-Division of this Country, call'd *Biledulgerid* in our Maps, the Sailors denominate the Country of *Gualata*; and to the South-Division, which in our Maps has the Name of *Zaara*, our Mariners give the Name of *Arguin*, from a Town that lies near the Mouth of the River of *St. John*'s: However, both *Biledulgerid* and *Zaara*, are barren desart Countries at this Day, with scarce any Towns in them; for which Reason, we have thrown them together.

The principal River is that which the *Portuguese* have given the Name of *Dorada* to. There are some few lesser Streams here, but none of them navigable; and the Country is so far from being well water'd, that, when the Caravans cross it from *Morocco* to *Nigritia*, they do not meet with Water in several Days.

The People of this Country are most of them tawny: Tho' *Nigritia* lies contiguous to them, there are few *Negroes* here; neither do the Inhabitants agree with the *Negroes* in their Religion, Manners, or Customs. Like the *Arabs*, they live in Tents, moving from Place to Place, as they can meet with Pasture and Water for their Cattle; and, like the *Arabs* also, they live chiefly by Plunder and Rapine: They are generally *Mahometans*; and probably the Descendants of those *Arabs*, or *Saracens*, who over-ran all the North of *Africa* in the seventh Century. *Biledulgerid*, that now lies almost uninhabited, was once the celebrated Kingdom of *Numidia*, then well peopled and fruitful; and there are still the Ruins of ancient Palaces and Temples to be met with here: But every Country is the worse for being possess'd by the *Mahometans*; who neither regard Building, or the Cultivation of the Soil.

The Nature of a different Complexion, from the Air.

Of a different Religion, &c.

CHAP. VII.

A Description of the Empire of Morocco, *comprehending the Kingdoms or Provinces of* Fez, Morocco, *and* Suz.

Situation and Extent of the Empire of Morocco

THE Empire of *Morocco* lies between 28 and 36 Degrees of North Latitude; and between four and nine Degrees of Western Longitude. It is bounded by the *Mediterranean*, on the North; by the River *Fulvia*, which separates it from *Algiers*, on the East; by *Biledulgerid*, on the South; and by the *Atlantick* Ocean, on the West; being upwards of five hundred Miles in Length from the North-east to the South-west, and about two hundred Miles in Breadth. All the Tract of Land from the Province of *Suz* to *Nigritia*, being a barren Desart inhabited by *Arabs*, who wander from Place to Place, is very improperly, by some, comprehended in the Empire of *Morocco*.

Anciently Mauritania Tingitana.

This Empire was the *Mauritania Tingitana* of the *Romans*, and so denominated from the City of *Tingis*, now *Tangier*, lying on the South-side of the Streights of *Gibraltar*.

Face of the Country.

The Country is finely diversified with Mountains and vast extended Plains, most of them very fruitful, and pretty well inhabited. The principal Mountains are those of *Atlas*, which lie almost in the Form of a Crescent between the Kingdoms of *Morocco* and *Suz*, and extend from the Kingdom of *Algier* to the *Atlantick* Ocean. There are not many Woods in it, and those are destitute of Timber.

Rivers and Towns.

The chief Rivers are, the River *Suz*, in the Kingdom of *Suz*, at the Mouth whereof stands the City of *Santa Cruz*; the River *Rabata*, at the Mouth whereof is the Piratical Town of *Sallee*; the River *Ceba*, at the Mouth whereof lies the Piratical Town of *Alamora*; the River *Lecus*, on which stands the Port Town of *Larrach*. None of these Rivers are navigable for Ships; nor will the Ports at the Mouths of them admit of large Vessels. *Arzilla*, to the Northwards of *Larrach*, is another inconsiderable Port Town; and the *Portuguese* are yet in Possession of *Massigan*, on the same Coast to the Southward. There are also the Bays of *Tangier* and *Tetuan* in the *Mediterranean*, where Ships may ride during some Winds, but are very unsafe in others: And the *Spaniards* are yet in Possession of *Ceuta* over-against

againſt *Gibraltar*, and of *Penon de Veloz* further to the Eaſtward: But in none of theſe is there any ſafe Harbour.

Sallee, a Piratical Port.

Sallee, on the Weſt Coaſt of the Kingdom of *Fez*, is eſteemed the beſt Port the Emperor of *Morocco* hath: And, tho' this appears to be a pretty good Harbour when a Ship is got into it; yet, at a full Tide, there is not above twelve Foot of Water; and the Bar, at the Mouth of it, is ſeldom to be paſs'd by any thing, but Boats and very ſmall Veſſels: And yet from this Place, and *Mamora*, a little to the Northward of it, do the Pirates of this Country perpetually infeſt theſe Seas. Even our *Eaſt-India* men and ſtouteſt Ships are under great Apprehenſions of them; for, tho' they have no Quarrel with us, they will ſeize and carry in our Ships upon very frivolous Pretences.

The Air of the Country.

The Air of this Country is generally temperate, eſpecially on the Mountains, and near the Sea-Coaſts, where they oftner complain of Cold than Heat: It freezes ſometimes in the Winter very hard, and the Tops of the Mountains are cover'd with Snow great part of the Year. However, in the Valleys, their Winter is but ſhort; and, when it freezes in the Morning, the middle of the Day is generally warm. It freezes hardeſt in *January*, as with us. *February* is more moderate, and the Weather variable, changing ſeveral times the ſame Day.

Seaſons.

In *March* the North and Weſt Winds blow furiouſly; in which Month their Trees begin to bloſſom: Towards the End of *April* they have ripe Cherries; in *May*, Figs; and, in the latter End of *June*, all manner of Fruit is ripe, except their latter Figs, which are not ripe till *September*. The Spring, when the Weather is temperate, is reckon'd to begin the latter end of *February*, and end the latter end of *May*: Then their Summer begins, and laſts to the middle of *Auguſt*. This is a pretty hot Seaſon. The Air all the while wonderful clear and ſerene; and it is uſually very unhealthful, if it happens to rain in the Summer. The Sun then is parching hot, and occaſions malignant Fevers. Their Harveſt begins in the middle of *Auguſt*, and laſts till the middle of *November*; when their Winter begins, and continues to the middle of *February*. During this time, and the Beginning of the Spring, they have hard Gales of Wind and Storm, with Snow, Hail, and Thunder; and the Eaſt and South-eaſt Winds frequently blaſt their Fruits in the Spring. Their rainy Weather begins in *October*, when they ſow their Lands upon the Hills; but, in their Valleys, their Seed-time does not begin till *February*.

The Kingdom of *Fez*, the firſt of the three Diviſions of this Empire, is bounded by the *Mediterranean*, on the North; by the Territories of *Tangier*, on the Eaſt; by *Morocco*, on the South; and the *Atlantick* Ocean, on the Weſt. The chief Towns are, 1. *Fez*, the Metropolis of the Empire, ſituated in a Plain on a Branch of the River *Celat* or *Fez*, Latitude 33, Longitude 4 Weſt of *London*. This City is rather two Cities join'd, the one call'd *Old Fez*, and the other *New Fez*. *Old Fez* is ſituated the loweſt, and has a ſmall River running through it: The Town is of a round Figure, and about three Miles in Circumference: There are between fifty and ſixty Moſques, or *Mahometan* Temples, in it: The Houſes of their great Men here, as in other Places, contain ſeveral Squares: Thoſe of the common People are very mean, and the Shops like ſo many Pedlars Stalls: The Streets narrow and unpav'd, miſerably dirty in Winter, and duſty in Summer: Their Inns, that have been ſo much cry'd up, are built in Form of a Square alſo, with Lodging-Rooms on the Inſide: The Traveller buys his own Proviſion, and dreſſes it, and has the Convenience of feeding his Horſes and Cattle before the Door of his Lodging in the Square. So that they pretty much reſemble the Caravanſera's, on the Roads in *Perſia* and *Turkey*.

The Town of *Old Fez* is defended by a double Wall, and a Caſtle on each Side of it, ſituated upon an Eminence; but lies very much expos'd, being commanded by ſome riſing Grounds in the Neighbourhood: Their beſt Defence lies in their Numbers, being able to arm forty thouſand Men.

The new Town is ſeparated from the other only by a ſmall River, and has a double Wall round it, with ſquare Towers, like thoſe of *Old Fez*: There is alſo one tolerable Baſtion on the Walls of the new Town, built by an *Engliſh* Renegado. This Town was deſign'd as a Citadel to command the old Town; and here the King always keeps a good Body of Horſe for that end, whoſe principal Buſineſs it is to collect the Corn of the neighbouring Country, and lay it up in the Magazines for grinding; for which they have ſeveral Water-mills on the Rivers that run by the Town. Here are ſome Palaces of the Kings and great Men, but run to Ruin ſince the Court remov'd to *Mequinez*. The new Town is about a Mile and a Half in Circumference, and very populous: The Gates magnificent, and make a grand Appearance at a Diſtance; but a Traveller is diſappointed when he comes into it, to find little elſe but thatch'd Cottages, beſides the Moſques, the Magazines, and ſome few ruinous Palaces. However, *Old Fez* is a Town of the greateſt Trade in the Empire.

Mequinez.

2. *Mequinez* is ſituated in a delightful Plain, about a Day's Journey to the Weſtward of *Fez*, and two to the Eaſtward of *Sallee*, on the ſame River that *Sallee* ſtands: The Palace and the Olive Parks about it make a very beautiful Appearance at a Diſtance; but neither does *Mequinez* anſwer the Expectations of the Traveller when he comes into it. It is of an irregular Form, about two Miles in Circumference, and ſaid to contain three hundred thouſand Souls: The Streets, like thoſe of *Fez*, are dirty in Winter, and duſty in Summer, meanly built, and their Tradeſmen have Stalls on ſome of the higheſt Ground in the Town, where they ſell their Goods. *Mequinez* is ſurrounded by an ordinary Wall, and parted by a Road from the *Negroe* Town, which is inhabited by the King's black Troops, and their Families.

The Palace lies on the South-ſide of the City, and indeed is another City interſpers'd with Parks, Fields, Canals, and Gardens: In one Quarter whereof is the *Haram*, aſſign'd ſolely to the Uſe of the King's Women and their Guard of Eunuchs: A ſecond contains the Rooms of State and Audience: In a third Quarter are the King's Handicrafts, Workmen, and Armoury: In a fourth his Guards are lodg'd, where are the Artillery and Magazines: And in a fifth the Stables: Every part divided into large Squares; being in the whole about three Miles in Circumference. And here the Walks and Pavements are kept exceeding neat, and the Galleries frequently adorn'd with *Moſaic* Work.

The Emperor *Muley Hamet Dubebby*, who reign'd in 1727, when Mr. *Ruſſel* went Embaſſador to this Court, was upwards of ſix Foot high, about fifty Years of Age, of a fierce Countenance, and much pitted with the Small-Pox; his Face bloated, and his fore Teeth out; and, being a Mulatto of a tawny Complexion, made a very

very indifferent Figure. It being cold Weather, when he receiv'd Mr. *Ruſſel*, he had a black Cloak over a white Alhague or Veſt. His Turbant was a green ſilk Saſh, which hung careleſly about his Head, and ſhewed he was drunk. All he had about him worth admiring was a fine Scymitar, in a gold Scabbard, richly ſet with precious Stones. It was uſual with him, it ſeems, to drink with his Miniſters, till he fell down dead drunk; and then he was carried to Bed by his Eunuchs: And, when he waked again, he was ſure to give ſome Examples of his cruel and fierce Diſpoſition; inſomuch, that his Servants fled, and dreaded to come near him; and happy was the Miniſter who could make an Excuſe to be abſent.

Some Character of the Emperor.

While the *Engliſh* Ambaſſador was at *Mequinez*, he ſhot two Men that waited on him: And he endeavoured to kill his Prime Miniſter with his own Hand; but this Courtier, keeping out of the Way till his Fury was over, was then taken into Favour again. He commanded two young *Jewiſh* Women to be brought to his Bed; and, when he ſent them home again, hearing that their Husbands had preſum'd to go to Bed to them, he order'd the poor Men to be put to Death. Another of his Miſtreſſes diſobliging him, he order'd all her Teeth to be drawn out; and, enquiring for her afterward, and being told ſhe was not recover'd from the Illneſs that Operation had occaſion'd, he order'd the Man's Teeth, who drew them, to be pull'd out, and ſent her by way of Satisfaction. For any trifling Offence, or for his Humour, would he order a Man to be toſs'd, that is, thrown up into the Air by four luſty Slaves, as high as they could, and then let fall again; whereby ſometimes the Perſon was kill'd, and at others made a Cripple of: And ſuch Feats as theſe, it ſeems, were his Sport and Diverſion.

He murders ſeveral People.

The ſeveral Quarters of the City of Mequinez.

But to return to the Deſcription of *Mequinez*: This City, as has been obſerv'd, is divided into ſeveral Quarters, or rather is ſeveral Cities united: The Palace is a diſtinct Town: The Quarter of the *Moors* is another: The *Negroe* Town a third; and the *Jews* have a Quarter to themſelves, in which there does not leſs than fifteen Thouſand of them inhabit, being allowed a Shiek, or Governor, of their own Nation: And, tho' the Princes and great Men inſult them ſometimes, yet the Government takes a particular Care of their Protection; for they are ſo uſeful here, that the Government cannot do without them.

Jews the only Merchants.

All Money Affairs, and all foreign Trade, are negociated and carried on in this Country by the *Jews*; their principal Employment at *Mequinez*, is working in Gold and Silver, changing of Money, and lending it upon Uſury: And not only the *Jews*, but the Chriſtian Slaves, have their Alcaide, who is a Chriſtian, and their Protector; and they are allowed to carry on any Buſineſs almoſt. Several Chriſtian Slaves get Money here, and are allowed a Property in it; in which reſpect their Condition is to be preferr'd to that of the *Moors* themſelves.

A Convent at Mequinez.

Here alſo is a Convent of *Spaniſh* Fryars allow'd, that is endow'd with a Revenue of five hundred Piſtoles a Year, for the Relief of Captives, both with Food and Phyſick. Theſe alſo are under the Emperor's Protection, on account of their taking Care of his ſick Slaves, and the Preſents they annually make him: They have an Infirmary capable of Entertaining an hundred Perſons.

The Condition of Chriſtian Slaves here.

The late Emperor, *Muley Iſmael*, employed many of the Chriſtian Slaves in his Buildings; However, their Work was not harder than that of our Day-labourers. And he gave ſeveral of them Licences to keep Taverns, on condition of ſubſiſting their poor Brethren; to whom he alſo order'd a daily Allowance of Bread: Nor were Maſters of Ships, or thoſe who had a little Money to bribe the Alcaide, forc'd to work at all. But further, the Canute, where the Captives are lodg'd, is a much better Place than any of our common Priſons: Here every Nation has a diſtinct Apartment, in which are Taverns, and a Market of all manner of Fruits and Eatables: Nor are any of the *Moors* ſuffer'd to diſturb them, or indeed to come into their Houſe but upon Permiſſion. Several Captives at *Mequinez*, live much better than ever they did in their own Country; for they have not only the *Spaniſh* Convent to go to in their Diſtreſs, but whatever Money their Friends ſend over for their Subſiſtance, is faithfully deliver'd them, unleſs they defraud one another. Nay, ſeveral Captives have grown rich here, and carried Money out of the Country; and ſome of them, when Mr. *Ruſſel* was there, kept their Mules and their Servants. It is not therefore ſo inſupportable a Slavery as has been repreſented.

The moſt wretched and abandon'd People at *Mequinez*, are the Renegadoes, who have renounced Chriſtianity, and turn'd *Mahometans*: Theſe are deſpis'd by the *Moors* to the laſt Degree, and uſually prove the moſt vicious, treacherous, diſſolute Mortals that the Country affords. They are generally entertain'd in the Army, where they are half naked and half ſtarv'd; unleſs ſome few of them, who underſtand Engineering or Gunnery, or ſuch as can be uſeful to the *Moors* in fitting out their piratical Veſſels at *Sallee*.

3. *Tetuan* is ſituated on the Aſcent of a Rock, about eight Miles from a Bay of the *Mediterranean* Sea, called from this Place *Tetuan Bay*; and is between twenty and thirty Miles South of *Ceuta*, and about fifty South-eaſt of *Tangier*. The Town is about a Mile long, and half a Mile broad, and has a fine Proſpect of the Sea, and the Country beneath it: The Streets are narrow, unpav'd, and full of Dunghills, which makes it a filthy Place in Winter; and yet this is one of the beſt Towns in the Country. Their Houſes are uſually built about a little open Square, with Piazza's ſupporting Galleries about them; and in the Middle of the Square, People of Subſtance always have a Fountain. There are commonly four Rooms on a Floor, one on every Side of the Square, which have no other Light than what they receive from the Folding-doors, that open into the Piazza.

The Town of *Tetuan* contains about thirty thouſand Inhabitants, of which five thouſand at leaſt are *Jews*, who have ſeven Synagogues, but not two hundred Houſes amongſt them, ſeveral Families living under the ſame Roof. They are very poor, tho' all the Trade of the Place paſſes through their Hands; for they are only Brokers between Chriſtians and *Moors*. One Thing particular to this Town is, that the People walk on the Tops of the Houſes, and viſit one another from thence, more than by the Streets. The Town is ſurrounded with an ordinary Wall, and defended by an old Caſtle, conſiſting of two Squares. They have a Burying-place, on a Hill above the Town, adorn'd with ſuch Numbers of Cupola's and Pyramids, that it looks like a Town itſelf.

The Entrance into the Baſſaw's Palace is by a Cloiſter, which leads to a ſpacious Square, ſurrounded by a Piazza, and in the Middle is a marble Fountain; the Pavement of the Area and the Piazza

Piazza being of a *Mosaic* Work: On each Side the Square is one large Room, and in each of the Angles a square Tower of a considerable Height above the Building; in two of which are Stair-cases, that lead to the grand Apartment above: In the third is a Door that leads to a Mosque; and in the fourth another, through which we go into the Gardens. On each Side of the Galleries above, which run over the Piazza, are fine Apartments for the Bassaw's four Wives; each Apartment consisting of five Rooms, namely, one large Room, cover'd with a Cupola, in the Center of four lesser's Room; and through these are Doors, that lead to the Bagnio's of the Women, and the Lodgings of the Female Slaves: But the inner Rooms have no other Light, than what they receive by the Door of the great outward Room: Both the Doors and the Cielings of the House are very lofty; and over the Womens Apartment are four noble Terrace Walks, that overlook the Town, a frightful Vale beneath it, the River, and Part of the *Mediterranean* Sea; and at the End of each Terrace, is a Turret with Lattices, where the Women sit to work, and can see all that passes without being seen: In the Evening the Ladies usually walk in the Garden, where several of the Walks are shaded with Vines turn'd over Arches; the Walls of the Garden being so high, that they cannot be overlook'd from any part of the Town. This Description of the Bassaw's Palace, may serve as a Model of all other Houses of the *Moors* of any Quality; for they scarce ever vary in their Form. The *Moors* of Quality have scarce any Pleasures, but what they take in their Women, their Houses, Gardens, and Horses: Conversation with Men is what they do not relish at all; the Reason of which is supposed to be, that their Law prohibits them Wine, without which, good Humour, and a sprightly Conversation, cannot be long kept up.

4. *Tangier* is situated on a Bay of the Sea near Cape *Spartel*, just at the Entrance of the Streights of *Gibraltar*, on the *African* Side: It is built on the Declivity of a Hill, which makes it excessive hot in Summer, the Afternoon Sun lying full upon it. When the *English* had it, the Walls were upwards of a Mile in Circumference, and they had Lines and Redoubts that took in the neighbouring Hills, with two Castles for its Defence: And there was a Mole built for the Security of Shipping, the Heads whereof run out three hundred Fathom into the Sea; but these and most of the Works were blown up, or demolish'd by the *English*, when they abandon'd the Place; and it is now not very strong. This Place, *Alphonsus* the Fifth, King of *Portugal*, took from the *Moors*, in the Year 1463; and, in 1662, the Court of *Portugal* transferr'd it to *Charles* II. King of *England*, on his Marriage with the Princess *Catharine*, Infanta of *Portugal*. The *English* kept it twenty two Years; but the Parliament refusing to let the King have Money to maintain the Garrison, he found himself oblig'd to quit the Place.

The Kingdom of *Morocco*, the next Division of this Empire, is bounded by *Fez*, towards the North; by the Mountains of *Atlas*, on the East; and by the same Mountains, which separate it from the Province of *Suz*, on the South. The chief Town is *Morocco*, a large old City, situated in a fine Plain about the Center of the Kingdom, Latitude 31 and a Half, West Longitude 7 Degrees. This, in some of our old Writers, is said to be one of the greatest Cities in the World; to contain an hundred thousand Families; to be elegantly built, especially their Mosques and Palaces: But all these Matters appear to have been wonderfully magnified; and, since the Seat of the Empire has been removed from thence, the Town is extremely declin'd. As to the Fortifications, they would not be able to hold out twenty four Hours against an Army prepared for a Siege. The rest of the Towns mention'd by Geographers in this Province are, *Elgiamba*, *Imegiagen*, *Imizimzi*, *Delgumba*, *Agmet*, *Teneſſa*, which have little in them that deserve a particular Description.

The Province of *Suz*, comprehending that of *Tafilet*, is bounded by *Morocco*, on the North; by *Biledulgerid*, on the East and South; and by the *Atlantick* Ocean, on the West. The chief Town of *Suz* is *Taradant*. The rest of the Towns in this Province are, *Messa*, *Guargesen*, *Tejeat*, *Garet*, *Tagoost*, *Tedsi*, *Santa Cruz* (a Sea-port,) and *Illec*. But the only Town Travellers mention in *Tafilet*, is the Capital, of the same Name, situated in Latitude twenty six and a half, Longitude two Degrees West of *London*. *Muley Ismael*, the late Emperor, was of *Tafilet*, which, lying the farthest South of any of this Empire, and the Emperor's Mother being a *Negree*, the Complexion of the Royal Family is exceeding dark; for the Inhabitants of this Empire differ much in their Complexions, according to their Situation. As to the *Blacks*, that compose their best Cavalry, these being brought from *Negroeland*, differ very little from the *Guinea Negroes*. *Suz.* The Complexion of the Natives.

The Habit of a *Moor* is a Linen Shirt, or Frock, next his Skin; a pair of Drawers; a Sash; and over all a loose Coat, or Vest, of Silk or Cloth, with small Buttons of Gold, Silver, or other Metal: Their Arms are bare to the Elbow, as well as their Legs; but People of Distinction sometimes wear *Turkey* Leather Buskins, and most of them Sandals or Slippers. They shave their Heads, all but one single Lock upon the Middle of the Crown, and wear a Turbant, which is never pull'd off. They express their Reverence, both to God and Man, by putting off their Slippers, which they leave at the Door of the Mosque or Palace, when they enter either: And when they attend their Prince in the City, they run barefoot after him, if the Streets are never so dirty: Their Turbants are of Silk, or fine Linen, some of them five or six Ells long; and in their Sash or Girdle, under their outward Garment, they usually carry three fine Knives, in a silver Scabbard about a Foot long, adorn'd with precious Stones: Their Handkerchiefs, and such Things as we carry in our Pockets, they have in their Bosoms: They never shave their Beards, but clip them into Form, and keep them very neat. Habits.

The Habit of a Woman is not very different from that of a Man, except that she wears a fine Linen Cloth, or Caul, on her Head, instead of a Turbant, and her Drawers are much larger and longer than the Mens. The Women also, when they go abroad, have a Linen Cloth over their Faces, with Holes in it for their Eyes like a Mask. Those of Quality wear Pendants in their Ears, and Bracelets on their Arms: But wrap themselves up in white Cloth, several Ells in length, when they walk in the Streets; so that little of them is seen. They paint and colour their Hair and Eye-brows with burnt Antimony, endeavouring to make them look as black as possible; and the Ends of their Fingers are painted blue. The Furniture of the *Moors*, is but mean: They have neither Wainscot nor Hangings; neither Beds, Chairs, Stools, Tables, or Pictures. They sleep upon a Mattress on the Floor, which, in the Houses of Persons of Quality, is cover'd with Carpets; and the meaner Furniture

People have Mats: On these they sit cross-legg'd also at their Meals, having Pillows and Cushions to lean on. They wash always before and after they eat, wiping on their Handkerchief. Rice seems to be a great part of their Food; tho' they eat also Bread, Beef, Mutton, Veal, Fish, and Fowls: Their favourite Dish is *Cuscusou*, which is fine Flower grain'd as large as Hemp-seed, and stew'd with Mutton, Fowls, and Roots. Their Meat is all so much boil'd or roasted to Rags, that they can pull it to pieces with their Fingers. They use neither Knives nor Forks; but, every Man putting his Hand into the Dish, takes up and squeezes together a good Handful of all the Ingredients, as much as his Mouth will hold. Their Cups and Dishes are of Brass, Pewter, Earth, or Tin, the Law prohibiting their using Gold or Silver Vessels. They drink nothing but Water, sometimes mixing it with Honey, Soup, or other Liquids; they eat with a great wooden Spoon, which is handed round to the Company. Their Desert usually consists of the Fruits of the Country, such as Grapes, Oranges, Figs, Pomegranates, and Melons.

Diet.

They smoke pretty much, and play at Draughts and Chess; but never for Money. They are as scrupulous of eating Blood as the *Jews*; and therefore cut the Throat quite through of every Beast they kill. Companies are sometimes entertain'd with Musick and Dancing; but People of any Fashion never dance themselves.

Diversions.

The *Moors* are a covetous, unhospitable People, intent upon heaping up Riches; to obtain which they will stick at no manner of Fraud; and, as they know themselves to be such Wretches, they are very suspicious of Foreigners. The *Arabs* also have the Character of a thievish, pilfering Generation, that will even rob and destroy one another, when they have no body else to prey upon. They are of a more tawny Complexion, and much thinner and leaner than the *Moors*. The People, who inhabit the Hills, are the plainest, honestest People amongst them, and still retain a good Share of Liberty and Freedom. But the *Moors*, with all their bad Qualities, are very dutiful to their Parents, their Princes, and every Superior. They are to be commended for their Reverence for God and Religion, and whatever is esteem'd sacred amongst them, which they will not suffer to be burlesqu'd. Tho' 'tis acknowledg'd they do not want Courage; yet their Quarrels rarely proceed to Blows, and scarce ever to the taking away each others Lives. They have not, however, the same Tenderness for Jews and Christians, as for one another. The Cheating, Robbing, and even Killing of these, they esteem meritorious. The *Alcoran*, and their Comments upon it, are their only written Laws; and their Cadies, and other Ecclesiasticks, their only Civil Magistrates.

Genius and Temper of the *Moors*.

The *Arabs*.

Laws and Government.

The late Emperor *Muley Ismael*, who sat upon the Throne sixty Years, appointed *Muley Hamet*, his Son by his favourite Wife, to succeed him; tho' he had an elder Son by a former Wife, named *Abdelmelech*. This latter, being Governor of *Suz* at the Death of *Muley Ismael*, disputed the Title of *Muley Hamet*, and, obtaining a Victory over an Army of his *Negroes*, possess'd himself of the Province of *Morocco*, as well as that of *Suz*; but impolitickly declaring, that he would extirpate all the *Blacks*, they united against him as one Man, and involved the Country in a Civil War; the *Blacks* adhering to *Muley Hamet*, and the *Moors* to *Abdelmelech*.

Succession of the Crown.

As their Cadies are Judges of all Religious and Civil Affairs; so are their Bashaws, Governors, Alcaides, and Military Officers, of what concerns the State of the Army. If a *Moor* should turn Christian, or a Renegado apostatize from Mahometanism, he is burnt. Murder, Theft, and Adultery, are punish'd with Death. For Crimes against the State, they have impaling, dragging the Prisoner through the Streets at a Mule's Heels, throwing him from a Tower upon Iron Hooks, hanging him upon Hooks till he dies, crucifying him against a Wall. The Emperor, or his Bassaws, frequently turn Executioners, or have Execution done in their Presence.

It is computed, that the *Black* Cavalry and Infantry amount to forty thousand Men, and the *Moorish* Horse and Foot may be as many. The *Blacks* are esteemed their best Horse, and the *Europeans* have been sensible of their Bravery and Skill, both at *Oran* and *Ceuta*: They have Fire-Arms, as well as Swords and Launces. Their Stirrup Irons are shap'd to the Foot, so that they can stand up and strike when they make their Blow. Their Horses are very swift and beautiful, but not so strong as ours.

Land Forces.

It is their Cavalry they chiefly rely upon. Their Infantry indeed are numerous, and carry Fire-Arms; but are not disciplin'd, and know not how to defend themselves against Horse; nor how to attack, or defend a Town. They seem very ignorant in the Management of great Guns and Bombs, which are altogether left to the Renegado Christians, of whom there are some thousands in their Armies. They have an hundred and fifty brass Guns in the Palace of *Mequinez*, besides several Mortars.

In 1727, their whole Naval Force consisted but of two Twenty Gun Ships, the biggest not above two hundred Tuns, and a *French* Brigantine, with some few Row-Boats; and yet with these, being full of Men, do they make Prizes of great Numbers of Christian Merchant-ships, carrying their Crews into Captivity. The Charge of these Piratical Cruisers is borne entirely by private Adventures; tho' the Emperor has a Tenth of all the Prizes they make, and all the Captives that are taken.

Sea Forces.

The Emperor has also a Tenth of all Corn, Cattle, Fruits, and Produce of the Soil. The Port Charges of Ships, that trade to his Dominions, are one Barrel of Powder for Entrance, twelve Ounces for Loading and Anchorage, and twelve to the Captain of the Port. Vessels, trading to and from *Gibraltar*, pay but half this Duty. The Duties on Goods exported are taken chiefly in kind: His whole Revenue being estimated at 165,000*l. Sterling*.

Revenue.

The Coins of this Empire are, A Fluce, a small Copper Coin; twenty whereof make a Blanquil; a little Silver Coin, of the value of Two-pence. Their Gold Coin is a Ducat, worth about nine Shillings *Sterling*; and they usually give three of them for a Moidore. Merchants Accounts are kept in Ounces, an imaginary Coin, ten of which make a Ducat; but, in Payments to the Government, they will reckon seventeen Ounces and a Half for a Ducat.

Coins.

The Animals of this Part of *Africa*, are much the same we meet with to the Southward, except the Elk, the Elephant, and Rhinoceros; and, as they want these, so they have four others, that are not to be found in the South of *Africa*, particularly Camels, Dromedaries, and that fine Breed of Horses call'd *Barbs*. As to Buffaloes, Cows, Oxen, Sheep, Goats, Deer, and Hares, they have great Plenty of them: Their Desarts also are very much infested with Lions, Tygers, Leopards, and Serpents, of a prodigious Magnitude. They have also great

Animals.

Numbers

Numbers of Oſtriches, Pheaſants, Partridges, Turkeys, and other Fowls wild and tame; and their Seas and Rivers abound with Fiſh. They keep the greateſt Number of Dogs of any People; but Hogs are left entirely to the Chriſtians. 'Tis ſaid, they will eat the Fleſh of Camels, and of many other Animals which we refuſe.

Camels, their Uſe and Uſefulneſs.

The Camels will carry a Burthen of a thouſand Weight, and travel eight or nine Days without Water, and with very little Food. Theſe Animals are extremely proper for their ſandy Plains, ſeveral of which are many Days Journeys over, and not a Drop of Water to be met with. But they are very ill made for going up Hill or down; nor does ſtony or ſlippery Ways ſuit with their ſoft tender Feet. Their Horſes are to be admir'd not only for their Beauty and Speed, but their Uſe in the Wars; being extremely ready to obey their Riders, upon the leaſt Sign, in charging, wheeling, or retiring. The *Roman* Hiſtorians relate, that the *Numidians* and *Mauritanians*, who poſſeſs'd the Coaſt of *Barbary* formerly, made no Uſe of Bridles, even in an Engagement. In their Husbandry they plow with Oxen: The Camels and Mules are the Beaſts of Burthen; and they have Mules to draw their Carriages.

Produce of the Soil.

They have, or might have, vaſt Quantities of Corn, Wine, and Oil: No Country affords better Wheat, Barley, or Rice; both the *French* and *Spaniards* fetch theſe from the *Barbary* Coaſt, when they have a Scarcity at Home: And our Garriſons of *Gibraltar* and *Port-Mahon* have been ſupplied with Proviſions from the *African* Coaſt. The Plains of *Fez* and *Morocco* are well planted with the fineſt Olives, that yield delicious Oil; and there are no better Grapes for making Wine in the World, tho' the Cultivation of Vines is not encouraged, Wine being prohibited them: However, ſome of their great Men will drink Wine when they can get it, and that pretty openly. The *Jews* alſo diſtil Spirits in *Barbary*, for which they meet with a quick Market, even among the *Mahometans*. However the leſs a Man drinks, the more he is eſteem'd; and therefore moſt of them, when they have a mind to intoxicate themſelves, do it with Opium. Beſides the Fruits already mention'd, they have Dates, Figs, Raiſins, Almonds, Apples, Pears, Cherries, Plums, Citrons, Lemons, Oranges, Pomegranates, with plenty of Roots and Herbs, and excellent Hemp and Flax: As to Foreſt Trees, they have but few, and ſcarce any good Timber. Here are ſome Mines of very fine Copper, but it is not very plentiful.

Trade by Land

They have no Shipping to carry on a Trade by Sea: But the *Europeans* bring them whatever they want from Abroad. Their Trade by Land, is either with *Arabia* or *Negroeland*: To *Mecca* they ſend Caravans, conſiſting of ſeveral thouſand Camels, Horſes, and Mules, twice every Year, partly for Traffick, and partly upon a religious Account. The Goods they carry to the Eaſt, are Woollen Manufactures, *Morocco* Skins, Indigo, Cochineal, and *Oſtrich* Feathers: And they bring back from thence, Silks, Muſlins, and Drugs. By their Caravans to *Negroeland*, they ſend Salt, Silk, and Woollen Manufactures; and bring back Gold and Ivory in return, but chiefly *Negroes*, who firſt carry a Musket and ſerve on Foot, and after ſome Time are preferr'd to be Cavaliers. As theſe have no other Dependance but the Favour of the Emperor, they prove much the moſt dutiful and obſequious of all his Subjects; and, indeed, ſupport him in his Tyranny over the reſt. Their Caravans always go ſtrong enough to defend themſelves againſt the wild *Arabs*; tho', notwithſtanding all their Vigilance, ſome of the Stragglers and Baggage often fall into their Hands: They are alſo forc'd to load one half of their Camels with Water, to prevent periſhing with Drought and Thirſt over theſe extenſive Deſarts. When the Winds riſe, the Caravan is perfectly blinded with the Duſt; and there have been Inſtances, both in *Africa* and *Aſia*, where whole Caravans, and even Armies, have been buried alive in the Sands. There is no doubt alſo, but both Men and Cattle are ſometimes ſurpriz'd by wild Beaſts. The hot Winds likewiſe, blowing over a long Tract of burning Sand, are equal almoſt to the Heat of an Oven, and have deſtroy'd abundance of Merchants and Pilgrims. In ſhort, if it was not for Devotion, or in Expectation of very great Gains, no Man would undertake a Journey in theſe Deſarts.

Religion.

As to the Religion of this County, they are of a different Sect from the *Mahometans* of *Turkey* and *Algiers*, and have alſo a Mufti or High-prieſt of their own, who reſides at *Maquinez*: And under him are Prieſts and Eccleſiaſticks in every City and Town, who determine Civil as well as Eccleſiaſtical Cauſes, and officiate in their Moſques. Beſides theſe, they have their Saints or Marabouts, that live in unfrequented Places; for whom they have ſuch a Veneration, that, if a Criminal can eſcape to their Abodes, the Officers of Juſtice dare not ſeize him, and he frequently procures the Offender's Pardon. Some of theſe are Temporal, as well as Spiritual Lords, having whole Towns and Countries that are their Vaſſals; indulging themſelves in a reaſonable Number of Wives and Concubines, and all the Pleaſures that the World affords. But there are others that live the Life of Hermits, and uſe great Auſterities, going about in Rags and a neglected Dreſs. The People proſtrate themſelves before theſe Marabouts, eſteeming it a great Favour to kiſs their Feet, or but the Hem of their Garments. It is much eaſier for a Proteſtant to live under the Government of *Morocco*, in one reſpect, than in any Popiſh Kingdom or State; for they compel no Man to be of their Religion, but allow every one the free and open Exerciſe of divine Service, according to their reſpective Forms of Worſhip. It is impoſſible for the People of *Barbary* to forget how their Anceſtors were uſed in *Spain*; and conſidering theſe Things, we cannot but admire the Moderation of thoſe *Mahometans*, in ſuffering the *Spaniards* and other Chriſtians to profeſs the Chriſtian Religion in that Country, when nothing leſs than a total Extirpation of *Mahometans* would ſatisfy the Catholicks of *Spain*.

Marriages.

Their Marriages are celebrated in the ſame Manner as in other *Mahometan* Countries. The Parties and their Friends having agreed upon Terms, they come before the Cadi, who records the Contract; after which, an Entertainment is made, and the Bride carried home in great State; which is the whole of the Ceremony. Whether it be part of the Contract, that the Man ſhall let every Wife take her Turn in his Bed, or whether the Law requires this of him, we can't tell? But it is held a great Piece of Injuſtice to defraud any of his Wives of their Due. A Divorce is not difficult to obtain on either Side: Only, if the Fault be in the Man, the Wife is ſuffer'd to go off with her Clothes and Jewels; and, if the Woman goes aſtray, ſhe is turned out naked, and indeed ſeldom eſcapes with her Life.

Funerals,

Their Funerals alſo are ſolemniz'd here, as in other *Mahometan* Countries: Women are hir'd to lament over the Corpſe, who tear off their Hair, and cut themſelves till the Blood follows. After ſome time, the Corpſe is carried to the

Burying-

Burying-Place, with the Head firſt, in the uſual Dreſs, the Prieſts ſinging as they go, *God is a great God, and* Mahomet *his Prophet*; and, having ſet the Corpſe upright in the Tomb, with the Face towards *Mecca*, they leave it in that Poſture.

As to their Burying-Places: Every Perſon purchaſes a Piece of Ground, a little out of Town, which they encloſe with a Wall, and make a Kind of Flower-Garden of it, erecting a Dome, or a Spire, over the Graves of their deceaſed Friends. Thoſe who can do no more, place a Stone at the Head, and another at the Feet, as in our Church-Yards. The Women piouſly viſit the Tombs of their Husbands, or other Relations, every *Friday* carrying thither Meat and Fruits, which the Poor eat when they are gone: And here, or at Home, the Women perform their Devotions on that Day; for they are never ſuffered to enter into a Moſque; nor are they viſited by their Prieſts.

CHAP. VIII.

A Deſcription of Algiers, *containing the Preſent State of that Kingdom.*

The Situation and Extent of the Kingdom of *Algiers.*

THE Kingdom of *Algiers* is bounded by the *Mediterranean* Sea, on the North; by *Tunis* on the Eaſt; by the Mountains of *Atlas*, on the South; and by the River *Zea*, or *Mulvia*, on the Weſt; extending along the Coaſt of the *Mediterranean* about ſix hundred Miles from Weſt to Eaſt; the Breadth various, and very uncertain; though our Geographers place it between the 30th and 37th Degrees of North Latitude.

Rivers. The principal Rivers, which riſe in Mount *Atlas*, and run Northward into the *Mediterranean*, are, 1. *Areſgola*, or *Hartegol*. 2. *Aſſafran*. 3. *Chelef*. 4. *Sofaya*. 5. *Sef Gomar*. 6. *Zinganor*, or *Major*; and, 7. *Mira*. None of theſe have a very long Courſe, nor is there any Navigation upon them; though ſome of them would probably be made navigable, if any other People but the *Turks* were poſſeſſed of them. They have not one Bridge, or Ferry, over any River in the Country, but go about frequently ſome Miles to find a Ford.

Provinces. This Kingdom is uſually divided into five Provinces, *viz.* 1. *Tremeſen*, or *Telenſin*; 2. *Tenez*; 3. *Algiers*; 4. *Bugia*; and, 5. *Conſtantina*.

Tremeſen. The Province of *Tremeſen* is bounded by the *Mediterranean*, on the North; by *Tenez*, on the Eaſt; by *Biledulgerid* on the South; and by the Kingdom of *Fez* on the Weſt: The chief Towns whereof, are, 1. *Tremeſen*, ſituated in 34 Degrees North Latitude, under the ſame Meridian that *London* lies, and about ſixty Miles to the Southward of the *Mediterranean* Sea. It has been under the Dominion of the *Turks* of *Algiers* theſe hundred Years and more: Hiſtorians deſcribe it to have been a moſt magnificent City, large, rich, and populous, while it was in its Glory, and governed by its native Princes. But there ſeems to be ſcarce any thing in it remarkable at preſent.

Towns.

Marſalquivir. 2. *Marſalquivir*, or *Almarſa*, lies on a Bay of the *Mediterranean* Sea, three or four Miles South-weſt of *Oran*, and is one of the ſafeſt Roads on this Coaſt. It was poſſeſſed by the *Spaniards*, till the *Algerines* took *Oran* from them; but ſurrendered to the *Spaniards* again, immediately after retaking *Oran*, in the Year 1732.

Oran. *Oran* is ſituated on another Bay of the *Mediterranean* Sea, Latitude 36 Degrees, Eaſt Longitude one, about two hundred and fifty Miles Weſt of *Algiers*. It lies partly in a Plain, and partly upon the Aſcent of a Hill, and is about a Mile and a half in Circumference, as well fortified as the Ground about it will permit; but, being commanded by ſome of the neighbouring Hills, if there be not a Garriſon of ten or twelve thouſand Men to defend the Avenues, diſtant Caſtles, and Redoubts, as well as the Town itſelf, it cannot ſuſtain a long Siege.

The *Spaniſh* Coaſts and Merchant Ships ſuffering much from the Corſairs of this Town, *Ferdinand* King of *Spain*, ſent over an Army, under the Command of Cardinal *Ximenes*, in the Year 1509, to beſiege it; who, having a Correſpondence with ſome of the Inhabitants, when the *Moors* ſallied out with the beſt Part of the Garriſon, their Friends in the Town ſhut the Gates againſt them, and the Cardinal obtained an eaſy Conqueſt, killing above four thouſand *Moors*, and delivering twenty thouſand Chriſtian Slaves out of Captivity: The *Turks* of *Algiers* made ſeveral Attempts to recover this Town, but were always repulſed till the Year 1708, when they made themſelves Maſters of it, and remained in Poſſeſſion till the Year 1732. But King *Philip* having a fine Army of veteran Troops that had no other Employment, embarked a good Body of them, at this Time, under the Command of the *Conde de Montemar*, who landed with very little Oppoſition; and, having afterwards gained the Height of the Mountains above *Oran*, the Garriſon abandoned the Place, without waiting to be beſieged in Form: Of which Tranſaction we received repeated Advice in our common News-Papers.

The next Province to the Eaſtward, is that of *Tenez*, bounded on the North, by the *Mediterranean*; on the Eaſt, by the Province of *Algiers Proper*; on the South, by the Mountains of *Atlas*; and on the Weſt, by *Tremeſen*; extending about an hundred Miles from Weſt to Eaſt: The chief Towns are, 1. *Muſtagan*, ſituated at the Mouth of a River that falls into the *Mediterranean*, in the Midway between *Oran* and *Tenez*. 2. *Tenez*, the Capital of the Province, ſituated alſo on the Sea-Coaſt, about an hundred Miles to the Eaſtward of *Oran*; ſuppoſed to be the *Julia Cæſarea* of the Antients. 3. *Sercelli*, or *Serſela*, near the Sea, between *Tenez* and *Algiers*; anciently a large populous City, but not very conſiderable at preſent.

The Province of *Algiers Proper* is bounded by the *Mediterranean* on the North, by the Province of *Bugia* on the Eaſt, by *Biledulgerid* on the South, and by *Tenez* on the Weſt; extending along the Coaſt of the *Mediterranean*, upwards of two hundred Miles, and about four hundred Miles from the ſame Sea to the Southward: The chief Towns whereof are *Algiers* the Capital, and *Mitigiſa*, or *Temendfuſt*.

Algiers

giers.

Algiers is situated in Latitude 37, West Longitude three and a half, on a Bay of the *Mediterranean* Sea, a little to the Eastward of the River *Safran*: It is built on the Side of a Mountain; the Houses flat-rooſed, terraſſed, and white-waſhed; and, riſing gradually from the Sea Shore up the Hill, forms a Kind of Amphitheatre, and appears very beautiful on the approaching it by Sea; but as the Streets are extremely narrow, and the private Houſes but mean, our Expectations are not anſwered when we come to examine it cloſely. However, the Inhabitants can viſit each other from the Tops of the Houſes, without going into the Streets. The Walls are about a League in Circumference, defended by ſome Baſtions, and ſquare Towers between them: The Port is ſecured by a Pier or Mole, in Length about five hundred Paces. On a ſmall rocky Iſland ſtands a Caſtle called the *Lantern*, with three Tier of Braſs Cannon, beſides other Fortifications. The Town has five Gates; and in it are ten great Moſques, fifty leſſer Moſques, three Colleges, and Abundance of Schools. It is computed, there are about an hundred thouſand Souls in the Town.

On the Side of the Bay, oppoſite to the Mole, is a Fort defended by about twenty great Guns, called *Fort Metaſuz*. There are alſo two other Forts on that Side, well furniſhed with Cannon. On the Land Side there is a Fortreſs at the very Top of the Hill, above the Town, called *Al Caſabha*; and without *Bebahweyd-Gate* are three other Forts; and a little farther a fourth, called the *Emperor's-Caſtle*, where the Emperor *Charles* V. had his Head-Quarters when he beſieged *Algiers*: But the greateſt Strength is the Numbers and Reſolution of the Natives, brought up to hazardous Enterprizes, being in perpetual War with all Mankind.

Metaſuz.

The Town of *Metaſuz* lies upon the Sea, about four Leagues to the Eaſtward of *Algiers*, and is not remarkable for any Thing, but being the Place where the Emperor *Charles* V. embarked, when he was forced to raiſe the Siege of *Algiers*, and the giving Name to a certain Promontory on that Coaſt.

Province of Bugia

The next Province to the Eaſtward of *Algiers*, is *Bogia*, extending about thirty Miles along the *Mediterranean*, and upwards of an hundred to the Southward of that Sea; the chief Towns whereof are, 1. *Gigeri*, ſituated fourteen or fifteen Leagues North-Eaſt of *Algiers*, upon the *Mediterranean* Sea, remarkable for little but an old Caſtle, that ſtands upon a Mountain of very difficult Acceſs. 2. *Bugia*, now the Capital of the Province, and formerly of a Kingdom of the ſame Name, ſituated at the Mouth of the River *Major*, about twenty Leagues to the Eaſtward of *Algiers*. It lies upon the Side of a Hill, and is defended by a Caſtle that ſtands above it, but not able to protect Ships in the River.

Gigeri

Bugia.

Near the Mouth of the River *Major*, lies the little Iſland of *Tabaria*, in the Poſſeſſion of the *Genoeſe*; and which they have ſo well fortified, as to bid Defiance to all the Power of the *Algerines*.

Conſtantina is the moſt Eaſtern Province of the Kingdom of *Algiers*, being bounded by the *Mediterranean* on the North; by the River *Guadilbar*, which divides it from *Tunis*, on the Eaſt; by *Biledulgerid*, on the South; and by the Province of *Bugia* on the Weſt: The chief Towns whereof, are, 1. *Conſtantina*, ſituated on a River, about ninety Miles South-Eaſt of *Bugia*, Latitude 35. There are ſome noble Ruins found in and about this Town. 2. *Bona*, or *Hippon*, on the *Mediterranean*, Latitude 37, about ninety Miles North-Eaſt of *Conſtantina*, and near a coral Fiſhery. This Town, among others, was taken by *Charles* V. but recovered by the *Turks* not long afterwards.

Face of the Country.

Mount *Atlas* runs through the South Part of the Kingdom of *Algiers*, quite from Eaſt to Weſt. It is alſo very mountainous towards the *Mediterranean* Sea: But both Hills and Valleys are exceeding fruitful where they are cultivated, abounding in Corn and Fruits: Such as Dates, Olives, Figs, Grapes, and Almonds. They have alſo good Store of Wax and Honey, and their Coaſts afford great Quantities of Salt.

Government of *Algiers*.

The Government of *Algiers* is an abſolute Monarchy; though it has ſome Appearance of a mixt Government; becauſe the Dey, or Sovereign, ſometimes aſſembles a Divan, and demands their Advice. But this is only to ſkreen him againſt popular Diſcontents; for he acts by his ſole Authority, whenever he pleaſes. The Dey is indeed elective, and this Election is by the *Turkiſh* Army: There are ſeveral Candidates named upon a Vacancy; and, when they have fixed upon one, they all cry out, *God proſper you, and ſhower down his Bleſſings upon you.* He is immediately inveſted with the Robe of Sovereignty: And then the Cadi is called, who declares, that God has vouchſafed to call him to the Government of that Kingdom; and that he is to maintain the Subjects in their Liberties and Properties. He ſits daily, adminiſtring Juſtice, from five in the Morning till Noon, and from one till four, hearing and determining all Cauſes, without any Aſſiſtants but four Secretaries. However, Matters relating to Inheritance, to Religion, or the Civil Laws, are determined by the Eccleſiaſtical Judges: So that thoſe determined by the Dey, relate chiefly to the Government of the State, and the Militia; or to perſonal Debts, and other controverted Matters. His Judgments are arbitrary, not regulated by Laws; nor is there any Appeal from his Tribunal. But, as the military Men do not only elect their Sovereign, but depoſe, or put him to Death, whenever they pleaſe; he is obliged to be very cautious in his Decrees.

Land Forces.

The Militia, who elect their Dey, are all natural *Turks*, or Renegado Chriſtians, generally denominated Janizaries, and amount to about twelve thouſand Men: Theſe are, by ſome, ſtiled the Nobility of *Algiers*; and certain it is, that the frequent Revolutions that happen at *Algiers*, are brought about by this Claſs of People chiefly: They are but few in Number indeed, compared with the native *Moors*; and yet do they tyrannize over the Natives in a moſt inſolent Manner. And, it is certain, the native *Moors* have as great a Dread of theſe Pirates by Land, as our defenceleſs Merchants have of them at Sea, and tremble at the very Name of an *Algier Turk*.

Though this Kingdom conſiſted at firſt of little more than the Lands within View of the City, by what they have taken from the Kings of *Tunis* and *Bogia*, and the Emperor of *Morocco*, we ſee it extended ſix hundred Miles and upwards in Length, and three or four hundred in Breadth. In theſe extenſive Territories the Dey has three Viceroys or Beys; one in the Eaſt, another in the Weſt, and a third in the South; who, in the latter End of the Summer, aſſemble each of them a ſmall Army, with which they make the Tour of their reſpective Governments, to gather in ſuch Taxes as the Dey is pleaſed to put upon the People; and, in caſe any of them refuſe the Payment, the Bey ſeizes, or deſtroys, their whole Crops of Grain or Fruits. Whatever the whole Country can raiſe, is brought to *Algiers* for the Support of the Government, and particularly the Payment of the Janizaries. As Money is pretty

Three Beys or Viceroys.

ſcarce in this Country, great Part of the Taxes are taken in Kind; and the Prizes they make at Sea, ſome Years, equal the Revenues they exact from the Natives at Land. Theſe Pirates ſeem to look upon the whole World as their Tributaries: *Chriſtians*, *Jews*, and *Moors*, (who are of the ſame Faith) are all treated by them with Inſolence. The meaneſt *Turkiſh* Soldier will make the wealthieſt *Moor* give him the Way: They have their Quarters in ſpacious Squares, where they are maintained, and ſerved by Slaves, at the publick Expence: They are duly paid every Moon, and buy their Proviſions one third cheaper than any other of the Inhabitants. Beſides the Janizaries, the Dey has ſeveral thouſand *Moors* in his Service, Horſe and Foot; but theſe are not entitled to any of the Privileges the *Turkiſh* Soldiers enjoy.

Force of the *Algerines* at Sea.

The *Algerines* have no leſs than five and twenty Ships of War, from eighteen to ſixty Guns, beſides a Multitude of ſmaller cruizing Veſſels. As they have very little Timber in the Country, nor any naval Stores whatever, their Ships are either thoſe they take as Prizes, or built and rigged out of the Materials of ſuch Ships as are taken: However, they never ſuffer the Number of their Ships of War to be diminiſhed.

The *Engliſh* have been at Peace with the *Algerines* ever ſince the Year 1682: But the *Dutch* could not obtain a ſettled Peace till very lately; in negotiating which, their good Friends the *Engliſh* aſſiſted them. Whether the *Dutch* will ever make any Returns for ſo ſignal a Favour, we ſhall ſee, if we live long enough.

They have little Dependance on the Grand Signior.

Though it has been already obſerved, that the Dey is an abſolute Sovereign, yet the Grand Signior ſtill ſtiles him his Lieutenant, and the People, under his Juriſdiction, Subjects to the Porte. And it appears, that the *Algerines* have indeed a great Veneration for the Grand Signior, as the Head of their Religion; but have a ſtill greater for their own Intereſt, and are not to be moved by any Threats of the Porte, when it pretends to debar them from exerciſing their piratical War with the *European* Nations, which is the Foundation of all their Wealth and Grandeur.

The Grand Signior had, till very lately, a Baſha always reſiding at *Algiers*, to whom he expected the Dey and his Subject ſhould pay a great Regard; but, finding his Authority ſlighted, and that they would not permit his Baſha to intermeddle in their Affairs, or even allow him a Vote in their Divan, he was pleaſed to conſtitute the Dey himſelf his Baſha, that he might ſeem ſtill to retain ſome Authority over the *Algerines*.

The Aga of the Janizaries the next Officer to the Dey.

The next temporal Officer to the Dey, is the Aga, or General of the *Turkiſh* Militia. This is the oldeſt Officer in the Army, who continues in the Poſt but two Months, and then is ſucceeded by the next Senior Officer. While he remains Aga of the Militia, the Keys of the City are in his Cuſtody, all military Orders are given out in his Name, and in his Palace only the *Turks* are puniſhed.

The Mufti, Cadi, &c.

The three chief Eccleſiaſticks are the Muſti, the Cadi, and the Grand Marabout: The firſt, the High Prieſt of their Religion: The ſecond, the ſupreme Judge in eccleſiaſtical and civil Matters: And the third, the General of that Order, who profeſs themſelves Hermits or Marabouts. Theſe three Eccleſiaſticks may be diſtinguiſhed by the Largeneſs of their Turbants: They ſit in the Divan, a little below the Dey, on his Right-Hand, and, when they enter the Aſſembly, he riſes up, and embraces them; but though they are adviſed with on important Occaſions, they have no Vote here.

In the Adminiſtration of Juſtice before the Dey, the Plaintiff always makes his Complaint in Perſon; and the Defendant is immediately ſummoned to anſwer the Complaint. Upon his Appearance, both Parties are examined upon Oath, as well as the Witneſſes; and, if either of them appear guilty of Perjury, he immediately receives three hundred Baſtinadoes with a Cudgel, and is obliged to make Satisfaction forthwith. If a Perſon is indebted to another, he is decreed to pay the Debt in ſuch Time as the Dey awards: In which, if he fails, an Officer ſells his Effects by Auction, and makes the Creditor Satisfaction; and this is done without any Manner of Charges. If the Debtor have no Effects, he is impriſoned: If he have a real Eſtate, the Matter is referred to the Cadi, who only can determine Matters in relation to Lands and Inheritances, which always deſcend to the eldeſt Son: But where a Perſon leaves no Heirs, all his Lands and Effects are poſſeſſed by the Government.

Adminiſtration of Juſtice.

Defect of Effects.

Puniſhments.

The uſual Puniſhment for Offences not Capital, is the Baſtinado, which conſiſts of Blows over the Soles of the Feet, the Calves of the Legs, the Buttocks, or Belly, with an unmerciful Cudgel. In Capital Caſes, the *Turks* are ſtrangled with a Bow-String: But the various Deaths the poor Chriſtian Slaves are put to, are almoſt innumerable; impaling and burning are but too frequent, on their attempting to make an Eſcape: But the worſt of all Deaths, is the throwing them off the Walls of the Town upon Iron Hooks, on which they are catched by the Jaws, by the Ribs, or ſome other Part of the Body, and hang in the moſt exquiſite Torture till they expire.

Captives.

The Corſair, or Pirate, no ſooner takes a Prize, but he examines into the Quality and Circumſtances of all his Priſoners. If he imagines they do not give him a juſt Account, he orders them to be baſtinado'd till they do. Having got what Information he can, he brings them on Shore, and carries them to the Dey's Houſe, whither the *European* Conſuls immediately repair, to ſee if any of the Priſoners belong to their reſpective Nations, who are at Peace with *Algiers*: In that Caſe, they reclaim them, provided they were only Paſſengers: But if they ſerved for Pay on Board the Ships of a Nation at War with this Government, there is no Way to get them releaſed, but by paying the full Ranſom.

The Matter being ſettled between the Dey and the Conſuls, the Dey has his Choice of every eighth Slave, and generally takes the moſt uſeful Men: Beſides whom, he lays Claim to all ſuch Priſoners as are of any Quality. The reſt are left to the Captor and their Owners, and uſually carried to the *Slave-Market*, where the Crier proclaims the Quality, the Profeſſion, and Circumſtances, of each of the Captives, and the reſpective Prizes ſet upon them. They are led afterwards to the Court before the Dey's Palace, and ſold by Auction, in his Preſence, to the beſt Bidder; but whatever is given beyond the firſt Price ſet upon them, belongs to the Government.

Thoſe Slaves which belong to the Dey and the Publick, and have no particular Profeſſion, are put to the moſt laborious Employments; as drawing Carriages, removing Rubbiſh, cleaning the Streets and Houſes, carrying the Soldiers Baggage; and are locked up at Night in the Priſons belonging to the State: They have each of them a Ring of Iron on one Ancle; and thoſe they apprehend inclined to make their Eſcape, are loaden with Chains, in which they are forced to work all Day. However, there are others, who, when they have got a little Money from their Friends, are permitted to keep Taverns, paying a certain Duty to

to the Dey, in proportion to the Wine they vend: And these are oblig'd to contribute towards the Maintenance of their Brethren in Servitude, and to the Christian Chapels that are allow'd in these Prisons. There have been Instances of some, in this Way, that have got enough to purchase their Liberties, and carry Money away with them; for the Government allow them a Property in what they get, and protect them in it. These Taverns are no better than Cellars, and dark Ware-houses, whither *Turks*, *Moors*, and *Christians* resort promiscuously. Very little Regard is paid to their Great Prophet's Prohibition in *Algiers*; only the good Musulman has so much Respect for the *Alcoran* even here, that he will not keep a Tavern, and distribute the forbidden Liquor to others, tho' he makes little Scruple in drinking it. The Man that keeps a Tavern, tho' a Slave, is empower'd to strip any of his Guests, even the *Turks* themselves, if they refuse to pay their Reckoning. Every Slave belonging to the Government is allowed three Loaves a Day, about the Bigness of a Penny Loaf, besides what he earns himself; for, when the Government have no Employment for them, they are allowed to work in any Manufacture they are Masters of, and take the Profit of it. Every *Friday*, particularly, they are allowed to work for themselves.

Slaves to private Men

Those who are Slaves to private Men, are employed in the Business of the House, in Trade, Husbandry, or Gardening, according to their Qualifications, and the Business the Master has for them to do: Ship and House-Carpenters, Sail-makers. Smiths, and the like, are very useful, and much encourag'd; and a *European* Surgeon is a notable Physician among them. Notwithstanding the Dread our People are in of being taken by *Turkish* Rovers, many of them live better in their Masters Houses at *Algiers*, than ever they did in their own Countries, being entertain'd rather as Companions than Servants, where they happen to be good for any thing: Tho', 'tis true, some barbarous Masters use their Slaves ill, giving them harsh Language, and beating them unmercifully, that they may oblige them to redeem themselves at an extravagant Price, especially where they are inform'd they are People of Substance. As to Female Slaves, unless their Masters expect a considerable Ransom for them, they make them their Concubines, or sell them to those who want to purchase such Conveniencies, if they are young. The Popish Priests, who are employ'd for the Redemption of Captives, entertain their Readers with abundance of Tragical Stories upon this Head.

Female Slaves

Courts of Justice and Judges

The *Moors*, *Jews*, and *Christians*, who are Free-men, have respective Judges of their several Nations assign'd them, who are permitted to administer Justice among their People, according to their several Laws. Traytors, House-breakers, and Highway-men, are put to the most cruel Deaths here, tho' their State is supported by Robbery. A *Moor*, who has been guilty of Theft, has his right Hand cut off; which, being hung about his Neck, he is set upon an Ass, with his Face to the Beast's Tail, and led about the Streets, a Cryer going before him and proclaiming his Offence. Adultery and Robbery are always punish'd with Death. Apostates from the establish'd Religion are burnt here, as in other *Mahometan* Countries: And tho' the Popish Priests, that are Slaves at *Algiers*, are used better than other Captives, their Brethren taking care to remit Money to their several Masters, to excuse them from Labour; yet, if any Christian Nation is at War with *Algiers*, the Priests are always made the first Sacrifice. When the *French* bombarded the City in the Year 1688, the *Turks* fir'd no less than forty *Frenchmen* at the Fleet, from the Mouths of their great Guns or Mortars; among whom were the *French* Consul, and the Apostolical Vicar: But the *French* Admiral set them an Example, by firing several *Turkish* Slaves from his Mortars into the Town: However, these are extraordinary Cases; for generally Christian Slaves are treated very well at *Algiers*. They neither tempt, or force them to change their Religion; for then they lose the Benefit of their Ransom; neither can they sell them to others. Indeed, when a Christian Slave deserves Death, the Dey will sometimes offer him his Life, if he turns *Mahometan*. And Slaves under twelve Years of Age, the rich Musulmen will bring up in their Superstition, and even adopt them for their Children: But, as for those that are grown up, they never attempt to make them change their Religion. For the most part, Christian Slaves are used better than those Christians that are at Liberty: The latter are insulted and abus'd both by *Turks* and *Moors*; but they take care how they meddle with Slaves, as their Masters will resent the Affront.

French Consul and Apostolical Vicar fir'd out of Mortars. The *Turks* do not force their Slaves to turn *Mahometans*.

There is more Danger of falling into the Hands of the Mountaineers, than of the *Algerines*; for the former make them serve with Rigour, frequently taking away the Life of a Christian Prisoner. But even here, the People are much more inclin'd to preserve their Prisoners, where a good Ransom may be expected, than to destroy them.

The *French* and *Spanish* Slaves have each of them their Priests and Chapels at *Algiers*, where Divine Service is perform'd after the Mode of their respective Countries: The *Jews* also, who are computed to be five thousand Families, have their Synagogues and their Priests; but *Britain*, and the several Protestant Nations of *Europe*, have neither Chapels or Ecclesiasticks to perform Divine Service, tho' they have Consuls here to transact their Affairs: But one Reason the *English* have no Chapel or Priest here, may be, that there are not many *English* Slaves in the Place, on Account of our having been at Peace with *Algiers* these fifty or threescore Years.

No Protestant Ecclesiastick at *Algiers*.

Trade of *Algiers*.

The Trade of the *Algerines*, by which they principally subsist, is Piracy and Man-stealing. In their Prizes they find all the Merchandize of *Europe*; and this, as well as the Prisoners, the Captain of the Pirate and his Crew divide equally with the Owners, after the Dey has taken his eighth Share. The *Jews* are the principal Merchants at *Algiers*, as they are in every Town upon the *Barbary* Coast; tho' there are some *Moorish* Merchants also. The *Turks* are all Men of the Sword, and look upon Traffick to be beneath them. The *Jews* buy the Goods found in the Prizes, and retail them at home, or export them again to foreign Markets. *European* Ships, that come to *Algiers* on Account of Trade, meet with little Encouragement, unless there have been no Prizes made in a great while; for the Pirates must certainly be able to afford better Penny-worths than the Merchant.

They take all foreign Ships into their Protection, when they have enter'd any of their Ports, whether they are at Peace with them, or not; but, if they meet with the same Ships at Sea, even in their Return from *Algiers*, they look upon them as lawful Prize.

Port Duties

The Duties on all Merchandize, imported by *Turks*, *Moors*, or *Jews*, are twelve and a half *per Cent*; and the Duties on Exportation two and a half *per Cent*. The *English*, by Treaty, are to pay but five *per Cent*. on Goods imported, and

two

two *per Cent.* on thoſe they export; and, 'tis ſaid, the *French* have had the ſame Favour ſhewn them: They make even Money pay five *per Cent.* on Importation, except that which is ſent for the Redemption of Captives; and this pays but three *per Cent.*

Goods imported.

The Merchandizes imported, are wrought Silks, Gold and Silver Stuffs, Damasks, Linnen and Woollen Clothes, Spices, Copper, Braſs and Tin Ware, Quickſilver, Arms, Powder, and other Ammunition; Sails and Naval Stores, Cochineal, Copperas, Sugar, Cotton, Galls, Brazil Wood, Red Wood, Alum, Vermillion, Wine, Brandy, Spirits, Opium, Gums, Paper, dried Fruit, and other leſs conſiderable Articles.

Goods exported.

In return for which, the *Europeans* receive Wax, fine Wool, Oſtrich Feathers, Skins of wild Beaſts, Dates, and Chriſtian Slaves: Nor is there any kind of Merchandize, but what may be met with here ſometimes, when they bring in rich Prizes.

The *Engliſh* furniſh them with Ammunition and Naval Stores.

The *Engliſh* Conſul is the only Merchant of that Nation at *Algiers*, and carries on a more advantageous Trade than any other Perſon; for he furniſhes the Dey with Powder, Bullets, *Bombs*, Arms, Anchors, Cordage, and all manner of Naval Stores, and takes in return Corn and Oil, which are of great Service to the *Britiſh* Garriſons of *Port-Mahon* and *Gibraltar*; and, 'tis ſaid, no other Nation is ſuffer'd to carry any Corn out of the Country; but there is more than one Reaſon for their keeping fair with the *Engliſh*; for if there ſhould happen to be another Rupture with *England*, the *Algerines* would not be able to ſtir out of their Ports for our Cruiſers from *Port-Mahon* and *Gibraltar*.

The Foundation of the *Turkiſh* Government at *Algiers*.

That infamous Pirate *Barbaroſſa*, laid the Foundation of the *Turkiſh* Dominions at *Algiers*, and was the firſt that ſtyl'd himſelf King of it. The *Moors* of *Spain*, having been driven from that Country in the Year 1492, and tranſported to *Barbary*, took all Opportunities of revenging themſelves on the *Spaniards*, by taking their Merchant-ſhips, and plundering the Towns on their Coaſts; which they were very ſucceſsful in for ſome Years, carrying Multitudes of People into Captivity: Whereupon Cardinal *Ximenes*, Prime Miniſter to *Ferdinand* V. King of *Arragon*, fitted out a Fleet in the Year 1505; on which having embark'd a Body of Land-Forces, under the Command of *Peter* Count of *Navarre*, he beſieg'd and took the Town of *Oran*, then inhabited by *Moors* who had been driven from *Grenada* and *Valencia*. The Count afterwards made himſelf Maſter of ſeveral other Towns upon the ſame Coaſt, together with the little Iſland that lies before the Bay of *Algiers*; whereby he gave the Town Apprehenſions of falling ſuddenly under the Dominion of the *Spaniards*.

In this Diſtreſs Prince *Selim*, Sovereign of *Algiers*, having heard of the Fame of *Barbaroſſa*, the *Turkiſh* Corſair, ſent to deſire his Aſſiſtance againſt the *Spaniards*: The Pirate, glad of the Opportunity, ſent away eighteen Gallies, and thirty ſmall Barks to *Algiers*, marching thither by Land himſelf. The *Algerines* march'd out of Town with Prince *Selim* at their Head, to welcome their Deliverer; and, having conducted him to *Algiers*, he was lodg'd in the Prince's Palace. But the Pirate, who made no Scruple of ſeizing whatever came in his Way, immediately found Means to aſſaſſinate Prince *Selim* privately, and cauſed himſelf to be proclaim'd King. Whereupon moſt of the Natives abandon'd the Place, and left the Uſurper in Poſſeſſion of the City; but, upon his promiſing them the Enjoyment of their ancient Liberties, they returned, and acknowledged him their Soveraign. They found themſelves however under the Dominion of a Tyrant, who, after he had ſecur'd his Poſſeſſion, treated them no better than Slaves.

This Revolution happened in the Year 1516; and the Son of Prince *Selim*, flying to *Oran* for Protection, prevail'd on the *Spaniards* the Year following to fit out a ſtrong Fleet, with an Army of ten thouſand Land-men on Board, to aſſiſt him to recover his Right, promiſing to acknowledge the King of *Spain* for his Sovereign. But the *Spaniſh* Fleet was diſpers'd in a violent Storm, and moſt of their Forces drown'd, cut in pieces, or made Slaves by the *Turks*. *Barbaroſſa*, puff'd up with this Succeſs, continued to treat the *Moors* with greater Inſolence than ever; which induced the reſt of the *Mooriſh* Princes to enter into a Confederacy againſt the Uſurper, under the King of *Tenez* their General. *Barbaroſſa* march'd out to meet them with a ſmall Company, and had the good Fortune to defeat the numerous Forces of his Enemies. After which, the Conqueror enter'd the City of *Tenez*, and cauſed the Inhabitants to proclaim him their King.

There happen'd, about the ſame time, an Inſurrection in the Kingdom of *Tremeſen*, and the Rebels, hearing of the Succeſſes of *Barbaroſſa*, invited him to come and deliver them from the Oppreſſions of their Sovereign. The ambitious *Turk* having ſent for a Reinforcement of Troops, and his Artillery, advanc'd towards *Tremeſen*, and obtained a compleat Victory, to which his Artillery and ſmall Arms very much contributed. The King of *Tremeſen* eſcaped out of the Battle, but his Subjects afterwards murder'd him, and ſent his Head to the Conqueror; who enter'd the City of *Tremeſen* in Triumph, and was proclaim'd King. *Barbaroſſa* now ſaw himſelf Maſter of three Kingdoms within the Space of a Year, which he had acquir'd with the Aſſiſtance of a handful of Men. As *Tremeſen* was in the Neighbourhood of *Oran*, he enter'd into an Alliance againſt *Spain*, with *Muley Hamet*, King of *Fez*, no leſs an Enemy to *Spain* than himſelf; and thus ſupported, did not doubt but he ſhould defend the Territories he had conquer'd againſt the Chriſtians. But *Charles* the Fifth, being implor'd by the Prince of *Tremeſen*, to aſſiſt him in the Recovery of his Father's Kingdom, ſent over ten thouſand Men from *Spain*, under the Governor of *Oran*, who being join'd by a good Body of *Moors* and *Arabs*, march'd towards *Tremeſen*. *Barbaroſſa* immediately march'd in Perſon, with fifteen hundred *Turkiſh* Musketeers, and five thouſand *Mooriſh* Horſe, to attend the Motions of the Governor of *Oran*; but, being hemm'd in by the *Spaniards*, and endeavouring to break through them in the Night time, he was cut in pieces, with all his *Turkiſh* Infantry. Whereupon the Governor of *Oran* continued his March to *Tremeſen*, and the young Prince was reſtor'd to his Throne. The *Spaniards* had now an Opportunity of recovering both *Tenez* and *Algiers*, if they had followed their Blow; but the Governor ſent back the Forces to *Spain*, at a Time when the *Turks* of *Algiers* had given themſelves over for loſt. But finding the *Spaniards* made no Preparations to attack them, they proclaim'd *Cheredin*, the Brother of *Barbaroſſa*, their King, who, in the Year 1619, underſtanding there was a general Conſpiracy of the *Moors* and *Arabs*, to free themſelves from the *Turkiſh* Yoke, diſpatch'd an expreſs to *Selim*, the then Grand Signior, deſiring he would ſend him a ſtrong Reinforcement of Troops, promiſing that he would act for the future, as Baſha, or Viceroy to the Grand Signior.

The

The *Ottoman* Emperor ſent two thouſand *Janizaries* to his Aſſiſtance; publiſhing a Proclamation at the ſame time, That all *Turks* who ſhould reſort to *Algiers*, ſhould enjoy the ſame Privileges there, as the *Janizaries* did at *Conſtantinople*: Whereupon all People of deſperate Fortunes, immediately enter'd themſelves into the Service of *Cheredin Barbaroſſa*; who, with theſe Reinforcements, was ſoon in a Condition to defeat all the Conſpiracies of the *Moors*, and render himſelf abſolute Maſter of that Part of *Barbary*: He alſo ſubdu'd the Iſland the *Spaniards* had poſſeſs'd themſelves of at the Mouth of the Bay of *Algiers*, and by a Mole join'd it to the Continent; and having erected a ſtrong Fortreſs on the Iſland, he enlarg'd his Piratical Fleet, and ſo infeſted the Coaſts of *Spain* and *Italy*, that a Merchant-ſhip could not ſtir out of any Port without falling into the Hands of his Corſairs. And this at the time when *Charles* the Fifth was at the Height of his Glory.

This Prince, incens'd to ſee his Dominions inſulted, and his Subjects daily carried into Slavery, and being incited by Pope *Paul* III, in the Year 1541, having aſſembled a Fleet of five hundred Sail, embark'd with an Army of twenty thouſand Men and upwards, in *Spain*; and, arriving before the Bay of *Algiers*, landed about two thirds of his Army, and ſummon'd the Place; which was upon the Point of ſurrendring to him, when a ſudden Storm happen'd, in which great part of his Fleet was ſhipwreck'd, his Proviſions all deſtroy'd, and ſuch heavy Rains at the ſame time fell on the Shore, that his Forces could no longer keep the Field: Whereupon he found himſelf oblig'd to abandon the Enterprize, and reimbark what Force he had left.

Some little time before this memorable Enterprize, the Grand Signior had preferr'd *Cheredin Barbaroſſa* to the Poſt of Captain Baſha, the Commander in Chief of all the Territories of *Algiers*; but thought fit to appoint *Haſſan* Aga Baſha of the Town of *Algiers*, probably to be a Check upon *Cheredin*, and prevent his ſetting up again for himſelf. After the Death of *Barbaroſſa* II, the Porte govern'd the Kingdom of *Algiers* by their Baſhas till the 17th Century, when the *Janizaries* of *Algiers*, repreſented to the Grand Signior, that his Baſhas tyranniz'd over the Country, and render'd the Government of the *Turks* ſo odious there, that the *Spaniards* and *Moors* would infallibly drive them from the Coaſt of *Barbary*, if that Government was not better regulated: They deſired therefore, that they might elect one of their Officers, with the Title of Dey, to be their Governour; promiſing to raiſe Supplies ſufficient to maintain their Forces, and that they would always acknowledge the Grand Signior for their Sovereign; in which Propoſal, the Porte acquieſced. Under the Government of ſuch Magiſtrates of their own electing, they remain at preſent; but in no part of the World are there ſuch frequent Inſtances of the People's depoſing and murdering their Princes, ſcarce any of them dying a natural Death. They reign with abſolute Authority for a few Years, Months, or Weeks; and ſometimes a few Hours puts an end to their Dominion, and their Lives.

It is amazing that this large Kingdom ſhould be kept under the moſt ſlaviſh Subjection by twelve thouſand *Turks* only, compoſed of the vileſt Wretches on the Face of the Earth; none of the better Sorts of *Turks* ever reſorting hither. And when the uſual Number of their Militia happens to be leſſen'd by Mortality, they ſend to the *Levant*, to pick up all the Banditti and Deſperadoes they can meet with, to recruit their Piratical Troops; taking alſo the Renegado Chriſtians, and the Sons of the Soldiery, which they have by *Mooriſh* or *Arabian* Wives, into that Body; for no *Turkiſh* Women ever come to *Algiers*. Neither *Moors* or *Arabs*, are ever admitted into this Militia, leſt they ſhould endeavour to free their Country. And tho' the Son of a *Turk* and a *Mooriſh* and *Arabian* Wife is admitted into their Militia, theſe are never ſuffer'd to enjoy any Preferment or Poſt in the Government.

To every private Soldier of this Body, they give the Title of *Effendi*, or Lords; and, indeed, theſe Lordains demand a Reſpect from the Natives equal to that of Princes. *Moors*, *Arabs*, *Chriſtians*, or *Jews*, are forced to ſubmit to all manner of Injuries and Affronts from them. They fly the Streets, if they ſee a *Janizary* coming, or ſtand cloſe up to the Wall in the moſt reſpectful Poſture, till thoſe High and Mighty Robbers paſs by them.

Thoſe *Janizaries* who are unmarried, have much the greater Privileges: They are lodg'd in ſpacious Houſes provided by the Government, attended by Slaves, and have the Privilege of buying their Proviſions one third under the Market Price, and a great Allowance of Bread every Day, beſides their Pay; but the married Men are excluded from all theſe Advantages. One Reaſon for diſcouraging the Soldiers marrying is, becauſe the Government is intitled to all the Effects of thoſe that die without Children: But the principal is, that the married Men are ſuppos'd to have more Regard to the Natives with whom they intermarry, than the unmarried Soldiers; and for the ſame Reaſon, the Sons of the married *Janizaries* are not allow'd the Privileges of natural *Turks*, as has been obſerv'd already; which are ſuch Diſcouragements to their taking Wives, that ſcarce any *Janizaries* marry: However, all of them are allow'd to purchaſe Female Slaves, and keep as many Concubines as they pleaſe.

The greateſt Crime here, next to Treaſon, is the expreſſing any Compaſſion for the Natives. But notwithſtanding the Tyranny the *Turks* exerciſe over the *Moors* and *Arabs*; yet if any *Chriſtian* Power makes an Attempt againſt their Country, they ſeem ready to unite their Forces againſt ſuch Invaders, as dreading the Government of *Chriſtians* more than the Uſurpations of thoſe of the ſame Faith.

The Election of the Dey, further treated of.

The Dey ought, by their Conſtitution, to be choſen by the *Turkiſh* Militia, without one diſſenting Voice. When the Throne is vacant, they aſſemble at the Palace, and the Aga of the Soldiery demands who ſhall be their Dey: Whereupon every one calls out for the Perſon he is beſt affected to; but till all agree in the Choice, they are directed to name others, till they pitch upon one who is univerſally approv'd. It is not uncommon for them to draw their Sabres, and for the Strongeſt to force the reſt to agree with them. And there are Inſtances of a powerful Faction electing another Dey, while the former has been living, and murdering the reigning Dey as he ſat upon his Tribunal. When the Dey happens to be kill'd, his Women are plunder'd of all they have, and reduc'd to their primitive State; and his Children have nothing more allow'd them than the Pay of a private Soldier, and are excluded from all Preferment in the State: But if the Dey dies a natural Death, they ſuffer his Women to remain poſſeſs'd of what he leaves them. *Haly* Dey had the good Fortune to reign from 1710 to 1718, and died in his Bed at laſt: However, he was no ſooner given over by the Phyſicians, but a powerful Faction made choice privately of a Succeſſor before he was dead; and the Moment

Haly expir'd, proclaim'd *Mahomet* Dey, who was before High Treaſurer, and he was immediately inveſted with the Royal Robes. And thereupon, all the Officers of State and the Soldiery congratulated him on his Acceſſion, knowing it would have been fatal to them to have inſiſted on another Election; tho' it has happen'd, that a Dey has been no ſooner plac'd upon the Throne, but he has been murder'd there by the oppoſite Party. There were, it ſeems, ſome few Years ſince, no leſs than ſix Deys aſſaſſinated in four and twenty Hours, whoſe Tombs ſtill form a Circle without one of the Gates of *Algiers*.

The War between the *Engliſh* and the *Algerines*.

The *Engliſh* Merchants, as well as thoſe of other Nations, have ſuffer'd very much by the Depredations of the *Algerines*. Sir *William Monſon*, in the Reign of King *James* I, burnt ſome few of their Ships; Admiral *Blake* more in the Year 1655; and Sir *Thomas Allen*, in 1668, lay before their Town, till he compell'd them to make Peace; but they broke it again the following Year. In 1670, Captain *Beach* forced ſeven of their Frigates on Shore, and burnt them. Sir *Edward Spragge*, in 1671, took and deſtroy'd nine of their Ships of War; and at ſeveral times, 'tis computed, the *Engliſh* may have deſtroyed forty or fifty of theſe Rovers; but one Ship is no ſooner loſt, than they fit out another; and, 'tis ſaid, not leſs than three or four hundred *Engliſh* Veſſels fell into their Hands in a few Years. The *Engliſh* and *Dutch* had agreed, a little after the Reſtoration, to fall upon the *Algerines* with their united Fleets; and a Squadron of each Nation ſailed to the *Streights* for that Purpoſe: But, when they arrived there, the *Dutch* Admiral treacherouſly ſeparated from the *Engliſh*, and went and deſtroyed their Settlements on the Coaſt of *Guinea*, and in the *Weſt-Indies*, without any Provocation. In 1682, the *Algerines* were ſo harraſs'd by the Squadrons the *Engliſh* ſent from time to time into the *Mediterranean*, that they thought fit to make Peace with us, which they have kept pretty well ever ſince: While the treacherous *Hollander* ſuffer'd ſufficiently many Years after, by the Depredations of the *Algerines*, who never kept any Peace they made with the *Dutch* two Years together, till very lately.

Articles of Peace concluded with *Algiers*, *Anno* 1682.

The Subſtance of the principal Articles of Peace, made by Admiral *Herbert*, *Anno* 1682, with the Baſha and Dey of *Algiers*, were: That the Ships, belonging to *Great-Britain*, might come to any Port in the Kingdom of *Algiers*, and traffick there, paying the uſual Cuſtom; and for Ammunition, and Naval Stores, no Duty was to be paid: That the Ships belonging to *Great-Britain*, and thoſe of *Algiers*, might freely paſs the Seas, without any Search, Hindrance, or Moleſtation from each other: That any *Britiſh* Merchant-ſhips out of the Seas belonging to his Majeſty's Dominions, upon producing a Paſs under the Seal of the Admiralty of *England* or *Scotland*, ſhould be permitted to proceed freely on his Voyage: That no *Algerine* Commander ſhould take out of any *Britiſh* Ship any Perſons whatever, to carry them to be examin'd, on any Pretence: That no *Britiſh* Ship, wreck'd on the Coaſt of the Kingdom of *Algiers*, ſhould be ſeiz'd, or its Crew made Slaves: That no Ship of *Algiers* ſhould ſerve the Corſairs of *Sallee*, or any other Power at War with *Great-Britain*: That no Ship of *Algiers* ſhould cruiſe in Sight of any Country or Place belonging to *Great-Britain*: That any Ships or Goods, belonging to his Majeſty's Subjects, brought into the Territories of *Algiers*, ſhould not be permitted to be ſold there: That when any *Britiſh* Man of War ſhould appear before *Algiers*, Proclamation ſhould be made to ſecure all Chriſtian Captives; after which, if any Chriſtian ſhould eſcape to ſuch Ship of War, they ſhould not be requir'd: That no *Britiſh* Subject ſhould be bought or ſold, or made a Slave in *Algiers*, on any Pretence: That if any Subject of *Britain* dies at *Algiers*, the Government ſhall not ſeize his Money or Effects, but ſuffer his Heirs or Executors to enjoy them: That no *Britiſh* Subject, in the Territories of *Algiers*, ſhall be liable to any other Juriſdiction, but that of the Dey, or Divan, except in Differences between themſelves, which ſhall be determin'd by the Conſul only: That if any *Britiſh* Subject happen to kill, wound, or ſtrike a *Turk* or *Moor*, he ſhall be puniſh'd in the ſame Manner as a *Turk* ought to be, guilty of the ſame Offence: That the *Engliſh* Conſul ſhall enjoy entire Freedom and Safety in his Perſon and Eſtate; and if any War ſhould happen between the King of *Great-Britain*, and the Kingdom of *Algiers*, the *Engliſh* Conſul, and all his Majeſty's Subjects reſiding there, ſhall, at all times, have Liberty to depart to their own Country, or to any other: That when any *Britiſh* Man of War, with his Majeſty's Flag at the Main-top-maſt-head, ſhall come to an Anchor in the Road of *Algiers*, the Dey and Regency ſhall cauſe a Salute of twenty one Cannon, and ſuch Ship ſhall anſwer it with the ſame Number, *&c.*

This Treaty has been renew'd ſeveral times; in *April* 1686, by Sir *William Soame*, Bart. in his Voyage to *Conſtantinople*, whither he went Ambaſſador, from King *James* II. to the Grand Signior. It was renew'd again, in 1691, by *Thomas Baker*, Eſq; and, in 1700, by Captain *Munden*, and *Robert Cole*, Eſq; then Conſul of *Algiers*, jointly with ſome Additional Articles. In the Reign of Queen *Anne*, *Anno* 1703, Admiral *Byng*, the late Lord Viſcount *Torrington*, renew'd the ſaid Peace with *Muſtafa* Dey, and the two following Articles were added: That, whereas the Subjects of *England* were to pay ten *per Cent*. Cuſtom for ſuch Goods as they ſhall ſell at *Algiers*, from thenceforwards they ſhall pay but five *per Cent*: That all Prizes taken by any Subject of *Britain*, and all Ships built and fitted out in her Majeſty's Plantations in *America*, that have not been in *England*, ſhall not be moleſted, tho' they have no Paſſes.

In the Year 1716, the Treaties with *Algiers*, were ratified, and, among others, the following Article added:

That as the Iſland of *Minorca* and City of *Gibraltar* have been yielded and annex'd to the Crown of *Great-Britain*; from this time the ſaid Iſland and City ſhall be deem'd, by the Government of *Algiers*, part of the *Britiſh* Dominions, and the Inhabitants thereof look'd upon as his Majeſty's natural Subjects.

CHAP.

CHAP. IX.

A Description of Tunis *and* Tripoli.

situation of Tunis.

THE Kingdom of *Tunis* is bounded by the *Mediterranean* Sea, on the North; by the same Sea and *Tripoli*, on the East; by Mount *Atlas*, on the South; and by the River *Guadilbarbar*, which separates it from the Kingdom of *Algiers*, on the West; lying between 30 and 37 Degrees and a Half North Latitude, and extending about two hundred Miles from West to East.

Rivers.

The chief Rivers are, 1. The *Guadilbarbar* already mention'd. 2. The Capes, or *Capsa*. 3 *Megereda*: All which rise in Mount *Atlas*, and fall into the *Mediterranean*.

Chief Towns.

The chief Towns are, 1. *Cairoan*, situated on the River *Megereda*, most remakable for being the Burying-place of the *Mahometan* Princes and great Men. 2. *Urbs*, situated in a fine Plain, on a River that falls into the *Guadilbarbar*, about an hundred and fifty Miles South-west of *Tunis*; chiefly remarkable for the Marble Pillars, Images, and other *Roman* Antiquities found here. 3. *Africa* or *El Melidia*, situated on the *Mediterranean*, ninety Miles South-east of *Tunis*. 4. *Susa* or *Ruspina*, situated partly on the *Mediterranean*, twenty-five Miles to the Eastward of *Tunis*: It contains more Antiquities than any Town in the Kingdom: Here is also a small Harbour.

The City.

5. *Tunis*, the Capital of the Kingdom, situated on a fine Plain, near a spacious Lake, in 36 Degrees and a Half North Latitude, almost over-against the Island of *Sicily*, but a few Miles from the Place where the famous City of *Carthage* stood, and about three or four Leagues distant from the *Mediterranean*. It is a large, populous City, and a Place of some Trade; the Walls about a League in Circumference, but of no great Strength. The Basha's Palace, the Mosques and Bagnio's, are the most remarkable Things in it. The Houses of the better sort of People are built about little Squares, adorn'd with Pillars, Galleries, and Fountains; and the Roofs are flat and terrass'd, as in other *Mahometan* Countries. When *Charles* V. took it in the Year 1535, it is said to have contain'd an hundred thousand Men, besides Women and Children; but certain it is, the Numbers are not near so great at present. 6. *Goletta*, situate on a little Island of the same Name, three or four Leagues to the Eastward of *Tunis*, and the Port Town to that Capital. It is defended by two Castles; one of them built by *Charles* V. It was held by the Christians till 1574, and was of great Use for restraining the Excursions of the *Turkish* Corsairs. 7. *Carthage*, now a small Village, situate near Cape *Carthage*, suppos'd on part of the Ground whereon the City of *Carthage* stood, and three or four Leagues North-east of *Tunis*. Here are still some Ruins of Marble and other Stones, and several Arches of the Aqueduct that convey'd Water to *Old Carthage* from a Hill thirty Miles distant. 8. *Byserta*, said to be the *Utica* of the Antients, situated on a fine Lake near the Sea, about thirty Miles to the Northward of *Carthage*; said to be one of the best Harbours the *Tunisians* have for their Gallies. 9. *Porto Farina*, situated on the *Mediterranean*, about the Midway between *Byserta* and *Carthage*.

Tripoli.

The Kingdom of *Tripoli*, in which we shall include *Barca*, is bounded by the *Mediterranean* on the North, by *Egypt* on the East, by *Nubia* and *Biledulgerid* on the South, and by the Kingdom of *Tunis* on the West; extending along the *Mediterranean* from *Tunis* to *Egypt*, at least a thousand Miles; and about two hundred Miles broad, where broadest; but in others scarce one hundred; lying between Latitude thirty and thirty-three and a half.

There are no Rivers in this Country worth mentioning. That Part of it contiguous to *Tunis* is tolerably fruitful; but all the rest to the Eastward, as far as *Egypt*, is only a parch'd barren Desart. The chief Towns taken notice of by Geographers are, 1. *Old Tripoli*; 2. *New Tripoli*; 3. *Zaara*; 4. *Tachore*; 5. *Mecellat*; 6. *Elhama*; and 7. *Mahara*. *New Tripoli*, however, is the only Town of any Note; which is situated in a sandy Plain near the *Mediterranean* Sea, Latitude thirty-three, about sixty Leagues South-east of *Tunis*. It is a populous Town, and surrounded with a Wall and Outworks; but the Fortifications very mean. Its greatest Strength are in the desperate Pirates that inhabit it; consisting of the same sort of People as inhabit *Algiers* and *Tunis*. The Government of the Country resembles that of *Tunis*; the Dey of both being very much under the Influence of the Bashas the Grand Signior sends thither, who levy annually a very considerable Tribute on the Natives, which is remitted to the Porte. The Government of *Tunis* and *Tripoli* is the same with that of *Algiers*, only in that one Instance, That the Dey in the two former, is under some Subjection to the Basha; whereas the Dey of *Algiers* acknowledges no Superiour. The Religion, Laws, and Customs of the People of *Tunis* and *Tripoli*, are also the same with those of *Algiers*. The governing Part are *Turks*, Natives of the *Levant*, and Renegadoes, cloth'd like other *Turks*, in Vests and Turbants; their Vests frequently made of *English* Cloth, and their Turbants of Silk or Linen: Nor is the Clothing of the *Moors*, who live in Towns, very different from theirs. But the *Arabs* have scarce any Clothing, more than a Cloth about their Waists, and ramble from Place to Place perpetually, to find Herbage and Water for their Cattle.

Chief Towns.

Tripoli City.

Bagnio's in *Tunis*, *Tripoli*, and *Algiers*.

There are in *Tunis*, *Algiers*, and *Tripoli*, a great Number of Bagnios, mightily frequented by the *Turks*, as well upon a Religious Account, as for Health and Pleasure: And to these Bagnios Foreigners also resort, where they are well accommodated, for a very moderate Consideration. A Gentleman is first brought into a handsome large Room, where he is undress'd, and a Towel ty'd about him; from thence, he is led into another Room, moderately warm, and, after some little time, into the Grand Hall, cover'd with a Cupola, in the Middle whereof is the Bath. The Floor is pav'd with white Marble, as are the little Rooms or Closets in the Sides of it, where People are wash'd and rubb'd: The Person is first set down upon a Marble Bench that runs round the Hall, and is soon sensible of an extraordinary

ordinary Heat, which makes him ſweat plentifully: Then he is carried into one of the Side Rooms of a moderate Heat, where a Linen Cloth being ſpread upon the Floor, and his Towel taken off, he lies down at his full Length, perfectly naked: Then two luſty Slaves, as naked as the Patient, come in, and kneeling down, waſh and rub his Arms, Legs, and every Part of him with a Fleſh-Bruſh, taking off all the Scurf and Roughneſs of the Skin: Then they waſh him all over again; and after that dry him with clean Towels. They alſo rub the hairy Parts, if they are not directed otherwiſe, with the Powder of a certain Earth, which immediately fetches off all the Hair. Then they waſh and dry the Party again, pair his Nails, ſqueeze and mould his Fleſh, and ſtretch and pull his Limbs with that Violence, that his Bones crack again; and thoſe who are not uſed to it, would be apt to think them all diſlocated: But if a Gentleman does not like this rough Management, he may be more gently dealt with. The Women have their ſeveral Baths, where they are attended by She Slaves, and no Man is permitted to enter theſe. Perſons of Diſtinction always have Bagnios for themſelves and their Women, in their own Houſes.

Produce and Traffick of the Country.

Tunis and *Tripoli* breed Abundance of Camels and fine Horſes, and produce Corn and Olives plentifully. In *Tripoli* they have exceeding fine Wool, and in *Tunis* a good Manufacture of Soap; and as Mulberry Trees thrive prodigiouſly in both Kingdoms, no Country is more proper for Silk, though very little cultivated. The *Europeans* trade with the People of *Tunis* and *Tripoli* for Corn, Oil, Wool, Soap, Dates, Oſtrich Feathers, Skins of wild and tame Beaſts; but one of the beſt Branches of their Commerce here, is the *European* Chriſtians, taken by their piratical Ships, whom they ſet very high Ranſoms upon. Their Camels they uſually ſell in *Egypt*, and their fine Horſes to the *French*: But they get much more by their Piracies, than by Trade.

Modern Hiſtory of *Tunis* and *Tripoli*.

The *Turks* have been Maſters of *Tunis* ever ſince the Year 1532, when *Heyradin Barbaroſſa*, Dey of *Algiers*, a Brother and Succeſſor of *Barbaroſſa* I. obtained the Dominion of this Kingdom in much the ſame Manner as his Brother acquired that of *Algiers*. The People of *Tunis* invited him thither, to deliver them from the Oppreſſion they ſuffered under the Adminiſtration of their Prince: Whereupon *Heyradin* having made a Voyage to the Porte, and procured a large Fleet and a ſtrong Reinforcement of Janizaries; from thence made a Deſcent near *Goletta*, the Port Town to *Tunis*, and advancing towards the City, *Muley Haſſan*, their King, thought fit to quit his Capital without ſtriking a Stroke, and ſuffer *Barbaroſſa* to take Poſſeſſion of it. The Uſurper remained pretty quiet for about three Years: But the depoſed Prince applying himſelf to the Emperor *Charles* V. his Imperial Majeſty embarked in Perſon, in the Year 1535, with a conſiderable Army, and made a Deſcent on the Coaſt of *Tunis*, where he took the Caſtle of *Goletta* by Storm, and the City of *Tunis* thereupon opened her Gates to him. Before the Uſurper left *Tunis*, he ordered ſome Renegadoes to ſet Fire to the Gunpowder, and blow up all the Chriſtian Slaves which were lodged near that Magazine; but in this he was not obeyed; and the Emperor, on the taking of the City, ſet at Liberty no leſs than 20,000 Chriſtian Slaves.

His Imperial Majeſty having reſtor'd *Muley Haſſan* to his Throne, reimbark'd his Troops, leaving only a ſtrong Garriſon of Chriſtians in the Caſtle of *Goletta*: But *Muley* was again depoſed by his rebellious Subjects, and forc'd to take Refuge a ſecond Time in the Emperor's Court. Some few Years after, the *Turks* retook both *Goletta* and *Tunis*, and ſtill remain poſſeſſed of them, the *Tuniſeens* being always in a State of War with *Spain* and *Italy*. They are alſo frequently at War with the reſt of the Nations of *Europe*, and make Prize of all they meet with; but the *Engliſh* had the good Fortune to clap up a Peace with them in the Year 1682, which has been renew'd from Time to Time; and, in the Year 1716, the following Articles, with a few others, were agreed on. *viz.* That free Trade and Commerce ſhall continue between the Subjects of *Great Britain* and the People of the Kingdom of *Tunis*, and the Dominions thereunto belonging. That the Ships of either Party ſhall have free Liberty to enter into any Port or River belonging to the Dominions of either Party, paying the Duties only for what they ſhall ſell: That for Prevention of all Inconveniences, the Ships of *Tunis* are to have a Certificate, under the Hand and Seal of the *Britiſh* Conſul, that they belong to *Tunis*; which being produc'd, the *Engliſh* Ship ſhall admit two Men to come on Board them, peaceably to ſatisfy themſelves they are *Engliſh*; and, although they have Paſſengers of other Nations on Board, they ſhall be free: That if an *Engliſh* Ship ſhall receive on Board any Goods or Paſſengers, belonging to the Kingdom of *Tunis*, they ſhall be bound to defend them and their Goods, ſo far as lies in their Power, and not deliver them unto their Enemies: That if any Ships of either Party ſhall be caſt away upon any Coaſt belonging to the other Party, the Perſons ſhall be free, and the Goods delivered to their lawful Proprietors: That the *Engliſh*, which do at preſent, or ſhall at any Time hereafter, inhabit the Kingdom of *Tunis*, ſhall have free Liberty, when they pleaſe, to tranſport themſelves, with their Families and Children, though born in the Country: That any of the *Engliſh* Nation reſiding in *Tunis*, ſhall not be forced to make their Addreſſes, in any Difference, unto any Court of Juſtice, but to the Dey himſelf, unleſs the Difference be between any two of his *Britannick* Majeſty's Subjects, then it is to be decided by the *Britiſh* Conſul only: That the Iſland of *Minorca*, and the City of *Gibraltar*, ſhall be eſteemed, in every Reſpect, by the Government of *Tunis*, to be Part of his *Britannick* Majeſty's own Dominions, and the Inhabitants thereof to be looked upon as his Majeſty's natural Subjects; and none of the Ships or Veſſels belonging to *Tunis*, or the Dominions thereof, ſhall be permitted to cruize in Sight of the aforeſaid City of *Gibraltar*, or any of the Ports of the Iſland of *Minorca*: That all the Ships of War belonging to either Party's Dominions, ſhall have free Liberty to uſe each other's Ports for waſhing, cleaning, or repairing any of their Defects, and to buy and to ſhip off any Sort of Victuals, alive or dead, or any other Neceſſaries, at the Price the Natives buy at in the Market, without paying Cuſtom to any Officer: That in caſe any Ships of War, belonging to the Kingdom of *Tunis*, ſhall take in any of their Enemies Ships, *Engliſhmen* ſerving for Wages, they are to be made Slaves; but, if Merchants or Paſſengers, they are to enjoy their Liberties and Effects unmoleſted: That whenever any Flag Officer of *Great Britain* ſhall arrive in the Bay of *Tunis*, in any of his Majeſty's Ships of War, there ſhall be five and twenty Cannon fir'd from the Caſtles of *Goletta*, or other the neareſt Fortification belonging to *Tunis*, and the ſame Number ſhall be return'd in Anſwer thereto by his Majeſty's Ships: That all Ceremonies of Honour ſhall be allowed to the *Britiſh* Conſul, who

who reſides here, to repreſent, in every Reſpect, his Majeſty's Perſon, and no other Conſul to be admitted before him in Precedency: That the Subjects of *Great Britain*, either reſiding in or trading to the Dominions of *Tunis*, ſhall not pay any more than three *per Cent.* Cuſtom, on the Value of Goods or Merchandize, which they ſhall either bring into, or carry out of the ſaid Kingdom; and whenever the Government of *Tunis* ſhall reduce the Cuſtoms of the *French* Nation to leſs than they pay at preſent, it ſhall always be obſerv'd, that the *Britiſh* Cuſtoms ſhall be two *per Cent.* leſs than ſhall be paid by the Subjects of *France*: That in caſe any *Britiſh* Ship ſhall import at any Port of the Kingdom of *Tunis*, any warlike Stores, or Proviſions, for the ſaid Kind of Merchandize they ſhall not pay any Duty whatever.

CHAP. X.

A Deſcription of the African *Iſlands.*

Iſlands of Africa.

THE principal Iſlands of *Africa*, are, 1. *Babmandel*; 2. *Zocotara*; 3. The Iſlands of *Comorro*; 4. Prince *Maurice*'s Iſland, or the *Mauritius*; 5. The Iſland of *Bourbon*; and, 6. *Madagaſcar*; all which lie in the *Indian* Ocean, Eaſtward of the Continent. On the South-weſt lie, 1. The Iſland of *St. Helena*; 2. *Aſcenſion*; 3. *St. Matthew*; 4. *Annabona*; 5. *St. Thomas*; 6. *Princes Iſland*; and, 7. The Iſland of *Fernando Po*. On the North-Weſt lie, 1. The Iſlands of *Cape Verd*; 2. The *Canary Iſlands*; 3. The Iſlands of *Madera*; and, 4. The *Azores*.

Babmandel *Bab*, or *Babel-mandel*, lies at the Entrance into the *Red-Sea*, and forms one Side of the famous *Streight* of *Babel*, or *Babmandel*: It is ſituated in thirteen Degrees North Latitude, and is about five Miles in Circumference. The *Ethiopians* and *Arabians* formerly contended with great Fury for the Poſſeſſion of it, being a Place of the laſt Importance, as it commanded the Entrance into the *Red-Sea*; but, ſince the *Turks* have poſſeſſed themſelves of both Shores, the Iſland is in a Manner deſerted.

Zocotora. *Zocotora*, or *Socotra*, is ſituated in the Eaſtern Ocean, in twelve Degrees North Latitude, thirty Leagues to the Eaſtward of *Cape Gardeſoy*, being about twenty-five Leagues long, and eighteen broad. There is but one Town in the Iſland, where the Shiek or Sovereign reſides; the reſt of the Inhabitants live in Cottages, diſperſed about the Country. There are two pretty good Harbours on the Coaſt, where *European* Ships formerly uſed to put in; but this ſeldom happens now. The People are a Mixture of *Pagans* and *Mahometans*. Their uſual Food is Milk, Dates, Roots, and ſome Fleſh: The Country affords ſcarce any Merchandize fit for Exportation, unleſs it be Frankincenſe, Aloes, and the Gum called *Dragon's-Blood*.

morro ands. The Iſlands of *Comorro* are five in Number, and lie between the Coaſt of *Zanguebar*, and the North End of the Iſland of *Madagaſcar*, from ten to fifteen Degrees of South Latitude: That which is beſt known to the *Europeans*, is the Iſland of *Johanna*, where Ships touch for Refreſhments in their Paſſage to *Bombay*, and the *Malabar* Coaſts of *India*: This Iſland lies in twelve Degrees and a half North Latitude, and is thirty Miles long, and fifteen broad. The People are Negroes of the *Mahometan* Religion, extremely hoſpitable, eſpecially to the *Engliſh*. They live under a Monarchical Form of Government; from which, it ſeems, the Females are not excluded. They have great Plenty of black Cattle and Goats; of Fowls, Rice, Potatoes, Yams, Honey, Wax, Bananoes, Tamarinds, Lemons, Oranges, Pine-Apples, Cocoa Nuts, and other Fruits. And the Women, as in other Parts of *Africa*, are employed in Husbandry, and other laborious Works, while the Men indulge their Eaſe. They are a very plain inoffenſive People; but do not abound in Wealth, and ſcarce know the Uſe of Arms, or what War means. Their Kings converſe familiarly both with their Subjects and Foreigners. They have but two Towns; to one whereof our Mariners have given the Name of *King's-Town*, and to the other of *Queen's-Town*. Theſe Towns are built with Stone and Timber; but the reſt of their Houſes are only mean Cottages, diſperſed all over the Country: Their uſual Food is Rice boiled, Meat, Milk, Roots, and Cocoa-Nuts; and the Milk of the young Cocoa-Nuts ſerves them for Drink, as the Shells do for Cups. They are under ſtrange Apprehenſions of Miſchief from the Devil, and burn him in Effigy once a Year: They alſo abhor the Place where any one happens to die; either out of a Dread of departed Spirits, or becauſe they look upon the Place where any Man dies to be polluted. The reſt of the Iſlands of *Comorro* are much about the ſame Dimenſions, inhabited by the ſame Kind of People, and produce the like Plants and Fruits.

The Iſland of Prince *Maurice*; or, the *Mauritius*.

The next Iſland is that of Prince *Maurice*, or the *Mauritius*, belonging to the *Dutch*, who gave it this Name in Honour of their Statdholder Prince *Maurice*. It is ſituated in twenty Degrees South Latitude, an hundred Leagues Eaſt of *Madagaſcar*; being of an oval Form, and about fifty Leagues in Circumference, abounding in Woods of various Kinds, particularly Ebony. There are alſo Abundance of very high Mountains, from whence their Rivers fall in Torrents. The *Dutch* have a Fort, and a Garriſon of fifty Men, in the Iſland; beſides which, there may be three or fourſcore Families of *Hollanders*, who keep Abundance of Negroe Slaves, that are employed in Husbandry, and other laborious Work. The *Dutch* found this Iſland uninhabited, and conſequently uncultivated: Nor was there any other Cattle upon it, but Deer and Goats. They have now introduced almoſt all the Plants of *Aſia* and *Europe*, and well ſtocked it with Cattle and Poultry: Rice and Pulſe, Sugar-Canes and Tobacco, are alſo raiſed here, but in no great Quantities; nor does the Soil ſeem proper for Corn or Wine: The *Hollanders* touch here in their Paſſage from the Cape to *Batavia*.

Bourbon Iſland The Iſland of *Bourbon* is ſituated in twenty-one Degrees South Latitude, about forty Leagues South-Weſt of *Mauritius*. It is of an oval Figure, and about thirty Leagues in Circumference; finely diverſified with Mountains and Plains, Foreſts and Champain Fields; has Plenty of Wood and Water, and a fruitful Soil, except one Part of it, which has been burnt up by ſubterraneous Fires. The *Portugueſe* firſt diſcovered it, *Anno* 1545, and ſtocked it with Hogs and Goats, as if they intended to have made Settlement here; but afterwards deſerted it again.

Captain *Castleton*, an *English* Commander, touched here in the Year 1613, and was so taken with the Beauty of the Island, that he gave it the Name of *The English Forest*: But our *East-India* Company did not think it worth while to fix a Colony here. The *French* afterwards took Possession of it in the Year 1654, gave it the Name of *Bourbon*, and left some few People there, who afterwards came away in an *English* Ship. The *French* still lay claim to the Island, tho' they make little or no use of it, there being no Harbour upon the Coast, or any Thing to induce them to visit it, but the fresh Provisions they meet with on their Voyage to and from *India*.

Madagascar.

The largest of the *African* Islands, and indeed of the whole World, except *Borneo*, is that of *Madagascar*. It is call'd by the *Portuguese St. Laurence*; but *Madagasc*, or *Madagascar*, is the Name by which it is most commonly known. It is situated between the 12th and 26th Degrees of South Latitude, forty Leagues East of the Continent of *Africa*, being about a thousand Miles in Length from North to South, and generally between two and three hundred Miles broad; only towards the North it grows much narrower, and terminates in a Point: It is a fruitful Country, abounding in Cattle, Corn, Fish, Fowls, Herbs, Roots, and Flowers; and almost all manner of Animals and Vegetables, that are to be found on the neighbouring Continent of *Africa*, may be met with here; and there are scarce any Plants of *Asia* or *Europe*, except the fine Spices, but will flourish here. As to the Face of the Country, it is universally agreed, that it affords a pleasing Variety of Hills and Valleys, Woods and Champain, and is well water'd with Springs and Rivers; and that there are several good Harbours upon the Coast: But still it is found not to produce any kind of Merchandize, which, for Quantity or Quality, can induce any one *European* Nation to fix any considerable Colonies here. The *Portuguese*, *English*, *Dutch*, and *French*, have successively endeavour'd to discover something that might turn to Account: They were long amus'd with Hopes, that there were Gold and Silver Mines in the Island; but there seems now to be little Hopes of finding those tempting Minerals. We purchase scarce any Thing here but *Negroe* Slaves, which the Natives barter for Clothing, Hard-Ware, Tools or Toys: The Shipping, bound to and from *India*, sometimes furnish themselves here with Water, fresh Provisions, and Fruit: The Natives are generally *Negroes*; but there are both white Men and Malatto's upon the Coast, who are supposed to come from *Arabia*. Their Religion is a Mixture of *Mahometanism*, *Judaism*, and *Paganism*: But, tho' they retain Circumcision, and some other *Mahometan* Rites, they have no Mosques or Temples, nor any regular publick Worship.

The Country is divided amongst several petty Monarchs, which would make it an easy Conquest, did their Soil produce any Thing to incite the Avarice of the *European* Powers. The Natives do not wear any other Clothing than a Piece of Cotton, Calicoe, or Linen Cloth about their Waists, adorning their Arms with Bracelets, their Necks with Necklaces, and their Hair with some glittering Trifles. Their Arms are Bows and Arrows, Darts and Launces, with a Shield for their Defence: They seem terribly afraid of Fire Arms: Their Houses are only round little Huts, thirty or forty of which form a Village; there is not any thing that can be call'd a Town in the whole Country. They go a fishing in their Seas and Rivers in Canoes, made of the Bodies of large Trees hollow'd; and they have also larger Boats, of Boards sew'd together, with Cordage made of the Cocoa Nut-Tree, but no Ships.

The *Europeans* have attempted to establish Settlements in *Madagascar*, both at the Bay of *St. Austin's*, on the South-West Part of the Island, and at Fort *Dauphin*, on the South-east Part of the Island. The *Portuguese*, *English*, and *Dutch*, have successively sent Detachments to the Bay of *St. Austin's*; and the *French* built Fort *Dauphin*, placed a Garrison there, and proposed to make themselves Masters of the Navigation of the *Indian* Seas; but they seem convinc'd, that their Project was impracticable.

Some Account of the Pirates at Madagascar.

The Court of *England*, about the Year 1700, sent a Squadron of four Men of War, commanded by Commodore *Warren*, to drive away the Pirates, who were settled here under Captain *Avery*. But the Commodore, finding it impossible to come at them, publish'd a Proclamation in Pursuance of his Instructions, offering a Pardon to all that would come in, except *Avery* their Leader: However, not a Man came over to him. The Commodore afterwards proceeded to Fort *St. George* in the *East-Indies*, where he used the utmost Diligence to meet the Pirates in the Seas of *India*, but to no Purpose: So that, having left one or two of his Ships on the Shoals near *Malacca*, he returned with the rest to *England*. However, his Expedition had this good Effect, that the Pirates durst not stir out from *Madagascar*; and, finding they were so narrowly watch'd, they agreed to divide what they had got, and disperse themselves.

Islands South-west of Africa. St. Helen.

We shall now take a View of the Islands on the South-west Part of *Africa*; and the first we meet with in the *Atlantick Ocean*, in sailing from the *Cape of Good Hope*, is *St. Helena*, so named by the *Portuguese*, who discover'd it on St. *Helen*'s Day, in the Year 1502. This Island is situate in sixteen Degrees South Latitude, about six hundred Leagues North-west of the *Cape of Good Hope*, almost in the Mid-way between the Continents of *Africa* and *America*, but nearer to that of *Africa*, from whence it is distant about twelve hundred Miles: The Winds blowing always from the South-east a moderate Gale, it is an exceeding pleasant Voyage from the *Cape* to *St. Helena*, and perform'd in less than three Weeks, without giving the least Trouble to the Seamen. But there is no sailing to this Island directly Northward. When a Ship therefore is sent from *England* to *St. Helena*, it first sails as far Southward as the *Cape of Good Hope*, and then returns to *St. Helena*. The Island is about one and twenty Miles in Circumference, and may be discern'd at Sea above twenty Leagues Distance: It consists of one vast Rock, and looks like a Castle in the Middle of the Ocean, whose natural Walls are of that Height, that there is no scaling them, or indeed any landing, but at a small Valley, call'd *Chappel-Valley*, in a Bay on the East Side of it, which is defended by a Battery of forty or fifty great Guns, planted even with the Water: And the Waves dashing perpetually on the Shore, it is at all Times difficult landing even here. There is one little Creek besides, where two or three Men may land at a Time; but this is now defended by a Battery of five or six Guns, and render'd inaccessible: There is no Anchorage any where about the Island, but at *Chappel-Valley Bay*: And, as the Wind always sits from the South-east, if a Ship over-shoots the Island ever so little, she cannot recover it again.

A little beyond the Landing-place is a Fort, where the Governor resides with a Garrison; and

in

in the ſame Valley there is a pretty Town, conſiſting of forty or fifty Houſes built after the *Engliſh* Way, whither the People of the Iſland reſort when any Shipping appears. For the Governor has always Centinels on the higheſt Part of the Iſland to the Windward, who give Notice of the Approach of all Shipping, and Guns are thereupon fir'd, that every Man may reſort to his Poſt.

Notwithſtanding the Iſland, on every Side, appears to be a hard barren Rock, yet on the Top it is cover'd with a fine Staple of Earth, which produces all Manner of Grain, Graſs, Fruits, Herbs, Roots, and Garden-Stuff: And the Country, after we have aſcended the Rock, is prettily diverſified with riſing Hills and Plains, adorn'd with Plantations of Fruit-Trees, and Kitchen-Gardens, among which the Houſes of the Natives are interſperſed; and in the open Fields are Herds of Cattle always grazing, ſome of which are fatted to ſupply the Shipping that touches here, and the reſt furniſh their Dairies with Milk, Butter, and Cheeſe: They abound alſo in Hogs, Goats, Turkeys, and all Manner of Poultry; and their Seas are well ſtor'd with Fiſh. But amidſt all this Affluence of other Things, they have neither Bread nor Wine of their own Growth; for the Rats, which harbour in the Rocks, and cannot be deſtroy'd, eat up all the Seed before the Grain is well out of the Ground: And the Latitude is too hot for making Wine. There is no Country within the *Torrid Zone*, where good Wine is produc'd; neither cold nor very hot Countries agreeing with this Liquor. All the Wine they ſpend therefore, they have from the *Canaries*, the *Maderas*, or the *Cape*, which is brought them in *European* Shipping, as well as their Flour and Malt: And their Houſes are ſome of them brought ready fram'd from *England*. Beſides Grapes, they have Plantains, *Banana*-Figs, Lemons, and ſuch other Fruits as hot Countries uſually produce: And, to ſupply the Want of Bread, they eat Potatoes and Yams.

There were upon the Iſland, in the Year 1701, about two hundred Families, moſt of them *Engliſh*, or deſcended from *Engliſh* Parents; tho' there were ſome *French* Refugees amongſt them, brought thither to cultivate their Vines. Every Family has its Houſe and Plantation on the higher Part of the Iſland, where they look after their Cattle, their Hogs, Goats, Poultry, Fruits, and Kitchin-Gardens: They ſcarce ever come down to the Town, unleſs it be once a Week to Church, or when the Shipping arrives, when moſt of the Houſes in the Valley are converted into Punch-Houſes, or Lodgings for their Gueſts. The Inhabitants are not ſuffered to purchaſe any Merchandize of the Ships that touch here: Whatever they want of foreign Growth or Manufacture, they are oblig'd to buy at the Company's Ware-houſe. The Coin chiefly current here, is *Spaniſh* Dollars, or *Engliſh* Money.

There is no Place out of *England*, where the Natives have ſuch freſh ruddy Complexions, and robuſt Conſtitutions, as we meet with here; which may be aſcrib'd to the following Cauſes. They live on the Top of a Mountain, always open to the Sea-Breezes; they are uſually employ'd in the moſt healthful Exerciſes of Gardening and Husbandry; their Iſland is frequently refreſhed with moderate cooling Showers, and there are no Fens or Salt-marſhes about it to annoy them. The Hill between the Town and their Plantation, is ſo deep, that they are forced to have a Ladder in the Middle of it, from thence call'd *Ladder Hill*. The Natives ſeem an honeſt, inoffenſive, and hoſpitable People. They enjoy all the Neceſſaries of Life in great Plenty; they are neither parch'd with exceſſive Heat, or pinch'd with Cold; they live in perfect Security, and are happy in a continued State of Health. As there are no Men worth more than a thouſand Dollars, ſo there is no Man worth leſs than four hundred Dollars. There is but one Inconvenience, that the Natives of *St. Helena* are liable to; and that is, the Oppreſſion of their Governor, which has ſometimes been their Caſe, and is not eaſy to be redreſs'd, as the Inhabitants have no Opportunity of making their Grievances known to thoſe who are able to relieve them. However, they are generally govern'd with an equal and impartial Hand; and while they are ſo, *St. Helena* is a Paradiſe, compar'd with any other Part of the World. In a Word, there is hardly any Town, either in *England* or out of it, where there are fewer Diſorders and Outrages committed, than at *St. Helena*. For tho' the People appear with an Air of Freedom not known in other Governments, yet an exact Order and Diſcipline is obſerv'd, and an univerſal Quiet and Satisfaction ſeems to reign in this Fortunate Iſland.

The *Engliſh Eaſt-India* Company took Poſſeſſion of the Iſland (the *Portugueſe* having deſerted it) in the Year 1600, and held it till 1673 without Interruption, when the *Dutch* took it by Surprize. However, the *Engliſh*, commanded by Captain *Munden*, recover'd it again within the Space of a Year, and took three *Dutch Eaſt-India* Ships that lay in the Road at the ſame time. The *Hollanders* had fortified the Landing-place, and planted Batteries of great Guns there to prevent a Deſcent; but the *Engliſh* being acquainted with the ſmall Creek beforementioned, climb'd up to the Top of the Rocks in the Night-time, and, appearing the next Morning at the Backs of the *Dutch*, they threw down their Arms, and ſurrendred the Iſland without ſtriking a Stroke.

Aſcenſion Iſland.

The Iſland of *Aſcenſion* lies in eight Degrees South Latitude, two hundred Leagues and upwards North-weſt of *St. Helena*. This alſo was diſcover'd by the *Portugueſe*, on *Aſcenſion*-Day: But neither they, or any other Nation, have yet thought it worth the planting. The Iſland is eight or ten Leagues in Circumference; ſome of it pretty high Land, but very barren. There is ſcarce any Wood, Fruit-Trees, Plants, or Herbage upon it: However, the *European* Shipping uſually call here in their Way from *India*, and refreſh their half-ſtarv'd Crew with the Fleſh of Tortoiſes. Theſe Tortoiſes have Fins inſtead of Feet, and are three Times as big as a Land Tortoiſe. Abundance of them frequent that Iſland, and the Sailors going on Shore in the Night-time, will turn two or three hundred of them on their Backs before Morning. The Fleſh is white, and looks like Veal, being a very great Refreſhment to our Seamen after they have ſed a Year or two upon ſalt Meat, and perhaps have little or none of that left by that time they arrive here.

St. Matthew.

The Iſland of St. *Matthew* is ſituated in two Degrees of South Latitude, an hundred Leagues North eaſt of *Aſcenſion*; and is about eight Leagues in Circumference. This Iſland alſo was diſcovered by the *Portugueſe*, who planted it and kept Poſſeſſion of it for ſome time; but it now remains uninhabited, having very little to invite other Nations to ſettle there.

Iſlands in the Gulph of Guinea.

The four Iſlands in the Gulph of *Guinea*, between *Congo* and *Benin*, having been all diſcover'd by the *Portugueſe*, are ſtill in Poſſeſſion of that Nation.

Annabon Iſland.

1. *Annabon* is ſituated in two Degrees of South Latitude, two hundred Miles to the Weſtward of *Congo*, being about ten Leagues in Circumference, and mountainous. The Name of *Annabon*,

or

or happy Year, was given it when diſcover'd on *New-Year's-Day*, 1571. Moſt of the Inhabitants are *Negroes*, brought hither from the Continent of *Africa*, and their Deſcendants. There are alſo a mingled Breed, call'd *Malottoes*, and ſome *Portugueſe:* The Iſland abounds in Cattle, Hogs, Poultry, Oranges, and Cocoa-nuts, with *Indian* Corn and Rice; and has a convenient Road for Ships.

St *Thomas's* Iſland.

The Iſland of St. *Thomas* is ſituated juſt under the *Equator*, between forty and fifty Leagues to the Weſtward of the Continent of *Africa*, and thirty North-eaſt of *Annabon*, being of a round Figure, and about forty Leagues in Circumference; diſcover'd alſo in 1571, on St. *Thomas*'s Day. This is the moſt conſiderable Iſland in the *Gulph* of *Guinea:* It is well ſupply'd with Wood and Water, and there is a high Mountain in the Middle of it, almoſt always cover'd with Clouds. The Heat and Moiſture of the Air render it extremely unhealthful to Northern Conſtitutions; but the *Portugueſe*, *Negroes*, and *Malottoes*, who inhabit it, live to a good old Age: They have plenty of *Indian* Corn, Rice, and Fruits, and make a good deal of Sugar. The *Portugueſe* have introduced here the Cinnamon-tree; but are afraid of planting this, and the other fine Spices, in any Quantity, leſt the *Dutch* ſhould come and take their Country from them. For the *Hollanders* would make the World believe, that no Nation can have a Right to the fine Spices but themſelves. The chief Town upon the Iſland, is called St. *Thomas*, and ſometimes *Pavoſan*; containing five or ſix hundred Houſes, and is the See of a Biſhop.

Princes Iſland.

Princes Iſland is ſituated in two Degrees of North Latitude, about forty Leagues North-eaſt of St. *Thomas*, and as much to the Weſtward of the Continent of *Africa*, and is the leaſt of the Iſlands in the Gulph of *Guinea*. It affords Rice, *Indian* Corn, plenty of Fruits, Roots, and Herbs. They have no want of Cattle, Hogs, or Goats; but what they abound in moſt, is, Sugar-canes.

Fernando Iſland.

The Iſland of *Fernando Po*, is ſituated in three Degrees and an half of North Latitude, ten Leagues to the Weſtward of the Continent, being about thirty Miles long and twenty broad; and as it is inhabited by the ſame Sort of People, ſo the Soil produces much the ſame Kind of Plants, Corn, and Fruits, as the reſt of the Iſlands in the Gulph of *Guinea* do. The *Portugueſe* uſually call at ſome of theſe Iſlands for Refreſhments in their Voyages to and from *India*, and in their Paſſage from *Brazil* to *Africa*.

Cape Verd Iſlands.

The Iſlands of *Cape Verd*, ſo nam'd from their being ſituated over-againſt that *Cape* in *Negroeland*, tho' they lie upwards of an hundred and twenty Leagues to the Weſtward of it, were diſcover'd by *Anthony Noel*, a *Genoeſe*, in the Service of *Portugal*, *Anno* 1460, and are about twenty in Number; but ſome of them only barren Rocks uninhabited. The chief of them are, *Bravo*, *Fogo*, St. *Jago*, *Mayo*, *Bonaviſta*, *Sal*, St. *Nicholas*, St. *Lucia*, St. *Vincent*, St. *Cruz*, and St. *Antonio*, ſituated between fourteen and nineteen Degrees of North Latitude. The largeſt of them,

St. *Jago*, the chief of the *Cape Verd* Iſlands

St. *Jago*, is of a triangular Figure, fifty or ſixty Leagues in Circumference, rocky and mountainous; but the Valleys produce *Indian* Corn, Cocoa-nuts, Oranges, and ſuch other Fruits, Plants, and Roots, as are common to hot Countries. And here we are ſupply'd, in our Voyages to *India*, with Hogs, Goats, and Poultry in great Abundance. Their Seas alſo abound with Fiſh. The *Engliſh* Shipping, in their Voyages outward-bound to the *Eaſt-Indies*, uſually come to an Anchor within a Bay beneath a ruinous Fort, ſituate on a high Rock, near which there is a pretty large Village of *Portugueſe*, *Malottoes*, and *Negroes*; but the chief Town, which is a Biſhop's See, and the Reſidence of the Governor, is three or four Leagues from thence. None of their Towns or Forts are of any great Strength. The *Portugueſe*, who reſide here, are ſuch as Neceſſity or Poverty has driven hither, and live a lazy indolent Life, ſubſiſting on the Fruits and other Produce of the Country. Some have repreſented them as a treacherous and thieviſh Generation; but they do not ſeem to deſerve that Character in general. Indeed, it behoves every Man to be very much upon his Guard, that viſits diſtant Countries. We may eſcape nineteen times, and miſcarry the twentieth. We don't know in what Light their Prieſts, or other deſigning People, may have repreſented us Proteſtants. We know there are *Mahometans*, that think they do Honour to their Prophet, by inſulting and murdering of Chriſtians: And there are *Roman* Catholick Prieſts that teach their Votaries we are Infidels, and deſerve to be extirpated from off the Face of the Earth.

W. Ind. Ships raile in Salt at *Sal* and *Mayo*

It may be proper to obſerve, that abundance of *Engliſh* Ships call at the Iſlands of *Sal* and *Mayo*, in their Way to our Plantations in *America*, for Salt. A great Number of Grampus's, a Species of Whales, are met with here, ſeventy or eighty Foot in Length.

Gra mpus's or Whales

The *Canaries*, antiently call'd *The Fortunate Iſlands*, being ſeven in Number, are ſituated between the 27th and 29th Degrees of Northern Latitude, and between the 12th and 21ſt Degree of Weſtern Longitude, reckoning from the Meridian of *London*; the moſt Eaſterly of theſe Iſlands lying about fifty Leagues Weſt of *Cape Non*, in the Empire of *Morocco*.

The *Canary* Iſlands.

They are ſaid, by ſome, to be call'd *Canes*, or *Canaries*, from the great Number of Dogs found here when they were diſcover'd: Others derive the Name from the *Canaanites*, the Anceſtors of the *Carthaginians*, who are ſuppos'd to have firſt planted them; but whether either of theſe ought to be accepted, is much to be doubted. *Ferro*, the moſt Weſterly of the *Canaries*, is ſituate in twenty ſeven Degrees odd Minutes North Latitude, and, till lately, was made the firſt Meridian by moſt Nations. It is about ſeven or eight Leagues in Circumference, and high Land; but has ſome fruitful Vallies, that afford Plenty of Corn, good Paſture, Sugar-canes, and Fruits. But there are no Springs or Rivers; all the freſh Water the Natives have is preſerv'd in Ciſterns, or fetch'd from the neighbouring Iſlands. 2. The Iſland of *Palma* is ſituated ten or twelve Leagues North-eaſt of *Ferro*, and about the ſame Dimenſions, remarkable for affording large Quantities of the beſt Wine of all the *Canaries*, uſually call'd *Palm Sack*. 3. *Gomera*, another ſmall Iſland, is about ten Leagues from the Eaſtward of *Ferro*, ſaid to abound in Corn and delicious Fruits, but affords very little Wine. 4. *Teneriffe* is ſituate in twenty eight Degrees North Latitude, about twenty Leagues to the Eaſtward of *Ferro*, and is about forty Leagues in Circumference. This Iſland affords Corn, Wine, and Fruits, in great Abundance, tho' 'tis pretty much encumber'd with Rocks and Mountains; of which the moſt remarkable is the famous *Pico* of *Teneriffe*, ſuppoſed to be one of the higheſt Mountains in the World: Some Writers have made it fifteen Miles, others five Miles high perpendicular; but thoſe, who make it about two Miles in perpendicular Height, ſeem to come neareſt the Truth. Certain it is, that the upper

Palma

Gomera

Teneriffe

The Height of the

Part

Part of it, which is in the Form of a Sugar-loaf, and white, may be seen plainly above the Clouds, at an hundred and twenty Miles Distance.

Some *English* Gentlemen, that had the Curiosity to visit this amazing Mountain, relate, That having ascended the Mountain about a Mile, they were obliged to quit their Horses, and climb up the Hill on Foot; and, having travers'd a steep black Rock about a Mile, they found the Top of the Rock as flat as a Pavement; and here the Air was so cold, that they were forced to keep great Fires all Night. The next Morning they travelled from the black Rocks up that Part of the Mountain call'd the *Sugar-Loaf*, which is exceeding steep, and the Soil a deep white Sand, which made it very difficult travelling: That when they came near the Top of the Pike, the Wind was very high, and a continual Breathing of a hot sulphureous Vapour issued from the Hill, which scorch'd their Faces, and made them sore: That on the Top of the Pike was a large Bason or Caldron, about a Musket-shot over, and four Yards deep; the Brim whereof, on which they stood, not above a Yard broad: That within this Vase were small loose Stones, mixed with Sulphur and Sand, that sent out a hot suffocating Steam: That from the Pike, they had a clear View of the *Grand Canary*, *Palma*, *Gomera*, and even of *Ferro*, which is twenty Leagues distant from the Pike. They relate, that there was a great deal of Snow and Ice about two thirds of the Way up, but at the very Top none at all; which is ascrib'd to the Heat that issues from the Caldron and the adjacent Earth. They met with no Trees, Shrubs, or Bushes, in their Passage, only some few Pines.

A Physician, who had lived upon this Island twenty Years, declared it as his Opinion, That the whole Island, being mightily impregnated with Brimstone, did formerly take Fire, and blow up most Part of it, there appearing several Mountains of hugh Stones, calcin'd and burn'd, about the Island, especially in the South-west Part of it: That the greatest Quantity of Sulphur, lying about the Centre of the Island, occasioned the raising of the Pike to the present Height; for these calcin'd Rocks lie three or four Miles round the Bottom of it: That from the Pike, to the South-west, almost as far as the Shore, are still the Tracks of the Rivers of Brimstone and melted Oar that ran that Way, and have so ruined the Soil where they flowed, that it will produce nothing but Broom: That some of the calcin'd Rocks resemble Iron Oar, some Silver, and others Copper Oar: That in the South-west Part of the Island are high Mountains of a bluish Earth, and Stones which have a yellow Rust on them, like that of Copper and Vitriol; and that there are several Springs of vitriolate Water here.

Certain it is, that about *Christmas* 1704, several Vulcano's burst out in this Island of *Teneriffe*, which did not only occasion a most terrible Earthquake, but whole Towns were swallowed up, or overturn'd, with many thousands of People in them, by those Torrents of Sulphur and metallick Oar that issued from those Vulcanoes; and the finest Country in the World, great Part of it by that Means converted into a barren Desart.

The chief Towns in *Teneriffe* are, 1. St. *Christoval de la Laguna*; or, St. *Christophers of the Lake*; by some stil'd the Capital of the *Canary Islands*, and the Seat of the Viceroy. It stands partly on the Side of a Hill, and partly on a Plain, and is a pretty large compact Town, having two Parish-Churches, and several Convents, Hospitals, and Chapels: On one Side of the Town is a fine Plain of three or four Leagues in Length; and on the East a Lake, from whence it receives its Name. 2. *Oratava* is a Port Town on the North-west Part of the Island, the Residence of the foreign Consuls and Merchants: It has one Parish-Church, and several Convents and Chapels, and is a Town of the best Trade in the Island. *Oratava.* 3. *Santa Cruz* is a little Town, situated in a Bay on the East-side of the Island, defended by two Forts, and several Batteries of great Guns; which could not, however, prevent Admiral *Blake*'s destroying sixteen *Spanish* Galleons, lying here in the Year 1657. *Santa Cruz.*

5. The Island call'd *The Grand Canary*, lies about thirteen or fourteen Leagues South-east of *Teneriffe*, between 27 and 28 Degrees of North Latitude, and is about fifty Leagues in Circumference, being a more level and a more fruitful Country than that of *Teneriffe*. The chief Town, call'd *Palma*, and by some *Canaria*, is situated a little Distance from the Sea, in the North Part of the Island; said to be a large clean pleasant Town, and to enjoy a serene temperate Air: It is the Residence of the Governor, the See of a Bishop, and has a beautiful Cathedral, richly adorn'd, besides several other Churches and Convents. Their Groves echo with the Musick of those Birds we so much admire here, and from this Island call'd *Canary* Birds, being preferable to those of the same kind in *Germany*. *The Grand Canary.* Chief Town *Palma.*

6. *Forte Ventura*, or the Island of *Good Fortune*, situated between the *Grand Canary*, and the Continent of *Africa*, a long Island, stretching from West to East, but very narrow. It abounds in Corn, Fruits, Cattle, Fish and Fowl, but chiefly in Goats, which serve them for Food, and they drive a great Trade with their Skins. *Forte Ventura.*

7. *Lancerota* lies a little to the Northward of *Forte Ventura*, and is said to produce Plenty of all Things but Wine: It is one of the least in the *Canaries*, and has no Town of any Note in it: That which is the most considerable, bears the same Name with the Island.—Besides these, there are some other small Islands in these Seas; but Travellers have not thought them worth a particular Description. *Lancerota.*

These Islands were very properly call'd *The Fortunate Islands* by the Ancients; for, by the concurrent Testimony of Travellers, there never was a richer Soil, or a more agreeable Situation: There is nothing desirable in Life, but what is to be met with in this terrestrial Paradise. Corn, Wine and Oil, Flesh, Fish and Fowl, abound in them, and that the most exquisite in every kind: As to the Richness of their Wines, they are not to be parallel'd, as every one can testify, who has ever tasted of the genuine Canary and Palm Sack; and of these, 'tis computed, they do not send less than ten thousand Hogsheads annually to *Great Britain*. These Islands a perfect Paradise.

The Natives of these Islands generally enjoy a serene Sky and temperate Air; for, tho' they lie in a warm Climate, they are so constantly refreshed with Breezes from the Sea, that they are never sensible of pinching Cold, or rigorous Seasons. The poorest People here know no Want of Clothing, Firing, Fruits, or Wine: And if Fields, cover'd with a Variety of beautiful and fragrant Flowers, and the musical Notes of those Birds, which all the World admire, affords an agreeable Pleasure; these are what every Native of the *Canaries* enjoy. But still it must be confess'd, that they who have seen or heard of those terrible Vulcanoes and Earthquakes, those Rivers of Brimstone and melted Oar, that have swallow'd so many Towns and Villages, must ever live in Dread of the direful Catastrophe.

The first Discovery of these Islands.

These Islands, it is generally believ'd, were first discover'd and planted by the *Carthaginians*; and it is held by some, that the *Romans* also were well acquainted with them: But of this there is some Doubt; for the People of these Islands had no manner of Communication with the Continent for many hundred Years; and it is evident the *Romans* either despis'd Traffick, or had no Genius for it. The distant Parts of the World had not so long remain'd Strangers to each other, if the *Romans* had not unfortunately destroy'd the *Carthaginian* State, and discouraged all remote Discoveries. It is a strong Argument, that the *Romans* were never acquainted with the *Canary* Islands, that they lay unknown to the rest of the World for several Centuries after the Decline of the *Roman* Empire; and, on their being discover'd again in the 15th Century, there were found no *Roman* Antiquities: Nor had the Customs and Manners, or Language of the Inhabitants, any Resemblance to those of the *Romans*; but would much rather incline us to believe them descended from the *Egyptians*, or some other People of *Africk*. However that be, *John* King of *Castile*, having Intelligence that there were such Islands, employed *John de Betancour*, a *French* Gentleman in his Service, to take Possession of them, about the Year 1405; who succeeding in this Expedition, the Propriety of three of them was conferred on *Betancour* by that King, and he resided there all his Life-time as Sovereign of the *Canaries*; but the Posterity of *Betancour* afterwards reconvey'd them to the Crown of *Castile*, and the *Spaniards* remain in Possession of them to this Day.

The *Madera* Islands.

The *Madera* Islands are situated between 32 and 33 Degrees of North Latitude, and in 16 Degrees of Western Longitude, about an hundred Leagues North of the *Canaries*, and as many to the Westward of *Sallee*, in the Kingdom of *Fez*. The largest of them, call'd *Madera* from its being cover'd with Wood, is about forty Leagues in Circumference, consisting of fine rising Hills and fruitful Valleys, well watered by the Rivulets that fall from the Mountains; tho' abounding much more in Wine than Corn. They make several Sorts of Wine; one call'd Malmsey, a very rich Wine; a white Sort; and a third like Tent, not fit to be drank unmix'd; but of these they have no great Quantities. The *Madera* Wine we usually drink, and which this Island yields most of, is not very strong. The Climate here is more temparate than that of the *Canaries*; but they do not enjoy so clear a Sky, or that Plenty of Corn and Fruits: However, in one respect they are to be preferr'd to the *Canaries*, that they are not so subject to Vulcanoes and Earthquakes; and, 'tis said, no venomous Animal will live here. The chief Towns are *Funchal*, *Santa Cruz*, and *Manchico*. *Funchal*, the Capital, is situated in a Bay, at the South-east Part of the Island: It is the Seat of the Governor, a Bishoprick, and has a Cathedral and three Parish Churches it in, besides several Convents and Chapels. So bigotted are the *Roman* Catholicks here, that they will not allow a Protestant any Burial, without paying very dear for the Permission. And however pleasant the *Canary* Islands and *Madera* may be, the Inquisition, that reigns in both, must make them no very desirable Residence for any, but those who can resign their Consciences and Understandings entirely to the Direction of the *Jesuits*. The Town of *Santa Cruz*, is situated on the North-east Part of the Island; and that of *Manchico* on the South-west. The rest of the Natives live at their Plantations and Vineyards, that are dispers'd all over the Country, and make it look like one continued Garden.

Chief Towns. *Funchal*. *Santa Cruz*.

This desirable Island, according to most of our *English* Writers, was discovered by one *Robert Manchin*, or *Masham*, a Native of *Bristol*, and Captain of a Merchant-ship of that Port, in the Year 1344; but the Story is told so many different Ways, and has so much the Air of a Romance, that we cannot give much Credit to it. However that was, it seems to be agreed, that the *Portuguese* did not plant this Island, or send any Colonies thither, till the Year 1425, and that when they came thither, they found the Island covered with thick Woods, and without Inhabitants; but burning down the Woods, the Ashes render'd the Soil exceeding fruitful and proper for Vineyards, which have been cultivated with great Care and Industry ever since: Corn also yielded at first an Increase of sixty or seventy Bushels for one; but after the Virtue of the Ashes, with which the Ground was at first improv'd, was spent, it yielded but indifferent Crops of Grain.

The next in Magnitude of the *Madera Islands*, is that of *Porto Santo*, situate six or eight Leagues North-east of *Madera Proper*. It is about five or six Leagues in Circumference, and abounds in the same Kind of Wine and Fruits as the former.

The *Azores*, or *Western Islands*, are not properly *African*, but rather *European Islands*; but, lying in the same Sea with the *Madera's*, are sometimes described with them. However, as we have given an Account of them already in our Description of the Dominions of *Portugal*, [pag. 725, of this Work,] we shall not repeat any thing there said, but pass by them to the Continent of *America*, with which we shall next begin.

A Di-

A DESCRIPTION OF AMERICA:

CONTAINING,

Conjectures on its firſt Peopling; the Hiſtory of its Diſcovery by *Columbus*; the Conqueſt of the ſeveral Countries by the *Europeans*; the Perſons, Genius, Habits, Buildings, Manners, Laws, Cuſtoms, Religion, Policy, Arts, Manufactures, *&c.* of the Natives; with an Account of the preſent Diviſions and Sub-Diviſions of this New World; and the Vegetables, Animals, and Minerals that are to be found in each Province.

CHAP. I.

Of the firſt Peopling of America, *and of the Diſcovery of its ſeveral Countries by* Columbus, *and others.*

THE Continent of *America*, 'tis probable, extends as far as the Pole on the North; and is bounded by the *Atlantic* Ocean, which divides it from *Europe* and *Africa*, on the Eaſt; by another anonymous Ocean on the South; and by the vaſt *Pacific* Ocean, uſually call'd the *South-Sea*, which ſeparates it from *Aſia*, on the Weſt.

The Length of *America*, if we extend it but from eighty Degrees North to *Cape Horn*, which lies in fifty-ſeven and a half South, takes up one hundred thirty-ſeven and a half Degrees of Latitude; which, reckoning ſixty Miles to a Degree, makes the Length of *America* to be eight thouſand two hundred and fifty Miles; but if we allow ſeventy Miles to a Degree, which comes near the Truth, nine thouſand ſix hundred and twenty five Miles. The Breadth is not anſwerable to the Length; for what is diſcover'd of *North America*, is ſcarce four thouſand Miles broad; and *South America*, which is of a triangular Figure, is not ſo broad in any Place.

The North and South Parts are joined by the narrow *Iſthmus of Darien*, which divides the North from the *South Sea*, and is about ſixty Miles over in the narrowſt Place, between *Porto Bello* and *Panama*. So that when we thus divide *America* into North and South, it muſt not be underſtood, that the Equator makes this Diviſion; for what is denominated *South America*, extends twelve Degrees odd Minutes to the Northward of the Equator.

The *Spaniards*, on their Arrival in *America*, finding one great Empire eſtabliſhed in *North America*, which went under the Name of *Mexico*, and another in the South, ſtiled the Empire of *Peru*, they gave the Name of *Mexico* to their Northern Conqueſts, and the Name of *Peru* to their Southern Conqueſts.

The Sea which ſeparates *North America* from *Europe*, is generally about four or five thouſand Miles broad; the Sea which ſeparates *South America* from *Africa*, about two or three thouſand Miles over; and the Sea which ſeparates *America* from *Aſia*, generally about eight or nine thouſand Miles over.

The Antients Opinion of the Form of the Heavens and Earth.

The Antients generally imagin'd, that the Heavens conſtituted but one Hemiſphere, and that the Earth was flat and round as a Table, ſerving as a Baſis or Foundation to ſupport the fine vaulted Roof over their Heads. The Fathers laughed at thoſe few Philoſophers who believed the Earth to be globular, and ſurrounded by the Heavens equally on every Side; and nothing was more exploded by them, than the Notion of *Antipodes*. And even thoſe of the Antients, who believed both the Heavens and Earth to be globular, and that there might be another Continent; yet look'd upon it to be divided from us by ſuch vaſt Seas, that we could have no Communication with it; and

and that all about the *Equator*, whether in this, or any other Continent, was not habitable, on Account of the excessive Heats. In a Word, the Antients in general, were so far from knowing any thing of *America*, that they knew nothing even of *Africa*, or the *East-Indies*, to the Southward of the *Equator*.

The Antients never sailed round *Africa*.

Pliny indeed reports, that *Hanno* the *Carthaginian* sailed round *Africa*; but this evidently contradicts what he had said before, that the Countries under the *Equator* were not habitable.

Plato speaks of a vast Island beyond the *Atlantic* Ocean, equal in Dimensions to *Asia* and *Africa*, and of several intermediate Islands, which rendered the Passage short and easy thither; but then he tells us, those Islands were long since sunk, and covered with the Ocean. If we take his Testimony therefore intire, there was no such Land as *America* known in his Days: And indeed his whole Relation appears to be no more than a poetical Fiction, and his *Atlantic* Islands to have no other Existence than *More's Utopia*.

An Enquiry how *America* was first peopled.

All that we know certainly concerning the peopling of *America*, is, that it has been planted many hundreds, or rather thousands, of Years, from the Numbers of People found there in the Beginning of the fifteenth Century. But the Resemblance there is between the People of that Continent and this, and the Religion and Customs of the one and the other, demonstrate that we proceeded from one common Stock. The Stature, Form, and Features of the *Americans*, do not differ from ours; the Frame and Turn of their Minds are the same; and they retained a Tradition, that their Continent was gradually peopled from a small Number. They used Arms of the Form also as the Men of our Continent did, *viz.* Swords, Spears, Launces, Bows, Arrows, Slings, and Darts; only, as they had lost the Use of Iron, their wooden Swords were edged with sharp Flints, and their Spears, Arrows, and Darts, pointed with the Bones of Fish, or other Animals. However, they seemed Strangers to almost every Art and Science when the *Spaniards* came amongst them.

Probably Men first arrived there in *Carthaginian* Ships.

Part of the Western Coasts of *Africa*, and the *Canary* Islands, over-against, and not far from *America*, were planted by the *Carthaginians*, four or five hundred Years before our Saviour; and, it is probable, when they sent Ships to plant Colonies, they were crouded with Men, Women, and Children, as ours are that we send to the Plantations at this Day. Is it strange then, that some of these Ships should be driven to *America*, by the Winds which constantly blow from the Eastward, when it is not more than three Weeks Sail from *Africa*, or the *Canaries*, to that Continent? If such Planters were once driven from their intended Port, far to the Westward, and found it impossible for them to return, what could be more rational, than to run before the Wind, in Hopes of making some other Land? And, as we suppose them victualled, in order to plant and recruit some Colony, such Adventurers could not have less than three Weeks or a Month's Provisions on Board, which was sufficient to support them in such a Voyage.

If it be demanded how it happened, that no Shipping was ever driven thither, since the *Carthaginian* State flourished? It may very truly be answered, that no People have ever navigated those Seas, since the *Carthaginians*, till very lately; all the Discoveries and Plantations of the *Carthaginians* upon the West Coast of *Africa*, and in the *Canaries*, were lost and ruined upon the Conquest the *Romans* made of *Carthage*; neither did the *Romans* ever revive that Branch of their Navigation.

Another Circumstance to induce us to believe they are descended from the *Phœnicians*, or *Carthaginians*, is their imitating them in such of their religious Rites, as Nature or Reason could never have taught them. The offering human Sacrifices seems to have been almost peculiar to those Nations. The *Americans* also adored Mountains, Woods, Seas, and Rivers, and almost every Animal, as the *Africans* once did, and some of them actually do at this Day. And if we suppose that *America* was first peopled by Sea, it could be by no other Nation but the *Phœnicians* or *Carthaginians*, no other People having Fleets and Colonies on the Western Coasts of *Europe* and *Africa* in those early Ages.

It could not be peopled from *Asia*.

As to the peopling *America* from any Part of *Asia*; in the first Place, the Breadth of the *Pacific* Ocean is not less than eight or nine thousand Miles, twice the Breadth of the *Atlantic* Ocean. 2*dly*, The Winds, within the Latitude of thirty North and South, constantly blow from East to West, and in higher Latitudes are variable. 3*dly*, The *Chinese*, the only People furnished with Shipping in the *Eastern* Parts of the World, never affected to make long Voyages, or visit remote Regions; and it is very unlikely, that any of their Ships should be driven by Accident to *America*, because the Sea, that separates them, is so very wide, and the Winds always against those that would sail from *Asia* to *America*.

It could not be peopled by Land from North or South.

As for that Notion, That the People of the Continent went North about to *America* by Land, it scarce deserves mentioning; for we know that the Sea extends more than eighty Degrees to the Northward; and consequently, if *America* was peopled that Way, those who went thither must travel within ten Degrees of the Pole, which Parts are neither passable nor habitable. To the Southward also, our Mariners have sailed to near seventy Degrees; and consequently, if the two Continents are united in that Part of the Globe, it must be in too rigorous a Latitude for Men to travel that Way by Land.

Should it be admitted, that there was a Passage by Land from the Old to the New World, it is strange, that no Man ever returned again that Way from *America* to us. If it be objected, that the same Argument held good against those who suppose *America* was peopled by Sea; this is evidently a Mistake, because the Wind always sits fair for sailing from *Africa* to *America*, and contrary to those that would return from thence. As well as we understand Navigation at this Day, we find it very difficult to come back from *America* without sailing pretty far North or South, where we meet with variable Winds, and for the most Part Westerly.

Objection answered.

But there remains an Objection against the peopling of *America* by the *Carthaginians*; and that is, that they were destitute of almost all Arts and Sciences; nay, that they knew nothing of Ship-building, or the Use of Iron. To this it may be answered, that as the first Generation was probably worn out before any Iron Mines were discovered, and it is possible that none of those that arrived there might understand the digging, melting, or separating the Metals, if such Mines had been discovered; it is no Wonder, that in an Age or two, the Use of Iron was forgot, and consequently all Manufactures that depended on the Use of Iron; though the Arts of Spinning and Weaving, for which the *Tyrians* and *Phœnicians* were famous, were retained.

Another Circumstance which inclines us to think, that *America* was peopled by the *Africans* by Sea, is, that we found it better peopled in the Middle, between the Tropicks, than it was towards

wards the North or South; whereas, in our Continent, the most populous Places are, and the most considerable Empires have been, within the *Temperate Zone*, to the Northward of the Tropick of *Cancer*. Had the *Europeans* or *Asiaticks* gone North about to *America*, they would have first planted those Countries that lay neareſt the North, or at leaſt thoſe within the *Temperate Zone*, and not have choſen to fix the two great Empires of *Mexico* and *Peru* within the *Torrid Zone*, and in a Manner deſert the reſt of the Country.

The Objection that Animals could not paſs by Sea conſider'd.

Still it may be objected, that though Men might paſs firſt to *America* in Ships, it can never be ſuppoſed, that every Species of Beaſts, Birds, and Inſects, paſſed thither the ſame Way. To which we anſwer, it is equally improbable they ſhould travel thither by the Extremities of the North or South Pole: For it cannot be ſuppoſed, that Animals bred in hot Countries, would ever wander into frozen Regions; nay, it is a Queſtion, whether many of them would live in a cold Climate, if they were carried thither. Beſides, many of the hardieſt Animals, and the fitteſt for ſuch Journies, ſuch as Oxen, Mules, and Horſes, were none of them to be found in *America*. On the other Hand, ſeveral Species of Animals we find in *America*, never appeared in our Continent. If theſe at firſt paſſed from us to them, how comes it that none of the ſame Species are left here? The Difficulty remains equal, whether we ſuppoſe Animals paſſed from the one Continent to the other, by Sea or by Land; and our being ignorant how the *Americans* came to have ſome of the ſame Animals we have, can be no Objection to the Notion that *America* was peopled by Sea.

Of the Diſcovery of *America* by *Columbus*.

We proceed, in the next Place, to give an Account of our modern Diſcoveries to the Weſtward. *Chriſtopher Columbus*, or *Colon*, was a Native of ſome obſcure Village in the State of *Genoa*. He was put to School at *Pavia*, where he was taught Arithmetick, Navigation, Aſtronomy, Drawing, and Painting. From School he went to Sea, and was in ſeveral Engagements with the *Turks*, the *Venetians*, and other Nations; in one of which, the Ship he was in being burnt near the Coaſt of *Portugal*, he had the good Fortune to eſcape to Shore upon a Plank, and come to *Lisbon*; and afterwards made ſeveral Voyages with the *Portugueſe* to the North and South, and particularly to *Guinea*. While he was in the Service of the *Portugueſe*, he married a Wife of ſome Quality and Fortune, whoſe Father had been concerned in ſeveral naval Enterprizes, and was Governor of one of the *Madera* Iſlands. *Columbus* came into the Poſſeſſion of all his Father-in-Law's Charts, Maps, and Journals, which gave him the firſt Hint of making Diſcoveries to the Weſtward: From his Youth, indeed, he applied himſelf to the Study of Coſmography, Aſtronomy, and Geometry; and appeared to have a more than ordinary Paſſion to underſtand the State of all Countries, and to make new Diſcoveries; and was perpetually drawing Maps and Charts, in which he received great Encouragement.

Columbus had three Inducements to believe, that there lay a Continent in the *Atlantick* Ocean, not far to the Weſtward, and that this Continent was contiguous to, or rather Part of the *Eaſt-Indies*. 1. He obſerved, that *Marinus* had placed the *Eaſt-Indies* fifteen Hours to the Eaſtward of the Weſt Coaſt of *Africa* and *Europe*, (which was however a very groſs Miſtake;) and that as there could remain but nine Hours more between this Continent and that, in ſailing Weſtward, ſuppoſing that Space to be all Sea, which he hoped was a great Part of it Land, he concluded it would be no very long Voyage to the *Eaſt-Indies* by the Weſt. 2. It was the Opinions of ſeveral learned Men, both Antients and Moderns, that there was another Continent beyond the Weſtern Ocean, either very near or contiguous to the *Eaſt-Indies*, and that it was not very far diſtant from our's. Signior *Paul*, a Phyſician of *Florence*, with whom he held a conſtant Correſpondence, in one of his Letters, relates how rich and populous a Country *China* or *Cathay* was, and aſſures him, that the Voyage thither, through the *Atlantic* Ocean, could not be farther than the Voyage from *Portugal* to *Guinea*. In ſhort, *Columbus* computes the Diſtance between *Lisbon* and *China* to be about five thouſand Miles, in which he was out two Thirds: However, ſo far he was accidentally in the right, that he met with Land five or ſix thouſand Miles to the Weſtward. 3. A third Inducement was the Reports of ſome ſea-faring Men, who had uſed thoſe Weſtern Seas. A *Portugueſe* Pilot informed him, that being 450 Leagues to the Weſtward of *Cape St. Vincent*, he took up a Piece of carved Wood, which he gueſſed came from ſome Iſland to the Weſtward, the Wind having long ſat that Way: Another aſſured him, that he ſaw a Piece of carv'd Wood, drove by the Weſterly Winds on *Porto Santto*, one of the *Madera* Iſlands; and that there had been thick Canes driven upon thoſe Shores, ſuch as did not grow in this Part of the World. Others, that had ſailed to the Weſtward of the *Azores*, affirmed they had ſeen an Iſland in thoſe Seas. But his principal Encouragement to this Undertaking, was ſome Sea Charts and Journals of a Pilot that died at his Houſe in *Lisbon*, that appeared to have diſcovered ſome Land far to the Weſtward. His Son indeed rejects this Story of the Pilot's leaving him thoſe Intimations, as derogatory to his Father's Honour, who, he inſiſts, was the firſt Diſcoverer of that new World; and no Doubt he was the firſt that diſcovered it to any Purpoſe, which is an Honour that might ſatisfy his Deſcendants. However, it is not improbable, that a Ship ſhould have been driven a Fortnight or three Weeks' Sail to the Weſtward of its deſigned Courſe, and have diſcovered either the Iſlands or Continent of *America*, as it is ſaid this Pilot did.

But to proceed: *Columbus*, having ſailed a great while in the *Portugueſe* Service, firſt propoſed the finding out a Way to the *Eaſt-Indies* by the Weſtern Ocean, to King *John* of *Portugal*; and gave ſuch ſubſtantial Reaſons for the Attempt, that the King ſeemed to be convinced the Thing was feaſible; and, while the Affair was negotiating, privately diſpatched a Ship to the Weſtward, with Orders to find out if there was any ſuch Lands as *Columbus* ſuppoſed. But, whether the Commander wanted Courage or Capacity for ſuch an Undertaking, he returned without meeting any Thing to his Purpoſe, and laughed at the Conjectures of *Columbus*: At which he was ſo incenſed, that he went to *Spain*, diſpatching at the ſame Time his Brother *Bartholomew Columbus* to *Henry* VII. King of *England*. But his Brother being taken by Pirates, and not making the Diſpatch that was expected, *Columbus* opened his Deſign to *Ferdinand* and *Iſabella*, King and Queen of *Caſtile* and *Arragon*: And though his Brother *Bartholomew* afterwards reached *England*, and his Propoſals were accepted by King *Henry* VII. yet *Columbus* having concluded an Agreement with the Court of *Spain* before he was advertiſed of his Brother's Succeſs, *England* loſt the Honour and Profit of this important Diſcovery.

It appears from our own Hiſtories, that his Brother *Bartholomew* was at the Court of *England* in the Year 1480, and that he had before treated

with the King of *Portugal*, if not with *Spain*: For it is likely that his Propoſals were rejected by the *Spaniſh* Court at firſt, which occaſioned his applying to *England* and *France*; but Queen *Iſabella* encouraging the Scheme, about the Year 1484, he ſeems from that Time to have applied himſelf wholly to the *Spaniſh* Court. However, *Ferdinand* and *Iſabella* being engaged in the Wars with the *Moors*, he was put off till the Year 1492, when a Supply of Money was provided, and *Columbus* entruſted with three ſmall Ships for the Expedition. He alſo obtained a Grant to be Admiral of the *Weſtern* Seas, with the ſame Privileges as the Admirals of *Caſtille* and *Leon* enjoyed; that all civil Employments, as well as Governments, in the World to be diſcovered, ſhould be wholly at his Diſpoſal; and beſides the Revenues of the Poſts of Admiral and Viceroy, he ſhould enjoy a Tenth of all the Profits ariſing by future Conqueſts.

And now *Columbus*, whom for the future we ſhall ſtile Admiral, having equipped and victualled his Ships, of which the chief, called the *St. Mary*, he commanded in Perſon; this little Squadron, manned only with ninety Men, ſet Sail from *Palos* for the *Canaries*, the third of *Auguſt* 1492, and arrived at thoſe Iſlands the twelfth. One of the Ships having received ſome Damage, the Admiral remained there till the firſt of *September*, when he ſet Sail upon his grand Deſign. He had not ſailed a Fortnight in this wide Ocean, before his Men began to murmur at the Enterprize; for they obſerved the Wind conſtantly ſat from Eaſt to Weſt, and apprehended there would be no Poſſibility of returning, if they miſſed of the Land they were made to expect: But on the 19th, obſerving ſome Birds fly over their Ships, and on the 22d, Abundance of Weeds driving by them, they began to be better ſatisfied. However, continuing their Courſe ſtill ſeveral Days farther, and meeting with no Land, they mutiny'd again to that Degree, that they had almoſt agreed to throw their Admiral overboard, and return Home without him; when, fortunately for him, they ſaw more Birds, Weeds, Pieces of Board, Canes, and a Shrub with the Berries upon it, alſo ſwim by them. It was on *Thurſday* the 11th of *October*, 1492, about ten at Night, that the Admiral firſt diſcovered a Light upon the Iſland of *Guanahani*. About two in the Morning, the Ship called the *Pinta*, the beſt Sailor of the three, gave the Signal of Land, which was firſt ſeen when they were ſcarce two Leagues from the Shore, by one of the common Seamen; who had not, however, the Reward that was promiſed to the firſt Diſcoverer, becauſe the Admiral ſaw a Light on the Iſland the Night before.

The Day appearing, the Ships came to an Anchor near the Iſland, which they found to be populous, well planted, and watered with a great Lake. The Natives came down crouding to the Shore, and ſeemed aſtoniſhed at the Sight of the Ships; and the Admiral went on Shore in his Boat, with the Royal Standard; as did the other two Captains in their Boats, with their Colours flying. They no ſooner came on Shore but they kneeled down, and gave God Thanks for their Succeſs: After which, the Admiral ſtood up, and having rear'd the Royal Standard, called the Iſland by the Name of *St. Salvador*, taking Poſſeſſion of it in the Name of their Catholick Majeſties: After which, his People recognized him their Admiral and Viceroy, ſwore to obey him, and begged Pardon for their untractable Behaviour during the Voyage.

The *Indians* ſtood gazing at the *Spaniards*, without attempting to oppoſe them, while they were thus taking Poſſeſſion of their Country; and the Admiral ordered ſome Strings of Glaſs Beads, Caps, and Toys of ſmall Value, to be diſtributed amongſt them; at which they ſeemed infinitely pleaſed, and immediately hung the Beads about their Necks, teſtifying, by Signs, the Value they ſet upon theſe Preſents. They were all perfectly naked, of a middle Stature, and Olive Complexion. The principal Ornament about them, was a thin Gold Plate, in the Form of a Creſcent, which hung from the Noſe over the upper Lip: And the Admiral demanding by Signs, from whence they had their Gold, they pointed to the South and South-Weſt, where they gave him to underſtand, there were ſeveral large Countries repleniſhed with that Metal. The Admiral rowed in his Boats about the Iſland, to diſcover if there was any thing worth his ſettling there, being followed by the Iſlanders every where, who ſeemed to adore him and his People. From this Iſland, he ſailed to another of the *Bahama* Iſlands, which he called *St. Mary of Conception*; and, having viewed this, and ſeveral more of theſe Iſlands, he took ſeven of the Natives with him, and ſet Sail for the great Iſland of *Cuba*. Here they found ſome Houſes on the Shore, but the People all fled up into the Mountains on their Approach: Whereupon two *Spaniards* and two *Indians* were ſent up into the Country, who travelled about twelve Leagues within the Land, and came to a Town conſiſting of fifty large Timber Houſes, which contained about a thouſand People, who came with great Reſpect, and kiſſed the two *Spaniards* Feet, giving them boiled Roots to eat: Several other Towns they ſaw in their Journey, where they were hoſpitably entertained; but demanding of the Natives, if they had any Gold or precious Stones, they pointed towards the Eaſt, intimating, that in a great Country, called *Bohio*, there was Plenty of theſe Things. Whereupon the Captain taking twelve of the Natives of *Cuba* with him, ſet Sail the fifth of *December*, and arrived the next Day at the Iſland of *Bohio*, about ſixteen Leagues to the Eaſtward of *Cuba*; and obſerving the Country to reſemble that of *Spain* in ſeveral Particulars, he gave it the Name of *Hiſpaniola*, which it retains to this Day. Having ſent ſome *Indians* and *Spaniards* on Shore for Intelligence, the People at firſt abandoned their Houſes; but the *Indians* informing the Natives, that there was nothing to be feared from the *Spaniards*, they returned, and ſhewed them all imaginable Reſpect, offering them ſuch Food as the Country afforded. But what the *Spaniards* were moſt inquiſitive after, was the Place where they had their Gold from; and the People directing them farther Eaſtward, the Admiral made no long Stay at the Weſt End of the Iſland, but ſailed again along the North Coaſt, in Search of that precious Mineral. In which Voyage one of their petty Kings came on Board the Admiral, with two or three hundred Men, and they made mutual Preſents to each other: The *Indians* gave the *Spaniards* chiefly thin Gold Plates; and the Admiral returned them Beads, Toys, Carpets, and little Bells. A Night or two afterwards, the Admiral's Ship had the Misfortune to run a-ground, and could not be got off. The *Spaniards* had the good Fortune to ſave all their Goods, by the Aſſiſtance of the Cacique and his *Indians*. And to compenſate for the Loſs of his Ship, the *Indians* brought the Admiral a pretty deal of Gold, made into thin Plates, and informed him he would meet with a great deal more at *Cibao*, in the inland Country: Whereupon he built a Fort within a Harbour, which he called the *Port of the Nativity*, with the Timber of his wrecked Ship;

Ship; and leaving in it a Garriſon of thirty-nine Men, with Cannon, ſmall Arms, Ammunition, and other Neceſſaries, he determined to return to *Spain*, and give an Account of his Voyage.

The Admiral departed towards *Spain* the 16th of *January*; and meeting with a Storm the 14th of *February*, he loſt the Company of the other Ship, commanded by *Martin Pinzon*, about one hundred and fifty Leagues Weſt of the *Azores*: They all expected to have periſhed in this Storm, and went to their Prayers. In the Account *Columbus* gave of it to their Catholick Majeſties, he ſays, "I meditated on your Highneſſes good "Fortune, and conſidered, that though I were "dead, you might ſome Way reap the Fruits of "this Enterprize: As briefly as I could, there-"fore, I wrote a Narrative in Parchment of what "I had diſcovered, and that your Majeſties Sub-"jects were left in Poſſeſſion of it; which Writ-"ing, folded up and ſealed, I addreſſed to your "Highneſſes, promiſing a Reward of a thouſand "Ducats to him that ſhould deliver it to you "ſealed: Then I wrapped the Writing in an "oiled Cloth, and incloſed that in a Ball of Wax, "which I put into an empty Cask; and, having "bung'd the Cask up cloſe, threw it into the "Sea. Another Cask, with a Copy of the ſame "Writing incloſed in like Manner, I placed on "the higheſt Part of the Ship; ſo that if the Ship "ſunk, the Cask might ſtill remain above Water."

The Admiral, however, had the good Fortune to weather this Storm, and, on the 15th of *February*, made the Iſlands of *Azores*. Here finding an Hermitage dedicated to the Virgin *Mary*, he ſent one half of the Ship's Crew, to perform their Devotions there; determining on their Return to go himſelf thither, with the reſt of the Company: And having waited a whole Day in Expectation of his Men, he underſtood that they were made Priſoners in the Iſland. But giving the *Portugueſe* to underſtand, that this Outrage would occaſion a War between their *Catholick* and *Portugueſe* Majeſties; and that he would make Repriſals, and carry double their Number off the Iſlands, they conſented to releaſe the *Spaniards*; who reported, that the King of *Portugal* had ſent Orders to all Places under his Dominion, that they ſhould ſecure the Perſon of the Admiral by any Means whatever.

The Admiral ſetting Sail from the *Azores*, ſoon after met with another terrible Storm, not inferior to the former, which drove him, much againſt his Will, into the River of *Lisbon* in *Portugal*: However, he was received here, contrary to his Expectations, very hoſpitably. The King of *Portugal* ordered him to be furniſhed with all Manner of freſh Proviſions *gratis*, and wrote to him, congratulating his Arrival, and inviting him to Court. On his coming on Shore, the Nobility and Officers of State were ordered to attend him, and he was admitted to ſit covered in his Majeſty's Preſence. But the King intimated, he thought the Diſcovery belonged to him, as the Admiral had reſided moſt of his Life in that Kingdom: To which the Admiral anſwered, His Majeſty did not think fit to liſten to the Overtures he had made him; that he went out with the King of *Spain*'s Commiſſion, and had punctually obſerved his Orders, not to go to the *Portugueſe* Mines in *Guinea*. After two Days, his Majeſty diſmiſſed him with great Civility, and he arrived at *Palos* in *Andaluſia*, on the 13th of *March* 1492 3, making his Voyage to the New World, and back again, in ſeven Months and eleven Days. Here the People received him with a ſolemn Proceſſion and Thankſgiving for his Return, moſt of his Seamen belonging to this Port.

Their Catholick Majeſties being at *Barcelona* at this Time, when the Admiral drew near that City, all the Court went out to meet him, and he was received with the Honours due to a Sovereign Prince. Their Majeſties confirmed to him the Viceroyſhip of all the Iſlands and Continent to the Weſtward of the *Azores* and the *Cape Verd* Iſlands, which he either had, or ſhould diſcover and conquer; empowering him to appoint all Governors, civil and military, in theſe new diſcovered *Indies*; and Orders were given for the fitting out a Fleet immediately to plant and take Poſſeſſion of thoſe Countries; in which ſuch Diligence was uſed, that the Admiral ſet Sail again, with ſeventeen Ships and fifteen hundred Men, from *Cadiz*, the twenty-fifth of *September* 1493. He touched at the *Canaries* as in the firſt Voyage; and departing from thoſe Iſlands, made one of the *Caribbee* Iſlands, when they were between ſeven hundred and fifty and eight hundred Leagues from the *Canaries*. This Iſland he named *St. Dominica*, from its being diſcovered on a *Sunday*. He then ſailed to another Iſland, which he called *Marigalante*, which was the Name of his Ship; and then to another, which he called *St. Mary of Guadalupe*, at the Requeſt of ſome Friars, who belonged to a Monaſtery of that Name in *Spain*. He found a little Town here; but the Inhabitants were all fled into the Woods, except ſome Children. The next Day his People brought off two young *Indians*, who ſaid they were not Inhabitants of that Iſland, but of another called *Boriquen*: That the Natives of *Guadalupe* were *Caribbees*, or *Canibals*, and had taken them Priſoners. The ſame Day, ſix *Indian* Women fled to the *Spaniards*, for Fear of the *Caribbees*; but the Admiral cauſed them to be ſet on Shore again, giving them Glaſs Beads, Bells, and other Things, which he thought would ſtrike the Fancies of their Maſters. They were no ſooner landed, but the *Spaniards* ſaw the *Caribbees* take theſe Toys from them. After which, the Captives came running again to their Ships Boats, begging that the *Spaniards* would take them on Board, for the *Caribbees* would eat them. And accordingly the Admiral ordered them to be brought to the Fleet, with another young Man, and two Children, that made their Eſcape alſo from the *Caribbees*. At laſt the Admiral landed, and took a particular View of their Town, and found a great deal of Cotton, ſpun and unſpun, Looms to weave Cotton-Net-Hammocks, Abundance of Men's Skulls hung up, and Baskets of Bones. Theſe were better Houſes, and more plentifully furniſhed with Proviſions, than any he ſaw in his firſt Voyage.

Weighing Anchor, he ſail'd toward the Northweſt, and came to another Iſland, to which he gave the Name of *Montſerrat*, becauſe of its great Height; and the *Indians* that were with him, informed him, that it was depopulated by the *Caribbees*, who had devoured the Inhabitants. Sailing on further Weſtward, he ſaw abundance of other Iſlands; and met with a Canoo, having four Men and a Woman in it, who fought his Boat's Crew with their Bows and Arrows; and the Boat overſetting the Canoo, one of the *Indians* ſhot ſeveral Arrows as he ſwam in the Water. The *Spaniards* obſerved that the Men were caſtrated; and were told it was uſual for the *Caribbees* to geld their Captives, that their Fleſh might reliſh the better.

Before we proceed, let us conſider a little the Account theſe Diſcoverers give us of the *Caribbees*, whom they will have to be Canibals, or Devourers of human Fleſh. From the Beginning of the World, every People almoſt has look'd upon thoſe, who were ſituated at a Di-

ſtance

ſtance from them, as *Barbarians*; and, upon the firſt Diſcovery of them, aſcrib'd abundance of unnatural Cuſtoms to them, and amongſt the reſt, frequently that of being Devourers of human Fleſh. There are ſome Iſlands that lie in the Bay of *Bengal*, which we were aſſured were inhabited by Canibals, by the firſt Adventurers to the *Eaſt-Indies*; but, upon our better Acquaintance with them, they appear to be ſo far from eating human Fleſh, that they eat no Fleſh at all. Theſe People had as barbarous Notions of us, as we could have of them, or of any others we knew but little of. On the Coaſt of *Guinea*, the unhappy Captives have a Notion we buy them up to fatten, and then feed on them. On the firſt Diſcovery of *America*, there was ſcarce a Country or Iſland in that Part of the World, but we were told was repleniſhed with Man-eaters; but, now we are perfectly well acquainted with them, it is very certain there are no Canibals to be found, any more than *Amazons*, *Giants*, or other *Monſters*, which our firſt Voyage-writers deſcribe.

Beſides, no Traveller, or Writer of Credit, will take upon him to ſay he has ever ſeen that People, that made human Fleſh their ordinary Food. It might be true enough, that the *Caribbees* ſacrificed the Men they took from other Iſlands: They might fat them too, to make the Victims the more acceptable, as we find the beſt and fatteſt Animals were always made choice of for Sacrifice. But as to the *Indians eating* theſe human Sacrifices, or *making human Fleſh their common Food*; this might be an Addition of the unhappy Captives, who look'd upon their Maſters as capable of any Barbarity, after they had ſeen them ſacrificing Men. It was from the Report and Apprehenſions of theſe Slaves, that we received the Notion of the *Caribbees* being Canibals.

To return to our Hiſtory: The Admiral arriving at *Hiſpaniola*, found that all the People he had left in the Fort were dead: That ſome of them died a natural Death; others parted from their Company, and were deſtroyed by the *Indians*; and the reſt were defeated and ſlain by a Cacique who came down from the Mountains, notwithſtanding the Cacique the Admiral had enter'd into Alliance with in the firſt Voyage, did all he could to protect them. He underſtood alſo, that the Garriſon ſoon fell into Parties and Diviſions, and had led moſt abandon'd Lives, taking four or five Women a-piece, and ſome of them by Force; which, with their Attempts to diſcover the Gold the *Indians* were poſſeſs'd of, probably haſten'd their Ruin. The Admiral going to viſit the Cacique *Guacanagari*, the *Spaniards* Ally, was preſented by him with a String of Gold Beads, a Regal Crown of Gold, and three Calabaſhes full of Gold Duſt, amounting to about Two Pound Weight of Gold; in return for which, the Admiral gave him ſome Toys, and and glittering Trifles, which the *Indians* eſteemed much more valuable.

Having obſerved other Parts of the Iſland more convenient for ſettling a Colony, than that where he built the firſt Fort, he returned with his Fleet farther Eaſtward; and, near a Mountain he had named *Monte Chriſto*, finding a commodious Harbour near the Mouth of a River, and a Rock that was a good natural Fortification, he laid out the Plan of a Town, to which he gave the Name of *Iſabella*, in honour of the Queen of *Caſtile*: And, while one Part of his Men were buſied in building this Town, another Detachment was ſent to diſcover the Country of *Ciboa*, about three or fourſcore Miles to the Southward of it, where the greateſt Plenty of Gold was to be found, according to the Information of the Natives. Receiving Advice that *Ciboa* was generally a rocky Country, pretty well repleniſh'd with Rivers, in whoſe Sands were found a pretty deal of Gold Duſt; the Admiral went thither in Perſon, in order to build a Fort there that might command the Natives; having firſt ſent twelve of his Ships back to *Spain*, and ſo diſpoſed of the reſt as to prevent a Mutiny in his Abſence: For the Adventurers, when they found there was a great deal of Labour to be undergone, before they muſt expect to accompliſh their Ends, form'd a Conſpiracy againſt the Admiral, and had even laid a Deſign to run away with the remaining Ships, and return to *Spain*.

In the Expedition to *Ciboa*, the Admiral obſerves, that the Natives were under the greateſt Conſternation when they ſaw their Horſes. They did not think themſelves ſecure, even when there was a River between them and the Horſe; for they imagin'd the Creature could fly; and, perhaps, they took the Horſe and the Rider for one Animal.

Having put the Town of *Iſabella*, and the Fort of St. *Thomas*, which he had built in *Ciboa*, in a Poſture of Defence, and left a ſufficient Body of Troops in the Country, the Admiral determin'd to go upon new Diſcoveries: Whereupon he nominated a Council of his principal Officers, in which his Brother *James Columbus* was to preſide, in his Abſence, and then ſet ſail to the Weſtward for *Cuba*. In this Voyage he met with ſeveral good Harbours and Rivers, and found the Country to be very fruitful. He alſo diſcover'd the Iſland of *Jamaica*, to the Southward of *Cuba*; which he commends as a more populous, pleaſant, and fruitful Country, than either *Cuba* or *Hiſpaniola*; and relates, that it was inhabited by a warlike People, who attack'd his Men with their Bows and Arrows, and would not permit him to make a Settlement on the Iſland: Whereupon he return'd to *Cuba*, and thence to the Town of *Iſabella* in *Hiſpaniola*, without knowing whether *Cuba* was an Iſland or Continent.

While the Admiral was abſent, Don *Peter Margarette*, to whom he had given the Command of the Flying-Army, aſpiring after the ſole Command of the Iſland, and refuſing to obey the Council; finding he could not obtain his Ends, left the Country, and tranſported himſelf to *Spain*: Whereupon his Troops diſpers'd themſelves, and, committing great Outrages, ſeveral of the Caciques aſſembled their Forces in their Defence, and cut off a great many of the *Spaniards*; but the Admiral being return'd, aſſembled his ſcatter'd Forces, and, with the Aſſiſtance of the Cacique *Guacanagari*, ſubdued all the Country under the Obedience of his Catholick Majeſty; tho', 'tis ſaid, one of the *Indian* Armies that oppoſed him conſiſted of an hundred thouſand Men; and all the Admiral's Troops, that took the Field, amounted to no more than two hundred Foot, twenty Horſe, and twenty great Dogs. Having taken *Caunabo*, the moſt powerful Cacique of the Iſland, Priſoner, he ſent him to *Spain*. This Cacique acknowledg'd, that it was he that deſtroy'd the firſt *Spaniſh* Fort, call'd *The Nativity*, and put to the Sword above twenty of the Garriſon.

The Tribute the Natives of *Ciboa* agreed to pay the *Spaniards*, was a large Horſe-Bell full of Gold Duſt, for every Head above fourteen Years of Age, once a Quarter; and the reſt were to pay twenty-five Pounds of Cotten *per* Head every three Months. And now the *Spaniards* had no Enemies remaining in the Iſland; but ſuffer'd very much from the Unhealthfulneſs of the Cli-

mate,

mate, and their frequent Mutinies againſt the Admiral were ſtill more fatal to them, and retarded their making farther Diſcoveries for ſome time. And here it may be proper to take ſome notice of the Religion and Cuſtoms of the Natives, when the *Spaniards* firſt arrived at *Hiſpaniola*.

The Religion of the Natives of *Hiſpaniola* when Columbus arrived there.

Every one of their Kings, or Caciques, (who were very numerous) had a Houſe ſet apart for their Images, which they call'd *Cemi*'s: Theſe Images were either of carv'd Wood or Stone, and the Natives pray'd to them, and perform'd ſuch Acts of Worſhip and Adorarion as the Catholicks did to their Images in their Churches: Theſe Images bore the Name of their Fathers, Grandfathers, or other more remote Anceſtors: They ſhew'd more Devotion and Reverence to ſome than they did to others, and addreſs'd themſelves to different Images on different Occaſions. But all theſe they worſhipp'd as inferior Deities, and had a much greater Veneration for the Sun, of which Planet however they made no Image.

The Cacique ſeem'd to be Chief Prieſt of his Temple, as well as Sovereign of his People; and made uſe of many holy Cheats to keep his People in Awe, and draw Money from them; cauſing Anſwers to be given as from the Mouth of the Image addreſs to.

They had various Ways of diſpoſing of their Dead: Some they buried in Caves; others they burnt in the Houſes where they died; but their Caciques and great Men were embowel'd and dry'd.

After Death, they apprehended they ſhould paſs to ſome delightful Plains, where they ſhould meet with their Anceſtors, Kindred, and Friends, and enjoy all the Pleaſures that Food, Women, or the moſt charming Situation could afford. And, laſtly, they had Phyſicians amongſt them that adminiſter'd medicinal Herbs, Roots, and Plants to their Patients; but pretended to effect the Cure chiefly by Magick, or the Aſſiſtance of Demons.

Columbus, having ſettled the Government of the Iſland, and built three New Fortreſſes, to preſerve his Conqueſt, thought fit to return to *Spain*; for he found ſo many Ill Offices had been done him by his Enemies, that the Court of *Spain* neglected to ſend him any farther Reinforcements, to enable him to extend his Diſcoveries. He ſet Sail on the 10th of *March*, the Wind being directly againſt him, and made it the 9th of *June* before he came upon the Coaſt of *Spain*, being near three Months after his leaving the Town of *Iſabella*.

The Admiral, attending their Catholick Majeſties at *Burgos*, preſented them with ſuch Foreign Plants and Animals as he judg'd would be moſt acceptable to them, and with ſome Gold plate, and Gold-duſt, but in no great Quantities. He was in Appearance graciouſly received: But the Court were much diſappointed that they received little more than Trifles for all the Expence they had been at; they expected to have entered immediately on Mountains of Gold, and to have loaden their Ships home with it; whereas they could not yet hear of any Mines that were opened, and met only with ſmall Quantities of the Duſt that was waſhed down from the Mountains, or in the Sands of the Rivers. This, with the Practices of the Admiral's Enemies, who inſinuated that he was not equal to the great Work he had undertaken, very much abated the Zeal of the *Spaniſh* Court for ſupporting and enlarging their Diſcoveries in the New World.

The Admiral, after near two Year's Attendance at the Court of *Spain*, having, at length, procured ſix Ships, ſet ſail on the 30th of *May* 1498, for *America* again, and in his Way touch'd at the *Maderas*. He afterwards made the Iſland of *Fero*, the moſt Weſterly of the *Canaries*, from whence he bent his Courſe toward the Iſlands of *Cape Verd*. Here he touch'd again; and, having taken in ſome Refreſhments, held on his Courſe to the South-weſt, till he came into five Degrees North Latitude; but meeting here with Calms, and abundance of Thunder and Lightening, he was deterred from ſailing any further to the South, and bent his Courſe to the North-weſt till he came into ſeven Degrees North Latitude, and then he ſteer'd due Weſt; which Courſe having continued ſome Days, he diſcovered a large Iſland on the firſt of *Auguſt*, to which he gave the Name of *The Trinity*, which lies near the Mouth of the River *Oroonoko* in *South America*; and in a Day or two after, he made the Continent of *Paria* or *Guiana*, now called *Nue-Andaluſia*, lying about ſeven Degrees South of *Barbadoes*.

The Admiral going on Shore on the 5th of *Auguſt*, bartered away ſome Trifles with the Natives of *Paria*, and obſerved they were whiter than thoſe of *Hiſpaniola*; that the Men wore their Hair long, and had little Aprons and Caps of Cotton-Linen; that the Women wore little Gold-plates and Chains of Pearl about their Necks, but had no Aprons or Covering for their Nudities; and that they were generally a harmleſs inoffenſive People.

Having ſpent about a Fortnight upon the Coaſt of *Paria*, he ſet ſail directly for *Hiſpaniola*, and arrived at St. *Domingo*, a Town that his Brother had built, and ſo named in memory of their Father *Dominick*. The continual Labour and Watchings the Admiral had endured, made the Sight of *Hiſpaniola* very acceptable to him, where he hoped to have enjoyed ſome Eaſe and Satisfaction; but to his great Mortification he found the Iſland in the utmoſt Diſtraction: He had left his Brother his Lieutenant, and one *Francis Roldan*, a *Spaniard*, in the Quality of Chief Juſtice, who agreed pretty well for the firſt Year after the Admiral's Return to *Spain*; but there being no News what was become of him, and generally believed he was loſt, *Roldan* began to entertain Thoughts of ſetting up for himſelf, and expelling the Admiral's Brothers from the Iſland. He had made ſuch a Party among the *Spaniards* and *Indians*, as had very near occaſioned a general Revolt. It was with a great deal of Difficulty, therefore, that *James Columbus* preſerved Part of the Iſland under his Obedience, till the Admiral returned: Nor could he himſelf accommodate the Matter, till he conſented to confirm *Roldan* perpetual Chief Juſtice of the Iſland.

And now applying himſelf to the digging of the Gold Mines, he found ſuch Plenty of that Metal, that one Man frequently got five Marks of Gold in a Day's time. But in the mean time his Enemies appeared too hard for him in the Court of *Spain*, by the malicious Stories they tranſmitted thither. They repreſented him to the King, as ambitious, covetous, and tyrannical; that he had no true Notions of Government, and uſed both *Spaniards* and *Indians* as Slaves; that he poſſeſs'd himſelf of vaſt Treaſures, while he conceal'd the richeſt Mines from the King's Officers: His Majeſty therefore ſent over *Francis Bovadilla*, a *Spaniſh* Knight, to *Hiſpaniola*, to enquire into the Admiral's Conduct, giving him Authority to apprehend him, and ſend him to *Spain*, if he thought fit. He ſent a

Letter alſo to the Admiral himſelf, commanding him to obey this new Governor.

Columbus, on the Arrival of *Bovadilla*, ſurrendered himſelf upon the firſt Summons, believing that on his repreſenting his Caſe to the King and Queen of *Spain*, he ſhould be reſtored to his Command. But the inſolent *Bovadilla* made the moſt of his Commiſſion. He immediately took Poſſeſſion of the Admiral's Palaces, and all his Effects, and clapping him and his Brother in Irons, ſent them both Priſoners to *Spain*. However, their Majeſties no ſooner heard of the Admiral's Arrival, but they ſent Orders to releaſe him, and invite him to Court; aſſuring him that his Eſtate ſhould be reſtored, and he ſhould be continued in the Command of all he had diſcovered. But notwithſtanding *Columbus* had the Titles of Admiral and Viceroy of the *Indies* continued to him, he appears to have been actually deprived of his Government of *Hiſpaniola*, and another was ſent thither in his room; which the Admiral ſo much reſented, that he had determined to retire, and lead a private Life. But the King conſidering what Diſhonour the laying the Admiral aſide might reflect upon him, perſuaded *Columbus* to put to Sea again, veſted with the like Power he had conferred on him in his former Voyages.

Accordingly the Admiral ſet ſail from *Cadiz* with four Ships, from 50 to 70 Tun, and 140 Men, on the 9th of *May*, 1502. He arriv'd at *Martinico*, the 15th of *June*, and the latter End of the ſame Month came before St. *Domingo*, in *Hiſpaniola*, but was not ſuffered to enter that Port, tho' moſt of his Eſtate and Effects lay thereabouts, and he had repreſented to the Governor, that one of his Ships was much damaged, and he apprehended a Storm. However, he had the good Fortune to get into a little Creek in the Iſland, where he weather'd a very terrible Storm, in which *Bovadilla*, his great Enemy, and fourteen Ships loaden with Treaſure, and bound for *Spain*, periſhed.

Columbus, after the Storm was over, left the Coaſt of *Hiſpaniola*, and ſailing to the Weſtward, arriv'd at the Iſland of *Guayana*, in the Gulph of *Honduras*, where he met with a Canoo as long as a Galley, and eight Foot wide, made of one Tree; which being loaden with Merchandize, and having twenty-five Men, and ſeveral Women and Children on board, bound for the Coaſt of *Mexico*, he made them Priſoners: He found on board the Canoo ſeveral large Pieces of Cotton-Linen, Quilts, and quilted Waiſtcoats, without Sleeves, finely wrought, and dyed of ſeveral Colours. The Women wrapp'd themſelves up in Pieces of Cotton-Linen, or had Cloths of the Bigneſs of Handkerchiefs to cover their Nudities: There were found alſo on board the Canoo, wooden Swords, edg'd with Flints, and Hatchets made of Copper: They had alſo Bells, Plates, and Crucibles of Copper to melt their Metal in. Their Proviſions were Maize, or *Indian* Corn, ſeveral Sorts of Roots, and Cocoa-Nuts.

The Admiral having taken out of the Canoo ſuch Things as he lik'd, and given the *Indians* *European* Goods in return, he diſmiſs'd the Canoo, and all the People in it, except one old Man, whom he detained to inform him of the State of the neighbouring Continent, and to ſerve him for an Interpreter among the Natives. He learn'd, that to the South-eaſt of *Honduras* was a narrow Strait, that led to a vaſt Ocean, which the Admiral determined to ſearch out, that over that Sea he might find a Way to the *Eaſt-Indies*: But the Misfortune was, that the ſame Word which ſignified a Strait by Sea, ought to have been, on that Occaſion, interpreted an Iſthmus by Land. This Miſtake cauſed the Admiral an infinite deal of Trouble and Fatigue; for upon this Intelligence he returned to the Eaſtward, labouring againſt the Trade-winds and Currents, which conſtantly ſit to the Weſtward in the North Sea. The People of this Coaſt adorn'd their Necks, Ears, and Noſes, with thin Gold-plates; and thoſe hung at their Ears ſtretched them to ſuch a prodigious Size, that the Admiral gave the Coaſt of *Honduras* the Name of *De las Orejas*, or, *The Country of Ears*.

Sailing along this Coaſt to the Eaſtward, he came to a *Cape*, which he named *Gracias a Dios*; or, *Thanks be to God*; becauſe he was no longer obliged to ſtruggle againſt the Winds and Currents; for here the Coaſt bending to the South, he continued his Voyage without any Difficulty, by the Aſſiſtance of the Eaſterly Trade-winds. The People here were very jealous, that the *Spaniards* had ſome Deſign upon their Country, and came down armed, in great Numbers, as if they intended to diſpute their Landing: But afterwards, finding the *Spaniards* only wanted to trade with them, they became more tractable, and exchanged Cotton-Linen, and Plates of Gold, for ſome *European* Toys. But one of the Admiral's People taking out a Pen and Ink, and beginning to write down his Obſervations on the People and Country, the Natives immediately fled, and left all the Things behind them they had received of the *Spaniards*. It is remarkable alſo, that here the *Spaniards* met with ſeveral dead Bodies enbalm'd, and wrapp'd in Cotton Sheets, and ſo perfectly dry, that they had no manner of ill Scent.

The Admiral continuing his Voyage to the Eaſtward, came to a large commodious Harbour, to which he gave the Name of *Porto Bello*, which it retains to this Day. Here he met with a great many *Indian* Houſes well inhabited; and, on the Iſlands near the Shore, he found a great deal of *Indian* Corn, and other Refreſhments, from whence he gave thoſe Iſlands the Name of the *Baſtimento's*, or, *The Iſlands of Proviſion*. Here underſtanding that there were Gold Mines in the Province of *Veragua*, which lies to the Weſtward of *Terra-Firma*, he returned again to that Coaſt, where he met with ſuch ſtormy Weather, that it almoſt deſtroyed his Ships, and reduced his Men to Deſpair: But the Weather favouring him at length, he ſent ſome Men aſhore in Search of the Gold he had heard ſo much of, and they had the Satisfaction of gathering ſome Gold, at the Roots of Trees, and near the Surface of the Earth; which made the Admiral determine to ſettle a Colony in *Veragua*, and leave his Brother Governor of it.

Accordingly he built a little Town and Fort, in which he left his Brother, and a Garriſon of eighty Men, ſupplying them with Arms, Ammunition, and Proviſions: But before he ſet Sail, he ordered his Brother to make the Cacique of that Part of the Country, with his Family, and the principal Natives, Priſoners; which he did, and ſent them on Board the *Spaniſh* Ships: But moſt of the Priſoners jumping into the Sea, and making their Eſcapes, raiſed the whole Country upon the *Spaniards*; and killing ſome, and wounding others, obliged them to quit their new Settlement. After this unfortunate Rencounter, the Admiral ſet Sail in a miſerable ſhattered Condition, and arrived again at *Porto Bello*. From *Porto Bello*, he directed his North Courſe, and on *Midſummer-Day* arrived at *Jamaica*, his two remaining Ships ſo leaky, that they found it almoſt impoſſible to keep them above Water till they got

to

to Shore: Whereupon they run them both aground, in a small Creek, close together, about a Musket-Shot from Land, where they shored them up with Timber, and lived on Board them above a Year, trafficking with the Country People for Provisions.

In the mean time, the Admiral sent some of his Crew to *Hispaniola*, in open Canoes, to get Ships to carry him and his Company off. But the Governor, who was an Enemy to the Admiral, delayed sending Ships so long, that his People mutiny'd, and one Half of them went on Shore in the Island, where they committed great Outrages, till the Admiral fought them, and reduced them to their Duty by Force, many of the *Spaniards* being killed on both Sides in the Engagement. At length, the Admiral's People having fitted out a Ship, at his Charge, in the Island of *Hispaniola*, they came back to *Jamaica*, and brought the Admiral off, after he had spent above a Year there, in great Distress, and lain most of the Time Bed rid with the Gout. The Admiral arrived at *St. Domingo*, in *Hispaniola*, the thirteenth of *August*, 1504; and, having settled his Affairs in this Island, returned to *Spain*, where his Catholick Majesty received him, in Appearance, very graciously; but was contriving, at the same Time, to deprive him of most of the Advantages he had stipulated to allow him: For his great Patroness, Queen *Isabella*, was now dead, and most of the Court envied him the Wealth and Honour he had acquired. But, notwithstanding the strictest Scrutiny his Enemies could make, it does not appear that any thing was fixed upon him, that could sully his Character, unless it was his too great Zeal to serve the ungrateful *Spaniard*. But he, as well as the rest of the Popish World, it seems, was then of Opinion, that all Infidel Nations ought of Right to become Slaves to the Christians. These Notions he certainly went upon, or he could not, with any Colour of Justice, have subdued *Hispaniola*, and made the *Indians* Captives, who received him as a Friend.

And what was the End of all this mighty Discovery in Regard to himself? He was indeed, at first, highly caressed and honoured, his Family ennobled, and vastly enriched: But if we consider the infinite Hazards and Labours he underwent, and that he saw himself at last about to be deprived of the Reward of so many Years Toil; we cannot wonder it had an Effect upon his Health, which the numerous Hardships he had suffered had already greatly impaired: It is rather to be admired he struggled so long under a Train of Calamities, of which the Ingratitude of the *Spaniards* was not the least. This, it appears, sat heavy upon him; and being retired to the City of *Valadolid*, we find he there left this Life for a better, on the 20th of *May*, 1506. After his Death, indeed, his Catholick Majesty was so just to this great Man, as to bury him magnificently in the Cathedral of *Seville*, and to erect a Tomb to his Memory, with this Inscription: THAT COLUMBUS HAD GIVEN A NEW WORLD TO CASTILE AND LEON.

From this Relation it appears, that the Admiral in Person discovered the *Lucayo's* or *Bahama* Islands; the great Islands of *Cuba*, *Hispaniola*, and *Porto Rico*, with several of the *Caribbee* Islands; the Countries of *Paria*, and *Guiana*, in *South America*; and the Island of *Trinity*: That he also discovered *Yucatana*, the Province of *Mexico*, the Bay of *Honduras*, and all that Coast which runs South-East from thence, as far as *Porto Bello*, and the River or Gulph of *Darien*, and received Intelligence of that vast Ocean, which has since obtained the Name of the *South-Sea*: So that all who afterwards extended the Discoveries of the *Spaniards* in the New World, only improved what the great *Columbus* had begun; and yet one of them, *Americus Vesputius*, had the good Fortune to give his Name to that vast Continent.

Americus Vesputius the second Discoverer.

The Enemies of *Columbus* having given the Court of *Spain* an ill Opinion of him, they employed this *Americus Vesputius*, a *Florentine*, in the Year 1497, to improve and enlarge the Discoveries begun by that great Man: But however fortunate this Gentleman might be in making Discoveries, he gives the lamest Account of them, of any Man that ever was employed in such an Undertaking. He says, he touched at the *Canaries* in this Voyage, and, having sailed a thousand Leagues to the Westward, arrived at a Country situated in sixteen Degrees of North Latitude, which must be some of the *Caribbee* Islands: He sailed near nine hundred Leagues further Westward afterwards, and came to a Country, which, by the Latitude and Distance to the Westward, seems to be Part of *Mexico*. He did not attempt to make Settlements any where, but satisfied himself with having trafficked with some of the *Indians* for Trifles, and fought with others.

He made another Voyage in the following Year 1498; and sailing to the South-West, passed the *Equator*, and came to a Country in five Degrees of South Latitude; which, in all Likelihood, was *Surinam*, in the Province of *Guiana*. Here he traded with the Natives for Pearl, and some Gold, which they exchanged for Glass and Toys, and returned Home by *Antegoa*, one of the Leeward Islands.

Emanuel, King of *Portugal*, afterwards entertained *Americus Vesputius* in his Service; and, in *May* 1501, he sailed from *Lisbon* with three Ships; and, coming again upon the Eastern Continent of *America*, in five Degrees of South Latitude, he sailed afterwards along that Coast to the Southward, till he came into fifty-two Degrees of South Latitude, when the cold and tempestuous Weather obliged him to return Home. Thus having discovered a Continent in the New World, little inferior in Dimensions to that of the Old, he was so happy as to give his Name to the whole, which, from him, has ever since gone under the Name of *America*.

The next, or rather a Contemporary Discoverer with *Americus Vesputius*, was *Cabot*, an *Italian* also, or at least of *Italian* Extraction. This Gentleman was employed by King *Henry* VII. to find out a Passage to *China*, and the *East-Indies* by the North-West; and accordingly he set out from *England*, in the Year 1498, and sailed along the Continent of *America*, to 67 Degrees of Northern Latitude; but his Men murmuring at the Hardships they underwent in that cold Climate, he returned Home, bringing with him only some of the Savage Natives of those frozen Regions.

Thus have we seen the vast Continent of *America* discovered, from 67 Degrees North Latitude to 52 South, within the Compass of about ten Years; but the *Spaniards* did not penetrate far into the Inland Country, till some Years afterwards.

Vasco Nunnes Discoveries.

The next considerable Discoverer, was *Vasco Nunnes de Balboa*, who made an entire Conquest of *Cuba*, and found it to be an Island: Then he sailed to the River of *Darien*, on the Isthmus of *America*, where *Columbus* had attempted to make a Settlement, but was driven from it. Here *Vasco* built a Fort and Town, which he named *Sancta Maria del Antigua*, or *Old St. Mary's*; and cultivating a Correspondence with the Caciques thereabouts, they shewed him the Way to the *South-Sea*; and though it was not more than three or fourscore Miles from the one Sea to the other,

other, yet their Way lay over such craggy Precipices, and was incumbered with such thick Woods, that they travelled twenty-five Days before they came in Sight of the *South-Sea*: And there *Vasco*, upon the highest Mountain, erected Crosses, and took Possession of the Country for their Catholick Majesties; as he did soon after of the *South-Sea* itself, and of all its Coasts and Bays, for the Crowns of *Castile* and *Leon*, in the Year 1513: He afterwards erected the Fortress of *Panama* on the *South-Sea*, and fitted out a Fleet to make further Discoveries on that Ocean; for which Services the Court of *Spain* made him Governor of *Cuba* and *Panama*, and Admiral of the *South-Seas*. But the King of *Spain* sending over *Pedrarias*, Viceroy of *Darien* and the Continent, with a superior Command to that of *Vasco Nunnes*, the Viceroy took an Opportunity to pick a Quarrel with *Vasco*, and caused him to be put to Death under a Colour of Law.

The next great Discoverer and Conqueror, was *Fernando Cortez*, who began the Conquest of *Mexico* in the Year 1518; of which we shall give an Account in this Work. *Fernando Cortez's Discoveries and Conquest of Mexico.*

The famous *Magellan*, in 1520, discovered the *Streights*, to which he gave his Name, in *South America*; from whence he sailed through the *South-Sea* to the *East-Indies*, being the first Commander that attempted that Passage: His Ship surrounded the Globe, and returned safe Home, though he had the Misfortune to be killed in an Island of the *East-Indies*. *Magellan's Discoveries.*

The last Discoverers I shall mention in this Introduction, are *Francis Pizarro*, *Don Diego de Almargo*, and *Fernando de Luque*, who, in Confederacy or Partnership, undertook the Discovery of *Peru*, from *Panama* by Sea, in the Year 1525, and afterwards made a Conquest of great Part of that extensive Empire: Of all which Discoveries and Conquests, the Reader will meet with a proper Account in the following History. *Pizarro and his Discoveries and Conquests.*

CHAP. II.

A Description of Mexico; *its Situation and Extent; the Face of the Country; its Seas, Gulphs, Capes, Lakes, Rivers, Winds, Tides, Air, and Seasons.*

The Name.

THE Natives of this New World had no general Name for their Country when the *Spaniards* arrived amongst them; but the most considerable Empire in *North America*, went under the Name of *Mexico*, and that in the South, under the Name of *Peru*. *Americus Vesputius* had the Honour first of communicating his Name to the whole Continent, as has been observed already.

The Situation and Extent of *Mexico*.

Mexico, the first Country in *America* we shall describe, is bounded by *New Mexico* or *Granada*, and *Florida*, on the North; by the Gulph of *Mexico*, and the North Sea, on the North East; by *Terra Firma Proper*, in *South America*, on the South-East; and by the *Pacifick* Ocean, or *South-Sea*, on the South-West; and lies between seven Degrees and twenty-eight Degrees of North Latitude; and between the eighty-third and 116th Degrees of Western Longitude, stretching along the *South-Sea* two thousand Miles and upwards; and on the North Sea, and the Gulph of *Mexico*, more than fifteen hundred Miles: But the Breadth is very unequal; for upon the Continent of *New Mexico*, it is upwards of six hundred Miles broad; and in the Province of *Veragua*, at the narrowest Part of the Isthmus, it is very little more than sixty Miles broad; and the Form is so irregular, that it can only be comprehended by the View of a Map.

The Face of the Country.

Mexico is much incumbered with Mountains, for the most Part covered with Woods: A Chain of Hills, higher than usual, run almost the whole Length of it, from the South-East to the North-West: From these we descend to other Hills, on either Side considerably lower; and between the Hills, are many fine fruitful Valleys, but scarce any Plains of a considerable Extent. Which Way soever we turn our Eyes, the Prospect is bounded by Hills and Woods, till we come near the Seas: But the Lands near the Sea Coast, especially on the North Sea, are so flat and low, that they lie under Water great Part of the rainy Season. And upon these Morasses and Bogs, are Thickets of *Bambou* Canes, Mangroves, Thorns and Briars, so closely knit and interwoven, that it is almost impossible to penetrate them, without cutting a Way through with a Hatchet. There are, indeed, some sandy Bays, where it is tolerable landing; but there is much more of the Mangrove Land, where a Man must wade up to the Middle in Mud, before he can get to dry Ground. Beyond the Mangroves, indeed, we meet with fine Meadows, lying between little rising Hills; and near the Gulph of *California*, the Mountains come almost close to the Shore, and there is none of those Morasses or Mangrove Lands. The Mountains on the West Side of *Mexico* are most of them Vulcanoes, from whence Fire and Smoke are perpetually issuing. Upon these Mountains there is a great Variety of fine large Timber, and little or no Underwood; a Man may ride through them without any Difficulty.

The Seas of *Mexico*, are, either the Gulph of *Mexico* and the North Sea, or the *Pacific* Sea. In the Gulph of *Mexico*, lies the famous Bay of *Campeachy*, where the greatest Quantities of Logwood are cut. And between *Jucatan* and *Honduras*, is the Gulph of *Honduras*. The chief Capes in these Seas, are, 1. *Cape Condecaco*. 2. *Cape Catoch*. 3. *Cape Honduras*. 4. *Cape Cameron*; and, 5. *Cape Gratia Dios*. In the *Pacific Ocean*, are the Gulph of *Salinas*, or *Nicoya*, and the Gulph of *Amapalla*; and the Capes are, *Cape Blanco*, and *Cape Corientes*. *The Bay of Campeachy and the Gulphs of Honduras and Amapalla.*

The chief Lakes are, 1. that of *Nicaragua*, which has a Communication with the North Sea, and extends almost to the *South-Sea*: And, 2. the Lake of *Mexico*, in which the Metropolis stands. The principal Rivers, are, those which fall into the North Sea, and those which fall into the South Sea: Of the first are, 1. The North River. 2. The River of *Panuco*, or *Tompeque*. 3. The River *Alvarado*. 4. *Tobasco* River. 5. The River *Xagua*, and, 6. The River *Dara*. These Rivers are moderately large, and would be navigable for great Ships, if they were not choaked up with Bars of Sand at their Entrance. However, Boats and *The Lakes and Rivers.*

and small Vessels may enter them. The chief Rivers which fall into the *South-Sea*, are, 1. *Rosario*. 2. The River *Teguantipique*; and, 3. The River *Lempa*. As to hot Baths and medicinal Springs, *Mexico* abounds with them; especially those Places which lie near the burning Mountains.

In every Ocean, the Wind continually blows from East to West, between the Latitudes of thirty North and South; only to the Northward of the *Equator*, it inclines North-East, and to the Southward of the *Equator*, South-East; to which Rule there is only this Exception, That under the Line, and for two or three Degrees on each Side, the Winds are variable, and perpetually changing; and sometimes there is so little Wind, and such Calms, under the Line, that a Ship shall not sail a League in a Month's Time. However, upon every Coast almost, within the Latitude of thirty North or South, there are other periodical Winds and Storms, that return at certain Seasons of the Year, called *Munsoons:* And there are, during the fair Season, Land and Sea Breezes, which constantly take their Turns at stated Hours every Day, and particularly upon the North and South Coast of *Mexico*.

Munsoons, Sea and Land Breezes.

The Land Breezes begin here late in the Evening, and blow till six or seven the next Morning, when they die away insensibly; and from that Time, till near Noon, it is generally calm: About Noon, the Sea Breeze rises, and refreshes the Inhabitants, who would, otherwise, faint with Heat. The Forenoon therefore is much the hottest Time of the Day within the Tropicks. But the Land Winds are not hot in *Mexico*, as they are in the *East-Indies*, where they blow over a long Tract of burning Sand: On the contrary, the Winds which blow from the Middle of the Country, are colder than those that come from the Sea.

The rainy Season, which begins usually in *May*, and lasts till *September*, is introduced with Thunder and Lightening, Tornadoes and Hurricanes, when the Wind blows almost from every Point of the Compass: But the worst Weather is in *June* and *July*. There are also strong North Winds that blow in the Gulph of *Mexico*, and in the Bays of *Campeachy* and *Honduras*, between the Months of *October* and *March*, about the Full and Change of the Moon, and are most violent in *December* and *January*.

Storms.

As to Tides, there are no Places in the Ocean without them; but they rise highest, and run strongest, in narrow Channels, Bays, and Creeks, or up the Mouths of Rivers; and that on such Coasts as have no Bays or Rivers, the Tides are but weak, and scarce perceptible. As the Sun approaches either of the Tropicks, it carries wet Weather so far with it; and when it is farthest from either Tropick, then the Weather is fair under that Tropick. On the contrary, those People who live without the Tropicks, have their fair fair Weather when the Sun is nearest them, and wet Weather when it is at the greatest Distance from them. These Rains, which overflow all the flat Country, the Land and Sea Breezes, that blow alternately, and their numerous Lakes, render the Air cool, and make even the *Torrid Zone* habitable and pleasant. The coolest Part of the Year is in the Months of *July* and *August*, when the Natives really complain of Cold Morning and Evening, as they do in the succeeding Months till *February*; though the Weather then seems very moderate to a *European* Constitution. The hottest Time of the Year is in *February*, *March*, and the Beginning of *April*; for then the Sun is seldom obscured by Clouds, the Waters are dry'd up, and it is very difficult to meet with fresh Water in some Places.

Tides.

Wet and dry Seasons.

Temperature of the Air.

The chief Season for sowing, or rather planting, their *Indian* Corn, though it will grow and come to Maturity at any Time almost, is in *May* and *June*; and they reap it in *October*, when the Rains are over. Their Trees are ever green, and their Fruits blossom and ripen almost all the Year round.

Seed-Time and Harvest.

CHAP. III.

Of the Provinces Mexico *is divided into, its Subdivisions, and chief Towns, with their publick and private Buildings and Furniture.*

Provinces.

MEXICO, or *New Spain*, is divided into three Audiences. 1. the Audience of *Guadalajara*, or *New Galicia*. 2. the Audience of *Mexico*: And, 3. the Audience of *Guatimala*.

Guadalajara Audience.

The Audience of *Guadalajara*, is bounded by *New Mexico* on the North-West, by the Gulph of *Mexico* on the East, by the Audience of *Mexico* on the South-East, and by the *South-Sea* and the Gulph of *California* on the South-West; and is subdivided into the following seven Provinces; *viz.* The Province of *Guadalajara Proper*; which is a plentiful Country, and hath several Silver Mines in it. The chief Town is *Guadalajara*, situated on a River of the same Name. It is the Capital of the whole Audience, the Seat of their Courts of Justice, and a Bishop's See. There are several Churches in it besides the Cathedral, and some Monasteries and Nunneries. 2. The Province of *Zacatecas*: The chief Towns whereof are, *Zacatecas*, situated about fourscore Leagues North-West of the City of *Mexico*; a Town in which the *Spaniards* keep a good Garrison: *Nombre de Dios*, a large, populous Town; and *Durango*, situated at the Conflux of several Rivers. The East Part of this Province has Plenty of Corn and Fruit, and the West is no less famous for its Silver Mines. 3. The Province of *New Biscay*: The chief Towns whereof are, *St. Barbara*, and *St. John's*: This Province also is rich in Silver Mines. 4. The Province of *Cinoloa*: The chief Town whereof, is *Cinoloa*. In this Province are rich Pasture Grounds, well watered, and great Plenty of Cotton. 5. The Province of *Culiacan*: The chief Town whereof is *Culiacan*. 6. The Province of *Chametlan*: The chief Town whereof is *St. Sebastian*, situated on a River of the same Name. This Province hath both Gold and Silver Mines in it. 7. The Province of *Xalisco*: The chief Towns whereof are, *Xalisco*, situated near the *South Sea*; *Compostella*, situated also near the *South-Sea*, and a rich Town; and *Santa Peaque*, where the *Spaniards* of *Compostella* keep a great many Hundreds of Slaves, that work in their Silver Mines.

Guadalajara Province.

Zacatecas Province.

New Biscay Province.

Cinoloa Province.

Culiacan Province.

Chametlan Province.

Xalisco Province.

Mexico Audience

The Audience of *Mexico* is bounded by that of *Guadalajara* on the North-West, by the Gulph of *Mexico* on the East, by the Audience of *Guatimala* on the South-East, and by the *South-Sea* on the South-West: And contains nine Provinces, *viz.*

Mexico Proper.

1. The Province of *Mexico Proper*; which is said to exceed all the Provinces of *America*, in spacious Valleys, arable Lands, Pasturage, Variety of Fruits, Plenty of excellent Fish, and Trade, both Foreign and Domestick. The chief Towns

Mexico City.

are, 1. *Mexico*, the Metropolis of the whole Viceroyalty now, and anciently of the Empire of *Mexico*, situated in a spacious Lake, that lies on the East Side of a Valley, about fourteen *Spanish* Leagues in Length, seven in Breadth, and upwards of forty in Compass; being surrounded by very high Mountains on all Sides.

The Town is a perfect Square, each Side half a League. There is a great Square in the Middle of it, from whence the Streets run quite through the Town in a direct Line, crossing each other at Right Angles. They are all wide, and well paved, but generally dirty. The Town stands, great Part of it, upon a Bog or Morass; and there are so many Rivers that fall from the Mountains into the Lake, that the Town is often in Danger of being overflowed, many of the Houses and Inhabitants having been actually swept away by Floods. By Reason of this Situation, the natural Strength of the City is great, there being no approaching it but by five Causeys that have been made between the City and the main Land. The Churches and Houses are built of Stone or Brick, three Stories high, where the Ground will bear it. *Mexico* is an Archbishoprick; and there are in it, besides the Cathedral and Parochial Churches, twenty-nine Monasteries, and two and twenty Nunneries; and it contains, as is computed, about one hundred thousand Inhabitants. But the *Spaniards* do not make a tenth Part of the Inhabitants; the Bulk of the People being Blacks or Mulattoes: For there having been Abundance of Black Slaves brought thither, who, by one Means or other, obtained their Freedom, and married with the Natives, their Descendants are very numerous. There is also a strange Mixture of *Spanish* and *Indian* Blood. Their Churches and Monasteries are proportionably rich and splendid, and their Revenues surprisingly great. The Cathedral is built in Form of a Cross, lofty and spacious; the Painting, Gilding, and Carving exquisite; and it contains Abundance of fine Altars and Chapels on each Side, the High Altar standing in the Middle of the Choir. The Revenues belonging to it are equal to the Beauty and Magnificence of the Buildings. The Archbishop's constant annual Revenue, (besides casual Fines, which amount to near as much) is near fifteen thousand Pounds Sterling *per Annum*; and the inferior Ecclesiasticks, Officers, and Attendants, have in Proportion. All the Ecclesiasticks belonging to this Church are three hundred in Number; and the entire annual Revenue of this Cathedral amounts to three hundred thousand Pieces of Eight, each Piece four Shillings and six Pence *English*.

What is most remarkable besides in *Mexico*, is the spacious Market Place, or Square in the Middle of the Town; on one Side whereof runs a Cloister, under which are some of the richest Shops in the World; and on the other, stands the magnificent Palace of the Viceroy, built about a large Square; the principal Front not inferior to that of *Naples*, in which the Courts of Justice are held. The Palace of the Marquis *de Valle*, the Successor of *Cortez* who conquered *Mexico* is built on the Ground where one of the Palaces of the Emperor *Montezuma* stood, and admired for its Dimensions and Structure.

There are in *Mexico* several Hospitals richly endowed; one for young Maids that are Orphans, who are maintained handsomely while they live single, and allowed five hundred Pieces of Eight each when they marry; another for those who have been unfortunate in venereal Encounters, which is a royal Foundation; and there is a third Hospital only for sick Priests. In this rich City there are a Multitude of wretched Objects; but none poorer than the *Spaniards* themselves, who are above working, though not above thieving.

The several Trades have their respective Streets or Quarters. There is a spacious Street, where the Goldsmiths expose their Goods to Sale; and here are to be seen the Value of many Millions in Gold, Silver, and Jewels. The Street where the Mercers expose their Silks, has a very grand Appearance; and the Street where those Tradesmen reside that deal in Brass, Steel, and Iron Ware, is very long and spacious: But the Street inhabited by the Nobility, Gentry, and great Lawyers, excels all the rest in Magnificence. Here are no Tradesmen's Shops intermixed, and here stands the Marquis *de Valle*'s fine Palace.

There is also a pleasant Park, well planted, and adorned with Fountains and Water-Works; whither the Quality of both Sexes, and the gay Part of the Town, resort every Evening. Several Hundreds of Coaches are frequently seen here, with numerous Retinues of black Slaves, in the richest Liveries. Another Diversion of the Citizens is fishing in Boats upon the Lake, whither they carry Wine and cold Provisions to regale themselves. This Lake is about five Leagues in Length, from North to South; but the Breadth is very unequal; the greatest something more than four Leagues; but the North End scarce half so broad. North of this Lake there are three others, which have a Communication with it by Rivers or Canals; and on the South there are two other Lakes, divided from it only by a Causey. The Waters of these Lakes are not fit for all Uses; one of them is so salt, that they make Salt of the Waters: And the Water they drink is brought from a Mountain that lies a good Distance from the Town, by a spacious Aqueduct. The Neighbourhood of *Mexico* is rendered extremely pleasant, by the numerous Palaces, Country-Seats, Monasteries, and Villages, either on the Islands, or on the Banks of the several Lakes.

The Lakes of Mexico.

Acapulco, a Sea Port Town

The second Town in *Mexico Proper* is *Acapulco*, a celebrated Port, about two hundred and forty Miles to the Southward of *Mexico*. At this Port all the Merchandize of *Europe* and *America* is ship'd for *China*, the *East-Indies*, and *Peru*; and here the Ships annually arrive with the Merchandize of those Countries; which makes the Fair that is held here at that Time one of the greatest in the World. But though it is then crowded with wealthy Merchants, it has at other Times the Appearance of a mean Village. Except the Castle and the Harbour, there is little worth Notice; the Town consisting of only two or three hundred thatched Houses, inhabited by Blacks and Mulattoes; a religious Cloister or two, and an Hospital. The *Spaniards* therefore, and even the Governor himself, desert the Place as soon as the Fair is over. The Harbour indeed is an excellent one, very secure and spacious. The Governor of the Castle, who is the chief Civil Magistrate in this Part of the Country, makes his Post worth twenty thousand Pieces of Eight *per Annum*, arising chiefly from the Profits of the Fair. The Comptroller of the Customs makes little less; and the Parson of the Place, whose stated Revenue is no more than one hundred and

eighty

eighty Pieces of Eight, makes fourteen thousand frequently; for he extorts most extravagant Fees from the Friends of such rich Merchants as die there. Two Leagues to the Southward of this Place is another Port, called *Port Marquis*, where Shipping sometimes puts in. At *Pachuca* the Silver is refined, and cast into Pigs or Bars, fit for Transportation.

choacan 2. The Province of *Mechoacan* hath Mines of *ovince.* Gold, Silver, and Copper; and produces Cotton and Cocao Nuts, good Corn and Pasturage; and, being well water'd, is esteem'd one of the most pleasant and healthful Provinces in the Audience of *Mexico*. The chief Towns are, 1. *Mechoacan, the Capital*, about an hundred and fifty Miles to the Westward of *Mexico*; a Bishop's See, Suffragan to the Archbishop of *Mexico*. 2. *Colima*, said to be rich and spacious, and to stand upon a River in one of the most pleasant and fruitful Valleys of this Province. 3. *Navidad*, or the *Port of Nativity*, situate a little to the Westward of *Colima*, where the *Spaniards* build some of the largest Ships they have in the *South* Sea.

nuco 3. The Province of *Panuco* has some Silver *ovince.* Mines; is tolerably fertile on the South; and the *Spaniards* used to make a great deal of Salt in it. The chief Towns are, 1. St. *Lewis de Tampice*. 2. St. *Estevan Puerto*, the Capital of the Province. 3. St. *Jago de los Valles*, situated five Leagues South-west of St. *Estevan*, which is taken notice of for the Salt-works near it, and the Garrison the *Spaniards* have there to awe the Natives. 4. St. *Lewis de Potosi*, an Inland Place, probably named *Potosi* from a Silver Mine near it, resembling that of *Potosi* in *Peru*.

laxcala 4. The Province of *Tlascala*, or *Los Angelos*, is *rovince.* the best peopled by *Indians* of any in *Mexico*; the Natives having been well used by the *Spaniards*, on account of their joining *Cortez* in his Conquest of *Mexico*. It is a plentiful Country, abounding in Sugar, Corn, Cattle, rich Pastures, Venison, and Wild-Fowl: Here are also some Silver Mines, Copperas, Allum, Liquid Amber, and fragrant Gums; with abundance of Cochineal. The Province is also well water'd with Rivers, the chief whereof is that of *Zahmah*, or *Zacadula*. The chief Towns are, 1. *Tlascala*, situate twenty Leagues to the Eastward of *Mexico*: Once a large populous Place, Capital of the Province; but now dwindled to a Village. 2. *Puebla de los Angelos*, or the *City of Angels*, situate in a fine Valley, twenty-five Leagues to the Eastward of *Mexico*. The Buildings chiefly of Stone, and the Form like that of other *Spanish* Towns: A spacious Square in the Middle, from whence run the principal Streets in a direct Line. The great Square is encompassed on three Sides with a stately Piazza, under which are the Shops of the principal Tradesmen; and on the fourth Side of the Square is the Cathedral, with a most beautiful Front. This is, in every Respect, a finer Square than that of *Mexico*. The Streets also are much cleaner; and there are a great many beautiful and magnificent Parochial and Conventual Churches, with several rich Monasteries and Nunneries. This fine Town is the See of a Bishop, Suffragan to the Archbishop of *Mexico*. The People of it in general are exceeding wealthy; tho' the Laity, in this Part of the World, cannot pretend to vie with the Clergy, either in Estates or Influence. 3. *Vera Cruz*, or *Ulua*, situate about sixty-five or seventy Leagues South-east of *Mexico*, in a barren sandy Plain; but considerable upon account of an excellent Harbour, and also on account of the *Flotilla*'s resorting hither to receive the Gold and Silver found in the Mines of *Mexico*; and its being a Mart for all manner of Merchandize and rich Goods that are brought hither from *China*, the *East-Indies*, *Peru*, and *Europe*. It extends itself from East to West, being much longer than broad; but not more than half a League in Circumference. The Place is very poor, being inhabited by *Blacks* and *Malottoes*, and some few *Spaniards*; unless when the *Flota* is there, and then vast Multitudes resort thither from all Parts. It was near this Place, at *Old Vera Cruz*, that *Cortez* landed, when he enter'd on the Conquest of *Mexico*; but the old Town, not having so commodious an Harbour, was deserted.

5. The Province of *Guaxaca*, or *Guaxata*: The chief Towns of which are, 1. *Spirito Sancto*, situate at the Foot of certain Mountains near the *South* Sea. 2. *Guaxata*, the Capital, situate in a fine Valley; a Bishop's See, and a rich well-built Town. 3. *Guatulco*, or *Aquatulco*, once a good *Spanish* Town; but, having been frequently plunder'd by Pirates, totally deserted now; and only mention'd for its excellent Harbour. And 4. *Tecoantipeque*, a well-built Town; but which has been plunder'd more than once by the Buccaneers. The Air of the Province is good, and the Lands fruitful: They have great Numbers of Horses, Mules, Sheep, and Oxen; and, abounding in Mulberry-trees, make more Silk than any Part of *Mexico*. Here are also rich Mines of Gold and Silver, and Gold Sands in several of their Rivers. It produces Cassia, Cochineal, Corn, Cotton, Sugar, Cocoa-Nuts, Plaintains, and a Variety of other Fruits. The Province has several fine Valleys in it, particularly that of *Guaxaca*, which is sixteen Leagues in Length, and full of Villages. *Guaxaca* Province.

6. The Province of *Tabasco* was heretofore deem'd a Part of *Jucatan*. As most Part of this Province lies on the Bay of *Campeachy*, where the Logwood grows, the Land is generally so flat and low, that it remains under Water great Part of the Year. The Logwood-cutters work in the Water usually up to their Knees, when they fell those Trees; and they can scarce find a dry Piece of Ground to build their Huts on. However, farther up in the Country are fine Meadow-Grounds; then gentle rising Hills; and higher Hills beyond them, on which grow Cedar, Brazil-Wood, and other good Timber. In the Valleys between the Hills, they have *Indian* Corn, Rice, Barley, and all manner of Garden Stuff; and the *Spaniards* have introduced Grapes, Figs, Lemons, Oranges, and other *European* Fruits: Here are also found Deer, and a Species of wild Hogs, proper to *America*, and almost all Sorts of *European* Cattle. There is not so much as an *Indian* Village, much less a *Spanish* Town, within four or five Leagues of the Coast, in the Bay of *Campeachy*, for several hundred Miles. It is, however, very pleasant sailing up the River *Tabasco*, the Banks being planted with Cabbage-trees an hundred Foot high, and with the largest Cotton and other Timber-trees, that are to be met with anywhere. Eight Leagues up the River, the *Spaniards* have a Breast-work, and a small Guard to watch the Buccaneers, who sometimes venture up, and have actually plunder'd the Town call'd *Villa de Mosi*, which lies four Leagues higher than the Breast-work, and seems to be the chief Town in the Country. Thus far the Ships come up with *European* Goods in the Months of *November* or *December*, and stay here till *June* or *July*, taking Cocoa and other native Commodities in return. All the Merchants and Tradesmen in the Country resort hither at *Christmas*, which very much enriches the Place. Here is also the Town of *Istape*, lying four Leagues beyond *Villa de Mosi*; and *Tabasco* Province.

said to be a Town of pretty good Trade; and a flourishing Town call'd *Halpo*, also higher up the River of *Tabasco*.

Yucatan Province.

7. The Province of *Yucatan*, or *Yucatan*, is a Peninsula, situated in the Gulph of *Mexico*, between the Bays of *Campeachy* and *Honduras*: It is generally flat low Land, and has scarce any Hills, unless in the Western Part of it, near the Isthmus: It is now thinly inhabited, especially near the Coasts; tho' it was very full of People before the *Spaniards* destroy'd the Natives. The Country is not agreeable to *European* Constitutions, the Air being excessive hot, and the Lands near the Coast frequently under Water. The chief Produce of the Country is Cotton, Salt, and Logwood; and the *Indians* employ themselves pretty much in Fishing. The only *Spanish* Town on this extensive Coast is *Campeachy*, situate in a Bending of the Land, but open to the Sea; and, being built of Stone, and surrounded with a good Wall, makes a fine Appearance: It has a Citadel for its Defence; notwithstanding which, it has been twice taken by the Buccaneers. There are two Inland *Spanish* Towns of some Note in *Yucatan*, namely, *Merida* and *Valladolid*.

Chiapa Province.

8. The Province of *Chiapa* is an Inland Country, mountainous, but well wooded and water'd, and has several fruitful Valleys, where they feed great Herds of Cattle; and they have a pretty brisk Trade with the neighbouring Provinces. The chief Town is *Chiapa*, or *Cividad Real*, a Bishop's See, and the Seat of their Courts of Justice. There is another Town called *Chiapa de los Indos*, because it is inhabited by the Natives, the largest *Indian* Town in the Country.

Soconusco Province.

9. The Province of *Soconusco* lies along the Coast of the *South* Sea for above an hundred Miles; and is not a very fruitful Country; neither do they seem to have much Trade. It is very mountainous; and the highest Mountain, which is a Vulcano, goes by the Name of *Soconusco*: To the South-east of this Vulcano runs a River, on the Banks whereof is situated a large *Indian* Town; and both the Town and the River take their Names from the Vulcano.

Guatimala Audience.

The Audience of *Guatimala* is bounded by that of *Mexico* on the North-west; by the *North* Sea on the North-east; by the Province of *Darien*, or *Terra-Firma Proper*, in *South America*, on the South east; and by the *South* Sea on the South-west; being about a thousand Miles in Length from the North-west to the South-east; but scarce half so broad in any Part, and in some not an hundred Miles broad. This Audience is subdivided into six Provinces, *viz.* 1. The Province of

Vera Paz. Province.

Vera Paz, said to have had that Name, signifying *True Peace*, given it by the *Spaniards*, because the Natives submitted, and made Peace with them voluntarily. It is a woody mountainous Country, subject to Earthquakes, and neither fruitful nor populous. The *Spaniards* mention two Towns, *Vera Paz*, or *Coban*, and St. *Peter's*; but Travellers have not thought them worth a particular Description.

Guatimala Province.

2. The Province of *Guatimala Proper* is a mountainous Country, every Mountain always a Vulcano, and subject to Earthquakes and fiery Eruptions. There are, however, many fruitful Valleys, abounding in Corn and Pasturage, rich Drugs for Dying, great Herds of Cattle, Sugar Plantations, some Silver Mines, and Fish. The chief Towns are, 1. *Guatimala*, or St. *Jago de Guatimala*, the Capital. There is a famous Mountain, with two Tops, two or three Leagues from this City; out of one of which, issues Water, and out of the other, Fire. At the Bottom of this Mountain stood the old Town of *Guatimala*, once destroy'd by a fiery Eruption, and a second time by Water issuing from the other Head; which induced the *Spaniards* to build the new City three Leagues from thence: However, at this Distance, the Town is sometimes cover'd with Ashes from the fiery Vulcano, which throws out Stones and Pieces of Rocks as big as a House, and is observed to burn most fiercely during the rainy Season. The new Town lies on a River, in a fine Valley, and is one of the largest Cities in *Spanish America*, containing upwards of eight thousand Families. It is the Seat of the President, and of the Courts of Justice of this Audience; a Bishop's See; a University; and has several fine Monasteries: The Cathedral and Parochial Churches also are exceeding rich. 2. *Trinidad*, or *Sonsonate*, a Port-Town, that consists of four or five hundred *Spanish* Families, besides *Mulattoes* and *Indians*, and has five Churches. 3. St. *Michael's*, another Port-Town, having seven or eight hundred Houses, and several Churches; and near it is a great Vulcano, call'd *The Vulcano of St. Michael*; beyond which is a large Lake, the Banks whereof are well inhabited by *Spaniards*, *Mulattoes*, and *Indians*. 4. *Amapalla*, in which are above an hundred *Spanish* Families, who have a brisk Trade for their Cochineal, Cocoa, Hides, Indico, *&c.*

Honduras Province.

3. The Province of *Honduras*, or *Comaiagua*, is said to have generally a good Air, and abounds in Corn and Pasturage. It was exceedingly populous, till the Natives were destroy'd by the *Spaniards*, who tortured many of them to death, and killed many more by obliging them to work in the Mines. It is even said, that the *Spaniards* murdered two Millions of People in this Province; but this Account must certainly be very extravagant. The chief Towns are, 1. *Valladolid*, or *Comaiagua*, situate in a pleasant Valley, on the West-side of a River. Here the Silver is refin'd, which is dug in the adjacent Mountains. It is the Residence of the Governor of the Province, and a Bishop's See. 2. *Truxillo*, situate on an Eminence between two Rivers, the Mouths whereof, and some Islands that lie before it, form an Harbour, which is defended by a Castle; but the Place has been plundered several times by the Buccaneers. 3. *Gracias a Dios*, situated on a Mountain near a fine fruitful Valley, and hath some Gold Mines in the Neighbourhood of it.

Nicaragua Province.

4. The Province of *Nicaragua* consists of Mountains, Valleys, and spacious Lakes, with fine Meadows, in which feed numerous Herds of Cattle. They have also Sugar Plantations, and a Variety of pleasant Fruits. And their constant Sea and Land-Breezes, with that extensive Lake, that runs quite cross it, renders this Province cool and healthful. But the Vulcanoes in their Mountains, and the Earthquakes occasion'd by them, too often disturb their Repose. The West End of *Nicaragua* Lake lies within four or five Leagues of the South Sea, and stretching to the Westward falls into the North Sea by a narrow Channel, usually called the River of *Nicaragua*; but this Channel is so obstructed by Rocks, and the River falls down such Precipices, that the Navigation is scarce practicable: Nor do the *Spaniards* care to move these Obstructions, lest some other Nations should find a Way through this Lake to their Settlements on the South Sea. The Lake is of a good Depth after passing the narrow Channel, upwards of an hundred Miles in Length, and thirty or forty in Breadth. It ebbs and flows like the Sea, and the Banks of it are pretty well inhabited, but are infested by Crocodiles and Alligators. The chief Towns in this Province are, 1. The City of *Leon*, situate in a Plain,

at

at the Foot of a piqued Mountain, call'd, *The Vulcano of Leon.* It is a Bishop's See, and, besides the Cathedral, has several Churches and Monasteries, and about a thousand Houses, most of them low built, on account of Earthquakes. The Riches of the Place has tempted the Buccaneers to plunder it several times. 2. *Rica Lexa*, or *Rica Lejo*, the Port-Town to the City of *Leon*, stands in a Plain on a small River, is pretty large, and has three Churches and an Hospital; but is a very sickly Place, on account of the Creeks and Salt-marshes, that lie about it. 3. *Granada*, a good trading Town, with some Fortifications about it. 4. St. *John's*.

Costa Rica Province. 5. The Province of *Costa Rica*, or the *Rich Coast*, is a mountainous barren Country; but inexpressibly rich in Gold and Silver Mines, from whence it obtain'd its Name. The chief Towns are, 1. *Nicoya*, having a Bay much frequented by the *Spanish* Shipping, and a Pearl-Fishery which yields a considerable Profit. Near this Coast, are *The Crown Mountains*, which are five or six Ridges of Hills, gradually surmounting each other, and resembling a Crown at a Distance. 2. The second Town is *Carthage*, the Capital, situated thirty or forty Miles within the Land. As it is a barren Country, there are few Towns in it, and those are not very considerable.

Veragua Province. 6. The Province of *Veragua* is a mountainous barren Country; but then their Mountains are well cloth'd with Timber. They have Mines of Gold and Silver, not inferior to those of *Costa Rica*; and in their Rivers is frequently found Gold Dust. The chief Towns are, 1. *Santa Fé*, or St. *Faith's*, where the *Spaniards* melt their Gold into Bars. 2. The Town of *Conception*, their Capital. 3. *Puebla Nova*, or *New Town*, a large Place, but of no Force. 4. *Chiriqui*. And 5. *La Villia*, where the Buccaneers surpriz'd three hundred *Spaniards* at High-Mass, and possessed themselves of a vast Treasure in Bullion and rich Merchandize.

Having given a Description of modern *Mexico*, and some of the chief *Spanish* Towns; we proceed to describe the Towns and Villages of the *Indians*, both ancient and modern, with the Form of their Houses, and the Materials of which they were, or are built, and their Furniture.

Old Mexico described. And first I shall treat of the City of *Old Mexico*: Which, as it stood on the same Ground the present City stands on, there is Reason to believe was square, as modern *Mexico* is, or pretty near that Figure; and the Dimensions may be gather'd from the Number of Families that resided in it, which the Histories of that Conquest make to be about sixty thousand. There was a vast Square in the Middle of the City, which, in the Time of their great Fair, contained an hundred thousand People, that resorted thither with their Goods and Merchandizes, and lodged in Booths and Tents. The Town was divided into two Parts; the one inhabited by the Court, the Nobility, and Persons of Distinctions; and the other by Tradesmen, and People of inferior Rank: The former was much the largest Part; where the Streets were spacious, the Houses of white hewn Stone, one Story high; and they had flat Roofs, adorn'd with Battlements: Their Ceilings were of Cedar, Cypress, or other odoriferous Wood; and their Hangings either of Furs and beautiful Feathers, or painted Cotton Linen, with a Variety of Figures of Birds, Beasts, or Plants. Their Beds were no better than Mats, and their Chairs of Wood; nor were any of the Nobility served in Plate; which was the Prerogative only of the Emperor.

The Palace where *Montezuma*, the last Emperor, resided, was so very large, that it open'd with thirty Gates, into as many different Streets; the principal Front making one Side of the great Square above-mention'd. The Materials of this Building were polish'd Jasper, black, red, and white; and over each Gate, in a large Shield, were the Arms of *Montezuma*, being a Griffin, with the Wings extended, and a Tiger in his Talons. This Palace consisted of several square Courts, so vastly extensive, that here were Apartments for three thousand of his Women, and a proportionable Number of other Domesticks. The Palace assign'd to *Cortez* and his Army was vastly large, containing commodious Rooms and Apartments for his five hundred *Spaniards*, and for several thousand *Tlascalans*; the whole being surrounded with a thick Stone-Wall, and flank'd with stately Towers, at convenient Distances. In several of the Streets of *Mexico* were Canals, with Bridges over them, and many thousand Boats ply'd upon the Water to bring in Provisions. There were two vast Aqueducts also made by the Emperor *Montezuma*, which brought in fresh Water from a Mountain three Miles distance. And, besides the two Palaces already mention'd, *Montezuma* had several Pleasure-houses in and about the City: In one of which were great Galleries, supported by Pillars of Jasper, in which were kept every Species of Land-Fowls and Birds that *Mexico* produced. The Sea-Fowls were preserved in Reservoirs of Salt Water; and those that were bred in Lakes and Rivers, in others of fresh Water: And so numerous were they of all Kinds, that it is said to have been the Business of three hundred Men to feed and look after them. In another Square of the same Palace, were kept all manner of wild Beasts, in their respective Dens and Cages, in a most regular Order. And in another Part of this Palace were Apartments for Dwarfs and Monsters, Fools and Naturals, of the human Species, kept for the Sport or Service of the Court. Here were also Armories, well replenish'd with Armour, and all manner of *Indian* Weapons. And in the same Quarter were the Artificers at work, that form'd and clean'd these Arms.

All these Palaces had spacious and elegant Gardens, laid out in fine shady Walks, Beds of fragrant and medicinal Herbs, and Parterres of beautiful Flowers; with magnificent Summer-houses, Bagnio's, Arbours, and Fountains. But there was a Building, in the most solitary Part of these Gardens, which surprized the *Spaniards* more than any thing they met with; and that was an Edifice call'd *The House of Sorrow*; to which the Emperor used to retire on the Death of his near Relations, or on any Calamity, publick or private. It was so contrived, as to inspire those that approached it with gloomy melancholy Thoughts; the Roof, the Cieling, and Sides were black; and only Light enough let in to discover the dismal Obscurity. Here he used to remain till the Time of Mourning and Humiliation were over; and here, if we may credit the *Spanish* Authors, *Montezuma* used to converse familiarly with the Prince of Darkness.

Temples. The Principal of the *Mexican* Temples was dedicated to *Vitzliputzli*, *the God of War*. This stood on a spacious Square, surrounded by a Wall of hewn Stone, wrought on the Outside with Knots of twisted Serpents: At a little Distance from the principal Gate was a Place of Worship, built of Stone, and ascended on the Outside by thirty Steps; on the Top whereof was a long flat Roof, and the Front of it adorn'd with the

Sculls of Men that had been ſacrificed. On each Side of the grand Square was a magnificent Gate, and over every one of them four Statues, ſuppoſed to repreſent ſome ſubordinate Deities. Under the Wall, on the Inſide, were the Apartments of the Prieſts, and of their Officers and Servants; and yet there was Room left for eight or ten thouſand Perſons to dance on their ſolemn Feſtivals. In the Middle of the Square was an Edifice of a pyramidal Form; three Sides whereof were ſmooth, and the fourth contain'd an hundred and twenty Stone-Steps, by which they aſcended to the Top, that was a Flat of forty Foot ſquare, laid with Jaſper of all Colours. The Rails that ſurrounded this, were of a ſerpentine Form, cover'd with a Stone as black as Jet, and join'd with a red and white Cement. On each Side, within the Rails, was a marble Statue, ſupporting a vaſt Candleſtick, and between them a green Stone, five Spans high from the Floor, which terminated in a Point; and on this they extended the human Victims they ſacrificed, throwing them on their Backs, and ripping them open with Knives made of Flint; after which, they tore out their Hearts, and offer'd them to their Idols. For on the farther Side, oppoſite to the Stairs, ſtood a Chapel of exquiſite Materials and Architecture, where the Idol was placed on an Altar. This Image was of human Form, and ſet on a Throne, ſuſtained by an Azure Globe, which they called Heaven; from the Sides whereof iſſued four Rods, their Ends reſembling the Heads of Serpents: On the Head of the Image was a Helmet, adorn'd with Plumes of various Colours. Its Countenance was ſevere and terrible, and much deformed by two blue Bands, which bound the Forehead and the Noſe. In the Right Hand it held a twining Serpent, that ſerved for a Staff; and in the Left four Arrows, which were revered as the Gift of Heaven. It bore a Shield alſo, adorn'd with fine white Plumes in the Form of a Croſs. On the Left Hand was another Chapel of the ſame Form, in which was the Image of *Vitzlock*, another of their Gods, reſembling the former in every reſpect. They were eſteemed ſo intimately united, that they aſcribed to them the ſame Attributes, and paid them the ſame Honours. The Walls and Altars of theſe Chapels were immenſely rich, cover'd with Jewels and precious Stones, ſet on Feathers of various Colours. There were eight of theſe Temples in *Mexico*, of the like Architecture and equal Wealth; beſides two thouſand ſmall ones, dedicated to as many different Gods; every Street having its tutelary Deity, every Diſtreſs or Calamity its particular Altar.

Some other ancient Towns deſcribed.

Thoſe, who have written of the Conqueſt of *Mexico*, have given us an Account of ſeveral other noble Cities and Towns in that Empire. *Iztacpalapa* was ſituated on an Iſland in the Lake, about two Leagues from *Mexico*, and had a Communication with it by a ſpacious Stone Cauſey. It conſiſted of ten thouſand Houſes, many of which were built like thoſe of *Mexico*. The Rooms of the Cacique's Palace were hung with Cotton Linen finely painted. Among other Curioſities in his Garden, he had a ſquare Reſervoir of Stone, with Stairs on every Side going down to the Bottom, each Side containing four hundred Paces. Another City, call'd *Cholula*, was for Beauty like *Valladolid* in *Spain*, containing twenty thouſand Souls, and having a Suburbs of equal Dimenſions.

The City of *Tlaſcala* alſo was built with Stone and Brick, and the Houſes like thoſe of *Mexico*: It was ſituated on four Eminences, which were united and defended by a Stone-Wall: So well were theſe People vers'd in Architecture in thoſe Days. And yet there are not any Towns in the Country now built of Brick or Stone, except thoſe in Poſſeſſion of the *Spaniards*.

Even thoſe *Indians*, that have ſubmitted to the *Spaniards*, and embraced their Religion, live in thatch'd Cottages, and obſerve very little Regularity in laying out their Streets: Their Houſes neither ſtand contiguous, nor in any Order; only they have one common Guard-houſe, ſituate on an Eminence, whither they reſort on the Approach of an Enemy, or when they aſſemble in Council. They never lay any deep Foundations. They ſet up ſmall Poſts, ſeven or eight Foot high, two or three Foot aſunder; and, having ſplinter'd up the Intervals, cover them with Clay: The Roof is made like that of an ordinary Barn, and cover'd uſually with Palmeto Leaves: The Length of the Building is about four and twenty Foot, and half as broad as it is long: The Fire-hearth is in the Middle of the Houſe, and they have a Hole over it to let out the Smoke. They build but one Floor, and have no Partitions. Inſtead of Beds they uſe Hammocks, which are hung up on the principal Beam, from one End to the other of the Houſe; nor have they any other Seats or Tables, but Blocks of Wood: Their Furniture conſiſts of Pots, Pans, and other Kitchen Utenſils, with Calabaſhes or Gourds of an uncommon Size to hold their Liquor; and their Arms and Tools, are hung round the Cottage as Ornaments. Their Guard-houſe is about an hundred and thirty Foot long, and five and twenty broad; the Walls nine or ten Foot high, and the Top of the Roof about twenty Foot in Height, and thatch'd with Palmeto Leaves. They have narrow Loopholes on the Sides, from whence they can annoy an Enemy with their Arrows. The Ground is clear'd of Wood and Shrubs for a good Space about them, that an Enemy may find no Shelter from their Arrows. They have ſtrong Doors to theſe Houſes; but the *Spaniards* eaſily burn them down, by ſhooting flaming Arrows into the Thatch.

CHAP. IV.

Of the Perſons and Habits of the Mexicans; *of their Genius and Temper; Arts, Manufactures, Diet, Exerciſes, and Diverſions.*

The various Inhabitants of *Mexico*

THERE is at preſent in *Mexico*, 1. The native *Indians*; 2. The *Spaniards*, and other *Europeans*; 3. The Deſcendants of the *Spaniards* unmix'd, who are called *Creols*; 4. The *Meſtices*, or *Meſties*, the Iſſue of a *Spaniard* and an *American*; 5. The *Fine Meſties*, the Iſſue of ſuch Iſſue; 6. *Terceroons des Indies*, the Children of the laſt, intermarried with pure *Spaniards*; 7. The *Quarteroons des Indies*, whoſe Poſterity are allowed the ſame Privileges as pure *Spaniards*.

Spaniards. The Blacks also are pretty numerous, having been carried over to the *Indies* from *Africa*, and, by one Means or other, obtained their Freedom. The Issue of a *European* by one of the Female Negroes, is called a Mulattoe; the Descendants of these also are called Mulattoes, though as white as the *Spaniards* themselves; and can never enjoy the Privileges of *Spaniards*, unless they can conceal their Descent, which they frequently do. And there is also a mingled Breed of *Negroes* and *Indians*, whose Descendants are ever excluded from the Privileges of *Spaniards*. Beside these, there are some Commonwealths of Blacks, that own no Subjection to the *Spaniards*, constituted out of the Negroes that run away from their Masters into the Woods and Mountains; who, at length, became so formidable, that the *Spaniards* were forced to enter into Treaties with them, and grant them their Liberties.

Negro Commonwealths.

The Persons of the Indians

The *Indians* are generally of a middle Stature, and their Complexions of a deep Olive, darker than that of a *Portuguese*. The Men have strait clean Limbs, are big-boned, and well-shaped; scarce a deformed Person to be found among them: They are nimble and active, and run very swiftly. The Women are moderately fat, and well-shaped; and the Faces, both of Men and Women, are round: Their Eyes large, either black or grey, lively and sparkling; their Foreheads are high, their Noses short, their Mouths of a moderate Size, their Lips thin, their Cheeks and Chin well proportioned; and all of them have fine Sets of Teeth: The Features both of Men and Women are generally good.

Their Hair, which is always black, in some Places the Men wear short, and the Women long, and in others it is just the Reverse: But all agree in suffering no Hair to remain upon them, unless the Hair of their Heads, and over their Eyes; the rest is pulled off with Tweezers as soon as ever it appears, which is the Business of the old Women. There are some Nations of the *Indians* that take Abundance of Pains to render their Countenances deformed; they do not only flat the Noses of their new-born Infants, but so press and squeeze their Heads between two Boards, that they make them perfectly flat; while others endeavour to mould their tender Skulls into the Shape of a Sugar-Loaf: And there are scarce any of them but disfigure their Faces and Bodies with Paint, and rub themselves over with Oil or Fat. The Colours they chiefly affect are a lively red, blue, or yellow; and sometimes they make the Figures of Men, Beasts, Birds, or Plants, on every Part of the Body, but chiefly on the Face: They draw these Figures on the Skin with wooden Pencils, gnawed at the End to the Softness of a Brush; renewing the Paint from Time to Time, till the Colours are fixed. But the Way they take to render the Figures indelible, is by pricking the Skin with a Thorn till the Blood follows, and then rubbing the Paint in with their Hands. Some Nations of *Mexicans*, when they go to the Wars, paint their Faces red, and their Bodies with other Colours, but this is usually washed off at Night, and renewed every Morning.

The Habits of the Indians

Most of the *Mexican* Nations wear some Habit or other; but there are *Indians* that go perfectly naked. Some were found with no Part of their Bodies covered, but their Nudities; others had their Faces streaked with black Lines, made by pricking the Skin, and rubbing in black Liquor; some wore Stags Sculls on their Heads with the Horns on; others had a Lion's, a Tyger's, or a Wolf's Head, upon their own, fastened about their Necks with Part of the Beast's Skin: These are Triumphs of their Victories over those Animals. But they are ambitious of nothing so much as of killing a *Spaniard*, that they may thus triumph in the Destruction of their most dreaded Enemy.

There is a Nation in *Veragua*, where the Men clothe nothing but the *Penis*, which the inferior People wrap up in a Leaf, and those of better Quality enclose it in a Case of Gold or Silver, of the Fashion of a Cone or Extinguisher, and adorn it with Jewels, letting the *Scrotum* hang uncovered: But even these People, on solemn Occasions, have a white or black Cotton Garment, like a Plowman's Frock, that reaches down to their Heels. They seldom want Ornaments for the Face, Ears, and Neck, besides the painting of the Skin, already mentioned. The Men have always a thin Plate of Gold or Silver, hanging over their Lips, almost of the Form of a Crescent, the Points whereof gently pinch the Bridle of the Nose. The Women, instead of a Plate, wear a Ring, which goes through the Bridle of the Nose, and by its Weight sometimes draws it down to the Mouth. Their great Men also wear two Gold Plates, of the Shape of an Heart, at each Ear, which stretches the Ear to an immoderate Size. They also wear a Bandage of Gold or Silver about their Heads, eight or nine Inches broad, and indented on the upper Side; others have only a Bandage of Cane painted red, stuck round with beautiful Feathers standing upright. Almost all the *Indians*, of both Sexes, wear Strings of Beads, Teeth, Shells, and other Toys, hanging from the Neck down to their Breasts: Every Person almost has three or four hundred of these Chains on, and the larger and heavier they are, the more ornamental; the meanest Woman when she is dressed, has fifteen or twenty Pounds Weight of these Strings; some carry thirty, and the Men as much more: But these are only worn at Festivals, and on solemn Occasions. The Women carry the Mens Ornaments in Baskets to their Assemblies, where they put them on, and will dance with that Weight about them: The Women, besides their Earings and Necklaces, have some of them Bracelets of the same Materials on their Arms.

Ornaments.

The Habits of the antient *Mexicans*.

The *Mexicans* that lived in Towns, when the *Spaniards* arrived there, had most of them some Clothing, although those that inhabited the Country had little or none, any more than they have at this Day. The *Spaniards* tell us, that *Montezuma* the Emperor, when he met *Cortez* at his Entrance into *Mexico*, had on a Robe of fine painted Cotton Linen, that trailed upon the Ground, and was covered with glittering Jewels and precious Stones; that he wore a Crown of Gold, in Form of a Mitre; had Shoes of hammer'd Gold, and a Kind of *Roman* Buskin about his Legs. They also relate, that the High-Priest wore on his Head a Crown of beautiful Feathers, with golden Pendants, enriched with Emeralds at his Ears; and that he was clothed in a Vest, and a fine Scarlet Robe over it. In the Pictures they have given us of the Priests, it appears, they had Sandals on their Feet, but their Legs were bare; which makes it reasonable to believe, that the Generality of the People wore neither Stockings nor Shoes, if the rest of their Bodies were clothed; and in other Pictures they have given us the upper Part of the Body naked.

The Habits of the *Spanish Indians*

The *Indians* that live in *Spanish* Towns, or are under their Government, wear a short Waistcoat and wide Breeches, with a short Cloke of various Colours over all; and some of them have Sandals on their Feet, but go bare legg'd: The Women wear a Waistcoat of Cotton Linen, over which they have a Frock or Shift, and a strait Petticoat of various Colours; and when they go Abroad,

have

have another Cloth wrapped about them. The *Meſtize*, *Mulatto*, and *Black* Women, not being allowed to clothe themſelves after the *Spaniſh* Faſhion, and deſpiſing the *Indian* Habit, go in an extravagant Dreſs, wearing a Kind of Petticoat about their Shoulders, like a Cloke. The Country *Indians*, who are civilized, in ſome Provinces wear a ſhort Waiſtcoat and Breeches, and have a Palm Leaf for a Hat, which is their Holiday Dreſs: They have no Shoes or Stockings, nor do they wear ſo much as a Waiſtcoat on working Days: The Women have a Cotton Linen Petticoat, and a Kind of Frock, that reaches down to their Knees, the Boſom whereof is open, and finely worked: They tie their Hair up in a Knot behind.

The Genius of the *Mexicans*.

As to the Genius and Temper of the *Mexicans*, there is a wide Difference between what they were when the *Spaniards* arrived amongſt them, and what we find them to be at this Day: They are far from being improved either in Arts or Morals. The firſt Adventurers inform us, that they were a wonderful ingenious People, inoffenſive and hoſpitable; and, except in the Matter of human Sacrifices, and what their idolatrous Worſhip required, there was very little Reformation wanting; nay, that the Generality of the People deteſted theſe Sacrifices, and were weary of their Superſtition. It appears, they were no mean Artificers in Painting, Statuary, and Building: That they uſed both the Pencil, and the beautiful Feathers of Birds, in drawing and forming of Pictures; and, without any Manner of Iron Tool, hewed vaſt Pillars and Slabs of Marble out of the Rock, and poliſhed them; as they did ſeveral precious Stones and Jewels: That they made Arms, defenſive and offenſive; wrought Mines of Gold, Silver, and Copper; melted and ſeparated theſe Metals, and afterwards wrought them into Plates and Veſſels. We find alſo, that they built great Towns, removed Stones of prodigious Size, from Place to Place; and yet had no Horſes, Oxen, or other Cattle for Draught, but all their Carriages were drawn by Men. They had alſo Images of Gold and Silver, Wood and Stone, and yet not an Iron Tool to work with: And how they did carve and engrave, paint and build, remains very much a Secret to us. For the *Spaniards* were ſo intent upon plundering their Gold and Silver, that they neglected to make proper Obſervations on theſe Articles; at leaſt, they did not think fit to tranſmit theſe Matters to Poſterity. We know, indeed, that ſharp Flints ſerved them inſtead of Axes, Knives, and Swords: That with theſe they formed the Edges of theſe Tools; but it ſhews a vaſt Genius and uncommon Application, that they were able, in ſuch Circumſtances, and with no better Inſtruments, to perform any Thing curious.

Good Artificers

Tho' the *Indians* were ſuch ingenious Artiſts two or three hundred Years ago, there are ſufficient Reaſons to be given for the Neglect and Diſuſe of theſe Arts at this Day. The *Spaniards*, under Pretence of Zeal for deſtroying the Pagan Temples and Idols, but, in Reality, that none of the Treaſures of the *Mexicans* might be concealed from them, pulled down every Town where theſe Arts flouriſhed. They alſo reduced the Natives to the moſt abject Slavery, compelling them to work in the Mines, and ſupply the Place of Beaſts of Burthen. And beſides, the *Europeans* being provided with Tools and Inſtruments to perform Things in a better Manner than the *Indians* could do under ſo many Diſadvantages; it is no Wonder, that the Natives threw away their Country Implements.

The antient *Mexicans* do not ſeem to have been defective either in Point of Temperance, Fortitude, or military Skill: Both their Policy and Stratagems were admirable, conſidering the Diſadvantages under which they laboured; and that they had an Enemy to oppoſe, verſed in the modern Arts of War, poſſeſſed of Gunpowder, Artillery, Arms, Armour, and Horſes, which the *Indians* had never ſeen or heard of till then.

Manufacture.

The principal Manufacture of the antient *Mexicans*, was Cotton-Linen, which they ſpun and wove, and afterwards painted with the Figures of Men, Animals, Trees, Flowers, &c. They made every Piece for the Uſe they deſigned it, and never cut any of their Linen. They uſed the Sinews of Animals inſtead of Thread, and Bones inſtead of Needles. The Feather Manufacture alſo was very great: They ſtripped every feathered Animal, to make their Pictures, and adorn their Houſes or their Perſons. Architecture was another of their Arts; and almoſt every Man made his own Arms. They had no other Veſſels upon the Water, but Canoes or Periagoes, which only differ in their Dimenſions. Theſe Kind of Veſſels are found very uſeful to this Day; and they have now an eaſier Way of framing them than formerly, by the Help of *European* Tools. The modern *Mexicans* are degenerated from their Anceſtors, and are reputed cowardly and cruel: They have no Senſe of Honour, are drowned in Vice, and die without any Apprehenſions of Futurity; but the hard Uſage of the *Spaniards* is the Occaſion of this Change. And the Mulattoes in *Mexico* are ſtill worſe than the *Indians*, there not being one honeſt, fair-dealing Man in an hundred amongſt them: Nor do the *Spaniards* themſelves, that reſide in that City, deſerve a better Character; four hundred of whom have been brought before a Court of Juſtice there, for Theft, at one Time. Whether the Meſtizes, or mixed Breed, have better Morals, we are not informed; but ſurely there muſt be ſome of better Principles amongſt them, or it would be impoſſible for the Government to ſubſiſt.

The *Indians* in the open Country, that have ſtill preſerved their Liberties, (of which there are great Numbers) are People of great Humanity, ſtill brave, generous, active, and unacquainted with the ſordid Vices of thoſe that live in Towns, whom the *Europeans* have corrupted. They are kind to Strangers, and even to the *Spaniards*, who uſe them worſe than Slaves, when they get them into their Power. Thoſe of the open Country ſpend great Part of their Time in Hunting, Shooting, or Fiſhing, as the Antients did: Every Man builds his own Houſe, and makes his own Arms, Tools and Implements of Husbandry. They cultivate but little Ground, planting juſt enough *Indian* Corn, Roots, and Fruit, to ſerve the Neceſſities of the Family; and theſe Plantations are the Buſineſs of the Women altogether, after the Men have cleared the Ground. The Women alſo ſpin, weave their Cotton-Linen, do all the Houſhold Buſineſs, ſerve their Husbands inſtead of Porters and Pack-Horſes; and all with Cheerfulneſs and Alacrity. The principal Food of theſe Natives is either *Indian* Corn, parched and ground into Flour, and made into thin Cakes; Fruits, particularly Plantains; and Roots; and ſometimes Fiſh, wild Hogs, Deer, or other Veniſon. They go a Hunting and Shooting frequently in Companies, a Week or a Fortnight together, every Man carrying with him his Bow and Arrows, or a Gun, if he can procure one, a Spear, a Hatchet, and a long Knife. Each Man alſo takes a Dog or two with him to beat for Game. Some Women alſo go with them to carry their Proviſions, with Calabathes or Gourds for their Drink, and Pipkins to dreſs their Food. The Beaſts they hunt, are chiefly

chiefly *Pecary* or *Warree*, two Sorts of wild Hogs peculiar to *America*, and they meet with great Variety of Fowls. They lodge at Night wherever they happen to be at Sun-set. They hang up their Hammocks between the Trees, and have scarce any other Covering, but a Plantain Leaf; only they make a Fire near their Hammocks. The Pecary or Warree are not swift of Foot, and usually go together in Droves of two or three hundred; but sometimes they hunt a whole Day without meeting any: When the Beast is tired or wounded, he will stand at Bay with the Dogs, till the Master comes up and shoots him; after which, the *Indians* let out the Blood, embowel and cut the Beast in two Pieces, carry them to the Place where they have appointed their Women to meet them: Here they cut off the Head of the Hog, quarter and flea it. What they intend to preserve, they dry upon a wooden Grate, (which is called a *Barbacue*) making a Fire of Wood-Coals under it. As to their Cookery, whether their Flesh be dried or fresh killed, they cut it into small Pieces, and throw it into a Pipkin, adding some Roots, green Plantains, or other Fruits, with a great deal of Pepper, stewing them together seven or eight Hours, which reduces all the Ingredients to a Pulp or Hotchpotch. When it is poured out into an earthen Dish or a Calabath, and set upon a wooden Block, they sit round it on lesser Blocks, every one having a Calabash of Water standing by him on the Ground, into which they frequently dip their Fingers while they are eating. They have seldom more than one Set Meal; but they eat Plantains and other Fruit almost all Day long. There is scarce any Flesh, Fish, or Fowl, but what they eat at their Meals, either stewed or barbacued. They use neither Knives, Forks, or Spoons, in eating; but take up the stewed Hotchpoth with their Right-hand, and fill their Mouths with it; and the broiled Flesh they tear off the Bones with their Teeth, unless those that conform themselves to *Spanish* Customs. Every thing they eat is high-seasoned with Pepper; and Salt too, if they can get it.

Chocolate serves both for Meat and Drink, in almost every Province of *Mexico*, both among the civiliz'd and barbarous *Indians*. They have also a great Variety of Liquors. The readiest and most ordinary Drink is Water, with the Flour of *Indian* Corn infused in it, and drunk off presently. Against an Entertainment, they frequently steep twenty or thirty Baskets of *Indian* Corn; and after the Water is impregnated, the Women chew more of the same Corn and spit into it, which ferments the Liquor like Yeast; and, when it has done working, they draw it clear off, and it proves very intoxicating, but tastes like sour Small-Beer.

Mistaw is another Liquor; and of this they have two Sorts; one made of Plantains fresh gathered, and the other of dried ones. Green and half ripe Plantains they also eat instead of Bread, boiling or roasting them first; as they do also Yams and Potatoes. The *Cassavi* Root, of which they make Bread, is first boiled and squeezed; then dried, ground, and made into Paste for Biscuit: For before it is boiled, and the Juice squeezed from it, it is rank Poison. As Pine-Apples are one of the most delicious Fruits of *America*, an Infusion of these is one of their beloved Liquors; and indeed they make Drink of all Manner of Fruits almost, as well as Grain, adding Honey to them at their Entertainments. But as to Wine, their Country affords none.

The *Indians* scarce undertake any Business of Consequence, without making an Entertainment. If they propose entering into War, their Chiefs are summoned to a Consultation, where they eat and drink plentifully, before they enter on their Debates. A Hunting Match, which lasts usually some Weeks, is preceded also by a Drunken-Bout. At Weddings, and other joyful Occasions, they have their Feasts, where they continue drinking two or three Days, till all the Liquor is out. They usually get exceeding drunk, insomuch that they can neither stand nor go; and, having slept till they have recovered their Senses, they move off. The Men drink to one another at Meals, as the *Europeans* do; but never to the Women, who always stand by, and wait upon their Husbands. But the Females feast, and are as merry as the Men among themselves. They are not afraid of being very drunk neither: However, till their Husbands are recovered, they take Care to keep sober.

Nothing is more universally drank in the City of *Mexico*, and in such Towns as are under the Dominion of the *Spaniards*, than Chocolate. To every Pound of the Cocoa-Nut the *Europeans* add a Pound of Sugar, an Ounce of Cinnamon, and two Ounces of the Flour of *Indian* Corn, to make it froth. They distil a Spirit also from a Plant called *Magey*, which is very intoxicating. The *Indians* once committed such Outrages when they were drunk with this Liquor, that it was prohibited for a Time; but both *Europeans* and *Indians* now drink it again.

We must not forget, that the *Indians* smoak as well as drink, since it was from them we first learnt the Use of Tobacco; but what the Natives plant is not so good as that the *English* plant and cure in *Virginia*. If they taught us to take Tobacco, we taught them to improve it, and the Use of Pipes; for the Way they smoaked it, was by lighting one End of a Roll they made with a Leaf, and holding the other End of the Roll in their Mouths; and, when it was half burnt out, they threw the Remainder away.

Their principal Exercises, or rather Employments, are Hunting, Shooting, and Fishing; which they are in a Manner forced into, in order to make Provision for their Families. Every Man breeds up his Son to these Exercises; and they are so dextrous at them while they are Children, that a Boy of eight Years of Age will split a Cane set up at twenty Yards Distance with his Bow and Arrow, and hit a Bird flying. But the most dextrous People are the *Mosquito Indians*, Natives of the Province of *Honduras*. These People are tall, well made, strong and nimble, long visag'd, have lank black Hair, a stern Look, are hard favour'd, and of a dark Copper Complexion: They are bred to throw the Lance, Harpoon, and Dart, and draw the Bow, from their Infancy; and they will parry any of these missive Weapons with a small Cane, not bigger than a Gun-stick, though the Arrows and Darts fly very thick. The *English* Privateers that cruise on the *Mexican* Coast, have usually one or two of these *Mosquito* Men on Board, to strike Manatee, Tortoise, and other Fish; and they will kill Fish enough to maintain a Crew of an hundred Men. When they learn the Use of Guns, they are exceeding good Marksmen. They are also very brave and daring in Fight. They have conversed so long with the *English*, that they frequently declare they will have no other Sovereign, but the King of *England*; nor have the *Spaniards* ever been able to subdue these, and many other Nations, that inhabit *Mexico*.

Exercises and Diversions.

Mosquito Indians.

The *Indians* have their Dances, and their Musick too, such as wooden Drums of the Form of a Kettle Drum, and a Kind of Pipes or Flagelets, made of a Cane or Reed. They love every thing that makes a Noise, how disagreeable soever the Sound is; they will also hum over some-

thing like a Tune, when they dance. They dance thirty or forty in a Circle, ſtretching out their Hands, and laying them on each other's Shoulders: They ſtamp, and jump, and uſe the moſt antick Geſtures for ſeveral Hours, till they are heartily weary; and one or two of the Company ſometimes ſtep out of the Ring to make Sport for the reſt, ſhewing Tricks and Feats of Activity; and, when they are in a moſt violent Sweat, will frequently jump into the Water, without taking any manner of Cold. We ſhould have remembred among their Exerciſes, that no Men ſwim or dive better than the native *Indians*. The Women have their Dances and Muſick too, by themſelves.

CHAP. V.

Of the Conqueſt of Mexico *by the* Spaniards.

The *Spaniards* firſt Attempt on *Jucatan* defeated.

IN the Year 1515, or 1516, *Francis Fernandez de Cordoua*, embarking at *Cuba* with an hundred and twenty Men, ſet ſail for *Jucatan*, a Province of *Mexico*, where he made a Deſcent, and was about to have erected a Fort. But he ſuffer'd himſelf to be ſurpriz'd by the *Indians*; and, having twenty Men kill'd, thirty more wounded, and two made Priſoners, the reſt retired to their Ships, and returned to *Cuba*. However, thoſe that eſcaped reporting that they ſaw great Plenty of Gold among the Natives, and offering to make a farther Attempt on the Continent of *Mexico*, the *Spaniards* of *Cuba* appeared impatient to make another Experiment. *Diego Velaſquez*, at this Time Governor of *Cuba*, obſerving the Ardour his Soldiers expreſſed to engage in a freſh Enterprize, fitted out three Ships and a Brigantine, giving the Command of them to *John de Grijalva*, who ſet Sail from *Cuba* on the 8th of *April* 1518; and arriving in *Jucatan*, where *Fernandez de Cordoua* had been defeated, took a ſevere Revenge on the Natives, and then ſtood Weſtward to the Mouth of the River *Tobaſco*, where he landed, and formally took Poſſeſſion of the Country for the Emperor *Charles* V. then King of *Caſtile*, offering the Natives Peace, if they would ſubmit to his Dominion. To which one of the Chiefs of the *Indians* anſwer'd, that they would conſult their Superiors on the Offer of Peace; but as to their becoming Vaſſals to a Prince they had never before heard of, it was not in their Power.

Grijalva ſent from *Cuba* to make farther Diſcoveries on the Continent.

Takes Poſſeſſion of the Country for the King of *Spain*

Some little time after, the ſame *Indians* returned, and acquainted the *Spaniards*, that their Caciques accepted their Offers of Peace. One of their principal Caciques alſo brought *Grijalva* a conſiderable Preſent: For which *Grijalva* returned ſuch *European* Toys and Utenſils as were moſt acceptable to them. Afterwards he viſited the Port of St. *John de Ulva*; and from thence ſailed as high as *Panuco*, the moſt northern Province of *Mexico* on that Side, trading with the People as he went; and underſtood from them that they were ſubject to a Monarch called *Montezuma*, a Prince poſſeſs'd of a vaſt Empire, abounding in Gold, Silver, and rich Merchandize; with which Intelligence he returned to *Cuba*.

Offers the Natives Peace, who accept it.

Learns the Greatneſs of the *Mexican* Empire

Returns to *Cuba*.

Diego Velaſquez immediately ſent over to the Admiral, the Son of the celebrated *Columbus*, at *Hiſpaniola*, and to the Court of *Spain*, to acquaint them with the Succeſs of the Expedition. But, notwithſtanding the great Service *John de Grijalva* had done, *Velaſquez* pitch'd upon the celebrated *Hernando* or *Fernando Cortez*, to command the ſmall Army, with which he propoſed to make an entire Conqueſt of that Continent. This *Hernando Cortez* was born at *Medellin* in *Eſtramadura*. He was bred a Scholar; but affecting a more active Way of Life, he embarked, in the Year 1504, for the Iſland of *Hiſpaniola*; and went from thence to *Cuba*, where he was very inſtrumental in the Conqueſt of that Iſland, and was, for his Services, made *Alcaide*, or chief Magiſtrate of St. *Jago*, the principal Town there. He married *Donna Catalina Suarez*, a young Lady of a noble Family.

Cortez made Captain General againſt *Mexico*

Some Account of him

His Rivals.

The Relations of *Velaſquez* envying *Cortez* the Command in an Expedition that was like to be attended with a vaſt Acquiſition of Wealth, as well as Glory, ſo far prevail'd on the Governor, that tho' he had attended *Cortez* to the Sea-ſide, when he embarked, with all the Marks of Reſpect, the Fleet was no ſooner ſailed, but he ſent Orders to the *Havannah*, where they were to touch, that the Fleet ſhould not proceed in the Voyage till farther Orders; and that *Cortez* ſhould return to him to St. *Jago*. But the Governor's Orders were not obey'd: The Soldiers were ſo tranſported with Expectation, and had ſuch an Opinion of their General, that they would not conſent to the changing of him, or to the Delay of the Enterprize, but agreed immediately to ſet Sail; which they did, with a Fleet of ten Ships, the 10th of *February* 1518-19, and arrived at the Iſland of *Cozumel*, where, muſtering his Forces, he found them to conſiſt of five hundred and eight Foot Soldiers, ſixteen Horſe, and one hundred and nine Seamen and Mechanicks; beſides his two Chaplains. The General made a Speech to his Forces at this Muſter; which was received with the loud Acclamations of his Troops, who deſired he would immediatly lead them on to Action.

Cortez recalled by the Governor.

He arrives at the Iſland *Cozumel*. His Force.

A Spaniard and three Indians found with the Forces.

While *Cortez* remained in this Iſland, he was inform'd, that there were ſome Men in *Jucatan*, who had been Priſoners there ſeveral Years, that much reſembled the *Spaniards*. Whereupon *Cortez* ſent ſome of the *Indians* with a Letter to thoſe Priſoners, and a Preſent to the Prince in whoſe Power they were, for their Ranſom. The *Indians* returned to *Cozumel*, bringing with them *Jeronimo de Aguilar*, a Native of *Spain*, in Deacon's Orders. This Eccleſiaſtick related, that he had been near eight Years in *Jucatan*, whither he eſcaped in a Boat with ſeveral more, after they had been ſhipwreck'd in their Paſſage form *Darien* to *Hiſpaniola*: That by his Skill in military Affairs, he had gain'd a great Reputation in *Jucatan*: And, that the *Indians*, he believed, had ſacrificed the reſt of his Company to their Gods.

This *Spaniard* was of infinite Service to *Cortez* in this Expedition; for he was perfectly acquainted with their Strength, their Way of making War, and their Language. *Cortez* had two or three Slaves alſo preſented to him by the Cacique of *Cozumel*, whom he order'd to be inſtructed in

the

He demolishes the Images of Mexitrans.

the *Spanish* Tongue. Before he left the Island, he expressed his Zeal against the Idolatry of the Natives, by breaking down their Idols; which does not seem very complaisant, after the hospitable Reception he met with from the Islanders.

He sets Sail from Cozumel

The Forces being reimbarked, *Cortez* continued his Voyage to the Mouth of the River *Tobasco*, in the Bay of *Campeachy*; where, when the Natives persisted to oppose his Descent, he fired upon them with his Artillery and small Arms: Whereupon they turn'd their Backs, and fled, and he landed his Men without Opposition. Being obliged to pass through some Woods, a Body of the Enemy, who had concealed themselves therein, surprized and wounded some of the *Spaniards* with their Arrows. Continuing his March till he came to the Town of *Tobasco*, he found it fortified with a Kind of wooden Wall, formed with the Bodies of Trees fixed like Palisadoes, through the Intervals whereof they shot their Darts and Arrows: But his Men no sooner came up to the Works, and fired their Muskets though the Pallisadoes, than the Enemy retired to a large Square in the Middle of the Town, where they made some Shew of defending themselves; but, upon the Approach of the *Spaniards*, they retired from thence also, and fled to their Friends in the Woods.

Cortez lands at Tabasco, and gains a Victory over the Natives.

He takes the City.

He obtains a second Victory.

The Day after the taking of *Tobasco*, the *Mexicans* assembled an Army of forty thousand Men, with which they attack'd the *Spaniards*. The Battle seem'd doubtful, till *Cortez* sallied out of a Wood, and charged them in Flank with his Horse; by which he obtained another complete Victory. The *Indians* are represented in this Battle as a very formidable Enemy, with a View to magnify the Courage and Conduct of *Cortez* and the *Christians*. They relate also, that St. *James* the Apostle appeared in the Battle, on a white Horse, and fought for the *Spaniards*. Whereas every one knows, that the *Indians* durst never stand a regular Body of *Europeans*, with Fire-Arms or Horse, and especially when the Artillery thunder'd upon them; believing that the People they engaged were Gods; and consequently, there was very little Occasion for a Miracle, or indeed for much millitary Skill or Courage, to defeat an Enemy, when they had such Advantages on their Side.

The Indians of Tobasco sue for Peace.

The Day after the Battle, the Cacique of *Tobasco* sent a solemn Embassy to *Cortez*, to implore Peace, attended with a Present. The Ambassadors approach'd *Cortez* as they used to do their Gods, with Golden Pans or Censers, in which they burnt Aromatick Gums and other Incense: The Cacique afterwards came in Person, and made his Submission, bringing with him twenty beautiful *Indian* Virgins, which he made *Cortez* a Present of. One of these, whom the General caused to be baptized by the Name of *Donna Marina*, served him, during the whole Expedition, in the double Capacity of Concubine and Interpreter. She was a Native of *Mexico*, of a ready Wit, and understood the Customs of the Country and the Language perfectly well; and to her Merit and Address the *Spaniards* ascribe the Success of their Arms in a great Measure. *Cortez* let the Cacique know, that he came from a powerful Prince; and that his View was to make them happy in this World and the next, by making them Subjects of the same Sovereign, and converting them to the true Religion. To which the Cacique answer'd, that he and his People should think themselves happy in obeying a King, whose Power and Greatness appeared with such an Advantage in his Subjects. But as to the Point of Religion, they gave little Hopes of their Conversion.

Cortez embarks his Forces again. He arrives at the Port of St. *John de Ulva*

Cortez, having compelled the Natives of *Tobasco* to acknowledge the King of *Spain* for their Sovereign, embarked his Forces, and sailed to the Port of St. *John de Ulva*. When the *Spaniards* were coming into this Port, two Periaguacs full of *Indians* came into the Fleet, and address'd themselves to the General in a submissive Manner; but were not understood by his Interpreter: Which *Donna Marina*, the General's Concubine, observing, offer'd to become Interpreter between the *Christians* and her Countrymen the *Mexicans*. The General was now informed by the *Mexicans*, that their Emperor *Montezuma* had sent two of his Ministers, *Pilpotoe*, Governor of that Province, and *Tentile*, one of his Generals, to know with what Intention the *Spaniards* visited his Dominions, and to offer them such Provisions and Accommodations as his Country afforded. To which the General answer'd, that he came as a Friend, and to treat of Matters of great Importance; desiring a Conference with the Officers *Montezuma* had sent to receive his Proposals: And, landing with his Troops, he laid out a Camp on an advantageous Situation, fortifying it with Trenches and Redoubts, and planting his Artillery in such a Manner as to command the Country round him.

He lands, and fortifies his Camp.

An Embassy from *Montezuma*.

On *Easter-Day* 1519, *Montezuma*'s Ambassadors came to the Camp of the *Spaniards*, and were admitted to the Presence of *Cortez*, who received them in great State, and entertain'd them at Dinner in a very splendid Manner: After which, he informed them, that he was come from *Don Carlos* of *Austria*, the great Monarch of the East, to propose Matters of great Importance to their Emperor *Montezuma*, and his Subjects; but that it was necessary he should deliver his Message personally to the Emperor, according to the Usage of all Nations; and hoped he should be received with the Respect due to his Character.

To this the *Mexican* Ministers answered, That they had Orders from their Sovereign, the great *Montezuma*, hospitably to receive and entertain all Strangers that arrived on their Coasts, and had brought him a Present of such Things as their Country afforded. But they gave him to understand, at the same time, that their Emperor never admitted Foreigners to his Presence; and therefore he must not think of approaching his Court. *Cortez* replied, That never any Ambassadors were refused an Audience, unless it were with a Design to affront the Prince they came from; and that he was determined not to leave the Country till he had delivered his Embassy to their Emperor himself. Whereupon the *Mexican* Ministers desired, That he would, however, remain in his Camp till they had acquainted their Emperor with the Proposal, and received his Commands; and they would, in the mean time, supply his People with Provisions, and every thing they wanted.

During this Conference, some of the *Mexicans* were very busy in drawing, upon Cotton Cloth, the Pictures of the principal *Spaniards*, and whatever they thought remarkable; as their Ships, Arms, Artillery, and Horses; which were designed to be sent to *Montezuma*, to acquaint him what kind of People, and of what Force, the *Spaniards* were. Of which *Cortez* being inform'd, desired they would not finish their Piece till he had given them a Taste of his military Operations: Whereupon he order'd his Forces to be drawn up in Order of Battle, and to exhibit a mock Engagement: He order'd also his Horse to mount, and shew their Activity and Horsemanship

in

thing like a Tune, when they dance. They dance thirty or forty in a Circle, ſtretching out their Hands, and laying them on each other's Shoulders: They ſtamp, and jump, and uſe the moſt antick Geſtures for ſeveral Hours, till they are heartily weary; and one or two of the Company ſometimes ſtep out of the Ring to make Sport for the reſt, ſhewing Tricks and Feats of Activity; and, when they are in a moſt violent Sweat, will frequently jump into the Water, without taking any manner of Cold. the *Spaniſh* Tongue. Before he left the Iſland, he expreſſed his Zeal againſt the Idolatry of the Natives, by breaking down their Idols; which does not ſeem very complaiſant, after the hoſpitable Reception he met with from the Iſlanders.

The Forces being reimbarked, *Cortez* continued his Voyage to the Mouth of the River *Tobaſco*, in the Bay of *Campeachy*; where, when the Natives perſiſted to oppoſe his Deſcent, he fired upon them with his Artillery and ſmall Arms: Whereupon they turn'd their Backs, and fled, and he landed his Men without Oppoſition. Being obliged to paſs through ſome Woods, a Body of the Enemy, who had concealed themſelves therein, ſurprized and wounded ſome of the *Spaniards* with their Arrows. Continuing his March till he came to the Town of *Tobaſco*, he found it fortified with a Kind of wooden Wall, formed with the Bodies of Trees fixed like Paliſadoes, through the Intervals whereof they ſhot their Darts and Arrows: But his Men no ſooner came up to the Works, and fired their Muskets though the Palliſadoes, than the Enemy retired to a large Square in the Middle of the Town, where they made ſome Shew of defending themſelves; but, upon the Approach of the *Spaniards*, they retired from thence alſo, and fled to their Friends in the Woods.

The Day after the taking of *Tobaſco*, the *Mexicans* aſſembled an Army of forty thouſand Men, with which they attack'd the *Spaniards*. The Battle ſeem'd doubtful, till *Cortez* ſallied out of a Wood, and charged them in Flank with his Horſe; by which he obtained another complete Victory. The *Indians* are repreſented in this Battle as a very formidable Enemy, with a View to magnify the Courage and Conduct of *Cortez* and the *Chriſtians*. They relate alſo, that St. *James* the Apoſtle appeared in the Battle, on a white Horſe, and fought for the *Spaniards*. Whereas every one knows, that the *Indians* durſt never ſtand a regular Body of *Europeans*, with Fire-Arms or Horſe, and eſpecially when the Artillery thunder'd upon them; believing that the People they engaged were Gods; and conſequently, there was very little Occaſion for a Miracle, or indeed for much millitary Skill or Courage, to defeat an Enemy, when they had ſuch Advantages on their Side.

The Day after the Battle, the Cacique of *Tobaſco* ſent a ſolemn Embaſſy to *Cortez*, to implore Peace, attended with a Preſent. The Ambaſſadors approach'd *Cortez* as they uſed to do their Gods, with Golden Pans or Cenſers, in which they burnt Aromatick Gums and other Incenſe: The Cacique afterwards came in Perſon, and made his Submiſſion, bringing with him twenty beautiful *Indian* Virgins, which he made *Cortez* a Preſent of. One of theſe, whom the General cauſed to be baptized by the Name of *Donna Marina*, ſerved him, during the whole Expedition, in the double Capacity of Concubine and Interpreter. She was a Native of *Mexico*, of a ready Wit, and underſtood the Cuſtoms of the Country and the Language perfectly well; and to her Merit and Addreſs the *Spaniards* aſcribe the Succeſs of their Arms in a great Meaſure. *Cortez* let the Cacique know, that he came from a powerful Prince; and that his View was to make them happy in this World and the next, by making them Subjects of the ſame Sovereign, and converting them to the true Religion. To which the Cacique anſwer'd, that he and his People ſhould think themſelves happy in obeying a King, whoſe Power and Greatneſs appeared with ſuch an Advantage in his Subjects. But as to the Point of Religion, they gave little Hopes of their Converſion.

Cortez, having compelled the Natives of *Tobaſco* to acknowledge the King of *Spain* for their Sovereign, embarked his Forces, and ſailed to the Port of St. *John de Ulva*. When the *Spaniards* were coming into this Port, two Periaguacs full of *Indians* came into the Fleet, and addreſs'd themſelves to the General in a ſubmiſſive Manner; but were not underſtood by his Interpreter: Which *Donna Marina*, the General's Concubine, obſerving, offer'd to become Interpreter between the *Chriſtians* and her Countrymen the *Mexicans*. The General was now informed by the *Mexicans*, that their Emperor *Montezuma* had ſent two of his Miniſters, *Pilpotoe*, Governor of that Province, and *Tentile*, one of his Generals, to know with what Intention the *Spaniards* viſited his Dominions, and to offer them ſuch Proviſions and Accommodations as his Country afforded. To which the General anſwer'd, that he came as a Friend, and to treat of Matters of great Importance; deſiring a Conference with the Officers *Montezuma* had ſent to receive his Propoſals: And, landing with his Troops, he laid out a Camp on an advantageous Situation, fortifying it with Trenches and Redoubts, and planting his Artillery in ſuch a Manner as to command the Country round him.

Cortez embarks his Forces again. He arrives at the Port of St. *John de Ulva*.

He lands, and fortifies his Camp.

On *Eaſter-Day* 1519, *Montezuma*'s Ambaſſadors came to the Camp of the *Spaniards*, and were admitted to the Preſence of *Cortez*, who received them in great State, and entertain'd them at Dinner in a very ſplendid Manner: After which, he informed them, that he was come from *Don Carlos* of *Auſtria*, the great Monarch of the Eaſt, to propoſe Matters of great Importance to their Emperor *Montezuma*, and his Subjects; but that it was neceſſary he ſhould deliver his Meſſage perſonally to the Emperor, according to the Uſage of all Nations; and hoped he ſhould be received with the Reſpect due to his Character.

An Embaſſy from *Montezuma*.

To this the *Mexican* Miniſters anſwered, That they had Orders from their Sovereign, the great *Montezuma*, hoſpitably to receive and entertain all Strangers that arrived on their Coaſts, and had brought him a Preſent of ſuch Things as their Country afforded. But they gave him to underſtand, at the ſame time, that their Emperor never admitted Foreigners to his Preſence; and therefore he muſt not think of approaching his Court. *Cortez* replied, That never any Ambaſſadors were refuſed an Audience, unleſs it were with a Deſign to affront the Prince they came from; and that he was determined not to leave the Country till he had delivered his Embaſſy to their Emperor himſelf. Whereupon the *Mexican* Miniſters deſired, That he would, however, remain in his Camp till they had acquainted their Emperor with the Propoſal, and received his Commands; and they would, in the mean time, ſupply his People with Proviſions, and every thing they wanted.

During this Conference, ſome of the *Mexicans* were very buſy in drawing, upon Cotton Cloth, the Pictures of the principal *Spaniards*, and whatever they thought remarkable; as their Ships, Arms, Artillery, and Horſes; which were deſigned to be ſent to *Montezuma*, to acquaint him what kind of People, and of what Force, the *Spaniards* were. Of which *Cortez* being inform'd, deſired they would not finiſh their Piece till he had given them a Taſte of his military Operations: Whereupon he order'd his Forces to be drawn up in Order of Battle, and to exhibit a mock Engagement: He order'd alſo his Horſe to mount, and ſhew their Activity and Horſemanſhip

in

in charging, wheeling, and retiring, as in a Battle: Then the ſmall Arms were ordered to fire, and afterwards the Artillery: At which the *Mexicans* were aſtoniſhed; ſome of them actually fled, and others fell down with the Fright, apprehending they ſhould be deſtroyed by this artificial Thunder; but, being a little recovered from their Conſternation, they made ſeveral Additions to the Piece they were painting: And, having finiſhed it, the Ambaſſadors carried the Picture, with a Preſent *Cortez* had provided for the Emperor, to the Court of *Mexico*. They returned again ſeven Days after, and brought another magnificent Preſent from *Montezuma*; but ſaid, he could not admit of the *Spaniards* reſorting to his Court. To which *Cortez* anſwered, He durſt not return to his Prince, till he had delivered the Meſſage he was ſent upon to the Emperor *Montezuma*.

The *Mexicans* aſtoniſhed at the Artillery and ſmall Arms.

While *Cortez* remained in his Camp, he order'd his Fleet to ſail along the *Mexican* Coaſt, and ſent out Parties by Land to gain farther Intelligence of the State of the *Mexican* Empire; and, in the mean time, received a Meſſage from *Montezuma*, requiring him to depart his Dominions, or he ſhould look upon the *Spaniards* as his Enemies, and treat them as ſuch. This occaſioned a Mutiny among his Men; ſome of them repreſenting, that it was the higheſt Raſhneſs to attempt the Conqueſt of ſo great an Empire with ſo ſmall a Force: Whereupon *Cortez* pretended he would return to *Cuba*, and get a farther Reinforcement of Troops; but finding a Majority of his Soldiers deſirous of proſecuting immediately what they had ſo fortunately begun, he determined to continue his March towards the Capital City of the Empire: In which Reſolution he was confirmed by the Cacique of *Zempoala*, who offered to enter into an Alliance with the *Spaniards*, againſt *Montezuma*.

The Cacique of *Zempoala* joins *Cortez*.

The General began his March to the City of *Zempoala*, the Capital of his new Ally; where, arriving in two or three Days, he was received by the Cacique with the greateſt Marks of Eſteem and Affection. He continued his March the next Day to the Town of *Quibiſlan*, where he ordered his Fleet to meet him. Here above thirty Caciques of the Mountains came and deſired his Alliance, offering to reinforce his Troops with an hundred thouſand Men, if he would aſſiſt them in throwing off the Yoke of *Montezuma*. This *Cortez* readily conſented to; and, as the *Indians* ſeemed to believe the *Spaniards* invincible, *Cortez* was not backward to encourage the Notion, looking upon it as a very likely Means to facilitate the Reduction of that Empire; of which he ſeemed to have ſuch an Aſſurance at this Time, that he took upon him to demoliſh the Temples and Images of the *Zempoalans*, who ſacrificed ſome of their Priſoners; telling them, that the God of the Chriſtians abominated ſuch Sacrifices: Nor was he content with this; but he converted one of the Temples into a Chriſtian Church, and erected an Altar in it, on which he placed an Image of the Bleſſed Virgin, and celebrated Maſs with great Solemnity.

The *Spaniards* march to *Zempoala*.

After this Execution on the Idols at *Zempoala*, *Cortez* returned to *Quibiſlan*, to which he gave the Name of *Vera Cruz*, where he found a Veſſel juſt arrived from *Cuba*, with ten Soldiers and two Horſes. By theſe he underſtood, that *Diego Velaſquez* continued to threaten him; and had ſent to the Court of *Spain* for the King's Commiſſion, to be Viceroy of that Iſland, and Captain-General on the Continent, that he might reap the Glory and Advantage of the Conqueſt of the Empire of *Montezuma*. Upon this Intelligence, *Cortez* drew up a Letter to the Court of *Spain*, in the Name of his principal Officers; giving an Account of the Succeſs of their Expedition, the Wealth and Fertility of the Country, the ſeveral Princes and Provinces that had already entered into an Alliance with the *Spaniards*, &c. Which Letter, with all the Gold, Jewels, and valuable Curioſities they had obtained by Preſents from *Montezuma*, or by Traffick with his Subjects, were ſent to *Spain*, as a Specimen of the Wealth of the Country. In this Diſpatch alſo was incloſed a Petition, that *Cortez* might ſtill continue to be the General and Conductor of the Enterprize.

New Adventurers arrive

Cortez ſends to *Spain* for a Commiſſion

But there was ſtill a conſiderable Party in the Intereſt of *Diego Velaſquez*, and amongſt them ſome of the principal Officers, his near Relations. And when the diſaffected Party found they were not able to carry their Point, they entered into a Conſpiracy to ſeize one of the Ships, and return to *Cuba*; which was diſcovered the Night before it was to have been executed; and *Cortez*, to deter his People from ſuch Attempts, cauſed two of the Conſpirators to be put to Death, two more to be whipped, and one to have his Foot cut off. The General and Officers of his Party alſo agreed to ſet Fire to the Fleet, after they had brought the Tackling, Iron Work, and Planks on Shore; whereby they rendered it impoſſible for any of their People to deſert him for the future, and added an hundred Seamen to their Army.

A Mutiny amongſt the *Spaniards*

Soon after the burning of the Fleet, appeared three *Spaniſh* Ships upon the Coaſt, that came from Don *Francisco de Garray*, Governor of *Jamaica*; who landed a Notary, attended by three Witneſſes, that were ſent to declare that the Governor of *Jamaica* laid Claim to that Part of the Coaſt where *Cortez* was, and intended to ſettle a Colony there; requiring him to remove from thence: But *Cortez*, inſtead of complying with the Demand, made the Notary, and ſix *Spaniards* more, Priſoners; and the Ships that brought them thereupon ſtood off to Sea again. After which, the General, having finiſhed the Fortifications of *Vera Cruz*, and left in it a Garriſon of an hundred and fifty *Spaniſh* Foot, two Troopers with their Horſes, and a good Number of Confederate *Indians*; began his March towards the City of *Mexico*, with the reſt of his Forces, conſiſting of five hundred *Spaniſh* Foot, fifteen Horſe, and ſix Field-Pieces, which were drawn by the Natives. He was attended alſo in this March by his Allies the neighbouring Caciques, and a numerous Army of *Indians*; and, having paſſed ſome high barren Mountains, he arrrived at the City of *Zocotblan*; the Cacique whereof commanded a great Extent of the Country, and received the *Spaniards* with a great Shew of Reſpect; but did not ſeem ſincere in the Friendſhip he profeſſed. Here, being adviſed to march through the Territories of *Tlaſcala*, an *Indian* Republick, that ever was at War with *Montezuma*; *Cortez* ſent four of the Chiefs of the *Zempoalans*, his Allies, as Ambaſſadors, to offer them Peace, and to demand a Paſſage through their Country. Which Propoſal being debated in the Senate of *Tlaſcala*, they determined to oppoſe the Paſſage of the *Spaniards* through their Country, till they had made an Experiment of their Strength. Indeed, they durſt not meet this terrible Enemy, whoſe Arms they reſembled to Thunder and Lightening, in a fair Field; but they frequently laid Ambuſcades in the Woods and Mountains, and, ſurrounding the Stragglers, killed and wounded ſome of the *Spaniards*; by which they learnt they were neither invulnerable nor immortal, as they had been repreſented. However, ſuch was the Advantage the *Spaniards* had in their Artillery and Horſes, that the *Tlaſcalans*, finding it in vain to continue

Cortez begins his March to *Mexico*

Arrives at *Zocotblan*

An Embaſſy to *Tlaſcala*

the

the War, were contented, at length, to accept of Peace, and become moſt faithful Allies to *Cortez*.

When *Montezuma* received Advice, that the *Spaniards* had ſubdued the *Tlaſcalans*, and were about to incorporate them in the Number of their Allies, he was under the utmoſt Conſternation; for he knew them to be the braveſt of the *Indian* Nations, and the moſt inveterate Enemies to his Empire. He ſent another Embaſſy therefore to *Cortez*, to repreſent the *Tlaſcalans* as a treacherous and barbarous People, who had no Regard to their Treaties, and who would take the firſt Opportunity that preſented itſelf of deſtroying thoſe that confided in them: But the *Spaniards* eaſily ſaw through the Deſign of *Montezuma*, and concluded their Treaty with *Tlaſcala* the ſooner, becauſe they found that Prince ſo much dreaded the Confederacy they were negotiating.

Montezuma made ſtill another Effort to divide the *Spaniards* and the *Tlaſcalans*: He even offered to pay a yearly Tribute to the *Spaniards*, conſiſting of half his Revenues, provided they would break with their new Allies, and lay aſide their Deſign of marching to *Mexico*: But *Cortez* would not conſent to either of theſe Propoſitions; and, receiving an Invitation from the Senate of *Tlaſcala*, to take up his Quarters in their Capital, he enter'd that City in Triumph, and had a Palace aſſign'd him, conſiſting of ſeveral Courts, large enough to accommodate his whole Army; and was entertain'd here at the Expence of that Republick, who readily conſented to become Fellow Subjects of the ſame mighty Prince the *Spaniards* were.

Cortez, having remained at *Tlaſcala* about 20 Days, received another Embaſſy from *Montezuma*, inviting him to advance to the Capital City of *Mexico*; for, finding the *Spaniards* were now become ſo powerful, by their Alliance with the *Tlaſcalans*, and other States, that it was in vain to oppoſe their March, he thought it the leaſt Evil of the two to receive them as Friends. And there is no doubt, but at this Time, *Montezuma* and the *Mexicans* were ſo terrified with the Artillery of the *Chriſtians*, and the formidable Alliances they had enter'd into with the Natives, that they might have made that Emperor tributary to *Spain*, and put almoſt any Terms upon him: But *Cortez*, who affected to make himſelf rather feared than loved, pretended that this ſudden Change in *Montezuma* could ariſe from no other Motive than Treachery; and was done with a View of ſurprizing and cutting off the *Spaniards*, when he ſhould have them in his Power.

However, tho' he knew of a Plot to cut off the *Spaniards* at *Cholula*, we are told, he continued his March thither; which was certainly very imprudent, if he really believed there was ſuch a Conſpiracy. But, as a Precaution, he took ſix or ſeven thouſand of the *Tlaſcalans* with him, beſides the *Zempoalans*, and the Forces of his other Confederates. Being arrived at the City of *Cholula*, he was received with all imaginable Marks of Eſteem and Affection. Hiſtorians relate, that ſuch were the joyful Acclamations of the *Mexicans*, on the *Spaniards* entering into this City, that they themſelves, tho' they had entertained a Jealouſy of a Conſpiracy before, were inclined to think them ſincere: That the Quarters the Magiſtrates aſſign'd the *Spaniards*, were four large Houſes, contiguous to each other, ſpacious enough to contain the *Chriſtians*, and all their Allies, except the *Tlaſcalans*, who were poſted as to have a Communication with their Friends; and that the *Spaniards*, having fortified their Quarters, were in no Danger of being ſurprized. But, whatever there was in the Conſpiracy of the *Indians* againſt the *Spaniards*, all agree, that *Cortez* and the *Tlaſcalans* fell upon the poor defenceleſs Citizens of *Cholula*, and cut the Throats of many Thouſands of them, without the Loſs of any of their own People: That he even ſet Fire to their Temples, which he burnt, with great Numbers of Prieſts and others, who had retired thither, either to invoke the Protection of their Gods, or as to Sanctuaries, which they thought none would be ſo barbarous as to violate.

Cortez murders ſeven thouſand *Mexicans* at *Cholula*.

This terrible Execution had ſuch an Effect on *Montezuma*, that he immediatly ſent another rich Preſent to *Cortez*, with farther Offers of Submiſſion and Reſignation to his Pleaſure: And there is little room to doubt, but *Cortez* expected this Maſſacre would be attended with ſome ſuch Conſequences.

Having remained ſome Days at *Cholula* after this Maſſacre, the General made the neceſſary Preparations for his March, and advanced, by eaſy Stages, towards the Court of *Mexico*, in order to gain farther Intelligence, and ſtrengthen himſelf by Alliances with the Caciques, or *Mexican* Princes, great Numbers of them reſorting to him, and complaining of the Tyranny and Oppreſſion of *Montezuma*. Nor was *Cortez* ſorry to ſee theſe Humours prevail in the Heart of the Country. Indeed the Diſaffection of the *Mexicans* was ſo univerſal, that *Montezuma* could not, without Difficulty, have prevented the Revolt of his Subjects, and a Confederacy of the *Indian* Caciques againſt him, if the *Spaniards* had not come to their Aſſiſtance. And, conſequently, the mighty Actions pretended to be done by theſe Adventurers, had very little to be admired in them.

Cortez enters into new Alliances, and advances towards *Mexico*.

It is pretended, that *Montezuma* had laid another Plot to deſtroy the *Spaniards*, by leading them into a deſart Country, full of Defiles and difficult Paſſes, where he propoſed either to cut them off, or ſtarve them; but their *Indian* Allies adviſed *Cortez* to take a different Road, whereby he preſerved his Army: That the Stratagem failing, *Montezuma* commanded his Magicians to aſſemble, and diſtreſs his Enemies by their Enchantments, on Pain of Death: That thereupon the Magicians took their Poſt on a Mountain, in View of the *Spaniſh* Army; where, beginning to draw Circles, and invoke the Devil, the Prince of Darkneſs appeared to them, in the Form of one of their Idols, of a moſt terrible Countenance; and, with an angry Look, exceeding the Fierceneſs of the Idol, ſeem'd to threaten them: Whereupon they proſtrated themſelves before the infernal Spirit; but he, regardleſs of their Devotion, in a diſmal Tone, bid them *tell* Montezuma, *that, for his Tyranny and Cruelty, Heaven has decreed his Ruin*, with more of the like Nature. And when this Viſion was related to *Montezuma*, 'tis ſaid, he was aſtoniſh'd, and for ſome time remained ſpeechleſs; but, at length, broke out in a piteous Exclamation, and ſeem'd ready to diſſolve in Tears: And now, finding it in vain to oppoſe the March of the *Spaniards* any longer, he began to make Preparations for their Reception.

The Magicians employ'd by *Montezuma* to diſtreſs the *Spaniards*.

A pretended Viſion.

The *Spaniards*, continuing their March, were attended by ſeveral other Caciques, and Lords of the Country, and, drawing near to *Mexico*, in order to ſtrike the greater Terror into their Natives, he cauſed ſeveral *Indians* to be ſhot, that approached too near his Quarters, while he lay encamp'd at *Amemeca*, on the Borders of the *Mexican* Lake.

Here Prince *Cacamatzin*, the Nephew of *Montezuma*, attended by the *Mexican* Nobility, came to the General, and bid him welcome; assuring him, that he would meet with a very kind and honourable Reception from the Emperor; but intimated, that there having lately been a great Scarcity of Provisions in the City of *Mexico*, occasion'd by unseasonable Weather, they could not accomodate him as they desired; and therefore entreated he would defer his Entrance into that Capital, if he did not think fit entirely to decline going thither: But, *Cortez* appearing determined to advance, the Prince seemed to acquiesce; and the Preparations for the Reception of the *Spaniards* were continued.

Cortez arrived next at *Quitlavaca*, a City situated on an Island in the great Lake, five or six Leagues from *Mexico*; and the last Town the *Spaniards* came to, before they arrived at *Mexico*, was *Iztapalapa*, which stands upon the great Causey leading to that Capital, and is about two Leagues from thence; where he was received, with all imaginable Honours, by the Cacique and the neighbouring Princes. And having remained here one Night, he began his March early the next Morning, being the 19th of *November* 1519, in order to make his Entry into the Metropolis of the Empire. Being come within a League of the City, they were met by four thousand of the Nobility and great Officers of State, who, having paid their Compliments, advanced before them to the Gates of *Mexico*, and then made a Lane for the Army to march through; which consisted at this time of four hundred and fifty *Spaniards*, and six thousand *Tlascalans* and *Indians*. They had no sooner enter'd the Streets of *Mexico*, but they were met by two hundred Noblemen of the Emperor's Houshold, clothed in one Livery, with large Plumes of Feathers on their Heads, all of the same Fashion and Colour. These, after meeting and complimenting the General, fell back also, and, dividing themselves, made a Lane for the *Spaniards*: Then came another Body of the Nobility, of a superior Dignity, who made a more splendid Appearance; and, in the midst of them was the Emperor *Montezuma*, carried in a Chair of beaten Gold, on the Shoulders of his favourite Courtiers, four more of them sustaining a Canopy over his Head; the whole adorned with beautiful Feathers, through which the glittering Gold appeared: He was preceded by three Officers, with Rods of Gold, the Harbingers of the Emperor's Approach, on whose Appearance the People prostrated themselves, none daring to look up.

Cortez entered Mexico.

Cortez dismounting when the Emperor drew near, the *Mexican* Monarch alighted from his Chair, and Carpets were spread in the Street for him to tread on: He advanc'd, according to the *Spanish* Historians, with a slow solemn Pace, leaning on the Arms of two Princes, his Relations; and was met by *Cortez* with a becoming Haste, and a most profound Reverence; which *Montezuma* answer'd, by touching the Ground with his Hand, and afterwards raising it to his Lips; a Condescention which added to the Esteem and Veneration his Subjects already had of the *Spaniards*. The Conference between the Emperor and the General was short. After which the Emperor commanded one of the Princes, his Relations, to conduct the General to the Palace assign'd for his Residence; and then returned to his own Palace.

The first Interview with *Montezuma*.

The Royal House appointed for the *Spaniards* Reception, was so spacious as to contain all the *Europeans* and their Auxiliaries: It had thick Stone-Walls, flank'd with Towers: The Roof of the Palace was flat, and defended by Battlements and Breast-works; insomuch, that when the General had planted his Artillery, and placed his Guards, it had very much the Appearance of a Fortress. Hither *Montezuma* came the same Evening, and was received by *Cortez* in the principal Square of the Palace; and that Monarch, having entered the Room of State, and seated himself, order'd a Chair for *Cortez*; and a Signal was made for his Courtiers to retire to the Wall: Whereupon the *Spanish* Officers did the same; and *Cortez*, being about to begin a Speech by his Intrepreters, *Montezuma*, as is said, prevented him. The Speech of the Emperor, the Answer of *Cortez*, and the Emperor's Reply, are all related by the *Spaniards*.

Montezuma entertained by *Cortez*.

In the first of these Speeches, the *Spanish* Historians have made *Montezuma* speak what they on this Occasion; and have sufficiently discover'd that Submission *Montezuma* was then disposed to pay them: They shew, that the *Spaniards* were then so high in the Opinion of the *Mexicans*, that they might have imposed what Terms they pleased upon them, if they had not struck upon the only String that could have prevented it; namely, the demanding a sudden and total Change in their Religion, even at this first Conference. Whether the Answer said to be made by *Cortez* be genuine, or not, is not very material; but it is evident, from this first Speech their Writers have put into his Mouth, and many other Passages, as also from his demolishing their Temples and Images at *Cozumel* and *Zempoala*, that he began so early to prejudice the *Indians* against the *Spaniards*, by insisting on a Change of Religion before he had established his Authority.

Remarks on this Speech.

The *Spanish* General, attended by some of his Officers and Soldiers, went the next Day to the Palace of *Montezuma*, and was admitted to an Audience. And here again, their Historians relate, that *Cortez* entertained that Prince chiefly on the Subject of Religion: That he endeavoured to give him an Opinion of the Rites and Ceremonies of the *Christians*, exclaimed against human Sacrifices, and how unnatural it was to devour their own Species thus sacrificed. But *Montezuma* still insisted, *That his Gods were as good in his Country, as the God of the* Christians *was in theirs*: Nor could he dissemble his Resentment, when he was press'd so closely on this Subject.

The first Audience of *Cortez*.

At another time, *Montezuma* carried *Cortez*, and some of the principal *Spanish* Officers, to take a View of the great Temple; explained to them their Rites and Ceremonies, the Deities the Images represented, and the Use of the sacred Vessels and Utensils; and this with great Reverence and Seriousness: At which the *Spaniards* were so rude and impolitic, as to laugh and make a Jest of them. *Montezuma* thereupon admonish'd them to keep within the Bounds of Decency. But *Cortez*, transported with great Zeal, said to the Emperor, *Permit me, Sir, to fix the Cross of Christ before these Images of the Devil, and you will see whether they deserve Adoration or Contempt.* At which the Priests were enraged, and *Montezuma* himself in Confusion; and said to the *Spaniards*, *You might, at least, have shewn this Place the Respect you owe to my Person*: And immediately led them out of the Temple; but returned thither again himself, telling them, he must ask Pardon of his Gods for having suffered them to proceed so far.

The first Audience of *Cortez*.

Still there continued a great Intimacy between *Montezuma* and *Cortez*. The *Mexicans* still treated the *Spaniards* with a Respect that favour'd of Submission. *Montezuma* spoke of their King with the

the ſame Veneration he mention'd his own Gods; his Nobility paid a profound Reſpect to the *Spaniſh* Officers, and the People bow'd the Knee to the meaneſt *Spaniſh* Soldier: But in the mean Time, one of the Emperor's Generals, levying the annual Tax impoſed on that Part of the Country which lay in the Neighbourhood of *Vera Cruz*; theſe Caciques, who had thrown off their Subjection to the *Mexican* Empire, applied themſelves to *John de Eſcalante*, Governor of *Vera Cruz*, for Protection; who thereupon march'd out of that Fortreſs, with forty *Spaniards*, and three or four thouſand Confederate *Indians*, to their Aſſiſtance; and, tho' he had the good Fortune to defeat the *Mexican* General, yet one of the *Spaniards* was killed, and his Head ſent up to Court; and the Governor, with five or ſix more of his Garriſon, were mortally wounded. Which News being brought to *Cortez*, gave him great Uneaſineſs; and the more, becauſe he was inform'd that the *Mexicans* were conſulting how to drive him out of their Territories, which they did not now apprehend impracticable. Finding it impoſſible therefore to maintain his Authority among the *Indians* any longer, without entering on ſome Action that might give them freſh Cauſe of Aſtoniſhment, he reſolved to ſeize the Perſon of *Montezuma*, and bring him Priſoner to his Quarters: And accordingly, having given Orders to his Men to arm themſelves without Noiſe, and poſſeſs themſelves of all the Avenues leading to the Palace; he went to the *Mexican* Court, attended by ſeveral of his Officers, and thirty of his Soldiers; and, being admitted to the Emperor's Preſence, complained of the Violation of the Peace between them, by the *Mexican* General falling upon his Confederates, and afterwards killing a *Spaniard* in cold Blood. To which *Montezuma* anſwer'd, That if any thing of that Nature had been done, it was without his Orders; and he was ready to make Satisfaction. But *Cortez* gave him to underſtand, that nothing would ſatisfy them but his ſurrendering himſelf into their Hands, and reſiding with them in the Palace aſſign'd to the *Spaniards* for their Quarters.

Montezuma refuſing to put himſelf into their Hands, was informed, that, if he would not, they would carry him off by Force, or murder him if they were oppos'd: Whereupon he gave Orders to his Officers to prepare for his Removal to the *Spaniſh* Quarters, whither he went in the uſual State, and in all Appearance voluntarily, unleſs that he was attended by a Company of *Spaniards*. They alſo obliged him to take with him ſome of his Children, with the principal Officers of State, whom they detain'd as Hoſtages; all which could not be effected, without a Suſpicion, that they were in reality Captives to the *Spaniards*. But *Cortez* obliged *Montezuma* to declare, that his Removal was voluntary. This unfortunate Prince was allow'd to live in the ſame State he had done in his own Palace for ſome Time, and to iſſue his Orders, as if he had been under no manner of Reſtraint; only the *Spaniards* us'd not to admit too many of the *Mexicans* to enter their Quarters at a Time. His Table alſo, during his Confinement, was ſerv'd with greater Plenty than uſual, and what was left, was diſtributed amongſt the *Spaniſh* Soldiers. He ſpent moſt of his Time, when he was diſengaged from Affairs of State, among the *Spaniards*; and the Reſpect they paid him in return, gave him great Satisfaction. He would ſometimes play with *Cortez* at a *Mexican* Game, call'd *Tolaque*, wherein they bowl'd at certain golden Pins, and he us'd to diſtribute his Winnings amongſt the *Spaniards*: And he preſerv'd the Sentiments of a Prince, even at play. But ſometimes *Cortez* entertain'd him with more ſerious Subjects; pretending that his Zeal would not permit him to loſe any Opportunity of making the Emperor his Convert. Nor did the *Spaniards* only teize this unfortunate Prince, on the Point of Religion; but they compelled him to iſſue out his Orders for apprehending his General *Qualpopoca*, who had engag'd the *Spaniards* near *Vera Cruz*; and this Gentleman, the *Spaniſh* Officers, at a Court-martial, condemn'd to be burnt before the Gates of the Palace, with the reſt of the Captains, that were concern'd in that Enterprize. And leſt this ſhould occaſion an Inſurrection, and an Attempt be made to reſcue *Montezuma*, *Cortez* cauſed him to be laid in Irons that Morning the Execution was to be performed. But *Cortez* having ſeen the Execution perform'd, immediately return'd to *Montezuma*'s Apartment, and order'd his Fetters to be taken off. The *Spaniſh* Hiſtorians add, that *Montezuma* had now Leave to go whither he pleas'd; which is ſcarce credible: For when that Prince only deſired to perform his Devotions in one of his Temples, it was granted only upon Condition that he ſhould return to the *Spaniſh* Quarters again, and from that Day aboliſh human Sacrifices. A Body of *Spaniards* alſo attended him to the Temple, which they could do with no other View than ſecuring their Priſoner. Nor did he ever go abroad without a *Spaniſh* Guard, or without asking Leave of *Cortez*, or ever lay one Night out of their Quarters by their own Confeſſion. All Poſts of Honour or Profit were diſpoſed of by *Cortez* and his principal Officers, who were courted by the *Mexican* Nobility, when they ſaw that no Preferments could be had but by their Intereſt.

Montezuma in Irons

The moſt fatal of all the Errors *Cortez* committed, were his repeated Attempts, from the very time he landed, to deſtroy the Temples and Images of the *Mexicans*, and force them to receive a new Religion before they knew any thing of it, and before he was in a Condition to force their Compliance. And when the Emperor and his Subjects appeared to be all Submiſſion, and had in a Manner given the Reins of Government into the Hands of the *Spaniards*, they attempted, at once, without demanding Leave, or giving any Reaſon for it, to demoliſh all the Images of their Gods, and convert the principal Temples in *Mexico* into *Chriſtian* Churches; which occaſion'd, as might reaſonably be expected, a general Inſurrection; and the *Spaniards* were at length convinced, by the Oppoſition they met with, that it was expedient to admit their Idols to remain, for the preſent, where they ſtood. However, they perſiſted in erecting a *Chriſtian* Chapel in one of the Temples, and placing in it the Croſs, and an Image of the Bleſſed Virgin; and actually ſung Maſs in it with great Solemnity: Which the *Indian* Prieſts agreed not to oppoſe, provided their own Idols might be permitted to remain in their Temples: And thus the Matter was accommodated between them, and the Tumult appeas'd. However, the falſe Politicks or Bigotry of *Cortez*, in endeavouring to deſtroy the *Indian* Superſtition, and introduce his own thus precipitately, prejudiced that People againſt him to ſuch a Degree, that we hear of nothing but Plots and Conſpiracies on the one Side, and cruel Butcheries and Oppreſſion on the other, till the *Spaniards* eſtabliſhed themſelves by pure Force, and had in a Manner extirpated the Natives, inſtead of converting them to the *Chriſtian* Faith.

Montezuma receiving Advice, that his Subjects were unanimous in their Reſolution of reſtoring

him

him to his Liberty and Empire, ſummoned the vaſſal Princes to *Mexico*, who came thither attended with formidable Bodies; and, in this Situation, he had the Courage to let *Cortez* know, 'That, having acknowledged his Maſter, the King of *Spain*, the Heir of his Empire, and that he held his Dominions of him, and having prepared a rich Preſent for that King, to teſtify his Submiſſion and Dependance on him; he expected *Cortez* ſhould withdraw from *Mexico*, and return to the Prince that ſent him, to give him an Account of the Succeſs of his Embaſſy. And *Cortez*, it ſeems, was under ſuch Apprehenſions, that he ſhould ſuddenly be attack'd by the Forces of the whole Empire, if he refuſed to comply with this reaſonable Demand, that he did not think fit to object any thing againſt it: Only deſired Time to build a Fleet to tranſport his Troops to *Spain*, the Fleet which brought him thither being deſtroy'd: To which the *Mexicans* agreed, and immediatly aſſign'd him Timber, Work-men, and Labourers, to rebuild his Ships; which furniſh'd him with a Pretence to ſtay ſome time longer; and he gave Directions to the Work-men not to make too much haſte, expecting that a Reinforcement of Troops might in a ſhort time arrive from *Spain*, and enable him to maintain his Ground againſt all the Powers of *Mexico*.

Montezuma requires *Cortez* to return to *Spain*

The Anſwer of *Cortez* to this Overture.

But, while *Cortez* lived in Expectation of a friendly Squadron, Advice was brought, that eleven tall Ships, and ſeven ſmaller Veſſels, with eight hundred *Spaniſh* Foot, fourſcore Horſe, and twelve Pieces of Artillery on board, were arrived on the *Mexican* Coaſt, near *Vera Cruz*; and that they were ſent by *Diego Velaſquez*, Governor of *Cuba*, to proſecute the Conqueſt of *Mexico*, and to make *Cortez* and all his Men Priſoners, that refuſed to ſubmit to his Authority, and obey *Pamphilio de Narvaez*, who had the Command of the Fleet and Army employ'd in this Expedition. For ſo good was the Intereſt of *Diego Velaſquez* in the Court of *Spain*, that he received the Commiſſion he deſired, and which we before mentioned his Petitioning for. And, being informed of the Succeſs of the *Spaniards* under *Cortez*, and ſupported by the Commiſſion he had obtained, he propoſed, by this ſecond Embarkation, to reap all the Glory and Advantages he at firſt propoſed to himſelf by that Conqueſt.

Narvaez ſent from *Cuba*, with a Body of *Spaniards*, to reduce *Cortez*.

Pamphilio de Narvaez, arriving with his Fleet near *Vera Cruz*, ſummoned *Gonzalo de Sandoval*, who had been appointed Governor of that Fortreſs by *Cortez*, to ſurrender: But *Gonzalo* was ſo far from complying with the Summons, that he ſent thoſe that came on that Errand Priſoners to *Cortez* at *Mexico*. However, *Narvaez* landed his Forces, and march'd directly to *Zempoala*; of which *Cortez* receiving Advice, at firſt ſeem'd Thunder-ſtruck; but recovering from his Surprize, reſolved to make *Narvaez* Offers of Peace, and propoſe the uniting their Forces in the Service of their Prince. Having aſſign'd fourſcore *Spaniards* therefore, under the Command of *Pedro de Alvarado*, to keep Garriſon in *Mexico*; and charged *Alvarado* to have a ſtrict Eye over *Montezuma*, and not ſuffer too great Numbers of the *Mexicans* to reſort to him, or any long Conferences between them; and extorted a Promiſe from the Royal Priſoner, that he would not attempt an Eſcape in his Abſence; telling him, he ſhould ſoon return to *Mexico*, in much better Circumſtances; *Cortez* proceeded towards *Zempoala*, taking an advantageous Poſt in the Neighbourhood of that City, where he could either treat or defend himſelf. And firſt, he made Overtures to *Narvaez*, for accommodating the Differences between them, and uniting their Forces in the Service of their Country; and even offered to relinquiſh the Advantages of that Conqueſt, and go upon ſome other Enterprize with his Adherents, rather than the King's Service ſhould ſuffer. And tho' *Narvaez* refuſed to give him any other Terms than thoſe of ſurrendering at Diſcretion; yet the Conceſſions *Cortez* made, had ſuch an Effect on the Officers and Soldiers, which *Narvaez* commanded, that *Cortez* was ſenſible, he ſhould meet with but a faint Reſiſtance from them: And underſtanding that *Narvaez* kept but a very negligent Guard, he reſolv'd to attempt to ſurprize his Enemy in the Night-time. Accordingly, in a very dark tempeſtuous Night, when *Narvaez* leaſt expected ſuch a Viſit, *Cortez* fell upon his Quarters, and made him and his principal Officers Priſoners, before they were well awake: Whereupon the reſt of his Troops flung down their Arms, and moſt of them enter'd into the Service of *Cortez*.

Cortez makes Overtures of Peace to *Narvaez*.

Cortez ſurprizes *Narvaez*, and makes him Priſoner.

While *Cortez* was engaged in this Expedition *Pedro de Alvarado*, who was left to command the *Spaniards* in *Mexico*, behaved himſelf with that Inſolence and Cruelty, and diſcover'd ſuch an inſatiable Temper, as united the whole City againſt him: The People became deſperate, when they found that they were daily plunder'd and murder'd for their Wealth; their Religion derided, and their very Gods defaced and demoliſh'd. But the principal Occaſion of this Inſurrection, was *Alvarado's* falling upon the *Mexican* Nobility at a Religious Feſtival, when they were moſt of them aſſembled and engaged with the common People in a ſolemn Dance called *Atotes*; wherein all Diſtinction is laid aſide, and the whole City, Noblemen and Plebeians, join annually in celebrating the Day. *Alvarado*, obſerving they had put on their Jewels and richeſt Ornaments on this Occaſion, aſſembled his Soldiers, and fell upon them, putting above two thouſand of the *Mexican* Nobility to the Sword, and plunder'd whatever was valuable about them. Whereupon the *Mexicans*, expecting they ſhould all be maſſacred if *Cortez* returned with a Reinforcement of Troops, aſſembled from all Parts, and attack'd the *Spaniſh* Quarters on every Side. And, altho' they were beaten off by the Artillery and Fire-Arms of the Beſieged; yet, as they had cut off their Proviſions, the *Mexicans* would probably have ſtarved *Alvarado*, if *Cortez* had not returned ſuddenly to his Relief: He ſent therefore Expreſs after Expreſs to *Cortez*, to haſten his March; letting him know, that he ſhould be obliged to ſurrender, if he was not ſpeedily ſupplied and reinforced.

The Troops of *Narvaez* ſerve under *Cortez*.

The Inſolence of the *Spaniards* in *Mexico*.

Alvarado maſſacres and plunders the Nobility.

Cortez had juſt finiſh'd the Defeat of *Narvaez*, when he received Advice of the Diſtreſs his People were in at *Mexico*; and, having incorporated all the Troops *Narvaez* brought over with his own, began his March towards *Mexico*, with a thouſand *Spaniſh* Foot, an hundred Horſe, and ſeveral thouſand Confederate *Indians*; leaving at the ſame time Garriſons in the Towns of *Zempoala* and *Vera Cruz*. *Montezuma*, 'tis ſaid, met him at his Return, and congratulated his Succeſs: But that haughty General turned from the Emperor with all the Contempt imaginable; not ſo much as vouchſafing to ſpeak to him. He now looked upon himſelf to be powerful enough to ſubdue the *Mexican* Empire, without courting *Montezuma* or his Subjects; and therefore carried every thing with a high Hand. He had found a Garriſon of fourſcore *Spaniards* able to repel the whole Force of *Mexico*; and he did not doubt, now he ſaw himſelf at the Head of ele-

Cortez treats *Montezuma* with Contempt.

ven People

ven hundred *Spaniſh* Horſe and Foot, with a multitude of Confederate *Indians*, he ſhould be able by Force to reduce the *Mexicans*, and make them Slaves: But he was near paying very dear for his Preſumption; for ſending out a Detachment of four hundred *Spaniards* and *Tlaſcalans*, in ſearch of the Enemy, they were ſurrounded, and in danger of having their Retreat cut off; and he himſelf, with the reſt of his Troops, eſcaped very narrowly being ſtarved, or cut in Pieces: For the *Mexicans*, render'd brave by their Deſpair, were not afraid to attack *Cortez* in his Quarters, tho' defended by a numerous Garriſon, and a Train of Artillery: And, when at any Time he made a Sally, he found Intrenchments in the Streets, and the Bridges broken down, which render'd his Cavalry in a manner uſeleſs; and, tho' he uſually came off victorious, he found he had committed a very great Error in ſhutting himſelf up in *Mexico*, from whence it was almoſt impoſſible to make his Retreat, and where he found it impracticable to fetch in Proviſions: So that if his People were not deſtroy'd by the continual Attacks of the Enemy, they muſt certainly in Time be reduced by Famine.

Revives the Hoſtilities with them.

They attack his Quarters.

In this Diſtreſs, *Cortez* thought fit to endeavour a Reconciliation with *Montezuma*, and make uſe of the Authority he ſtill retained among his Subjects, to induce them to lay down their Arms, and permit the *Spaniards* to march out of *Mexico*. But whatever the Emperor ſaid on this Occaſion, it is evident the *Mexicans* had little Regard to it. His Words, they knew, were put into his Mouth by the *Spaniards*, whoſe Priſoner he was, and tended only to procure them a ſafe Retreat; and they were ſenſible, if they loſt the Advantage they had, they muſt never expect ſuch another. The *Mexicans* reſolved therefore not to conſent to a Ceſſation of Arms, but rejected the Propoſal with Diſdain: And ſome Hiſtorians ſay, they were ſo enraged at the Overture, that they ſhot at their Emperor for making it, and mortally wounded him.

He propoſes to treat with them.

The *Mexicans* refuſe to let *Cortez* retire.

Cortez, finding the *Mexicans* were not to be amuſed with inſidious Propoſals, and that it would be impracticable to make his Retreat in the Day-time, reſolved to attempt it in a dark Night. Having divided the Treaſure therefore amongſt his Men, which amounted to the Value of a Million of Crowns, he iſſued out of his Quarters at Midnight, the Weather being extremely tempeſtuous: But he had not advanced a Mile upon the Cauſey, before he found himſelf attack'd on every Side by the *Mexicans*, both by Land and Water, the Lake being filled with their Canoes or Boats; and, as they had broke down the Bridges, and cut the Cauſey through in ſeveral Places, the *Spaniards* were in great Danger of being entirely cut off. *Cortez* indeed had foreſeen this, and provided a portable Bridge to paſs the Breaches in the Cauſey, which was of great Uſe to him in ſeveral Places: But the *Indians* found Means to deſtroy this Bridge before they were all paſs'd over, and their Rear guard, conſiſting of two or three hundred *Spaniards*, and a thouſand *Tlaſcalans*, was cut in Pieces. They loſt all their Artillery, Priſoners, Baggage, and Treaſure, with ſix and forty Horſes. However, *Cortez*, with the beſt part of his Forces, broke through the *Indians*, and eſcaped to the other Side of the Lake; and he and his Army thought themſelves very happy that there was no Army to oppoſe them there, and that they were purſued no farther, till they had Time to form and recover themſelves from their Conſternation.

He marches away in the Night.

He is attack'd by the *Mexicans*, and his Rear cut off.

Recover. He farther ide of the ake.

This good Fortune, it ſeems, was owing to the Compaſſion the *Mexicans* expreſs'd for the two Sons of *Montezuma*, and ſeveral Princes of the Royal Blood, whom they found ſlaughter'd among the *Spaniards*, when the Day-light appear'd. The *Mexicans* relate, that *Montezuma* himſelf was of this Number, and that the *Spaniards* murder'd both him and his Sons. The *Spaniards*, on the other hand, ſay, that *Montezuma* was killed before, by the Arrows of the *Mexicans*; and that the Princes alſo were accidentally killed in this Engagement, while it was dark. But however that was, the Princes were found dead, pierced through with many Wounds; and the *Mexicans* deferr'd the Purſuit of the *Spaniards*, to ſolemnize their Exequies. To which Piece of Piety *Cortez*, and the *Spaniards* who were left alive, in a great meaſure ow'd their Safety.

Montezuma and his Sons ſaid to be murder'd in this Retreat

The *Mexicans* ſolemnize their Funeral.

The *Spaniards*, having halted ſome Time to refreſh themſelves, continued their March towards *Tlaſcala*: But they had not advanced many Leagues before they were overtaken by the *Mexicans*, at a Time when they were ſo fatigued, that had not *Cortez* taken Poſſeſſion of a Temple, ſurrounded by a Wall of a large Extent, he would have found it difficult to have repulſed the Enemy. But the *Mexicans*, finding they could make no Impreſſion on the *Spaniards*, as they lay entrench'd within thoſe Walls, thought fit to ſound a Retreat. However, *Cortez*, apprehending he ſhould be diſtreſs'd here for want of Proviſions, began his March again at Midnight, in hopes to have got the Start of the Enemy: But being arrived on the Top of a very high Mountain, he diſcover'd the whole Forces of the *Mexicans*, conſiſting of two hundred thouſand Men, drawn up in *Battalia*, in the Valley of *Otumba*, through which it was neceſſary to paſs, in his Way to *Tlaſcala*. Whereupon *Cortez* made only this ſhort Speech to his Officers: WE MUST EITHER DIE, OR CONQUER; THE CAUSE OF OUR GOD FIGHT FOR US. And, finding an uncommon Ardour in his Soldiers to engage, immediately led them on. The Fight was for ſome Time bloody and obſtinate; and *Cortez* gave a ſurpriſing Turn to the Battle, by attacking the Imperial Standard carried by the *Mexican* General: For having killed the General, and taken the Standard, the reſt of the Troops fled, and were purſued with incredible Slaughter.

They continue the Purſuit

The Battle of *Otumba*.

The *Spaniards* victorious.

The *Spaniards* had not remained long at *Tlaſcala*, before an Embaſſy came to that Republick from the new-elected Emperor *Quetlavaca*, to negotiate a Peace between the two Nations of *Mexico* and *Tlaſcala*, and propoſe the uniting their Forces againſt their common Enemy the *Spaniard*. But the *Mexicans* were more dreaded by this Republick than the *Spaniards*; and the Generality of that People ſtill looked upon the *Spaniards* to be ſent from Heaven to their Aſſiſtance. The Ambaſſadors from *Mexico* therefore were diſmiſs'd, with Marks of Contempt, and Preparations made to carry on the War againſt that Empire, in Confederacy with the *Spaniards*.

An Embaſſy from the *Mexicans* to the *Tlaſcalans*.

The *Tlaſcalans* reſolve to quit the Party of *Cortez*.

The *Mexicans* were more ſucceſsful in their Negotiations with the City and Territory of *Tepeaca*, that lay between *Tlaſcala* and the *Spaniſh* Fort of *Vera Cruz*. They incited this People to take up Arms againſt the *Spaniards*; and the *Tepeacans* actually cut off ſome ſmall Parties that *Cortez* ſent from *Tlaſcala* to *Vera Cruz*; inſomuch that the General found it abſolutely neceſſary to reduce *Tepeaca*, in order to keep open his Communication with the Sea: And accordingly both the *Spaniards* and the *Tlaſcalans* made Preparations to invade *Tepeaca*. The *Mexicans*, on the other hand, ſent them a Reinforcement of Troops; and a general Battle enſued; wherein *Cortez* was ſo fortunate as to defeat their united Forces. After

A Confederacy between *Mexico* and *Tepeaca*

Tepeaca subdued by *Cortez*.

ter which, the City and Territory of *Tepeaca* submitted to the Conqueror, who took a severe Revenge on that unhappy People, murdering great Numbers of them in cold Blood, and selling the rest for Slaves. And a *Spanish* Fortress was erected at *Tepeaca*, to which they gave the Name of *Segura de la Frontera*, or *The Security of the Frontier*. *Cortez* also reduced the City of *Guacachula*, and several other Towns, by the Assistance of his *Indian* Confederates; of whom he had not less than one hundred thousand in his Army at this Time.

Vessels built for the Siege of *Mexico*.

Having taken a particular Survey of the Country, *Cortez* made himself Master of all such Posts as might be of Advantage to him in reducing the City of *Mexico*, which was ever his principal View: And, as he was sensible there was no approaching that City by Land but on the Causeys, which might be broken down, he order'd thirteen Brigantines and Sloops to be built, which would make him Master of the Navigation of the Lake, and enable him to attack the Town on every Side by Water as well as Land. While these Vessels were building, *Cortez* assembled an Army of two hundred thousand Confederate *Indians*, and made himself Master of *Tezcuco*, and several other considerable Towns upon the Lake; where he laid up Magazines of Ammunition and Provision, to carry on the intended Siege of the Capital. He was so fortunate also, before he enter'd upon this grand Enterprize, to be joined by near three hundred *Spaniards* from *Cuba* and *Jamaica*, who chose to follow his Fortunes, tho' they were sent out by those who were no Friends to *Cortez*, and with a View of depriving him of the Advantage of this Conquest; and with these he received a Supply of Arms and Ammunition, and some Recruits of Horses.

Cortez possesses himself of the Posts about that City.

Receives a Reinforcement of *Spaniards*.

Thus prepared and reinforced, *Cortez* commanded a Captain, five and twenty *Spaniards*, and twelve Rowers, to go on board each of the thirteen Brigantines. He also placed one of his Field-pieces on board every one of the Vessels; and, while his Fleet sailed to take a View of the City, he possessed himself of the three principal Causeys leading thither, in order to carry on as many Attacks by Land. All the *Europeans Cortez* had in his Army at this Time amounted to no more than nine hundred; of which about two hundred were Musketteers and Cross-bows, eighty-six were Horse, and the rest Pikemen; and his Train of Artillery consisted of eighteen Field-pieces, fifty whereof were Brass.

The Siege of *Mexico* commences.

The first Engagement with the *Mexicans* happen'd upon the Water: For when the *Spaniards* approach'd the City with their Brigantines, an innumerable Swarm of Canoes and Periguaes came out of the Canals of the City to oppose them: But the Brigantines, having the Advantage of the Wind, run in among the Canoes, sunk and overset them at Pleasure, having scarce any Occasion to make use of their Arms. Whereupon those Canoes that escaped the first Shock, fled, with the utmost Precipitation, back to the City, whither they were follow'd by the Brigantines, and several great Shot fired into the Town, to terrify the Inhabitants. After which the Brigantines retired; and the next Day some Progress was made at the three Attacks by Land: But the Enemy had made such Breaches and Intrenchments on the Causeys, as render'd the Approaches very difficult: And whenever the *Spaniards* advanced to attack them, Canoes full of armed *Indians* issued from the Town, and charged them in the Flank; which obliged *Cortez* to order some of the Brigantines to support his Land Forces, and beat off the Canoes. He also caused some thousand Canoes to be made, and mann'd by his Confederates, that might follow the *Mexicans* into the Shallows and Creeks. But, notwithstanding all these Precautions, the *Mexicans*, by their Stratagems, gained several Advantages of *Cortez*. At one Time they broke down one of the Causeys, cut off his Retreat, and took him Prisoner: But he was rescued out of their Hands as they were carrying him away. However, there were about sixty *Spaniards* and a thousand *Tlascalans* killed or taken in this Action, and many more wounded; and he was forced to leave one of his great Guns behind him.

Cortez repulsed in one of his Attacks, and taken.

At last, the wounded Men being recover'd, and the Army of the Confederate *Indians* recruited again to two hundred thousand Men, *Cortez* resolved to give a general Assault to the City; and accordingly they filled up the Breaches that had been made in the Causeys, and drove the Enemy back into the Town: Each Body made a Lodgment within the City, and fortified it; but could not advance far that Night. But the next Day the *Spaniards* got more Ground, and on the third repulsed the Enemy on every Side, and advanced to the great Square in the Middle of the Town, where *Cortez* drew up his united Forces; the Enemy retiring to the farther Part of the Town, and fortifying themselves there. Whereupon *Cortez* thought fit to offer them Terms; and they agreed to treat, with a View of amusing him, till the Emperor and his Nobility made their Escape; of which *Cortez* being apprized, renew'd the Hostilities, and the Emperor, with the principal *Mexican* Nobility, were taken by the Brigantines in the Lake, as they were endeavouring to get away. Whereupon all the rest of their Forces flung down their Arms, and submitted to Mercy; and *Cortez* took Possession of that Capital on the 13th of *August* 1521.

A general Assault.

Mexico taken.

The Emperor taken.

The *Spanish* Historians relate, that no less than one hundred thousand *Mexicans* fell by the Sword in the Defence of this City, besides great Numbers that perish'd by Famine, and other Calamities; and that this Conquest was attended with the Submission of most of the neighbouring Provinces, who consented to acknowledge themselves Subjects of the King of *Spain*.

The Slaughter of the *Mexicans* at this Siege.

The City of *Mexico* being thus reduced, *Cortez* distributed the Plunder among his Soldiers, reserving only a Fifth, with the most remarkable Curiosities, for the King; which he sent to *Spain* by some of his principal Officers, together with an Account of his Conquest, and the State of that Country; desiring his Majesty would confirm the Magistrates he had appointed to govern that Country, with the Grants of the conquer'd Lands and *Indian* Slaves he had made, to his Soldiers; and that his Imperial Majesty would send over Persons qualified to survey the Country, that it might be improved to the best Advantage; with Priests and Missionaries, for the Conversion of the People; as also Cattle, Seeds, and Plants, to improve the Lands: But 'tis said he provided particularly against the sending over Physicians or Lawyers.

The Spoil divided.

Part sent to the Emperor.

The Provinces that depended on *Mexico* having submitted to the *Spaniards*, *Cortez* summon'd the more distant *Indian* Princes to come and acknowledge the King of *Spain* for their Sovereign; of whom one of the chief was the King of *Mechoacan*. To this Prince *Cortez* sent *Montano*, and three other *Spaniards*, attended by twenty *Mexican* Chiefs, with a Present of *European* Utensils and Toys. The King himself came to the *Spanish* Quarters, soon after their Arrival; demanded, who they were? whence they came? and what brought them from so remote a Country? Whether

He has submit

ther they had nothing to eat at home, that they prey'd upon Strangers? And what the *Mexicans* had done, that they had deſtroy'd their City? Demanding if they deſign'd to do the like by him? If they did, he ſaid he ſhould not tamely ſubmit to it, but oppoſe Force to Force. To which the *Spaniards* anſwer'd, They came from the Emperor of the *Chriſtians*, to cultivate a Friendſhip with him, to traffick with his People, and to inſtruct them in the Worſhip of the true God.

The King of *Mechoacan* was at this Time determined to have ſacrificed the *Spaniſh* Ambaſſadors; but the *Mexicans*, who accompanied them, aſſured that Prince, if he offer'd any Violence to their Perſons, their General would infallibly take a ſevere Revenge on him and his Kingdom; giving an Account of the Wonders he had done in their Country with his Fire-Arms, Horſes, and Artillery. At which the King was ſo aſtoniſh'd, that he order'd the *Spaniards* to be treated with the utmoſt Reſpect; and ſoon after ſent in as much Gold and Silver as amounted to an hundred thouſand Dollars, beſides a great Quantity of Cloathing, Jewels and Ornaments, for the General, and a Preſent for each of the Ambaſſadors; with which they return'd to *Mexico*, attended by ſome *Mechoacan* Noblemen, who were ſent Ambaſſadors to *Cortez*. Before theſe *Cortez* order'd his Troops to be drawn up, to exerciſe and skirmiſh, making ſeveral Diſcharges of his Artillery and ſmall Arms, to their great Amazement.

The Ambaſſadors returning, and making their Report to their Prince of what they had been Witneſſes of at *Mexico*, he reſolved to pay *Cortez* a Viſit in Perſon; and, being arrived in that City, acquainted him, he was come to make his Submiſſion perſonally, and acknowledge his Subjection to the King of *Spain*. Whereupon *Cortez* acquainted him how happy he would be in becoming ſubject to ſo great an Emperor, who deſired nothing more than his Converſion, and to have him inſtructed in the Religion of the *Chriſtians*. But *Cortez* ſoon let the King of *Mechoacan* know, that he had a farther View than to make him acknowledge the King of *Spain* for his Sovereign; for he commanded *Chriſtopher Olid* to march into *Mechoacan*, with an hundred *Spaniſh* Foot, forty Horſe, and ſeveral thouſand Confederate *Indians*, to take Poſſeſſion of his chief Towns, and treat his Subjects as a conquer'd People. Whereupon he began to ſtand upon his Defence; for which great Numbers of his People were maſſacred in cold Blood. And *Cortez* having, through this Country, penetrated to the *South Sea*, erected Forts, and built Ships there, for farther Diſcoveries on that Side. *Gonzalo de Sandoval* alſo was ſent to ſubdue the Countries near *Tobaſco* and *Tecoantepec*, on the *North Sea*; and *Pedro de Alvarado* was detach'd to take Poſſeſſion of the Countries bordering upon the Vale of *Guaxaca*, to the Eaſtward of *Mexico*; who all ſubmitted to the Conqueror. And *Cortez* march'd in Perſon to the Province of *Panuco*, which he obliged alſo to ſubmit.

Notwithſtanding his barbarous Uſage of the Natives, and his refuſing to reſign his Government to thoſe who were ſent to ſucceed him in his Command, *Cortez* was declared Captain-General and Governor of *New Spain* by the Emperor. The Governors of *Hiſpaniola* and *Cuba* were commanded to re-inforce him, and give him all poſſible Aſſiſtance. Whereupon, finding himſelf eſtabliſhed in his Command, he ſet about rebuilding the City of *Mexico*, which he had burnt and demoliſh'd. He aſſign'd Places for building Churches, and other publick Edifices; laid out Market-places; divided Part of the Ground among the *Spaniards*, and the reſt among the Natives, giving them Encouragement to build and people the Place again. He aſſign'd one Quarter particularly to *Montezuma*, a Son of the late Emperor, and another to one of the moſt popular *Indian* Generals; and they ſoon erected a much finer Town than that which had been deſtroy'd. But nothing could be more magnificent than the Palace *Cortez* erected for himſelf, upon the Ground where *Montezuma*'s Palace formerly ſtood; about which he uſed ſeven thouſand Beams of Cedars, ſome of them an hundred and twenty Foot in Length. He alſo provided himſelf with a numerous Train of Artillery, which gave the *Indians* a vaſt Opinion of his Power. But that which was his real Strength, and did him moſt Service, was the prodigious Wealth he acquired by Plunder.

His own Palace.

Cortez was generally fortunate in the Choice of Commanders; but he appears to have been miſtaken in *Chriſtopher Olid*; for this Officer threw off his Dependance on *Cortez*, and was about to ſet up for himſelf: However, he was ſoon aſſaſſinated by ſome of the General's Creatures. In the mean time, Commiſſioners came over from *Spain*, to enquire into the Conduct of *Cortez* and his Fellow-Conquerors, repeated Complaints having been ſent to *Europe* of their Cruelties and Oppreſſions; which were found to be ſo many, and ſo manifeſt, that *Cortez* was removed from his Government for a Time, and threaten'd with Capital Puniſhment. To avoid which, he march'd againſt the large Provinces of *Honduras* and *Jucatan*; of which he made an entire Conqueſt, and, in the end, ſo cunningly managed his Affairs, by his Agents in the Court of *Spain*, that for two hundred thouſand Pieces of Eight he was reſtored to the Government of *Mexico*, with the Titles of *Don* and *Adelantado*, or Lord-Lieutenant, and was allowed to bear the ſame Arms as the Emperor of *Mexico* had borne. And now he acted more deſpotically than ever; and, to ſhew himſelf impartially cruel, he hanged the Emperor *Quatemoc*, who was elected after the Death of *Montezuma*, with two other tributary Kings, under pretence they were forming a Conſpiracy againſt him.

Commiſſioners appointed to enquire into his Oppreſſions.

Honduras and *Jucatan* conquer'd by *Cortez*.

He purchaſes a Pardon of the Court of *Spain*.

He hangs the *Mexican* Emperor.

In the Year 1527, the Complaints againſt *Cortez* being revived, he obtained Leave to go over to *Spain*, and make his Defence before the Emperor. He carried with him ſuch a prodigious Treaſure, that all his Faults ſeem'd to be entirely forgot. His Imperial Majeſty made him a Grant of the whole Valley of *Ariſto* in *Mexico*, with all the Towns and Villages belonging to it; in which he had twenty four thouſand Vaſſals. He created him Marquis of the Valley of *Guaxaca*, and conſtituted him Generaliſſimo of all the Forces in *New Spain*; tho' it was thought fit to exclude him abſolutely from the Civil Government: And ſeveral ſtrict Orders were made for the better Uſage of the Natives for the future. And, that theſe Orders might be the better obſerved, the Biſhop of *Mexico*, and the Superiors of the *Dominicans* and *Franciſcans*, were made Protectors of the *Indians*. From theſe intended Regulations, we may gather what the Grievances of the *Indians* were; namely, their being obliged to carry Burdens beyond their Strength; to work in the Mines, Fortifications, and Buildings, with ſuch Rigour, that they periſh'd in the Service; that their Women, Wives, and Daughters were taken from them, and abuſed by the luſtful *Spaniards*; that they made Slaves of the Natives without Diſtinction, and tranſported them to diſtant Countries. And it was many Years before theſe Abuſes were fully redreſs'd, even in thoſe Countries that peaceably ſubmitted to their Dominion.

He goes over to *Spain*, and buys his Peace again.

Orders in Favour of the Natives

Their Grievances.

Before

Before *Cortez* let *Old Spain*, he procured all the Grants of the Lands and Territories of the *Indians*, which he had given to his Soldiers, to be confirm'd; and himself to be constituted Governor of all the Continent and Islands he should discover in the *South* Sea; and a twelfth Part of such Discoveries to be granted to him and his Heirs. Returning to *America*, and not being suffer'd to go to the City of *Mexico*, he took up his Residence at *Tezcuco*, some few Leagues distant from it, where he had a very great Court.

Cortez attempts new Discoveries.

Before his going to *Old Spain*, he had sent three Ships through the *South* Sea to the *Spice Islands*, in the *East-Indies*; where, his People encountering the *Portuguese*, his Ships and most of the Men were destroy'd, some few only returning to *Old Spain*, with an Account of their Misfortune. Before *Cortez* received Advice of this Accident, he fitted out two other Ships on the *South* Sea, to make Discoveries towards the North-west; but these met with no better Success than the Fleet he had

He is unsuccessful.

sent to the *East-Indies*. He again fitted out two Ships more, to make Discoveries to the North-west; but these also were as unfortunate as the former. Whereupon he embarked on the *South* Sea himself, but did not meet with better Success than those he had sent before him. In the Year 1539, however, he fitted out three Ships more in the *South* Sea, and his People landed in *California* on the opposite Continent, but made

He goes to *Spain*, and is not suffer'd to return to *Mexico*.

no Settlement. And having been at a vast Expence in these Naval Expeditions, he went over to *Old Spain* again, in hopes of prevailing on that Court to reimburse him his Charges. But the Ministry expecting to have received an Increase, rather than a Diminution of their Treasure, from these Expeditions; he did not meet with so favourable a Reception as formerly. He was never suffer'd to return to *Mexico* again; and remained a kind of Prisoner at large in the Emperor's Court, where he died on the 2d Day of

His Death

December 1545, in the 62d Year of his Age; and his Body was afterwards transported to *Mexico*, and inter'd in the Cathedral of that City.

How the *Spaniards* behaved themselves towards the Natives, on the Conquest of this new World, will appear from the Bishop of *Chiapa*, who resided there at the Time of the Conquest.

The Bishop of *Chiapa*'s Narrative of the *Spanish* Cruelties.

This Prelate affirms, That *Hispaniola* and the neighbouring Islands were full of People, as well as the Continent, when the *Spaniards* first discover'd *America*: That the *Spaniards* did not cease for forty Years (from the Year 1492, when *America* was first discover'd, to the Time our Author wrote, *Anno* 1532) to torture, murder, and destroy them, by a variety of strange and unaccountable Cruelties; insomuch, that of three Millions of Souls they found in the Island of

The Islands depopulated.

Hispaniola, there were not two hundred Native *Indians* upon that Island; and the neighbouring Island of *Cuba*, equally populous, was in a Manner depopulated: That those of *Porto Rico* and *Jamaica*, abounding with People, when the *Spaniards* came thither, were become perfect Deserts: That the *Bahama* Islands, which contain'd five hundred thousand Souls, had not one human Creature left upon them; and the *Antilles*, or *Caribbee*

On the Continent

Islands, had been destroy'd in like Manner: That on the Continent, the *Spaniards*, by their Cruelties, had depopulated ten Realms larger than *Spain*: That he was able to give a certain and particular Account of twelve Millions of Souls, Men, Women, and Children, that, within the said Space of forty Years, had been unjustly put to Death by the *Spaniards* on the Continent; and,

Fifteen Millions destroy'd.

he verily believed, more than fifteen Millions of Souls had perish'd by their Hands within that Time. That he himself saw four or five of the *Indian* Princes, or great Lords, broiled at one time on Gridirons, over a slow Fire; and others roasted: Many more he saw torn in Pieces with Dogs: That they massacred whole Towns, sparing neither Women nor Children; ripped up Women with Child; beat out the Brains of some Infants, and drowned others; and that they would, in Sport, lay Wagers which would kill the poor *Indians* soonest, cutting off their Heads, or piercing their Breasts: That the Soldiers being about to burn one of the *Indian* Princes, whose Name was *Hathway*, a Priest was sent to him, to persuade him to turn *Christian* before he died; and the Priest telling him he would go to Heaven, a Place of Happiness, if he embrac'd Christianity; otherwise he must expect eternal Torments in Hell; *Hathway* demanded, If the *Spaniards* went to Heaven? And being answer'd, Yes; the *Indian* Prince reply'd, *Then let me go to Hell, where there will be no* Spaniards. If the *Spaniards* had Intelligence, that any Town was rich in Gold, or other Treasure; it was an ordinary Thing to send a Party of Men to summon them to turn *Christians*, and acknowledge themselves Subjects of *Spain*; which if they refused, they thought they had sufficient Authority to plunder the Place, and massacre the Inhabitants. But many of their Parties went farther; they would make Proclamation, a Mile or two before they came at the Town they had destin'd to Destruction, *That the Inhabitants should immediately come and do Homage to the King of* Spain; which the poor People knowing nothing of, were attack'd without any Notice, and put to the Sword. And that, in such Expeditions, the Governor of the Province of *Terra-Firma* only, destroy'd eight hundred thousand Souls between the Years 1514 and 1522.

Variety of Torture.

These Facts well attested.

This Prelate, in his Narrative, descends to Particulars, and gives an Account of the several Depopulations of different Countries, by different Commanders. His Relations are, indeed, so shocking, that it cannot be supposed they should easily gain Credit: But if we consider, that their Author was Bishop of *Chiapa* during the Administration of *Cortez*; that he came over to *Spain* to obtain a Redress of these Grievances; that he met with a very great Opposition from *Cortez* and his Friends, and yet procured that General to be displaced, and obtained an Order that the *Indians* should be no more treated as a conquer'd People; that *Cortez* was actually prosecuted for these Outrages, and not suffer'd to return to *Mexico* to his dying Day, notwithstanding the pretended Services he had done; we must believe, that the Charge was in a great Measure true; especially when we find some great *Spanish* Ecclesiasticks endeavouring to maintain, *That it was lawful to massacre and enslave any People, who refused, upon their Summons, to turn Christians, and submit to the Pope in Spirituals, and to the Emperor in Temporals.*

Give us Leave to add a Paragraph out of the same Prelate's Apology for the poor *Indians*.

Part of the Bishop's Apology for the poor *Indians*. They did not sacrifice such Number as was pretended.

" It is not true, says he, that the *Indians* did " annually sacrifice twenty thousand Persons, or " one hundred, or even fifty; but the Tyrants " have invented such Stories to justify their own " Barbarity, and that they might have a Pre- " tence to detain those miserable People in Sla- " very. But it may very truely be said, *That* " *the* Spaniards, *since their Arrival in the* Indies, " *have annually sacrificed to their adored Goddess,* " *Avarice, more People than the* Indians *sacrificed in* " *an hundred Years.* We have, in little more than " forty Years, depopulated and destroyed more " Countries than *Europe* contains: We have not " only plunder'd and usurp'd the Dominion of them, " but have murder'd twenty Millions of Souls."

CHAP.

CHAP. VI.

Of the Mexican *Animals, Vegetables, and Minerals.*

nimals at were t found *Ame-ca.*

WHEN the *Spaniards* first arrived in this new World, they found neither Horſes, Oxen, Camels, Aſſes, Goats, Sheep, Elephants, Hogs, or Dogs, of the *European* Species. They had indeed, ſome little dumb Dogs, with which they beat for Game; but no other kind. The *Indians* were as much afraid of the great Dogs the *Spaniards* carried over, as of Lions or Tygers: For their cruel Conquerors hunted this unhappy People in the Woods and Mountains with their Dogs, as they would hunt wild Beaſts, and tore Men, Women, and Children, in Pieces. Nor were Horſes leſs terrible to the *Indians*, than the *European* Dogs.

nimals at were und ere.

There were great Numbers of Wolves and Bears towards the North, and ſome Lions and Tygers in the warmer Climates; and there were alſo ſome few Elks. But whatever the *Indians* wanted of our Animals, the *Spaniards* ſoon ſupply'd them with, particularly Horſes, Oxen, Sheep, and Hogs; which increaſed ſo prodigiouſly, that upwards of an hundred Years ago, it was an ordinary thing for a *Spaniſh* Grazier to be poſſeſs'd of ten or twenty thouſand Sheep. And the Horſes and black Cattle are increaſed as much as the Sheep; ſo that great Numbers of Bulls and Cows are found wild in their Foreſts; and the *Spaniards* hunt them. The wild Cattle of *Mexico* are the fatteſt in the dry Seaſon, that is, in *February*, *March*, and *April*.

ropean ars le ſtly in-eaſed.

Beſides the Beaſts already mention'd, which the *Americans* had in common with us, they had alſo ſeveral kinds of red and fallow Deer, Hares, Rabbets, Foxes, Otters, Wild-Cats, Pole-Cats, Squirrels, Porcupines, Monkeys, and Jackalls. But the Beaſts peculiar to *America*, and particularly found in *Mexico*, are, their *Pecaree* and *Warree*, the *Opoſſum*, the *Mooſe*, the *Guanoe*, the *Flying Squirrel*, the *Sloth*, the *Armadillo*, the *Rackoon*, the *Ounce*; and ſome amphibious Animals. The *Pecaree* is a little, black, ſhort-legg'd Animal, that has ſome Reſemblance of a Hog: The Navel grows upon its Back, and, if it be not cut off as ſoon as the Creature is kill'd, it immediately corrupts the whole Carcaſs.

ther eaſts ey had com-on with a. eaſts pe liar to *merica.*

The *Warree* is leſs than the *Pecaree*, and has its Navel in the uſual Place; but the Shape is much like the former. The *Opoſſum* is about the Size of a Fox, and grey; remarkable for its falſe Belly, in which ſhe preſerves her young Ones when ſhe is purſued. The *Mooſe* is ſomething like a red Deer in his Head and Neck: He has Horns alſo like a Deer, near two Yards wide; but is as big as an Ox, and ſlow of Foot. The *Guanoe* is ſhap'd like a Lizard; the Body as big as a Man's Leg, but grows tapering towards the Tail, which is very ſmall: They have four ſhort Feet and Claws; and are of various Colours. The *Flying Squirrel* has a very ſmall Body, and looſe Skin; which he extends like Wings, and is borne up by the Wind. The *Sloth* is about the Bigneſs of a large Spaniel; has a round Head, ſmall Eyes, and very ſharp Teeth and Claws: He feeds on the Leaves of Trees, and frequently kills them; but is ſo many Days in getting down one Tree, and climbing another, that tho' he be fat when he comes down, he grows lean before he gets to the Top of another. The *Armadillo* is as big as a ſucking Pig, and has a long Body incloſed in a thick Shell, which is join'd under the Belly: This Shell opens, and it puts out its Head and Legs when it walks. The *Rackoons*, are only a Species of Rats, but four times as large, and burrow in the Earth like Rabbets. They have Rabbets alſo of a different Species from ours, as large as Hares, and without Tails. The *Ounce*, or *Tyger-Cat*, ſeems to be only a ſmall Species of Tygers: They are ſaid to be fiercer than thoſe of a larger Size, and more miſchievous. The *Sea Cow* and *River-Horſe*, called by the Ancients *Hippopotamus*, are the ſame Animals; and are variouſly deſcribed by *American* Travellers. The *Manatee* is of a different Species: For the firſt is an amphibious Creature, with four Legs, that feeds on Shore; the other a pure Fiſh, without Legs. Their *Alligators* are a Species of *Crocodiles*. Theſe are numerous, and have done much Miſchief in *America*. They are amphibious Animals, accuſtom'd both to Land and Water; ſhap'd like a Lizard, twenty or thirty Feet in Length: They have four ſhort Feet, or rather Claws, on which they crawl: Their Head is flat, their Eyes large, and their Back cover'd with broad Scales, reſembling Armour, and as impenetrable. Some of them are ſo large, 'tis ſaid, that they have actually ſwallow'd Men whole. But tho' they are of that prodigious Bulk, they proceed from an Egg no bigger than a Turkey's, which is hatch'd in the warm Sand.

There is an Animal, which *Dampier* calls a *Squaſh*, bigger than a Cat, and its Head like that of a Fox, with ſhort Ears and a long Noſe; the Legs ſhort, and runs up Trees like a Cat; the Body is cover'd with a fine yellow Hair, and the Fleſh very good Meat. The *Monkeys* of *Campeachy*, the ſame Writer relates, are the ugliеſt he ever ſaw: They are much larger than a Hare, and have great Tails two Foot and a Half long; the Body and upper Part of the Tail cover'd with coarſe long black Hair: They keep together twenty or thirty in Company, and ramble over the Woods, leaping from Tree to Tree; and if they meet with a ſingle Perſon, he is in danger of being torn in Pieces by them.

As to the feather'd Race, we find in *Mexico*, *Parrots*, *Parrokites*, *Macaws*, *Quams*, *Curaſoes*, *Cockrecoes*, *Bill-Birds*, *Humming-Birds*, *Eagles*, *Vultures*, *Doves*, *Pigeons*, *Subtil-Jacks*, *Black-Birds*, *Turkeys*, and tame Poultry; *Pelicans*, *Cormorants*, *Bats*, and a Multitude of other Fowls and Birds, which are not found in this Part of the World. The *Macaw* is ſhap'd much like a *Parrot*, but twice as big; the Feathers of the Body are of ſeveral bright and lively Colours: It has a buſhy Tail, with two or three long ſtraggling Feathers, red or blue. They make a great Noiſe in the Morning reſembling a hoarſe Voice; but they will imitate the Voices of the *Indians*, and their Way of Singing; as alſo the Voice of any Bird or Animal almoſt. The *Quam* Birds and Fowls.

is a wild Land-Fowl of the Bigneſs of a Hen-Turkey, and has a Bill like that Fowl; the Feathers of a Dun Colour. The *Curaſoe* is larger than the *Quam*, but much of the ſame Shape: The Bones are ſo noxious, that the Natives bury them, and will not ſuffer a Dog to eat them; for a Dog runs mad if he eats one of them. The *Carrion-Crow* is black, and as big as a Raven; has a bald Head, and reddiſh Neck like a Turkey, and lives altogether on Carrion. The *Subtil-Jack* is as big as a Pigeon, the Feathers generally black, but the Tips of the Wings yellow: Its Neſt is always hung by a String, at the Extremity of the Bough of ſome Tree that ſtands alone. There are alſo ſeveral Sorts of Birds to which the *Engliſh* have given the Name of *Bill-Birds*, from their Bills being almoſt as big as their Bodies. The *Cockrecoes* are of the Colour of a Partridge; but ſomething leſs, and their Legs longer. The *Cardinal* is about the Bigneſs of a Wood-Lark; of a Scarlet Colour, has a beautiful Tuft of Feathers on the Head, and ſings ſweetly.

Dunghill Fowls.

Their Poultry, or Dunghill-Fowls, differ little from ours, but are ſomething leſs. Their *Quails* are of the ſame Colour as thoſe of *Europe*, but their Fleſh is not ſo good. The *Guiachichil*, or *Suck-Flower*, is always ſeen flying with a Flower in its Mouth. It is never known to reſt on the Ground, but will ſtick its Beak into the Bough of a Tree, and remain there ſeveral Months. The *Humming-Bird* is a little feather'd Animal, not much bigger than a large Waſp. It has a black Bill, like the Point of a Needle; and its Legs and Feet are proportionable to its Body.

Birds of Prey.

Water-Fowl.

Their Birds of Prey are *Eagles*, *Vultures*, *Hawks*, and the *Carrion-Crow*, already mention'd. Their Water-Fowl, *Geeſe*, *Ducks*, *Curlews*, *Herons*, *Crab-Catchers*, *Pelicans*, *Cormorants*, and *Fiſhing-Hawks*. The *Crab-Catcher* is of the ſame Shape and Colour as the *Heron*, and has its Name from feeding on ſmall Crabs. The *Pelican* is a web-footed Fowl, almoſt as big as a Gooſe, and of a grey Colour. Its Legs are ſhort, the Neck long, the Bill ſeventeen or eighteen Inches long, and two Inches broad. It is remarkable for a Bag or Purſe in the Neck, in which it keeps a Reſerve of Prey after the Appetite is ſatisfied. The *Cormorant* is of the Shape and Size of a Duck, and the Bill and Feet like a Duck's; the Feathers on the Body black, only white on the Breaſt: They live on ſmall Fiſh. The *Fiſhing-Hawk* is of the Size and Shape of an *Engliſh* Sparrow-Hawk, and ſits by the Sea or River Side; from whence he flies at the ſmall Fiſh, and ſnatches them out of the Water without wetting his Wings. The *Bats* of this Country are as large as Pigeons.

Inſects and Vermin.

In all hot Countries there are abundance of poiſonous and troubleſome Inſects and Vermin, and *Mexico* has its Share of them; ſuch as *Snakes*, *Scorpions*, *Centipees*, *Spiders*, *Toads*, *Flies*, *Muſketoes*, and *Piſmires*. There is in *Mexico* a yellow *Snake*, as big as the Small of a Man's Leg, ſix or ſeven Foot long, that takes little Pains to hunt for its Prey; but lies conceal'd, and ſurprizes the ſmall Animals as they paſs by. There is alſo a green *Snake*, about the Bigneſs of a ſmall Cane, and four or five Foot in Length: And a dun-colour'd *Snake*, about two Foot long, that frequents Houſes, and kills Mice and other Vermin. Their *Scorpions* and *Centipees* do not differ from thoſe of other Countries. Their *Spiders* are of a monſtrous Size; particularly one, that is near as big as a Man's Fiſt, has long Legs, and two black Teeth, or Horns, two Inches in Length, and as ſharp as a Thorn. Here are great black *Ants*, whoſe Bite is almoſt as painful as the Sting of a Scorpion: Nor are their ſmall yellow *Ants* leſs dreaded, which come in ſuch Swarms ſometimes, that a Man ſhall be cover'd with them in an inſtant. There are another ſort of black *Ants*, with long Legs, that come into Houſes, run over their Cheſts and Beds, and ſearch every Place. The *Muſketoes*, or *Gnats*, are another ſort of Inſects that ſufficiently try the Patience of the Natives, and are much more miſchievous to Strangers in hot Countries. There is alſo in *Mexico* an Inſect, called by the *Spaniards Mixa*, which is ſo ſmall that it can ſcarce be diſcerned. This Creature uſually ſtrikes into the Feet or Legs of a Man, but ſeldom into the Hands, or any Part of the Body. They make the Part they ſtrike into burn and itch, and at firſt they may be eaſily pick'd out; but if they are let alone, they get farther into the Fleſh, and lay a great many Nits, which itch intolerably; and if the Part be rubb'd or ſcratch'd, it immediately feſters. *Dampier* alſo mentions *Leg-worms*, that he met with in the Bay of *Campeachy*, of the Bigneſs of a Hen's Quill, and three Quarters of an Inch long; each of them having three Rows of black, ſhort, ſtiff Hair, running quite round them.

The *Shining-Fly* is an Inſect common to the *Eaſt* and *Weſt Indies*: Theſe, in the Night-time, appear like ſo many Stars, at a little Diſtance. As to *Bees*, they have ſeveral Sorts; from whom the Natives get a great deal of Honey. But the Inſect called *Cochineal* is ſtill more profitable to the *Mexicans* and *Spaniards* than the *Bee*: It is bred in a Fruit that grows on a Shrub about five Foot high, and full of Thorns: There is a red Flower on the Top of the Fruit, which covers the Fruit when it begins to open; but being ſcorch'd away in a Day or two, the Fruit opens as wide as the Mouth of a Pint Pot, and the Inſide is full of theſe ſmall red Inſects, which have curious thin Wings. When the *Indians* perceive the Fruit open, they ſpread Sheets under the Trees, and ſhake them; whereupon theſe Inſects take Wing, and hover for a little while over the Tree, and then fall down dead into the Sheets. When they fly up, they appear red; but when they fall down, they are black. However, they are uſed in dying the fineſt Scarlet. The *Locuſt* is an Inſect that brings Deſtruction with it wherever it comes, and is found in almoſt every hot Country at one Time or other.

Fiſh.

The Sorts of Fiſh that Travellers have taken notice of in the *American* Seas, Lakes, and Rivers, are chiefly theſe following: The *Paracood* is about three Foot and a half long, and eight or ten Inches round, and haunts the Lakes, Iſlands, and Places near the Shore. The *Gar-fiſh* is of the Shape of the former, but leſs; and has a long ſharp Bone in his Snout, like the *Sword-fiſh*; only as the *Sword-fiſh*'s Bone is flat, and indented like a Saw, this of the *Gar-fiſh* is faſhion'd like a Spear, round, ſmooth, ſharp at the End, and about a Foot long. *Mullets* and *Snooks* are plentiful in this Part of the World; and the *Ten-pounder*, in Form much like a *Mullet*, but ſo full of Bones there is ſcarce any eating them. The *Spaniſh Mackerel* are in Shape and Colour like thoſe of *Europe*; but a Yard long and more, and nine or ten Inches about. There are three Sorts of Flat-fiſh, called the *Stingray*, the *Raſpray*, and the *Whipray*. They are all of them about a Foot and a half broad. The *Old Wife* alſo is a flat Fiſh, and very good Meat; as is the *Cavally*, a ſmall ſlender Fiſh. The *Tarpom* is a good firm Fiſh, of fifty or ſixty Pound Weight. The *Sculpin* is a Fiſh ſurrounded with little ſharp Bones. The *Manatee* is the beſt Fiſh on the Coaſt, but

has

has been already described among the amphibious Animals. He is generally taken in the Sea, and sometimes in Creeks and the Mouths of Rivers.

Of *Tortoise*, or *Turtle*, there are several Sorts: Some are Sea-Tortoise, and have Fins; these seldom come on Shore, but to lay: Others live, for the most part, on the Land; have Claws, and will run a good Pace. Some weigh upwards of three hundred Pound, and others not five. Every Species of Turtle lay their Eggs in the Sand, three times in the Season; at every Time fourscore or an hundred Eggs, about the Bigness of an Hen's Egg, but round, and cover'd only with a white Membrane. Those that make it their Business to catch Tortoise, wait for them when they come on Shore to lay, and turning them on their Backs with Poles, the Creature can never get up again. The Male always accompanies the Female when she goes to lay, and never leaves her till she returns. They are nine or ten Days in the Act of Generation in the Water, the Male on the Female's Back; nor is the Male to be frighten'd away at these Times: She, indeed, endeavours to get away if a Boat approaches when they rise to take Breath; but the Male grasps her with his two Fore-Fins, and holds her fast; and a very bad Striker may strike them both at such Times. It seems, a Sea-Tortoise cannot remain in the Deep, without coming up to the Surface of the Water to take Breath, once within eight or ten Minutes. These Animals live to a very great Age; at least we are sure the Land-Tortoises do so: For Archbishop *Laud* put one into his Garden at *Lambeth* an hundred Years ago, which is living there still, at least was very lately. This Creature makes a Hole in the Ground about *Michaelmas* every Year, where it lies all the Winter, and appears again about *Easter*; and is supposed to eat nothing while under Ground.

In the *American* Seas they have *Oysters* and *Muscles* of a prodigious Size. Some *Rock Oysters* are said to be so large, that one of them would dine several Men: But the most valuable is the *Pearl Oyster*, found in several Parts of the *Mexican* Coast. These are about the Size of our middling Oysters, but flatter and thinner: The Pearl is found at the Head of the Oyster, between the Meat and the Shell. Some will have twenty or thirty small Seed Pearls about them, and others none at all. The Shell of the Oyster is more beautiful on the Inside than the Pearl itself; the Flesh, however, is scarce eatable. The *Indians* dive for these Oysters in five, six, seven, or eight Fathom Water, and bring up ten or twelve at a Time; and those on board the Vessel open them as they are brought up. The *Spaniards* destroy'd a great many Thousand of the *Indians* soon after the Conquest, by compelling them to dive and drudge for Oysters beyond their Strength. And thus the Natives of the *Bahama* Islands in particular, who were esteem'd excellent Divers, were destroy'd. The *Conch* is another large Shell-fish, form'd like a Snail: The Colour of the Shell within is like Mother of Pearl, but the Outside of it rough. *Lobsters*, *Crabs*, *Prawns*, *Shrimps*, and other Shell fish, they have in common with us: Also in their Lakes and Rivers Fish like our *Jacks* and *Carp*, and Plenty of others. But we proceed to their Vegetables; and first to their Forest Trees.

The *Cotton-Tree* is one of the most remarkable in this Country: Of these there are two Sorts; the white and the red: The white *Cotton-Tree* grows like the Oak, but is much larger and taller; the Body is straight, and clear from Knots or Boughs to the Head, where it spreads out its great Limbs horizontally. The Bodies of these Trees are some of them three or fourscore Foot high, and ten or twelve in Diameter: The Bark is grey and smooth; the Leaves are like those of the Plumb-tree: It bears a Pod as big as a small Wallnut, which bursts when it is ripe, and then the Cotton falls, or is blown away. The red *Cotton-Tree* is not so large as the white, and bears no Cotton. The Wood of both is very soft, spongy, light, and easily wrought; but the red is the hardest. Their Periguaes, which hold three or fourscore Men the largest of them, are made out of the Body of one single *Cotton-Tree*. Their *Cedar-Trees* are exceeding tall and large; the Wood is very red, of a fine Grain and fragrant Smell; and this Timber is so plentiful in *Mexico*, that whole Towns are built with it. This Wood also makes the most durable Canoes, tho' not so large as the *Cotton-Tree*. *Logwood* is much like our *White-Thorn*, but a great deal bigger; the Rind of the young Branches is white and smooth, and set with Thorns; but the Body and old Branches are blackish, and the Rind rough. The Heart, which is red, is only used in Dying; and this will tinge the Water it lies in like Ink. Some Trees are five or six Foot in Circumference; and these they cut into Logs fit for a Man's Burden. There is another kind of Wood called *Bloodwood*, used in dying Reds, more valuable than *Logwood*, and grows in the Gulph of *Nicaragua*. There are three Sorts of *Mangrove-Trees*; black, red, and white. The black is the largest, growing to the Bigness of a moderate Oak. It is very serviceable Timber, but extraordinary weighty. The red *Mangrove* grows from several Roots of the Bigness of a Man's Leg, which, about six or eight Foot above Ground, join in one Body. Where this Sort of Tree grows, it is extremely difficult to march; for these Roots are so interwoven, that the Traveller is often forced to cut his Way through. The white *Mangrove* is the least of the three, and of no great Service; and neither the black or white proceed from such Stakes as the red does, but grows from their Roots like other Trees. There is another Tree, if it may be called such, that grows on the same kind of Land. Amongst the red *Mangroves* grows the *Bamboe*, a large, knotted, hollow Cane, that grows to the Thickness of a Man's Leg. These *Bamboes* serve for Measures, and hold their Liquors, when saw'd off at the Joint. The *Maho-Tree* is of the Bigness of an Ash; the Bark will strip off in Strings from the Top to the Bottom; and of this they make Ropes, and even Cables. The *Lightwood-Tree* is of the Size of an Elm, straight and well-bodied, and somewhat resembles Cork. It is so exceeding light in the Water, that three or four Blocks of it, of the Thickness of a Man's Thigh, will make a Rafter on which three Men may go out to Sea. The *Whitewood-Tree*, so called from its Whiteness, is about as thick as a large Ninepin, and eighteen or twenty Foot high.

We proceed to the Description of their Fruit-Trees and Fruits, among which we range the *Cabbage*. This is a tall slender Tree, often ninety or an hundred Foot in Height. There are no Boughs on it but at the Head; and there the Branches are of the Bigness of a Man's Arm, and twelve or fourteen Foot long. The Fruit is found at the Top of the Tree, amidst the Branches. It is about a Foot long, and six Inches round; of the Form of an ordinary Cabbage, and surrounded with young Leaves. It is as white as Milk, and as sweet as a Nut, if eaten raw; and is very good boil'd. They usually cut down the Tree for the *Cabbage*; for the gathering the Fruit kills it, if they let it stand. The *Calabash-Tree* is short and thick, and the Fruit grows among the Boughs, as Apples do. There are two Sorts of them; of the

Fruit-Trees and Fruit

the one the Fruit is ſweet; of the other bitter. The *Indians* eat the ſweet *Calabaſh* frequently, but it is not very palatable: What this Fruit is moſt valued for, is its Shell, which will hold from two to five Quarts. Of this the *Indians* make Bottles, Bowls, Drinking-cups, and all kind of Veſſels for their Meat and Drink. The *Cacao-Tree*, full grown, and of the largeſt Sort, is ſeven or eight Foot high to the Branches, and a Foot and a Half thick: The Boughs ſpread horizontally, and have dark green Leaves, and the Nuts are incloſed in Cods, which hang down from the Body of the Tree, and from the larger Branches. The Cod is almoſt half an Inch thick, neither ſpungy nor woody, but of Subſtance between both. They neither ripen, nor are gather'd at once; but, while the Seaſon laſts, the Overſeers of the Plantations go every Day to ſee which are turn'd yellow, not cutting more than one or two from a Tree in a Day. When the Cods are gather'd, they are laid in Heaps to ſweat; after which, they break the Shell, and take out the Nuts, which ſtick cloſe together in regular Rows, like the Grain in an Ear of *Maiz*. There are fourſcore or an hundred Nuts in a Cod, about the Bigneſs of an Almond. The *Venella*, or *Bainilla*, which is uſually mix'd with the *Cacao-Nut* to make Chocolate, is a Sort of Cane, which twines about the Orange-tree, or any other, like Ivy: It produces a long green Cod, which, when gather'd and dry'd in the Sun, is hard and blackiſh. *Plantains* and *Bananoes* are Fruits very common here, as well as in *Africa* and the *Eaſt-Indies*. The *Plantain* Fruit is of the Size and Shape of a *Bologna* Sauſage. The *Bananoe* is much the ſame kind of Fruit, but leſs. The *Pine-Apple* alſo is common to the *Eaſt* and *Weſt-Indies*. It is of the Shape of one of our Pine-Apples, but much larger, and is generally ſaid to have the Taſte of every delicious Fruit. The *Sapadillo* reſembles the Pear-tree in its Size and Figure, and the Fruit appears to the View like that of the Bergamot-pear. It is generally eſteemed, and excellent cooling Fruit. The *Avogato* Pear-tree is of the Size of the former, and not unlike it in Shape; the Fruit as large as a Lemon. It is the more eſteemed by the *Spaniards*, as it inſpires them with freſh Vigour for *Venereal* Encounters. The *Mammee-Tree* is a large, tall, ſtrait-bodied Tree, without Knots or Branches for ſixty or ſeventy Foot in Height. The Fruit is round, and of the Size of a *French* Pippin. It has a fine fragrant Smell, and the Taſte is anſwerable. The *Mammee-Sappota-Tree* is not ſo large or tall as the former: The Fruit is extremely well reliſh'd, and wholeſome. The *Wild Mammee-Tree* bears no Fruit; but the Timber, being very ſtrait and tall, ſerves for Maſts for Ships. The *Grape-Tree* is ſeven or eight Foot high, and two or three in Circumference; the Fruit about the Bigneſs of a common Grape, grows in Cluſters, and is well taſted. The *Guava* grows upon a Shrub; the Fruit green on the Outſide, perfectly round, and of the Size of a Crab-apple. It has both a tart and ſweetiſh Flavour, very agreeable to the Palate; but moſt valuable for being of ſuch an aſtringent Nature, that it will either prevent or cure a *Bloody Flux*, if the Patient has not neglected himſelf too long: And the Pomegranate has much the ſame Effect. The *Prickle-Pear* is a Shrub about five Foot high: It is ſo full of large ſtrong Thorns, that nothing makes a ſecurer Fence. The Fruit is as big as a large Plumb, pleaſant to the Taſte, and very cooling and refreſhing. The *Bibby-Tree* has a ſtrait ſlender Body, naked of Leaves, but full of Thorns; ſixty or ſeventy Foot high: At the Top it is full of Branches, among which grows the Fruit, being white Berries, of the Bigneſs of a Nutmeg: They are very oily: The *Indians* tap the *Bibby-Tree*, and it affords them a tart Liquor, of the Colour of Whey.

Beſides the Fruits proper to *Mexico*, the *Spaniards* have introduced *Oranges*, *Lemons*, *Grapes*, *Figs*, and almoſt all manner of *European* Fruits, except *Nuts* and *Cherries*: But the Grapes of this Country will not make Wine. Their *Gourds* grow to a very large Size, and either run upon the Ground, or up the Trees; the Pulp of ſome of them ſerving for Food, and others for Medicine: But, like the Calabaſh, valued moſt by the Natives for their Shells, which ſerve them for Pails, Bowls, and Buckets. *Melons*, *Cucumbers*, and *Onions*, they have in much greater Perfection here, and in all hot Countries, than in colder Climates. There is alſo a very uſeful Plant here, to which the *Engliſh* have given the Name of *Silk-graſs*. The Leaves are as thick as a Man's Hand in the Middle, and thin at the Edges; a Yard or two in Length, and indented like a Saw. The *Indians* cut them at a proper Growth; then dry and beat them, and no Flax affords a better Thread. Of theſe they make Cordage and Fiſhing-nets, Stockings, and Hammocks. The *Manchanel-Tree* bears a Fruit, in Smell, Taſte, and Colour, like a lovely Apple, but leſs, and of ſuch a poiſonous Nature, that if any Animal has been feeding on it, the Fleſh of the Creature will poiſon the Perſon that eats it. They have alſo *Tamarinds*, *Locuſt-Trees* and a *Ballard Cinnamon*, in *Mexico*. The *Granadilla de China* grows like Ivy, winding about ſome neighbouring Tree till it perfectly covers it: The Fruit is as big as a Hen's Egg, white and yellow without, and white within; and has Seeds like the Grape; There is a pretty Mixture of Sweet and Sour in the Taſte. But there is not a Plant of more general Uſe than the *Maghey*; for the Leaves furniſh the Natives with Thread for Linen and Cordage: It alſo yields Balſam, and a Liquor as ſweet as Honey; into which the *Indians* infuſe a Root that makes it ferment like Wine, and it is of equal Strength. They diſtill a Spirit from it alſo as ſtrong as Brandy.

European Fruits here. *No Wine.*

We proceed to the moſt remarkable *Balms*, *Gums* and *Gums*, and *Drugs*, that are found in *Mexico*; among which are the *Copal* and *Anime*; both of them a kind of Roſin, and not much unlike. The *Copal* is very white and clear, and has a very good Scent: Of this the *Indians* made Incenſe and Perfumes for their Sacrifices in their Temples. The *Anime* alſo is a white Gum, diſtilling from a great Tree, and more oily than *Copal*: It has an exceeding pleaſant Smell, when burnt. This, as well as the former, is uſed by Phyſicians for Pains in the Head, and in Plaiſters and Sear-cloths applied to the Stomach. The *Gum Tacamahaca* has a very fine Scent, and is of great Uſe to diſſolve Swellings, and remove Pains in the Limbs. And the *Gum Coranna* hath much the ſame Effects. The *Liquid Amber* is obtained by making Inciſions in a fine fair Tree. The Bark of this Tree, as well as the Liquor diſtilling from it, has an exceeding ſweet Smell, but more when it is burnt. The *Oil of Amber* is drawn from *Liquid Amber*. The *Balm*, or *Balſam*, uſually called the *Balſam of Peru*, is alſo found in *Mexico*. The Tree that yields it, is of the Size and Figure of the Pomegranate tree.

Drugs

There are three ſorts of Wood found in *Mexico*, of great Uſe in Medicine, *Guaiacum*, *China Root*, and *Sarſaparilla*. 1. The *Guaiacum* is a Tree as large as an Oak; the Bark dry, but full of Gum; the Heart of the Tree almoſt black, very hard,

Medicinal Woods

and

and ponderous: It has a small Leaf, and yields a yellow Flower; out of which proceeds a round Fruit, of the Size of a Crab-apple, with small Kernels. 2. The *China Root*, received first from *China*: But which is also a *Mexican* Plant. 3. The *Sarsaparilla*, chiefly remarkable for its Roots, which are very long and large. To these we may add, The Rood *Mechoacan*, which takes its Name from a Province of *Mexico*, where it is found.

The Roots which serve the *Indians* chiefly for Food, are the *Cassava Root*, *Yams*, and *Potatoes*. The *Cassava Root* something resembles a Parsnip. There are two Sorts of them; the one sweet and innocent, the other poisonous: The sweet Sort they roast, and eat as they do Potatoes: Of the poisonous Sort they first boil and press out all the Juice, then dry and grind it to Powder, and make Biscuit of it. As to *Yams*, *Potatoes*, *Rhadishes*, *&c.* they need no Description: We shall only observe, that all manner of *European* Roots and Fruits grow much larger, and come to much greater Perfection, there than here.

The *Spaniards* have carried over Wheat and Barley, Peas and Beans, and other *European* Grain, which thrive very well in some Places; but their principal Grain is *Maiz*, or *Indian* Corn, which is the Food of Men, of Horses, Mules, and Oxen. This they plant in little Hillocks, like those in our Hop-grounds, at the Beginning of the rainy Season, in *May* or *June*; and reap in *October*, when the fair Weather returns. This Corn we see frequently brought to *England*, and therefore need not describe it. The *Spaniards* of *Mexico*, beside their Arable, have large Grazing-Farms, in which one Grazier shall have several hundred Head of black Cattle, and a great many thousand Sheep. During the rainy Season, they never want good Pasture. When the Meadows and low Grounds are overflow'd, their Hills produce Plenty of Grass. They are most put to it for Fodder in *February*, *March*, and *April*, when their Grounds are burnt up. As to the *Indians*, who have hitherto preserved their Liberties, they have only small Plantations among the Woods, at a Distance from the *Spanish* Towns; where they plant a little *Maiz*, *Yams*, and *Potatoes*, with some few *Plantains*, and other Fruits. And, as these unconquer'd *Indians* subsist chiefly by Hunting and Fishing, many of them plant little or nothing, but rob the *Spanish* Plantations, of which they look upon themselves the true Proprietors. The *Spaniards*, beside their *European* Grain, sow some *Rice*; for which this Country is extremely proper. They have also large Plantations of *Sugar*, *Tobacco*, and *Indico*. They are pretty much employ'd also in cutting *Logwood* in their *Cochineel* Plantations, and looking after the *Silvester*, *Otta*, and other Dying Plants and Herbs; in cultivating and dressing their *Cotton*; in the making of *Salt*; and in their *Fisheries*, which are very considerable.

As to Flowers, the *Indians* are extremely fond of them, and have great Variety, which they make up into Nosegays, and present to their Superiors. Their great Men are seldom seen without a Nosegay in their Hands; and they always present them to their Guests at Entertainments, expressing a great deal of Art in the matching and disposing of the Flowers. *European* Flowers come to great Perfection there; namely, *Roses*, *Jasemine*, *Violets*, *Gilliflowers*, and several others that have been transported from *Spain*. The *Indian* Flowers, however, do not smell very sweet, unless they be the Blossoms that grow upon Trees. The Tree *Floripondro* bears no Fruit, but the Flowers are larger than a Lilly, and remain upon the Tree all the Year round; the Scent whereof is exceeding sweet and agreeable. And the Tree *Granadilla*, the Superstitious imagine, has the Portraiture of the Instruments of our Saviour's Passion.

A Zeal for the Propagation of Christianity, Mineral. which the *Spaniards* pretended, was certainly a very laudable Motive for their passing the *Atlantic* Ocean; but had there been no Gold, Silver, or precious Stones to be found there, possibly the Adventurers had not been very numerous. The Gold and Silver Mines of *Mexico* are in the rocky, mountainous, and barren Parts of the Country; and, indeed, neither these, or any other Metals, are found in a fruitful Soil.

Gold is found here either in Grains, in Dust, Gold Mines. in the Sands of Rivers, or in Stone in the Mines. The Grains are small Pieces of Gold, like the Seeds or Kernels of Fruit, which are found without the Mixture of any other Metal, and have no need of refining. But much the greatest Quantity of Gold is found in Dust in the Sands of Rivers and Torrents, after the Rains have fallen. As to the Gold which is found in the Mines, it is intermix'd with great hard Stones. It runs in Veins like Silver, and is exceeding hard to dig and separate: This Gold is usually mix'd with Silver or Copper; and that which is incorporated with Copper is the best. The Gold seems to lie much nearer the Surface than Silver, it being found in large Pieces at the Roots of Trees on the Mountains, and wash'd into the River by the Rains; and if they do not find it pretty near the Surface in the Mines, they never dig so deep for it as they do for Silver.

The Silver Mines, tho' usually found in barren Silver Rocks and Mountains, are sometimes met with Mines. in plain and champain Fields. There are two Sorts of them; the one straggling here and there in Spots, the other more continuous and fix'd. It is the fix'd Mine that has the greatest Depth and Length; and these resemble the Ramifications of Trees and Plants; and where they find one, they usually meet with a great many in the same Place. The *Indians* knew how to purify Silver by Fire, and to separate it from Lead and other Metals, before the *Spaniards* came amongst them; but they knew nothing of the Art of refining it by Quicksilver, which the *Spaniards* use at this Day. There are some Sorts of Silver Oar, which cannot be purified and refined without Quicksilver. The Veins where they find Silver run between two Rocks; the one commonly hard as Flint, and the other softer and easy to break. The Oar is very unequal. The richest Oar is of an Amber Colour, and the second Sort that which inclines to black; a third is red, and a fourth of an Ash Colour, and some of the Oar is scarce to be distinguish'd from common Stone. It is usual to draw from one Quintal or five hundred Weight of Oar, thirty, forty, and fifty Peso's of Silver, of the Value of six Shillings and Six-pence.

The manner of refining Silver, is thus: They Refining first grind the Oar to Powder, and then sift it of Silver. through a fine Sieve: After which, they put the Powder into Vessels, and set it over Furnaces, putting to every fifty Quintals of Oar five Quintals of Salt, the Salt separating the Earth and Drofs from the Silver, and making Way for the Quicksilver to operate more effectually: Then they strain the Quicksilver through a Piece of fine Linen into the Oar, stirring it about, so that it may the better incorporate with the Oar. When the Mercury has done its Part, and assembled all the Silver, leaving nothing behind, but is filled as a Sponge with Water (which is usually in five or six Days) they put the Oar into Coppers

and Veſſels full of Water, turning it about with Wheels, and waſhing of it: Whereupon the Earth and Droſs go off with the Water that runs away, and the Silver and Quickſilver remain at Bottom. Then they take it out, and waſh it again in other Tubs and Veſſels, until they have cleanſed away all the Droſs: After which, they ſtrain it through Cloths, and make it into the Form of Sugar-Loaves, of about an hundred Pound Weight each; on which they put Earthen Caps of the ſame Shape; and, ſetting theſe over a violent Fire, the Quickſilver exhales in Smoak, which, ſtriking againſt the Earthen Cap, thickens and diſtils like the Smoak of a Pot cover'd; and by a Pipe, like that of a Limbeck, they receive the Quickſilver, the Silver remaining without changing its Form; but its Weight is diminiſh'd five Parts in ſix, and is light and porous like a Sponge. Of two of theſe Loaves they make one Bar of Silver, of ſixty five or ſixty ſix Marks Weight, eight Ounces in every Mark, and then carry them to be touch'd and mark'd.

Any one may open a Mine

Any Perſon, who diſcovers a Mine of Gold or Silver in *Mexico*, may work it, paying the King's Tenth of the Product; and the King's Officers aſſign the Diſcoverer ſixty Yards round about the Place he chuſes to dig; beyond which Space another may open a Mine, leaving five Yards between them for a Partition: And, as they ſink under Ground, one may work into another's Diviſion, till he meets with his Workmen; but then he muſt deſiſt, and retire into his own Part.

How All the Silver dug in the Mines of *Mexico*, is brought to the King's Exchequer in the Capital City, and enter'd there; except what is run and concealed, which amounts to a great deal: And it is related, that there are two Millions of Marks, of eight Ounces each, enter'd in one Year; out of which they coin annually, in that Mint, ſeven hundred thouſand Marks. There are five Sorts of Silver Money coin'd in the Mint of *Mexico*; Pieces of Eight (of the Value of four Shillings and Six-pence each) Half Pieces of Eight, Quarter Pieces, Single Ryals (about the Value of Six-pence *Engliſh*, and Half-Ryals. There being ſome Gold frequently mixed with the Silver, they are ſeparated with *Aqua-fortis*. The Gold is afterwards run in a Furnace, and caſt firſt into round Pieces, and then into Bars; as is alſo the Silver ſeparated from it: And the Gold is coin'd into Pieces of Sixteen, Eight, Four, or two Pieces of Eight; which are call'd Crowns of Gold.

Officers of the Mint at *Mexico*

All the chief Officers of the Mint at *Mexico*, are appointed by the King; and all the inferior Officers by the Treaſurer. The principal Officers purchaſe their Places, and have the Privilege of aſſigning them to whom they pleaſe; but then the Officer that reſigns muſt live twenty Days after his Reſignation; and he, to whom the Reſignation is made, muſt acquaint the Viceroy with it within ſixty Days, and pay a third Part of the Value of his Place to the King. The Treaſurer's Place is worth between fifty and ſixty thouſand Pieces of Eight *per Annum*; thoſe of Aſſayer and Founder, fifteen or ſixteen thouſand Pieces of Eight *per Annum*. The reſt of the chief Officers have three thouſand five hundred, and none of them leſs than eight hundred Pieces of Eight *per Annum*. The Maſters of the eight Furnaces, and twenty Coiners, have each of them eight hundred or a thouſand Pieces of Eight *per Annum*, and the meaneſt Servant earns a Piece of Eight a Day. Their Salaries.

The *Indians* had no Coin when the *Spaniards* first came amongſt them; Gold and Silver ſerved them only for Ornament: Their Traffick conſiſted in bartering and exchanging one Thing for another; only the Cocao-Nuts ſerved them to purchaſe Things of ſmall Value; as they do now in the Markets of *Mexico*, neither the *Spaniards* or *Indians* having any Copper Coin. Weights and Meaſures the *Indians* had none; but they had both dry and liquid Meaſures, made either of *Calabaſſes*, *Palmiboe Canes*, or Woods. And they had their Numbers and Characters, by which they adjuſted the Value of Goods, and the Taxes impoſed upon them.

As to Stones for building, there are in *Mexico* Quarries of *Jaſper*, *Porphyry*, and all Kinds of excellent Marble; for of ſuch Stones, the Palaces and Temples of *Mexico* were built before the Conqueſt. We are told of a great many precious Stones and Jewels in the Ornaments of *Montezuma*; but the Relaters have not ſpecified what they were, unleſs Emeralds and Pearls, and of theſe the World is furniſh'd with great Quantities from *Mexico*. The Emerald is a green Stone, and grows in a Stone like Cryſtal; and they ſeem by little and little to harden and refine: Some of them are as big as a Nut, and others larger. And with theſe we may well range their Pearls; of which there are great Quantities found on the Coaſts of *Mexico*, as well as in the Seas of *South America*. Multitudes of *Indians* and other Slaves have been deſtroy'd for the *Spaniards* in this Part of the World, in fiſhing up the Oyſters that contain them. The Pearls differ much in their Size, Figure, Colour, and Luſtre; and it is very rare to find two of the ſame Size, Form, and Colour; but when they do find two alike in all Reſpects, it much increaſes the Value of both, eſpecially for Pendants.

CHAP. VII.

Of the Traffick of Mexico; *their Carriages, Inns, and Way of Travelling.*

Traffick with Foreigners prohibited

THE People of *Mexico*, and the reſt of the *Spaniſh Weſt-Indies*, are prohibited trading with any but the Subjects of *Spain*; nor are Foreigners ſuffer'd to viſit their Coaſts, unleſs the *Aſſientiſts*, who furniſh them with Slaves, and that under ſeveral Reſtrictions, as will be related hereafter. Notwithſtanding which, the Traffick of *Mexico* is one of the moſt and moſt extenſive in the World: For the trade with the *Philippine* Iſlands near the Coaſt of *China*, through the *South Sea*; with *Peru* and *Chile*, through the ſame Sea; and with *Old Spain* and the *Spaniſh* Iſlands, through the *North Sea* and *Atlantic Ocean*. There is alſo a very conſiderable

smuggling

smuggling or clandestine Trade, carried on between the *Mexicans* and *Indians* on the one Side, and the *English*, *French*, and *Dutch* on the other.

Their Trade with the Philippines and China.

The *Philippine* Islands, which are under the Dominion of *Spain*, lie 140 Degrees of Longitude from *Mexico*; which, reckoning sixty Miles to a Degree, makes it eight thousand four hundred Miles from *Mexico* to *Manila*, the Capital of the *Philippine* Lands; and these the *Spaniards* sail in ten Weeks, or three Months, in going from *Mexico* to *Manila*, having a constant Trade-Wind from the North-East, and serene Weather in 10 or 12 Degrees of North-Latitude, which they get into as soon as they can. But it is not so in their Return from *Manila*, in the *Philippine* Islands, to the Port of *Acapulco* in *Mexico*. This is a Voyage of incredible Hazards and Hardships, which no Gain or Advantages would induce a wise Man to undertake twice; for, when they leave the *Philippines*, they are forced to stand away to the North, till they come into 35, or perhaps 40 Degrees, before they can meet with westerly, or even variable Winds: And here they are toss'd with frequent Storms, and their Patience try'd by inconstant Weather.

In this Voyage, they always take Advantage of the southerly Monsoon, which sets in, in *May* or *June*, on the Coast of *China*, and blows till *September* or *October*; this carrying them as high as the Latitude of 30 North. When they have sailed into this Latitude, the Weather becomes very tempestuous and cold; and several Galeons have been cast away in that vast Ocean, between the 30th and 40th Degrees of North Latitude: The Wind is oftner contrary than fair, and they are very seldom free from Storms. And the Voyage before they arrive at their desired Port of *Acapulco* in *Mexico*, is generally about seven Months after they set Sail from *Manila*. Thus much it was necessary to observe to shew the Length and Difficulty of the Passage from *Asia* to *America* at this Day: From whence we may infer, how impracticable, and even impossible, it was for the *Chinese*, or any other *Asiatic* Nation, to send Colonies to *America* by Sea; when Navigation was in its Infancy, and the Use of the Compass was not known.

Manage of the Spanish Ships.

The *Spaniards* employ but two Ships annually in this rich Trade; but then they are Ships of good Force, and usually eight hundred or a thousand Tons Burden. One of them sets out from *Acapulco* the latter End of *March*, or the Beginning of *April*, and arrives at *Manila* some time in *June*; when the other is ready to sail from *Manila* to *Acapulco*, where she usually arrives about *Christmas*. The Cargo of this Ship consists of Diamonds, Rubies, Saphires, and other precious Stones, found in the *East-Indies*; of Cinnamon, Cloves, Mace, Nutmegs, and Pepper; of the rich Carpets of *Persia*; the Camphire of *Borneo*; the Benjamin and Ivory of *Pegu* and *Cambaia*; the Silks, Muslins, and Calicoes of *East-India*; the Gold Dust, Tea, China-Ware, Silk, Cabinets, &c. of *China* and *Japan*. The Merchants get an hundred and fifty, or two hundred *per Cent.* by this Voyage. It was computed, that the Pilot of the Ship that returned in 1697, would make twenty thousand Pieces of Eight; his Mates nine thousand each; the Captain of the Galeon forty thousand: The Boatswain, who has the Privilege of taking several Bales of Goods on Board, gets an Estate in one Voyage; the Wages of every Sailor is three hundred and seventy Pieces of Eight; and the King's Duties of this one Ship amounted to fourscore thousand Pieces of Eight.

Trade between *Mexico* and *Peru*.

At the Time this Ship arrives at *Acapulco* from *Manila*, there comes in two or three Ships from *Lima* and *Peru*, very little inferior to the former in Value, being laden with Silver, Quicksilver, Cacao Nuts, and other rich Merchandize of *South America*; with which they purchase the Merchandize of *Europe* and the *East-Indies*: For, in the Months of *January* and *February*, at the great Fair, there are such Crowds of People at *Acapulco*, that all Provisions are excessive dear, and a Negro-Porter will earn fourteen or fifteen Shillings a Day. The Galeon from *Manila*, having sold all her Effects, takes in a new Cargo, chiefly of Silver, and returns in *April*. In the mean time, the Ships of *Peru*, having furnish'd themselves with the Merchandize of *China*, the *East-Indies*, and *Europe*, return to *Lima*. There is very little Traffick carried on by Sea on the Coast of *Mexico*; all Goods are carried from *Acapulco* to the City of *Mexico* by Mules and Pack-horses; and from thence to *Vera Cruz* on the *North* Sea, in like manner, in order to be shipped for *Europe*; which brings us to the Trade between *Old* and *New Spain*.

The Trade between *Old Spain* and *Mexico*.

Thirty or forty Ships carry on all the Trade between *Old Spain* and the *Spanish* Dominions in *America*; and these are almost all their own Vessels, no Trade being carried on in Foreign Bottoms, except that of the *Assientists*. The Vessels used by the *Spaniards*, in transporting Merchandize from *Old Spain* to *America*, are generally large and of good Force, and called Galeons: They sail in Fleets annually from *Cadiz*, laden with the Goods of almost every Country on this Side the *Atlantick*: The Woollen Cloth and Stuffs of *England*; the Linen and Lace of *Holland* and *Flanders*; the Silks of *Italy* and *France*; the Muslins, Silks, and Calicoes of the *East-Indies*; with the Merchandize of *China*, *Turkey*, and *Persia*, make up their Cargoes. The *English*, *Dutch*, *Italians*, and *French*, are Proprietors of great Part of their Cargo; and the *Spaniards*, in a great Measure, their Factors: For when the Galeons return from *America*, with the Treasure for which these Effects have been sold, it is most of it distributed amongst the Merchants and Factors of the four Nations last mention'd. The Government of *Spain* is very well apprized that this Trade is carried on by Foreigners, and, for very good Reasons, connive at it: They know their own People are not able to freight these Fleets; and, if they were not enabled to do it by Foreigners, their *Indian* Dominions must want all manner of Necessaries almost for Cloathing and Furniture.

The greatest Part of the Galeons sail to *Carthagena* and *Porto Bello*, and are called the *Fleet*; the other Part, called the *Flotilla*, or *Little Fleet*, sail to *Vera Cruz* in *Mexico*. The former sell their Merchandize chiefly at the Fair of *Porto Bello*, where they take on Board the Gold and Silver, and other rich Treasures, of *Peru* and *Chili*, in return for their Merchandize. The latter sell their Cargoes at the Fair of *Vera Cruz*; to which Place is brought the Gold and Silver of *Mexico*, with the Gold Dust, precious Stones, and other Treasures of *China* and the *East Indies*; and with these the *Flotilla* is freighted, on its Return to *Europe*.

The Galeons, on their going out, sail to the South-West, and get into the Way of the Trade-Wind, which carries them into 11 or 12 Degrees of North Latitude; then, bending their Course directly West, they leave the *Caribbee* Islands on their Right, and continue their Course till they arrive at *Rio de la Hacha*, where they send Ex-

press

preſſes to *Carthagena*, *Panama*, *Porto Bello*, *Vera Cruz*, &c. to prepare the King's Treaſure for the Galeons to take on Board. After which, the greateſt Part of the Fleet ſails to *Carthagena* and *Porto Bello*, and the reſt to *Vera Cruz*. The whole joining together uſually, in their Return, at the *Havanna*, in the Iſland of *Cuba*; and, ſailing from thence to *Spain* in Company, take a very different Courſe from that by which they came from *Europe*: For in their Return they ſail North through the Gulph of *Florida*, and continue their Courſe to the North-Eaſt till they come into the Latitude of 36 or 40, where they meet with variable Winds: They then ſhape their Courſe as near to the Eaſt as the Winds will permit them, till they come upon the Coaſt of *Spain*; and are uſually ſix or eight Weeks in their Paſſage. Theſe Fleets have ſometimes brought home the Value of twelve or fifteen Millions *Sterling* in Gold and Silver only; of which the King has a Fifth; and great Part of the Remainder is diſtributed among the Factors of the Nations above-mention'd; the leaſt Share, perhaps, coming to the Subjects of *Spain*.

Trade between the Continent and Iſlands by the *Barlavento* Fleet.

There is a Trade carried on alſo between *Mexico* and the *Spaniſh* Iſlands of *Cuba*, *Hiſpaniola*, and *Porto Rico*; as alſo between *Mexico* and *Terra-Firma* in *South America*, by the *Barlavento* Fleet, ſo called from its ſurrounding the *Barlavento*, or *Leeward* Iſlands, annually. This Fleet comes to *Vera Cruz* in *October* or *November*, and remains there till *March*. It conſiſts of ſix or ſeven Sail of Ships, of good Burden and Force, that ſerve both as Men of War and Merchant-men; for they viſit all the *Spaniſh* Sea-ports in the *North* Sea every Year, as well to ſupply one Place with what another wants, as to prevent Foreigners trading in their Ports, and to clear the Sea of Buccaneers or Pirates. From *Vera Cruz* this Fleet ſails to the *Havanna*, where they diſpoſe of the Merchandize they bring from *Mexico*: After which, they ſtand to the Northward, through the Gulph of *Florida*, till they come into the Latitude of 30 or 40; then they ſtretch away to the South-Eaſt, till they make the Iſland of *Porto Rico*; and, having diſpatch'd their Buſineſs there, they continue their Courſe to the Southward, till they arrive at the Iſland of the *Trinity*, near the Mouth of the River *Oroonoko*: From thence the Fleet ſails to *Margarita*; coaſting along to *Cumana*, and ſo to *Caracos*. Then they double *Cape La Vela*, and coaſt along by *Rio de la Hacha*, *St. Martha*, and *Carthagena*; on which Coaſt they frequently meet with *Engliſh* and *Dutch* Trading-Sloops, and make Prize of them: And, having ſtaid ſome time at *Carthagena*, they proceed to *Porto Bello*; and, having viſited the Bay of *Campeachy*, they return at length to *Vera Cruz* again.

A clandeſtine or ſmuggling Trade.

As the *Spaniards* do not ſend more than thirty or forty Ships annually from *Old Spain* to *America*, with the Produce and Merchandize of *Europe*; they are far from being ſufficient to ſupply their extenſive Dominions in that new World. Moſt Part of the Merchandize carried over in the Galeons, is ſold at the Fair of *Porto Bello*, and bought up at extravagant Rates, to be tranſported again by the *South* Sea to *Peru*: So that many of the *Spaniſh* Provinces upon the *North* Sea would be deſtitute of neceſſary Clothing and Furniture, and even Proviſions for their Tables, if they were not ſupplied with them by Foreigners. The *Engliſh* therefore from *New-England*, *New York*, *Jamaica*, &c. the *French* from *Hiſpaniola*, and the *Dutch* from *Curaſſaw*, fit out Sloops, with all manner of Proviſions and Neceſſaries, which they know are wanting, on the Coaſt of *Mexico*, in order to trade with the *Mexican Spaniards*, who are no leſs ready to receive the Goods of theſe Foreigners, than they are to ſell them, giving Pieces of Eight for what they buy; which makes this a very beneficial Trade to the *Engliſh*, *French*, and *Dutch*. But then, if the *Barlavento* Fleet, or the *Spaniſh Guarda de Coſta's*, meet with ſuch Trading-Sloops and Veſſels, they never fail to make them all Prizes; and ſometimes ſeize on Ships that have never been concerned in this clandeſtine Trade, on Suſpicion: Which has been the Occaſion of thoſe many Complaints our Merchants have made of the *Spaniſh Guarda de Coſta's*, to the Parliament and Board of Trade.

Logwood Trade.

There has been another Trade or Buſineſs carried on by the *Engliſh* in *North America*, which has occaſion'd many Diſputes between the two Nations of *Britain* and *Spain*, and is not yet adjuſted; and that is, the Buſineſs of Logwood-cutting in the Bay of *Campeachy*. This the *Engliſh* had follow'd, in a Part of the Country deſtitute of *Spaniſh* or *Indian* Inhabitants, for a great many Years; and look'd upon it, that their long Poſſeſſion had given them as good a Right to that Part of the Country, as the *Spaniards* had to any of the reſt: And in ſome Treaties the *Spaniards* ſeem to have yielded this Buſineſs to the *Engliſh*. However, they have thought fit, of late Years, to fall upon our Logwood-cutters, killed many of them, and carried the reſt into perpetual Impriſonment, not ſuffering them to be exchanged or ranſomed. And thus have we been driven violently and unjuſtly from a very valuable Branch of Buſineſs, under Pretence that becauſe the *Spaniards* had forcibly ſettled themſelves in one Part of the Continent, no other Nation had any Right to ſettle in another Part of it: A Rule, that the *French* are too wiſe and too brave to ſubmit to.

The Aſſiento Trade.

We proceed now to that Branch of Trade, which the *Engliſh* are entitled to carry on with the *Spaniſh* Dominions in *America*, by virtue of the *Aſſiento* Contract made between the two Nations in the Year 1713, and entitled, *The* Assiento, *adjuſted between their* Britannick *and* Catholick *Majeſties, for the* Engliſh *Company's obliging itſelf to ſupply the* Spaniſh Weſt-Indies *with black Slaves for the Term of thirty Years, to commence on the 1ſt Day of* May 1713, *and to end the 1ſt of* May 1743. The Preamble of this Contract recites, that the *French Guinea* Company had formerly enjoy'd the Benefit of the *Aſſiento*; and that their Term being expired, his *Catholick* Majeſty had determined to grant the ſame to the *Engliſh* Company. The Subſtance of the principal Articles is as follows, That the *Aſſientiſts* ſhall export to the *Spaniſh Weſt-Indies*, within the ſaid Space of thirty Years, one hundred forty-four thouſand Negroes, that is, four thouſand eight hundred Negroes in each of the ſaid thirty Years: That for each Negro, of the Standard of ſeven Quarters, neither old or defective, the *Aſſientiſts* ſhall pay to the Crown of *Spain* thirty-three Pieces of Eight, and one Third of a Piece of Eight: That the *Aſſientiſts* ſhall advance to his Catholick Majeſty two hundred thouſand Pieces of Eight, which ſhall not be reimburſed before the End of twenty Years; and then it may be deducted, by equal Portions, in the ten laſt remaining Years, after the Rate of twenty thouſand Pieces of Eight yearly, out of the Produce of the Duty on Negroes: That the *Aſſientiſts* ſhall not pay the ſaid Duties for more than four thouſand Negroes yearly; the Duties payable for the remaining eight hundred being given to them as Intereſt for the Money to be advanced as aforeſaid: That the *Aſſientiſts*, if they find a Demand for more Negroes, may import a greater Number than four thouſand eight hundred during the

the first twenty-five Years; for which supernumerary Negroes they shall pay but half the abovementioned Duty: That the *Assientists* may import and vend the said Negroes in all the Ports of the *North* Sea, and that of *Buenos Ayres*, where there are Royal Officers to search the Ships and their Cargoes: That the Negroes which are carried to the Windward Coast, shall not be sold for more than three hundred Pieces of Eight each; but as to the other Ports of *New Spain*, its Islands, and *Terra Firma*, for the best Prices they can get: That the *Assientists* may hold some Parcels of Land, to be assign'd them by his Catholick Majesty, in the River *Plata*, sufficient to plant, cultivate, and breed Cattle upon, for the Subsistence of the Persons belonging to the *Assiento* and their Negroes; and may build Houses of Timber only; but not throw up the Earth, or make the slightest Fortification; and his Catholick Majesty shall appoint an Officer to reside there, who shall have the Command of all Things relating to such Lands: That in order to the carrying of black Slaves into the Provinces of the *South* Sea, the *Assientists* may freight, either at *Panama*, or any other Port of the *South* Sea, Ships of about four hundred Tons each, on Board of which they may ship Negroes to all the other Ports of *Peru*, and to bring back the Produce of their Sale to the said Port of *Panama*, without being obliged to pay any Duties for such Produce: That the *Assientists* may employ *English* or *Spaniards* for the Management of this *Assiento*, and the *English* shall be treated as the Subjects of *Spain*, provided there do not reside in any one Port more than four or six *Englishmen*: That the *Assientists* may nominate Judges Conservators of the *Assiento*, in all the Ports and chief Places of *America*, provided they nominate some of his Catholick Majesty's Ministers; which said Judges are to have Cognizance of all Causes relating to the *Assiento*, and no Appeal to lie from them, but to the supreme Council of the *Indies*: That during this *Assiento*, neither the *French Guinea* Company, nor any other Persons, shall transport Negroes to *Spanish America*, but the *Assientists*, on pain of forfeiting such Negroes to the *Assientists*: That if any Merchandize be found in the *Assiento* Ships, besides the Negroes, and Provisions for them, it shall be confiscated, and the Officers importing it shall be disabled to serve in the *Assiento*: That the Ships of the *Assientists* may sail either from *Great-Britain* or *Spain*; but an Account shall be given to his Catholick Majesty of what Ships they dispatch yearly, and the Ports for which they are design'd: That all Prizes taken in Time of War by the *Assientists*, on the Coasts of *Spanish America*, be carried to *Carthagena*, or *Porto Bello*, and the Goods sold by the King's Officers at the Fair of *Porto Bello*; three Fourths of the Produce whereof, after Duties paid, to be enjoy'd by the Captors, and the other Fourth by his Catholick Majesty: That their *British* and Catholick Majesties shall each of them have a fourth Part of the Profits arising by this Contract: That the *Assientists* shall give in an Account of their Profits and Gain, upon Oath, at the End of the first five Years; which Accounts shall be examined in the respective Courts of *Great-Britain* and *Spain*; and the said *Assientists* shall pay his Catholick Majesty's Share of the said Profits regularly and punctually: And this they shall do every five Years during the Term: That the *Assientists* shall be allow'd three Years, after the Expiration of their Term of thirty Years, to adjust their Accompts, and gather in their Effects in the *Spanish West-Indies*: That in case of a War between *Britain* and *Spain*, the *Assiento* shall be suspended: However, the *Assientists* shall be allow'd a Year and a Half to remove their Effects.

An annual Ship granted to the *Assientists*.

His Catholick Majesty also, on condition that the *Assientists* shall not carry on any unlawful or clandestine Trade, grants them the Privilege of sending out a Ship of five hundred Tons annually, to trade to the *Indies*; provided they give his Majesty a fourth Part of the Gain, and five *per Cent.* out of the Gain of the other three Parts.

The late Queen *Anne* afterwards transferred to the *South* Sea Company the Benefit of the *Assiento* Contract, and granted them her fourth Share of the Profits arising by that Commerce; and yet such are the Misfortunes they have undergone in the Course of that Commerce, their Effects in the *Indies* having been twice seiz'd on account of those Misunderstandings with *Spain* in the Years 1718 and 1727, that they have gain'd little by it, tho' they were not out of Pocket. Indeed, such have been the Misunderstandings between *Great-Britain* and *Spain*, ever since the Peace of *Utrecht*, whereby the *Spaniards* yielded *Gibraltar* and *Port Mahon* to this Crown, and let us into the Traffick of the *Spanish West-Indies*, that we have been great Sufferers in our Commerce in general with that Nation of late, and seem in a Manner to have lost the Affections of that People.

There is no doubt, but the *Assiento*, consider'd in itself, would be very advantageous to *Britain*: We send little, besides our own Manufactures, to *Guinea*, to purchase those Negroes which we exchange with the *Spaniards* for Gold and Silver: The annual Ship also goes to *Porto Bello* laden chiefly with *British* Merchandize, for which she receives the Treasures of *Peru* and *Mexico* in return. But still, if the *French* and other Nations run away with the other Branches of the *Spanish* Trade, and we must ever remain in a State of Hostility with that Nation, whose Friendship is of such Importance to us, perhaps it were better we had never insisted too strictly on the Articles of the Treaty of *Utrecht*.

The *Mexican* Carriages and Way of Travelling.

We shall conclude this Head with the *Mexican* Carriages and Way of Travelling. The Country is so mountainous, that in their Inland Traffick they use scarce any Waggons or Wheel-Carriages; but all Merchandize is carried on Mules or Pack horses from one Province to another; and, before the *Spaniards* transported Mules and Horses thither, all Burdens were carried to the most distant Places on the Backs of *Tamenes*, or Porters. Their Princes and great Men were carried also on Men's Shoulders, lying or sitting on a kind of Couch, with a Canopy over it, not much unlike the *Palankins* in the *East-Indies*. Indeed Coaches are in Use at *Mexico*, and in some other great Towns, at present; but it is impracticable to travel long Journeys over their Mountains in Coaches. They have some few Inns upon their Roads, but usually miserable Houses, and destitute of tolerable Provisions; and they are such a Distance from each other in some Places, that Travellers are glad to take up their Lodging under Trees, and in poor Huts, where they suffer pretty much from the Snows and excessive Cold on the Mountains, and from the sultry Heat and Dust in their Valleys.

Their Inns.

CHAP. VIII.

Of the History and Government of Mexico, *antient and modern.*

The firſt Inhabitants of *Mexico.*

ACCORDING to the Traditions of the *Mexicans*, that Country was firſt inhabited by a wild and barbarous People, who went perfectly naked, lived on the Game they took in Hunting, and on Fruits and Roots; never planting and manuring the Ground: They dwelt in Caves of the Rocks and Mountains, or under Trees; building no Houſes, nor aſſociating together in Communities, having ſcarce any Religion or Government amongſt them: And there were ſome ſuch People that inhabited the Mountains of *Mexico*, even when the *Spaniards* conquered it.

The ſecond Nation that poſſeſs'd *Mexico*, conſiſting of ſeven Tribes.

The next People that poſſeſs'd this Country were the *Navatlacas*, who give no other Account of their Original, but that they came out of ſeven Caves. Theſe were ſeven Nations, or rather Tribes, that antiently dwelt between the 30th and 40th Degrees of Northern Latitude; but, about the Year 820, began to remove to the Southward, and poſſeſs themſelves of that Country, now denominated *Mexico*, which they did very gradually; for they did not move all together, but only one Tribe at a Time. The firſt Tribe, was called the *Suchimilcans*, or *Gardiners of Flowers*. The ſecond Tribe were the *Chalci*. The third Tribe were the *Taſeneca's*, or *People of the Bridge*. The fourth Tribe were called *Culhua*, or the *People of the Bending Mountains*. The fifth Tribe were the *Tlatelvica's*. And the ſixth Tribe were called the *Tlaſcalteca's*.

The *Mexicans.*

Three hundred and two Years after the Peregrination of the firſt Tribe, the ſeventh Tribe, called *Mexicans*, from their Leader *Mexi*, ſet forward towards the South, to find new Seats; being told by their God *Vitziliputzli* (or his Prieſts) that they ſhould obtain the Dominion of all the Tribes that went before them, and poſſeſs a Country abounding in Gold, Silver, precious Stones, Feathers, and rich Mantles. To which Prophecy they give ſuch Credit, that they began their March, carrying the Image of their God with them in a Cheſt, or Ark, on the Shoulders of four of their chief Prieſts. Theſe Prieſts gave them Laws in the Name of their God, and inſtructed them how they ſhould offer Sacrifices to him. The Prieſts alſo directed when they ſhould decamp, and how long they ſhould remain in any Place. And the firſt thing they did, wherever they came, was to erect a Tabernacle in the midſt of their Camp, for the Ark to reſt in upon an Altar: And they continued their Wandrings for many Years, before they came to the promis'd Land. Thus did theſe People imitate the Children of *Iſrael*, in their March from *Egypt* to the Land of *Canaan*.

When they came to *Mechoacan*, or the *Land of Fiſh*, they would have ſet up their reſt; but their God killed many of them in one Night, for preſuming to ſtay here: Whereupon they proceeded to the Lake of *Mexico*, and partly by Force, and partly by Treaty, obtained Leave to ſettle on ſome Iſlands in the Lake, agreeing to pay a certain Tribute for what they were to poſſeſs. Soon after, the *Mexican* Prieſts inform'd their People, that their God had appeared to them in a Dream, and commanded the *Mexicans* to fix themſelves in that Part of the Lake where they ſhould find an Eagle perching on a Fig-tree that was rooted in a Rock; which they immediately went in Search of, and found a Fig-tree growing out of a Rock, and on it a moſt beautiful Eagle, looking at the Sun, with her Wings diſplay'd, and holding a little Bird in her Talons: Upon the Sight of which, they all fell down, and worſhipped the Eagle; and afterwards built a City on the very Spot, to which they gave the Name of *Tenochtitlan*, or the *Fig-tree on a Rock*; and the Arms of the City (which afterwards obtained the Name of *Mexico*, from their firſt Leader) were an Eagle, with her Wings diſplay'd, looking on the Sun, holding a Snake in her Talons, and ſtanding with one Foot on the Branch of an *Indian* Fig-tree.

Mexico built.

The *Mexican* Chiefs afterwards falling into Factions, and being inſulted by the other Tribes, reſolved to elect a King, that might have the Government of their State; and, not being able to agree upon any one of their own Tribe, they made Choice of *Acamapixtli*, the Grandſon of the King of *Culuacan*, under whoſe Adminiſtration they ſoon began to make a conſiderable Figure; which drew upon them the Envy of the neighbouring Tribes. He reigned forty Years, and very much improved the City, by Buildings, Canals, Aquaducts, and Bridges: He left his Subjects at Liberty to chuſe whom they pleaſed to ſucceed him. And this generous Confidence had the Effect he foreſaw; for they made Choice of one of his Sons for their King, whoſe Name was *Vitzilovitli*, or the *Rich Feather*. *Vitzilovitli* dying, the *Mexicans* choſe his Son *Chimalpopoca* their King, tho' the young Prince was but ten Years of Age: But ſoon after, the *Tapanecans*, his Subjects, treacherouſly murder'd the minor King of *Mexico*, which occaſion'd a War between the two Nations; for the Management whereof the *Mexicans* choſe *Izcoalt* their fourth King, the Son of *Acamapixtli*, by his Concubine. This Prince perfectly ſubdued his Enemies, and divided their Country among his *Mexicans*: After which, he made a Conqueſt of *Tacuba*, *Cuyoacan*, the *Suchimilca's*, and all the Tribes that inhabited the Banks of the Lake. He died after a proſperous Reign of twelve Years. Hitherto the *Mexicans* in General had all of them a Voice in the Election of their Kings; but *Tlacaellec* the General perſuaded them to transfer their Right of electing a Sovereign to the Kings of *Tezcuco* and *Tacuba*, and four Princes of the Royal Blood; which the People conſented to. Theſe Electors, by the Direction of the General, choſe his Nephew *Montezuma* their fifth Monarch, who firſt inſtituted the Cuſtom of the elected King's ſacrificing ſome of his Enemies, taken in War by himſelf, at his Coronation. *Montezuma* made an entire Conqueſt of the Territories of the *Chalci*; and his General *Tlacaellec* ſoon after ſubdued all the Nations bordering on the *North* and *South* Seas, except the *Tlaſcalans*. *Montezuma* alſo applied himſelf to regulate the Civil Government and the Officers of his Houſhold, and built that celebrated Temple in *Mexico* that was dedicated to their God *Vitziliputzli*. He died after he had reigned

reigned twenty-eight Years. The Electors, assembling on this Demise, chose *Ticocic*, one of the Sons of the deceased King, who was recommended to them by the General; but he, proving an unfortunate Prince, was poison'd by his Subjects, after he had reigned four Years: Whereupon the Electors, by the Advice of the same General, chose *Axayaca*, another of the Sons of *Montezuma*, for their Soveraign; and the General *Tlacaellec* dying soon after, *Axayaca* constituted his eldest Son General of the *Mexican* Armies. *Axayaca* subdued the Provinces of *Tecoantipique* and *Guatulco*; from whence he brought several Captives, whom he sacrificed at his Coronation. He died after he had reigned eleven Years; and the Electors thought fit to chuse *Autzol*, one of their Number, his Successor; who added *Guatimala*, and several other large Provinces, to his Dominions: He also rebuilt and beautified the City of *Mexico*; but, endeavouring to bring a River of fresh Water into the Town, drowned great Part of it: However, he found Means to draw off the Water again, and repair the Damage. *Autzol*, having reigned eleven Years, died; and *Montezuma* the second was elected King, being the same Prince that sat upon the Throne when the *Spaniards* first invaded *Mexico*. This Prince was, or appeared to be, the best qualified for that high Dignity, of any of the Royal Family; wise, valiant, generous, affable, and endow'd with every other Royal Virtue. He refused the Crown when it was offer'd him, and was in a Manner forced to accept it: But he no sooner ascended the Throne, than he gave his Subjects good Reason to believe his Humility and Condescention were counterfeited, only to render himself popular. However, he caused Justice to be duly administer'd throughout his Empire, was a great General, and added several Provinces to his Dominions. It was in the fourteenth Year of his Reign, *Anno* 1517, when the *Spaniards* first appeared upon his Coasts. In the following Year, 1518, *Cortez* arrived. *Montezuma* the second is looked upon as the last of the *Mexican* Emperors; tho' there were two elected afterwards.

The Learning of the antient *Mexicans*

The *Mexicans* had neither Letters or Characters, to express their Meaning by; Statuary and Painting were the only Ways they had to record what was past: An Image or Picture, with a Crown on its Head, signified a King; and an Image, habited like a Priest, a Priest. There were some few Things indeed that represented others, and may be stiled Hieroglyphicks; as the painted Wheel, that distinguish'd their Age; and lesser Circles, their Years: And this brings us to speak of their Kalendar. This they regulated by the Motion of the Sun, making his Altitude and Declination the Measure of Times and Seasons. Their Year consisted of three hundred sixty-five Days, and was divided into eighteen Months, to each of which was assign'd twenty Days, which made three hundred and sixty; but then there were five intercalary Days, which they added at the End of every Year; during which they gave themselves up entirely to Pleasure. At the End of the five Days, the new Year began, which happen'd on the 26th of our *February*. Their Weeks consisted of 13 Days each, distinguish'd in their Kalendar by different Figures; and their Age consisted of 52 Years, or four Weeks of Years; for the describing whereof they made a large Circle, which they divided into 52 Degrees, allowing a Year for every Degree: In the Center of the Circle, the Sun was painted, from whose Rays proceeded four Lines of different Colours, which equally divided the Circumference, leaving thirteen Degrees to each Semidiameter. In a larger Circle, inclosing the other, they mark'd, with the Figures of Animals, Plants, Weapons, or other Instruments, the most remarkable Occurrences that happen'd; which, however, they seem'd conscious, could not be perfectly understood by Posterity; and therefore Schools were instituted, wherein the Youth were taught to celebrate the great Actions of their antient Heroes, and to repeat the most memorable Transactions of the preceding Ages; on which they relied much more than on their Hieroglyphicks.

The Kalendar.

The End of the World expected at the Conclusion of every Age.

At the End of every Age, the *Mexicans* expected the End of the World. On the last Night they extinguish'd their Fires, abandon'd themselves to Sorrow, and remained with their Eyes fixed towards the East, till they saw the Dawn of the succeeding Day appear. Then they congratulated each other that a new Age was begun, and they should no more be in Danger of the like Calamity for two and fifty Years.

Government of the antient *Mexicans*.

The Government of the antient *Mexicans*, was at first Popular or Republican, till they elected *Acamapixtli*, their first King. The King Elect, after the Reign of *Montezuma* the first, was obliged to invade some neighbouring Nation, and to bring home a certain Number of Captives, to be sacrificed at his Coronation. On his Return in Triumph, he was met by the Nobility, and chief Priests, and conducted to the Temple of the God of War; where, after the Sacrifice, he was clothed by the Electors in the Imperial Robes; a Golden Sword, edg'd with Flints, was put into his Right Hand; and into his Left, a Bow and Arrows. After which, the King of *Tezcuco* set the Crown upon his Head, as first Elector of the Empire: Then one of the Ministers made a Speech, in the Name of all the *Mexicans*, congratulating him upon his Accession, and putting him in Mind of the Duties incumbent on those who were raised to sovereign Power. Then the High Priest anointed him with a thick Balm or Oil, as black as Ink; blessed him, and four times sprinkled him with a consecrated Water; putting a Mantle over his Shoulders, painted with Skulls and human Bones, to put him in Mind that Princes were subject to Mortality. They also used some Drugs at the Coronation, to preserve him from Diseases and Enchantments. After which, he offered Incense to the God *Vit zliputzli*, and took an Oath to maintain the Religion and Customs of his Ancestors.

Ceremonies of the Coronation.

The Courts of their antient Kings. Their Women.

Montezuma the second, who lived in the greatest Splendor of any of their Monarchs, had two Sorts of Guards; one of Soldiers, and the other of two hundred Noblemen, who daily attended in their Turns. He had also no less than three thousand Women in his Palace, being the most beautiful young Ladies the Governors of the several Provinces could pick out. These were taken from their Relations, either with or without their Consent, as a Tribute due to their Prince. There was a perpetual Succession of them in the Palace; for the King frequently gave them to his Courtiers and Favourites in Marriage, and supplied their Places with others. This Prince appeared but seldom in publick; and when he admitted any to petition him, they were not suffer'd to look him in the Face. He eat alone, having above two hundred Dishes at his Table. Tables were kept for all who resided in the Palace, or whose Business brought them thither. The King sat at Table on a little Stool, and the Room was divided in the Middle to keep off the Crowd. The Dishes were brought in by young Ladies richly dress'd. The Dishes and the Table-Linen, were every Day distributed among the Servants, being never used twice. He drank

out

out of Golden Cups frequently, a Privilege never allow'd to his Subjects. There were generally attending at his Table three or four Buffoons, who frequently acquainted him with Things that others durſt not name. Having repoſed himſelf a little after Dinner, he was entertain'd with ſuch Vocal and Inſtrumental Muſick as his Country afforded.

Courts of Juſtice.

There was one ſupreme Tribunal in *Mexico*, conſiſting of twelve Judges, who determined all Appeals from the reſpective Provinces; and both the Town and Country had their proper Judges and Officers, who heard the Parties, and determined Cauſes in a ſummary Way. Treaſon, Murder, Sodomy, and Adultery, were puniſh'd with Death. The firſt Theft was only puniſh'd with Loſs of Liberty. Corruption in the Judges and Magiſtrates was puniſh'd capitally; and Bribery in an Officer or Miniſter was never pardon'd. There was a Council of War at *Mexico*, which regulated all Things relating to the Militia; for the Soldiery were more favoured than any Set of Men in the Empire; and more raiſed their Fortunes, and acquired Poſts and Titles of Honour, in this Profeſſion than any other. It is ſaid, that *Montezuma* had thirty vaſſal Princes in his Dominions, that could each of them bring an hundred thouſand Men into the Field. Theſe Princes commanded their reſpective Troops in Perſon, but received their Orders from the Generaliſſimo. There were ſeveral military Honours: Some were created Knights of the *Eagle*, ſome of the *Tyger*, and others of the *Lion*, who bore the Device of their reſpective Orders on their Habits. There was ſtill a ſuperior Order of Knighthood, to which none but Princes, and thoſe of the Blood-Royal, were admitted; which the Emperor himſelf was of. There was a Court, or Council, which had the Management of the Royal Revenues, which were greatly encreaſed in the Reign of *Montezuma* the Second, who compelled his Subjects to yield him one third Part of their Profits; and the pooreſt People were obliged to work in the publick Buildings, without any other Wages than their Food, when required. The laſt Council was the Council of State, to which all others were ſubject. This was compoſed of the ſix Electors of the Empire, and uſually held in the Preſence of the Emperor himſelf.

Government of modern *Mexico*.

Modern *Mexico* is govern'd by a Viceroy, and each of the largeſt Diviſions of that Vice-royalty has its Court of Audience, to which all the leſſer Provinces and Diſtricts are ſubject. The Viceroy, or Governor, is Preſident of each Court of Audience; and the Alcaid-Majors, Fiſcals, and Counſellors of State, are Members of it. Theſe take Cognizance of all Cauſes, Criminal or Civil, within a certain Circuit round the City where the reſpective Courts are held, in the firſt Inſtance; and by way of Appeal from the Courts of the reſpective Alcaids, Rigidors, and Corrigidors of the reſpective Towns and Diſtricts. In the Viceroy is veſted the ſupreme military Power, and he has the Nomination to many Civil and Military Employments; but moſt of the principal Poſts are filled up by the King, or the Council of the *Indies* in *Old Spain*; to whom alſo there lies an Appeal from the Courts of Audience in *Mexico*: And the *Spaniards* make it an inviolable Rule never to prefer any *Mexican*, tho' born of *Spaniſh* Parents, to any conſiderable Poſt in the *Indies*. The Term of the Viceroy's Adminiſtration is uſually limited to five Years; but ſometimes he amaſſes Wealth enough in that Time, to purchaſe a Continuance in his Office for another five Years. They uſually ſell all the Poſts they have to diſpoſe of, without regard to the Qualification or Merit of the Perſon preferred; ſo that there is a Train of Bribery, Corruption, and Oppreſſion, that runs through the whole Adminiſtration. In the Towns that are purely *Indian*, the *Spaniards* conſtitute the ſame Sort of Magiſtrates, and the Government is adminiſter'd in the ſame Manner by *Indians*, as it is in the *Spaniſh* Towns by *Spaniſh* Magiſtrates: But there are ſome Tribes of *Indians* that are rather in Alliance with the *Spaniards* than ſubject to them. However, moſt of the *Indians* acknowledge the King of *Spain* for their Sovereign; and their Chiefs accept a Staff with a Silver Head, which is in a Manner a *Spaniſh* Commiſſion to govern their own People. This Chief they obey as their Prince, who acts the Part of a General when they take the Field, and that of a Judge in time of Peace; and, in his Determinations, is govern'd by antient Cuſtom.

The Forces of *Mexico*.

The regular Forces in *Mexico* are very inconſiderable: In the Metropolis there are ſcarce five hundred Soldiers; and at *Vera Cruz*, they have not half that Number; and their Fortifications are as contemptible as their Garriſons. There is ſcarce a Town, of any Name, near the Coaſt of the *North* Sea, but has been taken and plunder'd by the Buccaneers more than once, tho' theſe Rovers ſeldom conſiſt of more than a thouſand or fifteen hundred Men. The ſame Buccaneers have fought their Royal Fleets on the *South* Sea, taken ſome of their ſtouteſt Ships, and ſeldom been unſucceſsful in their Encounters with the *Spaniards*, by Sea or Land. What then might not an *Engliſh* or *French* Squadron of fifteen or twenty Men of War, and five or ſix thouſand Land-Forces, effect in the *Spaniſh Weſt-Indies*. It is not the Want of Power, but the Want of Inclination, that has prevented the *Engliſh* fixing themſelves in the richeſt Parts of the *Spaniſh Weſt-Indies*.

The Revenues of *Mexico*.

The Revenues of *Mexico* are very conſiderable, and ariſe principally from, 1. The King's Fifth or Tenth of the Treaſure dug out of their Mines; 2. From the Duties of Exciſe and Cuſtom; and, 3. From the Rents and Services by which they hold their Eſtates, and the Produce of their Husbandry and Manufactures. The King has but a Tenth of the Silver in *Mexico*, tho' he has a Fifth of the Silver of *Peru*, becauſe the *Mexicans* are at a very great Charge in purchaſing Quickſilver to refine their Silver; whereas the *Peruvians* have Mines of Quickſilver in their Country. Gold, however, pays a Fifth to the King, both in *Mexico* and *Peru*. In the Year 1698, the King's Part for that Year came to twelve hundred thouſand Pounds *Sterling* of our Money; and to ſixteen hundred thouſand Pounds *Sterling*, in the Year 1691. The Cuſtoms and Exciſe alſo muſt raiſe a great deal of Money; for the Exciſe on a ſpirituous Liquor, drawn from the Plant *Maghey* only, amounts to about eleven hundred thouſand Pieces of Eight *per Annum* in the City of *Mexico*. The Rents and Services due to the Crown, muſt be equal, if not ſuperior, to either of the former Branches; for the pooreſt married *Indian* pays four, ſix, and, in ſome Places, eight Ryals *per Ann.* to the Crown; and others in Proportion to their Eſtates. All Lands there, as with us, hold mediately or immediately of the Crown, and the Owners of them contribute to the Support of the Government.

CHAP.

CHAP. IX.

Of the Religion of the Mexicans, *Antient and Modern; their Marriages, Education, and Funerals.*

Religion of the Chichimecas.

THE People that inhabited this Country before the *Mexicans*, were the *Chichimeca's*, who are represented by the *Mexicans* as a very brutish Generation, without Religion: But, notwithstanding, the *Spanish* Historians, most of them, agree, that this savage People worshipped the Sun and Moon, and sacrificed Fowls and other Animals to them. At the Village of *Teotiguacan*, about a Day's Journey from *Mexico* City, are two Pyramids of Earth, with Steps from the Bottom to the Top, like those of *Egypt*; the one being the Pyramid of the Moon, and the other of the Sun. There once stood on the Top of the first Pyramid a vast Idol of the Moon, made of a hard coarse Stone, which the first Bishop of *Mexico*, out of a Religous Zeal, caused to be broke in Pieces. Within the Pyramid were several Vaults, where Kings had been buried: For which Reason the Road to it was called the *Highway of the Dead*. The Pyramid of the Sun, two Sides of it, are three hundred *Spanish* Yards in Length, and the other two about two hundred. It is about eighty *Spanish* Yards high, and a fourth Part larger than that of the Moon: The Statue on the Top of it is broken; but the best Part of it remains there, being too large to be easily removed. According to their Traditions, these Pyramids were built by the *Olmeco's*, a People which came by Sea from the East; which gives Reason to conjecture, that they were Colonies of the *Egyptians* and *Carthaginians*. The *Mexicans* do not pretend to know when these Pyramids were erected: But certain it is, there was formerly a great City where they stand, as appears by the vast Ruins about them.

Religion of the *Mexicans*.

The *Mexican* Tribes, who succeeded the *Chichimeca's*, according to the *Spanish* Writers, acknowledg'd one supreme God as well as the *Peruvians*, and worshipped the Idol *Vitziliputzli* as the Image of this great God: But they contradict themselves in other Parts of their Histories; telling us, that *Vitziliputzli* was their *Mars*, or *God of War*; and that he had a Brother, named *Tlalock, of equal Power*; and that the like Prayers and Sacrifices were made before each of them. Besides, the same Writers acknowledge, that there was not one *Indian* Nation that had a Word in their Language, or any Term, that signified God. If the *Mexicans* had any God which they imagined presided over the rest, it was the Sun. But they had no Image of the Sun or Moon in the Temples of *Mexico*, as the former Inhabitants of the Country had: The Idols *Vitziliputzli* and *Tlalock*, the Reader will find already described. The third Idol was *Tescalipuca*, called the *God of Penance*. It was an Image of human Form, carved out of a black shining Stone, and represented sitting on a Chair in the Middle of the Altar. The fourth Image was the *Mercury* of the *Mexicans*, represented under a human Shape, and called *Quitzalcoalt*. They had also a Goddess called *Toci*, or *Our Great Grandmother*; a Deity of their own framing. Another Idol was formed of a Paste, composed of the Flour of several Sorts of Grain, mixed with Honey; which they obliged their Prisoners to adore that were destined to be sacrificed. We have before taken notice, that the Story of their offering human Sacrifices, has been greatly magnified: And that of their eating human Flesh is not at all to be relied on.

A Resemblance between the *Mexican* and *Christian* Rites.

It is said, that they imitated both *Jews* and *Christians* in the Worship and Service of their Idols: That they had their Temples, Priests, Sacrifices, Sacraments, Prophets, and Ministers, as the People of God had: Their Chief Priest, or *Pope*, was vested with sovereign Authority, and held his Office by Inheritance, as the rest of the Priests of *Vitziliputzli* did: But the other Priests were elected or dedicated to that Office in their Infancy. The daily Employment of their Priests was to offer Incense to their Idols: This they did at Break of Day, at Noon, at Sun-set, and at Midnight; when they sounded their Drums and Trumpets: The Chief Priest in waiting, being clothed in a Kind of Surplice, took Fire from the Altar at Midnight; and, having incensed the Idol, was followed into a Chapel by the rest of the Priests and Officers of the Temple; where they perform'd a very rigorous Penance, lashing and cutting themselves till the Blood follow'd, and then besmearing their Faces with their own Blood. The Priests and Religious also fasted five or ten Days before their grand Festivals; and some of them cut and disabled themselves in such a Manner, as to render them incapable of enjoying Women: Neither did they drink strong Liquor, or indulge themselves in Sleep, most of their Penances being perform'd in the Night-time.

At some of their Festivals, they flea'd a Captive, and clothed another Man in his Skin, who went through the Streets begging the Charity of the People, the Money being applied to the Service of the Temple. A Captive was annually given to the Priests, to be the Representative of their God. This Man they clothed with all the Robes and Ornaments of the Idol he was to personate, and gave him the same Name; and he was adored all that Year as the Idol was, lodged in the best Apartment in the Temple, entertained by those of the first Rank, and, when he went through the Streets, was attended by their Princes and Nobility: But at the End of the Year he was sacrificed, and sent to increase the Number of their Gods. The Priests put both the King and People upon these barbarous Sacrifices; who were weary of them when the *Spaniards* arrived amongst them, and were determined to have left them off themselves.

Festival of *Vitziliputzli*.

In their great Feast of *Vitziliputzli*, which was held the Beginning of *May*, their Nuns made an Image of their God in Paste, which having dress'd up, and seated on an Azure Throne, they carried it in Procession to the Area before the Temple, where a Set of young Friars received it, and carried it to the Steps of the Altar, where the People came and worshipped. They afterwards went in Procession with the Image to a Mountain, a League distant from *Mexico*, taking a Tour thro' several of the neighbouring Villages: After

which they returned to the Temple in a triumphant Manner. And then the Nuns took Paſte, and made it into the Form of human Bones, which were laid at the Feet of the Idol, and, being conſecrated by the Prieſts, were called, *The Fleſh and Bones of* Vitziliputzli. After which, the Prieſts ſtripped the Idol of Paſte of its Ornaments, broke that and the Bones in Pieces, which they diſtributed to the People, bidding them *eat the Fleſh of their God*; the whole Ceremony concluding with a Sermon or Exhortation of the Prieſts.

Their Communion.

On the 19th of the ſame Month of *May*, was annually celebrated the Feaſt of *Teſcalipuca*, when the Prieſts abſolved the People from their Sins. The Temple Gates being open'd, one of the Prieſts appeared, and blew a Horn, turning himſelf to the four Winds: After which, he took up Duſt and put in his Mouth, pointing to the Heavens; in which he was imitated by the People, who ſigh'd, wept, and mourn'd for their Offences; and, proſtrating themſelves on the Ground, implored the Divine Mercy. The Horn was blown for ten Days ſucceſſively, from the 9th to the 19th of *May*; all which Time was ſpent in weeping and mourning; and, on the laſt Day, the Image of the God *Teſcalipuca* was carried in Proceſſion, two Prieſts walking before it with Cenſors in their Hands; and, every Time they cens'd the People, they lifted up their Hands to Heaven, adoring the Sun and their Idol: And, during the Ceremony, the Penitents ſcourg'd themſelves with Whips and knotted Cords. After the Proceſſion, the People made their Oblations, conſiſting of Gold, Silver, the Fruits of the Earth, or of their Labour. They alſo ſet all Manner of delicious Meats before the Idol, which were afterwards carried by the Servants of the Temple to the Apartments of the Prieſts; the whole Ceremony concluding with the Sacrifice of the Perſon who had been the living Image of the God of Penance the preceding Year, and the uſual Songs and Dances at ſuch Solemnities.

Feaſt of *Teſcalipuca*

The next Feſtival is that of *Quitzalcoalt*, the *God of Trade*. Forty Days before this Feaſt, the Merchants purchaſed a beautiful young Slave, without any Manner of Defect, to be the living Repreſentative of this God; and, having waſh'd and purified him, they clothed him with the ſame Robes and Ornaments with which the Idol was adorn'd he was to repreſent: They danced, ſung, and adored him; furniſhing him with every thing that could render Life deſirable: But, on the Night of the Feaſt-day, about Twelve o'Clock, they ſacrificed the unhappy Wretch in the uſual Manner.

Feaſt of *Quitzalcoalt*.

The *Mexicans* adored alſo the *God of Hunting*; and, at certain Seaſons of the Year, uſed to ſurround the Woods and Mountains, where they expected to meet with wild Beaſts, or Game: And, having lighted Fires on all Sides, and driven the Beaſts to the Centre, there they uſed to kill, and offer them to this God, who was placed on an Altar on the Top of the Mountain thus invaded.

Feaſt to the *God of Hunting*.

The Inhabitants of *Honduras*, *Yucatan*, *Nicaragua*, and the reſt of the Provinces, had Idols of different Figures, that were worſhip'd with different Rites. The Iſland of *Cozumel*, on the Coaſt of *Yucatan*, was famous for its Oracles. The Prieſts here, as well as the Pagan Prieſts of old, uſed to abuſe the People with pretended Anſwers from their Idols, which they themſelves pronounced unſeen from a hollow Place, where they ſtood concealed.

Within the Bounds of every Temple there were two Convents, the one of Nuns, and the other of Friars: The Nuns were clothed in white, and called the *Daughters of Penance*, being admitted into the Cloiſter at twelve or thirteen Years of Age, when their Heads were ſhaved. Their Buſineſs was to keep the Temple clean, and dreſs the ſacred Meats preſented to the Idols, and afterwards eaten by the Prieſts; and they made the Furniture and Ornaments for the Temple, and the Idols it contain'd: They roſe at Midnight to attend the Service of the Temple, and perform the Penances impoſed on them; and it was Death to ſuffer their Chaſtity to be violated while they remained in the Cloiſter; but then they were to continue here but a few Years; after which, they were allowed to leave their Cells, and marry. The young Friars were admitted at eight or nine Years of Age, had their Crowns ſhaved, and attended the Service of the Temple alſo: They were obliged to live abſtemiouſly, and practiſe great Auſterities; but were, however, at twenty Years of Age, allowed to go into the World, and marry.

Convents and Nunneries.

Circumciſion and Baptiſm.

The *Spaniſh* Writers alſo relate, that the *Mexicans* had the Rites of Baptiſm and Circumciſion amongſt them; by which they initiated young Children, eſpecially thoſe of noble Extraction, into their Religion. Their Prieſts alſo obliged their People to come to Confeſſion, and enjoin'd them Penance, after the Manner of the *Roman* Catholicks.

Confeſſion.

Cortez, and his Companions, ſtudied nothing leſs than the Converſion of the *Indians*, whatever they pretended: They only ſummoned the *Indians* to ſubmit to the Pope and the Emperor; and, on their Refuſal, to become Chriſtians, they ſeiz'd their Country murder'd many Millions of them, and enſlaved the reſt: And afterwards, when Miſſionaries were ſent over, they perfectly dragoon'd the *Indians* that were left alive into Chriſtianity, driving them by Hundreds and Thouſands into the Rivers to be baptized, on Pain of having their Throats cut. One of the Miſſionaries boaſted, that he had baptized above thirty thouſand *Indians* himſelf.

The Chriſtian Religion introduced.

It is very ſeldom that any conſiderable Dignity in the Church of *Mexico* is conferred on a Native of that Country, tho' born of *Spaniſh* Anceſtors; which has created an implacable Enmity between the Clergy that are Natives of *Mexico*, and thoſe that are Natives of *Old Spain*. The Miſſionaries ſent from *Spain*, are frequently Monks of very little Merit, and of lewd Lives. The principal Motives that draw the *Spaniſh* Clergy over to *America*, are a View of gaining great Riches, to free themſelves from the Confinement of their Cloiſters, and enjoy an unreſtrained Liberty; for it is frequent for a Prieſt to lay up ten or twelve thouſand Crowns in ten Years time, who has but an ordinary Cure in *Mexico*, and to live plentifully and luxuriouſly all the Time. Both the Monks in the Cloiſters, and the Parochial Clergy, rival the Quality in their Dreſs and luxurious Way of Life: They drink, they game, they ſwear, they wench, and made a Jeſt of their Vows of Poverty; getting Money enough, many of them, to return to *Old Spain*, and purchaſe Biſhopricks. And as to the Laity here, there is not a more bigotted, or a lewder People, upon the Face of the whole Earth: A preſent to the Church wipes off the Odium of the greateſt Crimes; and the Way the People are inſtructed in their Religion here, as in *Old Spain*, is by Plays and Theatrical Entertainments in their Churches. There is ſcarce any Part of the Hiſtory of the Goſpel but is the Subject of a Play, which the loweſt of the People are taught to act; one perſonating our Saviour, another *Pilate*, a third

Herod,

Herod, and so on: And as their Churches are exquisitely fine, so is their Musick, both Vocal and Instrumental. In their Cloisters they have Masks, Dances, and all manner of Entertainments the Laity in this Part of the World indulge themselves in: And yet have they their Seasons for Penance and Mortification, particularly in *Lent*, and in case of an Earthquake, Famine, or other general Calamity.

Marriages

The *Mexicans* were married by their Priests in the Temple: The Bride and Bridegroom standing before him, he took each of them by the Hand, and demanded, if they were agreed to marry; and, on their answering in the Affirmative, he tied a Corner of the Woman's Veil to a Corner of the Man's Mantle; and, leading them in this manner from the Temple to the Bridegroom's House, he made the Bride surround the Fire (that was kindled in the Middle of the House for that purpose) seven times: After which, the Man and Woman sat down by the Fire; and thus the Marriage was concluded without farther Ceremony, and consummated the same Night. But if the Man did not find his Bride a Virgin, she was returned the next Day to her Friends. On the contrary, if he had no Objections to her Virtue, he gave a handsome Entertainment to her Friends the next Day, and Sacrifices were offered to the Gods on the joyful Occasion. A Schedule was afterwards made of all the Jewels, Cloaths, and Goods the Wife brought with her, which her Father kept; and, in case of a Divorce, all the Effects mention'd in the Schedule were return'd with the Wife, to her Friends: And, People once divorced, were prohibited coming together again.

Polygamy was allowed amongst them; but the common People had more Wives than one, because they were so far from being a Charge to a Man, that they might well be reckon'd Part of his Stock, as well as his Slaves: Whether they brought Fortunes with them or not, they improved and increased his Estate every Day.

Of bad Women.

In the Country of *Darien*, a Woman is no sooner deliver'd of a Child, but she and the Infant are immediately wash'd in some River: After which, the Child is swathed or tied to a Board, and the Mother suckles it with the Board at its Back: It also sleeps in a Hammock thus fasten'd to a Board. And, when they grow up, the Boys are bred to their Father's Exercises, namely, Shooting, Fishing, or Hunting; while the Girls are taught Husbandry as well as Housewifery, and to spin and weave.

Of Indians subject to the Spaniards.

As to the *Indians* that are subject to the *Spaniards*, and obliged to profess themselves Christians, their Priests compel them to marry when the Lads are fourteen, and the Girls twelve: And if they are not then provided with a Spouse, the Priests find one for them. A Wife and Children are the surest Pledges of a Man's Fidelity. An *Indian* seldom retires to his untamed Countrymen in the Mountains, after he is married; but becomes a profitable Member of the Commonwealth, paying Duties both to the Church and his Civil Governors. The marrying them so young also renders the Country the more populous, which was impolitickly deprived of its Inhabitants by the first Adventurers. Nor do the *Spaniards* only take care to see the young *Indians* married to each other, but they encourage, or at least suffer, the native *Spaniards*, and the *Criolli* their Descendants, to marry with the *Indians*. The like Policy the *French* observes in their *American* Plantations; while the *English* prohibit their People marrying with the *Indians*, and consequently lose many Advantages in planting and establishing themselves, which other *European* Nations have.

Mexican Education.

The antient *Mexicans* were exceeding careful of the Education of their Children: They had publick Schools and Academies belonging to almost every great Temple, where their Masters studied the Genius of the Children under their Care, and qualified them for the Church, the State, or the Army, according as they were inclined: They suffer'd them to take but little Sleep, obliged them to live abstemiously, to carry Burdens, and perform the roughest Exercises; and those design'd for the Army were oblig'd to attend the Camp, and give Proofs of their Courage, before they were admitted to be enrolled among the Soldiery, which was esteemed the most honourable Employment of all others. The young Ladies also were educated in Convents, instructed in the Principles of Religion and Virtue, taught to paint and match beautiful Feathers, and such other Works as might render them useful and agreeable when they enter'd on the married State. Both Sexes were taught to sing and dance, and to repeat the heroick Actions of their Ancestors, and other remarkable Occurrences in their History.

Funerals.

The *Mexicans* sometimes burnt, and at others, buried their Dead: Their Princes and great Men were generally burnt, and their Ashes, being afterwards collected, and put into an Urn, were then buried: The Funeral Solemnity was perform'd by their Priests; and the Places of Interment were usually their Gardens or Court-yards; tho' some were buried within the Walls of their Temples, and others in the Fields or Woods, some distance from *Mexico*.

Soon after the Party died, the Corpse was wash'd; and, being dress'd in the Mantles the Deceased usually wore in his Life-time, and set upright, all his Friends and Relations came and took a solemn Leave of him. The Corpse was carried to the Place of Interment, attended by the Priests, who sung mournful Funeral Songs, and play'd upon their Wind-Musick. And where a Prince was to be inter'd, the Nobility and Officers of State attended the Procession. They were buried with their Arms, and their Habits.

The State of departed Souls.

The *Mexicans* believed that the Soul was Immortal, and that there was another State, where every one was to be rewarded according to his Works; but they had no Notion of the Resurrection of the Body. They held also, that there were nine different Places to which departed Souls were sent, according to the Time of their respective Ages, and the different Lives they had led; but that the Place of the greatest Happiness was near the Sun: This was to be the Portion of the Brave who died in Battle, and of such as had been sacrificed to their Gods. Some of the latter were canonized, and even deified; which might be some Excuse for their sacrificing Men: They imagin'd, they did them no Injury, when they deprived them of a Life of Care and Anxiety, and sent them to share the Joys of Paradise, or, rather, to be number'd with the Gods.

CHAP.

CHAP. X.

A Description of New Mexico *and* California.

New Mexico Situation and Extent.

NEW MEXICO, or *Granada*, is bounded by unknown Lands on the North; by *Florida* on the East; by *Mexico*, or *New Spain*, on the South; and by the Bay of *California*, which separates it from *California*, on the West; lying between the 28th and 45th Degrees of Nothern Latitude, and between 100 and 130 Degrees of Western Longitude, from the Meridian of *London*.

Gold and Silver Mines in *New Mexico*.

We know little more of this Country, than that it abounds in rich Silver Mines, and has some of Gold: That it is an exceeding fruitful Country, well water'd with Rivers, and abounding with the same Plants and Animals as our Plantations of *Virginia* and *Carolina* do; and, according to the *Spanish* Accounts, is very thinly inhabited by scatter'd Clans of savage People, who live chiefly by what they take in Hunting, and on the Fruits of the Earth that grow spontaneously; neither building Towns, or clothing themselves, or being acquainted with any Art or Science.

The Natives.

Gemelli's Account of *New Mexico*.

Gemelli Careri, who was at *New Mexico* in the Year 1698, gives us the following Account of that Country. He says, Part of it is newly conquer'd, and there remains still much more to conquer. As to the Natives, they were such skilful Archers, that they would hit a Six-pence thrown up into the Air, and shake all the Grain out of an Ear of Corn without breaking it off: That they are great Lovers of Mule's Flesh; for which reason they often robbed Travellers, and carried away only the Beasts, leaving behind the Chests of Silver, which they do not value: That they paint their Bodies, and pricking the Skin, render the Colours indelible. The King of *Spain* maintains six hundred Horse in *New Mexico*. These Soldiers are arm'd with a Shield, Musket, and Half-pike, or Spear; not to fight, but to hunt them out like wild Beasts: They are order'd by the Government not to kill this savage People, but to bring them in, that they may be instructed in their Religion, and civilized: Thus an hundred and fifty Leagues have been conquer'd to the Westward, tho' the People endeavour'd to defend themselves with their Bows and Arrows. The worst is, that, being five hundred Leagues from the City of *Mexico*, those Barbarians quickly revolt, knowing there cannot be Supplies of Soldiers sent against them suddenly. The Country is plain, and convenient for Carriages for some Months every Year; but the King's Forces are obliged to pass such wide Deserts, that they usually intrench every Night, and keep Guard, for fear of being surprized by the Savages. The *Franciscans* have the Charge of the Conversion of these People, called *Chichimeca's*, who are rather Atheists than Idolaters, and have brought a great Number of them to live like Men; but their wild Nature always inclines them to Solitude. The Country is so thinly peopled, that they travel several Days Journey without meeting with a Village; for which Reason the Viceroy has sent several Families thither of late Years to people it, the Soil plentifully producing all Things that are sowed or planted in it, even of the Fruits of *Europe*: And there are, besides, rich Mines of Gold and Silver. The Length of the Way not allowing Travellers to carry their Quilts to lie on, the Jesuits that go to their Millions in this Country have learnt of the *Indians* to carry before them, on their Saddles, Mattresses and Pillows made of Leather, which at Night they blow full of Wind, and they are as soft as a Feather-Bed.

Some Writers have subdivided *New Mexico* into twenty or five and twenty Provinces, and furnish'd us with the Names of as many Towns, the Capitals of the respective Provinces: But, as they have not given us the Situation, Boundaries, or Description of any of these Provinces, and most Authors agree, that not one twentieth Part of the Country is yet inhabited or cultivated; we shall be content with observing, that *Santa Fé*, the Capital Town of *New Mexico*, is situated in 36 Degrees odd Minutes North Latitude, a little to the Westward of the *North River*; and that it is a Bishop's See, and the Residence of the Governor; and said to be regularly built of Stone.

California described.

We shall conclude our Description of the *Spanish* Dominions in *North America*, with an Account of *California*, which may well be look'd upon as a Part of *New Mexico*, since it is joined to it by a narrow Isthmus, or only separated from it by the Bay or Gulph of *California*; and, if not under the same Governor, is subject in a great measure to the *Spanish* Influence.

Peninsular Situation.

This Country, formerly deemed an Island, is laid down in our latest Charts and Maps as a Peninsula, adjoining to the Continent of *New Mexico*. It is bounded by unknown Lands on the North; by the Bay or Gulph of *California*, and a narrow Isthmus, which separate it from *Old* and *New Mexico*, towards the West; and by the *South* Sea on the South and West; stretching in Length from the Tropic of *Cancer* to the 45th Degree of North Latitude; and lies between the 115th and 136th Degrees of Western Longitude, from the Meridian of *London*. It is of an unequal Breadth, narrow in the South, and growing broader towards the North; indented by many considerable Bays and Gulphs of the Sea; said to be about fifteen hundred Miles in Length, and three hundred in Breadth in the broadest Part.

This Country was first discovered by *Cortez*, in the Year 1535; but the *Spaniards* did not, till very lately, penetrate far into it, contenting themselves with the rich Pearl-Fishery on the Coast. Sir *Francis Drake* touched upon this Coast in the Year 1578, and took Possession of it in the Name of the then Queen of *England*, calling it *New Albion*; but the *British* Government has never thought fit to attempt any farther Discoveries in *California*; and it is at this Day, or will be in a very short time, in the Power of *Spain*, and annex'd to their *Mexican* Dominions.

The Heats in Summer are very great along the Sea-Coasts of *California*, and it seldom rains; but the Air of the Inland Country is more temperate, and the Heats not so excessive: It is the same in Winter in Proportion. In the rainy Season there are Floods; but, when that is over, instead of Rain, the Dews fall in such Plenty every Morning, that one would think it had rained; which renders the Earth very fruitful. In the Months of *April*, *May*, and *June*, there falls with the Dew

Dew a Sort of Manna, which congeals and hardens upon the Leaves of Reeds, from whence they gather it: It is as ſweet as Sugar, but not altogether ſo white.

There are in *California* large Plains, pleaſant Valleys, excellent Paſtures at all Times for great and ſmall Cattle, fine Springs of running Water, Brooks, and Rivers, with their Banks cover'd with Willows, Reeds, and wild Vines. In their Rivers they have Plenty of Fiſh, eſpecially Cray-fiſh, which they keep in Reſervoirs till they have Occaſion for them. There is alſo Plenty of *Xicames*, of a better Taſte than thoſe of *Mexico*. On the Mountains there are, all the Year long, *Meſcales*, a Fruit peculiar to this Country; and, in moſt Seaſons, large *Piſtachio's* of ſeveral Sorts, and Figs of different Colours. The Trees are very beautiful; and, amongſt others, that which the Natives of the Country call *Palo Santo*, bears a great deal of Fruit: From this they draw excellent Frankincenſe.

As this Country abounds in Fruits, it does no leſs in Grain, of which there are fourteen Sorts, that the People feed on. They uſe the Fruits of Trees and Plants, and among others, thoſe of the *Yuca*, or *Caſſavy*, to make Bread of. There are excellent *Skirrets*, a Sort of red Strawberries, of which they eat plentifully: *Citrons* and *Water-Melons* of an extraordinary Size. The Land is ſo good, that moſt Plants bear Fruit three Times a Year; ſo that, with ſome Labour in cultivating it, and Skill in managing the Water, they render the Country extremely fertile. Nor is there any Sort of Fruit or Grain, but what they gather in great Abundance.

Beſides ſeveral Sorts of Animals that we know, which are here in Plenty, as Deer, Hares, Rabbets, they have two Sorts of Deer that we know nothing of. The firſt Sort is as large as a Calf of one or two Years old: Its Head is much like that of a Stag, and its Horns, which are very large, like thoſe of a Ram: Its Tail and Hair are ſpeckled, and ſhorter than a Stag's; but its Hoof is large, round, and cleft like that of an Ox. The other Sort, ſome of which are white, and others black, are larger, and have a great deal more Wool, which is very good, and eaſy to be ſpun and wrought. Beſides theſe Animals, that ſerve for Food, there are Lions, wild Cats, and many others, like thoſe in *New Spain*. As for Fowls, there are in *California* all that are in *New* and *Old Mexico*; as Pigeons, Turtle-doves, Larks, Partridges, of an exquiſite Taſte, and in great Quantities; Geeſe, Ducks, and many other Sorts, both of River and Sea Fowls. The Sea affords Plenty of very good Fiſh: They take Pilchards, Anchovies, and Tunnies; which laſt they catch with their Hands on the Shore. They often ſee Whales, and all Sorts of Torroiſes. The Shores are filled with Heaps of Shells, larger than thoſe of Mother of Pearl. The Salt they have is not from the Sea, but out of Pits: It is as bright as Chryſtal, and ſo hard, that they are often forced to break it with Hammers: It is a very good Commodity in *New Spain*, where Salt is ſcarce.

Tho' Heaven has been ſo bountiful to the *Californians*, yet they make no Eſteem of the Plenty and Riches of their Country, contenting themſelves with what is only neceſſary for Life. The Inland Parts of the Country are very populous, eſpecially towards the North: They have no Houſes, but defend themſelves from the Heat of the Sun in the Day-time under the Shade of the Trees; and of their Leaves and Branches make a Sort of Roof, againſt the Inclemency of the Night. In the Winter they ſhut themſelves up in Caves in the Earth, and live there together little better than ſo many Beaſts. The Men go naked. They wear about their Head a fine Linen Fillet, or ſort of Net-work; and about their Neck, and ſometimes about their Arms, for Ornament, Mother of Pearl, in divers Figures, very finely wrought, and prettily intermix'd with little round Fruits. They have no other Arms than Bows and Arrows, and a Sort of Spear or Lance, which they always carry in their Hands, either to kill Game, or defend themſelves; for they are frequently at War with each other. The Women wear, from their Waiſt down to their Knees, a kind of Apron made of Reeds, very neatly wrought, and platted together: They cover their Shoulders with the Skins of Beaſts, and wear about their Heads, like the Men, a very curious Kind of Net-work. They, as well as the Men, have Necklaces of Mother of Pearl, mixed with the Stones of ſome Sorts of Fruit and Sea-ſhells, hanging down to their Waiſt; and Bracelets of the ſame. The common Employment both of Men and Women is ſpinning: They make their Thread of long Plants, which ſerve them inſtead of Hemp and Flax, or elſe of a Cotton-like Subſtance found in the Shell of ſome Sorts of Fruit. Of the finer Thread they make the Ornaments above-mention'd, and of the coarſer, Fiſhing-nets and Sacks, or Bags for ſeveral Uſes. The Men moreover, of certain Plants, whoſe Fibres are very cloſe and thick ſet, and which they are well ſkilled in working, employ themſelves in making Diſhes and other Kitchen Neceſſaries, of all Fathions and Sizes.

The *Californians* have a great deal of Vivacity, and are naturally addicted to Raillery. When the Miſſionaries were among them, if they committed any Error in their Language, they jeſted and made Sport with them. And if at any Time they explained any Myſtery or Point of Morality, not conformable to their Prejudices, they waited for the Preacher after Sermon, and diſputed againſt him with a great deal of Force and Wit. They have not amongſt them any Form of Religion or regular Worſhip, only they adore the Moon, and cut their Hair in her Decreaſe, in Honour of their Deity, which they give to their Prieſts, who employ it to ſeveral ſuperſtitious Uſes. Every Family is a diſtinct State, and hath different Laws and Cuſtoms, which is the Reaſon that they are ſo often at War with one another.

CHAP. XI.

A Description of Terra-Firma.

Terra-Firma. Its Situation and Extent.

THE Countries, comprehended under the general Name of *Terra-Firma*, are bounded by the *Atlantick* Ocean, on the North and East; by *Peru* and the Country of the *Amazons*, on the South; and by the *South* Sea, and the Province of *Veragua* in *Mexico*, on the West; being upwards of two thousand Miles in Length from East to West, and generally about five hundred Miles in Breadth from North to South.

Terra Firma Proper described.

1. The first Province of *Terra-Firma*, is *Terra-Firma Proper*, which frequently goes under the Name of *Darien*. It lies in the Form of a Crescent, about that noble Bay of *Panama*, being about 300 Miles in Length, and 60 in Breadth, from Sea to Sea. This Province is, in Proportion, the richest, and of most Importance to the *Spaniards*, and has been the Scene of more Action, than any Province in *America*. Its Situation, both on the *North* and *South* Seas, and on the Confines of *North* and *South America*, and the Gold Mines, Gold Sands, and Pearls, with which it is replenished, render it invaluable, and make it the darling Object of all enterprizing People.

The Face of *Terra-Firma Proper.*

The Surface of the Country is very unequal, consisting of exceeding high Hills, and long deep Valleys: The Valleys are watered with Rivers, Brooks, and perennial Springs, most of them having their Sources in a Ridge of Mountains that over-top the other Hills, running the whole Length of the Isthmus parallel to the Coasts, bending as the Isthmus bends. This vast Ridge of Hills is nearest the Coast of the *North* Sea, seldom more than ten or fifteen Miles distant from it. The Hills between this Ridge and the *South* Sea, are covered with fine tall Woods, with little or no Under-wood to interrupt the Passage: But those on the North-side are full of Bushes, Bamboes, and Mangroves, near the Shore, that render them almost impenetrable.

The Rivers.

The Rivers on the North Side, have generally a very short Course, running precipitately into the Sea, tho' there are Exceptions to this Rule. The chief Rivers are, 1. The River or Gulph of *Darien*, the Eastern Boundary of this Province, six or seven Leagues wide at the Mouth, and navigable fourscore or an hundred Miles. 2. The River of *Conception*, which is pretty broad, and makes a good Appearance at the Mouth. 3. The River *Chargre*, the most navigated of any of this Province. Upon this River is embarked all the Merchandize that is sent from *Panama* to *Porto Bello* for the Galleons, except the Gold and Silver, which are carried over Land upon the Backs of Mules. 4. The River *St. Mary's*, pretty large, navigable, and considerable on account of its lying in the Neighbourhood of the Gold Mines, and for the Rivulets which fall into it; in whose Sands are found abundance of Gold. From one of these, called the *Golden River*, 'tis said, they carry off eighteen or twenty thousand Pound Weight of pure Gold in a Season. 5. The River *Cupo*, large, and navigable for great Vessels within the Bar, but so shallow at the Mouth, that it is very difficult entring. 6. The River of *Darpo* is a considerable navigable River, and runs a long Course; but has the same Misfortune as the rest in this Country, to have a Bar at the Mouth, that large Ship cannot enter it.

Air and Seasons.

This Province being very narrow, and lying between two great Oceans, is observed to have more wet Weather, than any other Place within the *Torrid Zone*. The Rains usually begin here in *April* or *May*: In *June*, *July*, and *August* they are very heavy; and it is extreme hot at this time, whenever the Sun shines out: There are then no Breezes to cool the Air. In *September*, the Rains begin to abate; but it is *November* or *December*, and sometimes *January*, before the fair Season returns: So that the Country is very wet for two Thirds, if not three Quarters of the Year. But in the wettest Season, there are some fair Days, with only a Thunder-Shower now and then. The coolest Time of the Year, is after the Rains, about *Christmas*, when the fair Weather approaches.

Chief Towns. *Panama* City.

The chief Towns in *Terra-Firma Proper*, are, 1. *Panama*, situated in 9 Degrees of North Latitude, and 82 Degrees of Western Longitude. It stands upon the finest Bay in the *South* Sea, and is built with Brick and Stone, being surrounded by a Stone Wall, fortified with Bastions and other Works. It lies in the Form of a Half-moon upon the Bay, affording a most beautiful Prospect. There are no large Woods or Marshes near *Panama*, but a fine, dry, Champaign Land, not subject to Fogs. The Island of *Perica*, three Miles distant, is the Port to *Panama*: For the Water is so shallow near the Town, that great Ships cannot come up to it. This Town contains upwards of six thousand Houses, eight Parish Churches, besides the Cathedral, thirty Chapels, and several Monasteries and Nunneries. It is a Bishop's See, Suffragan to the Archbishop of *Lima* in *Peru*; the Seat of the Governor, and of the Courts of Justice of this Province. *Old Panama* stood about four Miles to the Eastward of this City, and was destroyed by the Buccaneers commanded by Captain *Harry Morgan*, in the Year 1670; which remarkable Occurrence shews how easily the *Spaniards* might be dispossess'd of this important Town and Province, if we should be compelled to fall out with them. The Captain and his Buccaneers brought away with them four hundred thousand Pieces of Eight, and the Captain was not only knighted by King *Charles* II, for his Bravery and Conduct, but was made one of the Commissioners of the Admiralty in *Jamaica*, and, in the Year 1680, left Deputy-Governor there.

Old Panama stood, and was destroyed by Sir *Henry Morgan*.

Porto Bello is situated on a Bay of the *North* Sea, in 10 Degrees of North Latitude, and 80 Degrees of Western Longitude, about seventy Miles North of *Panama*. It has a very fair, large, and commodious Harbour, affording good Anchorage and Shelter for Ships, having a narrow Entrance, and spreading wider within. At the Bottom of the Harbour lies the Town, bending with the Shore like a Half-moon. The Town lies open towards the Country, and at the East-end is a long Stable for the King's Mules. The Governor's House stands upon an Eminence near a great Fort at the West-end of the Town. It is an unhealthful Place, and no People ever experienced

experienced it more than the *Engliſh*, when the Squadron under Admiral *Hoſier* lay before it, without being ſuffered to enter upon Action, in the Year 1727: For here we did not only loſe Admiral *Hoſier*, but the Seamen twice over, without acquiring the leaſt Advantage to our ſelves.

3. *Venta de Cruz* is ſituated on the River *Chagre*, about thirty Mile[s] to the Northward of *Panama*: And here the M[er]chandize brought is embark'd for *Porto Bello*, in order to be ſent to *Europe*. 4. *Cheapo* is about twenty-five Miles North-eaſt of *Panama*, and but a ſmall Place. 5. *Nata* is about ſeventy Miles South-weſt of the City of *Panama*. Its chief Dependance is on Cattle, Hogs, and Poultry, with which they ſerve the Markets of *Panama*. 6. The Town of *Conception*, ſituated near the Mouth of the River *Conception*. 7. *Santa Maria*, ſituated about thirty Leagues South-eaſt of *Panama*, and conſiderable on account of the Gold Mines in the Neighbourhood of it. 8. *Scuchadero*, a ſmall Town, refreſh'd by the Sea Breezes, and eſteemed a healthful Place.

The laſt Place we ſhall mention in this Province, is *New Edinburgh*, or the Place which the *Scots* gave this Name to, when they attempted to make a Settlement on the Coaſt of *Darien*, and denominate the Country about it *New Caledonia*. This Fortreſs was ſituated on the Continent, near the North-weſt Point of the Gulph of *Darien*, on a moſt excellent Harbour, large enough to contain five hundred Sail of Ships untouch'd from any Wind. The Forts ſtood upon a Peninſula, almoſt ſurrounded by the Harbour and the *North* Sea, and the Acceſs to the Peninſula was ſo defended by Rocks and Precipices, that a very little Art would have render'd it impregnable. The Soil was rich, the Air temperate, and the Water ſweet; every thing contributing to render it healthful and convenient: The Land abounding in Veniſon and Poultry, and the Seas with the beſt Fiſh; and, what were ſtill greater Advantages, it ſtood in the Neighbourhood of the richeſt Gold Mines in *America*. The *Scots* thought themſelves extremely fortunate in happening upon this agreeable Situation, which the *Engliſh*, *Dutch*, and *French*, never once diſcover'd, and the *Spaniards* themſelves were Strangers to it. Here it was the *Scots* arrived in the Month of *November* 1699, in order to fix a Colony of their Countrymen on the Continent, in Conſequence of an Act paſſed by the Parliament of *Scotland*, for erecting a Company to trade to *Africa* and the *Indies*: By which they were authorized to plant Colonies and Settlements in the *Eaſt* and *Weſt-Indies*, under his Majeſty's Letters-Patent, which they alſo obtained. The *Indian* Princes within theſe Limits, received the *Scots* into their Country with a great deal of Joy, in Hopes of their Aſſiſtance againſt their antient Enemies the *Spaniards*. The Settlement went on proſperouſly at firſt: But the *Spaniards* complaining to the Court of *England*, and declaring that they ſhould look upon this as an Act of Hoſtility; the *Engliſh Eaſt-India* Company alſo complaining of this Settlement at the ſame time, the *Engliſh* Parliament thought fit to interpoſe, and addreſs King *William* to recall his Patent to the *Scots* Company.

Having taken a View of the principal Places upon the Continent of *Darien*, or *Terra-Firma Proper*, we proceed to give ſome Deſcription of the Iſlands near the Coaſts of this Province, which are very numerous. On the *North* Sea, at the Entrance of the Gulph *Darien*, lie three Iſlands almoſt in a Triangle, which form a very good Harbour. The Eaſtermoſt of the three, and the ſmalleſt, is called *Golden Iſland*: There is a fair deep Channel between this and the Main; it is naturally ſtrongly fortified, being defended by a ſteep Rock almoſt all round, except the Landing-place, which is a ſmall ſandy Bay on the South ſide. The largeſt of the three Iſlands lies to the Weſt of *Golden Iſland*, being marſhy Ground, and ſo beſet with Mangroves, that it is difficult getting on Shore. It is ſcarce parted from the Main-land, but at high Water, and even then Ships cannot paſs between. The third, called *The Iſle of Pines*, is a ſmall Iſland, North of the other two; and, riſing into Hills, is a good Sea-mark: It is covered with tall Trees fit for building, or any other Uſe, and has a fine Rivulet of freſh Water in it. Three Leagues North-weſt of theſe, lie a Multitude of ſmall Iſlands, extending as far a *Point Samballas*, generally denominated, *The Samballas Iſlands*; ſome of them lie one Mile from the oppoſite Shore of the Continent; ſome two Miles, others two Miles and a Half from the Shore, and about as far from each other; and there are navigable Channels between them: The Sea between this long Range of Iſlands and the Continent, is navigable alſo from one End to the other, and affords every-where good Anchoring in hard ſandy Ground. The *Samballas* are generally low, flat, ſandy Iſlands, but have Variety of Fruit-trees and Foreſt-trees upon them. Their Shores alſo afford good Shell-fiſh; but no People have thought fit to inhabit any of them. From the *Samballas* Iſlands paſſing to the Weſtward by Port *Scrivan*, we arrive at the Iſlands of *Baſtimento*, being four or five in Number, and lying about a Mile from the Continent: They are, for the moſt Part, high Land covered with Wood; and one of them has a Spring of freſh Water in it. A little farther Weſtward, over-againſt *Porto Bello*, are two ſmall flat Iſlands without Wood or Water: They lie ſo near the Continent, that there is but a very narrow Channel between.

In the Bay of *Panama*

The Bay of *Panama* is of a ſemicircular Form, being about an hundred Miles over, and three hundred in Circumference. The *Kings*, or *Pearl* Iſlands, being low, woody Iſlands, and very numerous, lie almoſt in the Middle of this Bay, ſtretching in Length about fourteen Leagues. The Northermoſt of them, called *Pachequ*, lies twelve Leagues South-eaſt of *Panama*; and they are generally about ſeven Leagues from the Main-land of *Darien*. Theſe Iſlands belong to the Citizens of *Panama*, who keep Negroes here to plant and cultivate them. The Iſland of *Chepelo*, ſeven Leagues Eaſt of *Panama*, and a League from the Continent, is the pleaſanteſt Iſland in the Bay of *Panama*. It is about two Miles over either Way, partly high Land, and partly Valleys. The Iſlands of *Perico* are three ſmall Iſlands, which lie before the City of *Panama*, about three Miles from it, and may be called the Port to that City. The Iſland of *Tabago* lies about ſix Leagues South of *Panama*, being about three Miles long, and two broad: A mountainous Iſland, the North-ſide whereof affords a pleaſant Proſpect, appearing like a Garden of Fruit, ſurrounded with high Trees. There is a ſmall Iſland on the North-weſt Side of this, called *Tabogilla*; and another about a Mile from it on the North-eaſt, with a good Channel between them. *Otoque* is an Iſland South-weſt of *Tabago*; in which there are good *Plantain* Walks with Negroes upon them, belonging to the Citizens of *Panama*. The Iſland of *Chuche* is a ſmall, low, woody Iſland, that lies Weſt of the *Pearl* Iſlands, and does not appear to be either inhabited or planted.

The

The Soil and Air of *Terra Firma Proper.*

The Soil of the Isthmus of *Darien*, is good in the Middle of the Province, but both the Shores of the *North* and *South* Seas are generally either a dry barren Sand, or drown'd Mangrove Land, that will scarce produce any kind of Grain. The Sea-Coasts of this Province are generally unhealthful. The Country about *Panama*, the Capital, is so exceeding poor, that their Corn, Flesh, and other Provisions, are brought them by Sea, from Countries at a very great Distance. For tho' the Heart of the Country is said to be fruitful, yet very little of it is cleared of Wood, or cultivated.

Their Persons and Habits.

The *Indians* of *Darien* resemble those in the Eastern Provinces of *Mexico*; only as they approach nearer the Equator, their Complexions are darker. When they are engaged in hunting, fishing, planting, or any laborious Exercise, they usually go naked, having their Skins painted with various Colours and Figures; but they have their Robes of Ceremony, both white and black, that are made of Cotton Linen, and reach down to their Heels; and the Men wear Coronets of Cane on their Heads, adorned with Feathers: Nor do they ever stir abroad without their Arms, their Bows, Arrows, Lances, Daggers, or great Knives; and many of them of late use Fire-arms, which they purchase of the *Europeans*. Both Men and Women are of a round Visage; have short bottle Noses; their Eyes large, generally grey, yet lively and sparkling: They have high Foreheads, white even Teeth, thin Lips, Mouths moderately large, Cheeks and Chins well proportion'd; they are in general finely featur'd, but the Men more so than the Women. Both Sexes have long black Hair, coarse and strong, which they usually wear down to the Middle of their Backs, or lower, only the Women tie it together with a String just behind the Head. They suffer no other Hair to grow, but that on their Heads, their Eye-brows and Eye lids. Their Beards, and all below, are pulled up by the Roots, as soon as any appears. They have the same Custom as the *East-Indians* and *Africans* have, of anointing their Heads and Bodies with Oil or Fat.

A Race of white *Indians.*

There are among these dark complexion'd *Indians*, some that are perfectly white in the Province of *Terra-Firma Proper*. Their Skins are not of such a White, as our fair People in *Europe*, who have some Tincture of Red in their Complexion: Nor is it like that of our paler People; but a pure Milk-white: And there grows upon their Bodies a fine short Milk-white Down, thro' which the Skin appears. The Hair of their Heads and Eye-brows also is white, growing to the Length of six or eight Inches, and inclining to curl. These People are less in Stature than the other *Indians*. Their Eye-lids are also differently form'd, bending like the Horns of the Moon; from whence, and their seeing so well by Moon-light, the Buccaneers call them Moon-ey'd. They cannot see at all in the Sun-shine; and therefore scarce ever go abroad in the Day-time, unless in dark cloudy Weather. They are contemn'd by the Copper-coloured *Indians*, who look upon this white Complexion as monstrous. They are not a distinct Race by themselves, but proceed from tawny Parents on both Sides. Perhaps the Reason of this very white Complexion of the *Darien Indians*, and the very dark Complexion of the *Negroes*, will be found out together. The Men in this Province, like those in *Mexico*, wear Silver and gold Plates in their Noses, which hang down over their Lips; and the Women Rings of the same Metal. They have also Pendants in their Ears, Chains of Beads and Shells about their Necks, and other Ornaments, as the *Mexican Indians* wear. Their Houses also are built in the same Manner, and their Lodging is generally in Hammocks: Nor is their Food or Exercise different from what has been related of the other *Indians*, who have preserved their Liberties.

Their Government.

Wafer informs us, that the Country was govern'd by the Heads of their respective Tribes or Families, in the Year 1681, but that there was a Prince superior to the rest, in the South-part of the Isthmus; and those on the North-side paid him great Respect. *Wafer*, on the other Hand, says, the People, where the *Scots* were about establishing a Colony, were under no formal Government; but every Captain commanded his own River, Bay, or Island, where he resided.

The *Darien Indians* still preserve their Liberty.

The Reason the *Indians* of *Darien* have so long maintained their Independency, notwithstanding it was the first Province on the *Terra-Firma* the *Spaniards* discovered, is, that the Country, in many Places, is inaccessible. The Torrents that fall for two thirds of the Year from the Mountains into the *North* and *South* Seas, are scarce passable by any but the Natives. These, and the thick Woods, cut off all Manner of Communication between *Panama* and *Peru* by Land: There is therefore no Road through the Country; but whoever goes from *Panama* to *Peru*, is forced to go by Sea.

Carthagena Province.

2. *Carthagena*, the second Province of *Terra-Firma*, received its Name from the Capital City. It is said to be about three hundred Miles in Length, from North to South; and about two hundred in Breadth, from East to West. The

Chief Towns.

Chief Towns are, 1. *Carthagena*, situated in a Peninsula, about an hundred Leagues to the Eastward of *Porto Bello*; said to have been so named by the *Spaniards*, either because they were Natives of *Carthagena* in *Old Spain*, or because it resembled that Harbour in the *Mediterranean*. The Town is built of Free-stone, and has several fine Churches and Monasteries in it; but the Jesuits Cloister and Church excel all the rest. As to the Form of it, like others of *Spanish* Foundation, it has a Square in the Middle; from whence most of the Streets run in parallel Lines: It is walled round, and defended by Forts, Block-houses, and other Works; which render it one of the strongest Places in the *West Indies*. This City is a Bishop's See, Suffragan to the Archbishop of *Santa Fe* in *Granada*, and the Seat of the Governor, and of the Courts of Justice of this Province. 2. *Madre de Popa*, situated on a high Mountain, about fifty Miles South east of *Carthagena*, chiefly famous for a Convent and Chapel dedicated to the Virgin *Mary*, so vastly rich, that it is only exceeded by that of *Loretto*. 3. *Zenu* or *Cenu*, situated upon a River of the same Name, about twenty five Leagues South of *Carthagena*, most remarkable for the Salt that is made here, and its Fisheries. 4. *Tolu*, situated about twenty-five Leagues South-west of *Carthagena*, celebrated for the Balsam found in the Neighbourhood of it, from whence it derives its Name. The principal River of this Province is that of *La Grande de Magdalena*, which, rising to the Southward of *Granada*, runs directly North, and afterwards divides the Province of *Carthagena* from that of *St. Martha*; falling into the *North* Sea, about twenty four Leagues North-east of the City of *Carthagena*.

3. The Province of *St. Martha* is about three hundred Miles in Length, from East to West, and two hundred in Breadth, from North to South. From the Mountains of this Province run a Chain of Hills, quite through *South Ame-*

rica

rica. Thoſe which bound *Peru* on the Eaſt, and are uſually call'd *The* ANDES, are a Part of them. The chief Towns of this Province, are, 1. *St. Martha*, the Capital, which gives Name to the Province. It has a large Harbour form'd by the Continent, and two Iſlands that lie before it. This Town is a Biſhop's See, and the Seat of the Governor and Courts of Juſtice. 2. *Ramada*, ſituated to the Eaſtward of *St. Martha* and remarkable for its Copper Mines. 3. *Taranca*, ſituated South-weſt of *St. Martha*; a Place of great Traffick. 4. *Cividad de los Reyes*, ſituated about a hundred Miles to the Southward of *St. Martha*. 5. *Tamalameque*, ſituated two hundred Miles to the Southward of *St. Martha*, and ſometimes call'd *The City of Palms*.

4. The Province of *Rio de la Hacha*, a ſmall Province, frequently reckon'd a Part of that of *St. Martha*: It abounds in Corn and Cattle, has a Pearl-fiſhery upon the Coaſt, and ſome Salt-works. The chief Towns are, 1. *Rio de la Hacha*, ſituated to the Eaſtward of *St. Martha*. 2. *Rancheria*, ſituated about twenty Leagues North-eaſt of *Rio de la Hacha*, and inhabited chiefly by the Pearl Fiſhermen.

5. The Province of *Venezuela*, including the Diſtrict of *Caracas*, about four hundred Miles in Length, from Eaſt to weſt; and three hundred in Breadth, from North to South. This is the moſt northerly Province of *South America*. In it we find abundance of exceeding high Mountains and deep Valleys. The Top of the Hills are barren; but the lower Part of them, and the Valleys between, have a rich Mould, ſo that here is Plenty of Sugar, Tobacco, Corn, Cattle, and rich Paſtures; and good Store of Veniſon, Fiſh, Fowl, and Fruits. There are alſo ſeveral Gold Mines in this Province. The chief Towns are, 1. *Venezuela*, ſo called from its Situation in the Waters. It is the Capital of the Province, the Reſidence of the Governor and the Courts of Juſtice, and a Biſhop's See. 2. *Caracas*, the Country about which is remarkable for the beſt Cocoa-nut to make Chocolate. 3. *Maracaiba*, pleaſantly ſituated on the Weſt-ſide of a great Lake, ſixty Leagues in Length, and thirty in Breadth. Upon the Coaſts of this Lake the Towns and Villages ſtand very thick; among which is, 4. *New Gibraltar*, a large Town, ſituated in a pleaſant Country.

6. *New Andaluſia*, comprehending the Diſtricts of *Comana* and *Paria*, and extending in Length, from North to South, five hundred Miles and upwards; and in Breadth, from Eaſt to Weſt, between two and three hundred Miles. The pricipal River which waters this Country, is that of *Oronoque*, or *Paria*, which riſes in the Mountains of *Andes*, and runs directly Eaſt for near two thouſand Miles; then turns to the North, and, continuing that Courſe above a thouſand Miles more, falls into the *North* Sea by ſeveral Channels. The Inland Part of this Country is mountainous, and covered with Woods, intermixed with Valleys and Meadows that yield Corn and Paſturage. It is the moſt eaſterly Province the *Spaniards* have in South *America*. The Produce is chiefly Sugar and Tobacco, *Brazil* Wood, and ſome other valuable Timber and Woods for Dying, with ſome Gums and Drugs. The chief Towns are, 1. *Comana*, ſituated on a Bay of the *South* Sea, and ſurrounded with Hills and Woods. It is a Place of great Strength. 2. *Verina*, a ſmall Town, remarkable for the excellent Tobacco that grows in the neighbouring Fields. 3. *St. Thomas*, ſituated on the Eaſt-ſide of the River *Oronoque*, and the only conſiderable Settlement the *Spaniards* have to the Eaſtward of that River.

7. The Province of *Guiana*, or *Caribiana*, extending twelve hundred Miles and upwards along the *Atlantic* Ocean. Several *European* Powers have Settlements on or near the Sea-coaſts of this Country, particularly the *Spaniards*, the *French* and *Dutch*; but the Natives are yet poſſeſſed of much the greateſt part of it, and are not in Subjection to any of them, unleſs upon the Sea-coaſt. The Sea-coaſt is generally low, and ſubject to Inundations, a multitude of Rivers running precipitately from the Mountains in the Inland Country during the rainy Seaſon. The Air is exceſſive hot and unhealthful, eſpecially in ſuch Parts of the Country as are not cleared of the Woods; but there are even here ſome elevated Situations tolerably cool and healthful, where the Air hath a free Paſſage. As for Towns in this Country, the Natives poſſeſs a few ſtraggling Villages, conſiſting of poor Huts, of the form of ordinary Barns. Their Furniture conſiſts of little more than the Hammocks they ſleep in, Baskets, Earthen-Pots and Pans, Gourds and Calabaſhes. The *Engliſh* had formerly ſeveral Settlements on this Coaſt, which were yielded to the *Dutch* by the Treaty of *Breda*, in the Year 1667. The chief *Dutch* Settlement is that of *Surinam*, ſituated five Leagues within the River of the ſame Name. They have given the Name of *Surinam* to all the Country about this Fortreſs for ſeveral hundred Miles; and look upon themſelves as Sovereigns of it. The chief *French* Settlement is that of *Cayenne*, ſituated on an Iſland at the Mouth of a River of the ſame Name. The Iſland is about ſeven Leagues long, and three broad; well wooded and watered with Rivulets; and has ſeveral good *French* Towns upon it, beſides Villages of *Indians*, producing Sugar, Tobacco, *Indian* Corn, and other Grain and Plants, like the neighbouring Continent; and is held to be more healthful, as it lies open to the Sea-breezes.

The Province of *Guiana*, or *Caribiana*.

As to the Perſons of the *Indians* of *Guiana* and *Caribiana*, their Complexion is a dark Copper Colour, but they reſemble their northern Neighbours of *Terra-Firma* in Size and Features. Here are no Tribes of a gigantic or a diminutive Stature, as the firſt Diſcoverers pretended. Thoſe who live in the Neighbourhood of the *Europeans*, wear ſome little Cloathing, but the reſt ſcarce any, either Men or Women: Tho' in Ornaments moſt of the *Americans* ſeem to agree; as in Plates and Rings for their Lips and Noſes; heavy Strings of Beads and Shells about their Necks, that reach almoſt down to their Bellies; and in anointing and painting their Faces and Bodies. And as Giants, Dwarfs, and Monſters ſeem at preſent to be expelled from this Continent, tho' our firſt Diſcoverers met with ſcarce any thing elſe, the Caſe ſeems much the ſame as to Cannibals. Our Buccaneers, who have traverſed the moſt barbarous and uncultivated Parts of *America*, have not been able to give us one Inſtance of their having ſeen any one Man eaten; only they tell us, that one of their Comrades being taken by the *Indians*, they ſuppoſed he was roaſted and eaten; becauſe, the next Day, they came to a Place where a great Fire had been made, and diſcovered human Bones in the Aſhes: Which they might have done, if the *Indians* had only burnt their Friend *in Terrorem*, as well as if they had broiled and eaten him. Nor is it at all improbable, that the Man was burnt; for the Buccaneers have frequently committed ſuch Outrages, both upon the *Spaniards* and *Indians*, as to induce them to retaliate the Injuries they have received, by putting them to the cruelleſt Deaths.

The Perſons of the *Caribees*.

There is nothing the common People in every Country ſeem to have been more univerſally agreed

Of Witchcraft and Magic.

agreed in, than in their Notions of Magick, Witchcraft, and a visible and familiar Conversation that some Pretenders to the Black Art have with the Spirits of Darkness. Every Nation of the *Americans*, and especially the *Caribbees*, pretend to have such Adepts amongst them. But this Office of Pawawer, or Conjurer, is generally assign'd to their Priests; possibly for no other Reason, but because they are something superior to the common People in their Experience and Knowledge of Nature.

Religion of the Caribbees.

As to Religion, we are told, that the *Caribbees* have a great Veneration for the Sun and Moon, as the *Mexicans* have; but pay them no divine Honours, nor apply to them in their Distresses, but to inferior Demons, to which our Travellers have given the Appellation of Devils; tho' 'tis very possible, that the *Indians*, as well as the *Pagans* of old, look upon them as a kind of Mediators to the Supreme Deity, and worship them as such. They may also be apprehensive of Mischief from an evil Spirit, as the *East-Indians* are, and endeavour to appease him, by paying him divine Honours; but most of the Accounts we have yet received of these Things, have very much of the Air of a Fable.

New Granada.

8. *New Granada*, the next Province we are to describe, is about six hundred Miles in Length, from the North-east to the South-west; and five hundred in Breadth. This large Inland Country affords vast Variety of Hills and fruitful Valleys; is well water'd with navigable Rivers, and esteem'd, as healthful as any Part of *Terra-Firma*. Their Mountains have Mines of Gold and Silver in them: They have Cedar-trees, and a great deal of other good Timber; and no want of Horses, Oxen, Hogs, Goats, Venison, Fish, and Fowl; but the Country is not proper for Sheep. Here is also great Plenty of Corn and Fruits, both *Spanish* and *American*, Guaiacum, Balm, and several other valuable Gums and Drugs. The chief

Chief Towns.

Towns are, 1. *Santa Fe de Bagota*, situated in a plentiful Country, that abounds in Corn and Cattle: This is the most considerable Town in all the *Terra-Firma*; the Seat of the Governor and the Courts of Justice, and an Archbishop's See, to whom the Bishops of *St. Martha*, *Carthagena*, and *Popayan*, are Suffragans. 2. *Tocama*, situated a little to the Northward of *Santa Fe*; remarkable for the Salt-springs in the Neighbourhood of it. 3. *Pampeluna*, situated sixty Leagues North of *Santa Fe*, and has some Gold Mines near it. 4. *Velez*, situated near a remarkable Vulcano. 5. *Trinidad*, situated twenty Leagues to the Northward of *Santa Fe*; near which are found Quarries of fine Marble, Rocks of Crystal, Emeralds, and other precious Stones. 6. *Palma*, situated thirty Miles South-east of *Trinidad*. 7. *Tunia*, a Fortress situated fourscore Miles South-east of *Trinidad*. 8. *St. John of the Plains*, situated an hundred and thirty Miles South-east of *Santa Fe*, near which there are Gold Mines.

Popayan Province

9. The last Province we are to describe in the *Terra-Firma*, is that of *Popayan*, extending in Length from North to South four hundred Miles, and in Breadth three hundred. A Chain of barren Mountains, almost impassable, runs through the Country from North to South; some of which are Vulcano's, and in one of them the Load stone is found. Innumerable Rivers and Torrents fall from the Mountains into the *South* Sea, in the Sands whereof is found a great deal of Gold-dust; and there are Mines of the same Metal in the Mountains. The chief Rivers are, 1. *Bonaventura*. 2. *Tomaco*. 3. *St. Jago*. The chief Towns are, 1.

Chief Town.

Popayan, situated at the Foot of the Mountains, the Seat of the Governor and of the Courts of Justice; a large Town, and a Place of good Trade. 2. *St. John de Pasto*, upwards of an hundred Miles South-west of *Popayan*; in the Neighbourhood whereof are many Sugar-farms; and they feed great Herds of Cattle in their Meadows. 3. *Madrigal*, an hundred and forty Miles to the Southward of *Popayan*, in a barren Country, but rich in Gold Mines.

We shall, in the next place, give some Description of the remaining Islands that lie on the Coast of *Terra-Firma* (those near *Terra-Firma Proper* having been already described.) Those that lie in the *South* Sea, on the Coast of *Popayan*, are, 1. *Gorgona*, a pretty high woody Island, producing large tall Trees, and several Springs of good Water, and lies four Leagues West of the Continent: It is about six Miles in Length, and four in Breadth, but uninhabited. 2. The Island of *Gallo* lies twenty five Leagues to the Southward of *Gorgona*, in a deep Bay: This also is pretty high Land, well furnished with good Timber, and has several Springs of fresh Water in it: There are also several fine sandy Bays in this Island, where a Ship may be cleaned. The Islands of *Gorgona* and *Gallo* have been frequently visited by the Buccaneers and other Adventurers, who take in Wood and Water, careen their Ships, and wait for *Spanish* Prizes here; these Islands lying in the Road from *Peru* to *Panama*.

Islands to the South.

The Islands on the Coast of *Terra-Firma* in the *North* Sea, are, 1. *Trinity*, subject to the *Spaniards*; situated near the Mouth of the River *Oronoque*, three Miles from the Continent of *Paria*. The Air is deem'd unhealthful, but the Soil tolerably fertile, producing Sugar, Cotton, *Indian* Corn and Fruits, and the best Tobacco the *Spaniards* are Masters of. The chief Town is named *St. Joseph*, situated on a Bay, over against the Continent. 2. *Tobago* lies a little to the North-east of *Trinity*; but this belonging to *Great-Britain*, will be mention'd among the *British* Islands in *America*. 3. *Margaretta*, situated about forty Leagues to the Westward of *Trinity*, and seven or eight Leagues from the Continent. It is about sixteen Leagues in Length, and eight in Breadth, high Land. The Soil affords *Indian* Corn and Fruits, and the *Spaniards* have introduced many of the Fruits of *Spain*; but they are forced to import all the Water they drink from the Continent; and there is very little Wood or Pasture to be met with on the Island. The chief Town is that of *Montpater*, where the Governor resides. 4. *Salt Tortuga*, fourteen Leagues to the Westward of *Margaretta*: This is a barren desart Island, yielding neither Corn nor Grass, and is not more than ten or twelve Miles in Circumference; only valuable to the *Spaniards*, on account of the Salt they sell to Foreigners. 5. The Islands of *Orchilla*, *Roca*, and *Aves*, are small inconsiderable Islands, situated to the Westward of *Tortuga*, and scarce deserve mentioning. 6. A little to the Westward of *Aves*, lies the Island of *Bonayre*, in Form of a Crescent, about sixteen Leagues in Compass, and situated about twenty Leagues North of the Coast of *Caracos*: This belongs to the *Dutch*, who have seven or eight Soldiers here, and five or six Families of *Indians*. 7. Nine or ten Leagues farther to the Westward, and about as many from the Continent, lies the Island of *Curassow*, or *Querisao*. There is a good Harbour on the South-east Part of the Island, where the *Dutch* have a considerable Town, defended by a strong Fort. The Country is level, and feeds abundance of Cattle; they have also some Sugar-farms, and small Plantations of Fruits and Roots; but it is not so much esteemed for its Produce, as

its Situation for a Trade with the *Spaniſh Weſt-Indies*. 8. The Iſland of *Araba*, or *Oraba*, lies ſeven or eight Leagues to the Weſtward of *Curaſſow*, at the Entrance of the Gulph of *Venezuela*, being about five or ſix Leagues in Compaſs. It is a level Country, except only one Hill, that riſes like a Sugar-loaf in the Middle of it: This Iſland alſo belongs to the *Dutch*, and furniſhes *Curaſſow* with Goats and Sheep; and there are ſome few Sugar Plantations in it.

The Diſcoverers of Terra-firma.

Columbus barely diſcovered this North-coaſt of *South America*, but did not fix one Settlement here. *Vaſco Nunez de Balboa* firſt ſettled a Colony, and built a Fort on the Weſt-ſide of the Gulph of *Darien*, to which he gave the Name of *Old St. Mary's*.

Enciſo, under whom *Vaſco* ſerved in an Enterprize againſt *Darien*, was very unfortunate, loſt a great many Men in ſeveral Engagements with the *Indians*, whereupon thoſe that eſcaped, refuſed to obey him any longer, and elected *Vaſco Nunez* their Commander. And *Enciſo* thereupon returned to *Spain*, to get his Commiſſion confirmed and enlarged. In the mean Time, *Vaſco* applied himſelf to make farther Diſcoveries; and, in order to it, ſurprized the Cacique *Careta* in the Night-time, making him Priſoner, and killing ſome of his People: But *Vaſco* offering to give the Cacique his Liberty, on Condition he would furniſh him with Proviſions, they made an Alliance; and, to cement it the cloſer, the Cacique gave *Vaſco* one of his Daughters, for his Wife. *Vaſco* found two *Spaniards* in the Territories of *Careta*, that eſcaped thither out of a Ship, who were very ſerviceable to him, as Interpreters, in his ſucceeding Enterprizes. *Careta* being engaged in War with *Ponca*, a neighbouring Cacique, at the Arrival of the *Spaniards*; *Ponca* finding himſelf unable to reſiſt his old Enemy, ſupported by theſe Strangers, abandoned his Country, where the *Spaniards* found conſiderable Quantities of Gold. *Comagre*, another Cacique, a Friend of *Careta*, voluntarily ſubmitted to *Vaſco*, and furniſhed him with Gold to a conſiderable Value; and the Son of this Cacique, obſerving the *Spaniards* ready to fight about dividing their Treaſure, told them, he would direct them to a Country where they would find as much Gold and Silver as their Hearts could wiſh, if they thought it worth their while to undergo the Fatigues that were neceſſary to obtain it. *Vaſco Nunez* was overjoyed to hear of Countries thus abounding with Treaſure, and of another Ocean; and made ſuitable Preparations for the Diſcovery of them. He alſo diſpatch'd Expreſſes to *Hiſpaniola*, and to *Spain*, deſiring ſuch a Reinforcement, as might enable him to reduce thoſe Countries. He alſo ſent over to *Spain* the Value of 15000 Pieces of Eight in Gold, as a Specimen of what thoſe Countries produced; and every Man ſent ſome Preſent to his Friends of the ſame Metal.

But *Vaſco* having no other Authority, than what the Troops had conferred upon him, every one expected to have his Advice attended to, and if he was not conſidered as he expected, became a Malecontent; till a Supply of an hundred and fifty Men being ſent him from *Hiſpaniola*, with a Commiſſion to be Captain-General of *Terra-firma*, his Enemies all ſubmitted to him, and he continued his Preparations for the Diſcovery of the *South* Sea. He made Choice of two hundred *Spaniards* and a thouſand *Indians*, whom he embarked on board a Brigantine, and being join'd by the Forces of the Cacique *Careta*, advanced towards the Mountains, through the Dominions of the Cacique *Ponca*, who now returned, and furniſhed the *Spaniards* with ſuch Proviſions as the Country afforded; alſo with Guides to paſs the Mountains, and with Porters to carry their Baggage. On the Mountains another Cacique, nam'd *Quarequa*, aſſembled his Forces, and made ſome Shew of oppoſing their Paſſage: But, upon the firing two or three Muskets, theſe Warriors all turned their Backs and fled: While the *Spaniards*, to increaſe their Terror, killed upwards of ſix hundred of thoſe defenceleſs People, among whom was the Cacique himſelf. After this, they plunder'd the Houſes of the *Indians*, where they found great Quantities of Gold; and caus'd many of the People they found in them to be torn to Pieces by Dogs.

Several hundred *Indians* cut in Pieces by the *Spaniards*.

Spending five and twenty Days in their March, they at laſt arrived at the Hills where the *South* Sea might be diſcerned: Of which *Vaſco* having notice, ordered all his Forces to halt; and going up to the Top of the Hill alone, ſaw that vaſt Ocean; whereupon he fell upon his Knees, and gave Thanks to Heaven, that he was the firſt *European* who had ſeen it: Then an Inſtrument was drawn up, importing, That he took Poſſeſſion of the *South* Sea, and all the Countries bordering upon it, for the Crown of *Caſtile*. Croſſes were erected, and great Heaps of Stones raiſed, and the King of *Spain*'s Name engraved on ſeveral Trees: This was performed on the 25th of *September* 1513. Deſcending from this Mountain, and conquering in their Way the Caciques *Chiapa* and *Cocata*, they arrived at a fine Bay of the Sea, and gave it the Name of *St. Michaels*, which it ſtill retains: And the Caciques informing him, that there were ſome Iſlands not far off, where great Quantities of Pearls were to be had, he and his *Spaniards* very narrowly eſcaped being drowned in attempting to go thither. He afterwards invaded the Territories of a Cacique named *Tumaco*, who being terrified into a Submiſſion, preſented the General with Gold to a very great Value, but much more in large Pearls. *Tumaco* alſo informed *Vaſco*, that the Coaſt extended without End to the Southward, pointing towards *Peru*, where he ſaid there were prodigious Treaſures of Gold and Silver to be found. After which, *Vaſco* took a Circuit through the Territories of ſeveral other Caciques, ſome of whom he ſubdued by Force, and others voluntarily entred into Alliances with him: But the Conditions on which the *Spaniards* afforded them their Friendſhip, were, that the *Indians* ſhould deliver up the Gold they were poſſeſſed of, and afterwards procure what they could more of the ſame precious Metal, and ſend after them.

The General, being returned to *Darien*, was received by his People with Tranſports of Joy, when they underſtood the Diſcoveries he had made, and the vaſt Quantities of Gold and Pearls he had acquired; for he divided the Treaſure equally, as well among thoſe that remained behind, as among the Troops he took with him; firſt deducting the King's Fifth, which he immediately ſent over to *Spain*; together with a full Account of the Situation of his Affairs, deſiring a Reinforcement of a thouſand Men. This News was very acceptable to the Court of *Spain*, and twelve or fifteen hundred Men were embarked immediately for *Darien*, under the Command of *Peter de Arias*, or *Pedrarias*, to whom the Government of that Province alſo was committed; and with him were ſent over Father *John Queve-do*, a *Franciſcan* Friar, as Biſhop of the Place, with ſeveral other Monks of that Order, to inſtruct the Natives in the Chriſtian Religion.

Pedrarias made Governor of *Terra Firma*.

But a more covetuous and barbarous Wretch was never ſent abroad with a Command, than this *Pedrarias*. He was received by *Vaſco* with all

all the Respect due to his Commission; but the Government was no sooner surrendered to him, than he began a Prosecution against the Man who had made all those important Discoveries, that he might have no Rival or Check upon his savage Disposition. Then he ordered his Troops out every Way, and, without any Regard to the Alliances that *Vasco* had made with the neighbouring Caciques, plundered their Countries, and massacred their Subjects without Mercy; and, above all, endeavoured to establish a Communication with the *South* Sea: But the *Indians* finding themselves thus abused, assembled their Forces, and laying Ambuscades, cut off a great many of his Parties, and he was not for some time able to fix Colonies in the Isthmus. In the mean Time, the Friends of *Vasco* having represented the Hardship of his Case to the Court of *Spain*, a Commission was sent him to be Lord-Lieutenant of the Coast of the *South* Sea, that he might prosecute the Discoveries he had begun on that Side. Bishop *Quevedo* interposed his good Offices, and procured a Reconciliation between the two Generals; and, in order to cement their Friendship the stronger, *Vasco* married the Daughter of *Pedrarias*. Soon after which he applied himself to the Building of Brigantines and Vessels, with which he sailed to the Pearl Islands in the Bay of *Panama*, and afterwards as far as *Port-Pinas* in *Peru*. But some malicious Officer informing *Pedrarias*, or rather the Governor pretending to be informed, that *Vasco* was about to renounce all Dependance on the Crown of *Spain*, commanded him to return to *Darien*, and answer the Accusation; which Summons *Vasco* readily obeyed; but *Padrarias* so managed the Matter, that he got him convicted, and caused him to be beheaded.

Vasco discovers *Peru.*

Beheaded by *Pedrarias.*

And now *Pedrarias*, being without a Rival, ravaged the Country as far as the Province of *Veragua*, planting a Colony at *Nata*, and another at *Panama*, on the *South* Sea. *Pedrarias* also founded another Town on the *North* Sea, which was named *Nombre de Dios*, between which and *Panama* all the Trade was carried on from the *North* to the *South* Seas for some time; but the *Spaniards* abandoned it afterwards, and built the Town of *Porto Bello*, removing the Trade thither. *Pedrarias* also reduced the Provinces of *Veragua* and *Nicaragua*, by the Forces he sent thither under *Francis Hernandez*; but entertaining some Suspicion that *Hernandez* had too great a Regard to his own Interest, he served him as he had done *Vasco Nunez*, under Pretence he was about to set up for himself: And expecting to be called to an Account for the Outrages he had committed, he quitted *Darien*, before his Successor arrived there, and removed to his Acquisitions in *Veragua*, where he looked upon himself to be out of the Reach of Justice. What became of him afterwards History does not inform us; only Father *Bartholomew de Casas*, Bishop of *Chiapa*, has given us a very melancholy Relation of the numerous Cruelties and Ravages committed by this Commander, in reducing these Provinces under the Dominion of the Crown of *Spain*: Setting forth, that he and his Successors did not destroy less, in that Government only, than eight hundred thousand People, and plundered the Country of several Millions of Gold, of which they did not send the King more than the Value of three thousand Crowns.

The Cruelties of *Pedrarias*

The rest of *Terra-Firma*, from *Darien* to the River *Oronoque*, was subdued by private Adventurers, at their own Charges. Every one begged a certain Extent of Country of the Court of *Spain*, and used the Natives as they thought fit, ravaging and plundering the several Countries, and murdering or enslaving the miserable Inhabitants, who were able to make but little Resistance to these Tyrants.

The rest of *Terra-Firma* reduced by private Adventurers.

Among the innumerable Instances of Cruelty mentioned by the Bishop, there is one that we must not omit. The greatest Prince of this Country, named *Bogata*, was tortured by the General for several Months, to make him discover his Gold and Emeralds; who, in hopes of being released from his Tormentors, promised to furnish them with a House full of Gold; and dispatching Expresses to every Part of his Dominions, brought in a prodigious Quantity: But the House being not quite filled, he was still racked and tortured to make him produce more; which being impossible, he expired in Torments under the Hands of his merciless Persecutors.

The Prelate adds, That as this great Prince had been used by the *Spanish* General, so his Officers and Soldiers used those of an inferior Rank, torturing and burning them to pieces by Inches, to make them discover their Treasures. It was a common Thing to cut off the Hands and Noses of Men and Women in Sport, and give them to their Dogs. When the poor Natives fled to the Woods and Mountains, to shelter themselves from their Rage, this was called a Rebellion, and they were hunted out by Dogs, torn in Pieces, slaughtered, and thrown from the Tops of the Rocks by hundreds. When any of them had secured themselves in inaccessible Places, the *Spaniards* would offer them their Lives and Liberties, to induce them to surrender, and then cut them in Pieces as soon as they had them in their Power.

It was an ordinary thing to lend a Brother *Spaniard* a Quarter of a Man, as they would lend a Neighbour a Quarter of Pork or Mutton, to feed their Dogs; promising to return it in kind, when they killed a Slave. They would go out a hunting for *Indians*, as they would hunt wild Beasts, and boast of their have killed twenty or thirty in a Day: Which Facts, how monstrous soever, appeared to be true, by the Testimony of Numbers of Witnesses.

CHAP.

CHAP. XII.

Of the Name, Situation, and Extent of Peru; *the Face of the Country; its Seas, Rivers, Lakes, Springs, Winds, Tides, Air, and Seasons.*

Peru described by Name.

THE Natives had not any general Name for this Country; only it was looked upon as the Dominion of the Emperor of *South America*, who was called *The* INCA, as the *East Indies* is called *the Empire of the* Great Mogul. As to the modern Name of *Peru*, we are told that *Vasco Nunez de Balbao* having first discovered the *South* Sea, one of the Ships that he built to go upon Discoveries in that Ocean, stretching Southward beyond the Equinoctial Line, and sailing close by the Shore, discovered an *Indian* Fisherman in the Mouth of a River; who, while he stood staring at the Ship as she was under Sail, they sent out their Boat and surprized the *Indian*, making him their Prisoner; and demanding of him by the *Indians* they carried with them, what Country it was? He mistaking them, and supposing they had asked him his own Name, answered *Beru*; and the *Spaniards* still seeming importunate to know something more, he answered, *Peru*; which was the Name of the River; or, according to some, is a common Name in the Language of those People for any River; however, from both these Words the *Spaniards* formed another, and called the Country *Peru*; and some of their Writers, *Piru*.

The Limits of the Dominions of the Inca's

When the *Spaniards* arrived here, the Country was divided by the *Inca's* into four grand Divisions, the Limits on the North being the River *Passio*, just under the Equinoctial; the Southern Limits were the *Arauco's*, in 40 Degrees of South Latitude; the Eastern Limits were the Mountains of the *Andes*; and the Western Boundary the *Pacifick Ocean*. The Limits of modern *Peru* are much the same now, except on the South; for the *Spaniards* extend it from the Equator to 25 Degrees of South Latitude only; so that as the Land runs from the North west to the South-east, *Peru* must be near two thousand Miles in Length: In Breadth it is generally about two hundred; but in the *South*, it may be four or five hudred Miles broad.

The Limits of Peru

The Face of the Country

The Face of the Country is very different, as it is distant from, or approaches near the Sea. It may be divided into three long narrow Slips, 1. The *Lanos*, which are sandy Plains that run along the Sea-Coast. 2. The *Sierras*, which are Hills beyond those Plains, intermixed with Vallies. 3. The *Andes*, or *Cordelero's*, still further within the Land, which are steep craggy Mountains, far surpassing all the rest in Height. The *Lanos* are about ten Leagues in Breadth; in some Places more, in others, less: The *Sierras* twenty Leagues in Breadth; and the *Andes* something more than twenty Leagues over. The *Andes* and *Sierras* are two Ridges of Mountains that run from North to South, parallel to each other, for above a thousand Leagues: Nor are the *Lanos*, that lie between the *Sierras* and the Sea shore, low Land. *Peru* has generally a high bold Shore, and there is no Landing on it, but at the Ports, or in some particular Bays: However, these Plains may be called low in Comparison of the *Sierras* that surmount them, and of the *Andes* that far surpass both, and are esteemed the highest Land in the known World. Beyond the City of *Cusco*, the two Ridges of Mountains separate themselves to a greater Distance, inclosing a fruitful Plain of a vast Extent, which is called the Province of *Callao*, watered by many Rivers, and by the great Lake *Titiaca*, which is fourscore Leagues in Compass; most of the Rivers falling into the Lake.

The *Lanos* are perfectly barren, except some few Valleys, into which they turn small winding Streams; and that Part of the Coast which lies within three or four Degrees of the Equator, where they have very heavy Rains great Part of the Year. The *Sierras* also are barren Hills; but then there are fine fruitful Valleys between them, that yield all Manner of Grain and Fruits; and these being temperate, are best inhabited; for the *Lanos* are for the most Part excessive hot. The *Andes*, on the contrary, are cold barren Mountains, the Snow lying upon them great Part of the Year. Timber and Wood in general seems to be very scarce here, and in all Parts of *Peru*, unless near the Line, and there they meet with enough.

The Lanos.

The Sierras.

The Andes.

Acosta says, he once mounted one of the highest of these Hills, called *Pariacaca*; that he went prepared according to the best Instructions he could get, with several more who had the like Curiosity; but notwithstanding all his Precaution, when he came near the Top, he was seized with such Pains that he thought he should have fallen to the Ground; and the rest of the Company being under the like Disorder, they all made haste to get down as fast as they could: That they were all taken with Reachings to vomit, and not only green Phlegm and Choler came up, but a great deal of Blood; and that this lasted for three or four Hours, 'till they had descended to the lower Part of the Hill. But generally this Sickness goes off as they come down the Hill, and is attended with no ill Consequences. In short, such is the Height of the *Andes*, that the *Pyrenees* and the *Alps* are but as ordinary Hills in comparison of them; from whence *Acosta* concluded, that the Air here was too pure and subtile for Animals to breathe in, and this he supposed occasioned that Disorder in the Stomach.

This Ridge of Mountains is for the most Part desart, without Villages or Habitations for Men, not so much as to lodge a Night in: Nor are there any Beasts upon them, wild or tame, except their Country Sheep, whose great Excellency lies in their climbing Rocks and Precipices, with Burthens on their Backs, where neither Man nor Beast can follow them. The Grass upon the Mountains is frequently burnt up and black, and these Desarts are five and twenty or thirty Leagues over, and five hundred Leagues long.

There are other mountainous uninhabited Desarts in *Peru*, where a sudden Blast of Air sometimes strikes a Traveller dead in an Instant. The *Spaniards* formerly passed the Mountain in their Way to *Chili*, but now either go by Sea, or by

Desarts in Peru, where a sudden Blast sometimes kills.

the

the Side of the Mountains. Others, that have escaped with their Lives, have lost their Fingers and Toes, and been lamed. General *Castilla*, who lost three or four Toes in passing this Desart to *Chili*, observed that they fell off without any Pain; and that marching over it once before with an Army, great part of his Men suddenly fell down dead, and their Bodies remained there without Stench or Corruption: And some *English* Seamen, who have been ashore in this very Country, assure us, that they have seen great Numbers of Bodies lying dead upon the Sands there: That these Bodies to Appearance seemed as if they had not been dead a Week; but upon handling them, they proved as dry and light as a Spunge or a Piece of Cork. These People were very probably destroyed by such hot Winds as we meet with in *Persia*, and the *East-Indies*, there appearing no Signs of Wounds or Violence upon them.

The Sea of *Peru*.

The only Sea that borders upon *Peru* is the *Pacifick Ocean*, which obtained its Name from the constant serene Weather that reigns here from 4 Degrees to 30 or 35 Degrees South Latitude. If we go farther Southward, this Sea, tho' it still retains the Name of the *Pacifick Ocean*, is as tempestuous as any other; and within 3 or 4 Degrees of the Line they have the like variable Winds and heavy Rains, most part of the Year, as we meet with in other Seas in the same Climate: And to the Northward of the Tropick of *Cancer*, and sometimes within it, they frequently meet with Storms and Hurricanes, tho' this Part of that Sea also bears the Name of the *Pacifick Ocean*. Between the 4th and the 35th Degrees of South Latitude, they have no Rain or dark Clouds, tho' 'tis often so thick as to hinder an Observation of the Sun with a Quadrant; and in the Morning there is hazy Weather frequently, and Mists that wet a little; but there are not in this Sea, any Tempests, Tornadoes, or Hurricanes; tho', North of the Equator, they are met with in this Sea, as well as in the *Atlantick* Ocean: This *Pacifick* Sea, however at the New and Full Moon swells and runs with high long Surges, or Waves; but such as never break at Sea, and so are safe enough. On the contrary, where they fall in and break upon the Shore, they make it very dangerous landing. The Winds in the *Peruvian* Seas, and on all the Western Side of *America*, from 38 Degrees South, to 7 Degrees North, are always Southerly two Points upon the Shore; so that where the Coast runs due North and South, the Wind is at South South-West; and where the Coast runs South South-East, the Wind is due South. The Southerly Winds on the Coast of *Peru* continue to blow 140 or 150 Leagues from the Shore before they alter; but then they may be perceived to come about more Easterly; and about two hundred Leagues to the Westward of that Shore, the true Trade-wind sets in at East South-East, which never alters till they arrive at the *East-Indies*.

Winds in this Ocean.

Weather at Land.

As to the Weather on Shore, it is various, according to the Situation of the Land; the sandy Plains by the Sea-side, never have a Drop of Rain upon them; but frequently thick Mists rise here. On the Hills beyond, the Rains fall when the Sun is in the Southern Signs, as they do in other Countries that lie between the Equator and the Tropick of *Capricorn*. And on the high Mountains that are situated farthest from the Sea, it rains or snows two thirds of the Year, and is excessive cold; and as the Valleys between the Hills, called *Sierras*, are the most fruitful Parts of the Country, their Season for planting and sowing there is at the Beginning of the Rains, and their Harvest at the Return of the dry Weather: Their Vintage also is in the fair Season, and their Vines thrive best in those Vallies near the Sea, where there is little or no Rain, and which are watered by Rivulets that fall from the Hills in the rainy Season: But most part of the *Lanos*, are barren Deserts, bearing neither Trees nor Herbs; and are very little inhabited.

The most considerable Capes, Islands, and Ports on the Coast of *Peru* and *Chili*, from the Equator to 30 Degrees of South Latitude, are, 1. Cape *Passao*, which lies in 8 Minutes South Latitude. It is an high round Cape, with some few Trees upon it. 2. Cape *Lorenzo*, in one Degree South Latitude; near which, Shipping may furnish themselves with fresh Water. Five Leagues West South-West of Cape *Lorenzo*, is a small barren Island called *La Plata*. 3. Cape *St. Helena*, in 2 Degrees 20 Minutes South Latitude; near which is a small Town of *Spaniards* and *Indians*, that keep Store-houses of Provisions, with which they supply the Shipping that touches there in their Passage to and from *Panama*. 4. The Island of *St. Clara*, in 3 Degrees South Latitude; it is pretty high Land, covered with small Trees. 5. Cape *Blanco*, in 3 Degrees 45 Minutes South Latitude, makes the North Point of the Bay of *Guiaquil*. The Town of *Guiaquil*, which gives Name to the Bay, is situated about 6 Leagues up a navigable River, and is the Port to *Quito*. 6. The Port of *Paya*, in 5 Degrees 15 Minutes South Latitude, capable of containing an hundred Sail of Ships; the Town consists of about fourscore Houses, most of them *Spaniards*; and the Bay is seldom without Ships, it lying very convenient for the Ships of *Peru*, in going to and from *Panama*. 7. The Island of *Lobos*, in 6 Degrees 20 Minutes South Latitude, in which is an Harbour on the North-East, but no fresh Water. 8. The Port of *Valdivigo*, in 8 Degrees South Latitude, which is known by a Mountain near it of the same Name. 9. *Guanchaco*, in 8 Degrees 15 Minutes South Latitude, being but an indifferent Harbour, as it lies almost exposed to all Winds; notwithstanding which, *Guanchaco* is a Place of pretty brisk Trade, being the Port Town to the City of *Truxillo*. 10. *Cosma*, a very good Port, in 9 Degrees 50 Minutes South Latitude. 11. *Vermeio* is a very good Port, a little to the Southward of *Cosma*. 12. The Port of *Guara* lies in 11 Degrees South Latitude, and a little to the Northward is the small Port of *Salinas*, from whence they export great Quantities of salt Beef, both to *Lima* and *Panama*. 13. The Island of *Callao*, that has neither fresh Water, Wood, or any green thing upon it; and yet on this barren Spot stands the Port Town to *Lima*. The Port is defended by a strong Castle, that has seventy brass Guns mounted on the Walls, close under which is the usual Place of Anchoring; and here the Ships ride in six Fathom Water, good salt Ground. This Port lies in 12 Degrees 20 Minutes South Latitude, and is about two Leagues distant from *Lima*. The *Armadilla* sails annually from hence to *Arica*, where most of the Silver and Gold of *Peru* is imbarked on board this Fleet. 14. The Port *Ylo* lies in 18 Degrees South Latitude, and is a good Harbour. 15. The Port of *Arica*, situated in 18 Degrees 20 Minutes South Latitude: Here the Treasure brought from the Mines of *Potosi* is constantly embarked every Year for *Lima*. It is a good Harbour, and a large Town, inhabited by *Spaniards*, *Indians*, and *Mulattoes*. 16. The Port of *Copiapo*, a good Harbour, in 21 Degrees South Latitude; the Inhabitants most of them *Indians*, who make good Wine here, and have Plenty of Provisions. 17. *Coquimbo*, situated in 30 Degrees South Latitude, a rich City, driving

The Capes, Islands, and Ports on the Coast of *Peru*.

driving a great Trade with *Lima* and *Panama*, and is a very good Harbour.

Lakes of Peru.

Altho' there is no other Sea borders upon *Peru* but the *Pacifick Ocean*, yet have they some Lakes that may be called Seas, if we regard the Greatness of their Extent. The Lake *Titicaca*, fourscore Leagues in Circumference, is situated in the Province and Valley of *Callao*, the Middle of it being in 15 Degrees South Latitude. Upon this Lake they sail in Ships, and other Vessels, as upon the Ocean; but 'tis subject to Storms sometimes. The Water of it is not so salt as the Sea, but too thick and foul to be drank. There are abundance of large Fish in the Lake, not esteemed wholesome Food. There are also great Shoals of small Fish, very bony, but better Eating than the former: And there are prodigious Flocks of wild Ducks, and other Water-fouls, in it. The Towns and Villages bordering upon the Lake, are esteemed the most agreeable Dwellings in *Peru*. From this Lake issues a large Stream to the Southward, which forms another Lake called *Paria*, not much inferior to the former in its Demensions, and has several Islands in it. On the Banks of these Lakes are rich Meadows, that feed great Herds of Cattle. There are also many Lakes upon the Mountains, which are the Sources of several large Rivers. From one of these issues the River *Aporima*, said to be the principal Stream that forms the celebrated River *Amazon*, esteemed the largest in the World. The Waters of some Lakes in the Valleys are extremely hot, particularly one in the Valley of *Tarpaya* near *Potosi*, the Waters whereof perfectly boil up for more than twenty Foot Square, which is the Spring; but the Heat is so moderate near the Shore, that the Inhabitants frequently bathe in it.

The Springs of Peru.

As to the *Peruvian* Springs, they have great Variety of them in that Part of the Country which is remote from the Sea, but very few on the sandy Plains near the Shore: There is one, near the Quicksilver Mines in *Guancavilica*, that throws out hot Water, which in running a little Way turns into Stone, and forms a Rock; of which Stone the Inhabitants build their Houses, it being soft, light, easily wrought, and yet very durable. There are also Fountains of liquid Matter called *Coppey*, very much resembling Tar, or Pitch, and put to the same Uses by Sea-faring Men, to preserve their Ropes, Planks, and Tackle. At the *Incas* Baths, as they are called, is a Spring of Water that issues out hot and boiling, and near it another as cold as Ice, which those Princes used to temper and mingle together to bathe in. At a Farm near the City of *Cusco* is a Fountain, the Waters whereof in a short Course turn into Salt. The Waters near *Guaiquil* are famous for curing the *French* Disease. These Waters are supposed to receive their Virtue from the Roots of *Sallaparella*, which abound in this Country. From the Top of the Mountain *Balcomotta*, esteemed the highest in *Peru*, there rise two Fountains, which run different Ways, and soon form two large Streams: These Springs, when they first issue from their respective Rocks, are of an Ash-colour, hot and smoaking, and smell of burning Coals; and thus they run a great Way, till mixing with other Streams, they become cool, and lose that burning Smell. There is another Fountain in *Peru*, from whence there runs a Stream as red as blood, and has from thence obtained the Name of the *Red River*.

Rivers that rise in the Mountains of *Peru*, And fall into the *North* Sea.

Most of the Rivers of *South America* rise in the *Peruvian* Mountains, *Andes*. Those which rise on the Eastward of the *Andes*, and fall into the *Atlantic* Ocean, have a very long Course, and are some of them the largest Rivers in the known World. Those that rise on the West-side of the *Andes*, are rather Torrents than Rivers, made by the annual Rains, which fall on the Mountains. The four principal Rivers, that rise on the East-side of the *Andes*, are, 1. The River *Magdalena*, or *Grande*; which rising in the Province of *Quitto*, near the Equator, runs above a thousand Miles directly Northward, falling into the *North* Sea between *Carthagena* and *St. Martha*. 2. The River of *Oronoque*, whose Source is near that of *Magdalena*, takes its Course first to the Eastward for fifteen hundred Miles, and upwards; and then turning directly North, runs almost as far to the Northward, falling into the *North* Sea, against the Island of *Trinity*. 3. The River of *Amazons*, generally held to be the largest River in the World, is formed at first by two Streams, that rise near eleven Degrees asunder. The first near *Quitto*, a little South of the Equator, and runs South-East; the other from the Lake of *Lauricocha*, in 11 Degrees South Latitude; and running first Northward five Degrees, then turns to the Eastward, and unites its Waters with the former: From thence the united Streams run between three and four thousand Miles farther Eastward, being enlarged by a Multitude of other considerable Rivers, and discharges itself into the *Atlantic* Ocean under the Equator, being fifty Leagues wide, at least, at the Mouth. 4. The fourth River, which rises on the East Side of the *Andes*, and is very little inferior to the last, is the River of *Plata*; which rises near the Town of *Plata* in *Peru*, in 20 Degrees of South Latitude; and running first to the Eastward, till join'd and enlarged by many other Streams, then bends its Course directly South, till it comes into 34 Degrees South; then stretches away to the Eastward, falling into the *Athantick* Ocean, in 35 Degrees of South Latitude, near the Town of *Buenos-Aires*, in the Province of *La Plata*, being thirty Leagues broad at the Mouth of it.

Rivers that fall into the *South* Sea.

As to the Rivers that rise on the West Side of the *Andes*, and fall into the *Pacifick Ocean*; the chief of them are, 1. The River *Colanche*, in 2 Degrees South Latitude; 2. The River of *Guaiquil*, in 3 Degrees; 3. The River *Payta*, in 5 Degrees 15 Minutes; 4. The River *Ilo*, in 18 Degrees; 5 The River of *Arica*, in 18 Degrees 20 Minutes: Besides which, there are a great many other small Rivers, that fall into the Sea, within 18 or 20 Degrees of South Latitude, but farther Southward, there is not a River on the Coast of *Peru* or *Chili*, once in a hundred or a hundred and fifty Leagues.

CHAP.

CHAP. XIII.

The Provinces Peru *is divided into; its Sub-divisions, and chief Towns; and their publick and private Buildings, Highways, Magazines, &c.*

Peru divided into three Audiences.

THE Kingdom of *Peru*, like that of *Mexico*, is divided into three Audiences.

Quitto Audience

The Audience of *Quitto*, the moſt Northerly of the three, is about four hundred Miles in Length, from North to South; and two hundred in Breadth, from Eaſt to Weſt; and is ſub divided into three Provinces. 1. *Quitto Proper*, bounded by the *Pacifick Ocean* on the Weſt; about two hundred Miles in Length, from North to South; and upwards of an hundred Miles in Breadth, from Eaſt to Weſt. The chief Towns of *Quitto Proper* are, 1. *Quitto*, the Capital of the whole Audience, ſituated in 30 Minutes South Latitude, at the Foot of the Mountains. It is a rich populous City, built after the *Spaniſh* Model. A Canal runs through the Middle of it, over which are ſeveral Bridges. It is the Seat of the Governor, and of the Courts of Juſtice; a Univerſity, and a Biſhop's See. They have a good Trade in Woollen Cloths, Sugar, Salt, and Cattle; but their greateſt Riches proceed from the Gold that is found in the adjacent Mines and Rivers. There is a *Vulcano* in one of the Mountains near this Town. 2. *St. Jago de Puerto Veijo*, ſituated a little to the Eaſtward of Cape *Lorenzo*; near which, there was formerly a Quarry of Emeralds; but the Quarry being exhauſted, the Town declined with it. 3. *Guiaquil*, ſituated about two hundred Miles to the Southward of *Quitto*. It contains five Churches, and ſeveral Convents, ſome of which are built of Stone; and is defended by three Forts. There being Plenty of Timber in the Neighbourhood of this Place, a great many Ships are built here for the King of *Spain*, and it has a pretty briſk Trade. A Market is held daily in Boats and Barklogs on the River, where Fleſh, Fiſh, Fruits, and other Proviſions, in which the Country abound, are ſold very cheap. The Officers of the Inquiſition act more arbitrarily here, than in *Spain* itſelf. Their Magiſtrates and Officers, all affect pompous Titles. This important Town of *Guiaquil* has been taken and plunder'd, by the Buccaneers, with a Handful of Men, ſeveral Times; which has given Occaſion to think, that the *American Spaniards* are ſo much degenerated from their Anceſtors of *Old Spain*, that they might be driven from the *Weſt-Indies*, as eaſily as they drove out the *Indians* two hundred Years ago.

Quitto Proper.

Chief Towns.

4. *Tombez*, or *Tumbez*, ſituated at the Foot of the Mountains, about twenty Leagues South of *Guiaquil*. Here the *Spaniards* found a Temple dedicated to the Sun, and abundance of Silverſmiths who made Veſſels of Gold and Silver for the Temple, and the Palace the *Inca* had here. The Walls of the Temple were lined with Silver Plate. 5. *Hombamba*, ſituated one hundred and ſixty Miles South of *Quitto*, at the Conflux of two Rivers: Here alſo was a Royal Palace of the *Inca's*, and a Temple dedicated to the Sun; both of them adorned with Gold, and Images made of Touch-ſtone and Jaſper. 6. *Loxa*, ſituated in five Degrees South Latitude; a pretty large Town, has ſeveral Monaſteries. 7. *Zamora*, an hundred Miles to the Eaſtward of *Loxa*, hath very rich Gold Mines in the neighbouring Mountains of the *Andes*. 8. *St. Michael's*, in 5 Degrees South Latitude, two Leagues Eaſt of the Ocean, a large Town, chiefly inhabited by Fiſhermen. 9. *Payta*, deſcrib'd already among the Port Towns.

Quixos Province. Quixos Town.

2. The Province of *Quixos* is bounded by *Quitto Proper* on the Weſt. The only Town of any Note in this Province is that of *Quixos*, ſituate about ſixty Miles South-Eaſt of *Quitto*.

Pacamores Province.

3. The Province of *Pacamores* is alſo bounded by that of *Quitto* on the Weſt. The chief Towns whereof are, 1. *Loyola*; 2. *Valladolid*; 3. *St. Jago*; 4. *St. Franciſco de Borgia*. Of which we meet with no particular Deſcription.

Lima Audience.

The Audience of *Lima*, or *Los Reyes*, is bounded by that of *Quitto* on the North, being about eight hundred Miles in Length from North to South, but the Breadth very unequal, not four hundred Miles in any Part, except on the South.

Chief Town. Lima City.

The chief Towns are, 1. *Lima*, the Capital of the whole Kingdom of *Peru*, ſituated in 12 Degrees and an Half of South Latitude, about ſix Miles from the Sea, and in one of the moſt ſpacious and fruitful Plains of *Peru*: It is built like other *Spaniſh* Cities, having a large Square in the Centre, with Piazza's on every Side; all the principal Streets terminating in the Square: On the Sides whereof ſtand the Cathedral, the Archbiſhop's Palace, the Viceroy's Palace, the Treaſury, the Town-Hall, the Armory, or publick Magazine, and a College of the Jeſuits, where the *Indian* Languages, and Arts and Sciences are taught. There are, beſides the Cathedral, a great many Parochial and Conventual Churches, a Univerſity, abundance of Monaſteries and Nunneries of every Order, and five or ſix large Hoſpitals. The whole City is about four Miles in Length, and two in Breadth; the Air moderately temperate and healthful. It is plentifully ſupply'd with Proviſions, and well watered with Canals. But this great City, thus happily ſituated, is not without its Allays. The Earthquakes they are frequently ſubject to, neceſſarily caſt a Damp on all their Enjoyments; eſpecially when great Part of their Town has been ſeveral times laid in Ruins by them. This City is ſurrounded by a Wall, fortified with Baſtions, but of no great Strength. However, as it is very populous, it may be ſtrong enough to reſiſt any Force that can be brought againſt it in that Part of the World. The Plain of *Lima*, in which it ſtands, produces Plenty of Corn, Wine, Oil, Sugar, Flax, and Fruits. 2. *Guamalca*, ſituated on the great Road of the *Inca's*. This was an antient Town when the *Spaniards* arrived there; well-built, ſurrounded with a Stone Wall, and defended by a Caſtle: On one Side of the City ſtood the Temple of the Sun, and on the other a magnificent Palace of the *Inca Atahalipa*. 3. *Guamico*, ſituated an hundred and fifty Miles North of *Lima*, a well-built Town, and ſtanding in a good Air. Here alſo was a fine Palace of the *Inca's*, and a Temple dedicated

to

to the Sun. 4. *Truxillo*, ſituated in the Valley of *Chimo* ſix Miles from the Ocean. It is a handſome *Spaniſh* Town, conſiſting of five hundred Houſes. 5. *Piſca*, or *Piſco*, a Port-Town ſituated in 14 Degrees South Latitude. 6. *Guamanga*, ſituated on the great Road of the *Inca's*, in a fine Plain, an hundred eighty Miles Eaſt of *Lima*. It is a well-built *Spaniſh* Town, and ſtands in healthful Air. 7. *Cuſco* (the Metropolis of *Peru*, during the Reigns of the *Inca's*) is ſituated in 13 Degrees odd Minutes South Latitude, 350 Miles to the Eaſtward of *Lima*. It is built on the ſide of a Hill, in the midſt of a ſpacious Plain ſurrounded by Mountains, from whence there fall four ſmall Rivers that water the Country, and altogether afford a moſt agreeable Proſpect from the Town, which overlooks the Vale. The City itſelf alſo is watered by one of theſe Rivers, that ſupplies ſeveral Canals cut through the principal Streets. The Climate, here, is exceeding temperate and healthful, and there is very little Difference between Summer and Winter: The Air is dry; inſomuch that Meat hung up will keep without corrupting; and this Dryneſs of the Air preſerves the Natives from Gnats, Flies, and all noxious Inſects, the Plague of other hot Countries. The chief Streets of the old Town pointed to the four Winds: and the Houſes were built with Stone, cover'd with Reeds, or thatch'd. The principal Buildings in it were, the Temple of the Sun, the Palace of the *Inca*, and the Caſtle.

The Form or Dimenſions of the Temple of the Sun, none of their Writers pretend to deſcribe; but relate, that amongſt all their Buildings, none was comparable to this Temple: That it was enrich'd with the greateſt Treaſures that ever the World beheld. That it was built of Freeze-ſtone, and lin'd with Gold Plate, the Cieling being of the ſame Metal; however, the Roof was no better than common Thatch: It was divided into ſeveral Chapels, Cloiſters, or Apartments; in the principal whereof, towards the Eaſt, was placed the Image of the Sun, conſiſting of one Gold Plate that cover'd the whole Breadth of the Chapel, and twice as thick as the Plates that cover'd the other Walls.

This Image, repreſenting the Sun, was of a round Form, with all his Rays and Emiſſions, much in the ſame manner as the *European* Painters draw him: On each ſide of it were placed the Bodies of the deceaſed *Inca's*, ſo embalm'd, that they ſeem'd to be alive. Theſe were ſeated on Thrones of Gold, ſupported by Pedeſtals of the ſame Metal. Upon the Arrival of the *Spaniards*, the *Indians* conceal'd theſe embalmed Bodies, with moſt of the Treaſures of the Temple; only the Image of the Sun was not removed, which falling to the Share of a *Spaniſh* Nobleman, he play'd it away before Sun-riſe the next Morning.

The Temple had ſeveral Gates cover'd with Gold, and round the Top of it, on the Outſide, was a Cornice a Yard deep, conſiſting of Gold Plate. And beſides the Chapel of the Sun, there were five others of a Pyramidical Form. The firſt being dedicated to the Moon, deem'd the Siſter and Wife of the Sun. The Doors and Walls whereof were cover'd with Silver: And here was the Image of the Moon, of a round Form, with a Woman's Face in the Middle of it. On each ſide of this Image, were placed the Bodies of their deceaſed Empreſſes, rang'd in Order. Next to this Chapel was that of *Venus*, called *Chaſca*, the *Pleiades*, and all the other Stars. *Venus* was much eſteem'd, as an Attendant on the Sun, and the reſt were deem'd Maids of Honour to the Moon. This Chapel was plated with Silver, like that of the Moon. The third Chapel was dedicated to Thunder and Lightning; which they eſteem Servants of the Sun: The Chapel was ciel'd and wainſcotted with Gold Plates, like that of the Sun. The fourth Chapel was dedicated to the Rainbow, as owing its Original to the Sun. This Chapel alſo was cover'd with Gold, and a Repreſentation of the Rainbow on one Side of it. The fifth Apartment was for the Uſe of the High-Prieſt, and of the reſt of the Prieſts, who were all of the royal Blood, where they gave Audience to the Sun's Votaries; this alſo was adorn'd with Gold, like the Chapel of the Sun.

Tho' there was no other Image worſhipped in this Temple but that of the Sun, yet had they the Figures of Men, Women, and Children, and of all manner of Birds, Beaſts, and other Animals, of wrought Gold, placed in it for Ornament, as big as the Life; nay, beſides the Figures of Animals for their Temples, they made all ſorts of Veſſels and Utenſils, as Pots, Pans, Bowls, Fire ſhovels, and even Spades and Rakes for their Gardens, of the ſame precious Metal.

The Palaces of the *Inca's* in *Cuſco*, were vaſtly large and magnificent, conſiſting of grand and ſpacious Rooms. There were Galleries, or rather Halls, two hundred Paces in Length, and fifty or ſixty in Breadth; one of which was converted into the Cathedral Church. The *Indians* of *Peru* never raiſed one Story above another in their Buildings; nor did they join one Room to another, but always left ſome Space between the Rooms, unleſs ſometimes in the largeſt Halls they built Cloſets at the Corners. When they had built the four Walls, they erected Pillars in the middle of the Room, to ſupport the Roof. The main Beams they croſs'd with Rafters, and thereon laid a Covering of Thatch or Straw a Yard deep, extending the Eves a Yard beyond the Walls. Beſides their Walls of Stone, they had thoſe of Sun-dry'd Brick, which they formed in Moulds, mixing the Clay with Straw; they were uſed in Building, cemented with the ſame Clay, mix'd with Straw. The Royal Palaces.

Whenever one of the *Inca's* dy'd, they lock'd up the Room where he uſually ſlept, with all the Furniture in it, and none were ever ſuffer'd to enter it afterwards, but they kept it in Repair on the Outſide as long as it would ſtand: Therefore on the Death of the *Inca*, they immediately fell to building a new Apartment for the Succeſſor. The Stones of theſe Buildings were generally ſo well join'd, that they needed no Cement; and if any were uſed, it was a ſlimy Liquor, like Cream, which ſo united the Stones together, that no Seam appear'd: And in many of the royal Palaces and Temples, for the greater Magnificence, they cloſed up the Seams of their Buildings with melted Gold and Silver; which occaſioned the total Deſtruction of moſt of them, the *Spaniards* ſubverting the very Foundations, in hopes of finding Treaſure. The Furniture, or Ornaments of theſe Palaces, like that of their Temples, were the Figures of Men, Beaſts, Birds, and other Animals, caſt in Gold; and on the Walls, inſtead of Tapeſtry, were Plants, and Flowers of the ſame Metal, intermixed with Serpents, Butterflies, and other Inſects.

They had not any Chairs; but the *Inca* himſelf ſat on a Stool made of Gold, without Arms or Back, having a Pedeſtal of the ſame Metal. They had no other Bedding but Blankets, or Carpets, made of the Wool of their Country Sheep, ſpread on the Floor. They had Baſons, and Ciſterns of Gold alſo in their Palaces; and all the Utenſils of their Kitchens, and in them and moſt Offices about the Palace, were of that Metal. But,

amid this Plenty, the *Indians* neither purchased Lands nor Houſes with their Gold, nor eſteemed it the Sinews of War, as the *Europeans* do. They only adorned themſelves, their Houſes and Temples with it while alive, and buried it with them when they died. The royal Gardens of the Palace were not only planted with a great Variety of Trees, Fruits, and Flowers; but the Figures of theſe, and all Manner of Animals, were made of Gold, and placed in the Walks to adorn them.

The Caſtle of *Cuſco*.

As to the Caſtle of *Cuſco*, its Works are incredible to thoſe who have not ſeen it; and thoſe that have, are apt to look upon it as erected by Enchantment. This Fortreſs ſtood upon the Top of the Hill on which the City was built, and towards the Town was defended by a high Rock, perfectly perpendicular. Towards the Country it was defended by triple ſemicircular Walls, of ſuch Thickneſs and Height, that they were proof againſt all the Force that could be brought againſt it. The Stones of theſe Walls were ſo very large, eſpecially the three firſt Rounds, that it was paſt Man's Underſtanding to conceive, how they were hewn out of the Quarry, or brought thither, the *Indians* having no Iron Tools, or Inſtruments to faſten them, or Beaſts to draw them thither; or any Pullies or Engines to lift them into the Places where they were fixed. Theſe Stones were dragg'd by the Strength of Men, ten, twelve, and fifteen Leagues over Hills and Valleys, and the moſt difficult Ways, to that Place: There is one Stone to which the *Indians* give the Name of *Syacuſa*, that is, *the tired or weary*, becauſe it never arrived at the Place it was deſign'd for. This Rock was drawn by twenty thouſand *Indians*, fifteen Leagues, over very rugged and uneven Ways. But notwithſtanding all their Care, it got the better of them; and tumbling down a ſteep Hill, kill'd ſeveral hundred of the *Indians*, who were endeavouring to poiſe the Weight. However, they rais'd it once again, and with incredible Pains dragged it to the Plain in the Neighbourhood of *Cuſco*, and there they were forced to leave it, never being able to get it up the Hill.

Between each Wall of the Caſtle, there was a Space of twenty-five or thirty Foot, which was fill'd up with Earth, and every Wall had a Breaſt-work on the Top of it: Beyond theſe three Walls, were three ſpacious Towers, ſtanding in a Triangle, anſwerable to the Bending of the Walls. The principal of theſe Towers, which ſtood in the Middle, and was called the round Fortreſs, had a Fountain of excellent Water in it, brought by a ſubterraneous Aqueduct; but from whence, the Natives themſelves did not know; for theſe were Secrets communicated to none but the *Inca* or his Council, leſt an Enemy ſhould diſcover the Stream, and cut it off, in caſe of a Siege. In this Fortreſs, the *Inca's* had an Apartment, which was adorned and furniſhed like their other Palaces. The other two Towers on the right and left were both ſquare, and contained Rooms for the lodging and quartering the Garriſon, who were all of the Blood of the *Inca's*. Under the Foundation of theſe Towers was as much Room as above; and they had a Communication with each other by a ſubterraneous Labyrinth, ſo difficult to paſs, that no Stranger could find his Way through without a Guide, or a Line faſtened at the Entrance, by which he might diſcover the Turnings and Windings in his Return. Moſt of the new City of *Cuſco* was built with the Stones found in the Ruins of this Fortreſs.

From the grand Market-place in *Old Cuſco*, iſſued four High-ways to the four Quarters of the Empire: Thoſe to the North and South running upwards of five hundred Leagues each. But theſe will be deſcribed hereafter, in treating of their Roads.

Four great Roads iſſue from the great Square of *Cuſco*.

Every Nation of this extenſive Empire had Quarters aſſign'd for their Reſidence in the royal City of *Cuſco*. The vaſſal Princes of every Province, and eſpecially the Caraca's, or conquer'd Princes, were obliged to ſend their eldeſt Sons to Court, and build them a Palace; about which all the Natives of the ſame Province, reſiding in *Cuſco*, had their Houſes; and every People were obliged to retain the Habits of their reſpective Provinces, being chiefly diſtinguiſhed by their Head-Dreſſes.

The City of *Cuſco* compoſed of all Nations in the Empire.

Theſe Inſtitutions added to the Splendor of the *Inca's* Court. The Sons of the Caraca's, being obliged to wait at the *Inca's* Palace in their turns, contributed much to the Security of the Government; theſe young Lords remaining Pledges of their Fathers Loyalty; though the Reaſons given for their Attendance were, that they might be the better inſtructed in the Laws of the Empire, and prepared for Poſts in the Adminiſtration: But whatever was the Reaſon of the Inſtitution, by this Means the Court Language, and the Manners and Cuſtoms of the capital City, were communicated to the moſt diſtant Provinces; and the Court were juſtly informed of the State of their remoteſt Territories.

The new City.

As for the City of *Cuſco* ſince it has been rebuilt, it is purely *Spaniſh*. As it is divided into the upper and lower Town by the River which runs through it, they have built ſeveral arch'd Stone Bridges on the River, for the more eaſy Communication. Beſides the Cathedral, there are ſeveral Parochial and Conventual Churches, Monaſteries and Nunneries of every Order, and ſome noble Hoſpitals, as well for *Indians* as *Spaniards*. The Biſhop of *Cuſco* is Suffragan to the Archbiſhop of *Lima*. The Gentlemen and Citizens of *Cuſco*, as the *Indians* had formerly, have moſt of them their Country Houſes in the pleaſant and healthful Valley of *Yucai*, through which there runs a fine River, that makes it one of the moſt fruitful Valleys in *Peru*.

8. *Arequipa*, the laſt of the great Towns in the Audience of *Lima*, is ſituated an hundred Leagues and upwards South Eaſt of *Lima*, and 80 Leagues South Weſt of *Cuſco*. This Town was founded by the Marquis *Pizarro*, one of the firſt Conquerors. It is now a Biſhop's See.

The Audience of *Los Charcas* is bounded by the Audience of *Lima* on the North, being about ſeven hundred Miles from Eaſt to Weſt, in the broadeſt Part, and about the ſame from North to South; but both the Length and Breadth very unequal: The chief Towns in this Audience are,

1. *Potoſi*, which takes its Name from the Mountain at the Bottom of which it ſtands. It is ſituated in 22 Degrees South Latitude, in one of the moſt barren Countries of *America*; there being neither Trees nor Graſs to be found near it, but the richeſt Silver Mines that ever were diſcovered; which has brought Multitudes of People hither, inſomuch that it is one of the largeſt and moſt populous Towns of *Peru*: Nor is it ill ſupply'd with Proviſions; all the Countries round about ſupplying their Markets, where they are ſure to be well paid for what they bring. The Mountain of *Potoſi*, though it be three or four Leagues in Circumference, and one thouſand ſix hundred and twenty four Yards high, is now little

more than a Cruſt or Shell, out of which the *Spaniards* have taken moſt of its internal Riches. They have erected a Chapel on the Top of the Hill, poſſibly more for Oſtentation than Devotion. For however the Religious ſeem to have renounced the World, they are uſually moſt numerous, where Silver moſt abounds.

2. *Porco*, ſituated ten Leagues North-Weſt of *Potoſi*, conſiderable on account of its Silver Mines, before thoſe of *Potoſi* were diſcover'd. 3. *La Plata*, Capital of the Province, receiv'd its Name from the Silver Mines in the Neighbourhood; which were the firſt the *Spaniards* wrought. It is ſituated in 21 Degrees odd Minutes South Latitude, in a fine Plain, and in a much more fruitful Soil than either *Potoſi* or *Porco*. It is the See of an Archbiſhop, and the Reſidence of the Governor and Courts of Juſtice of this Province; the Inhabitants whereof are exceeding rich. 4. *Santa Cruz* of the Mountains, fifty Leagues to the Eaſtward of *La Plata*. 5. *La Paz*, on the great Road of the *Inca's*, an hundred Leagues to the Northward of *La Plata*. It is a ſmall Town, pleaſantly ſituated, and has ſeveral Gold Mines in the adjacent Mountains. 6. *Chinquita*, on the great Lake *Titicaca*, in an exceeding plentiful Country. 7. *Tiguiauaca*, on the South-end of the Lake; beſides which, there are abundance of fine Towns and Villages bordering on the Lake. 8. *Arica*, a Port-town, already deſcribed. 9. *Ylo*, or *Hilo*, another ſmall Port, that has been frequently plundered by the Buccaneers.

Of the Peruvian Towns in general.

Before the Arrival of the *Spaniards*, there was only one great Town in every Province; all the reſt were Villages, conſiſting of little Huts or Cottages: But in the Capital of every Province was a Palace belonging to the Governor, a Temple dedicated to the Sun, and a Convent of ſelect Virgins, reſembling thoſe in the City of *Cuſco*: And upon the High-ways were Magazines and Store-houſes of the *Inca's*, ſufficient to ſupply all the Forces of the Provinces in which they ſtood. The *Indians* had alſo noble Aqueducts, by which they brought Water into their great Towns and Corn-fields many Miles, which render'd the moſt barren Lands fruitful. As to the Convents of ſelect Virgins, thoſe ſeem to have been built like Cloiſters, with Cells for the Virgins on the Sides of them, without any upper Rooms. In the Nunnery of *Cuſco*, there were no leſs than fifteen hundred Virgins, all of the Blood of the *Inca's* or Emperors: And in the Convents of every Province, the Nuns were the Kindred of the vaſſal Princes, or of the Lords of the reſpective Provinces. Theſe Nuns were not intended for the Service of the Temple of the Sun. No Female was ever ſuffer'd to enter into theſe Temples: Nor was any Man admitted to come within the Walls of theſe Nunneries.

Convents of ſelect Virgins.

The *Inca Guaynacava*, marching with his Army from *Cuſco*, to ſubdue the Province of *Quito*, met with great Difficulties in his March; whereupon returning victorious, he cauſed a ſpacious Way to be hewn out through the Rocks; levelling the rough and uneven Ground, by raiſing it in ſome Places fifteen or twenty Fathoms, and in others ſinking it as much; and in this manner carried on the Work for fifteen hundred Miles: And future *Inca's* continued it as far to the Southward. He afterwards cauſed another Way, of equal Extent, to be carried through the plain Country forty Feet wide, which was defended by Walls on each ſide: And along theſe Ways were Houſes at certain Diſtances, ſhady Groves, and Rivulets or Reſervoirs of Water, for the Refreſhment of his Troops, or weary Travellers, upon a March. At the Houſes erected by the *Inca's* on the great Roads, Travellers were ſupplied with Proviſions for their Journey: And in caſe any Traveller fell ſick, he was taken care of: But no Perſon was ſuffer'd to travel for Curioſity, Pleaſure, or private Buſineſs, but only in the Service of the *Inca*, or the Lord of the Province.

Two Royal High-ways deſcribed.

Magazines.

In every Province, there were always two Magazines, or Store-houſes; in one of which they laid up Corn and Proviſions for the Support of the Natives in Years of Scarcity; and in the other, the Proviſions belonging to the Temple of the Sun, and the *Inca*; beſides which, they had ſmaller Store-houſes, built upon the High-ways, three or four Leagues diſtant from each other; which the *Spaniards* make uſe of at this Day, as Inns, when they travel. All the Eſtate of the Sun, and of the *Inca*, within fifty Leagues of the City of *Cuſco*, was brought thither for the Support of the Court; the Overplus whereof the *Inca's* diſtributed among the vaſſal Princes, and great Officers, only a certain Portion was laid up in Magazines for the Uſe of the People of the reſpective Diſtricts. The Revenues ariſing in the Provinces above fifty Leagues from *Cuſco*, were laid up in the King's Store-houſes, and from thence carried to the leſſer Store-houſes, ſtanding on the common Road, from whence the Forces were readily ſupply'd wherever they march'd, and the Soldiery was never quarter'd upon the People. There were Magazines and Store-houſes alſo erected in the Mountains and Plains out of the Road, at the Diſtance of a Day's March or two, near ſome Rivulet; where an Army might, at any time, be ſupply'd with Arms and Proviſions.

Bridges.

From their Roads, we naturally come to their Bridges; and theſe ſeem to have been the meaneſt of all their Works: They neither knew how to erect Arches, nor to fix Piles in the middle of a Stream; and therefore, whenever the Stream was too wide to lay Planks over, they had a kind of floating Bridges faſten'd to each Side, made of Flaggs or Ruſhes: And inſtead of Ferry-boats, they had Floats of Calabaſhes, or Ruſhes, to convey over Travellers. They ſometimes faſtened Ropes croſs their Rivers, and drew themſelves over in Baskets, ſliding along the Ropes.

Carriages, and way of Travelling.

They had no Cattle fit for Draught; every thing was drawn by Men; nor had they any Beaſts of Burthen, but a kind of Sheep, one of which would ſcarce carry an hundred Weight: Moſt of their Baggage therefore, was carried by Porters. Their great Men alſo were carried on Chairs, or Coaches, on the Shoulders of Men; or in Hammocks; which laſt was the uſual way of carrying ſick People.

CHAP

CHAP. XIV.

Of the Persons and Habits of the Peruvians; *of their Genius and Temper; Arts, Manufactures, Food, Exercises, and Diversions; Diseases, and Physicians.*

Persons of the *Peruvians.*

THE *Peruvians* are generally of a middle Stature. There are no Nations of Giants or Pigmies, in that Part of the World, as our first Adventurers related. They are of an Olive Complexion generally; but near the Equator of a perfect Copper-colour; their Hair, as that of all other People between the Tropicks, always black: Most of them had their Heads shav'd; and the Hair of their Beards and other Parts of the Body was pull'd off with Tweezers whenever any appear'd, except on their Eye-Brows, and Eye-Lids.

Habit.

The several Nations were distinguish'd chiefly by their Head-dresses: Some wore whole Pieces of Cotton-Linen, wrapp'd about their Heads like Turbants; others had only a single Piece of Linen tied about their Heads: Some wore a kind of Hats; others, Caps in the Form of a Sugar-Loaf; and a Multitude of other different Fashions there were of their Head-Attire, which they never alter'd. But this is to be understood of the better Sort of People; for the rest went bare-headed. The Head-dress, or Turbant, seems to have been granted to their Chiefs as a Mark of Distinction: Their Heads and Bodies also were anointed with Oil or Grease; and some of them used Paint. Their Holy-day Dress was a Sort of Shirt, and a Vest without Sleeves, and a Mantle: They had also Shoes, or rather Sandals, made of the Skins of Beasts untanned; but the common People usually went naked, except a small Piece of Linen about their Waists. They had scarce any Clothes on when they were at Work, when they went a Hunting, or travelled the Road.

Ornaments.

The principal Ornaments of the *Peruvians* were their Rings and Jewels in their Ears, which they stretch'd to a monstrous Size. They had also Chains of Jewels and Shells about their Necks; no Gold Plates, or Rings in their Noses, like the *Indians* to the Northward of the Equator.

The Habits of the Women.

The Habits of the *Peruvian* Women were not very different from those of the Men; only as the Men shav'd their Heads, and wore Caps or Turbants, the Women dress'd in their Hair, which reached down to the Middle of their Backs, sometimes loose and flowing, and at others, twisted in several Braids: And as the Sun frequently changed their Hair to a ruffet-brown, or red, they were at great Pains to restore it to its original Colour; nothing being esteem'd a greater Beauty among the Women than long flaming black Hair. Both Men and Women, at Festivals, and other solemn Times, frequently adorn'd their Heads with Flowers and beautiful Feathers. But the *Peruvians* now follow the *Spanish* Modes in every thing.

The Genius and Temper of the People.

As to the Genius and Temper of this People, if we were to credit the full Accounts we received of them from the *Spaniards*, they were little better than Brutes in human Shapes. And this has been the general Conduct of Mankind, to represent distant Nations, and those they are to subdue, as Barbarians. The great Conquerors and Heroes of Antiquity among the *Greeks* and *Romans* always represented their Enemies, and those they were pleased to make such, as strange unpolish'd Animals. It is remarkable also, that the *Inca's* of *Peru*, gave much the same Reasons the Antients did, for making War upon their weaker Neighbours, and subjecting all that Part of the World under their Dominion.

Garcilasso de la Vega relates, that he received the following Account of the antient Inhabitants of this Country, from one of his Relations, a Descendant of their *Inca's*, as he himself was: That they were like so many Beasts, without Religion or Government; they neither ploughed or sowed, or clothed themselves; they fed on Herbs, Roots, wild Fruits, and on Man's Flesh; enjoyed their Women, as well as Lands, in common: But that their Father the Sun beholding the savage Disposition of these People, sent a Son and Daughter from Heaven to instruct them in the Worship of himself, to teach them to live in Societies, and reform their barbarous Customs; constituting them, the *Inca's*, Lords and Princes over that People. From whence it appears, that the *Inca's* of *Peru*, like the antient Law-givers, pretended to be descended from some God, who had conferred the Dominion of those Nations upon them. We can never therefore make a just Estimate of the Characters of any People from the Accounts we receive from those who have enslav'd them, or usurp'd the Dominion over them.

De la Vega continues, that the antient *Peruvians*, according to Tradition, sacrificed Men to their Gods; were Canibals; had Shambles of Man's Flesh, and made Sausages of their Guts: But he reflects severely upon those *Spanish* Writers, who relate, that there were any such Sacrifices, or any Canibals in *Peru*, since the *Inca's* reigned there; which was four or five hundred Years before the Invasion of the *Spaniards*. From whence we may conclude, that all the Accounts we have of human Sacrifices and Canibals in *South America* from the *Spanish* Writers are false. And if it be admitted then, that there were no such barbarous People in *Peru*, for four hundred Years before the *Spanish* Conquest, we may take it for granted, there were none there before that time; at least there could be no Certainty of any such.

The Character of the *Peruvians* when the *Spaniards* arrived there.

We proceed now to enquire into the real Character of the *Peruvians* when the *Spaniards* arrived there. They exceeded most Nations in the World in Quickness of Wit and Strength of Judgment; which appears in that, with all the Help of Letters, they attain'd the Knowledge of many Things, which the Learning of the *Egyptians*, *Chaldeans*, and *Greeks*, could never reach. If they had any thing that look'd shocking to the *European*, it did not proceed from the Want of natural Parts, but from the Want of Masters to instruct them in the liberal Sciences: For such of them as had the Advantage of Masters, since the Arrival of the *Spaniards*, became greater Proficients than their *Spanish* Instructors.

And

And as to their Memories, they generally exceeded the *Spaniards*, and would cast up their Accounts, by Knots, with more Expedition than a *European* could by the Help of Cyphers.

Courage and military Skill. As to their military Skill and Conduct, making Allowance for Circumstances, they appear'd also superior to the *Spaniards*. Let us see the bravest Captains of *France* or *Spain* on Foot, without Horses, without Armour, without Spears, Swords, or Fire-Arms; with no other Clothes than their Shirts, no other Head-piece than a Cap of Feathers, or Garland of Flowers; a Shield made of a Piece of a Mat; and let their Diet be only Herbs and Roots of the Field; then let us see how they will be able to oppose Swords, Spears, and Guns.

Hospitality. The first Invaders of *Peru*, found the *Peruvians* extremely hospitable and kind; courteous in Conversation, and friendly to the *Spaniards*: Nor did they offer to commit any Hostilities, till the *Spaniards*, by their Outrages and Cruelties, compelled them to stand upon their Defence.

Amanta's. There were certain among them called *Amanta's*, who were subtle in their Argumentation, and laid down certain *Phœnomena* of natural Things; but in regard they were unacquainted with Letters, they could leave none of those Conceptions to Posterity, unless some few Principles discover'd by the Light of Nature, which they represented

Morality. by rude Figures: However, in Moral Philosophy they attained to a greater Degree of Perfection; for the Doctrine of Good-manners being the Study and Business of the Magistrate, an easy and constant Improvement was made therein.

Natural Philosophy Astronomy. In Natural Philosophy they had studied little, and only knew Things by their Effects. As to their Astronomy, they had observ'd the various Motions of the Planet *Venus*, the Increase and Decrease of the Moon. The *Inca's* also observ'd, that the Sun perform'd his Course in the Space of a Year; tho' the common People divided it only by the Seasons; and the End of their Harvest, with them, was the End of the Year: While the *Inca's* mark'd out the Summer and Winter Solstices by high Towers, which they erected on the East and West of the City of *Cusco*. And as they describ'd their Year by the Course of the Sun, so their Months were distinguish'd by the Moon, and their Weeks were call'd Quarters of the Moon. They were astonish'd at the Eclipses of the Sun and Moon; and when the Sun hid his Face, believ'd it was for their Sins. When the Moon was entering into the Eclipse, they imagin'd she was sick; and when totally obscur'd, that she was dying; and sounded their Trumpets, Kettles, and every Thing that would make a Noise, to rouse her from this Lethargy. They made no Predictions from the Sun or Moon, or the Conjunction of the Stars, but chiefly from their Dreams, or the Intrails of Beasts they offer'd in Sacrifice.

Physick. They had so much Skill in Physick, as to know, that Bleeding and Purging were two necessary Evacuations. Their Lancet was a sharp-pointed Flint set at the End of a small Cane, which cut with less Pain than one of our Lancets. They usually purg'd before the Disease had prevail'd, but afterwards trusted to Nature and a regular Diet. Their principal Ingredient was a white Root resembling a Turnip, which being dry'd and powder'd, they took in Water or their ordinary Drink. In an Hour's Time it began to work upwards and downwards in a violent Manner, bringing away all indigested Matter. They had several Herbs and Roots which they apply'd to Wounds with great Success; but used neither Plaisters nor Ointments, and had no compound, only simple Medicines.

They had only Geometry enough to measure their Lands, and describe the Limits of their Provinces. Geometry.

Their *Amanta's* were Poets also, and invented Comedies and Tragedies, which were acted on their Festivals before the Royal Family; the Actors being the great Lords of the Court. The Subjects of their Tragedies were the great Actions of their Ancestors, which seem to have been the best Means they had of preserving the Memory of what was pass'd. In their Comedies, their Husbandry, their Houshold Affairs, and their Commerce with the World, were represented, and the most remarkable Follies in Life exposed. Poetry.

These *Amanta's* also composed Songs and Ballads; for they had both vocal and instrumental Musick. Musick.

They seem to have been more perfect in Arithmetick than any other Science, and would cast up an Accompt, subtract, multiply, and divide, by certain Lines or Threads of various Colours, tied in Knots; which they call'd *Quippo's*, with more Expedition than a *European* by the Help of Figures. Arithmetick.

Of their Gold and Silver Smiths there were great Numbers, that labour'd constantly at their Trade; yet were they not so skilful as to make an Anvil of Iron, but made use of a certain hard Stone which they smooth'd and polish'd; nor had they learn'd to put Handles to their Hammers; neither had they any Files, graving Tools, or Bellows; but instead of Bellows, Copper-Pipes of a Yard long, with which they blow'd up their Fires. Their Carpenters had no other Tools than Hatches made of Copper or Flint; no Saws, Augers, or Planes; and instead of Nails, they fastned their Timber together with Cords or Withs: Nor had their Stone-Cutters any Tools but sharp Flints or Pebbles, with which they wore out the Stone with perpetual rubbing. Pullies and other Engines also were wanting; all was done by Strength of Hand.

They used a Thorn or fine Bone for a Needle, and their Threads were the Sinews of Animals, the Fibres of some Plant, or the Bark of a certain Tree. Scissars they had none, and their Knives were Flint or Copper. Combs were made of long Thorns, set on each Side a Piece of Cane; and the Razors they shav'd their Heads with were no better than sharp Flints. They had no Looking-Glasses, but the *Peruvian* Ladies made use of a round Plate of polish'd Brass or Copper.

As to ordinary Working Trades, there were no Fraternities, or particular Men, that applied themselves to these; but every Man was his own Carpenter, Shoe-maker, Weaver, Taylor, and Mason: But there were Societies of Poets, Painters, Musicians, Goldsmiths, Engravers, Founders, and Accomptants, who were employ'd in the Service of their Temples, and of their Princes and great Men. Their Woollen and Cotton Clothes, which they wove and dy'd into all Manner of Colours, were their principal Manufactures. But no Man was suffer'd to wear a Garment, Cap, or Turbant, of different Colours, but those of the Royal Blood. Their Carpets and Blankets were made of the Wooll of their Country Sheep, or the fine Hair of their Goats; and their Hammocks of Cotton, or rather Net-work. They had little or no Trade, either with Foreigners, or with one another; every Family having its Plantation, and all Necessaries almost within itself; only they sometimes barter'd Fruits and Eatables with their Neighbours, some Grounds producing what others wanted. Traffick.

The general Food of the *Peruvians*, before the *Spaniards* arriv'd among them, was Maiz, or *Indian* Corn. And in some Countries, that did not Food.

produce Maiz, they had a very small Grain, or Seed, that was produced from a Plant like Spinage. In other Parts, they had the Cassavy-Root. They eat also Potatoes, and other Roots, and almost all Manner of Fruits, raw, roasted, and boil'd. Nor was there scarce an Herb that grew, but what serv'd them for Food; not as Sauce or Sallads, as we use them, but as substantial Dishes. As to Flesh, they eat very little, for their *Inca's* and great Lords were Masters of all the Cattle wild and tame. But there was a general Hunting-bout appointed by their Princes once a Year; wherein a great deal of Venison and Game was taken, and distributed to the People: And this, with the Flesh of the tame Cattle, which was also given them annually, serv'd for the whole Year. They never eat Joints of Meat, as the *Europeans* do, but having cut their dry'd Flesh in Pieces, stew'd, and season'd it high with Pepper, they eat it as Sauce to their other Food, as we eat Anchovies, or Pickles, to relish our Flesh.

The usual Times for eating were between Eight and Nine in the Morning, and about Sun-set in the Evening. They were not altogether so abstemious in Drinking as Eating. Their Gentry and great Men, who had little else to do, sate drinking great Part of the Day: And of the same *Indian* Corn that serv'd them for Bread, they made a Kind of Malt, and brew'd good strong Drink of it. The *Maghey* Tree also afforded them a very intoxicating Liquor; and they made a kind of Wine of almost all Manner of Fruits; but the common People very seldom drank any strong Liquors. The common Beverage here, as well as in *Mexico*, was Water, with a little of the Flower of Maiz infused into it.

Feasts. While we are treating of their Food, it is very natural to speak of their Feasts, of which they had many within the Compass of a Year; particularly four in Honour of the Sun, and one at every new Moon. They had also their Feasts at the Accession of their Princes, and upon every Victory or Conquest; at their Weddings, and the Birth or Weaning of their Children; and almost upon every joyful Occasion. And at these the Guests were entertained with vocal and instrumental Musick, and Dancing, and the Men drank hard: But they always left off early in the Evening, and rising betimes in the Morning, returned to the Feast again; some of these Entertainments lasting several Days.

Exercise of Arms. The Exercising their Arms, the Lance or Spear, the throwing Darts, and shooting Arrows, were Parts of their Recreations and Diversions; to which all the better Sort of People were bred.

Hunting. Hunting was another of their Exercises and Diversions; but this was not permitted to the common People, only once a Year. These hunting Expeditions were after the Breeding-time was over every Year. The *Inca* then assign'd a certain Part of the Country for this Diversion appointing twenty or thirty thousand *Indians* to beat twenty or thirty Leagues round. They march'd along, hooping and hallowing, till the Game came to be so straitened on all Sides that they could not get away, and were easily taken. They consisted chiefly of red and fallow Deer, and of the Country Sheep and Goats, of which there was such Plenty, before the *Spaniards* arriv'd there, that they frequently took thirty or forty thousand at one Hunting-Match. The Female Deer they suffer'd to escape, except the old barren Does, which were kill'd. They releas'd also as many of the Males as were thought necessary to propagate the Species. The rest were divided among the common People. They also shore the Sheep, and divided the Wooll in like Manner. But the fine Hair of the Vicuna's was reserv'd for the *Inca* and the Royal Family.

Every Nobleman learn'd some Trade. Every Nobleman and Gentleman learn'd some mechanick Art, such as making of their Arms, Utensils of Husbandry, Cloathing, and the like, in which they buried themselves when they had nothing else to do. Even their Women of Quality carried their Reels, Spindles, and Needle-work with them, where-ever they visited; nor was the Lady of the Family ever found unemploy'd. They were, like the *Chinese*, courteous and ceremonious even to a Fault in their Visits, always addressing their Superiors, and even their Equals and Inferiors, in the most obliging and complaisant Language.

Races. The being swift of Foot was esteem'd a very great Accomplishment, and Prizes were given to those that excell'd at their Foot-races by publick Authority; for as there was no Writing, every thing of Importance was committed to Memory: And if a distant Viceroy had any thing to communicate to the Emperor, it was done by word of Mouth, and that not by one Express, but perhaps by forty or an hundred: For at every Quarter of a League were little Houses, where seven or eight of the Emperor's Messengers always attended, who were capable of receiving and telling a Message very exactly. One or more of these were dispatch'd upon all Affairs of State; and having deliver'd their Message at the next Stage, some of those ran to the next, and so on till they reach'd the Court: But they all carried their Quippos and Knots with them, which assisted their Memories very much, and prevented Mistakes. And so swiftly did these Expresses run, that the Court received the Intelligence in twenty four Hours, tho' the Governor who sent it was at an hundred and fifty Miles Distance: And in case of a Rebellion or Invasion, they had Beacons on high Hills, at proper Distances, by Means of which they spread an Alarm.

Post and Express

CHAP. XV.

Of the Peruvian *Animals, Vegetables, and Minerals.*

Animals. AS *Peru* and *Mexico* have Animals, for the most Part, of the same Species; we shall not describe those again that have been treated of in *Mexico*, but speak chiefly of such as seem peculiar to *Peru*.

Tame Beasts. The *Peruvian* Sheep are call'd by different Names, as Paco's, Lama's, Huanacu, and Guanacu; and these are distinguish'd again by the tame and the wild, the large and the small kind. The large tame Huanacu is of the Bigness of a Stag, and resembles a Camel the most of any other Beast, only it hath no Bunch on its Back: His Body is cover'd with a coarse Wool, and the Hide makes excellent Leather. They were the only

only Beasts used in carrying of Burdens, when the *Spaniards* arriv'd there. The Flesh of this Creature is tender, and exceeding fine eating, and is preferred before Chickens. Before Horses and Mules were imported, it was common to see eight hundred or a thousand of them in a Caravan. They would carry their Burdens over Rocks and Precipices, where a Man could hardly travel on Foot: Their usual Burden was about three or fourscore Pound Weight, with which they travelled nine or ten Miles a Day. They were no Charge to their Masters, who only took off their Packs, and turn'd them up to graze in the common Fields at the End of every Stage. Nor was there any need of Pack-saddles, the Wooll on their Backs serving instead of them: And as they were cloven-footed, they needed no Shoeing. The lesser Sort of Sheep, or Paco's, carry'd no Burdens, but their Flesh was almost as good Meat as the former, and their Wooll long and much esteem'd. The wild Sheep afforded them Wooll, but not so fine as the tame ones; nor was their Flesh so good Meat.

The *Peruvian* Goats, called *Vicunas*, had that Name given them by the *Spaniards*, because they resembled a *European* Goat more than any other Animal. It is a long-legg'd Creature, bigger than the largest Goat, without Horns; and so swift of Foot, that no Greyhound can take it; and therefore they are usually shot or snar'd. Their Flesh is lean, tough, and ill-tasted, and yet in much Esteem with the *Indians*, on account of some medicinal Qualities it is said to have: And its Wooll is much more esteem'd than the Wooll of their Sheep; for of this they make the finest Garments and Carpets.

Bezoar-Stone. In these, and most of the wild Cattle of *Peru*, the Bezoar-Stone is found in their Stomachs and Bellies, and there are sometimes, two, three, or four together of different Shape, Size, and Colour, some as big as Filberts, others of the Size of Pigeons Eggs, or Wallnuts, and some as large as Hens Eggs. All Beasts that engender it chew the Cud, and usually feed upon the Rocks in the Snow. And as there are many Herbs and venomous Reptiles that poison the Waters and Pastures in this Country, so there is one Herb, which the Beasts which engender the Bezoar-Stone, run to by Instinct, when they find themselves poison'd, and by that Means expel it: And the *Indians* are of Opinion, that of this Herb the Stone in the Stomach of these Animals is compounded; from whence it receives that Virtue against Poisons, and produces many other wonderful Effects.

There are red and fallow Deer in *Peru*, but much less than those of *Europe*. Before the Arrival of the *Spaniards* they came in Droves into the Villages, the common People never attempting to kill or take them. They had also tame and wild Rabbits, and these every Man was at Liberty to keep or take.

Wild Beasts. As to wild Beasts, they had some few Lions, but neither so large or so fierce as those of *Africa*. They had still fewer Bears, and not any Tygers, unless upon some of the highest Mountains of the *Andes*. Nor had they any Wolves: So that People travell'd in great Security, and their tame Cattle were in no Danger of being destroy'd. There is a Beast found on the Mountains of the *Andes* in Shape like a Cow, but less, and without Horns; of whose Hides they make Buff and very strong Leather. There are great Numbers of Monkeys in this Country of various Kinds and Colours, some with Tails, others without, and some four times as large as the ordinary Monkeys. Their Activity and Motion is such, that they seem to have Reason and Discourse: They leap from one Tree to another; and when the Distance is such, that one cannot reach the Place, they hang themselves from the Bough of a Tree, one at the Tail of another, and fetching a long Swing, the lowermost, with the Help of the others, throws himself to the Bough they aim at, and when he is there, helps his Companions after him. These Monkeys, when they are tam'd and taught, seem to equal Men in Understanding. There were not either House Cats or Rats in *Peru* till the *Spaniards* imported them; and the Rats probably were carried thither in Shipping against their Wills; but they multiplied so fast, and grew so large on the Coast of *Peru*, that in the Year 1572 and 1573, they almost occasion'd a Famine, by eating up the Corn as soon as it was sown, and by peeling the Bark of the Fruit-Trees, and knawing the Roots; insomuch that they were forced to publish a Proclamation, that every House should lay Ratsbane to destroy them, and in the mean Time that they should cover their Meat and Drink from the Rats, to prevent Peoples being poison'd. And by this, and some other Means, their Numbers were considerably lessen'd for a Time.

Fowls. The *Peruvians* had no tame Poultry till the *Spaniards* imported them, unless it were a Fowl that something resembled a Duck, and was between the Size of a Goose and a Duck: These the *Indians* called *Nuthna*. But as to wild Fowl and Birds they had great Variety, both on the Land and on the Water: They had Eagles, but not so large as those of *Europe*; Hawks of several kinds, and some sorts that were never seen on this Side the *Atlantick*. The most remarkable Bird of Prey was that which the *Indians* call'd the *Conder*, or *Cuntur*, many of which, with the Wings extended, measured fifteen or sixteen Feet from the Extremity of one Wing to the other: They are a very fierce voracious Fowl, and have Feet like a Hen: They are so strong that two of them will set upon a Bull or a Cow, if they find them lying down, and rip up their Bowels; and some of them have killed Boys of ten or twelve Years of Age, and devoured them. They are black and white like a Magpye, and have Combs on their Heads. There is a kind of large Carrion Crows, which devour Flesh to that degree, that they cannot fly till they have disgorg'd it; and it is one of the Diversions of the Country to pursue them on Horseback, when they spue up the Flesh all the way they run till they are light enough to fly. Upon the Coast of the *Pacifick Ocean*, there are Numbers of Birds which prey upon the Fish. Their Rivers and Lakes also abound in Water-Fowl, such as Herons, wild Ducks, wild Geese, Swans, and many other kinds. They have two Sorts of Partridges, and a pretty great Plenty of them; one Sort as large as Hens, and the other less than *European* Partridges. They have also good Store of Wood-Pigeons, and Turtle-Doves of the Size and Colour of those of *Europe*, and others no bigger than Larks. But they abound more in Parrots than any other, and these are of various Sizes and Colours, the least of the Bigness of Larks, and the largest as big as Pullets.

Fish. The *South-Sea* is well replenish'd with all Manner of Fish, particularly Pilchards, which are a great Part of the Subsistence of the People upon the *Peruvian* Coast; but their Rivers afford scarce any Fish, which is ascrib'd to their Rapidity and the Shallowness of their Channels, most of which are dry at one Season of the Year.

Vegetables. Forest Trees. Forest Trees are very scarce in *Peru*, unless in the Province of *Quito* near the *Equator*; and here they have Cedars, Cotton Trees, Cocoa Trees, Palms,

Palms, Mangroves, Bamboes, the Maho-Tree, Light-wood, and many other Kinds of Wood, which have been deſcrib'd in treating of *Mexico*:

Peruvian Bark.

But none are more valuable than the Tree which furniſhes us with the *Peruvian* Bark, which grows in the Province of *Quitto*, upon the Mountains near the City of *Loxa*. It is the Size of a Cherry Tree, the Leaves round and indented, and bears a long reddiſh Flower, from whence arrives a Kind of Pod, in which is found a Kernel like an Almond, cloth'd with a ſlight Rind. That Bark which comes from the Trees at the Bottom of the Mountains is thickeſt, becauſe it receives moſt Nouriſhment from the Earth. It is ſmooth, of a whitiſh Yellow without, and of a pale Brown within. That which comes from the Trees at the Top of the Mountains is abundantly more delicate: But the Trees which grow in the Middle of the Mountains have a Bark ſtill browner than the other, and more rugged. All theſe Barks are bitter, but that from the Trees at the Bottom of the Mountains leſs than the others. The beſt is, that which grows in the Middle of the Mountains, becauſe it has not too much nor too little Nouriſhment.

Their Husbandry.

Maiz, or *Indian* Corn, has been deſcribed already. As to their Husbandry, the Country for the moſt Part being hot and dry as well as mountainous, they were at great Pains in collecting the Waters, and introducing Rivulets into their Corn-fields, without which this kind of Grain will not grow in that hot Climate. They throw their Fields therefore into level Squares, that they may retain the Water; and where they meet with a Mountain of a tolerable good Soil, they cut it into Squares, one above another, from the Bottom to the Top, ſupporting them with little Stone Walls; ſo that they look like hanging Gardens or Stairs: And if they can meet with a Fountain on the Top of the Hill, from thence they water all the Squares beneath: They uſed alſo to make Aqueducts and Canals, ſeveral hundred Miles in Length, into which they brought all the Streams and Rivulets they could meet with, and from theſe every Man was allow'd to let Water into his Grounds, in his turn, to improve both his Corn and Graſs. By the Sea Coaſt, below *Arequipa*, for two hundred Leagues, they uſed no other Dung but that of Sea-Fowls, of which the Numbers bred on the Iſlands near the Coaſt, lay ſuch Heaps of Dung, that at a Diſtance they appear like Hills of Snow. On other Parts of the Coaſt, more to the Southward, they dung their Lands with a ſmall Fiſh like Pilchards: And it is with infinite Labour here, for ſix or ſeven hundred Leagues, that the Natives find a Subſiſtence; for they have no Springs or Rivers; nor does a Drop of Rain ever fall on thoſe parch'd Sands.

European Grain, &c. ſow'd in Peru.

Wheat and Barley were firſt imported into *Peru* about the Year 1540, by a noble Lady. *Francis de Caravantes*, a Nobleman of *Toledo*, had the Honour of planting the firſt Vines in *Peru*. Olives have been carried over alſo into *Peru*, but they do not thrive there ſo well as other *European* Plants; tho' they are found very agreeable to the Soil of *Chili*. However, *Peru*, at this Day, abounds in Sugar-Canes, Oranges, Lemons, Figs, Cherries, Apples, Pears, Quinces, Nectarines, Peaches, Apricots, Plumbs, and Pomegranates; none of which Fruits were in *Peru* before the *Spaniards* arrived there: But they had Coco-nuts, Cacao-nuts, Pine-apples, Guava's, Plantains, and moſt of the Fruits enumerated in *Mexico*.

Kitchen Gardens.

As to the Kitchen Garden, they had neither Lettice, Radiſhes, Turnips, Garlick, Onions, Beets, Spinage, Aſparagus, Melons, Cucumbers, Peaſe, Beans, or Rice; of all which there is now great Plenty; as there are alſo of Roſes, Jeſſamin, and many odoriferous Flowers they never ſaw before the *Spaniards* imported them. But then they had ſeveral Sorts of Herbs, Flowers, Sallading, and Roots, that we want. And 'tis obſerv'd of the Fruits and Plants that have been carried thither from *Europe*, that they thrive better, and grow much larger, there than they do here.

Balſam of Peru deſcribed.

The Balſam of Peru proceeds from the Trunks and Branches of a little Tree. There are three Sorts of it. The firſt is called the Balſam by Inciſion, and is a white Liquor. The ſecond is called Balſam of the Shell, which drops from the Ends of the Branches that are cut. The third is a black Balſam, which is made by boiling the Bark, Branches, and Leaves of theſe little Trees in Water. And beſides this Balm, the Country produces Anami, Caranna, Storax, Caſſia-fiſtata, Guaiacum, Sarſaparilla, Saſſafras, Copal, Liquid Amber, and ſeveral other Gums and Drugs, mention'd already in the Deſcription of *Mexico*.

Mineral.

Gold and Silver were ſo plentiful in *Peru* in the ſixteenth Century, that there had been exported from thence to *Spain* every Year, for twenty five Years ſucceſſively, the Value of twelve or thirteen Millions of Crowns, beſides what had paſs'd without Account. Gold was found in every Province of *Peru*, more or leſs; ſome on the Surface of the Earth, and waſh'd down by Torrents, which the *Indians* gather'd up in Baskets, and ſeparated from the Sand. In the Year 1556, there was dug out of the Veins of a Rock in the Mines of *Callavia*, a Piece of Gold Ore as big as a Man's Head, having certain Perforations in it from one End to the other; and in all the Holes were little Kernels of Gold, as if melted and drop'd into them. The Owner of this valuable Piece of Ore was carrying it over to *Spain*, but the Ship was caſt away in the Voyage, and he periſh'd with his Treaſure.

Gold.

That Gold which is found in a Lump in the Mines, is call'd Virgin Gold, becauſe it comes pure out of the Mine, and needs no farther Preparation. The ſecond Sort is in Grains, not ſo fine as the firſt. The third is Gold mix'd with other Metals, and the Marcaſite or mineral Stone. This is call'd Gold Ore. And the fourth is Gold Duſt, mix'd with Sand at the Bottoms of Rivulets; and there is ten times more Gold found in ſuch Sands than is acquir'd all the other ways. All Stones which contain any Metal, are called Marcaſite. But the three principal Marcaſites are, thoſe that contain Gold, Silver, or Copper. The two firſt are in little Balls, of the Bigneſs of a Nut, almoſt round, weighty, and browniſh without, but within the firſt is of the Colour of Gold, the other of Silver. Gold is often found mix'd with Silver or Copper.

Marcaſites.

Silver. Potoſi.

There are a great many Silver Mines in ſeveral Parts of *Peru*; but thoſe of *Potoſi* are the richeſt. Theſe were diſcover'd in the Year 1545, about fourteen Years after the *Spaniards* invaded that Country.

An *Indian*, purſuing his Game up the Mountain of *Potoſi*, and being like to fall, laid hold of a Shrub, that grew upon a Vein of Silver, to ſave himſelf; and happening to pull it up by the Roots, thereby diſcover'd the rich Metal underneath. He kept the Thing ſecret till he had drawn from it Silver enough to enrich himſelf and his Family; but at Length it was diſcover'd to the *Spaniards*, who thereupon pareel'd it out among the Adventurers. That which made the Mines of *Potoſi* the more valuable, was, that they

were

were never hinder'd working by Water, though they had ſunk them two hundred Fathom deep. The firſt forty Years theſe Mines of *Potoſi* were wrought, there were regiſter'd *One hundred two thouſand Millions of Crowns*, beſides a great deal that had been carried off without paying Cuſtom; but this muſt needs have been a Miſtake.

Quick-ſilver Mines.

Another Part of the Riches of *Peru* conſiſts in their Quickſilver, of which they have ſeveral Mines in the Audience of *Lima*, particularly in the Mountains of *Oropeza* and *Guancavilca*, near the City of *Guamanga*. It is found in a kind of Stone called *Cinabar*, which likewiſe yields Vermilion. The Native *Indians* had long wrought theſe Mines before the *Spaniards* arrived, without knowing what Quickſilver was. They ſought only for the Cinabar or Vermilion, to paint their Faces and Bodies on Rejoicing-Times, and to beautify the Images of their Gods.

As to the Manner of refining, or ſeparating Quickſilver from the Ore; they take the Stone, in which it is found, and beating it to Powder, put it into the Fire in Earthern Pots, and the Stone being melted, the Quickſilver ſeparates itſelf, and aſcends, till it encounters the Top of the Pot, and there congeals. They unſtop the Pots, and draw out the Metal, when it is cold; for if there remain any Fume or Vapour, it endangers the Lives of the Workmen. They put the Quickſilver, when it is melted, into Skins, for it keeps beſt in Leather; and thus they ſend it to *Potoſi*, where they ſpend above ſeven thouſand Hundred Weight in refining Silver, every Year, beſides what is ſpent at other Mines.

Quickſilver is found ſometimes incloſed in its own Mineral, and ſometimes fluid, and of as changeable a Figure as we ſee it. When it is found liquid in the Ground, the Slaves who gather it have nothing to do but to ſtrain it through Shamois Leather, to cleanſe it from its Impurities: Quickſilver is ſo very weighty, that a ſolid Foot of it weighs nine hundred forty ſeven Pounds; and it is ſo exceeding ſtrong as well as weighty, that an hundred and fourſcore Pounds of Quickſilver will bear up an Iron Weight of fifty Pounds.

The Properties of it are ſo great, that into whatever Shape you metamorphoſe it, you may make it return to its firſt State, with a very little Diminution. As it is a very fluid Body, ſo it is more difficult to be found than other Metals; for it inſinuates itſelf into Earths, and into the Cleſts of Stones, ſo that you often loſe the Sight of it, when you think you are juſt going to take it up.

Cinabar. Cinabar is of two Sorts; the one natural, called *Mineral Cinabar*; the other artificial, called ſimple *Cinabar*: The natural is found formed in Stones that are red, ſhining, and weighty, in the Quickſilver Mines. The artificial Cinabar is made with three Parts crude Mercury, and one Part Sulphur mix'd, and put into ſubliming Veſſels over a gradual Fire. Vermilion is Cinabar in Stone, ground with Urine, or *Aqua Vitæ*. As to the precious Stones of *Peru*, they have great Plenty of Emeralds here as well as in *Mexico*. They have alſo Turquoiſes, which are of a blue, or azure Colour, as the Emeralds are green. Chryſtal is alſo found here: And Pearls they had in greater Plenty in *South*, than in *North America*; but thoſe Fiſheries ſeem to be almoſt exhauſted.

Vermilion. Precious Stones. Pearls.

CHAP. XVI.

The Hiſtory, Religion, and Government, of the Peruvians, *before the* Spaniſh *Conqueſt.*

Ancient History, Religion, Government.

GARCILIASSO *De la Vega* has attempted to give us the Hiſtory of *Peru*, even before the *Inca's* founded that Empire, and was as well qualified for ſuch an Undertaking, as any Man could be in ſuch Circumſtances, being deſcended from the Royal Family of the *Inca's*, and bred up among his Relations before they had received the *Spaniſh* Cuſtoms. This Gentleman made it his Buſineſs for ſeveral Years to inform himſelf, from his Relations and Acquaintance, of the Hiſtory and Cuſtoms of their Anceſtors; and afterwards came over to *Spain*, where that Court put him upon digeſting his Obſervations, and making them publick; which he did, under the Title of, *The Royal Commentaries of Peru*. But the *Spaniards* took Care that this Hiſtory ſhould be ſo model'd, as to caſt as little Reflection on their Conduct in ſubduing *Peru* as poſſible; and the Hiſtorian himſelf had a ſtrong Bias towards the Family of the *Inca's*, from whom he was deſcended, aſcribing the Civilizing of that People to them. And that he may reflect the greater Honour on the *Inca's*, he repreſents the People of *Peru*, before the Foundation of that Empire, as more ſavage than the Brutes themſelves. He ſays, every Tribe and Family had its particular God; that they ador'd Trees, Mountains, and Rivers, and worſhipped Lions, and Tygers, and all manner of Animals: Others made Stocks and Stones the Objects of their Adoration; and ſacrificed not only their Enemies, but their Children to them, and eat them in great Feſtivity when they had done. But ſure ſuch monſtrous Relations need no Confutation; the very repeating them is ſufficient to diſcredit them. However, from ſuch Stories as theſe, which the *Peruvians* ſeem to have been very full of, the *Spaniards* firſt took the Hint, and repreſented the *Peruvians* themſelves to be addicted to the ſame barbarous Cuſtoms, and made this a Pretence for oppreſſing and enſlaving them: And when both *Spaniards* and *Indians* contributed to ſupport the Truth of ſuch Relations, no wonder they were ſoon propagated all over *Europe*.

The Reformation of the *Peruvians* by the *Inca's*.

De la Vega tells us, that all theſe barbarous Cuſtoms were aboliſh'd by the *Inca's*, when they laid the Foundation of their Monarchy; of which they had in their Family the following Tradition.

That their Father, the Sun, beholding Mankind in that ſavage State above related, ſent a Son and Daughter of his own from Heaven to Earth, to give them Laws and Precepts to govern themſelves by, that they might live like Men, and enjoy the Fruits of the Earth. With ſuch Inſtructions, their Father placed his two Children in the great Lake of *Titicaca*, from whence they were to begin their Labours, giving them a little Wedge of Gold, which they were to ſtrike into the Ground at every Place they

reſted; and where-ever this Wedge ſhould ſink out of their Sight, in that Place they were to make their Reſidence, and the People ſhould reſort to them to be inſtructed, their Father conſtituting them Lords and Sovereigns over all Men. That travelling Northward from the Lake of *Titicaca*, and ſtriking the Golden Wedge into the Earth in the Valley of *Cuſco*, there it diſappear'd; and thereupon they agreed to aſſemble the People there, in order to inſtruct them in the Doctrines committed to them: Accordingly the Man and the Woman ſeparated, the one going North, and the other South, declaring to all they met, that their Father, the Sun, had ſent them to be their Teachers and Benefactors, to draw them from that ſavage Way, and inſtruct them in all ſuch Arts as might render their Lives comfortable. That the Savages, obſerving theſe two Perſons cloth'd and adorn'd, and that by the Gentleneſs of their Words, and the Grace of their Countenances, they manifeſted themſelves to be the Children of the Sun, they were ſtruck with Admiration, gave them entire Credit, and obey'd them as their Princes.

Great Multitudes being aſſembled, they led them to that Spot of Ground where *Cuſco* now ſtands, laid out the Plan of the City, and inſtructed the People how to prepare Materials for building it. In the next Place, the *Inca* ſhewed the Men how to cultivate their Lands, and bring the Streams of Water into them; while his Queen taught the Women to ſpin, and weave their Cotton into Garments; to dreſs their Meat, and other Parts of Houſewifry. This Colony flouriſhing extremely, drew in the Neighbouring Tribes to join them. And now the *Inca*, finding himſelf in a Condition to enlarge his Territories by Force, taught the People the Uſe of Arms; and thoſe, who refuſed to ſubmit themſelves voluntarily, were compell'd by Force to relinquiſh their former vagrant Life, and be obedient to the Laws of Society. This firſt *Inca* was named *Manco Capac*, and his Queen *Coya Mama*.

Manco Capac, firſt *Inca*.

His Laws.

Manco Capac did not only teach all his Subjects to adore his Father, the Sun, but inſtructed them alſo in the Rules of Morality and Civility, directing them to lay aſide their Prejudices to each other, *and to do as they would be done by*. He ordain'd, that Murder, Adultery, and Robbery, ſhould be puniſh'd with Death: That a Man ſhould have but one Wife; and that in Marriages they ſhould confine themſelves to their reſpective Tribes: And over every Colony, he placed a Caracas, or Prince; who govern'd the People under them, as their Subjects. He alſo built a Temple to the Sun, taught the People to offer Sacrifices, and other Religious Rites, and erected a Cloyſter for a certain Number of ſelect Virgins, who were all to be of the Blood Royal, and dedicated to the Sun.

Religious Rites.

Among other Inſtitutions, this *Inca* commanded, that all the Males of his Family ſhould have their Heads ſhav'd. He alſo order'd them to bore their Ears, which they did with a Thorn, and afterwards ſtretch'd the Orifice to ſuch a Degree, that it would hold the Wheel of a ſmall Pulley. They were alſo order'd to wrap a Wreath, or Cloth of various Colours, four or five times about their Heads, in Form of a Turbant. Which three Things were to diſtinguiſh the Royal Family of the *Inca's* from other People. Laſtly, having reign'd many Years, he adopted his chief Miniſters for his Children, conferring on them his own Title of *Inca*, which they and their Poſterity retain'd ever afterwards.

Sinchi Roca, ſecond *Inca*.

The *Inca* being dead, was ſucceeded by his eldeſt Son *Sinchi Roca*, whom he had by his Wife *Coya Mama* his Siſter. He alſo, after the Example of his Father, married his eldeſt Siſter by the ſame Mother; and this was the Practice of all ſucceeding *Inca's* in their Marriages, tho' they did not ſuffer their Subjects to marry their Siſters, or near Relations. The Corps of *Manco Capac* was afterwards embalm'd, and placed in the Temple of the Sun, where he was worſhip'd as a God; as were all the ſucceeding *Inca's*: But both the Sun and the *Inca's* ſeem to have been worſhipped as inferior Deities; for the *Peruvians* acknowledg'd one Almighty God, Maker of Heaven and Earth, whom they call'd *Pacha Camac*, *Paca* in their Language ſignifying, *the Univerſe*, and *Camac*, *the Soul*: *Pacha Camac* therefore ſignified him who animated the World. They never took this Name into their Mouths, but with the greateſt Veneration, and Signs of Devotion: But becauſe they did not ſee this Supreme Deity, they therefore ſeldom erected Temples, or offered Sacrifices to him, but worſhipped him in their Hearts as the *Unknown God*. The Name by which the *Peruvians* called the Devil, was *Capay*, which they never pronounced but they ſpit, and ſhewed other Signs of Deteſtation. Their principal Sacrifices to the Sun were Lambs; but they offered alſo all Sorts of Cattle, Fowls, and Corn, and even their beſt and fineſt Clothes; all which they burnt in the Place of Incenſe. They had alſo their Drink-Offerings, made of their Maiz, or *Indian* Corn, ſteep'd in Water; and when they firſt drank after their Meals, they dipp'd the Tip of their Finger into the Cup; and lifting up their Eyes with great Reverence to Heaven, gave the Sun Thanks for their Liquor, before they preſumed to take a Draught of it.

The Peruvians acknowledg'd one God, Maker of Heaven and Earth.

All the Prieſts of the Sun that officiated in the City of *Cuſco*, were of the Royal Blood; tho' the inferior Officers were taken out of thoſe who had been adopted into the Privileges of the *Inca's*: The High Prieſt was either the Brother, or Uncle of the King, or one of his neareſt Relations. In other Provinces, Perſons of Diſtinction among the Natives were made Prieſts, but the High Prieſt was always an *Inca*. Beſides the Worſhip of the Sun, they paid ſome kind of Adoration to the Images of ſeveral Animals and Vegetables, that had a Place in their Temples. Theſe were the Images brought from the conquer'd Countries, where the People ador'd all manner of Creatures, animate or inanimate; for whenever a Province was ſubdu'd, their Gods were immediately remov'd to the Temple of the Sun at *Cuſco*, where the conquer'd People were permitted to pay their Devotions to them, for ſome time at leaſt.

The People were divided into Decurions, or Tythings, of which an exact Regiſter was kept: Over every Decurion, or ten Families, the Maſter of one of the Ten was appointed to preſide. Over every five of theſe Diviſions was another Decurion, who had the Command of fifty Families: Another Officer was placed over an Hundred, another commanded five Hundred, and the chief Officer a Thouſand; but no Man was ſuffered to govern more than a thouſand Families. The loweſt Decurion was to ſee that thoſe under his Command wanted none of the Neceſſaries of Life; to deliver out to them Corn to ſow their Lands, Wooll for their Clothing, and Materials to build their Houſes, and to take care of ſuch as were ſick and infirm: He was alſo to be the Cenſor of their Actions, and inform his Superiors of any Crimes, or Immoralities, committed by thoſe under his Care, which were to be puniſh'd by them; but as for trivial Offences, he had

had the Correction of them himſelf, and the Deciſion of Controverſies of ſmall Moment. Where Differences aroſe between two Provinces, theſe were decided by Commiſſioners appoined by the *Inca* himſelf; and there was a General Cenſor appointed to inſpect the Conduct of the chief Officers, and Miniſters of State, who were puniſh'd capitally, if ever they oppreſs'd the Subjects, or betray'd their Truſts.

The Conduct of Parents and Maſters of Families was nicely inſpected; and the Decurion was anſwerable for the Faults of the Children of thoſe under their Care: Like the *Chineſe*, they inculcated nothing more than a moſt reſign'd Submiſſion of Children to their Parents, and the utmoſt Reſpect in ſpeaking to their Superiors. As every Family was regiſtred, ſo the Decurions took care to intimate ſuch Alterations as happened in them by Births, Marriages, or Deaths; ſo that the *Inca's* were always apprized of the State and Condition of their Provinces, the Numbers of their Subjects, and the Forces and Revenues proper to be required of them upon all Occaſions. They were inform'd alſo of ſuch Calamities and Misfortunes as befel them, and the *Inca's* thereupon immediately ſupplied them with whatever was wanting; ſo that they might juſtly be ſtil'd, Fathers and Guardians of their People; and one of the *Inca's* Titles was, *A Lover of the Poor:* And ſo dutiful were their Subjects, that in this vaſt Empire, it was rare to find one Perſon convicted of a Crime within the Space of a Year.

Sinchi Roca, the ſecond *Inca*, anſwered the Name that had been given him, the Word *Sinchi* ſignifying *Wiſe*, and that of *Roca*, *Valiant*. This Prince having ſolemnized his Father's Funeral, inſtead of being crown'd, had a Wreath of various Colours bound about his Temples, ſuch as the ſupreme *Inca's* wear. He propoſed to the *Caraca's*, the making an Expedition to the South, to ſummon the neighbouring Nations to acknowledge the Sun for their God, and the *Inca* for their Sovereign. The *Caraca's* expreſſing their Readineſs to attend their Prince, he ſet forward at the Head of a numerous Army, employing Heralds to march before him, and declare the Intent of his Approach: And the People were ſo alarm'd with the Gentleneſs of his Adminiſtration, that they immediately ſubmitted to him, without Compulſion; and during his whole Reign, he never engag'd in War, or compelled any People to ſubmit to him by Force, though he conſiderably enlarged his Empire.

Sinchi Roca having reigned many Years, in Imitation of his Predeceſſor, declared he was going to repoſe himſelf with his Father the Sun; and dying ſoon after, was ſucceeded by *Loque Yupanqui*, his Son by his Wife and Siſter *Mama Cora*. This *Inca* was not altogether ſo peaceable as his Predeceſſor; for thoſe Nations that refuſed to obey him on his firſt Summons, were treated in a hoſtile Manner, till they made their Submiſſion; and were contented to forſake their former Laws and Cuſtoms. He extended his Conqueſts to the Southward of the Lake *Titicaca*, and taught the ſubdu'd People how to cultivate their Grounds, to introduce Rivulets into them, to make Aqueducts, to build, to plant, and clothe themſelves decently. *Mayta Capac*, the fourth *Inca*, enlarg'd his Dominions by the Conqueſt of ſeveral other Nations lying to the Southward of the Lake of *Titicaca*. There is little elſe remarkable in this Reign, unleſs it be the *Inca's* making a great Float of Oziers, on which he tranſported his Army over great Rivers, and invaded his Enemies, who thought themſelves ſecur'd by thoſe Waters from all Invaſions: And that this ſo aſtoniſh'd thoſe People, that they ſubmitted to the *Inca* without ſtriking a Stroke. *Capac Yupanqui*, the eldeſt Son of *Mayta Capac*, ſucceeded his Father, and ſeems to have been an unactive Prince. *Inca Roca*, eldeſt Son of the former Emperor, ſucceeded him. The *Spaniſh* Writers make this *Inca* one of the principal *Peruvian* Law-givers, and have given us ſome of his moſt celebrated Sayings. *Inca Roca* was ſucceeded by his eldeſt Son *Yahncor Huacac*; in whoſe Reign there was a great Rebellion of the *Chanca's*, inſomuch that the *Inca* abandon'd the capital City, leaving it to be defended by his Son *Viracocha*, who gave the *Chanca's* a great Defeat. After this Victory, *Viracocha* became extremely popular; and it was agreed to depoſe the old *Inca*, and advance his Son to the Imperial Dignity; which the Son very readily accepted, and the Father was afterwards content to lead a private Life in one of his Palaces. This *Viracocha* is repreſented as one of their moſt victorious Princes, and ſaid to be worſhipped as a God. It is reported alſo, that the *Inca Viracocha* foretold, that, after the Succeſſion of a certain Number of Kings, a People ſhould arrive from far diſtant Countries cloth'd like Angels, who ſhould ſubvert their Religion and Empire: Which they held to be fulfill'd at the *Spaniſh* Conqueſt.

Fifth *Inca*. Sixth *Inca*. Seventh *Inca*. Eighth *Inca*.

The *Inca Viracocha* dying, was ſucceeded by his eldeſt Son *Pachacutec*, who is ſaid to have ſubdu'd many Nations by the Conduct of his Brother *Capac Yupanqui*; for this Emperor ſeldom took the Field in Perſon, but ſpent his Time in erecting magnificent Temples and Palaces, regulating his civil Government, planting Colonies, and making Improvements in ſeveral Parts of his Empire. *Yupanqui* his eldeſt Son ſucceeded him, and extended his Empire beyond the Mountains of the *Andes* two hundred Leagues and upwards. This *Inca* was unfortunate in an Expedition againſt the Nation of the *Chirihuana's*, which inhabited another Branch of the Mountains of *Andes*. But turning his Arms to the Southward, he reduced ſeveral Nations in the Country of *Chili*; inſomuch that in his Time the *Peruvian* Empire is ſaid to have been of a thouſand Leagues Extent from North to South. This Prince erected ſeveral ſtately Edifices, and among the reſt the celebrated Caſtle of *Cuſco*, already deſcribed. He left alſo between two and three hundred Children, more legitimate (whoſe Mothers were of the *Inca* Family) than illegitimate (who were born of other Women.) Moſt of the *Inca's* had as many Children, looking upon it as a Duty incumbent on them to increaſe the Blood Royal, and render them as numerous as poſſible: It being for the Honour of their God and Father the Sun to have a numerous Progeny, as they pretended. But the Privilege of a Plurality of Women, was never indulg'd to the Vulgar.

Ninth *Inca*. Tenth *Inca*.

Inca Tupac Yupanqui carried his Arms to the North, as far as the Equator, and ſubdued Part of the Kingdom of *Quito*, and having ſpent two Years in this War, ſent for his Son *Huana Capac*, to whom he committed the Care of finiſhing that Conqueſt, and return'd to *Cuſco*. *Tupac Yupanqui* dying, was ſucceeded by *Huana Capac*, who ſpent the firſt Year of his Reign in mourning and ſolemnizing his Father's Funeral, as their Laws required, and then viſited the ſeveral Provinces of his Empire. At a Feſtival, when his eldeſt Son was to receive his Name, he cauſed a Chain of Gold to be made of two hundred Yards in Length, and of the Thickneſs of a Man's Wriſt, which was carried by thoſe that danced at that Solemnity: For the Cuſtom was, for an hundred Men, and

Eleventh *Inca*. Twelfth *Inca*.

and ſometimes two hundred or more, to take Hands and dance in a Ring together; and inſtead of joining Hands the *Inca* ordered, that every one of the Company ſhould take a Link of this Chain in his Hands, and dance as uſual, with Muſick of all Kinds: The *Spaniards* arriving not many Years after, made ſtrict Enquiry after this invaluable Chain, but it was conceal'd from them by the *Mexicans*, which might be one Occaſion of the *Spaniards* uſing them ſo cruelly. But however that was, the young Prince receiv'd the Name of *Huaſcar*, or *The Chain*, from this rich Utenſil. *Huana Capac* proceeded to enlarge his Territories by his Arms, and conquer'd the famous Valleys of *Tumpez* and *Pachacamac*, with the Iſland of *Puna*, at the Mouth of the River *Guiaquil*. A Rebellion breaking out in the great Province of *Chachapayas*, he was ſo fortunate as to ſuppreſs it with very little Loſs: After which, he turn'd his Arms towards the Country of *Manta*, on the Sea Coaſt, in which lies that Port to which the *Spaniards* afterwards gave the Name of *Porto Veio*. From *Porto Veio*, the *Inca* advanced as far as Cape *Paſſao*, reducing all the Nations on that Coaſt to his Obedience; which was not very difficult, the Country being divided into ſmall Tribes, that had no common Chief or any Dependance on each other. Having conquer'd this Province of *Paſſao*, which lies under the Equator, he determin'd to make this the Limits of the Empire towards the North. He left Garriſons behind him therefore to preſerve his Conqueſts, and return'd to his Capital City of *Cuſco*.

Huana Capac, after the Completion of the Conqueſt of *Quitto*, having taken the Daughter of that King to his Bed, had by her a Son, whom he named *Atahualpa*, or *Atabilipa*; and is ſaid to have been fonder of him than of any of his Children: But as none of the Sons or Daughters of the *Inca's* were held legitimate, but thoſe who were born of their Siſters, or ſome near Relation, and *Huaſcar* was the eldeſt legitimate Son of this *Inca*, he appear'd much diſquieted that his beloved Son ſhould become a Vaſſal to his eldeſt Brother, and that he could not leave him the Dominion of any one Province: But his Son *Huaſcar*, being acquainted with the Reaſon of his Father's Uneaſineſs, generouſly conſented he ſhould ſettle what Part of his Territories he pleaſed upon his beloved Son. Whereupon *Huana Capac* conſtituted *Atahualpa* King of *Quitto* in his Life-time.

It was in the Reign of *Huana Capac*, that the *Spaniards* firſt appeared with their Ships upon the Coaſt of *Paſſao* in *Peru*, which is ſituated under the Equator. They were commanded by the celebrated *Vaſco Nunez de Balbao*, who firſt diſcover'd the *South-Sea*. Three Years before the *Spaniards* appeared on the Coaſt of *Peru*, 'tis ſaid a Prodigy happen'd, which alarm'd and aſtoniſh'd the Court and all the Empire: At their grand annual Feſtival of the Sun, a Royal Eagle, call'd in their Language *Inca*, appeared ſoaring in the Air, and purſued by Hawks of all Sizes, which attack'd the Royal Bird with that Fury, that he fell down among the *Inca's* as they march'd in Proceſſion to the Temple of the Sun, through the great Market-Place of *Cuſco*: That they nouriſh'd this Eagle with all the Tenderneſs imaginable; but notwithſtanding their Care, the Bird died in a few Days; which the *Inca*, his Prieſts and Diviners, interpreted to preſage the total Ruin of the Empire and of their Religion, eſpecially as it was followed by violent Earthquakes, that over-turned ſome of the neighbouring Mountains. Upon the Sea-Coaſt alſo, the *Indians* obſerved the Tides, in their Ebbings and Flowings, did not keep their uſual Courſe; and Comets and Apparitions were ſeen in the Air. The Moon, in the midſt of a bright Night, was obſerved to be encompaſs'd with three large Haloes or Circles, the firſt of the Colour of Blood, the ſecond black, and the third like a Fog or Smoak; which one of their Adepts in Magick obſerving, came weeping into the Preſence of the Emperor *Huana Capac*, and declared, that his Mother the Moon, like a tender Parent, by this *Phænomena* made known to him, that PACHA CAMAC threatened his Royal Family and Empire with grievous Judgments. And all the Magicians and Aſtrologers of his Court, confirmed the Interpretation their Brother had made of theſe Signs in the Heavens. *Huana Capac*, however, endeavoured ſtill to conceal his Fears, and told the Magicians, that unleſs PACHA CAMAC himſelf reveal'd this to him, he would not believe it; and then diſmiſs'd them from his Preſence. Reflecting, however, on what had been ſaid, and conſidering how it agreed with the Predictions of an antient Oracle; That after the Reign of twelve *Inca's*, the Empire ſhould be diſſolved; and being informed at the ſame Time, that a prodigious Wooden Float, with tall Maſts and Sails, from whence iſſued terrible Thunders, Fire, and Smoak, was ſeen upon the Coaſt; and that the People on Board differed in their Perſons and Habits from all that had hitherto appeared in that Part of the World, he was in a Manner confounded. However, he did not neglect the Defence of his People, but aſſembled an Army, and marched them to the Sea Coaſt; but the Ship diſappearing, and nothing of that kind being ſeen again in ſeveral Years, their Apprehenſions began to wear off. Every Thing remain'd quiet, and *Huana Capac* died in Peace, and a good old Age, having reigned forty Years in great Splendor. Their Fears, however, began to revive, when the Emperor, upon his Death-bed, put his Subjects in mind of the old Prophecy, already mention'd, which he conjectur'd would be fulfilled not many Years after his Death: And adviſed his Subjects to ſubmit and ſerve that People, who were in every Reſpect ſuperior to them; their Laws better; and their Forces and military Skill rendering them invincible.

We meet with the like Omens recorded by Hiſtorians, before every conſiderable Revolution almoſt that has happened in *Europe*, whether antient or modern, and therefore we leave every one to paſs what Judgment he pleaſes on them. *Huana Capac* being dead, *Huaſcar*, his eldeſt legitimate Son, reigned in Peace at *Cuſco* ſix four or five Years after his Father's Death, without giving his Brother, the King of *Quitto*, any Moleſtation; but then conſidering the Loſs he had ſuſtained by yielding up one of the richeſt Provinces of the Empire to *Atahualpa*, and reflecting alſo, that his Brother might one Day rival him in the reſt of his Territories, he determined to reſume what he had too eaſily parted from: He ſent an Ambaſſador therefore to his Brother, to inform him, that, by the Laws of the Empire, the Territories of the *Inca* could not be divided. However, ſince it was the Will of his Father, he was ready to confirm the Ceſſion upon two Conditions: 1. That he ſhould not endeavour to make any Addition to his Territories; and, 2. That he ſhould hold them as a Vaſſal and Feudatary of his Empire. To both which Demands, *Atahualpa* ſeemed readily to conſent, and promiſed in a ſhort Time to attend on him at *Cuſco*, to do him Homage in Perſon. With which Anſwer *Huaſcar* was entirely ſatisfied, and diſmiſſed the Troops he had raiſed to

recover

recover *Quitto* by Force; while the ſubtle *Atahualpa* increaſed his Forces, under Pretence of doing his Homage with the greater Splendor.

Huaſcar being informed, when it was too late, that his Brother had levied an Army of 30,000 regular Troops, which were advanced within forty Leagues of *Cuſco*, found he had been deceived, and immediately iſſued his Orders to the Governors of the ſeveral Provinces, to rendezvous with their reſpective Forces at *Cuſco*, and form an Army for the Defence of that Capital. But *Atahualpa* had corrupted ſeveral of the Caraca's, who join'd his Forces in their March; and the reſt that obey'd the Summons of *Huaſcar* being new undiſciplin'd Troops, were not much to be depended on. However, being attacked by *Atahualpa*'s Army, they behaved in Defence of their *Inca* as bravely as could be expected, and the Battle laſted a whole Day. The Emperor's Guards, conſiſting of a thouſand Men, defended their Prince till they were almoſt all cut in Pieces; and at Length *Huaſcar* was taken Priſoner, and carried in Triumph to his Brother, who did not march with his Army in Perſon, but continued at a Diſtance, till he ſaw what Succeſs his Generals would have.

Huaſcar being thus unhappily made Priſoner, *Atahualpa* gave out, that he had no Intention to depoſe his Brother, but to defend his own Dominions, and to limit *Huaſcar*'s Prerogative, ſo as to make the Condition of his Subjects eaſy and happy: And thereupon ſummoned all the *Inca's* of the Empire to appear at *Cuſco*, that all things might be ſettled to the mutual Advantage of Prince and People. And having, on ſuch Pretences, got moſt of them into his Power, he cauſed a Body of his Forces to ſurround them and cut them in Pieces. Nor did his Rage ſtop here; he murdered all the Caraca's and Officers that appeared faithful to *Huaſcar*; and afterwards the Women and Children of the Family of the *Inca's*, whom he put to Death by various Tortures. However, between five and ſix hundred of the Blood of the *Inca's* did eſcape, by one Means or other.

Farther Enquiry into the Religion of the Incas.

It is generally ſaid, that the *Inca's* of *Peru* acknowledged no other God but the Sun, whoſe Offspring they pretended to be: And this poſſibly may be true of the firſt *Inca's*; but ſome of them afterwards invading that Part of the Country where *Lima* ſtands, and meeting with a notable Oppoſition, they were obliged to indulge that People in the Profeſſion of their antient Religion, and the Worſhip of the Almighty Inviſible God, and to promiſe not to demoliſh their Temple, before they would ſubmit to their Dominion. This Temple ſtood in a fine Valley, a little Diſtance from *Lima*, and was dedicated to PACHA CAMAC, the inviſible or unknown God, who created and ſuſtains all Things, and was ſtanding when the *Spaniards* arrived in *Peru*; and here they found an inconceiveable Treaſure, that had been dedicated to the God PACHA CAMAC, whoſe Name was communicated to the Valley wherein the Temple ſtood, which is ſtill called *The Valley of Pacha Camac*.

The Temple of Pacha Camac.

The *Inca's* did not only permit this People ſtill to adore their God PACHA CAMAC, but ſeem to have been convinced, from the Time of this Conqueſt, that there was one Almighty Inviſible Being, that created Heaven and Earth; and that the Sun was his Vice roy or Lieutenant. Others made two Gods of them; the one viſible, and the other inviſible. And ſome of the *Inca's*, particularly *Huana Capac*, looked upon the Sun as a mere Creature, directed and governed in all his Motions by the Supreme God. From whence it is natural to infer, that the *Inca's*, notwithſtanding the Reformation they pretended to have effected in the Provinces they conquered, did in ſome Parts of their Conqueſts introduce their own Idolatry, in the Room of the Worſhip of the one only God, or, at leaſt, obliged the People to worſhip the Sun as well as God, and conſequently adulterated rather than reformed their Religion. And 'tis very poſſible, that many of the People they ſubdued might equal, if not ſurpaſs them, in the Innocence and Regularity of their Lives, as well as in the Purity of their Religion.

The principal Feſtivals of the Inca's.

The *Inca's* had four grand Feſtivals annually, beſides thoſe they celebrated every Moon. The firſt of their great Feaſts, called *Raymi*, was held immediately after the Summer Solſtice, which they did not only keep in Honour of the Sun, but in Commemoration of their firſt *Inca*, and his Wife and Siſter. At this Feſtival all the Vice-roys, Generals, Governors, Caraca's, and Nobility, were aſſembled at the Capital City of *Cuſco*. The Emperor officiated at this Feſtival as High-prieſt. The Nobility, at this time, were crown'd with Garlands or Coronets of Gold, adorned with Flowers and beautiful Feathers, and their Garments were in a Manner plated with Gold. The Governors of Provinces carried the Enſigns and Colours of their ſeveral Countries, and marched at the Head of their reſpective People. They faſted three Days, as a Preparative to this Feaſt, eating nothing but unbaked Maiz and Herbs, and drinking Water. The Faſt being ended, on the Eve of the Feaſt, the Prieſts prepared the Offerings, while the Virgins were employed in kneading Dough, and making Bread for the *Inca's*.

The Ceremony of adoring the Riſing Sun.

The Morning being come, the *Inca*, accompany'd by his near Relations, went in Proceſſion at Break of Day to the Market-place bare-footed, where they remained in Expectation of the Riſing Sun, which no ſooner appeared but they fell down and adored the glorious Planet, acknowledging him to be their God and Father. The Caraca's, vaſſal Princes, and Nobility, aſſembled ſeparately in another Square, and perform'd the like Ceremony. After which, the King riſing upon his Feet (while the reſt remain'd in a Poſture of Devotion) took two great Gold Cups in his Hands, fill'd with their common Beverage, and invited all his Relations to partake with him, and pledge him in that Liquor. Then he poured the Drink out of the Bowl in his Right-hand into a ſmall Stone Channel, which convey'd it to the Temple: After which, having drank of the Bowl in his Left-hand, he diſtributed the Remainder to his Kindred *Inca's*, who waited with little Gold and Silver Cups to receive the Liquor. The Caraca's and Nobility drank of another Cup of the ſame kind of Liquor, prepared by the Wives of the Sun.

Sacrifices.

This Ceremony being ended, the whole Company advanced bare-foot to the Gate of the Temple, and the *Inca* and his Relations entering the Doors, adored the Image of the Sun, while the Caraca's worſhipped in the great Court before the Gate of the Temple. The *Inca* now offered the Vaſes with which he performed the Ceremony of Drinking, and the reſt of the Royal Family delivered theirs into the Hands of the Prieſts. Then the Prieſts went out into the Court, and received from the Caraca's their Offerings.

Theſe Offerings being made, great Droves of Sheep and Lambs were brought; out of which the Prieſts choſe a black Lamb, and having kill'd and open'd it, made their Prognoſticks and Divinations thereupon relating to Peace and War,

and other Events, from the Intrails of the Beast; always turning the Head of the Animal towards the East, when they killed it. After the first Lamb, the rest of the Cattle provided were sacrificed, and their Hearts offered to the Sun. Their Carcasses were flea'd and burnt, with Fire lighted by the Sun's Rays. Some of this Fire was carried to the Temple of the Sun, and to the Cloister of the Select Virgins, to be preserv'd till the following Year.

The Sacrifices being over, they returned to the Market-place, where the rest of the Cattle and Provisions were dress'd and eaten by the Guests; and after they had done eating, great Quantities of Liquor were brought in. Then the Emperor, being seated on a Golden Throne, ordered his Relations the *Inca's* to drink in his Name with the most celebrated Generals, Governors, and Nobility of the respective Provinces. The *Inca's* thereupon carried Bowls of Liquor to the Persons thus distinguished, telling them the supreme *Inca*, invited them to drink with him, and they were come to drink with them in his Name; whereupon the Generals, each of them taking a Cup, lifted up their Eyes to the Sun, and having drank, returned the Bowl back to the *Inca's*, with the profoundest Adoration. Bowls of Liquor also were carried by the *Inca's* to the rest of the Lords, but to these they drank in their own Names, and not in the Name of the Emperor. In return of this Compliment, the principal Lords filling their own Bowls, approached the Throne with the greatest Reverence, and in their Order drank to the Emperor, who received it of them, and it was reckoned a peculiar Mark of Respect where the Emperor pledg'd any one of them heartily. The rest of the Caraca's and Noblemen drank to the Royal Family of the *Inca's*, who first drank to them in their own Names; and then retiring to their respective Stations, the Musick play'd; and their Dances, Masquerades, and all other Diversions, were practised, which were in use among the several Nations of *Peru*. This Festival was continued in the same Manner nine Days successively, only there were no Offerings or Sacrifices after the first.

Second Festival. A second Festival was kept every Year on the conferring Military Honours, great Regard being had to those who behaved well in their Country's Service.

Third Festival. Their third Festival was in the Spring, when their Corn first appeared, on which Occasion Sheep and Lambs were sacrificed.

Fourth Festival. The fourth was celebrated on the New Moon, after the Equinox in *September*, when they ador'd the Sun as it rose, as at their grand Festival, and pray'd him to avert all Calamities.

Monthly Feasts. Their monthly Feasts were celebrated by the Priests within the Temple, at which times Sacrifices of Sheep, Lambs, Fowls, and other Animals, were made to the Sun, but no publick Processions.

The Posture of Adoration. We should have observed, that the People fell down on their Knees and Elbows when they adored the Sun, covering their Faces with their Hands; and that the *Peruvians* expressed their Veneration for the Temple, and other holy Places, by putting off their Shoes, as the *Chinese*, the People of the *East-Indies*, and other *Asiaticks* do, and not by uncovering their Heads, as the *Europeans* do at Divine Service.

Their Notions of a future State. The *Peruvians*, it is evident, believed the Soul survived the Body: But when the *Spanish* Missionaries add, that they believed a Resurrection of the very same Bodies, we doubt they impose upon us; for the Resurrection of the same Body, is surely a Doctrine peculiar to Christians. What View the *Spanish* Missionaries had in suggesting, that there was not a Doctrine, Rite, or Ceremony, practised by the *Romish* Church, but were found among the *Peruvians*, is not easy to conceive.

Oracles. We must not dismiss the Head of Religion, without taking some Notice of the *Peruvian* Oracles, and particularly the Oracle of *Rimac*, now *Lima*. The Valley of *Rimac* lies four Leagues to the Northward of *Pacha Camac*, and received its Name from a certain Figure of a Man, that answered Questions like the Oracle of *Apollo* at *Delphos*. This Idol was seated in a magnificent Temple, to which the great Lords of *Peru* either went in Person, or enquired by their Ambassadors, of all the Important Affairs relating to their Provinces. And the *Inca's* themselves held this Image in high Veneration, and consulted it after they conquered that Part of the Country.

Rimac.

CHAP. XVII.

Of the Invasion and Conquest of Peru *by the* Spaniards.

The Conquest of *Peru*. VASCO *Nunez de Balboa*, being recalled and put to Death by *Pedrarias*, Governor of *Terra-Firma*; *Pedrarias* afterwards employ'd several Pilots and Adventurers to plant Colonies in *Peru*: But so extremely difficult was that coasting Voyage, before they were acquainted with the Winds and Currents, that all the People he employ'd were discouraged from prosecuting the Discovery of that Country. Whereupon *Pedrarias* desisted from that Enterprize, despairing to overcome the Difficulties that had been represented to him. However, three bold Adventurers, *Pizarro*, *Almagro*, and *De Luque*, who then resided in his new Town of *Panama*, desired his Leave to attempt the further Discovery of *Peru* at their own Charges, which he readily granted, being of Opinion it would come to nothing.

The three principal Adventurers assemble Council.

Some Account of *Peru*. *Francis Pizarro*, who makes the greatest Figure in this Triumvirate, was a Native of *Truxillo* in *Spain*, of a noble Family. He served first in the Wars in the Islands of *Hispaniola* and *Cuba*, and afterwards accompany'd *Alonzo de Ojeda*, to the Gulph of *Darien*, to settle a *Spanish* Colony there. *Ojeda*, returning to *Hispaniola* for Recruits, left *Francis Pizarro* his Lieutenant in *Darien*, which very much raised the Reputation of this Captain. He afterwards attended *Vasco Nunez*, when he discovered the *South-Sea*; served under *Pedrarias* when he fixed a Colony at *Panama*; and was employed by that General in the subduing the Province of *Veragua*; in which Expeditions he acquired the Reputation of a good Officer, and a Fortune sufficient to have satisfied any reasonable Man; but when he might have spent the Remainder of his Days in Ease and Plenty,

Plenty, he chose, in the Decline of Life, being upwards of fifty, to enter upon the Discovery of unknown Regions.

Some Account of *Almagro*.

Diego de Almagro, was born at *Almagro* in *Spain*, of a mean Original, but of a Genius equally enterprizing as the former, and who, in several Expeditions in the *West-Indies*, had amass'd a great deal of Wealth. These two residing at *Panama*,

Of *De Luque*.

associated themselves with *Ferdinand de Luque*, an Ecclesiastick of that Town, richer than either of them, and who was Proprietor of the Island of *Tabago*, in that Bay. This Gentleman had been acquainted with *Vasco Nunez* as well as the other two, and was pretty well assured that the Voyage would answer their Expectations, if they could overcome those Difficulties of contrary Winds and Currents, that had discouraged others. These three Gentlemen entered into Articles, never to abandon each other for any Hazards they might meet with in the Enterprize, till they had made a Conquest of *Peru*: And solemnly took their Oaths in publick, for the Confirmation of these Articles.

The Contract of the Adventurers.

Francis Pizarro was to command the first Party that went upon the Discovery; *Almagro* was to carry him Recruits from time to time, and *Ferdinand de Luque* was to remain at *Panama*, and lay-in Provisions to support the Enterprize. And whatever Effects should be acquired, after the Charges, and the Emperor's Fifth were paid, were to be divided equally amongst them.

Pizarro sails to *Peru*.

The three Partners having bought a Ship, victualled and equipped her, *Pizarro* embarked about the Middle of *November* 1525, with fourscore Men and four Horses, and setting Sail from *Panama*, sailed to Port *Pinas*, on the South-East Side of the Bay of *Panama*. Here *Pizarro* endeavoured to penetrate into the Country; but meeting with nothing but Bogs, or Mountains, over-run with Wood and Deluges of Rain, and the People having fled from their Habitations, so that no Provisions were to be had; he ran further down to the Southward, and then landing again, found the Country no better. Whereupon he sent the Ship to the Isles of *Pearls* for Provisions, and in the mean Time was followed by *Almagro* with two other Ships, and a Recruit of sixty Men and upwards. These two Captains meeting upon this wretched Coast, and landing their united Forces, had some Skirmishes with the Natives, in which *Almagro* lost an Eye; but happening to meet with a Parcel of Gold of the Value of 14 or 15000 Crowns, they resolved to persist in the Enterprize; in which they were the more encouraged by the Pilot *De Ruyes*, who, while *Pizarro* remained on Shore, ran down as far as Cape *Passao*, and making some Prisoners, was assured by them, that the Treasures of *Peru* were much beyond any Thing that had hitherto been reported of them. Whereupon he returned to *Pizarro* with the agreeable News. In the mean Time, *Almagro* returned to *Panama* with the Gold they had got, to procure another Re-inforcement, and found *Pedrarias* removed from his Government, and succeeded by *Peter de los Rios*, who permitted him to raise what Men he could. Whereupon he embarked again with forty Soldiers more, some Horses, Provisions, and Medicines, and returned to *Pizarro*, whom he found in a very miserable Condition, great Part of his Men being sick or dead. They removed therefore from that unhealthful Part of the Continent, and put on Shore in the Island of *Gallo*, where they remained fifteen Days, and then run along the Coast further to the Southward; however, they still met with such a drowned Country, and bad Weather, that even *Pizarro*'s Heart failed him, and the two Commanders were upon the Point of drawing their Swords, so hot was the Contest for and against proceeding in the Enterprize; but at length it was agreed, that they should go to the Island of *Gallo* again, where *Pizarro* should remain till *Almagro* went to *Panama* for Recruits: And great Care was taken, that none of the Men should write home, and discover their wretched Condition. But notwithstanding all the Care their Commanders took, one of them found Means to send a Paper, subscribed by most of the Men, desiring to be recalled, which was inclosed in a Bottom of Cotton Yarn, and thereby concealed from the Notice of their Officers. This Paper coming to the Hands of the Governor of *Panama*, he was so far from suffering *Almagro* to levy any more Recruits, that he sent a Ship, with a Commissary on Board, to the Island of *Gallo*, on purpose to bring back all the Men that survived. The Commissary arriving, *Pizarro* begged of him, that he would however suffer as many of the Men to remain with him as were willing to proceed in the Enterprize; which the Commissary consenting to, *Pizarro* drew a Line with the Point of his Sword, and haranguing his Men, told them they were at Liberty to return to *Panama*, if they thought fit; but it grieved him that they should now abandon the Enterprize, when they were upon the Point of reaping the Reward of all their Sufferings. But such were the Sufferings of these poor Wretches, that only thirteen Men and a *Mulatto* came over the Line; the rest embarked and returned to *Panama* with the Commissary.

The Commanders fall out

Pizarro deserted by all his Men, but thirteen and a Slave.

Pizarro, being thus left, removed to the neighbouring Islands of *Gorgona*, for the Benefit of fresh Water, and remained there till *Almagro* and *Ruyes* came to him with Refreshments, and some few Volunteers; on whose Arrival it was agreed to sail Southward; and having pass'd the Equator, they came to an Anchor in 3 Degrees South Latitude, and going on Shore in the Island of *St. Clara*, they found several Vessels and Utensils of Silver Plate, with Garments made of Cotton and fine Wooll, which were Offerings made to some Idols in this Island, where the Natives of *Puna* came at certain Seasons to worship them; but there were no constant Inhabitants on the Island. They spent two whole Years in this Voyage from the Island of *Gorgona*, in 3 Degrees of North Latitude, to the Bay of *Guiaquil* in 3 Degrees of Southern Latitude; a Voyage that may be performed in less than a Month, now we are acquainted with the Currents, Winds, and Seasons, upon the Coasts of *Popayan* and *Peru*.

While *Pizarro* and *Almagro* lay in the Bay of *Guiaquil*, they took several great Floats, with armed *Indians* on Board, that were going from *Tumbez*, to invade the Island of *Puna*, with which they were at War. From these *Indians* they learn'd, that there was a great Town and Castle at *Tumbez*, a magnificent Temple, a Convent of Select Virgins, and abundance of Gold and Silver Vessels, and that the Country abounded with Corn and Fruits. Whereupon *Pizarro* treated the *Indians* with great Civility, and gave them their Liberty to return to the Continent with their Floats; and let them know, that they came as Friends, and did not design any manner of Hurt or Damage to the Natives. These *Indians* acquainting their Lord, the Cacique of *Tumbez*, with the Wonders they had seen, and informing him, that the *Spaniards* came to visit that Coast in a friendly Manner, the Cacique sent a Noble-man, or Orejon, on Board, with several Barks loaden with Provisions; and to invite the *Spaniards* to come on Shore. Whereupon one of the Sailors

Tumbez Town and Province.

They are hospitably received by the Peruvians.

was

was sent on Shore with the *Indians*, and brought twenty Butts of Water on Board with their Floats: The Orejon enquired of *Pizarro* in the mean time, what it was he went in search of? *Pizarro* answered, They came from the most potent King of *Spain*, to require them to submit to his Dominion, and be instructed in the true Religion; at which Answer, the *Peruvian* appeared a little astonished. However, *Pizarro* sent one of his Company on Shore with the *Peruvian* Nobleman, and a present of *European* Animals, an Ax, and some glittering Trifles, with which the Cacique was extremely pleased: And as the *Indians* were surprized to see so strange a People, and such Animals and Instruments as they brought with them, the *Spaniards* were no less surprized to find a fine Palace, and a magnificent Temple, and all manner of Vessels and Utensils form'd of Gold or Silver; and when the Man returned on Board, he seemed unable to declare the vast Treasures he had seen, and the Strength and Beauty of the Castle where the Cacique resided.

Peter de Candia goes on Shore alone, and takes a View of Tumbez.

Pizarro, desirous to be better acquainted with the Truth of what the Sailor related, *Peter de Candia*, a Man of good Judgment, offered to go on Shore, and take a particular View of the Place: And as he was of a Stature beyond the common Size, it was thought his Person would be the more admired: And to add to the Astonishment of the Natives, *Pizarro* made him put on a complete Suit of shining Armour, a Shield on his Left-arm, a broad Sword by his Side, and take a Fuzee in his Hands. The *Indians* were amazed to see a Man so tall, and of proportionable Bulk, his Body covered with glittering Steel, and a long Beard on his Chin, and immediately fled from the Shore to the Castle on his landing. *Peter* thereupon advanced towards the Gates, and giving them to understand that he had no hostile Intentions, was conducted to the Presence of the Cacique, and received with great Civility. The Cacique shew'd him the *Inca's* Palace, the Temple of the Sun, and the House of consecrated Virgins; and afterwards sent him on Board with a handsome Present of *Indian* Corn, Sheep, and Fruits. *Peter de Candia*, at his Return, related that every thing exceeded what the Sailor had reported; at which the *Spaniards* were transported with Joy; but not being prepared to make themselves Masters of these Treasures at this time, *Pizarro* run further down to the Latitude of 7 Degrees South, and discovered a pleasant fruitful Country; but then at the Importunity of his Men he returned back to *Panama*, in order to make Preparations for the entire Conquest of *Peru*.

Pizarro returns to Panama for more Forces.

Pizarro having succeeded at last, and brought from thence Specimens of the Wealth that abounded in *Peru*, the People were very ready to list in his Service; but the Governor of *Panama* opposed it. Whereupon the three principal Adventurers came to a Resolution, that *Pizarro* should go over to *Spain*, and procure an Authority and Recruits equal to so great an Undertaking. *Pizarro* accordingly set sail, and arriving in *Spain*, met with a very gracious Reception, on his presenting his Imperial Majesty with some *Peruvians* in their proper Habits, two or three *Peruvian* Sheep, and several Gold and Silver Vessels and Utensils of the Fashion of that Country. The Emperor recommended the Overtures he made to the Council of the *Indies*, who, having made their Report, *Pizarro* was authorized to proceed in the Conquest of *Peru*. He procured also the Title of Governor and Captain-General to be conferred on him for Life, with the Offices of Lord-Lieutenant, and Chief Justice.

Pizarro goes to Spain for a Commission and Recruits.

He was also empowered to erect four Castles in *Peru* where he thought proper, and retain the Government of them to him and his Posterity: He obtained for *Ferdinando de Lugne*, that he should be made Bishop of *Tumbez*; and constituted Protector-General of the *Peruvians*. *Almagro* was constituted Governor of *Tumbez*; and a twentieth Part of all the Revenues of the Country, when conquered, were to go to *Pizarro* and *Almagro*, two Thirds thereof to the former, and one Third to the latter; and *Almagro* was made a Gentleman, and his Bastard Son legitimate: The thirteen Men that remained with *Pizarro* in his Distress, on the Island of *Gallo*, were made Gentlemen, if they were not so before; and those that were Gentlemen then, were ordered to be knighted. Six *Dominican* Friars were also ordered to go over with *Pizarro*, as Missionaries to assist in the Conversion of the *Peruvians*.

Pizarro, repairing to his native Town of *Truxillo*, spent some Months in raising Men, and making Provisions for his Voyage, which having effected, he embarked at *Seville* with his four Brothers, *Ferdinand*, *John*, *Gonzalo*, and *Francis*, and arrived at *Nombre de Dios*, from whence he marched with his People to the City of *Panama*; but his ingrossing all the Honours to himself so disgusted *Almagro*, that he refused to assist in the intended Expedition, till *Pizarro* promised to relinquish the Title of Adelantado, and to give him an equal Share in whatever they should acquire: And upon these Concessions *Almagro* promised to assist him as formerly, and smothered his Resentment for the present, that the Service might not suffer.

Pizarro embarks again for Peru, in the Year 1531.

At length *Pizarro* embarked at *Panama* in three Ships, taking with him one hundred and eighty five Soldiers, thirty seven Horses, and such Quantities of Arms, Ammunition, and Stores, as might enable him to fix Colonies on the *Peruvian* Coast; but meeting with like contrary Winds he had done in the first Voyage, he was obliged to land above an hundred Leagues to the Northward of *Tumbez*: And now thinking himself strong enough to drive the naked *Indians* before him, he fell upon them, plundered their Towns, and made many of them Prisoners, without any manner of Provocation. But was afterwards so distressed, that his Forces were exceedingly diminished, and he perceived his Error, in not courting the Natives, being in no Condition to make a Conquest of *Peru* with the Forces he had left. He took most of the Treasures therefore he had plundered the *Indians* of, and sent his Ships with it to *Panama* to raise more Recruits, inviting at the same time some Adventurers from *Nicaragua*, and other Parts of *North-America*, to come and join him. And having, with infinite Labour, marched as far as *Tumbez*, he very fortunately found the *Peruvians* engaged in a Civil War, one Part of them adhering to their lawful Prince *Huascar*, and the other to *Atabalipa*, the Bastard Son of the preceding Emperor *Huana Capac*, as has been already related. In this War, the Inhabitants of the Vale of *Tumbez* adhered to their lawful Prince *Huascar*; and those of the Isle of *Puna*, took Part with the Bastard *Atabalipa*, as their Interest led them. *Pizarro*, finding himself not able, at this time, to attempt the Conquest of the whole Empire, took Part with the *Tumbezenes*, and joining their Forces, invaded the Island of *Puna*, which became an easy Conquest; and having taken all the Caciques of the Island Prisoners, he delivered them into the Hands of the *Tumbez* Generals, who immediately cut off their Heads. In the mean time, *Almagro* having sent *Pizarro* a considerable Re-

Finds Peru in a Civil War.

Pizarro joins the Party of the Bastard Atabalipa.

inforcement

forcement from *Panama*, and *Ferdinando de Soto* and other Adventurers arriving from *Nicaragua*, he thought himſelf in a Condition to carry on the War upon the Continent. Accordingly, having provided a ſufficient Number of Floats, he tranſported the Troops to *Tumbez*, where ſome of his People were attacked and cut off by the Natives; which was a Surprize to him, as he took them to be his Friends. The *Spaniſh* Writers give various Reaſons for this Alteration in the Conduct of the Natives of *Tumbez*. But whatever was the true Reaſon, it is evident, that they were put in ſuch Confuſion by the *Spaniſh* Horſe and Artillery, that they fled as the *Spaniards* advanced, and after the Slaughter of ſome Thouſands of them, were forced to abandon the Town and Caſtle, and even the whole Valley of *Tumbez*, leaving behind them all the Gold and Silver Plate, Emeralds, Pearls, and other rich Spoils, which lay heaped up in the Temple of the Sun, and the *Inca's* Palace; being ſo vaſt a Treaſure, that the *Spaniards* could ſcarce believe their Eyes, when they found themſelves ſo ſuddenly poſſeſſed of it: And ſuch was the Conſternation of *Atabilipa*, and his whole Court, when the Fugitives related what Slaughter the Thunderer's Ordnance made among them, and how impoſſible it was to eſcape the *Spaniſh* Horſes, that they concluded, if the *Spaniards* were not Gods, they were certainly Devils, and that it was not poſſible for any human Force to defend their Country againſt them. Of which *Pizarro* receiving Intelligence, reſolved to take Advantage of the Terror they were in, and march immediately to find out *Atabilipa*, whilſt he remained under that Deluſion; but he found it neceſſary to defer his March, till he had erected a ſlight Fortreſs on the Sea Coaſt, to which he gave the Name of *St. Michael's*. This was the firſt *Spaniſh* Colony planted in *Peru*, and here the firſt *Chriſtian* Church was erected in the Year 1531.

Pizarro reſolves to go to *Tumbez*, and poſſeſſes himſelf of a great Treaſure.

St. Michael's the firſt *Spaniſh* Colony and Church in *Peru*.

Pizarro, whoſe Buſineſs it was to prevent the *Peruvians* uniting againſt him, gave out that he was come in the Name of the great King of *Spain* to relieve the Oppreſſed, and do juſtice to thoſe that were injured; which he ſoon found had the Effect he expected; for the Emperor *Huaſcar*, having been depoſed and impriſoned by *Atabilipa*, his Friends immediately ſent an Embaſſy to *Pizarro*, that he would aſſiſt them in delivering their Prince from his Captivity; to whom the *Spaniſh* General returned a favourable Anſwer. And *Atabilipa*, who was yet ſcarce ſettled in the Throne, apprehending he ſhould ſoon be driven from it again, if the *Spaniards* joined with the Loyal Party, endeavoured by all poſſible Ways to gain the Favour of *Pizarro*. The *Spaniſh* Generals, finding they were like to meet with little Oppoſition from either Side, concluded they ſhould now ſoon be Maſters of thoſe immenſe Treaſures they underſtood were heaped up in the City of *Cuſco*, and of the Gold and Silver Mines from whence they were drawn. They began their March therefore to *Caxamalca*, where they underſtood the *Inca* then was, and carrying with them a Train of Artillery, which was drawn by the *Indians* preſs'd into their Service, advanced by ſlow Marches, ſending out Parties to diſcover the Country as they went along.

Pizarro marches to *Caxamalca*.

The Conſternation increaſing among the *Peruvians*, and the *Spaniards* approaching *Caxamalca*, *Atabilipa* apprehended there was no Safety for him but in his Submiſſion; and therefore ſent a ſolemn Embaſſy to *Pizarro*, by his Brother *Atahalipa*; together with rich Preſents of Gold and Silver Plate, and whatever his Country afforded. *Atahalipa* being admitted to the Preſence of *Pizarro*, told him, he was ſent by the *Inca Atabilipa*, to welcome him, and the reſt of the Sons of their common God and Father, the Sun; deſiring he would accept the ſmall Preſent he brought with him for the Refreſhment of his Troops in their March; telling him, that the *Inca* was impatient to ſee his Kindred, whom he underſtood to be of the like heavenly Extraction, and to whom he promiſed all Obedience. The Subſtance of *Pizarro's* Anſwer was, that the *Spaniards* were authorized by their High-Prieſt, the Pope, to convert the *Peruvians* to the *Chriſtian* Religion; and that the great Emperor of the *Chriſtians*, *Charles* V. had empowered them to enter into a League of Friendſhip with the *Inca*, if theſe Overtures were accepted.

The *Peruvian* Ambaſſador being diſmiſſed, *Pizarro* diſpatched his Brother *Hernando Pizarro*, and *Hernando de Soto*, attended by about thirty Horſe, and *Philip* the Interpreter, as Ambaſſadors to the *Inca Atabilipa*, who was then in the Neighbourhood of *Caxamalca*. The *Inca* being informed of their Approach, ordered a Detachment of his Army to advance, and conduct them to his Preſence. This Body of *Peruvians* attended the Ambaſſadors to the Palace; where they were conducted to the *Inca*, whom they found ſitting on a Chair of Gold, in the Midſt of his Officers and Courtiers. The Emperor aroſe from his Seat to receive them, and Golden Chairs were brought for the Ambaſſadors. After they were ſeated, the *Inca*, looking ſtedfaſtly on them, ſaid to his Courtiers, Behold the very Countenance, and Habit, of our God *Viracoche*, in the ſame Manner as our Anceſtor the *Inca Viracoche* deſcribed him in his Viſion. Immediately two Royal Virgins brought in each of them two golden Cups, filled with the Liquor uſually drank by the *Inca*, and bowing, delivered one of the Cups into the Hand of *Atabilipa*, and another to *Hernando Pizarro*. Whereupon the *Inca* and *Hernando* drank, and gave away their Cups. Then the other Virgin delivered one of her Cups into the Hands of the *Inca*, and the other to *Hernando Soto*, who had the Honour alſo to drink in like Manner with the Emperor. Then ſix Boys and as many Girls brought in green and dry Fruits; and one of the Virgins, addreſſing herſelf to the Ambaſſadors, ſaid, Ye Sons of *Capac Inca Viracoche*, take of theſe Things we offer, and it will extremely oblige us: Whereupon the *Spaniards* taſting of their Fruits, were amazed to find ſo much Civility and Politeneſs among a People they had been taught to look upon as barbarous.

The Collation being over, *Hernando de Soto* made a Speech to the Emperor; to which Speech the *Inca* returned an Anſwer; neither of which we ſhall inſert, becauſe it is unlikely the Copies preſerved of them ſhould be entirely genuine. The Ambaſſadors were afterwards diſmiſſed with large Preſents of Gold and Silver Plate; the *Inca* telling them, he would ſpeedily go to *Caxamalca*, and viſit the Sons of his God VIRACOCHE, and Meſſengers of the PACHA CAMAC. And accordingly, the next Morning, the *Inca* began his March towards the *Chriſtians*. Of which *Pizarro* having Notice, made Preparations to receive him; but far different from what the *Inca* expected: For he choſe out a large Square in *Caxamalca* for this Interview, ſurrounded by a Wall, in which there were but two Gates, and ordered his Horſe to divide themſelves, and draw up in three Squadrons behind ſome ruinous Buildings out of View. Then he planted his Artillery, ſo as it might do the greateſt Execution: And on an Eminence in the Middle of the Square he ſtood, at the Head of his Infantry, where he

Atabilipa marches to meet the *Chriſtians*.

propoſed to meet the *Inca*; commanding his Men, that as ſoon as ſeven or eight Thouſand of the *Inca's* Forces were entered the Square, they ſhould ſhut the Gates, and ſuffer no more to come in; and that they ſhould all be ready to fall on when he gave the Signal.

The *Inca* ſeem'd to have ſome Suſpicion of the Miſchief that was intended him, and halted a League before he came to *Caxamalca*, ordering his Generals to encamp there. Whereupon *Pizarro* ſent ſeveral Meſſengers, to deſire him to haſten his March: And the *Inca*, yielding to his preſſing Invitations, march'd forward, and entering the Gates of the Square, put himſelf into the Power of his treacherous Enemies. As the *Inca* was advancing to the Eminence where the *Spaniſh* Foot was drawn up, *Pizarro* ſent Father *Vincent Valverde* to meet him, and ſummon him to ſubmit himſelf and his Dominions to the Pope and the Emperor: Whereupon that Father went up to the Chair or Couch on which the *Inca* was carried, with a Croſs in one Hand, and a Breviary in the other, and made a long Speech; In which, it is ſaid, he gave an Account of the Trinity, the Creation, the Fall of Man, his Redemption, the Virginity of *Mary*, the Authority of the Pope, the Power and Magnificence of the Emperor *Charles*, and his Commiſſion to convert the *Peruvians* to *Chriſtianity*; requiring the *Inca* to renounce his own Religion, and ſubmit to the *Chriſtian*, and to the Authority of the Pope and the Emperor.

The *Spaniſh* Writers ſeem to diſapprove this Speech of the Friar's, as too imperious and aſſuming. They lament alſo that it was ill interpreted by *Philip* the *Peruvian*, who had no Notion himſelf of the *Chriſtian* Religion: Inſomuch, that when he came to ſpeak of the Trinity, as *that God was three, and yet one*, he ſaid, *God was three and one, that was four.* And when he came to mention the Generation of Mankind, and Original Sin by *Adam's* Fall, inſtead of ſaying, *That all the World ſinned in* Adam, he ſaid, *All the World heaped their Sins upon* Adam. Speaking of the Divinity of Chriſt, he ſaid he was a great Perſon, who died for Mankind; nor could he find Words to expreſs the Purity of the bleſſed Virgin. Speaking of the Power of the Emperor, and his ſending his Forces to conquer the World, he expreſs'd it ſo as if he had been Superior to all the Powers in Heaven and in Earth.

The Emperor apprehending, by the Concluſion of the Friar's Speech, that he was, by fair Means or Force, to renounce his Sovereignty, and become a tributary Prince by the Commands of the Pope and the Emperor, was extremely dejected, believing that the *Spaniards*, as God's Inſtruments, were come to take Vengeance on him and his People; and fetching a deep Sigh, repeated the Word *Altar*, which is as much as if he ſaid, *Moſt unhappy Man!* However, recollecting himſelf, he gave an Anſwer to Father *Vincent's* Speech; intimating, That he did not ſufficiently underſtand their Interpreter, but by what he could apprehend, their Demands were unreaſonable: That he imagined the great God they ſpoke of, was the ſame that the *Peruvians* called *Pacha Camac*: That he wondered at their requiring him to pay tribute to the Emperor only, ſince if it was due to any Body, it muſt, according to what they had ſaid, be to the Pope: Concluding, That he deſired to be informed, whether the Five which they highly honoured, (meaning the Trinity, the Pope, and the Emperor) were adored by them for Gods: "For if it be ſo, (ſaid he) you hold "more for Gods than we, who acknowledge no "other than PACHA CAMAC, who is the Supreme, and the Sun, who is inferior to him, "and the Moon, who is his Siſter and Wife."

The Speech ill interpreted

But after all, it is plain that theſe Speeches and Summons's of the *Spaniards* to the *Indians* to change their Religion, were but mere Grimace. *Pizarro's* Eyes were altogether fixed upon the Plunder, and he was prepared to cut the *Peruvians* in Pieces, before he knew what Anſwer would be given the Miſſionaries. This was manifeſt from the Event; for the *Spaniards*, weary of this long Diſcourſe, began to attack the *Indians*, and plunder them of their Gold, Silver, and Jewels; for they had put on their richeſt Ornaments that Day, to receive the Embaſſy ſent them (as they believed) from the univerſal Monarch of the World. In a Word, the Conference between the *Inca* and the Friar was ſcarce ended, before *Pizarro* made the appointed Signal for the great Guns to fire among the thickeſt of the *Indians*, and his Horſe to attack and trample them under their Feet, and the Dogs to be let looſe at them; while he, at the Head of the Infantry, march'd up to the Golden Chair, or Throne, on which *Atabilipa* was carried, and made him Priſoner. The poor *Indians*, when they ſaw what the Chriſtians chiefly aim'd at, threw themſelves between the *Spaniards* and their Prince, to prevent his being taken; but not a Man of them offered to lift up a Weapon to defend himſelf, their Emperor having commanded the contrary. But *Pizarro*, having made his Way over Heaps of the Slain, pulled down the Emperor from his Chair with his own Hands, in which Action he received a ſlight Wound from one of his own Soldiers, that ſtruck at the *Inca*; and the General was the only *Spaniard* that was hurt, tho' five thouſand *Peruvians* were killed that Day, with their Arms in their Hands.

The Spoils of the Field

Pizarro having ſeized the *Inca*, and conveyed him to his own Quarters, directed the Spoils of the Field to be collected and brought to him; conſiſting of large Gold and Silver Veſſels and Utenſils, fine Garments of various Colours, Jewels and Ornaments belonging to the *Inca*, the Royal Family, and great Officers. There were taken alſo ſeveral Ladies, Wives of the Caciques and Orejons, and ſome of the *Mamacona's*, or conſecrated Virgins: And *Pizarro* had the Confidence to command a ſolemn Thankſgiving to God to be obſerved that very Day, and in that very Field where the Ground was covered with the dead Bodies of the *Indians* they had thus murdered and plundered. Next Day he ſent out a Detachment of his Forces to plunder the *Inca's* Camp, where he met with another rich Booty; tho' 'tis ſaid the *Peruvian* Generals had carried off three thouſand Porters Burdens of Gold and Silver before the *Spaniards* arrived there: Therefore, in order to induce the *Indians* not to carry off any more of their Treaſures, he cauſed it to be proclaim'd that their *Inca* was alive, and that they were at liberty to come and attend him. Whereupon ſeveral of the great Officers returned to *Caxamalca*, to attend their captive Sovereign. He alſo cauſed the *Inca's* Women to be brought to him, tho' he ſtill kept him in Fetters; which made the *Inca* apprehenſive they would take away his Life in the End, unleſs he could obtain his Liberty: Having obſerved, therefore, the inſatiable Thirſt of the *Spaniards* after Gold and Silver, he promiſed to give them as much of thoſe as a great Room in the Caſtle of *Caxamalca* would hold, for his Freedom; and propoſed their ſending ſome *Spaniſh* Officers with his People to *Cuſco*, to the Temple of PACHA CAMAC, and other Places, to bring the Treaſures repoſited there to *Caxamalca*.

The Inca offers a Treaſure for his Liberty

In

Almagro brings a great Reinforcement to *Peru.*

In the mean time, *James de Almagro* having liſted an hundred and fifty Men in his Service at *Panama*, arrived at the new *Spaniſh* Colony of *St. Michael's*, and there he underſtood that *Pizarro* had made the Emperor *Atabilipa* Priſoner, and poſſeſs'd himſelf of a vaſt Treaſure. Whereupon *Almagro* conſulted with his Officers, whether they ſhould join *Pizarro*, or go upon ſome further Diſcoveries independent of him. But *Pizarro* ſent very obliging Meſſages to *Almagro*, inviting him to advance and join him. And *Almagro* thereupon immediately began his March towards *Caxamalca*.

The *Inca Atabilipa* receiving Advice that another Body of *Spaniards* was arrived upon the Coaſt, began to reflect that this would not probably be to his Advantage. He haſtened therefore the bringing in the Treaſure he had offered for his Ranſom, that he might obtain his Liberty before *Pizarro* was joined by *Almagro*. Mean while the three *Spaniſh* Officers that were ſent to *Cuſco*, happening to paſs through the Town where *Huaſcar*, the lawful Emperor, was Priſoner, went to ſee him; and that Prince acquainted them how unjuſtly he had been depoſed by *Atabilipa*, who had no Right to the Empire, or the Treaſures he had promiſed: And as he underſtood one principal Deſign of this Expedition was *to relieve the Diſtreſſed*, he did not doubt but they would reſtore him to his Throne; which he ſhould gratefully acknowledge, and furniſh them with much more Treaſure than the Uſurper could poſſibly do; for his Loyal Subjects had buried moſt of their Plate after the Battle wherein he was made Priſoner, and would readily produce it again, and pay it to the *Spaniards* for his Ranſom. *Pizarro*'s Meſſengers promiſed *Huaſcar* that Juſtice ſhould be done him; but left that Prince however in Priſon, and continued their Journey to *Cuſco*. And Advice being carried to *Atabilipa* of this Conference, he ſoon ſaw that he ſhould be undone unleſs *Huaſcar* was diſpatched, knowing that the greateſt Part of the Empire were ſtill in his Intereſt; and as they would be ſupported by the *Spaniards*, to whom his Brother had diſcovered his Treachery, and promiſed ſuch Mountains of Gold and Silver, they would certainly ſacrifice him to their Avarice. But then reflecting, if he ſhould order his Brother to be put to Death, the *Spaniards* might make this a Pretence for taking away his own Life, he firſt ſounded how *Pizarro* ſtood affected towards *Huaſcar*, by feigning he had received Intelligence that the Officers had put him to death without his Knowledge: But finding *Pizarro* was not moved at the Relation, *Atabilipa* diſpatched an Expreſs for putting *Huaſcar* to death, and his Orders were immediately executed. But the *Peruvians* made great Lamentations for him, and entreated the *Spaniards* to revenge it on *Atabilipa*.

The *Inca Huaſcar* put to death by *Atabilipa*'s Orders.

In the mean Time, the three Officers that were ſent to *Cuſco*, were adored as the true Deſcendants of the Sun; but the *Spaniards* knew not how to preſerve that Reſpect the *Peruvians* had conceived of them, which was then ſo neceſſary to facilitate their future Attempts. The *Indians* ſoon perceived, they muſt deduce the Original of the *Spaniards* from ſome baſer Fountain than that of the Sun, and the Eſteem and Affection they at firſt entertained for the Chriſtians, was, on a ſudden, converted into Dread and Averſion. However, they durſt not diſobey the Commands of their *Inca Atabilipa*, but having amaſs'd a conſiderable Quantity of Treaſure, they loaded it on the Backs of their *Yanacones*, or Porters, and conveyed it to *Caxamalca*. But the moſt valuable Treaſure being lodg'd in the Temple of PACHA CAMAC, *Pizarro* diſpatched his three Brothers thither. But the Prieſts of PACHA CAMAC ſent away four hundred Loads of Gold, Silver, and Jewels, before the *Pizarro's* arrived. However, *Ferdinand Pizarro* found as much Plate in this Temple as amounted to 90,000 Crowns, beſides what the Soldiers embezzled.

The *Peruvians* bid their Eſteem for the *Spaniards.*

Almagro being advanced into the Neighbourhood of *Caxamalca*, *Pizarro* went out to congratulate his Arrival, and offered him ſuch a Share of the Spoils as made him perfectly eaſy: But his Soldiers, who expected to divide the Booty with thoſe that ſerved under *Pizarro*, were told, they were entitled to no Part of it; which was near creating a Mutiny amongſt them; but they were appeaſed when *Pizarro* agreed to diſtribute an hundred thouſand Ducats amongſt them. The reſt of the Plunder, after the Emperor's Fifth was deducted, was divided by *Pizarro* in ſuch Proportions as he ſaw fit: And 'tis ſaid, he at this time, after he had reſerved the *Inca's* Golden Chair to himſelf, diſtributed as much Gold and Silver Plate amongſt the Soldiers, as, conſidering the Value of Gold and Silver at that time, was more than fifteen Millions at this Day.

The Soldiers, being poſſeſs'd of this prodigious Wealth, fell into all manner of Exceſſes; which their Officers encouraged, that the Soldiers, having loſt their Money, and becoming dependant on them again, might be more under Command. And now *Pizarro* thought it a proper time to ſend over the fifth Part of the Treaſure to the Emperor, and with it his Brother *Ferdinando Pizarro*, to ſolicit for Reinforcements, and to petition that his Government might be extended ſtill further to Southwards. *Almagro* alſo employed his Agents, to deſire that all that Part of *South America* which lay to the Southward of the Lands granted to *Pizarro*, might be put under his Government: And with theſe Agents returned ſeveral Adventurers, who having obtained thirty or forty thouſand Ducats a Piece for their Shares of the Spoils, choſe to enjoy what they had got in their own Country, rather than undergo more Difficulties to increaſe their Fortunes.

A formal Proceſs drawn up againſt *Atabilipa.*

Atabilipa having actually paid great Part, if not all of the Treaſure he had offered, *Pizarro*, notwithſtanding, determined to take away his Life, pretending that he encouraged the *Indians* to attempt his Reſcue and cut off the *Spaniards*: And that he might juſtify his Conduct in this Proceeding, he cauſed a formal Proceſs to be drawn up againſt him. The *Inca* abſolutely deny'd the Charge, complained of the Treachery of *Pizarro*, and deſired he might be ſent over to *Spain*, and try'd before the Emperor. However, the *Spaniards* proceeded to examine Witneſſes againſt him, and *Pizarro* and *Almagro* ſitting as his Judges, they made no Difficulty to condemn him to be burnt; and Friar *Vincent Valverde* approved the Sentence under his Hand, that it might give the greater Satisfaction to the Court of *Spain*: The Friar alſo took great Pains to induce the *Inca* to turn Chriſtian before he died, which he conſented to, upon Condition that the Execution might be changed from burning to ſtrangling; and he was accordingly ſtrangled, the Friar having firſt given him Abſolution.

Atabilipa is condemn'd to be burnt

Pizarro, however, did not carry his Reſentment ſo far, but he thought fit to treat the Corpſe of the *Inca* with the Reſpect due to a Sovereign Prince: He celebrated the *Inca's* Funeral with great Solemnity, and went into Mourning for him: But he ſoon diſcovered how deteſtable this Murder rendered him among the Natives. The two Factions immediately united againſt him, under *Illiana Capac*, the Brother and Heir of *Huaſcar*,

Huascar, whom they proclaim'd Emperor of *Cusco*: Whereupon *Pizarro* proclaim'd *Toparpa*, a Son of *Atabilipa*, Emperor, caused him to wear the Imperial Coronet, and to be treated with the same Honours his Father had been; issuing such Orders in his Name, as might best serve the Interest of the *Spaniards*; but this *Inca* died soon after. And now *Pizarro*, conjecturing that nothing could tend to establish the *Spanish Dominion* in *Peru*, more than his possessing himself of the Capital City of *Cusco*, he began his March thither with all his Forces, consisting of near four hundred Men, besides confederate *Indians*.

Pizarro proclaims another *Inca*.

Marches towards *Cusco*.

In the mean time *Atauchy*, Brother to *Atabilipa*, having collected a great Quantity of Treasure to purchase his Brother's Ransom, brought it to *Caxamalca*; but finding *Atabilipa* murder'd, and the *Spaniards* marched from thence, determined to be revenged of them; and joining his Forces with some other *Peruvian* Generals, surprised the *Spaniards* upon their March to *Cusco*, killed some of them, and made several Prisoners. But understanding that some of their Prisoners had protested against the *Inca's* Death, they resolved to give them their Lives and Liberties, entring into Articles of Peace and Friendship with the captive *Spaniards*, before they dismiss'd them. But *Pizarro* and *Almagro* positively refused to ratify the Articles, and would hear of nothing but an absolute Submission, which occasioned long and bloody Wars afterwards: Whereas the *Spanish* Historians admit, they might have established Christianity in *Peru* without spilling a Drop of Blood, if the Ambition and Avarice of the Adventurers had not prevented it.

Some of his Men cut off, and made Prisoners.

A Treaty between the *Spaniards* and *Indians*.

Pizarro, continuing his March towards *Cusco*, was again attacked by several Parties of the *Indians*, at some difficult Passes in the Mountains; but finding themselves unable to resist the Fire-Arms and Horses of the *Christians*, they fled, after a faint Resistance, to the Capital City; declaring, that it was in vain for any human Force to oppose the *Spaniards*, who were armed with Thunder and Lightning. Whereupon the People of *Cusco*, without offering to defend their Walls, fled with their Wives and Children, and what was most valuable to them, to the Woods and Mountains; and *Pizarro* entered the City without Opposition in the Month of *October* 1532, where he met with a prodigious Booty, notwithstanding the Citizens had so much Time to carry off their Treasure.

Cusco abandoned by the *Indians*.

The *Spaniards* enter *Cusco*.

Pizarro having thus possess'd himself of the Capital City of *Peru*, from whence the *Inca* and the greatest Part of the Inhabitants were fled, thought fit to invite them to return to their Dwellings. The *Indians* accepted *Pizarro's* Invitation, and even the *Inca* made some Overtures to him, intimating that he should be content to embrace the *Christian* Religion, and hold his Dominions of the Emperor of the *Romans*, provided that neither he nor his Subjects should be molested in their Persons and Estates: And being encouraged by *Pizarro* to believe he should have the Terms he demanded, the *Inca* came in Person to *Cusco*, and had an Interview with the *Spanish* General, who caused him to be invested in the Empire, in the same Manner his Successors used to be inaugurated into that Dignity, and assured the *Inca* he would strictly observe the Capitulation made by the *Spanish* Prisoners with his People.

A Peace between *Pizarro* and the *Inca Manco Capac*.

These pacific Measures the *Spaniards* found themselves under a Necessity of taking, not only because they saw all the Southern Provinces of *Peru* assembling against them, but because *Ruminavi*, *Quisquiz*, and other *Peruvian* Generals, had assembled a very great Army in the Northern Provinces, and possessed themselves of *Quitto*, which obliged him to send a Detachment of his Forces under the Command of *Sebastian Belalcazar*, to make Head against the *Peruvian* Generals in *Quitto*. *Belalcazar* thereupon marching into *Quitto*, made himself Master of the Capital City, and was in a fair Way of reducing the rest, when Advice was brought, that *Don Pedro de Alvarado* was come upon the Coast of *Peru*, with a considerable Fleet, and had landed seven or eight hundred Men, intending to take the Government of *Peru* upon him, and expel *Pizarro* and *Almagro* from thence; at which News these two Adventurers were Thunder-struck, apprehending they should be dispossessed of all the Spoils they had taken, and perhaps sent Prisoners to *Spain*, to give an Account of their Conduct in murdering the late *Inca Atabilipa*, and massacreing his People: They continued therefore to cultivate a good Understanding with the *Indians* of the Southern Provinces, and treated the *Inca* and his Subjects as their Friends and Allies.

Don Pedro de Alvarado was one of the principal Generals that accompany'd *Cortez* in the Conquest of *Mexico*, and obtained the Government of *Guatimala*, one of the most considerable Provinces of that Empire. This Gentleman was become vastly rich by the Spoils of the *Mexicans*, and his Government in Extent was little inferior to that of *Spain*; but understanding that there was greater Plenty of Gold and Silver in *Peru* than was to be found in *North America*, and believing that as he was an elder General, *Pizarro* and *Almagro* would have submitted to him, on his allowing them to share that Country with him; he equipped a good Fleet in the Harbours of *Guatimala*, where he embarked seven or eight hundred Men, most of them Cavalry, and among them several Persons of Quality and old Officers. With these he set sail in the Year 1535; and arrived, at length, near the *Spanish* Colony of *St. Michael's*, having got a much greater Body of Troops than were under the Command of *Pizarro* and *Almagro* in *Peru*.

Don Pedro de Alvarado lands in *Peru*.

Alvarado one of the Conquerors of *Mexico*.

Almagro being detached to watch the Motions of *Alvarado*, was in a terrible Consternation upon the Advices he received of his Approach, especially when he understood he had surprized a Party of Horse that were sent out to get Intelligence, and made them Prisoners: But the Men returning to his Camp, and telling him that *Alvarado* treated them handsomly; he began to entertain Hopes that their respective Pretensions would be adjusted by a Treaty. And this he was confirmed in, when *Alvarado* was pleased to invite him to a Conference; which *Almagro* accepting, the following Articles were agreed on between them: That *Pizarro* and *Almagro* should pay *Alvarado* an hundred thousand Nobles: That such of the Officers and Soldiers who came with *Alvarado* as desired it, should serve under *Pizarro* in *Peru*, and be provided for as their own Troops were: And that thereupon *Alvarado* should return to his Government of *Guatimala* in *Mexico*. But being obliged to wait some time to receive the Treasure promised him, *Alvarado* proposed to visit *Pizarro* at *Cusco*, who apprehending that *Alvarado* might alter his Mind upon seeing that rich City, sent him a Compliment, that he would meet him in the Valley of *Pacha Camac*, and bring the Sum with him. *Almagro* had promised; and accordingly he set out with a Party of Horse, and a Detachment of *Indians*, and arrived at the Valley of *Pacha Camac*, where he met with *Alvarado* and *Almagro*; and to ingratiate himself with the former, gave him the Com-

Articles between *Alvarado* and *Almagro*.

mand

mand of all the Troops while he remained there, and paid him twenty thousand Nobles more than he had stipulated for the Expences of his Journey. Whereupon *Alvarado* returned to *Mexico*, entirely satisfied with his Reception, and the Treasure he had acquired.

Soon after the signing the Treaty between *Pizarro* and *Alvarado*, *Almagro* was detached with Part of the Troops that arrived with *Alvarado* to *Cusco*, whilst *Pizarro* applied himself to the building of Towns, and settling Colonies upon the Coast: Particularly he founded the Capital City of *Lima*, to which he gave the Name of *Cividad de les Reyes*, or, *the City of Kings*; because on that Day, the Kings of the East made their Presents to our Saviour: but this Name is now disus'd, and the City is called by the Name of *Lima*, from the Valley wherein it stands. However, to commemorate the Day, *Pizarro* ordered the Arms of the City to be Three Crowns, with a Star shining over them. The City being laid out, *Pizarro* divided the Country about it among his Officers and Soldiers, and other *Spanish* Adventurers that came to reside in it, with the Native *Indians* upon those Lands, who held what the *Spaniards* were pleased to allow them by the basest Tenures of Villainage. And when any *Spaniard* purchased any of these Lands, of another, the *Indians* upon such Lands were transferred with them, as Trees, Deer, and Fish, are with us, upon the conveying away an Estate. *Pizarro* having built the City of *Lima*, he advanced further Northward, and founded another City on a good Harbour, which he named *Truxillo*, from the City of that Name in *Spain*, of which he was a Native. While *Pizarro* remain'd at *Truxillo*, Advice came from *Spain*, that the Emperor had conferred on him the Title of Marquis of that Province, and enlarged his Government considerably to the Southward: And as to *Almagro*, the Title of Marshal of *Peru* was confirmed to him, and a Government of two hundred Leagues Extent of Country conferred on him, to the Southward of the Country assigned to the Marquis *Pizarro*.

Lima founded.

Truxillo founded.

Almagro residing at *Cusco* at this time, and observing that *Cusco* was not within the Limits assigned to *Pizarro*, he immediately took upon him the Title of Governor of *Cusco*, and the District belonging to it, in his own Name. On the other Hand, *John* and *Gonzalo Pizarro*, Brothers to the Marquis, opposed this Usurpation of *Almagro*; and their Differences arose to that Height, that they entered into a formal War with *Almagro*, and several were killed on both Sides; of which the Marquis receiving Intelligence, caused himself to be carried to *Cusco* with such Expedition, that he arrived there before he was expected by either Side: And representing to *Almagro*, that the Country which lay to the Southward of the District of *Cusco* was richer in Gold and Silver than any that had been yet discovered, of which he was contented *Don Almagro* should take the Government upon him; *Almagro* and his Party were then pretty well satisfied, and immediately made Preparations for an Expedition to the Southward.

Almagro upon his the Government of *Cusco*.

Which occasions a War with the *Pizarro's*.

Almagro, at the Head of five hundred *Spaniards* and fifteen thousand *Indians*, advanced as far as the Province of *Charcas*, without meeting with any thing to obstruct his Designs; but finding the *Charcas* a wretched Country, and being ignorant of the rich Mines it contained, he resolved to proceed forward to the Kingdom of *Chili*. The *Indians* informed *Almagro* that there were two Ways to approach the Kingdom of *Chili*, both extremely hazardous: *Almagro* took the Way of the Mountains, as being the shortest, and more agreeable to the Constitutions of *Europeans*; but had not advanced far before he found the Snows so deep, that they were forced to dig their Way through them, the *Indians* dying by Hundreds with the intense Cold; the *Spaniards* also were almost starved, and many of them perished on those Mountains either by Cold or Want. However, *Almagro* himself, with between three and four hundred *Spaniards*, the *Inca Paulla*, the High-priest, and about five thousand *Indians*, reached the other Side of the Mountains, and came into a fine, temperate and plentiful Country. The People of *Chili* being informed that the *Spaniards* were *Viracocha's*, descended from their God the Sun, they presented them with Gold and Silver Vessels to the Value of two hundred thousand Ducats; and not many Days after, collected the Value of three hundred thousand more, and presented to *Almagro*.

Almagro having refreshed his weary Troops, proposed to the *Inca Paulla* the subduing those Parts that were not subject to the *Inca*: To which he consented; and assembling several thousand *Indians* to reinforce the Marshal, they marched against the Natives of the more Southern Parts of *Chili*, and had the good Fortune to reduce those Provinces under their Subjection: And being joined about this time by *Ruis Dias* and *John de Hereda*, with upwards of an hundred *Spaniards* more, they would have extended their Conquests much farther, if *Almagro* had not taken a Resolution of returning to *Peru*, to take Possession of his Government of *Cusco*, which he was now assured belonged to him by Virtue of the Emperor's Commission, which *John de Hereda* brought him. The Resolution being taken of returning to *Peru*, the next thing to be considered was, which Way they should march; and it was unanimously determined to take the Way of the Plain, by the Sea Side. However, the Hardships the *Spaniards* suffered in this scorching Desart, were little inferior to what they sustained on the frozen Mountains.

Almagro resolves to return to *Cusco*.

Ferdinando Pizarro returning from *Spain* with his Brother's new Commission, and the Patent for the Title of Marquis, brought some Orders with him, that were not acceptable to the Marquis or his People; particularly, that the Emperor expected they should be accountable for all the Treasure they had received as the Ransom of *Atabilipa*, his Imperial Majesty alone being entitled to it; or at least that they should raise a good round Sum, and send over to *Spain* in lieu of it. But the Marquis and his Officers reply'd, This was neither reasonable nor possible. *Ferdinando*, however, desired his Brother would confer on him the Government of *Cusco*; which the Marquis consenting to, *Ferdinando* applied himself to the *Inca*, giving him to understand that he would be restored to his Dominions, if he could procure a considerable Sum for the Court of *Spain*. Whereupon the *Inca* sent Expresses to several Parts of his Dominions, directing them to bring him their usual Tribute of Gold and Silver Plate, as the most probable Means of delivering him out of the Hands of the *Spaniards*. Accordingly a great deal of Treasure was brought in, which the *Inca* presented to *Ferdinando Pizarro*. But the *Inca* finding he was still a Prisoner, and not suffered to stir out without a Guard of *Spaniards*, concluded they intended him no Good. He was perpetually meditating therefore, how he might get out of the Hands of his treacherous Keepers; and at last hit upon the following Stratagem. He informed *Ferdinando Pizarro*, that in the Valley of *Yuca*, where the *Inca's* Bowels used to be interred, there were several rich Tombs, and in

The Emperor demands great Sums of the *Pizarro's*.

one of them a Statue of solid Gold of one of his Anceſtors, as big as the Life, which he believed he could find if he might be permitted to go thither with his uſual Guard of *Spaniards*. This being a Prize which *Ferdinando* had ſet his Heart upon, he conſented: But *Manco Inca* having ordered ſeveral thouſand *Indians* to rendezvous on the adjacent Mountains, and having obtained Leave of the Governor to reſort to the Valley of *Yuca*, he found Means to eſcape from his Guard, and get to his Forces in the Mountains; and the Night coming on, before Morning he was conducted beyond the Reach of the *Spaniards*.

The Inca eſcapes from the Spaniards

The *Inca* being now at Liberty, and having ſummoned a Council of his Nobility, repreſented the Treachery of the *Spaniards*, who performed none of their Articles, but had, on the contrary, laid him in Irons in the Caſtle of *Cuſco*. And an Inſurrection being hereupon reſolved on, Expreſſes were diſpatched to every Province of the Empire, and three great Armies were aſſembled in an Inſtant; one whereof was intended to cut off *Almagro* and his Forces in *Chili*; a ſecond inveſted the City of *Lima*; and the third, conſiſting of two hundred thouſand Men, commanded by *Manco Inca* in Perſon, attacked the City of *Cuſco*, took the Caſtle, and drove the *Spaniards* into the grand Square in the Middle of the Town. The *Spaniards* muſt now have been reduced in a ſhort Time, if they had not been joined by great Numbers of the common People of *Peru*, who being Slaves to the reſt, adhered to the *Spaniards* in theſe Wars; whereby they did not only gain the Superiority of their Maſters, but ſhared the Plunder of their Eſtates with the Chriſtians. But Liberty being proclaimed to all the Vaſſal *Indians* that would join the *Spaniards*, they reſorted to the Aſſiſtance of the Beſieged in ſuch Numbers, that the *Inca's* Troops were entirely driven out of *Cuſco* again, and even out of the Caſtle; in the Storming of which, however, *John Pizarro*, Brother to the Marquis, loſt his Life.

A general Inſurrection of the Indians.

Cuſco beſieg'd.

The Indians Slaves join the Spaniards.

John Pizarro ſlain

The Marquis *Pizarro*, who was at his new City of *Lima*, finding all Intercourſe cut off with the City of *Cuſco*, ſuſpected there was ſome Miſchief intended, and was ſoon after informed by the *Indian* Slaves, that *Cuſco* was actually inveſted, and that the *Indian* Generals were marching with another Army to beſiege *Lima*. Whereupon he immediately diſpatch'd Expreſſes to *Panama*, *Mexico*, *Nicaragua* and *Hiſpaniola*, for Reinforcements of Troops to prevent the Loſs of *Peru*: He commanded alſo all the Detachments he had ſent out to extend his Conqueſts, to return and join him; and at the ſame Time ordered a Body of an hundred Foot, under the Command of his Couſin *Diego Pizarro*, to march towards *Cuſco*. The *Indians* permitted this Detachment to march unmoleſted, till they had advanced ſixty or ſeventy Leagues in their Way; but having drawn them into a narrow Paſſage between the Rocks and Mountains, they rolled down great Stones upon them, which ſo diſorder'd the *Spaniards*, that they were all killed or made Priſoners by the *Indians*. Two or three Parties more, that were ſent out ſucceſſively to get Intelligence, met with the like Misfortune: Nor did the *Indians* only defend the Paſſes in the Mountains, but advanced to the very Walls of *Lima*, which they block'd up for a conſiderable Time; where we ſhall leave them at preſent, and enquire after *Almagro*, whom we left in the ſandy Deſart of *Atacama*.

Lima beſieged.

Almagro on his Return from *Chili*

Manco Inca had diſpatch'd Expreſſes as far as *Chili*, to acquaint his Subjects with his Deſign of throwing off the *Spaniſh* Yoke. He acquainted alſo his Brother *Paulla*, the High Prieſt, and the reſt of the *Indians*, who march'd with *Almagro* into *Chili*, with his Intentions; whereupon the High-Prieſt left *Almagro's* Camp privately, and returned to the *Inca Manco Capac*, who was then encamp'd before *Cuſco*. As to *Paulla*, *Almagro* no ſooner heard of the Revolt of *Manco Inca*, but he proclaim'd *Paulla* Emperor of *Peru*, and cauſ'd his Head to be bound with the Imperial Wreath: Whereupon *Paulla* and the confederate *Indians* continued to eſpouſe *Almagro's* Cauſe. And when *Manco Inca* heard of the Approach of *Almagro*, he thought fit to quit the Siege of *Cuſco*, and retire with a ſmall Part of his Troops to the Mountains of the *Andes*, ordering the reſt of his Forces to diſperſe, and return to their Dwellings.

And now *Almagro* being arriv'd before the Walls of *Cuſco*, and finding the *Indians* drawn off, ſent a Summons to *Don Ferdinando Pizarro*, to deliver up that Capital to him. But *Ferdinando* anſwer'd, he held that City by Virtue of a Commiſſion from his Brother the Marquis, and ſhould not deliver it up to any Man without his Orders, and immediately proceeded to put the Place in a Poſture of Defence; but Part of the Garriſon being Friends to *Almagro*, introduced his Forces into the Town at Midnight; and *Ferdinando* and *Gonzalo Pizarro* were ſurpriz'd in their Beds, and made Priſoners. In the mean Time the Marquis *Pizarro*, having aſſembled five hundred *Spaniſh* Horſe and Foot, gave the Command of them to *Don Alonzo de Alvarado*, with Orders to march with all Expedition to *Cuſco*.

Almagro ſurpriſes *Cuſco*, and makes *Ferdinando Pizarro* Priſoner

Whereupon *Almagro* took the Field, conſtituting *Don Orgonnez* his Lieutenant-General, and advanced as far as the Bridge of *Abancay*, on the other Side whereof *Alvarado* lay encamp'd: Here *Orgonnez*, fording the River at the Head of *Almagro's* Horſe, put *Alvarado's* Forces into great Confuſion, and made that General his Priſoner, with whom he return'd in Triumph to *Cuſco*.

The Marquis *de Pizarro* hearing no News from *Alvarado*, and imagining the *Indians* might have cut off his Communication with that General, march'd in Perſon at the Head of three or four hundred *Spaniards*, to gain Intelligence: And after ſome Days March, receiv'd Advice that the *Indians* had rais'd the Siege of *Cuſco*; that *Almagro* was return'd from *Chili*, and had poſſeſs'd himſelf of that Capital, and made his Brothers *Ferdinando* and *Alonzo* Priſoners; and that his other Brother *John Pizarro* was kill'd during the Siege of *Cuſco*; and a Day or two after, had News brought him of the Defeat of *Alvarado*. Whereupon he thought fit to retire again to *Lima*, and fortify himſelf there, till he ſhould receive Reinforcement from *North-America*; and to divert *Almagro* from taking Advantage of his preſent Weakneſs, he diſpatch'd ſeveral *Spaniards* of Quality to attend him, and offer him any Terms he ſhould inſiſt upon to procure his Brothers' Liberty; but had no Intention to obſerve any Terms with *Almagro*, any longer than he ſhould be in a Condition to break them with Advantage.

It ſeems, the Biſhop of *Panama* had been appointed in the Year 1536, by the Emperor, to go to *Lima*, and ſettle the Limits between *Pizarro's* and *Almagro's* Governments. But *Pizarro* apprehending then that *Cuſco* belong'd to the Diviſion which was allotted to *Almagro*, kept him ignorant of the Emperor's Grant, and perſuaded him to undertake the Expedition to *Chili* above-mention'd; and when the Biſhop arriv'd at *Lima*, diſſuaded him from taking that tedious Journey to *Cuſco* to execute his Commiſſion: Whereupon the Biſhop return'd to *Panama* without doing any thing: But *Almagro*, on his Return from *Chili*, finding how he had been abuſed by the *Pizarros*, ſurpriz'd the City and Caſtle of *Cuſco*, and made

Ferdi-

Ferdinando and *Gonzalo Pizarro* Prisoners, as has been related already.

Arbitrators being again chosen to settle the Limits between the two Generals, and not being able to come to any Agreement, the Marquis, in order to procure his Brother *Ferdinando*'s Liberty, pretended he was content that both Parties should keep what they were possess'd of, till the Court of *Spain* should determine otherwise; and that he would furnish *Almagro* with a Ship, by which he might send over his Commissioners to *Spain*, to manage his Cause there: And upon these Terms *Almagro* consented to set *Ferdinando* and *Gonzalo Pizarro* at Liberty.

But the Marquis having obtain'd his Brothers' Liberty, and a great Supply of Troops from *North America*, sent a Herald to *Almagro*, requiring him to deliver up *Cusco* to him, and all his Conquests in *Peru*. And upon *Almagro*'s refusing to resign his Government, immediately declar'd War against him, sending his Brothers *Ferdinando* and *Gonzalo*, at the Head of seven hundred *Spanish* Horse and Foot, to surprise the City of *Cusco* in the Absence of *Almagro*; who being better acquainted with the Country than the *Pizarro's*, and his Troops more used to that Climate, got between the Enemy and *Cusco*. And 'tis highly propable, that the *Pizarro's* would never have been able to have taken that Capital, if *Almagro* had remain'd within the Walls upon the Defensive. But the Officers under *Almagro* confiding in the Bravery of their Forces, no sooner heard the Enemy approach'd, but they prevail'd on their old General *Almagro*, to suffer them to march out and give the *Pizarrists* Battle, in which they were entirely routed.

Almagro himself fled to the Castle of *Cusco*, and the *Pizarrists* entering the City pell-mell with the Fugitives, the Slaughter was very great. *Orgonnez* and *Pedro de Lerma* being cover'd with Wounds, were kill'd after Quarter given them, and a great many Officers more upon private Pique and Resentment; but poor old *Almagro* was reserv'd to be murder'd by the Forms of Law. After he had remained Prisoner some Months in *Cusco*, the Lawyers were employed to draw up Articles against this old General, and his Enemies sitting in Judgment on him, he was capitally convicted, and condemned to die. And the *Pizarrists*, having ordered him to be strangled privately in Prison, afterwards caused his Head to be cut off on a Scaffold in the great Square of *Cusco*. His Body lay all Day expos'd on the Scaffold, his Friends not daring to bury him; but towards the Evening, a poor *Negro*, who had been Slave to the Deceased, brought a coarse Sheet, and wrapped up the Corpse, and carried it to the Church of the *Mercads*, where the Friars buried him under the High Altar. *Almagro* had one Son by an *Indian* Woman, to whom he gave his own Name, and made him joint Heir of his Fortunes with the Emperor his Sovereign *Charles* V, constituting *James de Alvarado* Guardian to his Son: But notwithstanding all these Precautions, the Marquis detained the young *Almagro* Prisoner at *Lima*, and seized the Father's Treasure, together with his Government.

But the *Pizarro*'s observing that this tyrannical Conduct created them many Enemies, and rendered them generally detested among the Soldiery; in order to support their Interest at the Court of *Spain*, it was resolved that *Ferdinando Pizarro* should resort thither, and carry a vast Treasure with him, to be apply'd as he should judge most for their Advantage; for *James de Alvarado* was already gone over to *Spain*, to petition the Emperor to do Justice to his Ward. And notwithstanding *Ferdinando Pizarro* bribed almost every Grandee in the Court of *Spain*, yet so notorious were the Outrages, that he and his Brothers had committed, that his Friends could not save him from being condemned and imprisoned: And had not *Alvarado* died suddenly, *Ferdinando* had probably lost his Head: As it was, he remained three and twenty Years a Prisoner in the City of *Medina del Campo*. *Ferdinando Pizarro* imprisoned in *Spain*.

The *Indians* observing the Divisions among the *Spanish* Generals, had recourse to Arms again. They had learned of the *Spaniards* to ride and handle their Arms pretty dextrously; and having taken some Horses, were not afraid to fight the *Spaniards* at their own Weapons: Nor did there want Instances of some Parties of *Spaniards* being defeated by them: And had not the *Indian* Slaves stuck close to the *Spaniards*, probably *Pizarro* would have been obliged to abandon his Conquest at last. The *Indians* rise in Arms again.

The most considerable Acquisition the *Pizarro*'s made after the Death of *Almagro*, was the Conquest of the *Charcas*, in which lay the invaluable Mines of *Potosi*. Here the Marquis founded the Town of *La Plata*, and divided the City and Country about it, with the *Indians* that inhabited it, among the Conquerors. This Division of the Country was made in the Year 1538, and 1539. And now the Marquis found himself possessed of a Territory seven or eight hundred Leagues in Length, in which were more rich Mines than in all the World besides; and yet was not his Ambition or Avarice satisfied. His Brother *Gonzalo*, who was now Governor of the Northern Provinces of *Peru*, was commanded to undertake an Expedition to the Eastward, the Marquis being informed that those Countries not only afforded Plenty of Gold, but yielded Spice very much resembling Cinnamon. *Gonzalo Pizarro* had not marched many Miles, before he arrived at the Country of *Canela*: He also met with some Gold in the Rivulets, but reaped very little Benefit from this Expedition, unless the Discovery of the great River *Amazon*; on which having built a Sloop, and put all his Treasure and Baggage on Board, he sent one of his Officers, named *Orellana*, with sixty Men down the River, to make further Discoveries, and then return to him: But *Orellana*, having sailed two hundred Leagues farther down this River, and finding it very difficult to return against the Stream, sailed to the Mouth of it, and then coasting along to the Northward, came to the *Spanish* Island of the *Trinity*, from whence he embarked for *Spain*. As to *Gonzalo Pizarro*, having been compelled by Famine to eat up his Horses, lost most of his Men, and endured incredible Hardships for two Years and upwards; he returned at length to *Quitto*, where he received Advice of the Misfortunes of his Brother the Marquis, which we come in the next Place to relate. The Mines of *Potosi* reduced. *Orellana*'s Voyage down the River *Amazon*.

The Marquis, in the Absence of his Brother, seemed more intent on suppressing the Party of *Almagro* than any thing else. He would not suffer any of the Officers or Soldiers, that shewed any Affection to the Family of *Almagro*, to enjoy either Lands or Offices in *Peru*. And as to young *Almagro*, he remained a Prisoner at large in the City of *Lima*, but was never suffered to stir from thence. Thus the *Almagrians* being neither permitted to return to *Spain*, nor to enjoy any thing in the *Indies*, they were dispersed all over the Country to get a poor Subsistence, till the cruel *Pizarro* published an Edict that no body should relieve them; which soon put them upon desperate Measures to preserve themselves from starving; which they could think of no better Way The Marquis oppresses the *Almagrians*.

to

to prevent, than by cutting off the Tyrant. They resorted privately therefore, either singly, or two or three at a time, to *Lima*, where they did not want Friends, who concealed them in their Houses, till they amounted to two or three hundred Men, all brave veteran Soldiers, who resolved to attack the Marquis as he came to the great Church on *Midsummer-day*, 1541. But he having some Intelligence of the Design, did not go out of his Palace that Day; and the *Almagrians* being informed that their Plot was discovered, and that they would suddenly be sacrificed, if they did not prevent it by some bold Attempt, twelve of them met at the House of young *Almagro*, and with their Swords drawn marched cross the Market-place to the Palace of *Pizarro*, crying out, *Long live the King, but let the Tyrant die!* Nor were they opposed by any Man, though there were not less than a thousand People assembled in the Square; nay, not a Man stirred to give the Marquis Intelligence of it; insomuch that the Conspirators found the Gates of the Palace and all the Doors open; and rushing forward, the Servants and all the Company that were with the Marquis fled, except his Brother-in-law *Don Francis de Alcantara*, and two of his Pages, who defended the Door-way of the Drawing-room, whither the Marquis was retired; but at length the Conspirators broke through, and killed the Marquis, his Brother, and the two Pages, who behaved themselves however very bravely, and desperately wounded four of the *Almagrians* before they fell. Then the Conspirators went out into the Market-place again, declared the Tyrant was dead, and proclaimed the young *Almagro* Governor of *Peru*. They also plundered the Houses of the Marquis, of his Brother *Francis de Alcantara*, of his Secretary *Pizado*, and some others of the principal *Pizarrists*, wherein they found an immense Treasure. In the Marquis's Palace alone, they found to the Value of a Million of Crowns in Gold and Silver; but did not meddle with the rest of the Furniture, leaving it standing for the Use of the young *Almagro*. Thus fell *Don Francis Pizarro* in the Capital City of *Lima*, which he had founded ten or eleven Years before, and was privately buried by his Servants, by the young *Almagro*'s Permission, no Person of any Figure daring to attend his Funeral, lest it should give Offence to the prevailing Party.

The *Almagrians* form a Conspiracy against the Marquis.

The Marquis is assassinated.

Young *Almagro* proclaimed.

The Marquis was no sooner dead, but *Lima*, *Cusco*, and most of the principal Towns, declared for *Don Diego de Almagro*. Some Places however refused to acknowledge *Almagro*'s Authority, but expected the coming of *Vaca de Castro* with the Emperor's Commission. *Pedro Alvarez Holguin*, and other Friends to the *Pizarrists*, assembled a great Body of Troops, took Possession of *Cusco* again, and declared War against *Almagro*. *Alonzo de Alvarado* assembled another Body of Troops between *Lima* and *Quitto*; and these two Generals preparing to unite their Forces, *Almagro* marched out of *Lima* at the Head of six hundred Horse and Foot, with an Intent to retake *Cusco*. But in the mean time, *Vaca de Castro* arriving in *Quitto*, and finding the Marquis was dead, declared himself Governor of *Peru*, by virtue of the Emperor's Commission. He soon after arrived in Person at *Lima*, and was proclaimed Governor of *Peru*, having been joined in his March from *Quitto* by *Alonzo de Alvarado* and *Holguin*, with their Forces.

The *Pizarrists* declare War against young *Almagro*.

Vaca de Castro the Governor arrives in *Peru*.

Almagro continuing his March to *Cusco*, took Possession of that City, and new modelled the Magistracy there: His next Business was to furnish himself with a Train of Artillery. He also made great Quantities of excellent Gunpowder; and the famous *Manco Inca* joined the *Almagrians* with several thousands of his *Indians*. But *Almagro* was unfortunate in the Loss of his General *John de Rada*, who died on the March to *Cusco*. *Almagro* afterwards constituted *John Balsa* the General of his Forces, and *Peter de Onate* his Lieutenant-General; and receiving Advice that *Vaca de Castro* was advancing towards *Cusco*, he marched out of the Capital at the Head of seven hundred *Spaniards* and several thousand *Indians*, with a good Train of Artillery, in order to give the Governor Battle, if he could not obtain equitable Conditions for himself and his Friends. He dispatched *Lopez de Vdiaquez* and *James Nunez* to treat with the Governor; who, instead of treating above-board with *Almagro*, endeavoured privately to corrupt his Officers, and induce them to desert him: Which *Almagro* discovering, both Parties prepared for Battle, and drew up their Troops in the Vale of *Chupas*. These little Armies were both composed of Veteran Officers and Soldiers: The Governor had the Advantage in Point of Numbers, but then *Almagro* had the Advantage of a Train of Artillery and of the Ground. However, to his Amazement, when the great Guns were fired, they did no manner of Execution, and the Enemy advanced as if they had nothing to fear from the Artillery: Whereupon *Almagro* rode up to *Pedro de Candia*, who commanded the great Guns, and killed him with his own Hands; and levelling one of the Cannon himself, cut off a whole Rank of the Governor's Troops. But the Enemy were now too near his Artillery to suffer from them, and his Men had quitted the Ground, where they were so advantageously drawn up, which occasioned the Loss of the Battle, though it was fought with great Obstinacy till two Hours within Night; when *Almagro* finding his Troops overpowered, retired out of the Field with *Manco Inca*, and three or four *Spanish* Officers, intending to have taken Refuge in the Mountains with the *Inca* and the *Indians*; but taking *Cusco* in his Way, with a Design to carry off his Treasure, the very Men in whose Hands he had put the Government of that City, apprehended him, and delivered him up to the victorious Governor; and young *Almagro*, who was not much above twenty Years of Age, was formally try'd, condemn'd, and executed in the same Place, and much in the same Manner his Father had been; and was afterwards buried by the Friars of the Convent of *Merced*, in the same Grave with his Father.

Almagro defeated at *Chupas*.

Taken and beheaded.

Almagro possesses himself of *Cusco*.

The Governor now dismiss'd most of his Forces, and applied himself to the regulating the Civil Government; and particularly he ordered the Magazines upon the great Roads to be stored with Provisions for the Conveniency of Travellers, prohibiting the *Spaniards* to quarter upon the *Indians*, to the Ruin of the Natives where they came. He also endeavoured the Conversion of the *Indians* to the Christian Faith, and prevailed with the *Inca Paulla* to be baptized, giving him the Name of *Christopher*. He also erected Schools in several Towns, ordering the Sons of the Caciques and Caraca's to be educated there, and instructed in the Principles of the Christian Religion. He commanded the *Spaniards* to use their *Indian* Servants with Humanity, and not to oppress or abuse any *Indian* whatever. Whereupon the *Indians*, who had fled to the Mountains many of them, returned and dwelt in *Cusco*, *Lima*, and other *Spanish* Towns, under the Protection of the Government. He also regulated the Distribution of the Lands and *Indians*, which had been made very extravagantly, and restored many

Vaca de Castro regulates the Government.

of

of the *Indian* Lords their Lands and Vaſſals, checking the Licentiouſneſs of the Soldiery, and adviſing them to marry, and apply themſelves to Traffick, or ſome honeſt Employments, and not ſpend their whole Time in Gaming and Exceſſes, and oppreſſing the poor *Indians*; by which he engaged the Affections of the *Indians*, but made himſelf a great many Enemies among the Adventurers, and military Men, who came into *Peru* with no other View but to advance their Fortunes, and live at Diſcretion among the Natives. He alſo enquired into the Conduct of the King's Officers, who he obſerved had amaſs'd together monſtrous Eſtates, by oppreſſing the *Indians*, and defrauding the Crown.

But ſtill grievous Complaints daily came over to *Spain*, of the *Indians* being deſtroyed in the Mines, and other rigorous Services. And thereupon the Emperor *Charles* the Fifth cauſed certain Orders to be drawn up, which he required ſhould be ſtrictly obſerved in *America* under ſevere Penalties: The Emperor alſo reſolved to ſend over a Governor to *Peru*, who ſhould ſee theſe Orders duly executed, and accordingly he made choice of *Blaſco Nunez Vela*. But the *Spaniards* immediately took a Prejudice againſt the Vice-roy, and began to grow very mutinous, pretending their *Indians* were their Property as much as any other Part of their Eſtates, and they might uſe them as they pleas'd; which they repreſented to the new Vice-roy, and deſired he would ſuſpend the Execution of his Ordinances; but the Vice-roy anſwered, they muſt petition the Court of *Spain*, if they expected any Alteration in them; and in the mean time, he was reſolved to ſee them put in Execution. This Conduct ſo enraged the *Spaniards*, that moſt of the great Towns appeared ripe for an Inſurrection. In a Word, theſe Diſcontents were fermented into a Conſpiracy againſt the Vice-roy.

Gonzalo Pizarro appeared at the Head of the Malecontents. *Manco Inca* was killed about this time, as he was playing at Bowls. The Vice-roy was impriſoned, but eſcaped; and *Pizarro* uſurped the Government of *Peru*. *Pizarro*'s Admiral inſulted *Panama*, and took all the Ships in that Bay; mean while *Pizarro* himſelf defeated and killed the Vice-roy, his General defeated the Royaliſts near *La Plata*, and his Admiral, in a ſhort Time after, poſſeſſed himſelf of *Panama* and *Nombre de Dios*.

Pizarro then applied to the Court of *Spain*, that he might be continued in the Government of *Peru*: Whereupon the *Spaniſh* Court ſent *Gaſca*, a ſubtil Lawyer, to *Peru*, with the Title only of Preſident of the Royal Court, but with Power to act as he ſaw convenient. The Court of *Spain* all this while wheedled *Pizarro*, whoſe Admiral and Fleet revolted to *Gaſca*.

Gaſca now employ'd an Agent to prepare the Citizens of *Lima* for a Revolt, and *Pizarro* was deſerted by great Numbers: Whereupon he prepared to defend his Uſurpation: But failing, he abandoned *Lima*, and *Laurence de Aldana* took Poſſeſſion of it for the Preſident. *Pizarro* then marched towards *Cuſco*, defeated *Centeno*, and ſeized the King's Treaſure at the Mines: But being deſerted by all his Forces, he ſurrendered himſelf a Priſoner, and was condemned, and beheaded.

The *Spaniſh* Soldiers now began to be diſcontented: Whereupon ſeveral Commanders were ſent upon new Conqueſts; and *Gaſca* returned to *Panama* with a vaſt Treaſure, which was ſeiz'd by the Rebels at *Panama*. But he recovered the Treaſure again, and arrived with it in *Spain*. Another Inſurrection in *Cuſco* was ſuppreſs'd, and *Mendoza* was made Vice-roy. There was then an Inſurrection at the Silver Mines, where the Rebels aſſaſſinated *Hinojoſa*, the Governor of the *Charcas*, and made *Don Sebaſtian* their General; but afterwards murdered him, and made *Vaſco Godinez* their Chief, who murdered a great many People. But General *Alvarado* ſurprized *Godinez*, and put him to death, with many more of the Diſaffected.

Another Rebellion, after theſe, was headed by *Hernandez Giron*, who defeated General *Alvarado*, and converted the Bells of *Cuſco* into great Guns, with which he attacked the Camp of the Royaliſts; but was forced to retire, and, being deſerted, fled to the Mountains, where he was taken, and carried to *Lima*, and executed. The Rebellion was now entirely ſuppreſſed; and from the Month of *November* 1554, in the Reign of *Philip* II. the *Spaniards* may be ſaid to have been in the peaceable Poſſeſſion of *Peru*; the ſubduing the firſt Adventurers, who endeavoured to render themſelves independant of the Crown of *Spain*, having proved a much more difficult Task than the Conqueſt of the defenceleſs *Indians*.

CHAP. XVIII.

Of their Marriages, Children, Slaves, and Funerals; and of the Navigation and Shipping of the Peruvians.

THE Laws of *Peru* did not only permit, but command the Emperor to marry his eldeſt Siſter of the whole Blood; tho' it prohibited all other Brothers and Siſters to marry: However, they were all obliged to marry in their reſpective Tribes or Families, and their Marriages were ſolemnized by the chief Magiſtrate of the Province. Thoſe of the Tribe of their *Inca's* were married by the King himſelf. Once in two Years, at moſt, the King's Officers were commanded to make a Liſt of all the young Men of his Family above twenty Years of Age, and of all the Virgins above eighteen, when he match'd them as he ſaw fit, the Ceremony being no more than this: The *Inca*, ſtanding between the Couple that were to be married, called each of them by their Names, and then joining their Hands, ſent them Home to the Bridegroom's Father's, where the Wedding was kept for ſeveral Days. And in the Provinces of the Empire at a Diſtance from *Cuſco*, the Vaſſal Princes performed the Ceremony, as the *Inca* did in the Capital City; but as to the King himſelf, and the Princes of the ſeveral Provinces, they took what Women they pleaſed for their Wives and Concubines. And if the common People were not allowed more Wives than one, they had a Liberty however to entertain a Commerce with other Women,

Common Women

to K who

who lived in poor Huts in the Fields, or in the Suburbs of great Towns, but were never suffered to dwell among honest People, and were generally esteemed infamous. When any of the Royal Family married, the Vassal *Indians* of that Province immediately built Houses for the new-married People, which were furnished by the Fathers of the Bride and Bridegroom, and their Relations. And when any of the common People married, their Neighbours were obliged to assist in the building their Houses, and raising a little Plantation of Fruits, Roots, and Herbs: And every married Man had a Portion of Food and Cloathing assign'd him every Year out of the Royal Magazines and Store-houses, in Proportion to the Bigness of his Family.

The Laws of Descent and Inheritances.

As the Emperor was obliged to marry his eldest Sister; and if he had no Issue by her, the next, and so on; and if he had Issue by none of his Sisters, to marry his next nearest Relation; so none but the eldest Son of such Marriages could inherit the Throne. If the Emperor had no Son, he was succeeded by his eldest Brother, or his next Male Relation. The Laws of Inheritance were not the same in every Province. In some, the eldest Son did not inherit, unless he was the most deserving; for the Vassals had the Choice of the Succession, provided they elected him out of the Family of the *Caraca's*. But in others the eldest Son inherited, as with us; and if there were no Sons, the Estate went to the eldest Uncle.

Widows and Orphans provided for.

The *Peruvians* seem to have had a particular Regard for Widows and Orphans: Their Lands were cultivated at the Charge of the Publick, and preferred to the Lands belonging to the Temple of the Sun and those of the *Inca*; but it was look'd upon as infamous for a Widow to marry a second Husband, especially if she had Children, and as infamous for a Man to marry such a Widow. Their Children were weaned at two Years of Age, when they shaved their Heads and gave them their Names, and the Relations all made Presents to the Infant. All their Children were bred up very hardily, washed with cold Water as soon as born, and the Mother bath'd in some cool Stream as soon as she was brought to bed; and they continued to wash their Children every Day with cold Water, till they were grown up and able to bathe themselves. They never took their Children into their Laps or Arms, unless it were to dress them, but stooped down to the Cradle to give them the Breast, and this only three times a Day. The Ladies of the first Quality always suckled their own Children; and tho' the ordinary Time of their sucking was two Years, the Women never came near their Husbands Beds till that Time was expired, nor had the Child any other Food till it was wean'd, if the Mother's Milk did not fail. When the Child could stand alone, it was taken out of its wooden Cradle, to which it used to be bound down hard with Filleting, and set in a little Pit, made in the Middle of the Floor, which reached to the Breast of the Child, and was lined with Linen or Woollen, and the Play-things set about the Verge of the Pit. The *Peruvian* Women had never any Occasion for Midwives, but there was usually an old Hag that attended the Labour, who muttering over some Charms, was supposed to facilitate the Birth.

The Management of their Children.

Their Funerals.

As to their Funerals, the Bodies of their Emperors were embalm'd, and placed in the Temple of the Sun, where divine Honours were paid them. And at the Death of the *Inca's* and *Caraca's*, or great Lords, their principal Wives, Favourites, and Servants, either kill'd themselves, or made Interest to be buried alive with them in the same Tomb. There was no manner of Occasion for any Force to compel them to follow their Benefactors or Masters to the other World; for when they were dead, they crouded after them so fast, that the Magistrates were forced sometimes to interpose, and put a Stop to these Self-murders. However, it is evident from hence, that the *Peruvians* believed another State after this, where they were to live and enjoy their Friends to all Eternity.

Their Belief of another State.

The first Month after the Death of the Prince, the whole City of *Cusco* bewail'd their Loss with loud Cries and Lamentations, and every Ward or Division of the City assembled and march'd out into the Fields in Procession, carrying the Trophies of their late Sovereign with them, and in Songs repeated his heroick Actions in the Wars, the most remarkable Instances of his Justice, and other Virtues. After the first Month they commemorated the Death of the *Inca* at every new and full Moon till the End of the Year, the last Day whereof was observed with more Solemnity than any of the former. Nor was this done only in the Capital City of the Empire, but in the chief Town of every Province, how far distant soever. They went out in Procession to all Places, where they remembred their *Inca* had ever been in a Journey, or upon any other Occasion, and there in mournful Songs recited his great Actions, and bewailed their Loss. And the Vassal Princes, or Noblemen, had much the same Honours paid them on their Decease, in their respective Provinces and Lordships, by their Vassals.

Mourning

The *Inca's* were absolute Sovereigns, restrain'd by no Laws or Compacts, but valued themselves most in being the Protectors and Fathers of their People. Every Province had its Caracas or Prince, as absolute in his Territories as the *Inca* in the Empire, and only accountable to him; and in every Province were a great many Caciques or Lords, who had the Command of their Vassals, as the Caraca's had of them: And as for the common People, they were all Slaves to their Lords, both their Persons and Estates being in their Power.

The State of the *Peruvians* when the *Spaniards* arrived there.

Whenever the Emperor had any particular Service to do, he commanded the Vassal Prince of the Province to see it done, and he again issued his Orders to the Nobility under his Government, who sent their Tenants to perform what was required, or marched at the Head of them in Person, if they were commanded to the Wars. The Generality of the People therefore were in a State of Slavery before the *Spaniards* arrived; all the Difference was, that during the Government of the *Inca's*, their Service was extremely easy and gentle; whereas the *Spaniards* destroyed thousands of them by exacting a too rigorous Service.

Peru is now possessed by a very different Set of People than it was at the Time of the *Spanish* Conquest. Besides the native *Indians*, there have been transported vast Multitudes of *Europeans*, and *African Negroes* of both Sexes, from whose mix'd Embraces have sprung another Race. Only those that were born in *Spain* are called *Spaniards*. If any Person is born of a *Spanish* Father and Mother in *America*, he is called a *Criole*. The Children born between a *Spaniard* and an *Indian* are called *Mestizo's*, and so are the Children of a *Spaniard* and a *Negroe*. Those born of a *Negroe* and an *Indian* are called *Mulata's*, or *Molata's*; and to the Children of these *Mulata's* the *Spaniards* give the Name of *Cholo*, which signifies a Dog of a mongrel Breed. The Children of a *Spaniard* and a *Mestizo* they call *Quartralvo's*, by

which

which they would ſignify they are three Parts *Spaniſh* and one *Indian*; but the Children of a *Meſtizo* with an *Indian* Woman, they call *Treſalas*, or three Parts *Indian*. The Deſcendants of all theſe have different Names and different Privileges, as was intimated in the Hiſtory of *Mexico*, where the Reader may look for other Particulars.

The Navigation of the *Peruvians*.

The *Peruvians* ſeem to have been provided with the moſt improper Veſſels and Vehicles for Tranſportation or Fiſhing of any Nation in the World. They had neither Ship, Boat, nor Canoe upon their Coaſt, when the *Spaniards* arrived there: They croſs'd over their Rivers on Floats of Reeds or Ruſhes, and at Sea had no other Way of Fiſhing, or tranſporting their Goods along the Bark-logs Coaſt, but on Bark-logs, made of many round Logs of Wood, in manner of a Raft, and very different according to the Uſe that they were deſign'd for, or the Humour of the People that made them. They always went before the Wind, being unable to ply againſt it; and therefore are fit only for theſe Seas. The Rafts that are now made for long Voyages, will carry ſixty or ſeventy Tons of Goods, and upwards. The Float is managed uſually by three or four Men, who when they come to *Panama*, diſpoſe of the Goods and Bottom together, getting a Paſſage back again for themſelves in ſome Ship or Boat.

The preſent Shipping of *Peru*.

As to the preſent State of their Navigation, the *Spaniards* have ſcarce any Ships on this Sea but Coaſting-Veſſels, and the King's Ships of War, which may be ten or twelve in Number, and ſerve to protect the Trade againſt the Buccaneers and Privateers, who are however very often too hard for them. The *Peruvian*, or *Spaniſh* Inhabitants, have yet no other foreign Commerce but with the reſt of the *Spaniſh* Colonies, either in *Chili* to the Southward, or with thoſe of *Mexico* to the Northward: They ſail every Year from *Peru* to the Fairs of *Acapulco* and *Panama*, carrying the Product and Manufactures of *Peru* thither, and at thoſe Fairs they furniſh themſelves with the Product of *China* and the *Eaſt-Indies* from the Weſt, and thoſe of *Europe* from the Eaſt; and in this rich Traffick there are not more than ſeven or eight Ships employ'd within the Space of a Year, tho' they export and import the Value of many Millions.

CHAP. XIX.

A Deſcription of Chili, *treating of its Name, Situation, and Extent, and of the Face of the Country; its Springs, Lakes, Rivers, Ports, Seas, Winds, Tides, and Seaſons; its Provinces and Subdiviſions, Towns and Fortreſſes; the Perſons, Habits, Genius, Arts, Food, and Exerciſes of its Inhabitants; its Animals, Vegetables, and Minerals.*

Name.

THIS Country was named *Chili* by the firſt *Spaniſh* Adventurers, from a famous River and Valley of that Name, where

Situation. they obtained a Victory over the Natives. *Chili*, comprehending *Patagonia*, the *Terra-Magellanica*, and *Terra del Fogo*, is bounded by *Peru* on the North, by *La Plata* and the *Atlantick Ocean* on the Eaſt, and by the great *South-Sea* on the South and Weſt, extending in Length from 25 to 57 Degrees, 30 Minutes, South Latitude: But the Breadth is very unequal, being about 400 Leagues broad in the North, and leſſening gradually till it is not 100 broad in the South. The Face of

Face of the Country this Country very much reſembles that of *Peru*; for the Coaſt of *Chili* is a high bold Shore, and further within the Land there ariſe other Hills, which the *Spaniards* call *Sierra's*, and above them the *Andes*, the higheſt Mountains in the known World, which extend from *Santa Martha* in *Terra-Firma*, to the Straights of *Magellan*, running 65 Degrees from North to South. The Rainbow, which in the Valleys we ſee croſſing the Heavens, we obſerve from theſe Hills extended under our Feet; nor is it leſs admirable, that while we travel over theſe Hills, and ſee Tempeſts and Storms falling into the Valleys beneath, the Serenity over our Heads exceeds that of the fineſt Summer's Evening. Theſe Mountains are

Mines of the *Andes* ſuppoſed to be very rich in Mines, but there may be two Cauſes aſſign'd why their Riches do not manifeſt themſelves more. The firſt is that inviolable Maxim among the *Indians*, not to diſcover them to any other Nation. For if any one among them diſcovers any thing of this Kind, his Death is infallible. The other Reaſon is, the great Plenty of every thing neceſſary for Life; ſo that Hunger being wanting, there are few that care to run Hazards in ſearch of hidden Treaſure. One would think Heaven had placed theſe Mountains here, to keep off from the Weſt all the Storms and ill Weather of the Eaſt. Any one that travels to the Top of them diſcovers both Horizons; and when he looks to the Eaſt, all is covered with groſs Vapours; and at the ſame time looking Weſt, the Heavens are ſo bright that it cauſes Pleaſure and Joy to look on them. A curious Obſerver contemplating once this remarkable Difference, ſaid, That Nature, in the Fabrick of this Part of the World, ſeem'd to have turn'd her Back upon the Eaſtern Provinces, and looked with her Face only upon *Chili*. 'Tis neceſſary to obſerve, that it is of the Cold of theſe Mountains that Authors ſpeak, when they ſay, that the Cold of *Chili* is ſo ſevere, that the Rivers are frozen up, and Men frozen to death in the Fields. For this is true only of thoſe uninhabited Mountains.

Springs and Rivers

Numerous are the Springs, Lakes, and Rivers on the Mountains of *Chili*; and 'tis obſerved, that Springs and Rivers abound much more in the low Lands of *Chili*, than they do in *Peru*. There are Rivers that precipitate themſelves from the Tops of the high Mountains, forming the moſt beautiful natural Caſcades that ever the Eye beheld; while others tumble from ſo vaſt a Height, that their Waters diſperſe, and fall upon the Valleys beneath in Drops like Showers of Rain; and when the Sun ſhines upon them, afford a moſt agreeable Proſpect as they deſcend.

The

The Fountains called *Los Oyos de Aqua*, in a Valley of about a Mile diameter, adorned with Ever-greens and Flowers, make it the very Picture of Paradiſe. This Valley is ſurrounded with prodigious high Rocks, and in the Middle of it theſe Fountains ſpring up, throwing themſelves with great Force into the Air, and falling down again from two large Streams, running in a winding ſerpentine Courſe through the Valley, till they unite at length in one Channel, and form a conſiderable River, the Water whereof is as clear as Chryſtal, and ſo extremely cold, that 'tis impoſſible to drink a Draught of it. There are many ſalutary Fountains alſo in the Plains and Valleys of *Chili*, particularly one that riſes at the Foot of the Vulcano of *Villarica*, and runs into a neighbouring Lake. There are two more which riſe near each other, and form the River *Chico*, one of them hot, the other cold. The Baths of *Rancagua*, near the Town of *St. Jago*, are celebrated alſo for the Cure of many Diſtempers; thoſe of *Mayten*, *Majocho*, and *Conchially*, have the like healing Virtues; but thoſe Fountains are the beſt that are fartheſt from the *Andes*.

Baths.

Lakes.

The moſt conſiderable freſh Water Lakes, are thoſe of *Tagatagua*, near *St. Jago*, and that of *Puren*, in which the *Chileſians* had an impregnable Fortreſs, from whence the *Spaniards* could never drive them. They have alſo ſeveral ſalt Water Lakes, which have a Communication with the Sea, part of the Year. In ſtormy Weather the Sea forces a Way into them, and leaves them full of Fiſh; and when the Communication with the Sea ceaſes, and the hot Weather comes on, the Water congeals, and leaves a Cruſt of fine white Salt a Foot thick. Among the Rivers of *Chili*, there are fifty large ones, riſing in the *Andes*, and running Weſtward into the *South-Sea*; and theſe are join'd by many other leſſer Streams that fall into them in their Courſe, none of them running more than 30 or 40 Leagues before they reach the Sea, and that ſo precipitately, that they are not navigable for a Veſſel of any Burthen much beyond their Mouths. The chief of theſe Rivers is, the River of *Salado*, a ſalt River on the South Confines of *Peru*, the Waters whereof are ſo hot that they cannot be drank.

Rivers.

Ports.

The chief Ports of *Chili* upon the *South-Sea* are, the Ports of *Copiapo*, *Coquimbo*, *Governadore*, *Valpariſo*, *Itata*, *Conception*, *Santa Maria*, *La Mouche*, *Valvidia*, *Brewers-haven*, *Carelmepo*, and *Caſtro* in the Iſland of *Chilve*. The Seas that border upon *Chili*, if we include *Patagonia*, are the *Atlantick* on the Eaſt, and the *South-Sea*, or *Pacifick Ocean*, on the Weſt: But this *Pacifick* Name is only proper to that Part of the South Sea which lies within 30, or at moſt 35 Degrees of South Latitude; for all that lies South of 35 is as ſubject to Storms as any other Sea, and the Winds as variable as in other Places. The Tides on this Coaſt riſe but nine or ten Foot, it being an open bold Shore, with very few Bays or Harbours in it.

Seas and Winds.

Tides.

In *Chile Proper* the Spring begins in the Middle of *Auguſt*, and laſts to the Middle of *November*, when the Summer begins, and laſts till the Middle of *February*; and then follows the Autumn, which laſts till the Middle of *May*, when they enter upon their Winter. Neither the Heat or the Cold are ſo great here as in other Countries of the ſame Latitude. In the Province of *Cuyo* the Winter is extremely cold, and the Heats are equally intolerable in Summer: *Terra Magellenica* and *Patagonia* is an uncomfortable Country, and the Cold is more intenſe here than in other Countries in the ſame Latitude, in our Northern Hemiſphere.

Seaſons.

The Province of *Chili Proper* is about fourteen hundred Miles in Length from North to South, and ſcarce an hundred in Breadth from Eaſt to Weſt. The chief Towns in *Chili Proper* are, 1. *St. Jago*, ſituated in 34 Degrees South Latitude, on a ſmall River at the Foot of a Hill, in a pleaſant and fruitful Valley, called *The Valley of Maypocho*. Before it was deſtroyed by the Natives, it was the largeſt and beſt built City in the Country, and according to the uſual *Spaniſh* Model. It was founded by *Peter de Valdivia*, who conquered this Part of *Chili* in the Year 1541. *Valparizo* is the Port Town to it. 2. The City of *Conception*, ſituated on a fine Bay of the *South-Sea*, in form of a Creſcent, and forming a good Harbour. 3. *Coquimbo*, or *La Serena*, ſituated on a ſmall River, in a fine Valley, in full View of a Bay of the Sea, from which 'tis about two Miles diſtant. The Place is of a pretty large Extent. 4. The Town of *Baldivia*, or *Valdivia*, ſituated on an Eminence, at the Point of a Peninſula, the ſecureſt and moſt ſpacious Harbour on the Coaſt of *Chili*. What this Place is moſt conſiderable for, beſides the Harbour, is, the rich Gold Mines in the Neighbourhood, in the working of which *Peter Valdivia* employed twenty thouſand *Indians*, who finding themſelves cruelly oppreſſed, roſe upon the *Spaniards*, re-took moſt of the Towns they had built, and making *Valdivia* Priſoner, poured melted Gold down his Throat, reproaching him, that his Avarice was not to be ſatisfied otherwiſe. 5. The Town of *Imperial* ſituated on an Eminence, at the Confluence of two Rivers. 6. The Town of *Villarica*, ſituated on a Lake near the Foot of the *Andes*. This Place obtained its Name from the vaſt Quantities of Gold found in the adjacent Country. 7. *Oſorno*, ſituated on a Bay of the Sea, about 20 Leagues South of *Baldivia*. 8. *Caſtro*, ſituated on the Weſt Side of the Iſland of *Chilve*, a fruitful Iſland, that bears good Wheat; and both here, and at *Oſorno*, over-againſt it, there is great Plenty of Gold, which the *Spaniards* purchaſe of the Natives. 9. *Copiapo*, ſituated at the Mouth of a River of the ſame Name, which, with an Iſland that lies before it, forms a tolerable Harbour in the *South-Sea*. 10. *Guaſco*, ſituated on a Bay of the ſame Sea. 11. *Angol*, ſituated in a fine fruitful Plain, 8 Leagues Weſt of the *Andes*. 12. *Arauco*, ſituated about 5 Leagues North of *Angol*, which gives Name to a Valley inhabited by the braveſt People of *Chili*.

Chief Towns in *Chili Proper*.

2*dly*, the Province of *Cuyo*, or *Cuto*, is about a thouſand Miles in Breadth generally from Eaſt to Weſt, and extending from the 35th to the 45th Degree of South Latitude. We find but three *Spaniſh* Towns mentioned in the Province of *Cuyo*; 1. *Mendoza*. 2. *St. John de Frontera*; and 3. *Oromante*, or *St. Lewis of Loyala*; all of them upon the Northern Confines, the *Spaniards* poſſeſſing very little of this Country on the South and Eaſt.

Cuyo.

Chief Towns in *Cuyo*.

3*dly*, The Province of *Patagonia*, or *Terra Magellenica*, is bounded by a Line drawn from the *Atlantick* to the *Pacifick Ocean*, in 45 Degrees of South Latitude, on the North; by the *Atlantick Ocean* on the Eaſt; and by the *South-Sea*, or *Pacifick Ocean*, on the South and Weſt. In this Part of the World we meet with no Towns, either of Natives or *Europeans*. The *Chileſians*, indeed, do not live in Towns, but every Tribe extends itſelf on the Bank of ſome River in the Valleys between the Mountains, their Houſes ſtanding regularly, and at a Diſtance from each other,

Patagonia, or *Terra Magellenica*.

other; neither do they remain long in one Place, but remove for the Conveniency of Pasture, and as the Season of the Year requires: In which they do not find much Difficulty, for their Houses are all upon a Floor, slightly built of Wood, and consist of three or four Rooms only, which are so contriv'd that they can be taken asunder and removed one after another. Their Beds are the Skins of Beasts laid upon the Floor; a Block or a Stone serves them for a Pillow, and they lay a Coverlet or two over them, made of the Wooll of their Country Sheep. Their Dishes are of Wood, or made of some Calabash, or Goad, which serve them also instead of Pails and Pitchers: Earthen Pots they have to boil and stew their Meat in; a rough unhewn Block serves for a Seat, and another of the same Kind for a Table; and their Lances, Swords, and other Arms, are the principal Ornaments of their Houses. Those who inhabit *Cuyo*, and the Plains on the East Side of the Mountains of *Andes*, are still less polish'd. Some of them live in Caves, and others, after the *Arabian* Way, are ever roving from one Part of the Country to another; and that they may do this with the greater Ease, they have no Houses at all, only a slight Tent made of the Skins of Beasts. As to *Patagonia*, or *Terra Magellanica*, we could never learn there was a single Town in the Country, and scarce any thing that looks like a House; nothing but poor Huts of a pyramidical Form, just to screen the miserable Inhabitants from the Rigour of the Weather. The Fortresses of the *Chilesians*, seem to resemble those of the antient *Britons*. They were usually situated in Woods, surrounded by Lakes, or Morasses, and the Trees cut down and laid across served them instead of Walls. Where they had no Water or Marshes to defend them, they made broad Ditches, and planted sharp Stakes at the Bottom of them.

The *Chilesians* are of the middle Size, and strong limb'd; of a tawny Complexion, and have long black Hair exceeding harsh; their Features tolerably good, their Teeth white and sound; active of Body, but of a dejected Countenance. Their Women are moderately tall, slender, and well-shap'd. Those *Chilesians* who inhabit the Province of *Cuyo*, and the Plains of *Pampas*, are People of a larger Stature than those of *Chili Proper*, and of a darker Complexion, and the Women paint their Faces, or some Part of them, green. *Patagonia*, is the Country which our first Discoverers peopled with Giants, Dwarfs, and Monsters: But none that have visited these Coasts the last hundred Years have seen any thing of this Kind.

The Men of *Chili Proper* wear a loose Garment, made of the Wooll of their Country Sheep, pretty full, and reaching down to their Knees or lower; not open before, or on the Sides, and has no Sleeves. They have a Kind of open Drawers and Doublets, but no Shirts, any more than Shoes and Stockings; but wear a Kind of Buskin on their Legs; and on their Heads a stiff Cap, the Crown of which is sometimes adorned with Feathers, dy'd Wooll, or Flowers. The Habits of the Women differ little from those of the Men, only they have no Covering on their Heads, but a Kind of Coronet of Wooll of several Colours binds their Temples. Their Hair is Part of it curled and braided, and the rest flows down their Backs. They have also a Kind of Sash, with which they swathe their Bodies from the Middle upwards; and when they go abroad, throw a Mantle over all. On Festivals their Clothes are of the same Form, but finer, and their Necks are covered with Chains of beautiful Shells, or precious Stones. The *Indians* in the Province of *Cuyo* and the Plains of *Pampas*, are not near so well clothed as those on the West. They are contented with Leaves to hide their Nudities, and the Skins of Beasts serve them for Cloaks. The People of *Patagonia* go like the antient *Britons*, perfectly naked, tho' they live in an exceeding cold Climate.

The *Chilesians* are the bravest People of the new World, and to this Day remain unconquered, for the most Part. The *Peruvian* Emperors formerly made some Impression on their Northern Frontiers, but were repulsed. The *Spaniards* also subdued several of their Provinces; but when the *Chilesians* had learned the Use of Fire-Arms, and to manage Horses, they revolted and drove the *Spaniards* out of their Country. Nor were these People less remarkable for their Wit than their Courage; they did not only learn the Art of War of the *Spaniards*, but excelled them soon in warlike Stratagems, and their Generals became superior to the *Spaniards*. The *Chilesians* are remarkable also for their Patience and Fortitude, being bred up to Hardships from their Infancy. In Temperance only they are deficient. In eating, drinking, and venereal Encounters, they know no Bounds; particularly at their Festivals and Entertainments. They are very little Meat, except Venison, before the *Spaniards* stocked their Country with Beef and Mutton, Hogs and Goats. Their usual Diet is Maiz, boil'd, parch'd, or ground, and made into Paste, with Pulse, Roots, Fruit, and Herbs: Their Drink is either made of their *Indian* Corn dry'd and steep'd, or of their Fruits, and is very strong and palatable; and in the Southern Provinces the *Spaniards* have introduced Grapes. They dance, sing, and play upon Instruments at their Festivals, tho' they make but dull Musick with their wooden Drums and Flutes; and if their Wind Instruments are made of the Bones of their Enemies, as some relate, it cannot be very harmonious. They dance round a Kind of Maypole, but lodge several Bottles of strong Liquor about the Pole, and drink round in the Intervals of their Dances, till they are exceeding merry.

Their Children are bred up from their Infancy to endure Hardships, to manly Sports, and the Exercise of Arms; and even their Women are not exempted from them. The whole Nation is so addicted to War, that it seems to be both their Business and their Pleasure. Since the *Spaniards* arrived, they have been in a perpetual State of War with those Invaders. This Genius for War, possibly, may be one Reason they have made so little Improvement in other Arts and Sciences. They had no Books, Letters, or Writings, among them, any more than the rest of the *Americans*, but assisted their Memories by *Quippo's*, or Knots, as the *Peruvians* did, and would cast up an Account by them with great Exactness. The Skill the Natives of *Chili* had in Physick and Surgery was very mean. But the Natives are said to be of such strong, hale Constitutions, and use so much Exercise, that they have very little Occasion for Physick, and live frequently to an hundred Years of Age. So averse are they to Slavery, that there is no keeping them Prisoners long. They will run any Hazard to make their Escape, and sometimes die by their own Hands, so much do they dread the Cruelty of the *Spaniards*, who send the captive *Chilesians* to the most distant Countries.

In this Country we meet with such Quadrupedes as have been described in *Peru*. The *Chilesians* can now bring a Body of ten or twelve thousand Horse into the Field at a short Warning: and they carry on a very great Trade with

Cle-

Learning.

Physick.

Their Aversion to Servitude

Animals

the Hides of their black Cattle, as well as the Flesh.

Their Birds and Fowls also are much the same that are found in *Peru*. The Parrots fly screaming in such numerous Flocks, that they obscure the Light of the Sun. At the time when they slaughter their Beef, there comes down another voracious Fowl, larger than a Duck, which gorges itself with the Carcasses that are left in the Fields. The Ostrich is another Bird the Natives hunt. They have another long-legg'd Fowl, bigger than a Turkey, that wades through Ponds and Rivers, and lives upon Fish. They abound also in Singing-Birds of various Kinds, many of them unknown to this Part of the World; and they have several the same as ours, such as Linnets, Nightingales, Blackbirds, and Finches. Of tame Fowls they had but one Sort, between a Duck and a Hen, when the *Spaniards* arrived here. Their Lakes and Rivers abound in good Fish, as well as their Seas. Whales and Grampusses are frequently found on the Coast of *Chili*, and there is Plenty of Albecores, Boneta's, Flat-Fish, and Shell-Fish.

Forest Trees. Among the Forest Trees of this Country, the principal are the Cypress Tree, the Cedar, the Oak, the Pareguay, and the Cinamon Tree, so called from some Resemblance it may have to the true Cinamon in its Colour. They have also the Sandal, the Palm, the Pine Tree, and the Guayac, which is a Wood as hard and as heavy as Iron almost. There is another Tree called the Thorn-Bush, that grows in Clusters, or Groves, which is their ordinary Fuel near *St. Jago*. The Mustard Plant, grows vastly large here.

Flowers. As soon as the first Rains fall in the Spring, the Fields are cloathed with green, and within a Month there is good Grass, with which Nature produces yellow Flowers in great Abundance, and after these, a vast Variety of other Flowers, red, blue, green, yellow. They have also Physical Herbs of great Virtue. A Plant called Quinchamali they take up and boil with the Roots, and the Liquor being drank hot, dissolves any coagulated Blood in the Body. Another of these healing Herbs is called Albaquilla, the Juice whereof applied to green Wounds, is a present Cure. A third healing Herb grows like a Lock of fine Hair, and cures Fevers and Pleurisies. There are Herbs that cure the Sciatica, others that dissolve the Stone in the Bladder, and some that cure almost every Malady.

Medicinal Herbs.

Fruits. The Fruits peculiar to the Country are, the Pengu, a red Fruit, which they boil and eat with their Meat. The Magne, whose Fruit is black and well tasted. They have many other Fruits, of which they make good Liquor; but the most admired is the Myrtilla, which is the common Food of the Natives beyond 37 Degrees. They have also a Seed called Madi, which affords a very good Oil. As to their Fruits in general, they have scarce any of those that grow in the Countries between the Tropicks. But then they have this Advantage, that whatever Fruits are carried thither from *Europe*, thrive prodigiously. The Fruit that thrives most is the Apple of every Kind, of which they have prodigious Orchards. Of Maiz, or *Indian* Corn, they had great Plenty before the *Spaniards* arrived; but they had neither Wheat, Barley, Oats, Annis, Cummin, Coriander-Seed, Linseed, Flax, Hemp, Peas, Cabbage, Lettice, Raddishes, Cardoons, Chicory, Endive, Cucumbers, Pursly, Garlick, nor Onions, all which they have now in Abundance, and in greater Perfection than they are to be met with here; and their Roots, particularly Turnips, grow to a prodigious Size.

Corn.

There are Mines of Gold, Silver, Copper, Quicksilver, and Lead in *Chili*; but the *Spaniards* seem to slight all of them but the Gold. *Valdivia* employed no less than fifty thousand *Indians* in working the Gold Mines; at which the Natives were so provoked, that they have made a general Revolt, defeated and killed *Valdivia*, and drove the *Spaniards* out of most of the Towns they had built. After which they made a Law, that it should be Capital to discover a Mine to the *Spaniards*, or any other Foreigners. Both the *English* and *Dutch* have endeavoured to cultivate an Understanding with the Natives of *Chili*, in order to traffick with them for their Gold; but could never succeed. The foreign Trade of *Chili* consists altogether in exporting their Produce to *Peru* and *Mexico*; namely, Gold, Copper, and other Metals; Hides, Tallow, dry'd Flesh, Fish, Corn, Fruits, Wine, Oil, Salt, Hemp, Flax, Cordage, Leather, Timber for Shipping, and other Uses, Medicinal Herbs and Drugs. Their naval Stores are another great Article, which the *Peruvians* receive entirely from thence; as also the Copper. And the *Spaniards* of *Chili* take in return, the Merchandise of *China*, *East-India*, and *Europe*.

Mines.

Foreign Trade.

What has been said hitherto relates to the Province of *Chili Proper*: As to that of *Cuyo*, we have not so perfect an Account as could be wish'd, nor indeed of any of the Inland Provinces. They abound in Corn and Wine, and their Fruits are said to have a better Flavour than those of *Chili*; and of this there is such Plenty, that they supply the Province of *La Plata*, and even *Buenos Ayres*, on the *Atlantick Ocean*, with dry'd Grapes, dry'd Peaches, Apples, Oil, and excellent Wine. But then this must be understood of that Part of the Province that lies next the Mountains, for the Desarts of *Pampas* extend six or seven hundred Miles further Eastwards, over which they are forced to pass in their Way to *Buenos Ayres*. These are vast Plains, which afford an unbounded Prospect, but produce neither Trees nor Herbage. They travel here in covered Carts and Waggons, made as commodious almost as an House, with Doors to shut, and Windows on each Side to let in the Air; and they lay Beds, or Mattresses, on the Floor, on which they sleep great part of the Journey. These Waggons are drawn by Oxen, and they set out about two Hours before Sun-set, travelling all Night, and till the Sun is an Hour high the next Morning.

Cuyo.

The Desarts of *Pampas*.

CHAP.

CHAP. XX.

The History of Chili, *containing the antient and present State of that Country.*

The History of Chili.

ALL we can learn of the antient *Chilesians* from the *Peruvians* is, that they worshipped a great many Creatures animate and inanimate, and were very unpolish'd: That they had no other Form of Government than the Patriarchal: And when they had Wars with their Neighbours, they made Choice of the Man most famous for Courage and military Skill for their General. As to that Part of the Country that was conquered by the *Inca's*, the *Chilesians* were obliged to conform themselves to the Religion and Manners of the *Peruvians*.

Expeditions to Chili.

Almagro was the first of the *Spanish* Generals, who undertook an Expedition against *Chili*, in which he was introduced by the *Inca Paulla*, as before related. *Valdivia* was the next *Spanish* Commander that attempted to extend their Conquests in *Chili*. He entered upon this Service in the Year 1540, and met with little Opposition from that Part of *Chili* which was subject to the *Inca's*; but on his advancing further, he was frequently encounter'd by the confederated Caciques. However, he penetrated as far as the Valley of *Mapocho*, which he found extremely fruitful and well peopled. In this Valley he founded the City of *St. Jago*, in the Year 1541, and built a Castle for the Defence of the Gold Mines in the Neighbourhood, which he compelled the conquer'd *Indians* to work in: At which the *Chilesians* were so exasperated, that they attack'd the Castle before it was well finish'd, and were very near carrying it: However, they were at length repuls'd. But the *Indians* giving out that there were very rich Gold Mines in a certain Part of the Country not far from *St. Jago*, drew a Detachment of his Forces into an Ambuscade, and cut off every Man of them, except their Commander and a *Negro*, who escaped to *St. Jago* by the Swiftness of their Horses.

The Civil Wars breaking out in *Peru*, *Valdivia* was commanded thither with some of his Soldiers, and left *Chili* to the Care of *Francisco de Villagra*: But the Rebels being defeated in *Peru*, *Valdivia* returned with a good Body of veteran Soldiers. During the Absence of *Valdivia*, there happened a Misunderstanding between his Lieutenant and *Pedro Sanchez de Hoz*, to whom the King of *Spain* had granted the Government of the further Part of *Peru* and *Chili*, and who with Reason therefore expected the Command of the Forces in the Absence of *Valdivia*. This *Valdivia* had agreed to; but his Lieutenant *Villagra*, taking an Opportunity to quarrel with *Sanchez* in the Absence of *Valdivia*, made him Prisoner and cut off his Head. While the *Spaniards* were thus engaged in Civil Broils, the *Chilesians* made their Advantage of them, surprized the Garrisons of *Copiapo* and *Coquimbo*, and putting them to the Sword, demolished both those Towns: And it was with Difficulty *Villagra* defended himself in *St. Jago* itself till the Return of *Valdivia*, who bringing a good Army with him, drove the *Chilesians* from the Valleys again, and rebuilt the Towns the *Indians* had destroyed there; after which he passed the River *Maypo*, and subdued the *Promoca's*, a warlike Nation. Afterwards observing an advantageous Situation in 37 Degrees South Latitude, he founded a City there, giving it the Name of *Conception*. But the *Chilesians*, enraged to see themselves thus bridled and restrained, assembled in great Numbers, and harrassed the new City with repeated Attacks, endangering the Loss of the whole Army. *Valdivia*, however, finished the Fortifications of that Town, and in the Year 1551, founded the City of *Imperial* at the Confluence of two Rivers, in 39 Degrees South Latitude. From hence he marched towards the *Andes*, and 16 Leagues to the Eastward of *Imperial* laid the Foundation of *Villa Rica*.

The *Chilesians* revolt.

The *Chilesians* at length finding their Enemies to be but Men like themselves, notwithstanding the Disadvantage they had in the Want of Horses, Artillery, and Armour, resolved to make another bold Push for the Recovery of their Liberties, being persuaded they should be able, by their Numbers and Courage, to expel these Strangers out of their Country. *Valdivia* receiving Intelligence of the intended Insurrection, made some haste to the Valley of *Arauca*, where he found thirteen or fourteen thousand of the Natives assembled in Arms, whom he charged with his Horse, and obliged them to retire into the Woods and Inclosures; but was not in a Condition to disperse them entirely; they frequently rallied and attacked his Troops, and continued to encounter him for several Days in a Sort of Running-fight.

Caupolican General of the *Chilesians*.

And now *Caupolican*, the brave *Chilesian* General, observing that his engaging the *Spaniards* with such Numbers only occasioned Confusion among his People, divided his Army into Battalions of a thousand each, ordering them to charge the Enemy by turns. In Pursuance of these Orders, the first Battalion engaged the *Spanish* Horse with great Resolution, and, having held them in play some time, leisurely retired, being succeeded by the second, and that by the third, and so on, till the *Spaniards*, both Men and Horse, began to faint with the Labours of the Day; which *Valdivia* too late observing, made a precipitate Retreat, ordering his Troops to take Possession of a Pass, about a Mile from the Field of Battle. But a *Chilesian*, Page of *Valdivia*, hearing his Master give Orders for their Retreat, deserted at that Instant to his Countrymen, and directed them to take Possession of the Pass before the *Spaniards* could arrive there. And taking up a Spear, charged his late Lord, *Valdivia*, at the Head of a Company of *Chilesians*, while another Detachment of the *Indians* secured the Pass, as he directed them. And now the *Chilesians*, seeing the *Spaniards* unable to resist their Attack, prest

The *Spaniards* routed.

them on every Side, and cut them all in Pieces on the Spot, except *Valdivia* himself, who was taken Prisoner making his Confession to a Priest, whom they killed immediately, but brought *Valdivia* before *Caupolican*, who ordering him to be ty'd to a Tree, *Valdivia* meanly begged his Life of the Conquerors. But the General pronounced his Doom, though Authors differ

about

and executed

about the Manner of his Execution. Some affirm, they poured melted Gold down his Throat, bidding him satisfy himself with that Metal he so violently thirsted after: Others relate, that one of the *Indian* Caciques beat out his Brains with a Club, without asking the General's Leave; and all the *Spanish* Writers agree, that they made Trumpets and Flutes of his Bones, and preserved his Skull as a Memorial of that important Victory. *Caupolican* constituted *Lautaro*, who had been *Valdivia*'s Man, his Lieutenant-General, finding him every way qualified for that Post.

Lautaro Lieutenant General

The News of *Valdivia*'s Misfortune arriving at *Conception*, *Francisco de Villagra* assembled the *Spaniards* that were dispersed in *Chili*, and being joined with several thousand *Indian* Allies, marched to give Battle to *Caupolican*. But that General retired before him, till he found the *Spaniards* so far engaged in the Woods that their Horse could be of little use to them: And then sending out Detachments to possess the Passes in their Rear, he boldly faced about and attacked them in Front; ordering his Men not to stand to be shot at, but immediately advance and come to a close Engagement; and being much more numerous than the *Spaniards* and their Allies, by this Stratagem they gained another memorable Victory, killing no less than two thousand five hundred *Spaniards* and *Indians* on the Spot. After which, *Lautaro* marched towards the City of *Conception*, and finding it abandon'd by the *Spaniards*, set fire to the Town and demolish'd it. *Lautaro* afterwards laid Seige to the City of *Imperial*, but the Winter coming on, was obliged to raise it, by the great Rains which fall at that Season.

The *Spaniards* afterwards rebuilt *Conception*; but *Lautaro* drove them from thence a second Time; and assembling a great Army, laid Siege to the Capital of *St. Jago*, where being killed with an Arrow, the Siege was raised. However, the Governor of *Peru*, apprehending all *Chili* would be lost, sent his Son *Don Garcia de Mendoza* with a powerful Reinforcement, to suppress the *Araucans*; who was so fortunate, after several Encounters, to make *Caupolican* Prisoner, whom he put to death after he had persuaded him to declare himself a Christian. But the *Chilesians* were determined to perish rather than become Slaves to the *Spaniards*, and raising fresh Forces, attacked all their Colonies at once, some of which were taken and retaken several times; and thus the War continued with great Obstinacy for upwards of fifty Years, when the *Spaniards* were driven with great Slaughter from most of their Settlements. In 1599, five thousand *Indians*, whereof three thousand were Horse, and the rest Foot, seventy of them carrying Fire-Arms, and two hundred of them in Armour, took the City *Imperial* by Surprize, burnt and destroyed the whole Town, killing and taking four hundred *Spaniards*. In short, of the thirteen Cities which were established in this Kingdom of *Chili*, the *Indians*, before the Year 1604, entirely destroyed seven, namely, *Valdivia*, *Imperial*, *Angol*, *Santa Cruz*, *Castro* in *Chiloe*, *Villarica*, and *Conception*. They also besieged and took the City of *Osorno*, but lost it again. They afterwards recovered several Places from the *Spaniards*, and almost expell'd them their Country; of which the *Hollanders* receiving Intelligence, their *West-India* Company, in the Year 1642, fitted out a Squadron of Men of War under the Command of Captain *Brewer*, and having put some Land Forces on Board, order'd them to sail to the Coast of *Chili*, and settle Colonies there. *Brewer* and his Fleet arrived on the Coast of *Chili* in 1643, where they engaged and defeated a Party of *Spaniards*. They afterwards landed at *Castro* in the Island of *Chiloe*, and made several Attempts to settle themselves in *Chili*: But General *Brewer* dying, and the *Chilesians* discovering, that the chief Matter in View with the *Dutch*, as well as the *Spaniards*, was to get Possession of their Mines, this Expedition came to nothing. About six and twenty Years afterwards, Captain *Narborough* was sent to *Chili* by King *Charles* II. at the Instigation of a *Spaniard* who had resided there; but very little Advantage was made of his Voyage, other than the Discovery of some Particulars relating to that Country which were unknown here before, and which prove that the Accounts which we have received from the *Spaniards* concerning *America* are not agreeable to Truth, but founded upon the Plan of Interest, Bigotry, or Vanity.

Spanish Forts on the Streight of *Magellan*.

Before the Passage round *Cape Horn*, the most Southern Land of *Terra del Fogo*, was discovered by *La Maire*, the *Spaniards*, imagining there was no other Way into the *South-Sea* but through the Streights of *Magellan*, built Forts on the narrowest Part of that Streight, and garrison'd them with several hundred Men, in order to exclude all other Nations from the *South-Sea*; but Sir *Thomas Cavendish* passing the Streights of *Magellan* in 1586, and coming to the first *Spanish* Fort, found no more than twenty-four alive of four hundred that were left there, and these almost starv'd. He arrived afterwards at another Fort in the Streight, to which the *Spaniards* had given the Name of Fort *St. Philip*, and found it in Ruins, most of the Garrison thereof having perish'd for want of Food; whereupon Sir *Thomas* gave it the Name of Port *Famine*, and proceeding in his Voyage, passed happily into the *South-Sea*. Several other Commanders also passed these Streights successfully, but many however have been disappointed, drove back, and lost by Tempests. Among the successful Voyagers of our own Countrymen, were Captain *Cowley*, Captain *Dampier*, Captain *Rogers*, and Captain *Sharp*.

The Islands of *Patagonia* and *Chili* described.

And here we shall give some Description of those three considerable Islands on the Coast of *Patagonia* and *Chili*, of which all Seamen, who visit the *Pacifick Ocean*, take so much Notice.

Terra del Fogo.

1. The Island of *Terra del Fogo* is bounded by the Streights of *Magellan* on the North, by the *Atlantick Ocean* on the East, and by the great *South-Sea* on the South and West, being of a triangular Figure, the Base whereof is the Streight of *Magellan*, three hundred Miles in Length from East to West; and it is about the same Extent from the Streights of *Magellan* to Cape *Horn*, the Point or Summit of the Pyramid, which lies in 57 Degrees 30 Minutes South Latitude. This Island is mountainous and woody, the Tops of the Mountains almost always covered with Snow; but it has several good Bays and Harbours, and does not want Rivulets of fresh Water. As to the Natives, Travellers agree that they are a brave and hardy People, but not very numerous: That they paint both their Faces and Bodies, and have no other Clothes but a Cloke made of raw Hides. The Women have nothing on their Heads, but wear Pieces of Penguins Skins before their Nudities. They live in Huts made of the Boughs of Trees, and eat Seals, Penguins, Venison, and other Game. Their Arms are Clubs, Bows, and Arrows pointed with sharp Flint or Bones. Their Boats are Canoes, and they make their Nets of Guts and Sinews, Fibres of the Bark of Trees, or such other Materials as the Country affords.

Chiloe.

2. The Island of *Chiloe*, situated on a great Bay of the *South-Sea*, over-against the Country of the

of *Chili* is computed to be about 140 Miles in Length, and twenty in Breadth. The Face of the Country is various, conſiſting of Mountains, Valleys, Woods, champaign and marſhy Grounds, and has in it ſome Springs and Rivulets of freſh Water. The only Town in it is that of *Caſtro*, built by the *Spaniards*, ſituated in 42 Degrees odd Minutes South Latitude. The Country abounding in Corn, Cattle, and Fruit, both *European* and *Indian*.

3. The Iſle of *Juan*, or *John Fernando*, lies in Latitude 34 Degrees 45 Minutes: Its Circuit may be about forty *Engliſh* Miles, and its Diſtance from the Continent four hundred. Its Soil is indifferent upon the Hills; but its Valleys are fine, fruitful, and pleaſant, interſperſed with natural Meadows. Theſe Valleys therefore are capable of great Improvement, ſince there need be no Queſtion of their producing every thing which is agreeable to this Climate. Ships which paſs the Streights of *Magellan*, or by Cape *Horn*, conſtantly touch here, by Reaſon that their Crew having by this time contracted an Epidemick Scurvy, the Captain's miſſing the Iſland might occaſion a Mutiny. Never any Iſland was more capable of being fortified, ſo as to reſiſt any Enemy who could attack it in that Part of the World. There are in it but two Bays capable of receiving Ships, which are both at the Eaſt End, and a ſmall Charge would build ſuch Works as would render it impracticable for any to land there againſt the Will of its Inhabitants. The Weſt End is of ſuch natural Strength, that a ſmall Body of Men might defend it.

Seals are found here in the greateſt Plenty of any Part of the World, and their Skins are of an extraordinary Value from the Fineneſs of the Furs: Their Fat makes very good Train Oil; and much better ſtill is made of the Sea-Lion, a Creature bigger than the Seal, amphibious, yet without a Fur. To theſe Advantages may be added the great Abundance of Goats, which have been produced by three or four that were left here by its firſt Diſcoverer.

John Fernando diſcovered this Iſle in the Voyage he was making from *Lima* to *Baldivia*, and being pleaſed with its Situation, Soil, and Climate, reſolved to ſettle it. On his Return to *Lima*, he endeavoured to procure a Patent for that Purpoſe: But whether his Propoſal claſhed with the private Intereſt of the *Spaniſh* Viceroy, or with any Maxim in the *Spaniſh* Policy; it has continued uninhabited ever ſince, except now and then ſome body has been left when the Ships watered there.

CHAP. XXI.

A Deſcription of La Plata; *treating of its Name, Situation, and Extent; its Waters and Seaſons, Provinces and Chief Towns; the Perſons, Habits, Genius, Arts, and Exerciſes, of its Natives; their Husbandry, Plants, Animals, and Minerals; with an Abſtract of their civil and religious Hiſtory.*

La Plata, its Name.

THE Province of *La Plata*, or *Paragua*, received its Name from the River *Plata*, which riſing in *Peru*, runs through this Country. It is bounded by the Country of the *Amazons* on the North, by *Brazil* on the Eaſt, by *Patagonia* on the South, and by *Peru* and *Chili* on the Weſt, lying between the 12th and 37th Degrees of South Latitude, and between the 50th and 75th Degrees of Weſtern Longitude. That Part of this Country which lies Weſt of the great River *Paraqua* conſiſts of large Plains, extending two or three hundred Leagues in Length, without any thing that looks like Timber, and ſcarce a Hill or a Stone to be ſeen in them; but in the Country to the Eaſtward of that River, there is a Variety of Hills and Valleys, Woods and Champaign.

Face of the Country.

This is for the moſt Part an Inland Country, and borders upon the *Atlantick Ocean* on the South Side of the Mouth of the River *La Plata*. Lakes they have in great Abundance, and ſome of them very large, particularly that of *Xarayes*. There is another called the Lake of *Ibera*, and a third called *Caracares*. The Sources of their Rivers are ſome of them in the Mountains of *Andes*: Thoſe that riſe run to the South-Eaſt, and fall into the great River *Paraqua*: Others riſe in the Hills which ſeparate this Province from *Brazil*, and running South Weſt, fall into the ſame River *Paragua*, which riſes out of the Lake *Xarayes*, and running South, unites with the *Uraqua*; after which it is called the River of *Plata* till it reaches the *Atlantick Ocean*. Other Rivers of Note are, 1. of *La Plata*, which riſes near *La Plata* in *Peru*, and running to the South-Eaſt, falls into the *Paraqua*, after which it loſes the Name of *Plata*, till it meets with the *Uraqua*, and then it reſumes the Name of *Plata* again. 2. The *Uraqua*, which, riſing in the Mountains that divide *Brazil* from this Province, runs South till it unites with the *Paragua*. 3. The *Parana*, another very large Stream. 4. The *Salado*, ſo named from the Saltneſs of its Waters. 5. The *Tercero*, which riſes in the *Andes*, and running almoſt due Eaſt, falls into the *Paragua* in 34 Degrees, not far from the Town of *Sprcto Sancto*.

There are a Multitude of other Rivers both on the Eaſt and Weſt of this Province, which fall into the great River *Paragua*, and ſo fertilize the Plains, that they abound in good Meadow and Paſture Grounds.

Seaſons.

As to the Seaſons, the North Part of this Country has in *November* and *December* annually very heavy Rains, Storms, and Tempeſts: And at this time all the flat Country is over-flow'd, and their Reſervoirs of Water are repleniſh'd. Their Lands are made capable of Tillage; and whenever theſe Rains fail, it occaſions a Famine. The Beginning of the rainy Seaſon is the Time of ſowing and planting, and the fair Seaſon, which follows, is their Harveſt. But in that Part of the the Country which lies South of the Tropick of Capricorn, it is their Summer in *November*, *December*, and *January*: And thoſe Rivers which riſe within the Tropicks, after the Rains are fallen within the Tropicks, overflow their Banks

as they paſs through the South Part of this Country, rendering it as fruitful as the *Nile* does *Egypt*.

Provinces. *La Plata* may be thrown into two grand Diviſions, *viz.* The Provinces on the Eaſt Side of the River *Paragua*; and thoſe that lie Weſt of the ſaid River. The Provinces on the Eaſt Side of the *Paragua*, are thoſe of, 1. *Paragua Proper*, a perfect *Terra Incognita*. No Author or Traveller pretends to give any Deſcription of it, or to know the Extent of it. 2. *Guayra*, bounded by *Paragua Proper* on the North. The chief Towns whereof are, *Guayra*, *Xavier*, and *Conception*. 3. The Province of *Parana*, bounded by that of *Guayra* on the North. The chief Towns whereof are, *Acarai*, *Ignatio*, and *Itapua*. 4. The Province of *Uragua*, bounded by *Guayra* on the North. The chief Towns whereof are, *Purification*, and *La Capia*, or *Yapua*. All theſe Provinces have *Brazil*, on their Eaſt. On the Weſt of *Paraguа* are, 1. The Province of *Tucuman*, bounded by *Peru* on the North. The chief Towns whereof are, 1ſt, *St. Jago de Iſtero*, ſituate almoſt in the Middle of the Province; a Biſhop's See and Univerſity, the Capital of *Tucuman*, and lies in the Midway between *Potoſi* and *Buenos Ayres*, being 250 Leagues from each. The Plate is brought from *Potoſi* hither on the Backs of Mules, but from *St. Jago* to *Buenos Ayres* it is carried in Waggons. 2*dly*, *Cordua*, about an hundred Leagues South of *St. Jago*, on the Road to *Buenos Ayres*. It is a Biſhop's See, and Univerſity, and has ſeveral fine Convents in it. The Inhabitants are vaſtly rich, and the Clergy ſtill richer than the Laity. 3*dly*, *Santa*, on the Road from *St. Jago* to *Potoſi*, almoſt in the Midway. 2. The Province of *La Plata Proper*. The chief Towns whereof are, 1ſt, *Buenos Ayres*, ſo named from its healthful Situation. It ſtands on the South Side of the River *La Plata*, 50 Leagues from the Mouth of it; is a Biſhop's See, having five Churches beſides the Cathedral, and ſeveral Convents. It is a very great Mart, for hither all *European* Merchandize is brought, and ſent from hence to *Peru* and *Chili*; and hither great Numbers of *Negroes* alſo are brought, and ſold to *Peru* and *Chili*; which Traffick the *Engliſh* have the Advantage of, by Virtue of the *Aſſiento Contract*. 2*dly*, *Santa Fe*, a well-built Town, ſituate at the Conflux of the Rivers *Salado* and *Paragua*, between two and three hundred Miles North-Weſt from *Buenos Ayres*. 3*dly*, *Aſſumption*, ſituate at the Conflux of the Rivers *La Plata* and *Paragua*, between four and five hundred Miles North of *Santa Fe*. A well-built populous Town, and the Sea of a Biſhop.

Buenos Ayres. *Santa Fe* *Aſſumption Town*

The Jeſuits, who are in a Manner Sovereigns of that Part of the Country which lies between *Brazil* on the Eaſt, and the great River *Paraguа* on the Weſt, boaſt of their having reduced theſe ſavage Nations to Civility, and made Chriſtians of them, purely by their Preaching. Certain it is, they govern them abſolutely both in Spirituals and Temporals. For the building of a Town here, the Fathers uſually pitch upon ſome Eminence on the Side of a Lake or River, where they have Plenty of Wood, and here they firſt form a Square, on the Side of which uſually ſtands a handſome Church, their Schools, the Father's Houſe who preſides in the Canton, and the Halls and Offices of their Courts of Juſtice, and from the Square run broad handſome Streets of a great Length. They have twenty ſix of theſe Cantons on the Banks of the Rivers *Uragua* and *Parana*, each of them containing eight hundred or a thouſand Houſes, and ſeven or eight thouſand Souls, under the Government of two Miſſionaries. The Church of each Canton is uſually built of Brick or Stone, and has a lofty Steeple, containing four or five Bells. It is as richly furniſh'd and adorn'd as the *Spaniſh* Churches in *Europe*. But notwithſtanding the advantageous Situation of theſe *Indian* Towns, and the Beauty of their publick Buildings, the common Houſes were generally mean at firſt. The Materials were uſually Earth and Clay, and one Room ſerved the whole Family: Here they lay promiſcuouſly, ſome on the Skins of Beaſts on the Floor, and others in Hammocks of Net-work; their Kitchin Utenſils being only ſome few Pots, Pans, and Calabaſhes, with Wooden Spits, and Gridirons. But they begin to improve both in their Buildings, and Furniture, ſince the Jeſuits have taught them to make Tiles and inſtructed them in other mechanick Arts.

Building. *Furniture.*

As to the Perſons of the Natives, they are not ſo tall as the *Europeans*. However, they are big-boned, ſtrong, well-ſet Men, and their Legs uſually pretty thick: Their Faces are flat, and rather round than oval, and their Complexion olive: They have black Hair as ſtrong as Horſe-hair, which they wear very long before they are converted. Thoſe who have not conformed to the *Spaniſh* Cuſtoms, wear only the Skin of ſome Beaſt about the Middle of their Bodies; and the better Sort have another Skin which ſerves for a Mantle. The ordinary Women have their Arms, Shoulders, and Breaſts bare, and no Covering on their Heads but their Hair, which they wear of an immoderate Length. Their Ornaments are glittering Fiſh Bones, which they wear in their Ears, and about their Necks and Arms, in Chains; and their Chiefs have a Kind of tripple Crown upon their Heads. Boys and Girls go perfectly naked. They ſeem to be a brave People, having defeated ſeveral Bodies of *Spaniards* when they firſt invaded their Country. It was a great many Years before the *Spaniards* could fix themſelves even in the Plains: But in the Woods and Mountains, to the Eaſtward of the River *Paraguа*, the Natives were never ſubdued, till the Jeſuits found Means to inſinuate themſelves into their good Opinion. Their principal Food is *Indian* Corn, which they beat to Flour in a Mortar, and bake with Fleſh, or make Cakes of it on the Hearth: They eat all manner of Fiſh, Fleſh, and Fowl, and are the greateſt Gluttons in the World: They are extreme lazy and indolent, and dull at Invention, but will imitate almoſt any thing you give them a Pattern of: Several of them are become ſuch excellent Mechanicks, that they make Organs and other muſical Inſtruments as good as thoſe that are brought from *Europe*: Others are Watch-makers, Painters, and Muſicians, in all which Arts they have been inſtructed by the Jeſuit Miſſionaries. Their Exerciſes and Diverſions are at preſent either rural Sports, ſuch as Hunting, Fiſhing, and Fowling, or Dancing and Feaſting, as in other Countries: But their principal Diverſion, or rather Buſineſs, before the *Spaniards* brought them into fix'd Habitations, was to rove about the Country from Place to Place.

Perſons. *Habits.* *Food.*

They have a wooden Plow, which does not enter the Ground above three Inches deep, and yet they have uſually a very plentiful Crop of *Turkey* or *Indian* Corn. The Miſſionary of every Canton has commonly forty or fifty Acres ſown with *European* Wheat. Theſe *Indians* are ſo voracious, that the Mother will hatch the Meat from her Child, and eat all that comes in ſight of them: For which Reaſon each Miſſionary has a great Barn, into which he forces them to lay up a certain Proportion of Corn, which he gives them back at Seed-time: Notwithſtanding which they ſometimes deceive the Miſſionary, or rather themſelves. At their Seed time, in *June* or *July*, the

the Miſſionary allots each *Indian* two or three Oxen to plow withal. On Default of Induſtry, theſe People are corrected in the ſame Manner as our Children, only that inſtead of Birch they make uſe of a Scourge: This is perform'd by ſome *Indian* or other, who gives the Delinquent twenty four or more Strokes, according to the Miſſionary's Order. In the Kitchen Gardens here, grow all the Year round divers Sorts of Sallad, Herbs, Endive, Cichory-Roots, Parſnips, Turnips, Spinage, Radiſhes, Cabbages, Carrots, Beet-Roots, Parſley, Aniſeed, Fennel-Seed, Coriander-Seed, Melons, Cucumbers, and divers Sorts of *Indian* Roots: In the Phyſick-Garden, Mint, Rue, Roſemary, Pimpernel, ſweet Marjoram, *&c.* The Flower-Garden produces white Lillies, *Indian* Lillies, yellow and blue Violets, Poppies, and many Sorts of *Indian* Flowers. In the Orchard are Apple and Pear Trees, and Hazel nut Trees; (but theſe two laſt will bear no Fruit here, tho' they grow very lofty;) Peaches, Pomegranates, ſweet and ſower Lemons, ſweet and ſower Citrons, Vanilleeys, and divers other *Indian* Fruits. A Vineyard ſometimes will produce five hundred large Casks of Wine in one Year. A Cask of Wine is ſold ſometimes for twenty or thirty Crowns; a great Price for ſuch an unwholſome Wine as this. In the Plains on the Weſt Side of the *Uraqua*, there is not a native Tree to be ſeen fit for Timber or Fuel; but the *Spaniards* have of late Years planted ſuch Abundance of Peaches, Almonds, and Figs, that there are now vaſt Woods of them. On the contrary, the Country to the Eaſtward of the River *Paraqua*, has naturally large Woods and Foreſts, well replenifhed with Timber. They have the fineſt Paſtures and Meadows in the World, both in the Eaſt and Weſtern Parts of *La Plata*; however, there is no mowing of Graſs, or making of Hay here. They have whole Fields of Cotton, but no Hemp or Flax growing in the Country.

Cattle. They had no great Stock of Cattle before the *Spaniards* imported *European* Animals; the principal were *Indian* Sheep, Goats, Swine, and Deer. But the *European* Cattle are ſo vaſtly increaſed of late Years, that there is ſcarce a Canton which has leſs than three or four thouſand Horſes and Mules, with black Cattle in Proportion, and thirty or forty thouſand *European* Sheep in ſome of them: They abound alſo in Hogs, Goats, and Poultry; and have Plenty of Fiſh in their Rivers. They ſee ſometimes fourteen or fifteen thouſand Cattle feeding together, that have no particular Owner, but any one ſends and takes what he pleaſes. One Sheep is more valued there than three Horſes, on account of their Wooll; for a good Horſe may be purchaſed for a Knife of the Value of Six pence; and a Bridle is of more Value than three Horſes, and a Horſe-ſhoe is worth ſix Horſes. As to Minerals, there are few or none in the flat Country; and tho' 'tis reported the Jeſuits have diſcovered ſome Gold Mines in the Mountains, thoſe Fathers do not acknowledge there are any.

As the Natives of *La Plata* were divided into a Multitude of Tribes, they knew nothing of the general Hiſtory of their Country when the *Spaniards* arrived: And what they received by Tradition relating to their particular Clans, could be very little relied on, as they were not acquainted with Letters. All that we know of them is, that thoſe on the Weſt Side of the River *Paraqua* lived a wandering Life like the *Tartars*, and thoſe on the Eaſt Side of that River in Caves: That the *Spaniards* and *Portugueſe* made ſeveral Attempts in vain to ſubdue them from *Brazil* and the River *La Plata*, before the *Spaniſh* Governors of *Peru* and *Chili* attacked them from the Weſt, and made a complete Conqueſt of that Country.

The firſt Adventurer that penetrated into this Country was *Alexius Garcia*, a *Portugueſe*, who in the Year 1524, march'd quite cro' *La Plata*, as far as the Borders of *Peru*, where having amaſs'd a vaſt Quantity of Plate, he was cut off in his Return with moſt Part of his Men; and *George Sedenho*, with ſixty *Portugueſe*, having been ſent out to ſupport him, was alſo cut in Pieces with all his Party. In the Year 1526, *Sebaſtian Cabot* entered the Mouth of the River *La Plata*, and ſailing up that River as far as where *Garcia* was kill'd, there met with the Plate he had got on the Confines of *Peru*, which he purchaſed of the Natives for a Trifle; and imagining it to be the Product of that Country, concluded he had made a very important Diſcovery. Whereupon he erected a Fort on the North Side of the River, near where the Town of *Aſſumption* now ſtands: He alſo detach'd *Alvaro Ramon* up the River *Uraqua*, to get further Intelligence of the ſuppoſed Mines; but *Ramon*'s Ship run a-ground, and he and his People were cut off by the Natives. After which, *Cabot* removed from that Shore, and built another Fort on the South of the River *Plata*, where *Eſpiritu Santo* now ſtands, and leaving a Garriſon in it, returned to *Spain* for a Reinforcement. But the Natives ſurpriz'd the Fort ſoon after he was gone, and put the Garriſon to the Sword.

However, *Cabot* repreſenting to the Court of *Spain* that *La Plata* was one of the richeſt Countries in the World, ſeveral of the beſt Families of that Kingdom made Intereſt to be ſent on an Expedition thither. Whereupon a Body of two and twenty hundred Landmen, beſides Mariners, were imbark'd for the River of *Plata*, the whole being commanded by *Don Peter de Mendoza*, the Emperor's Sewer; who arriving at the Mouth of the River *La Plata*, founded the Town of *Puenos Ayres*, in the Year 1535, but not without great Oppoſition from the Natives; and Proviſions ſoon growing ſcarce, the Governor thought fit to return to *Spain*, leaving *Ojeda* his Deputy-Governor. But *Ojeda* thought fit to abandon *Buenos Ayres*, and built the Fort of *Aſſumption*, whither he removed with his half-ſtarv'd Garriſon. The Governor *Alvaro Nunez Cabeca de Vaca* afterwards made further Diſcoveries, planting Colonies as far as the North of *Tucuman*, and he and his Succeſſor rebuilt *Buenos Ayres*, and ſome other Towns near the Mouth of the River *La Plata*: And in 1553, *Diamos de Iguiz* being, detach'd from *Chili*, built the City of *St. Jago*, the Metropolis of *La Plata*; and two Years afterwards *John Gomez Zarita* was ſent from *Chili* to *La Plata*, who built the Town of *Cordua*, and made an entire Conqueſt of the Country as far as the River *Paraqua*. But the Provinces to the Eaſtward of that River were never conquer'd by Force, but reduced by the Addreſs of the Jeſuits under the Dominion of the Crown of *Spain*; and that Court, in return for that Service, confer'd the Property of that Country on thoſe Fathers.

Religion of the Natives. As to the antient Religion of the Natives of *La Plata*, they worſhipped the Sun, Moon, and Stars, and Thunder and Lightning, as the *Peruvians* did, and in ſome Parts of the Country, Trees, Stones, Rivers, Animals, and almoſt every Thing, animate and inanimate. As to a great Serpent the Jeſuits tell us of, that was as big, about as an Ox, and one of the Objects of their Adoration, we may without Offence ſuſpend our Belief of ſuch Relations.

In

In their modern Religion, the People are as good Catholicks as the Jesuits can make them, and the most obedient Vassals to that Order.

Marriages. These *Indians* anciently allow'd both of Poligamy and Concubinage, and the greatest Objection they have to Christianity is, its confining them to one Woman. The Jesuits, when a Virgin is fourteen, and a Lad sixteen, do not suffer them to remain longer unmarry'd, for fear of worse Consequences. Upon the Marriage, it is the Missionary that provides the Hutt, and the Wedding Clothes; a Bed they never want, Bull-Hides being cheap enough; and the Wedding Dinner is made with a fat Cow, which is likewise presented by the Missionary. Their Marriage Agreement consists only in two Articles: The Woman promises to fetch what Water the Husband wants from the River, in lieu of which he engages to furnish the Kitchen with Fuel. There is one Thing peculiar in their Marriages, that here the Man does not woe the Woman, but the Woman the Man: In this Case the Maid comes to the Missionary, and says, Father, I have an Inclination to marry such or such a one, if you will give your Consent. Whereupon the Missionary sending for the Person, says, My Son, such or such a one is desirous to be marry'd to you; are you contented she should? Unto which if he replies *Yes*, then the Match is made, and wants nothing but the Priest's Blessing.

CHAP. XXII.

A Description of the Country of the Amazons; *treating of its Name, Extent, and Discovery; its River, Air, Seasons, Vegetables, and Animals; the Genius, Habits, &c. of the Natives.*

Name of the Country.

THE Country of the *Amazons* obtained its Name from a supposed Nation of Female Warriours, that were said to inhabit the Banks of one of the greatest Rivers in the World, which runs through this Country from West to East. There is not a Circumstance related by the Antients of the *Asiatick Amazons*, which has not been applied to these by the Moderns; tho' all the Ground there was for these Fictions seems to have been, that there were seen some Women mingled with the Men that came to gaze on the *Spaniards*, when they first invaded this Country; which is bounded by the Equator, which separates it from *Terra Firma*, on the North; by *Brazil* and the *Atlantick Ocean* on the East; by *Brazil* and *La Plata* towards the South; and by *Peru* on the South West; lying between the Equator and the 15th Degree of South Latitude, and between 50 and 75 Degrees of Western Longitude.

The Situation and Extent.

The River *Amazon* discover'd by *Gonsalo Pizarro*.

Gonsalo Pizarro, Brother to the Marquis, was the first that discovered this mighty River, in the Year 1540, when he was Governor of *Quitto*; which Expedition of his we have mentioned in the History of *Peru*. The Hardships which he, and the four hundred and fifty veteran *Spaniards* underwent therein, are almost unexpressible. Only Fourscore of the returned to *Peru*, and these almost without Clothes, and so sun burnt and emaciated with Fatigue and Want of Food, that their nearest Friends scarce knew them. Such Hazards did the first *Spanish* Adventurers struggle with in Search of Gold, even when they had before acquired enough. It is a Question whether *Gonsalo Pizarro*, who was one of the Proprietors of the Mines of *Potosi*, had not amass'd more than a Million of Crowns before he entered upon this Expedition.

Peter de Orsua attempts to discover the Country.

Peter de Orsua, who obtained a Commission in the Year 1550, to subdue the Provinces bordering on the River *Amazon*, embarked on the River *Napa* with seven hundred armed *Spaniards* and two thousand *Indians*, and sailed down the Stream two or three hundred Leagues, till he came to the Confluence of the two Rivers *Amazon* and *Napa*, and continuing his Voyage two hundred Leagues further, was killed in a Mutiny of his Men. Several other Adventurers made the like Attempts afterwards, but most of them prov'd unfortunate, till two Monks and some Soldiers Two Friars set out from *Quitto* in *Peru*, in the Year 1635, and embarking on the River *Amazon*, sailed the whole Length of it till they arrived at *Para* in *Brazil*. These Friars having given an Account of their Voyage to the Governor of *Brazil*, he embark'd seventy *Portuguese* and two thousand *Indians*, and ordered them to sail up the River, under the Command of *Texeira*, who, by the Help of the Easterly Wind, sailed up against the Current till he arrived at *Los Reyes*, a Town of *Quitto* in *Peru*. The River not being navigable higher for his Vessels, he went by Land to the City of *Quitto*, where he was kindly received by the *Spanish* Governor; and the Governor sent Father *De Acuna*, and another *Spanish* Jesuit, down the River with him, ordering them to embark for *Spain* when they arrived at *Brazil*, and communicate the Observations they should make in this Voyage to his Catholick Majesty. From the Relations they published, we learn that the River *Amazon* rises in *Quitto*, almost under the Equator, and running South East till it unites with the River *Napa* continues its Course almost due East for 26 Degrees of Longitude, and then returning to the North, by many Mouths discharges itself into the *Atlantick Ocean*, almost under the Equator. They compute, that, with all its Turnings and Windings, it does not run less than 1800 Leagues; and observe that it is ordinarily 2 or 3 Leagues broad; and at the Mouth fifty or sixty Leagues broad; that there is one Streight where it is not above a Quarter of a Mile over, and that there are near two hundred Rivers which fall into it.

The Air of the Country about it is cooler than could be expected so near the Equator, which proceeds from the heavy Rains, that occasion the Rivers to over flow their Banks one half of the Year; from the cloudy Weather, from the Shortness of the Days, and from a brisk Easterly Wind that blows frequently quite through the Country. Travellers also observe, that they have most terrible Thunder and Lightning great Part of the Year: And it may properly be said they have two Summers and two Winters every Year.

The

The Trees here are Ever-greens, and they have Fruits, Flowers, and Herbage all the Year round. Their Fruits are Cocoa-nuts, Anana's, or Pine-apples, Guava's, Banana's, and such other Fruits as are usually found between the Tropicks. Their Forest and Timber Trees are Cedar, *Brazil* Wood, Oak, Ebony, Logwood, Iron-wood, the Canela, or Cinamon, and several Sorts of dying Wood. They have also *Indian* Corn, and the Cassavi Root, of which they make Flower and Bread; Tobacco, Cotton, Sugar, Yams, Potatoes, Sarsaparilla, and other Roots. They have also Plenty of Venison, Fish, and Fowl; among which they mention Deer, *Indian* Sheep and Goats, Guano's, Manatee, Armadillo's, Tortoise, and vast Flocks of Parrots of all Colours.

The Natives are of the ordinary Stature of Men: They have good Features, long black Hair, and black Eyes, and their Complexion is a Copper Colour; whereas the Natives of *Africa*, in the same Latitude, are all *Negroes*. As to the Nation of *Amazons*, they are now no where to be found, any more than the Giants and Canibals the first Adventurers mentioned. The People have as much Humanity or more than the *Europeans* who invaded them, and a Genius for Painting and some mechanick Arts; particularly they make good Joyners Work, tho' they have no other Tools than such as are edged with sharp Stones. They spin and weave themselves Cotton Garments, and are pretty decently cloth'd: Their Earthen-Ware is much admir'd: But they have not learnt to make Bricks, or build with Stone, the Materials of their Houses being of Wood, Thatch, and Clay, but one Floor, and usually on some Eminence near the River Side.

The Banks of every River are inhabited by a distinct People, commanded by their respective Sovereigns, who are distinguish'd by Coronets of beautiful Feathers. Their Arms are Bows, Arrows, and Spears, and they make War on each other by Water as well as Land. Whatever their Pretensions are for War, their principal End in it is to make Slaves; however, they use their Slaves with great Humanity, and never sell them to Foreigners.

They worship Images, and carry them with them in their Expeditions; but have no Temples dedicated to any God, or any Order of Priests. They countenance both Polygamy and Concubinage. As to Gold and Silver Mines, the *Spaniards* have not yet met with any here, tho' they find some Gold in the Rivulets, that fall into the River *Amazon* near its Sources. The *Spaniards* made great Efforts from *Peru* to subdue this Country while they had a Notion it abounded in Gold, but seem to have neglected the Discovery ever since they were undeceiv'd in this Particular.

CHAP. XXIII.

A Description of the Spanish *Islands, particularly*, Cuba, Hispaniola, *and* Porto Rico.

THE three principal *Spanish* Islands that remain to be described, are *Cuba*, *Hispaniola*, and *Porto Rico*.

The Island of *Cuba* is situated between the 20th Degree of Northern Latitude and the Tropick of *Cancer*, and between the 74th and 87th Degrees of Western Longitude, 30 Leagues North of *Jamaica*, and about as many South of Cape *Florida*, being near 250 Leagues in Length, and generally between 20 and 30 Leagues broad. A Ridge of Mountains runs almost through the Island from East to West, well replenish'd with Timber and other Trees; but the Land near the Shore is generally a plain champaign Country. There are Abundance of Rivulets which run from the Mountains North and South, but none of them large. No Place in the World has better Harbours, the chief of which are *St. Jago*, and that of the *Havana*. They have no Winters here, but great Rains and Tempests usually when the Sun is vertical, which renders the Climate tolerable. The driest Season is when the Sun is at the greatest Distance from them; and then the Morning is much the hottest Part of the Day; for towards Noon the Sea Breeze begins to blow pretty briskly, and continues to do so till the Evening. From *October* to *April* they have brisk North or North West Winds at the Full and Change of the Moon; and in *December* and *January* they frequently increase into Storms, tho' that be their fair Season.

The chief Towns in the Island are, 1. *St. Jago*, situated at the Bottom of a fine Bay, in the South-East Part of the Island, which, with some small Islands, form a commodious Harbour: It was built by General *James Velasquez*, about the Year 1514: And it may still be stiled the Capital of *Cuba*, being the only Bishop's See in it, but is very much upon the Decline, both the Bishop and Civil Governor residing at the *Havana*, for the most Part. 2. The *Havana*, situate at the North-West Part of the Island, about five hundred Miles to the Westward of *St. Jago*. It is a little City, about half a League in Compass, seated in a Plain. It is almost round, inclosed with low Walls on the Land Side, and defended on the other Part by Water. The Inhabitants are about four thousand Souls, *Spaniards*, *Mulattoes*, and *Blacks*, who live most of them in low Houses. The Women are beautiful, and the Men ingenious. The Governor hath the Title of Captain-General of the Island, and administers Justice with the Assistance of a Lieutenant, who is appointed by the Council of the *Indies*. The Inhabitants are poor, having no Trade but Tobacco and Sugar; and all the Labour falls upon the *Blacks*. The City is encompassed on two Sides by its Harbour, which is so deep that the Ships anchor within a few Steps of the Shore. It is defended by three Castles, the chief of them called *Del Morro*, the second *De la Punta*, and the third only *The Fort*. 3. *Puerto*, situated at the North-East Part of the Island, upon a good Harbour for small Vessels. 4. *Porto del Principe*, situated on the North Side of the Island. 5. *Santa Cruz*, situated also on the North Side of the Island, upon a very good Harbour. 6. *Trinidad*, situate at the Bottom of a Bay on the South Side of the Island. 7. *Spirito Sancto*, situate also on the South Side of the Island.

This Island produces the same Animals as the neighbouring Continent; but there is no Place Animals.

to be

where the Seas and Rivers abound more with Crocodiles, from whence several small Islands upon this Coast have obtained the Name of *The Crocodile Islands*. Tortoises and Manatee are also exceeding plentiful here; and the *European* Cattle are so vastly increased that they run wild, and are killed chiefly for their Hides and Tallow; and their Horses are said to be the best Breed in *America*. Their Timber Trees are Cedar, Cotton, Oaks, Pines, Palms, Cocoa nut Trees, and such others as are usually found between the Tropicks. Their Fruits are Plaintains, Banana's, Ananas's, Guava's, Oranges, Lemons, Grapes, and other Fruits introduced by the *Spaniards*; but their Wine turns sour and will not keep. They have also Ginger, Cassia, Fistula, Aloes, and long Pepper; but as to Cinamon, and other fine Spices, they are only to be found in the *East-Indies*. There are bituminous Fountains in the Island, which produce a Substance that serves instead of Pitch: And there is a Stone Quarry where vast Quantities of Flints are found, of the Shape and Size of Cannon Balls. Travellers mention also Gold Mines in this Island; but if there were any they are exhausted, tho' there are some of Copper not far from *St. Jago*.

Trees and Fruits. Bitumen. Stones. Mines.

Columbus first discovered this Island, as related in the first Chapter of *America*; but the *Spaniards* fixing first at *Hispaniola* on account of the Gold Mines there, *Cuba* was not entirely conquered till the Year 1512, or 1514; *Don James Velasquez* having the Honour of reducing it. The *Spaniards* have frequently been disturb'd in the Possession of it by their Enemies, and the Buccaneers; particularly Captain *Cliff* took the Capital City of *St. Jago* in the Year 1601, and Captain *Morgan* the Town of *Porto del Principe*, in the Year 1699.

History.

2. The Island of *Hispaniola* is situated between 15 and 20 Degrees of North Latitude, and between 66 and 75 Degrees of Western Longitude, being about eighty Leagues in Length, and about forty Leagues broad, and lies fifteen Leagues to the Eastward of *Cuba*, twenty Leagues East of *Jamaica*, and upwards of an hundred Leagues North of *Terra-Firma*. The Name the *Indians* gave it antiently was *Bohio*, but *Columbus* called it *Hispaniola*, or *Little Spain*, and it was frequently called *Dominica*, or *Domingo*, from its Capital.

Hispaniola. Name.

As to the Face of the Country, there are Mountains in the Middle of it well planted with Forest Trees, and other Mountains more barren, in which formerly were Gold Mines, that seem to be entirely exhausted at this Day. On the North and South are fine fruitful Plains, watered with abundance of pleasant Rivers, of which those on the South Side of the Island are the largest. There are also several Woods and Groves of Timber and Fruit Trees: And no Island hath more secure and commodious Ports. The Air and Seasons are much the same here as in the Island of *Cuba*. The Island may be thrown into two grand Divisions, The South-East Part, which is subject to the *Spaniards*, and The North-West, now subject to the *French*.

Face of the Country. Division.

The chief Towns under the Dominion of the *Spaniards* are, 1. *St. Domingo*, situated on a commodious Harbour on the South Side of the Island. This Town is built after the *Spanish* Model, so often described. It is most delightfully situated, having a fine fruitful Country on the North and East, a large navigable River on the West, and the Ocean on the South, and is the See of an Archbishop. It is also a Royal Audience, the most antient in *America*, and the Seat of the Governor of the Island. There are in it several fine Churches and Monasteries, and it is well fortified. The Inhabitants are *Spaniards*, *Mestices*, *Mulattoes*, and *Albatraces*, a sixth Part of which may be *Spaniards*: And in its flourishing State, it might contain about two thousand Houses; but is very much declin'd of late Years. It was founded by *Bartholomew Columbus*, Brother to the Admiral, in the Year 1494. 2. *Hiney*, 30 Leagues East of *Domingo*, most considerable for its Sugar-works. 3. *Xibo*. 4. *Cotuy*, near the East End of the Island, formerly a rich Town, but now an inconsiderable Place. 5. *Azua*, or *Asso*, a good Port Town, eight Leagues West of *Domingo*. 6. *Conception de la Vega*, 25 Leagues North of *Domingo*, in which is a Cathedral and several parochial Churches, founded by *Columbus*, who from this Town had the Title of Duke *De la Vega*. The Towns subject to the *French* are, 1. *Petit Guaves*, a Port situated in a great Bay at the West End of the Island. 2. *Leogane*, another Port in the same Bay. 3. *Port Louis*, a good Harbour on the South-West. 4. *Cape St. Nicholas*, the most Easterly Settlement the *French* have on the North, near which they have the Fort *De Paix*.

Chief Towns of the *Spanish*. Hispaniola. *French*.

As the South-East Part is under the *Spaniards*, and the North-West subject to the *French*, consequently the *Spaniards* and *French* are Lords of their respective Districts; but the *Criols*, *Mestices*, *Negroes*, and *Albatraces*, are much more numerous than their *European* Lords, tho' their Slavery is as intolerable here as upon the Continent; but there is this Difference between the *French* and the *Spanish* Settlements, that the *French* apply themselves to Planting sometimes, whereas the *Spaniards* live a lazy Life, depending on their Slaves entirely for their Subsistence. The Stature and Complexion of the Natives are the same as in the like Climates on the Continent. There may be observed a great Variety of Features and Complexions here, and in all the *European* Colonies in *America*.

When the *Spaniards* first discovered *Hispaniola* and the neighbouring Islands, there was not one four-footed Animal upon them, unless some little Dogs that could not bark: But the *Spaniards* importing Horses, Oxen, Asses, Mules, Sheep, Hogs, Dogs, and Cats, they multiply'd prodigiously; and the *Spaniards* afterwards deserted this Island, having first destroyed the Natives, the black Cattle ran wild in the Mountains and Forests, and for many Years were killed by the Hunters and Buccaneers for their Hides and Tallow, of which incredible Quantities were exported to *Europe*: And here the Buccaneers used to victual their Ships with Beef and Pork, and sell the same Kind of Provisions to the Shipping that touch'd there; but since the *French* became Masters of the North West Part of the Island, and the Number of Cattle is decreased, they have apply'd themselves to planting Sugar, Tobacco, &c. As to the feather'd Kind, there is a Sort of Fowls in their Woods equal to our Poultry, which the *Spaniards* call Pintado's, and great Numbers of Parrots of various Colours. Here is also the Carpenter-Bird, the Cabrero, Men-of-War Birds, Ravens, Crows, Swallows, Ducks, Teal, &c. As to Reptiles and Insects, there are Serpents of various Kinds, but none of them venomous, Chego's, Musketo's, Fire-Flies, Crickets, and Millipedes. The Crocodiles and Tortoises also are as numerous here, as in any Place of the World, and they have Plenty of Fish in their Seas and Rivers. The principal Forest Trees on *Hispaniola* are the Cedar, the Oak, the Pine, the Mahoe-Tree, the Acoma-Tree, Brasil, and other dying Woods, and the Manchinil, the Fruit of which last is poisonous. They have also several Sorts of Palms, with several Kinds of Fruit-Trees, such

Animals.

ſuch as Banana's, Plantains, Guava's, Anana's, Oranges, Lemons, Citrons, Limes, Grapes, Apricots, Caramite-Trees, the Genipa-Tree, and the Abelcoſe. But the principal Produce of the Iſland at this Day is Sugar, of which the *French* as well as the *Spaniards* have very large Plantations: And the great Frugality of the *French*, enables them to ſell this Merchandize cheaper than the *Britiſh* Colonies can do, which conſequently muſt diminiſh our Trade in that Particular. They plant Tobacco alſo in *Hiſpaniola*, and have ſeveral Gums and Drugs that are uſed in Medicine, ſuch as Gum-Elema, Guaiacum, Aloes, Caſſia, and China-Root.

The Hiſtory.

The firſt Diſcoverer of this Iſland, and Part of its Hiſtory, have been already treated of. We ſhall add in this Place, that the *Spaniards*, after they had made an entire Conqueſt of it, lived in great Splendor here for many Years, till they had exhauſted the Gold Mines, and worn out the Natives in the working of them. After which the *Spaniards* deſerted the Iſland themſelves, and went over to the Continent, moſt of them to *Peru* and *Chili*. Whereupon this Iſland became the Habitation of wild Beaſts, till Outlaws, Buccaneers, and Pirates of all Nations began to make Settlements here, and maintain themſelves by hunting the wild Cattle on Shore, and the Prizes they made at Sea, or by plundering the maritime Towns in thoſe Seas. The *Spaniards* finding their Commerce interrupted by theſe Free-booters, thought fit to ſend Colonies thither, and repoſſeſs themſelves of the South-Eaſt Part of the Iſland again, but could not drive the Buccaneers from the North Weſt Coaſt: And theſe being moſt of them *French*, his moſt Chriſtian Majeſty ſent a Governor thither, and obliged theſe diſorderly People to build Towns, cultivate their Lands, and live in ſubjection to the Laws of *France*, ſince which time they have made prodigious Improvements.

Sir *Francis Drake*, in 1586, took *St. Domingo* by Storm with twelve hundred Men, and then quitted it again. It ſeems to have been a Maxim then in *England*, to humble the Pride of the *Spaniards*, but not abſolutely to drive them from their Settlements. But *Cromwell* and his Miniſtry were of a different Mind. He ſent the Admirals *Penn* and *Venables* thither in 1654, with a fine Fleet and ten thouſand Land-men, who had infallibly made themſelves Maſters of the Iſland, if ſome that envied *Cromwell* that glorious Conqueſt had not defeated the Deſign by unneceſſary Delays. However, theſe Forces did the Nation the next beſt Service they could poſſibly have performed, in making a Conqueſt of *Jamaica*, which the *Engliſh* have kept Poſſeſſion of to this Day.

Cromwell ſends the Forces to Conqueſt of *Hiſpaniola*.

The Forces ſent to *Jamaica*.

Iſlands on the Coaſt of *Hiſpaniola*.

There are ſeveral ſmall Iſlands near the Coaſt of *Hiſpaniola*, of which the Chief are *Savona*, *St. Catalina*, *Navaſſa*, *Gonaibo*, and *Tortuga*.

Porto Rico. Situation and Extent.

3. The Iſland of *Porto Rico* is ſituated in 18 Degrees of Northern Latitude, and between 64 and 66 Degrees of Weſtern Longitude, being about forty Leagues in Length from Eaſt to Weſt, and twenty in Breadth from North to South, and lies about twenty Leagues Eaſt of *Hiſpaniola*. The *Indian* Name was *Boriquen*, and *Columbus* called it *St. John*, but the chief Town being afterwards built upon a commodious Harbour called *Porto Rico*, the Iſland loſt both its former Names. The whole Iſland is pleaſantly diverſified with Woods, Hills and Valleys, and is well watered with Springs and Rivers; only on the little Iſland, on which the City of *Porto Rico* ſtands, they have neither Spring or Brook, but fetch their freſh Water from the main Iſland, or preſerve it in the Time of Rain in Ciſterns and Reſervoirs.

Name.

Face of the Country.

The chief Towns are, 1. *Porto Rico*, or *St. John's*, ſituated on a ſmall Iſland about two Miles in Length, and joined to the main Iſland by a narrow Cauſey. The Town ſtands upon an Eminence, and is about half a League in Circumference, and being a Biſhop's See, has a handſome Cathedral, and ſix or ſeven parochial and conventual Churches. The Entrance of the Harbour is very narrow, and defended by ſtrong Forts and Batteries, which render the Town inacceſſible by Sea. Nor is the Place leſs pleaſant than it is ſtrong. 2. *St. Germains*, ſituated at the Weſt-End of the Iſland of *Porto Rico*, about four Miles from the Sea. Towns.

Their rainy and tempeſtuous Seaſon is in the Months of *June*, *July*, and *Auguſt*, when the Sun is near them; and then the Winds in theſe Seas are at South-Eaſt, tho' they are North-Eaſt at other times. It is very fortunate that it rains here in thoſe Months, which would otherwiſe be the hotteſt: And the Sea Breezes are another great Relief; for about eight in the Morning there riſes a freſh Gale of Wind, and blows till four in the Afternoon. The Time of the Rains is uſually unhealthful. Seaſons. Winds.

St. John de Porto Rico was diſcovered by *Columbus* in 1493, but he being employed in Diſcoveries on the Continent afterwards, it was not reduced under the *Spaniards* till the Year 1510; when *John Ponce de Leon*, Deputy-Governor of *Hiſpaniola*, embarking with ſome few *Spaniards*, arrived at *Boriquen*, where pretending he only came to eſtabliſh a friendly Commerce with the Natives, the chief Cacique made an Alliance with the *Spaniards*, ſhewing them two Rivers wherein were ſome Gold Sands. Whereupon *Ponce de Leon* introducing a good Number of *Spaniards*, and building ſeveral Forts in the Iſland, uſurp'd the Dominion of it: And not content with taking the Country from the Natives, he obtained a Commiſſion to be Governor of the Iſland, under Colour whereof he made all the People Slaves, dividing them among his Captains and Followers, who employed thoſe poor People in all manner of Drudgery, uſing them as unmercifully as the *Spaniards* had done the Natives of *Hiſpaniola*. Whereupon ſome of the *Indians* run away to the Woods and Mountains, and others ſtood upon their Defence; but not being in a Condition to reſiſt the Fire Arms, Horſes, and Dogs of the *Spaniards*, they were at length moſt of them compelled to ſubmit to that cruel Bondage, and thoſe that would not, were tortured or torn in Pieces with Dogs. And when repeated Orders came from *Spain* to uſe the People better, thoſe Adventurers repreſented to his Catholick Majeſty that they were Canibals, and procured Leave to make Slaves of all they were pleaſed to denominate ſuch. Hiſtory of this Iſland.

The City of *St. John de Porto Rico* was founded in the Year 1514, and continued in a flouriſhing Condition for many Years. Sir *Francis Drake* gave ſeveral Aſſaults to the Town in the Year 1595, but was beaten from it. The Earl of *Cumberland* had better Succeſs; for he made himſelf Maſter of the Place the next Year, with a Fleet ſet out at his own Expence, aſſiſted by two Regiments of the Queen's. But it was with great Hazard and Difficulty the Earl carry'd the Town: For in an Aſſault he fell from a Rock into the Sea in his Armour, and remained ſo long under Water, that he was almoſt dead. The Earl had determin'd to keep Poſſeſſion of *Porto Rico*, and from thence to have attack'd the other *Spaniſh* Settlements, but loſing more than half his Men by the Bloody-flux in a very ſhort time, he was compelled to ſet ſail for *England* with much leſs Treaſure than he expected to have met with *Porto Rico* founded. The Earl of *Cumberland* takes the Town.

with here; for the *Spaniards* had carried off or concealed all that was valuable. The beſt Prize he met was eighty Pieces of Braſs Cannon.

Produce of Porto Rico

The Soil of *Porto Rico* is rich, producing long coarſe Graſs, which they feed their Cattle with, but never make into Hay. They have good Timber fit for the building of Ships, and Variety of Fruit-Trees. The Country alſo produces Rice and *Indian* Corn, but they make more Bread of the Caſſavi-Root than of Corn. The principal Produce for Exportation is Ginger, Sugar, and Hides. They have more Goats and Hogs than *European* Sheep, and the Mutton they have is poor dry Food: Their Pork is excellent, and their Kids are pretty good Meat: They have alſo all manner of *European* Poultry, and Plenty of Fiſh. Parrots are as common as Crows in *England*, and they are well ſtocked with Wood-Pidgeons and Guanoes. They have alſo Land-Crabs, which burrow in the Ground like Rabbets; but theſe are the Food of Dogs more than of Men. As to Gold Mines, there are none wrought at this Day; nor was there ever any that were very conſiderable; but poſſibly there might be ſome little Gold found in their Rivulets formerly, which invited the *Spaniards* to take Poſſeſſion of the Iſland.

Their Dogs feed on Land-Crabs. Gold none here.

The *Virgins Iſlands* are a Cluſter of barren Rocks, a little to the Eaſtward of the Iſland of *Porto Rico*, through which the Paſſage is ſomething difficult. They are ſcarce worth claiming by the *Spaniards*, or any other Nation.

The Virgins Iſlands.

CHAP. XXIV.

A Deſcription of Brazil; *treating of its Situation, and Extent; its Name, the Face of the Country, Springs, Rivers, Lakes, Seas, Air, Winds, and Seaſons; its Provinces and Chief Towns; the Perſons, Habits, Genius, Arts, &c. of the Natives; its Animals and Vegetables; its Hiſtory and Cuſtoms, civil and religious.*

Brazil ſituation.

BRAZIL, under the Dominion of the King of *Portugal*, is ſituated between the Mouth of the great River *Amazons*, under the Equator, and the Mouth of the River *La Plata*, in 35 Degrees of South Latitude, being bounded by the *Atlantick Ocean* on the North and Eaſt, by the River *La Plata* on the South, and by the Province of *La Plata* and the Country of the *Amazons* on the Weſt; being two thouſand four hundred Miles in Length from North to South in a direct Line, and near four thouſand if we take in all the Turnings and Windings of the Coaſt, but not in many Places more than two hundred Miles broad, tho' in ſome the *Portugueſe* may have penetrated four or five hundred Miles.

Name

The *Portugueſe*, who firſt diſcovered this Country, gave it the Name of *The Holy Croſs*, but it afterwards obtain'd the Name of *Brazil* from the great Abundance of *Brazil* Wood which grows here.

Face of the Country

The Land is rather low than high near the Coaſt, but exceeding pleaſant, being chequer'd with Woods and Meadow Grounds, and the Trees, for the moſt Part, Ever-greens: But on the Weſt Side of it, far within Land, are high Mountains, which ſeparate it from *La Plata*, and in theſe are innumerable Springs and Lakes, from whence iſſue abundance of Rivers that fall into the Rivers *Amazon* and *La Plata*, or run croſs the Country from Weſt to Eaſt into the *Atlantick Ocean*, which laſt are of great Uſe to the *Portugueſe* in turning their Sugar Mills, and meliorating their Lands, which they over flow annually. Through every Province of *Brazil* there runs a great River, which communicates its Name to the Province.

Springs, Lakes, and Rivers

The Sea.

The only Sea that borders upon *Brazil* is, the *Atlantick Ocean*, which waſhing its Coaſts for three thouſand Miles and upwards, forms ſeveral fine Harbours, Bays, Capes, and Promontories; the principal whereof are, Cape *Roque*, the Harbour of *Pernambuco*, or *Recife*, Cape *St. Auguſtin*, the Harbour or Bay of *All Saints*, the Harbour of *Porto Seguro*, the Port and Bay of *Rio Janeiro*, Cape *Frio*, the Port of *St. Vincent*, Cape *St. Mary*, the Port of *St. Catharine*, and, the Port of *St. Salvador*.

Harbours and Capes.

The Seaſons, Air, and Winds throughout this extenſive Country, vary with the ſeveral Situations. The North of *Brazil*, like other Countries in the ſame Situation, is ſubject to great Rains and variable Winds, particularly in the Months of *March* and *September*, when they have Deluges of Rain, with Storms and Tornadoes; but this Part is very little inhabited. The *Portugueſe* only keep Poſſeſſion of the Coaſts, to keep Foreigners out. The Air, Winds, and Seaſons in that Part of *Brazil* which lies between 5 Degrees South Latitude, and the Tropick of *Capricorn*, are the very reverſe to what they are in other Parts of the World in the ſame Latitudes; for here the wet Seaſon begins in *April*, when the South-Eaſt Winds ſet in, with violent Tornadoes, Thunder, and Lightning: And in *September*, when the Wind ſhifts to Eaſt North-Eaſt, it brings with it fair Weather; and this is the Time of their Sugar Harveſt. But two Winds blow upon this Coaſt, the South-Eaſt from *April* to *September*, and the North-Eaſt from *September* to *April* again: But thirty or forty Leagues out at Sea they meet with the conſtant Trade Wind, which blows in the *Atlantick Ocean* all the Year round from the Eaſtward with very little Variation. There is no Country between the Tropicks where the Heats are more tolerable than this. The moſt Southerly Part of *Brazil*, which lies without the Tropick of *Capricorn*, appears to be like other Countries in the ſame Climate, one of the moſt deſirable Parts of the World, having a greater Share of fair Weather, and a more temperate Air than thoſe Countries that are nearer, or thoſe that are removed further from the Equator, and are generally bleſſed with a moſt fruitful Soil. The Winds here are variable, and the little Winter they have, is when the Sun is in the Northern Signs.

Air, Winds, and Seaſons.

Brazil is uſually divided into fifteen Provinces or Captainſhips. 1. The Captainſhip of *Para*, or *Para*. The principal River, which gives Name to the Province, runs through it from South to North, and falls into the Mouth of the River *Amazon*; and the chief Town, called alſo *Para*, or *Pelem*,

Parts of Brazil

Belem, is ſituated at the Mouth of the River *Amazon*. 2. The Captainſhip of *Maragnan*, bounded by *Paria* on the Weſt. The chief Towns whereof are, *St. Lewis de Maragnan*, ſituated in an Iſland made by the Mouths of their three principal Rivers, *Maragnan*, *Tapucary*, and *Mony*: And the Town and Iſland of *St. Lewis* formerly poſſeſs'd by the *French*, and then by the *Dutch*. 3. The Captainſhip of *Siara*. The River *Siara* runs from the South-Weſt to the North-Eaſt, at the Mouth whereof ſtands the Town of *Siara*, and about twenty Leagues to the Eaſtward of it the Fort of *St. Luke*. 4. The Captainſhip of *Potigi*, or *Rio Grande*. The River of *Rio Grande* runs from Weſt to Eaſt, on which ſtands the Town of *Tiguares*, the only one in the Province. 5. The Captainſhip of *Payraba*. The River *Payraba*, running from Weſt to Eaſt, divides this Province in two equal Parts. The Town of *Payraba* lies on the South Side of this River, about five Leagues from the Sea. 6. The Captainſhip of *Tamara*, or *Tamaraca*. The chief River is *Tamara*, in the Mouth whereof lies the Iſland and Town of *Tamaraca*. There is another Town called *Guia*, or *Goyana*, ſituate on the *Goyana*, about three Leagues from the Sea. 7. The Captainſhip of *Pernambuco*, extending two hundred Miles along the Coaſt from North to South, and an hundred and fifty Miles in Breadth from Eaſt to Weſt, and was the principal Province belonging to the *Dutch* when they were in Poſſeſſion of *North-Brazil*. The chief Town whereof was *Pernambuco*, or *The Reciefe*. This Harbour was called *Pernambuco*, or rather *Infernibuco*, the Mouth of Hell, by the *Portugueſe*, on account of the Rocks and Shoals under Water at the Entrance of it. It is compoſed partly of a Peninſula on the Continent, and partly of ſeveral ſmall Iſlands which were built upon and fortify'd in the Time of the *Dutch*. The Peninſula is called *The Reciefe*, and lies a little to the North of Cape *St. Auguſtin*. South of *The Reciefe*, and juſt oppoſite to it, is an Iſland built upon, and called *Maurice-Town*, from the Palace of Prince *Maurice*, which was ſituated on it, and hath a Communication with *The Reciefe* by a Bridge. It was ſurrendered by the *Dutch* to the *Portugueſe*, in the Year 1647, for want of Ammunition and Proviſions. The City of *Olinda* is ſituated on ſome ſmall Hills on the Sea-Coaſt, a very little North of *The Reciefe*, and before the *Dutch* took it from the *Portugueſe*, was the principal Port in *Brazil*, and contained two thouſand Inhabitants, beſides religious People and Slaves. *Porto Calvo* lies at the Conflux of four Rivers, about thirty Miles South of *The Reciefe*. Cape *St. Auguſtin* Harbour is ſituated near the moſt Eaſterly Promontory of *Brazil* of the ſame Name, about twenty five Miles North of the little Iſland of *St. Alexio*. The Entrance of the Harbour is dangerous, on account of the Rocks which lie under Water. 8 and 9. The Captainſhip of the Bay of *All Saints*, in which we include *Serigippe*, is bounded by the great River *St. Francis* on the North, being about two hundred and forty Miles in Length from North to South. It is eſteemed the richeſt and moſt populous Province in *Brazil*. The chief Towns whereof are, 1*ſt*, *Serigippe*, or *St. Chriſtophers*, ſituated on a Bay between the Rivers of *St. Francis* and *Real*. 2*dly*, *Baha*, or *St. Salvador*, ſituated on a Hill above the Harbour; the moſt conſiderable Town in *Brazil*, whether we regard the Beauty of its Buildings, its Magnitude, or its Trade and Revenue. The Harbour is capable of receiving Ships of the greateſt Burthen: The Entrance whereof is guarded by a ſtrong Fort, called *St. Antom*; and there are other ſmall Forts which command the Harbour. The Town itſelf conſiſts of about two thouſand Houſes, the major Part of which cannot be ſeen from the Harbour; but ſo many as appear in Sight, with a Mixture of Trees between them, and all placed on a riſing Hill, make a very pleaſant Proſpect. There are in the Town thirteen Churches, Chapels, Hoſpitals, and Monaſteries, and one Nunnery. Here lives an Archbiſhop, who has a fine Palace; and the Governor's Palace is a fair Stone Building, and looks handſome to the Sea, tho' but indifferently furniſhed within. The Houſes of the Town are two or three Stories high; the Walls thick and ſtrong, being built with Stone, with a Covering of Pan-tile, and many of them have Balconies. The principal Streets are large, and all of them pav'd with ſmall Stones. There are alſo Parades in the moſt eminent Places of the Town, and many Gardens, as well within the Town as in the Out-parts of it. Here are about four hundred Soldiers in Garriſon. They commonly exerciſe in a large Parade before the Governor's Houſe, and many of them attend him when he goes abroad. The Soldiers are decent-clad in brown Linen; and beſide thoſe in Pay, he can ſoon have ſome thouſands of Men up in Arms upon Occaſion. The Magazine is on the Skirts of the Town. 'Tis big enough to hold two or three thouſand Barrels of Powder, but ſeldom has more than an hundred.

A great many Merchants always reſide at *Baha*, for 'tis a Place of great Trade. The Merchants that live here are ſaid to be rich, and to have many *Negroe* Slaves in their Houſes, both Men and Women. They are chiefly *Portugueſe*, Foreigners having but little Commerce with them: There is a Cuſtom-houſe by the Sea-ſide, where all Goods imported or exported are enter'd. The chief Commodities that the *European* Ships bring hither, are Linen Clothes, and ſome Woollens, Hats, Stockings, Biſcuit-Bread, Wheat-Flower, Wine, Oil, Olive, Butter, Cheeſe, &c. They bring hither alſo Iron, and all Sorts of Iron Tools, Pewter Veſſels of all Sorts, &c. Looking-glaſſes, Beads, and other Toys; and the Ships that touch at *St. Jago* bring thence Cotton Cloth. The *European* Ships carry from thence Sugar and Tobacco. Theſe are the Staple Commodities; beſides which here are Dye-woods, with Woods for other Uſes. They alſo carry home raw Hides, Tallow, Train Oil, &c. Here are alſo tame Monkeys, Parrots, Parroquets, &c. The Sugar of this Country is much better than that which we bring from our Plantations: For all the Sugar that is made here is clay'd, which makes it whiter and finer than our unrefin'd Sugar. Our Planters ſeldom refine any with Clay, unleſs to ſend home as Preſents to their Friends in *England*. Their Way of doing it is by taking ſome of the whiteſt Clay, and mixing it with Water till 'tis like Cream; with this they fill up the Pans, in which the Sugar is ſunk two or three Inches below the Brim by draining the Molaſſes out of it, juſt ſcraping off the thin Cruſt of the Sugar that lies at the Top, and would hinder the Water of the Clay from ſoaking thro' the Sugar of the Pan. The Refining is made by this Percolation: For ten or twelve Days time, that the clayiſh Liquor lies ſoaking down the Pan, the Water whitens the Sugar as it paſſes through it, and the Clay itſelf grows hard on the Top, and may be taken off at Pleaſure; when ſcraping off the upper Part of the Sugar, that which is underneath will be white almoſt to the Bottom: And ſuch as is called *Brown* Sugar is thus whiten'd.

Trade.

Clayin of Sugar

The *European* Ships commonly arrive here in *February* or *March*, and they have generally quick

Paſſages. They commonly return from hence about the latter End of *May*, or in *June*. The Ships that uſe the *Guinea* Trade are ſmall Veſſels: They carry out from hence Rum, Sugar, Cotton-Cloths, Beads, &c. and bring in return, Gold, Ivory, and Slaves. The ſmall Craft that belong to this Town are chiefly employed in carrying *European* Goods from *Bahia*, the Center of the *Braziliun* Trade, to other Places on this Coaſt, bringing back hither Sugar, Tobacco, &c. About *Chriſtmas* theſe are moſtly employed in Whale-killing; for about that Time a Sort of Whales, as they call them, are very thick on this Coaſt. They come alſo into the Harbours and inland Lakes, where the Seamen go out and kill them. The Fat of them is boiled to Oil; the Lean is eaten by the Slaves and poor People. Theſe are but ſmall Whales, yet here are ſo many, and ſo eaſily kill'd, that they get a great deal of Money by it. All the ſmall Veſſels that uſe this coaſting Traffick are built here, and ſo are ſome Men of War alſo for the King's Service: And the Timber of this Country is very good and proper for this Purpoſe. Beſides Merchants, here are other pretty wealthy Men, and ſeveral Artificers and Tradeſmen, who maintain themſelves very well, eſpecially ſuch as can purchaſe a *Negroe* or two. The richer Sort, beſides the Slaves whom they keep in their Houſes, have Men Slaves who wait on them abroad for State, either running by their Horſes Sides, or to carry them to and fro on their Shoulders, in a Cotton Hammock of the *Weſt-India* Faſhion, moſtly dy'd blue, with large Fringes hanging down on each Side. This is carried on the *Negroes* Shoulders by the Help of a Bambo about twelve or fourteen Foot long, to which the Hammock is hung, and a Covering comes over the Pole, hanging down on each Side like a Curtain, ſo that the Perſon ſo carry'd cannot be ſeen unleſs he pleaſes. There is ſcarce a Man or Woman of any Faſhion, that will paſs the Streets but ſo carry'd in a Hammock.

Artificers.

The chief mechanick Trades here are Smiths, Hatters, Shoe-makers, Tanners, Sawyers, Carpenters, Coopers, Taylors, Butchers, &c. All theſe Tradeſmen buy *Negroes*, and train them up to their ſeveral Employments: And having ſo frequent a Trade to *Guinea*, they have ſo conſtant a Supply of them, that the *Negroe* Slaves make up the greateſt Part of the Inhabitants: Every Houſe having ſome, both Men and Women, of them. Many of the *Portugueſe* Batchelors, keep of theſe black Women for Miſtreſs, tho' they know the Danger they are in of being poiſon'd by them, if ever they give them any Occaſion of Jealouſy.

Slaves.

The Captainſhip of *Ilheos*.

10. The Captainſhip of *Ilheos*. There are two conſiderable Rivers in this Province, *St. Antonio*, which ſeparates it from the Province of *Seguro*, and the River *Ilheos*, which falls into the Sea about twenty Leagues to the North of *St. Antonio*. The chief Town, named *Ilheos*, ſtands on a Promontory near the Mouth of the ſaid River, and is remarkable for its Sugar-Mills. 11. The Captainſhip of *Porto Seguro*. The River of *Dolce*, is the largeſt in this Province: Beſides which there are three other Rivers, *viz.* the River of *Crocodiles*, the *Ilequa*, and the River of *St. Michael*. The chief Towns are, *Porto Seguro*, *Sancta Cruz*, and *Sancta Amaria*. 12. The Captainſhip of *Spirito Sancto*. The principal River of this Province is that of *Paraiba*, or *Parina*. The only Town is *Spirito Sancto*, ſituate on the Banks of a River of the ſame Name. 13. The Captainſhip of *Rio Janeiro*, ſo called from a celebrated Bay and River of that Name, diſcovered in the Month of *January*, in the Year 1515. This Bay and River are now reſorted to by the *Portugueſe* as much as any Part of *Brazil*, on account of the rich Gold Mines that have been diſcovered in the Mountains to the Weſtward of this, and the Province of *St. Vincent*: Theſe have occaſioned the peopling the Banks of the River *Janeiro* more than any other Part of *Brazil*. The chief City of *St. Sebaſtian* is ſituated on the Weſt Side of this River, about two Leagues from the Sea, and defended by ſeveral ſtrong Forts. It is the See of a Biſhop, Suffragan to the Archbiſhop of *St. Salvador*. *Los Reyes*, or *Angra de Los Reyes*, is ſituate about twelve Miles Weſt of the Bay of *Rio Janeiro*. The Town and Harbour of *St. Salvador*, lies over-againſt Cape *Frio*. 14. The Captainſhip of *St. Vincent*. The chief Towns are, *1ſt*, *St. Vincent*, ſituated at the Confluence of three Rivers, on a fine Bay, and defended by ſeveral Forts. This Harbour is in a flouriſhing Condition on account of the Gold Mines; but the Town which has the moſt immediate Advantage by them is, *2dly*, that of *St. Paul*, built on purpoſe for their Security, about an hundred Miles North-Weſt of *St. Vincent*. *3dly*, The Town of *Santos*, by ſome reckoned the chief Town in the Province. 15. The fifteenth and laſt Province of *Brazil* is that of *Del Rey*. This Province has been pretty much neglected by the *Portugueſe* till of late Years. But ſince they have found Gold in the Province of *St. Vincent*, they have built ſeveral Forts on the North Side of the River *La Plata*, and on the Iſlands at the Mouth of it, to prevent the *Spaniards* ſettling there again. This has occaſioned ſome Hoſtilities between the *Spaniards* and *Portugueſe*, and poſſibly may occaſion a War between them one time or other. But no doubt the *Portugueſe* conceal the Place as well as they can from the *Spaniards*, and all other *European* Nations, as they do their Mines of Diamonds and other precious Stones which they have diſcovered in *Brazil* of late Years.

The Captainſhip of *Porto Seguro*.

The Captainſhip of *Spirito Sancto*.

The Captainſhip of *Rio Janeiro*.

Before the *Portugueſe* planted *Brazil*, the Country was all one great Common, every Family inhabiting what Part of it they ſaw fit, and removing their Dwellings whenever they pleaſed; only every Man was looked upon as the Proprietor of what he poſſeſſed, till he removed and left that Part of the Country for another he liked better. Their Towns conſiſted uſually of five or ſix great Barns, each of which contained two or three hundred, and ſometimes a thouſand People; and over theſe the Head of the Tribe or Family preſided. The Materials of their Houſes were only long Poles, and Reeds, or *Palmeto* Leaves for a Covering. Their Furniture conſiſted of Hammocks of Cotton Net-work, faſtened to Poles, in which they ſlept; ſome earthen Pots and Pans, and their Gourds and Calabaſhes. Beſides which they had Baskets, in which they carried their Proviſions; and the Ornaments of their Houſes were their Bows, Arrows, Spears, and other Arms. There were ſome Nations alſo that had no ſettled Abode, but living in Tents, were continually removing from Place to Place; and both the one and the other often tied their Hammocks on the Boughs of Trees, and ſlept without Doors, but uſed to make Fires near their Lodging, to prevent the ill Effects of the cold Dews that fell in the Night-time.

The *Portugueſe* and *Dutch* Writers give the Name of *Tapuyers*, to the Natives which inhabit the North Part of *Brazil*, and the Name of *Tapuimbes*, or *Tapuimaboys*, to thoſe who dwell in the South of *Brazil*; but divide theſe again into ſeveral petty Nations. The *Tapuyes* are Men of a good Stature, and as they inhabit a hot Climate, are of a dark Copper Colour, then Hair black,

black, and hanging over their Shoulders; but they ſuffer no Hair on their Bodies or Faces, and go almoſt naked, the Men only incloſing the *Pans* in a Caſe, and the Women concealing their Nudities with Leaves. The Man has alſo a Coronet of Feathers, but the Women have not any Covering on their Heads. Their Ornaments are glittering Stones hung upon their Lips and Noſtrils, and Bracelets of Feathers about their Arms. Some of them paint their Bodies; whereas others rubbing their Bodies with Gums, ſtick beautiful Feathers upon them, which make them look more like Fowls than human Creatures at a Diſtance. The *Tupinambes* are of a moderate Stature, and not ſo dark a Complexion as their Northern Neighbours: Neither the one or the other are ſo black as the *Africans* are, who lie in the ſame Latitude: The *Tupinambes*, however, reſemble the *Africans* in their flat Noſes, which are not natural, but made ſo in their Infancy. They have alſo black curl'd Hair on their Heads, but ſuffer no Hair to grow on their Bodies or Faces, and paint themſelves like the Northern *Brazilians*.

The general Food of the *Brazilians* was the Caſſavi, or Mandioka Root, dry'd and ground to Powder, of which they made Cakes, like our Sea-Biſcuit. They carry'd this Flower with them on Journeys, and it ſerved them, infus'd in Water, both as Meat and Drink. They uſed alſo to feed on other Roots, Fruits, and Herbs, and ſuch Veniſon as they could take in Hunting, as alſo on Fiſh and Fowl; and with every thing eat a great deal of Pepper. The general Liquor the Natives drink is Spring-Water, of which they have the beſt and the greateſt Variety in the World; but there are other kinds of Liquors made of their Fruits preſs'd and infus'd, or of Honey, with which they ſometimes get very drunk. They are charged alſo with being a very lazy Generation: And as to Arts and Sciences, they were Maſters of ſcarce any, unleſs the Art of Spinning and Weaving, and forming their Arms, and the Art of Building, which was but mean. As for Letters, Characters, and Arithmetick, they were perfectly ignorant of them. They had ſome Knowledge of the Virtues of ſeveral Herbs and Drugs, which they frequently adminiſtered with Succeſs to the Sick. Hunting, Fiſhing, and Fowling, were rather their Buſineſs than Diverſion: Drinking, Singing, and Dancing, were more properly their Diverſions. They are great Smokers, and take the ſtrongeſt Tobacco: Their Pipes are a hollow Reed or Cane, and the Bowl a large Nut-ſhell that holds almoſt a Handful of Tobacco. They are a tractable and ingenious People, ready to learn any Art or Science, and take nothing ſo kindly of the Jeſuits as the inſtructing their Children; which has given the Fathers an Opportunity of making abundance of Converts.

The Beaſts that were found in this Country were the ſame with thoſe already deſcribed in *Mexico* and *Peru*, particularly the *Peruvian* Sheep, the Peccari, the Sloth, the Armadillo, the Opoſſum, the Guanoe, the Racoon, and Flying-Squirrel, with great Variety of Monkeys, Deer, Hares and Rabbets; the Ant, Bear, and ſome Lions, Tygers, and Porcupines. Their Fowls are Macaws, Parrots, Parequets, the Quam, the Curaſoe, the Bill-Bird, the Cockrecoe, the Partridge, the Wood Pidgeon, the Heron, the Pelican, the Crab catcher, the Fiſhing-Hawk, the Oſtrich, the Cormorant, the Curlieu, the Carrion-Crow, and the Humming-Bird. They have alſo great Variety of Singing Birds, ſeveral Species of Wild Ducks, Wild-Geeſe, and Dunghil-Fowls, and there is not any Sort of Poultry in *Europe*, but what has been carry'd thither by the *Portugueſe*: However, Fowls of all Kinds are but dry Meat in theſe hot Climates; nor is there Mutton very good; Pork is the beſt Fleſh we eat between the Tropicks. The moſt ſurprizing Relations Travellers entertain us with, are concerning the Multitude and monſtrous Size of their Serpents. We are told of ſome that are thirty Foot long and upwards, as big about as an Hogſhead, and which will ſwallow a whole Buck, or a Man; and that they eaſily take either by throwing their Tails about them. The ſame Writers have furniſhed us with a Dragon that has Wings and Feet. Mr. *Harris* tells us of a Water-Snake in *Brazil* near forty Foot long, and every Way proportionable, in whoſe Body were found two whole wild Boars he had ſwallow'd. As for the Amphisbena, or Snake with two Heads, 'tis agreed now that he really has but one; only ſome ſhort-ſighted People miſtook his Tail for a Head. Here is alſo found the Rattle-Snake, and ſeveral other Species of Snakes. They have alſo Scorpions, Centepees, Spiders, and other venomous Inſects of an extraordinary Size: And their Ants are almoſt as troubleſome here as in *Africa*. Here alſo is the Fire-Fly, which ſeems to differ but little from the Glow-Worm, only in its Wings. Of Bees they reckon up twelve ſeveral Sorts, ſome of which have vaſt Neſts that yield them great Quantities of Honey and Wax; and the Honey makes a Liquor that has ſome Reſemblance of Mead. Their Seas, Lakes, and Rivers, are full of excellent Fiſh, and the lean Fleſh of the Whales is eaten by the poor People at *Brazil*: But the beſt Fiſh on their Coaſt is the Manatee. They have alſo the Sword-Fiſh, Thraſher, Paracood, Old-wife, Cavally, Gar-fiſh, Mullets, Snooks, Herrings, Mackerel, Turpoons, Oyſters, Crabs, Shrimps, Prawns, and other Shell-fiſh. Their beſt River Fiſh has a Reſemblance of our Perch, and they have others not unlike Jacks and Carp. Of amphibious Animals they have Tortoiſes of three Kinds; Crocodiles, but not ſo large as thoſe of *Africa*; and a Creature, which the *Portugueſe* call the Water-Dog, as big as a Maſtiff, and hairy from Head to Tail.

The Soil of *Brazil* is generally good, producing very large Trees of divers Sorts. Their Paſtures are loaden with Graſs and Herbs, and, being cultivated, produce every thing that is proper for ſuch Countries as lie between the Tropicks. Of their Foreſt Trees the chief are, the Sapiera, the Vermiatico, the Commeſſerie, the Guiteba, and the Serrie; the ſpeckled Wood, the Fuſtick, and other dying Woods; three Kinds of Mangrove-Trees, and the Manchinele Tree. There grows alſo in *Brazil* a wild Cocoa-nut Tree, neither ſo tall or ſo large as thoſe in the *Eaſt* or *Weſt-Indies*. There are alſo in *Brazil* three Sorts of Cotton Trees, but very little of the right *Weſt-India* Cotton Shrub. As to Fruits, they have ſeveral Kinds of Oranges and Limes, Pomegranates, Pomecitrons, and *European* Grapes; but all theſe have been tranſported thither by the *Portugueſe*. They have alſo Plantains, Banana's, Guava's, the true Cocoa-nut, Cabbage-Trees, Cuſtard-Apples, Sourſops, Caſhews, Paphas, and Jempabas. Beſides theſe, here are many Sorts of Fruits which are not met with any where elſe, as Anſah's, Mericatah's, Petango's, Petumbo's, Mungaroo's, Muckiſhaws, Ingwa's, Otee's, Muſteran de Ova's, Palm-Berries, and Phyſick-Nuts. They have likewiſe Plenty of Callavances, Pine-Apples, Pumpkins, Water-melons, Muſk-melons, and Cucumbers; alſo Roots,

Roots, as Yams, Potatoes, Caſſava's, &c. Garden Herbs alſo good Store, as Cabbages, Turnips, Onions, Leeks, and abundance of Salladings; and for the Pot, Drugs of ſeveral Sorts; beſides Wood for Dying and other Uſes, as Fuſtick, ſpeckled Wood, &c. The Jeſuits have introduced the Cinamon-Tree into their Garden at *St. Salvador*, but the Bark is not ſo fine as that of the *Ceylon* Cinamon. The Jeſuits have Mango's alſo in their Garden at *St. Salvador*. As to their Corn. Corn, there is no Sort that thrives in *Brazil* like Maiz, or *Indian* Corn. Wheat and Rye grow too rank, and run up into Straw. Their Seed-time is at the Beginning of the rainy Seaſon, and their Harveſt immediately after it. Their own Trees and Shrubs bear leaves, Bloſſoms, and Fruit all the Year round; and the ſame is obſerved of their Oranges, Limes, and ſome other Fruits that have been carried thither. Here we muſt caution the Reader to underſtand what is ſaid only of that Part of *Brazil*, which lies within the Tropick of *Capricorn*, which is the beſt peopled of any Part of *Brazil*. As the Air and Seaſons are very different, ſo are their Grain, Fruits, and Plants generally; tho' there are ſome will thrive on either Side the Tropick. The Ants in *Brazil* are great Enemies to the Corn, Fruits, and other Produce of the Earth. As to Minerals. their Minerals, there is no doubt but they have diſcovered very rich Gold Mines of late Years; and 'tis ſaid there are ſome Silver Mines in the Country. They have alſo diſcovered very rich Diamond Mines, Jaſper, Emeralds, Chryſtal, and other precious Stones.

History. The firſt Adventurer that diſcovered *Brazil* was *Americus Veſputius*, in the Year 1498. Afterwards, in the Year 1500, he ſailed again to *Brazil*: But he does not give us any Account of the Country. The ſame Year, 1500, *Emanuel* King of *Portugal* ſending a Fleet to the *Eaſt-Indies*, they were driven upon the Coaſt of *Brazil*, where meeting with pretty good Harbour, they gave it the Name of *Porto Seguro*, and to the Country the Name of *Santa Cruz*; tho' it ſoon after loſt it, and obtained the Name of *Brazil*. The Admiral of this Fleet ſent one of his Ships back to *Portugal*, with an Account of the Country, and then continued his Voyage to the *Eaſt-Indies*. Several private Adventurers upon this Intelligence went over to *Brazil*, but were moſt of them deſtroyed by the Natives, and no Settlement was made to any Purpoſe till the Year 1549, when *John* III. King of *Portugal*, ſent a great Fleet thither. This Fleet arriving at the Bay of *All-Saints*, General *Soſa* there built the City of *St. Salvador*. The *Portugueſe* finding the *Brazilians* at War among themſelves, and joining with one Nation againſt another, by this Means ſubdu'd firſt their Enemies, and then their Allies, making Slaves of all without Diſtinction. The *French* alſo made ſeveral Attempts to ſettle Colonies on the Coaſt of *Brazil*, but were driven from thence by the *Portugueſe*, who at length poſſeſs'd themſelves of all the Coaſt from the River *Amazon* to the River of *Plata*.

Religion. As to Religion, the *Portugueſe* will not allow the *Brazilians* any, and yet they tell us they have Prieſts, and allow a State of Rewards and Puniſhments; that the Brave go to *Elyſium*, or Paradiſe, and mean and cowardly Souls to a Place of Torment. The ſame Authors admit, that their Prieſts direct them to bring their Offerings to them, and aſſure them, on their doing this, that thoſe inviſible Beings who give them all the good Things they enjoy, will proſper their Affairs, and if they neglect this, they muſt expect ſome dreadful Calamities will overtake them; and that accordingly the People bring them ſuch Fruits as they apprehend will be moſt acceptable. They inform us alſo, that they believe their Souls ſurvive their Bodies, and are converted into Demons or Spirits, after Death. And that they comfort themſelves, that they ſhould after Death viſit their Anceſtors beyond certain Mountains. From all which it is evident that this People were not entirely without Religion. And tho' the idolatrous *Portugueſe* make their having no Images an Argument that they have no Religion, we preſume that will be of little Weight with Proteſtants. But further, we meet with Writers that tell us ſome of the *Brazilians* worſhip the new Moon, and that others worſhip the Conſtellation called the *Great Bear*. As to their having no Temples, perhaps they look upon the Heaven to be the only proper Temple to adore the great Creator in, or at leaſt, the Sun, Moon, and Stars, if they worſhip them as Gods. Nor do theſe People live without Government. They have Kings in their reſpective Territories, who adminiſter Juſtice according to the Cuſtom of their ſeveral Countries, tho' they have no written Laws. And no People are more hoſpitable to Strangers than the *Brazilians* are.

In their Marriages they are not confin'd to one Woman, but enter into a Contract to uſe them well, in which they are uſually as good as their Words; and when a Man takes home his Wife, there is great Feaſting and Rejoicing, but no other Ceremony. The Women, however, ſeem to have much the greater Share in the Care of providing for the Family. The Man is only employ'd in making his Arms, or in Hunting or Fiſhing.

Upon the Death of any Perſon, the Friends and Relations aſſemble and ſet up a Howl, repeating by Turns the Praiſes of the Deceaſed, admiring his Wealth, his Strength, Beauty, and excellent Parts, the Multitude of his Friends, Servants, and Cattle, concluding with Words of the following Tenour: *He is dead; we ſhall ſee him no more until we dance with him beyond the Mountains.* Theſe Lamentations having continued ſix Hours, they bury the Deceaſed, digging a Grave like the Mouth of a Well, in which they place the Corpſe in a ſitting Poſture; and building a little Tomb of the Form of a Dome over him, they leave at the Place all Manner of Meat and Drink, his Arms, and whatever was uſeful to him while alive, coming every Day with freſh Supplies to the Grave for a Month, making the ſame Lamentations they did the firſt Day.

Theſe People had no other Arms but Bows, and Arrows, and wooden Swords or Clubs, and in ſome Places Shields; and when they charg'd an Enemy, it was never in Rank and File. They would march Day and Night with great Expedition; and, lying in Woods, fall upon their Enemies when they were unprepar'd to receive them, carrying away Men, Women, and Children into Slavery.

In the Year 1623, the *Dutch Weſt India* Company fitted out a ſtrong Fleet, and ſent them to *Brazil*, where they took the City of *St. Salvador*, with very little Loſs: But the King of *Spain* ſending a great Fleet thither in the Year 162[illegible] recovered the City again. However, the *Hollanders* continued to ſend ſtrong Squadrons to *Brazil* every Year, where they harraſs'd the *Portugueſe* Settlements, and made abundance of rich Prizes; and making a Deſcent near *Olinda*, in the Year 16[illegible]9, took that City, with the Fortreſs of *The Reef*; and, being join'd by ſome Nations of the *Indians*, at length poſſeſs'd themſelves of the entire Province of *Pernambuco*, where they

they erected a great many Forts, and compelled the *Portugueſe* who reſided there to obey them as Sovereigns. Count *Maurice* of *Naſſau* was pleaſed to accept the Government of the *Dutch* Territories in *Brazil*, and remained in that Capacity from 1637 to 1644, during all which Time the *Dutch* and *Portugueſe* remained in a State of War. Prince *Maurice* recovered from the *Portugueſe* three more of their Northern Provinces: Nor did he content himſelf with taking Places from the *Portugueſe* in *Brazil*, but detach'd from thence a Squadron to *Africa*, and took from them the Fort of *Del Mina*, the ſtrongeſt Fortreſs on the *Guinea* Coaſt, which the *Hollanders* are in Poſſeſſion of at this Day. But the *Dutch Weſt-India* Company not ſupplying the Count with ſuch a Number of Forces as he apprehended neceſſary to ſecure their Conqueſts againſt the *Portugueſe*, he returned to *Holland* in Diſguſt, in 1644, after which the Affairs of the *Dutch* in *Brazil* declin'd apace; for the *Portugueſe*, under the Government of the *Hollanders*, joining their Countrymen, by degrees recovered all the Towns which the *Hollanders* were in Poſſeſſion of, and drove them entirely out of *Brazil* again, in 1654. However, the *Dutch* ſtill continuing their Pretenſions to *Brazil*, the *Portugueſe* agreed, at a Treaty of Peace made by the Mediation of *England*, in 1661, to pay the *Dutch* eighty Tuns of Gold to relinquiſh their Intereſt in that Country; which was accepted, and the *Portugueſe* have remained in the peaceable Poſſeſſion of all *Brazil* from that Day to this.

Count Maurice Governor of Dutch Brazil.

The preſent Inhabitants of *Brazil* are, *Portugueſe*, *Crioli*, *Meſtiſe*, *Negroes*, and *Braziliians*. The *Portugueſe* of *Europe*, who are the Governors, are the feweſt in Number; the *Crioli* are more numerous, and the *Meſtiſe* ſtill more numerous than either: But whether the *Negroes* do not exceed all the reſt we much queſtion. The *Dutch*, when they were poſſeſs'd of the Northern Provinces of *Brazil* (not a Third of the Whole) employ'd forty thouſand *Negroes* in their Sugar-Works and Husbandry: And as the *Portugueſe* employed a proportionable Number, which have been increaſing for upwards of an hundred Years, and ſo many thouſand annually imported all the while, they muſt of Neceſſity ſwarm upon the *Brazil* Coaſt. There are ſome *Portugueſe* Planters that have ſeveral hundreds of *Negroe* Slaves, and when they have not Employment for them, they ſuffer them to work for themſelves, paying their Maſters ſomething weekly: And thoſe *Negroes* who are bred up to any Trade, bring in their Maſters a handſome Income. The native *Braziliians* are partly Freemen, and partly Slaves; but the *Negroe* Slaves are much more valued than the *Braziliians*, being of more robuſt Conſtitutions. Nor are the latter now very numerous; for the *Portugueſe*, like the *Spaniards*, in their Conqueſts, deſtroy'd the unfortunate Natives by all the cruel Ways they could invent.

The preſent Inhabitants of Brazil.

The Strength of the *Portugueſe* in *Brazil* is ſufficient at this Day to maintain the Dominion of that Country againſt any other Power. The *Engliſh* and *Dutch* may diſturb their Navigation, and now and then ſurprize their maritime Places, but ſcarce any of them would be able to take this Country from them, if they ſhould attempt it. For that Mixture of People, *Portugueſe*, *Crioli*, Natives, *Meſtiſe*, and *Negroes*, are now in a Manner one People, their Religion the ſame, and their Blood intermix'd by Marriages: They would infallibly unite therefore againſt all the reſt of the World, however they may diſagree among themſelves while they have no Enemy to contend with. And this is an Advantage that the *Spaniards*, *Portugueſe*, and *French*, have over the *Engliſh* in *America*.

The Force of the Portugueſe in Brazil.

CHAP. XXV.

A Deſcription of the Britiſh *Dominions in* America, *more particularly of the Provinces of* Carolina, Virginia, *and* Maryland; *treating of their Situation, Name, Extent, Inhabitants, Towns, Productions, Hiſtory,* &c.

Britiſh Plantations.

HAVING gone thro' the Dominions of *Spain* and *Portugal*, the *Britiſh* Dominions in *America* come next to be conſider'd; and theſe are divided into thoſe that are ſituated on the Continent, and the Iſlands. The Territories on the Continent (except *Hudſon's Bay*) lie contiguous, and are extended along the Eaſtern Coaſt of *North-America* from 31 Degrees of Northern Latitude to 50 and upwards, lying between the 63d and 83d Degrees of Weſtern Longitude: And the Coaſt runs from the South-Weſt to the North Eaſt. They are about fifteen hundred Miles in Length, and generally under two hundred Miles broad, but in no Place four hundred, unleſs we take in the *Indian* Nations under our Protection, and then they may be extended farther Weſtward.

Their Situation and Extent.

Sir *Walter Raleigh* was the firſt *Engliſh* Adventurer who attempted to ſettle Colonies on this Coaſt, and gave it the Name of *Virginia*, in Honour of his Sovereign, the Virgin Queen *Elizabeth*. It was afterwards divided into *North* and *South Virginia*: But at this Day we find it ſubdivided into the eight following Provinces, 1. *Carolina*, in which *Georgia* is comprehended. 2. *Virginia Proper*. 3. *Maryland*. 4. *Penſilvania*. 5. *New-Jerſey*. 6. *New-York*. 7. *New-England*; and 8. *New-Scotland*, called alſo *Acadia* and *Acady*. There is ſtill a ninth Province, called *New-Britain*, or the *Terra de Labarador*, which is in a great Meaſure the ſame with *Hudſon's Bay* and *Streights*, and is ſeparated from the reſt of the *Britiſh* Territories by the River of *St. Laurence*, and part of the *French Canada*.

The Name

Subdiviſion.

Carolina, including *Georgia*, is the moſt Southerly of the *Britiſh* Provinces on the Continent. It extends from Latitude 29 to 36 North, about 400 Miles; but its Breadth is uncertain. This Tract of Land is the moſt fertile and pleaſant of all that was formerly called *Florida*, being that Part of it that was named *French Florida*. The Name of *Carolina* was given it in Honour of King *Charles the Second*, who in 1663, granted it, by Letters Patent, in Propriety to *Edward*, Earl of *Clarendon*; *George*, Duke of *Albemarle*; *William*, Earl of *Craven*; *John*, Lord *Berkley*; *Anthony*,

Carolina. Its Situation and Extent.

Name

Lord *Ashley*; Sir *George Carteret*, Sir *John Coleton*, and Sir *William Berkley*: By which Letters Patents, the Laws of *England* were always to be in Force in *Carolina*; only the Lords Proprietors had Power, with the Consent of the Inhabitants, to make such By-laws as might be thought necessary for the better Government of the Province. So that no Money could be raised, or Law made, without the Consent of the Inhabitants or their Representatives. The Proprietors were likewise indued with a Right to appoint and impower Governors and other Magistrates, to grant Liberty of Conscience, make Constitutions, with many other great Privileges. And by their Care and Endeavours, two Colonies were soon settled in that Province, one at *Albemarle*, in the most Northerly Part, and the other at *Ashley*-River, in the Latitude of thirty two Degrees and some odd Minutes.

Albemarle Colony.

Albemarle Colony, which borders upon *Virginia*, and excels it in Health, Fertility, and Mildness of Winter, is, in its Productions, much of the same Nature with it. This Colony was first settled in *April* 1670, by the Lords Proprietors, who, at their sole Charge, furnished out three Ships with a considerable Number of able Men, and whatsoever was thought necessary for this new Settlement; and who continued for several Years after to supply the Place with all Things necessary, until the Inhabitants were able to live of themselves; in which Condition they soon arrived to a very great Degree of Plenty, so that most Sorts of Provisions were cheaper there than in any other of the *English* Colonies.

Ashley-River Colony.

Ashley-River, about seven Miles from the Sea, divides itself into two Branches; the Southermost still retains the Name of *Ashley*, but the North Branch is called *Cooper*-River. Upon the Point of Land, which divides those two Rivers, the Proprietors, in the Year 1680, ordered the Port-Town, that should serve for them both, to be built, calling it *Charles*-Town. This has ever since been the Capital of the whole Province, and the only free Port there. It is fortified with six Bastions, and has a Line round it. It has a considerable Trade, but no Ship of above 200 Tons can pass the Bar into the River. At this Town, as soon as its Foundations were well laid, there rode, at one Time, sixteen Sail of Ships, that came from divers Parts of the *British* Dominions, to traffick there.

Temperature.

This Part of *Carolina* is blessed with a temperate and wholesome Air, neither the Heat in Summer, nor the Cold in Winter, being troublesome, the latter being so moderate, that it doth not check the Growth of the Trees and Plants. *December* and *January*, which are the coldest Months, are much of the same Temperature as the latter End of *March*, or Beginning of *April*, in *England*, which small Winter helps the Production of all the Grains and Fruits that grow with us in *England*; so that the Apple, the Pear, the Plumb, the Quince, the Abricot, the Peach, the Walnut, the Mulberry, and the Chesnut, thrive very well in the same Garden with the Orange, the Lemon, the Pomegranate, the Fig, and the Almond. Nor is the Winter subject to Clouds and Fogs, but the Rain, though it fall often in the Winter Months, usually comes in quick Showers, which are no sooner past, but the Sun presently shines out again. The Summer is not so hot as in *Virginia*, which is chiefly occasioned from the Breezes, which rise about Eight in the Morning, and blow from the East, till about Four in the Afternoon; about which Time a North Wind riseth, which blowing all Night, keeps the Air exceeding fresh. People who live near Marshy Places, are somewhat inclined to *Agues*; but in other Places, 'tis so exceeding healthy, that in the first nine Years there died but one of those Masters of Families that went over, and he was seventy five Years of Age before he came thither.

Fertility.

The Soil is generally very fruitful, and, besides what is proper to the Climate, produces good Wheat, Rye, Barley, Oats and Peale, Turnips, Carrots, Parsnips and Potatoes, and near twenty Sorts of Pulse which we have not in *England*.

Trees.

Near the Sea, the Trees are not very large, but further up they are bigger, grow further asunder, and are free from Under-wood. There grow (besides the Cedar, Cypress, and the like) the Oak, Ash, Elm, Poplar, Beech, and all other useful Timber.

Beasts and Birds.

Their Woods likewise abound with Hares, Squirrels, Racoons, Conies, and Deer, which last are so plentiful, that an *Indian* Hunter will kill several of them in a Day, and the considerable Planters have one of these *Indian* Hunters for less than twenty Shillings a Year, who will find the Family with as much Venison and Fowl as they can well eat; their Woods and Fields being likewise stored with great Plenty of wild Turkeys, Partridges, Doves, Parroquets, Pigeons, Cranes, and divers other Birds whose Flesh is delicate Meat. They have likewise plenty of Sheep and Hogs, both which increase wonderfully there.

Rivers.

Carolina so abounds with Rivers, that within fifty Miles of the Sea, you can scarcely place your self seven Miles from one that is navigable; and some of them are navigable three hundred Miles up into the Country. Their Rivers and Brooks abound with great Variety of excellent Fish, and near the Sea with good Oysters, in some whereof Pearls are often found.

The Natives.

The Natives are a People of a ready Wit, and, tho' illiterate, are generally found to be of a good Understanding. For their keeping an Account of Time, they make use of Hieroglyphicks, and to instruct their Children in such Matters as relate to their Family and Country, which are so preserved from one Generation to another. Where a Battle hath been fought, or a Colony settled, they raise a small Pyramid of Stone, consisting of the Number of the Slain, or those settled at the Colony: And for religious Rights, as Sacrifices, Burials, and the like, they make round Circles with Straws or Reeds, by the different placing whereof, it is known for what they are intended; and to meddle with any of those Circles, is accounted by them Sacrilege. As to their Persons, they are generally well proportioned. They are no ways addicted to any Extravagancies, and always content themselves with a mean Diet and Apparel for the present, without taking much care for the Time to come. They are addicted to Mirth and Dancing, and to Acts of Courage and Valour, which they prefer above all other Virtues. Their Governments generally are of no great Extent; and that Side which Fortune crowns with Victory in their Wars, rejoice with great Triumph.

Their Worship.

They worship one God, as the Creator of all Things, whom they call *Okee*, and to whom their High Priest offers Sacrifice, but believes he hath something else to do than to mind human Affairs; which they fancy he commits to the Government of inferior Deities, to whom their inferior Priests make their Devotions and Sacrifices. They believe the Transmigration of Souls; and when any of them die, their Friends inter with their Corps Provisions and Houshold-Furniture. They are very superstitious in their Marriages, and from a Belief which is entertained amongst them, that from four

Women

Women only all Mankind ſprang, they divide themſelves into the like Number of Tribes, and have four Burying-places; believing it to be a wicked Thing to mingle their Bodies even when dead.

The Commodities which this Country produceth, are ſeveral Sorts of Wines; five Sorts of Grapes growing naturally there; and there is Care taken to plant the *Rheniſh*, *Canary*, *Claret*, *Muſcat*, *Madera*, and *Spaniſh* Grapes; of all which are Wines made, which prove very good both in Colour and Taſte: Oyl Olives, which being carried thither from *Portugal* and *Bermudas*, flouriſh and increaſe exceedingly: Cotton, Indigo, Silk, Ginger, Tobacco, Flax, Hemp, Pitch, Tar, Jallop, Saſſaparilla, Turmerick, Saſſafras, Snake-root, and the like. There are in this Country likewiſe ſeveral Sorts of wild Creatures. Their wild Cat is ſomewhat larger than a Fox, of a kind of a reddiſh gray Colour, and in Figure every Way like an ordinary Cat, but exceeding fierce, and ſo cunning, that knowing the Deer, upon which they chiefly prey, to be too ſwift for them, they lurk upon Branches of Trees, and as the Deer walk and feed under them, ſuddenly jump down upon their Backs. Their Fur is greatly eſteemed, and their Fleſh is eaten by the *Indians*. The Wolves here are exceeding ravenous. The Woods are likewiſe full of Bears, Otters, and gray Foxes.

The Parts of *Carolina* about *Aſhley* River are at this Day the beſt inhabited of any in the Country. South of this, about an hundred Miles, is the New Colony of *Georgia*, upon the River *Savanna*, eſtabliſhed ſince the Crown purchaſed *South Carolina* of the Proprietors, and called *Georgia* in Honour of his preſent Majeſty King *George* the Second. Here they have built a new Town, which from the River on which it ſtands is called *Savanna*; and great Numbers of People, eſpecially the perſecuted *Saltzburghers* and the diſtreſſed *Irish*, have tranſported themſelves hither with their Families. All we ſhall ſay farther of this new Colony, is, That from the Accounts tranſmitted thence from Time to Time, it appears to be in a flouriſhing Condition: That in *February* 1735-6, two hundred Houſes were regularly built in the Town of *Savanna*, ſome of which were let at 30*l.* Sterling *per* Year: That, beſides this, there were at the ſame Time ſeveral regular *Engliſh* Settlements, to which the Adventurers had given the Names of *Benzet*, *Thunderbolt*, *Hartargile*, *Weſtbrook*, &c. and which were likely to riſe into Towns: And, finally, That theſe, and many other valuable Improvements in *Georgia*, are chiefly owing to the great Humanity and indefatigable Induſtry of *James Oglethorpe*, Eſq; now Captain-General of all his Majeſty's Forces in theſe Parts.

The whole Province of *Carolina* was divided into ſeveral Counties by the firſt Planters, namely, *Albemarle* County, where two Colonies are now ſubſiſting; *Bath* County; *Clarendon* County, in which there is another *Charles*-Town; *Berkley* County; *Craven* County; *Colleton's* County, and *Granville* County. The Towns of Note are few, and ſcarce any of them worth deſcribing, except *Charles* Town on *Aſhley* River, of which we have ſpoken already.

Virginia Proper, the ſecond Province we ſhall deſcribe, is bounded on the South by *Carolina*, on the Eaſt by the *Atlantick Ocean*, on the North by *Maryland*, and on the Weſt by that vaſt Tract of Land that extends to the *South Sea*. It is divided into North and South *Virginia*, both together about 260 Miles long.

As to the Diviſion of the Country, the Planters follow pretty much the *Engliſh* Manner here, and in all the Provinces under the Dominion of the Crown of *Great-Britain*. We ſhall endeavour to give ſome ſhort Idea of it in this Place, and only name the Counties and principal Towns in ſpeaking of the other Provinces, which are all form'd on the ſame Model. Provinces and chief Towns.

Virginia then, is at preſent divided into twenty five Counties, 1. *James County*, which lies on both Sides of *James River*, and contains five Pariſhes, *viz. James Town*, *Williamsburg*, and *Wallingford*, on the North Side of *James River*, and *Merchants Hundred*, and *Bruton*, on the South Side of the River. *James Town*, the Capital of the whole Province, is ſituated in a Peninſula on the North Side of *James River*, about forty Miles from the Mouth of it, the River being at this Place about a Mile broad. There are not above three or fourſcore Houſes at preſent in it, and thoſe moſt of them publick Houſes, kept for the Entertainment of Sea-faring People who reſort hither; for it is not agreeable to the Humour or Buſineſs of the *Virginian* Planters to live in Towns. Another Reaſon which makes *James Town* now ſo inconſiderable is, the removing the Courts of Juſtice and the Seat of Government to *Williamsburgh*: And laſtly, *James Town* ſuffered very much in the Rebellion during the Reign of King *Charles* II. when it was almoſt entirely burnt to the Ground. Before that Misfortune happen'd, 'tis ſaid, there were ſeveral ſpacious Streets and handſome Buildings in *James Town*. Few Towns are capable of being made ſtronger than *James Town*, as it is ſituated on a Peninſula, which, at high Water, is a perfect Iſland. *James Town*. The Town of *Williamsburgh* is ſituated about ſeven Miles from *James Town*, further within Land; and this, tho' the Seat of the Government, is but a very ſmall Place, conſiſting only of thirty or forty Houſes that are not contiguous. Governor *Nicholſon* did all that lay in his Power to increaſe the Buildings, in the Year 1689, particularly he built a Town-houſe, to which he gave the Name of *The Capitol*. A fine College alſo was erected here, and a good Revenue ſettled upon it; but this was unfortunately burnt down. There are ſome Redoubts and Batteries of Guns erected for the Defence of the Place, but of no great Conſequence. *Williamsburgh*. 2. *Henrico* County, the moſt Weſterly of thoſe on the South of *James River*, contains the two Pariſhes of *Henrico* and *Briſtol*. 3 and 4. *Prince George* and *Charles* Counties are ſituated over-againſt *Henrico* County, in which are the three Pariſhes of *Martin Brandon*, *Wyanoke*, and *Weſtover*; and twenty Miles higher, is the *Monacan* Town, where the *French* Refugees are ſettled. 5. *Surrey* County, over-againſt *James* County, contain the two Pariſhes of *Southwark* and *Lyons Creek*. 6. *Iſle of Wight* County, South-Eaſt of *Surrey* County, contains the two Pariſhes of *Warwick-Squeak* and *New-Port*. 7. *Nanſamund* County, South of the *Iſle of Wight* County, contains the three Pariſhes of *Upper-Pariſh*, *Lower-Pariſh*, and *Chukatuck*. In this County riſes the River of *Nanſamund*. 8. *Norfolk* County, South Eaſt of *Nanſamund* County, extends, to the Borders of *Carolina*, and contains only the Pariſh of *Elizabeth*. In this County riſes the River *Elizabeth*. 9. *Princeſs Anne* County, North-Eaſt of *Norfolk*, having the Bay of *Cheſapeak* on the North, and the Ocean on the Eaſt, contains only the Pariſh of *Lynhaven*. 10. *York* County, between *York* and *James* River, contains the three Pariſhes of *York*, *Hampton*, and *New-Pokoſon*. 11. *Warwick* County lies contiguous to *York* County, in which are the two Pariſhes of *Denby* and *Mulberry Iſland*. In this County riſes the River of *Pokoſon*. 12. *Elizabeth* County

County lies contiguous to *Warwick* County: It hath but one Parish, called *Elizabeth*, in which was a City of the same Name, but of late Years dwindled to a Village. 13. *New-Kent* lies North of *James* County, and contains the two Parishes of *Blissland* and *St. Peters*, being one of the largest and most populous Counties in *Virginia*. In the West Part of this County are some Hills of glittering Sand, which the first Adventurers mistook for Gold. 14. *King William* County is contiguous to *New-Kent* to the Westward, the River *Pamunky* running through it. It contains only the Parish of *St. John's*. 15. *King and Queen* County lies on the South of *King William* County, and contains the two Parishes of *Straton Major* and *St. Stephen's*. In this County rises the River *Chicohomony*. 16. *Glocester* County is situated between the Mouth of *York River* and *Prankitank River*, and contains the four Parishes of *Perso*, *Abington*, *Ware*, and *Kingston*. 17. *Middlesex* County lies North of *Glocester*, containing only the Parish of *Christ-Church*. 18. The County of *Essex* lies North-West of *Middlesex*, containing the three Parishes of *South-Farnham*, *Sittingburn*, and *St. Mary's*. Upon the Confines of this Country and *Middlesex* there is a great Bog almost sixty Miles in Length, called *Dragons Swamp*, covered with Bushes and Flags, in which harbour wild Beasts and Game in abundance. 19 and 20. *Richmond* and *Stafford* Counties lie North-West of *Essex*, and contain the three Parishes of *North-Farnham*, *St. Paul's*, and *Overworton*. 21. *Westmorland* County lies Eastward of the last. 22. *Lancaster* County lies on the North of the River *Rapahanock*, and contains the two Parishes of *Christ-Church* and *St. Mary White-Chapel*. 23. *Northumberland* County is bounded by *Patowmack River* on the North, and the Bay of *Chesapeak* on the East, containing the two Parishes of *Fairfield-Bawtry*, and *Wicomoco*. 24. *Acomac* County lies in the Peninsula on the opposite Side of the Bay of *Chesapeak*, having Part of *Maryland* on the North, in which is the Parish of *Acomac* only; but it is, however, the largest County of *Virginia*. 25. *Northampton* County lies South of that of *Acomac*, and forms the South Part of the Peninsula on which the Promontory called Cape *Charles* is situated. In all these Counties, it is computed there may be at this Day about an hundred thousand Souls, besides Servants and Slaves, which are above three times that Number.

Numbers of People.

Indian Villages and Buildings.

The *Indians* had not any Thing that deserved the Name of a Town, even in their greatest Prosperity, before the *English* came among them. They lived dispers'd in small Villages of ten or twelve Huts a Piece, either in the Woods, or on the Banks of Rivers, where they had little Plantations of *Indian* Corn and Roots, scarce sufficient to supply their Families half the Year, subsisting the Remainder of it by Hunting, Fishing, and Fowling, and the Fruits of the Earth, which grow spontaneously in great Plenty there.

Its Discovery.

This Country was first discovered in the Year 1497, by *Sebastian Cabot*, a *Portuguese*, but whose Mariners were all *English*. But it was more fully discovered by Sir *Francis Drake*, and was called *Virginia* by Sir *Walter Raleigh*, in Honour of Queen *Elizabeth*, as before observed. In the Year 1603, divers Persons, who obtained the Propriety of it from Sir *Walter*, made a Voyage thither, and discovered *Watson-Bay* in forty one Degrees. There being much Time spent in this Discovery, at length, in the Year 1607, Sir *John Popham*, and others, settled a Plantation at the Mouth of the River *Sagbadoc*. And about this Time, by the Industry of Captain *Smith*, *James-Town* began to be built; the *Indians* supplying

James Town built.

their Necessities, which were sometimes very extream. But the Winter approaching, the Rivers afforded them very great Plenty of Cranes, Swans, Geese, Ducks, wherewith they had Feast, and wild Beasts. In the Discovery of *Chickahamine-River*, one *George Cassion* was surprized; and *Smith*, with two others, beset with two hundred *Savages*, his Men slain, and himself taken Prisoner: However, in about a Month's Time, *Smith* procured not only his Liberty, but was in great Favour among them, they being extraordinary well pleased with his Discourses of God, Nature, and Art; so that he had a most noble Entertainment from *Powhatan*, one of their Emperors, who sate in State upon his Bed of Mats and Pillow of Leather, imbroidered with Pearl and white Beads, attired with Robes of Skins, as large as an *Irish* Mantle. At his Head sate a handsome young Woman, and another at his Feet; and on each Side the Room twenty others; their Heads and Shoulders painted red, with a great Chain of white Beads about their Necks, and a Robe of Skins like an *Irish* Mantle. Before these sate his chief Men, in their Orders. In his Palace, or Arbour, one *Newport*, who accompanied Captain *Smith*, gave the Emperor a Boy; in requital whereof *Powhatan* bestowed upon him *Namontack* his Servant, who was afterwards brought into *England*: Yet after this *Powhatan* contrived the Murder of sixteen of our Men, which was happily prevented by Captain *Smith*, who seized another of their Kings, and thereby obtained Peace with them upon his own Terms.

This Emperor had about thirty inferior Kings, or Captains, under him; his chief Treasure consisting of Skins, Copper, Pearls, Beads, and the like, all which were kept in Store against his Burial. his House was fifty or sixty Yards long, and frequented chiefly by Priests. He had as many Women as he pleased, whom, after he was grown weary of them, he bestowed upon his Favorites. His Will, with the Custom of the Country, were his Laws, punishing the Malefactors by broiling them to death, and with several other Tortures. About ten Miles from *James Town* one of their Kings made a Feast in the Woods, the People being most monstrously painted, with their Hair loose. They continued two Days dancing in a Circle of a Quarter of a Mile about, four in a Rank, in two Companies, the King leading the Dance. They think these and other extravagant Ceremonies so necessary, that if omitted, they believe *Okee*, and their other Gods, would hinder them from having any Deer, Turkeys, Corn, or Fish, and would likewise make a great Slaughter among them. They imagine their Priests, after Death, go beyond the Mountains towards the Sun setting, and remain there continually, having their Heads painted with Oil, and finely trimmed with Feathers; and, being furnished with Beads, Hatchets, Copper, and Tobacco, never cease to dance and sing with their Predecessors. By Break of Day, before they eat or drink, the Men, Women, and Children, above ten Years old, run into the Water, and there wash a good Space, till the Sun arise: Then they offer Sacrifice to it, strewing Tobacco on the Land and Water, repeating the same Ceremony at Sun-set. *George Cassion*, aforementioned, was bound to two Stakes, with his Back against a great Fire; after which they ript up his Belly, and burnt his Bowels, drying his Flesh to the Bones, which they kept above Ground in a Room: Many other *Englishmen* were cruelly executed by them, though perhaps not sacrificed, and none had escaped if their Ambush had succeeded.

Powhatan

Powhatan invited one Captain *Ratcliff* and thirty others to trade for Corn, and having brought them within his Ambush, murdered them all.

Virginia, after its Discovery, cost no small Pains before it was brought to Perfection, with the Loss of many *Englishmen's* Lives. In the Reign of King *James* the First, a Patent was granted to several Persons as a Corporation, and called the Company of Adventurers of *Virginia*. But upon several Misdemeanors and Miscarriages in 1623, the Patent was made null; after which it became free for all Subjects of *England* to trade into these Parts.

Temperature. This Country is blest with a sweet and wholesome Air, and the Climate so agreeable to the *English*, since the clearing it from Woods, that few die of the Country Disease, called Seasoning.

Fertility. It is every where interlaced with delectable Hills and rich Valleys, and of a Soil so fertile, that an Acre of Ground commonly yieldeth 200 Bushels of Corn, and produceth readily the Grain, Fruits, Plants, Seeds, and Roots, which are brought from *England*, besides those that are natural to this Country and the rest of *America*.

Fruits. Here are excellent Fruits in great Abundance, which may be compared to those of *Italy* or *Spain*; as, Arbicots, Peaches, Melons, Apples, Pears, Plums, Cherries, Figs, Quinces, Marrocks, Puchamins, Chesnuts, Walnuts, Olives, Strawberries, Rasberries, Gooseberries, and Mulberries in great Abundance. Of their Apples they make Cyder, of their Pears Perry, and of their Grapes

Roots. Wine. They have also several Sorts of Roots; as Potatoes, Carrots, Turnips, Artichokes, Onions, Cabbages, Colliflowers, Asparagus, &c. with most Sorts of Garden Herbs known to us, in great Plenty.

Fowls. They have great Plenty of Fowl; as wild Turkeys, which usually weigh about six Stone, or forty eight Pounds; Partridges, Swans, Geese, Ducks, Teal, Wigeons, Dotterels, Heathcocks, Oxeyes, Brants, Pigeons, Cranes, Herons, and several Sorts of Hawks; and for small Birds, innumerable Quantities of sundry Sorts; as Blackbirds, Thrushes, Red-birds, and, above all, the Mock-bird, which counterfeits the Noise of all

Beasts Birds. They have likewise great Store of wild Beasts; as Lions, Bears, Leopards, Tygers, Wolves, and Dogs like Wolves, that bark not; Buffaloes, Elks, whose Flesh is as good as Beef; Roscomes, Utchunquois, Deer, Hares, Bevers, Otters, Foxes, Martins, Polecats, Wesels, Musk-Rats, Flying Squirrels, &c. And for the tame Cattle, Cows, Sheep, Goats, Hogs, and Horses

Fish. in great Plenty. Great Plenty of excellent Fish is also to be found, as well in the Sea, and Bay of *Chesapeak*, as in the Rivers, *viz.* Cods, Thornback, Sturgeon, Grampusses, Porpusses, Drums, Cat-Fish, Basses, Sheeps-heads (which make Broth like that of Mutton) Coney-fish, Rock-fish, Cray-fish, white Salmons, Soals, Plaice, Mullets, Mackerel, Trouts, Perches, Conger-Eels, Herrings, Oisters, Shrimps, Cockles, Muscles, &c.

Commodities. The Commodities which the Country doth, or may produce, are Hemp, Flax, Hops, Rape-seed, Annise-seed, Woad, Madder, Pot-Ashes, Honey, Wax; and also Silk if they would make it, since Mulberry Leaves grow in so great Plenty: Here are several sweet Gums, and excellent Balsams of sovereign Virtues; several Sorts of Plants and Woods used by Dyers. Here are also Veins of Allum, Iron, and Copper, together with sundry Sorts of rich Furs, Elk Skins which make excellent Buff, and other Hides; Pitch, Tar, Rosin, Turpentine, Butter, Cheese, salted Fish and Flesh, which find vent at *Barbadoes* and other *Caribbee-Islands*; but, above all, Tobacco, which is their principal Commodity, and the Standard whereby all the rest are prized. There grows likewise a Kind of Flax, called *Silk-Grass*, of which the *Indians* make Thread and Strings; and it is good to make Linnen Cloth and Shifts, and would make excellent strong Cables.

Here all Tradesmen, especially Handicrafts, find good Encouragement; and for the Commodities aforesaid, the *English*, (who have the sole Trade,) bring them all Sorts of Apparel, all Manner of Utensils belonging to Houshold-Stuff, or necessary for their Plantations, or otherwise; also Wine, Brandy, and other strong Drinks; likewise all Silks, Stuff, and Cloth, both Linnen and Woollen, which they convert to several Uses according to their Fancies, being sufficiently supplied with Taylors.

Here groweth likewise sundry Sorts of Trees; Trees. as the red and white Oak, black Walnut, Cedar, Pine, Cypress, Chesnut, Poplar, Ash, Elm, &c. many of which are very good for the building of Ships, and other Uses.

This Country is well watered with several Rivers. great and swift Rivers, which lose themselves in the Bay of *Chesapeak*, which gives Entrance for Shipping into this Country, and also to *Maryland*, next adjoining; which Bay is very large, capacious, and commodious for Shipping, being said to run up into the Country Northwards seventy-five Leagues; in Breadth in many Places being five or six or seven Leagues, and sometimes more, and six or seven Fathom deep; and at its Opening to the South, between *Cape Henry*, which beginneth *Virginia*, and *Cape Charles* on the other Side opposite, it is about 10 or 12 Leagues wide. The principal of the Rivers, beginning at *Cape Henry*, is *Pawhonan*, now called *James's River*, being found navigable about fifty Leagues. *Pamaunke*, now *York River*, is also large, and navigable about twenty Leagues. *Rapahanock*, or *Topahanock*, is likewise a good River, and navigable about forty Leagues, which is the last River of *Virginia* northwardly, that falls into the Bay of *Chesapeak*. Upon, or near these Rivers, for the Conveniency of Shipping, the *English* are seated, and have several little Towns; the chief amongst which is *James-Town*, commodiously seated on *James-River*, and already described.

The Governor is sent over by his Majesty; and the Country is governed by Laws agreeable with those of *England*, for the Decision of all Causes both Civil and Criminal; which Laws are made by the Governor, with the Consent of the General Assembly, which consists of his Council, and the Burgesses chosen by the Freeholders. And for the better Government, the Country possessed by the *English* is divided as aforesaid into several Counties, in each of which are Sheriffs, Justices of the Peace, and other Officers, who are from Time to Time appointed by the Governor.

Complexion. The *Virginians* are not born of so dark a Complexion as they appear. Their Hair is generally black and flaggy, which they wear long: Few Men have Beards, because they pluck out the Hairs that would grow. Their Ointments and smoaky Houses do in a great measure cause their Colour, and make them look like Bacon. They are of a ready Wit, very subtle and treacherous, not much addicted to Labour, but much given to Hunting. They have one Wife, many Concubines, and are said likewise to be *Sodomites*. The antient Women are used for Cooks, Barbers, and other Services, and the younger for Dalliance. They are modest in their Carriage, and seldom quarrel. In entertaining a Stranger, they spread a Mat for him to sit down, and then dance before him; they wear their Nails long, to flea their Deer; and put Bows and Arrows into the Hands of their Children, before they are six Years old.

In each Ear they have generally three great Holes, wherein they commonly hang Chains, Bracelets, or Copper. Some wear a Snake therein, coloured green and yellow, near half a Yard long, which crawls about their Necks; others have a dead Rat tied by the Tail. The Women mark their Bodies, Legs, and Thighs, with an Iron, in curious Knots, and Shapes of Fowls, Fishes, and Beasts, and rub a Painting therein which will never come out. The Queen of *Apomatica* was attired with a Coronet, beset with many white Bones; with Copper in her Ears, and a Chain of the same, six times encompassing her Neck. The *Sasquehanocks* are frequently a Giant-like People, very monstrous in Proportion: It is said, their Voice sounds as out of a Cave. Their Garments are Bear-skins, hung with Bears Paws, a Wolf's Head, and such odd Ornaments. Their Tobacco-pipes are three Quarters of a Yard long, with the Head of some Beast at the End, very weighty. They have several ridiculous Conceits concerning their Original; as that a Hare came into their Country, and made the first Men, and after preserved them from a great Serpent; and two other Hares coming thither, the first killed a Deer for their Entertainment, which was then the only Deer in the World, and strewing the Hairs of that Deer, every Hair became a Deer.

In the Reign of King *James* the First, one *Tomocomo*, an *Indian*, and Counsellor to one of their Kings, came into *England*; who landing in the West, was much surprised at our Plenty of Corn and Trees, which he thought we had wanted, imagining, we ventured into their Country to supply their Defects: He began then to number the Men he met with, but his Arithmetick soon failed him. The Natives think it a Disgrace to fear Death; and therefore, when they must die, they do it resolutely; as it happened to one that robbed an *Englishman*, and was by *Powhatan* (upon Complaint made against him) fetched sixty Miles from the Place where he lay concealed, and by this *Tomocomo* executed in the Presence of the *English*; his Brains being knocked out, without the least Shew of Fear or Terror.

Apparel. Their Apparel is but mean, they contenting themselves with only something to cover their Nakedness; and for the better defending themselves from the Weather, they anoint their Bodies with certain Oils mixed with Bears-Grease.

Houses. Their Houses are no better than our *English* Hogsties, being made of Boughs, and covered with Barks of Trees; and in the Midst thereof is

Diet. placed their Chimney, or Fire-place. Their Diet is mean, and answerable to their Houses; not endeavouring to please their Palates with curious Sauces, or pampering their Bodies with provocative Meats.

Maryland. Situation. The Province of *Maryland*, the next in Order, is situated between the Degrees of thirty-eight, or thereabouts, and forty Degrees of Northern Latitude. It is bounded on the North with the Province of *Pensilvania*; on the East, by the *Atlantick* Ocean, and *Delaware Bay*; on the South, by *Virginia*; from whence it is parted by the River *Patowmack*. The Bay of *Chesapeak*, gives Entrance to Ships, both into this Country and *Virginia*, passing through the

Rivers. Heart of this Province, and receiving into it several considerable Rivers; as *Patowmack*, *Patuxon*, *Inn-Arundel*, and *Susquesahanough*, lying on the West Side of the Bay; and to the East of the said Bay, those of the *Choptanke*, *Nantcopa*, *Pocomack*, and several other Rivers and Rivulets, to the great Improvement of the Soil, and Beauty of the Province.

Climate. The Climate of late is very agreeable to the *English* Constitution, especially since the Felling of the Woods; and the People accustoming themselves to the *English* Diet, it is very healthful and agreeable to the Constitution of the *English*, few now dying, at their first coming, of the Country Disease, or Seasoning. The Heat is not extreme in Summer, being much qualified by the cool and gentle Breezes from the Sea, and refreshing Showers of Rain; and the Cold in Winter is of so little Durance, that the Inhabitants cannot be said to suffer by that neither. The Country is generally plain and even, yet rising in some Places into small and pleasant Hills, which heighten the Beauty of the adjacent Vallies. The Soil is rich and fertile, naturally producing all such Commodities as are particularly set down to its neighbouring Colony, *Virginia*; as all Sorts of Beasts and Fowl, both tame and wild; Fish, Fruits, Plants, Roots, Herbs, Gums, Trees, Balsams, *&c.* and likewise all Commodities produced by Industry, are here found in very great Plenty and Perfection. But the chief Trade of *Maryland* depends upon *Tobacco*, which is esteemed better for a foreign Market than that of *Virginia*, and finds greater Vent Abroad; the Trade of which is not inconsiderable. There is a competent Stock of ready Money in this Province, both of *English* and Foreign, and of the Proprietor's own Coin; yet their chief Way of Commerce is by Way of Barter, or Exchange of Commodities.

Natives. The Natives, as to their Complexion, Stature, Customs, Dispositions, Laws, Religion, Apparel, Diet, Houses, *&c.* are much the same with those of *Virginia*, already treated of; being divided likewise into many different Tribes, and each governed by their particular King. There are

Relig. many strange Rites and Ceremonies used by these native *Indians*: They believe there are several Gods, which they call *Mantaac*, but of different Sorts and Degrees; yet there is but one absolute God from all Eternity who, when he made the World, created other Gods, to be as Instruments in the Creation; and that the Sun, Moon, and Stars, are petty Gods. Out of the Waters they affirm, all the Variety of Creatures were made. As to Mankind, that Woman was made first, who, by the Assistance of one of the Gods, conceived, and brought forth Children; but they pretend not to know how long it is since this was done, having no Arithmetick, nor Records, but only Tradition from Father to Son. They make the Images of their Gods in the Shape of Men, placing one at least in their Houses or Temples, where they worship, sing, pray, and make Offerings. They believe that after this Life, the Soul shall be disposed of according to its Works here, either to the Habitation of the Gods, to enjoy perpetual Happiness, or to a great Pit or Hole in the furthest Part of their Country toward Sun-set, (which they count the furthermost Part of the World) there to burn continually; which Place they call *Popoguffo*. Whatever Tricks or Subtilty the Priests use, the Vulgar are hereby very respectful to their Governors, and careful of their Actions; though in criminal Causes they inflict Punishments according to the Quality of the Offence. They were at first esteemed great Necromancers, which is very unlikely, because they account our Fireworks, Guns, and Writing, to be the Works of God rather than Men. When one of their Kings was sick, he sent to the *English* to pray for him. Some of them imagine that we are not mortal Men, nor born of Women; but say we are an old Generation revived, and believe that there are more of us yet to come, to kill their Nation, and take their Places, who are at present invisible in the Air without Bodies, and that at their Intercession

sion they cause those of their Nation to die who wrong the *English*.

Their Idol they place in the innermost Room of the House, of whom they relate incredible Stories: They carry it with them to the Wars, and ask Counsel thereof, as the *Romans* did of their Oracles. They sing Songs as they march towards Battle, instead of using Drums and Trumpets. Their Wars are exceeding bloody, and have wasted the People very much. Once a Year they hold a great Festival, meeting together out of several Villages, each having a certain Mark or Character on his Back, whereby it may be discerned whose Subject he is. The Place where they meet is spacious, and round about are Posts, carved on the Top like a Nun's Head. In the Midst are three of the fairest Virgins, lovingly embracing and clasping each other. About this living Image, and artificial Circle, they dance in their savage Manner. Their chief Idol, called *Kiwasa*, is made of Wood four Feet high, the Face resembling the Inhabitants of *Florida*, painted with Flesh-Colour; the Breast white; the other Parts black; the Legs only spotted with white, with Chains and Strings of Beads about his Neck. This Idol is the Keeper of the dead Bodies of their Kings, which are advanced on Scaffolds nine or ten Feet high, this *Kiwasa* or Guardian being placed near them; and underneath liveth a Priest, who there mumbles his Devotions Night and Day.

Wars.

This Province of *Maryland*, King *Charles* the First, in *Anno* 1632. granted by a Patent to the Right Honourable *Cecilius Calvert*, Lord *Baltimore*, and to his Heirs and Assigns, and by that Patent created him and them the true and absolute Lords and Proprietors of the same (saving the Allegiance and sovereign Dominion due to his Majesty, his Heirs and Successors;) thereby likewise granting to them all royal Jurisdictions, both military and civil; as Power of enacting civil and martial Laws, making of War and Peace, pardoning Offences, conferring of Honours, coining of Money, &c. In Acknowledgment whereof they were to yield and pay yearly to his Majesty, his Heirs and Successors, two *Indian* Arrows at *Windsor* Castle, on *Easter* Tuesday, together with the fifth Part of all the Gold and Silver Ore that shall be found there.

Political.

The Lord *Baltimore* fixed his Residence at *Mattapany*, about eight Miles Distance from *St. Mary's*, where he built a pleasant Seat, though the general Assemblies and Provincial Courts were kept at *St. Mary's*: And for the better inviting of People to settle here, his Lordship, by the Advice of the General Assembly of that Province, established a System of good and wholsome Laws, for the Ease and Benefit of the Inhabitants, with Toleration of Religion to all Sorts that profess the Faith of *Christ*; which hath been a principal Motive to many to settle under that Government, rather than in another, where Liberty of Conscience was denied them.

This Province, where it is peopled with *English*, is divided into ten Counties; five Eastwards of *Chesapeak* Bay, namely *Cecil*, *Dorchester*, *Kent*, *Somerset*, and *Talbot*; and five Westwards of the said Bay, *viz. Ann-Arundel*, *Baltimore*, *Calvert*, *Charles*, and *St. Mary's*. Here are likewise certain Magistrates appointed by his Lordship in each County, as Sheriffs, Justices of the Peace, &c.

Counties.

The Inhabitants, being very numerous, have since built several Towns, which in few Years, came to some Perfection; as *Calverton*, *Herrington*, *Harvey-Town*, *Baltimore*, *Oxford*, and *Arundel*, all commodiously seated for the Benefit of Trade, and Convenience of Shipping. The principal Town was formerly esteemed *St. Mary's*, seated on *St. George*'s River, being beautified with divers well-built Houses, and the chief Scale of Trade for the Province. But *Annapolis* now bears away the chief Dignity, being noted for the Seat of the Governor, two Markets a Week, a State-House, a Free-School, and the only Church built of Bricks in the whole Province. It is also now the chief Seat of Justice for *Maryland*, and in 1694 was made a Port Town.

Towns.

CHAP. XXVI.

A Description of Pensilvania, New-Jersey, *and* New-York; *treating of their Situation and Extent, Climates, Seasons, Rivers, Productions, Trade, Inhabitants both Natives and Planters, Animals, Towns*, &c.

Political.

IT is the Law of Nations, that whatever uncultivated Country is the Discovery of any Prince, it is the Right of that Prince. *Pensilvania* is a Member of that Part of *America*, which the King of *England*'s Ancestors have been at the Charge of discovering; and King *Charles* the Second, upon the Petition of *William Penn*, Esq; was pleased to make a Grant to the said *William Penn*, of that Tract of Land in *America*, as was expressed in a Declaration made for that Purpose.

The Description of the Province cannot better be given than by *William Penn* himself, who sent an Account of it from off the Place; of which we shall insert as much as necessary. The Land contains divers Sorts of Earth; as Sand, yellow and black, both poor and rich: Also Gravel, both loomy and dusty; and in some Places a tall, fat Earth, like our Left Vales in *England*, especially by Inland Brooks and Rivers. We have much of another Soil, and that is a black, hazel Mould, upon a stony or rocky Bottom. The Air is sweet and clear, the Heavens serene, and as the Woods come to be more cleared, that itself will refine. The Waters are generally good, for the Rivers and Brooks have mostly gravel and stony Bottoms. We have also Mineral Waters. For the Seasons of the Year, from the Middle of *October*, to the Beginning of *December*, it is like an *English* mild Spring. From *December* to the Beginning of *March*, we have usually sharp, frosty Weather; and the Air dry, cold, piercing, and hungry. From that Month to *June*, usually a sweet Spring, no Gusts, but gentle Showers and a fine Sky. The Winds here are more inconstant, Spring and Fall, than in Summer or Winter. From thence to the End of the Summer, they have extraordinary Heats, yet mitigated sometimes by cold Breezes. The Wind that rules the Summer Season, is the South-West; but Spring, Fall, and Winter, 'tis rare to want the North-Western seven Days together; and whatever

Soil.

Climate

whatever Miſts, Fogs, or Vapours, foul the Heavens, in two Hours Time are blown away.

Trees. The natural Trees of moſt Note, are, the Black Walnut, Cedar, Cyprus, Cheſnut, Poplar, Gum-wood, Hickery, Saſſafras, Aſh, Beech, and Oak of divers Sorts, as red, white, and black; *Spaniſh* Cheſnut and Swamp. The Fruits are the white and black Mulberry, Cheſnuts, Walnuts, Plumbs, Strawberries, Cranberries, Hurtleberries, and Grapes of divers Sorts. The great red Grape is in itſelf an extraordinary Grape, and by Art may be cultivated to an excellent Wine, little inferior to the *Frontiniac*, as it is not much unlike it in Taſte. There is a white Kind of Muskadel, and a little black Grape, like the Cluſter of Grapes in *England*. Here are alſo Peaches, very good, and in great Quantities. They make a pleaſant Drink, and are not inferior to any Peach in *England*, except the true *Newington*.

Product. The artificial Product of the Country, is Wheat, Barley, Oats, Rye, Peaſe, Beans, Squaſhes, Pumkins, Water-Melons, Musk-Melons, and all Herbs and Roots that our Gardens in *England* uſually bring forth.

Animals Of living Creatures, as Fiſh, Fowl, and the Beaſts of the Woods, here are divers Sorts: Some for Food as well as Profit; as the Elk, as big as a ſmall Ox, Deer bigger than ours, Beaver, Racoon, Rabbits, Squirrels, and young Bear. Of Fowls of the Land, there is the Turkey, which is very great; Pheaſants, Heath-Birds, Pigeons, and Partridges in Abundance: Of the Water, the Swan, Gooſe white and grey, Ducks, Teal, the Snipe and Curlew, and that in great Numbers; but the Duck and Teal exceed. Of Fiſh, there is the Sturgeon, Herring, Rock, Shad, Cats-head, Eel, Smelt, Perch, Roch; and in Inland Rivers, Trout, ſome ſay Salmon, above the Falls. Of Shell-Fiſh, Oiſters, Crabs, Cockles, Concks, Muſeta's; ſome Oiſters ſix Inches long; and one Sort of Cockles, as big as the ſtewing Oiſter. The Creatures for Profit only, by Skin or Furr, and that are natural to thoſe Parts, are the Wild-Cat, Panther, Otter, Wolf, Fox, Fiſher, Minx, Musk-Rat: And of the Water, the Whale for Oil. They have no Want of Horſes, and ſome are very good, and ſhapely enough: Here is alſo Plenty of Cows, and ſome Sheep. The People plow

Plants. moſtly with Oxen. There are divers Plants that are of great Virtue, ſuddenly curing the Patient; and for Smell, I have obſerved the wild Myrtle. The Woods are adorned with lovely Flowers.

Perſons. The Natives for their Perſons are generally tall, ſtrait, and well-built, and of good Proportion: They tread ſtrong, and moſtly walk with a lofty Chin; of Complexion black, but by Deſign, as the Gypſies in *England*: They greaſe themſelves with Bear's Fat clarified, and uſing no Defence againſt Sun or Weather, their Skins muſt needs be ſwarthy. Their Eyes are little and black; the thick Lip and flat Noſe, ſo frequent to the *Eaſt-Indians* and *Blacks*, are not common to

Lan guage. them. Their Language is lofty, yet barren, like the *Hebrew*; in Signification full, like Short-Hand in Writing: One Word ſerveth in the Place of three, and the reſt are ſupplied by the Underſtanding of the Hearer; imperfect in their Tenſes, wanting in their Moods, Participles, Ad-

Cuſtoms verbs, Conjunctions, and Interjections. For their Children, ſo ſoon as they are born, they waſh them in Water; and while very young, they plunge them in the Rivers to harden them: Having wrapped them in a Clout, they lay them on a ſtrait thin Board, a little more than the Length and Breadth of the Child, and ſwaddle it faſt on the Board, to make it ſtrait. The Children will go very young, at nine Months commonly: They wear only a ſmall Clout round their Waiſt, till big. If Boys, they go a Fiſhing till ripe for the Woods, which is about fifteen: Then they hunt, and having given ſome Proofs of their Manhood, by a good Return of Skins, they may marry. The Girls ſtay with their Mothers, and help to hough the Ground, plant Corn, and carry Burthens; and they do well to uſe them to that young, which they muſt do when they are old; for the Wives are the true Servants of their Husbands; otherwiſe the Men are very affectionate to them. When the young Women are fit for Marriage, they wear ſomething upon their Heads for an Advertiſement, but ſo as their Faces are hardly to be ſeen, but when they pleaſe. The Age they marry at, if Women, is about 13 or 14, if Men, 17 or 18. Their Houſes are Mats, or Barks of Trees, ſet on Poles, in the Faſhion of an *Engliſh* Barn: They lie on Reeds or Graſs. In Travel they lodge in the Woods about a great Fire, with the Mantle-Duffils they wear by Day, wrapped about them, and a few Boughs ſtuck round them. Their Diet is Maiz or *Indian* Corn, divers Ways prepared. They have likewiſe ſeveral Sorts of Beans and Peas, that are good Nouriſhment; and the Woods and Rivers are their Larder.

Entertainment. If an *European* comes to ſee them, or calls for Lodging at their *Wigwam*, they give him the beſt Place and firſt Cut. If they come to viſit us, they ſalute us with an *It ah*, which is as much as to ſay, *Good be to you*, and ſet them down, which is moſtly on the Ground, cloſe to their Heels, their Legs upright. May be they ſpeak not a Word more, but obſerve all Paſſages: If you give them any Thing to eat or drink, it is well, for they will not ask; and be it little or much, if it be with Kindneſs, they are well pleaſed; elſe they go away ſullen, but ſay nothing. They are great Concealers of their own Reſentments; brought to it, by the Revenge that hath been practiſed among them. Some of the young Women are ſaid to take undue Liberty before Marriage, for a Portion; but when married, they are chaſte: When with Child, they know their Huſbands no more, till delivered; and, during their Month, they touch no Meat they eat, but with a Stick, leſt they ſhould defile it; nor do their Husbands frequent them, till that Time be expired.

Their liberality. In Liberality the Natives excel; nothing is too good for their Friend. They are light of Heart, and ſtrong in Affections; the moſt merry Creatures that live, feaſting and dancing perpetually. They never have much, nor want much: Wealth circulateth like the Blood, all Parts partake; and though none ſhall want what another hath, yet are they exact Obſervers of Property.

On ſuch Occaſions as their Feſtivals, or at their common Meals, the Kings diſtribute, and to themſelves laſt: They care for little, and the Reaſon is, a little contents them: In this they are ſufficiently revenged on us; if they are ignorant of our Pleaſures, they are alſo free from our Pains. They eat twice a Day, Morning and Evening: Their Seats and Tables are the Ground. Since the *Europeans* came into thoſe Parts, they are grown great Lovers of ſtrong Liquors, Rum eſpecially; and for it they exchange the richeſt of their Skins and Furs. If they are heated with Liquors, they are reſtleſs till they have enough to ſleep; and this is their Cry, *Some more, and I will go to Sleep*; but, when drunk, one of the moſt wretcheſt Spectacles in the World. In Sickneſs, impatient to be cured. They drink at thoſe Times a Decoction of ſome Roots in Spring-Water; and if they eat any Fleſh, it muſt be of the Female of any Creature.

If they die, they bury them with their Apparel, be they Men or Women, and the neareſt of Kin flings in ſomething precious with them, as a Token of their Love. Their Mourning is blacking of their Faces, which they continue for a Year: They are careful of the Graves of their Dead; for, leſt they ſhould be loſt by Time, and fall to common Uſe, they pick off the Graſs that grows upon them, and heap up the fallen Earth with great Exactneſs.

Religion of the Natives.

Theſe poor People believe a God and Immortality, without the Help of Metaphyſicks; for they ſay there is a great King that made them, who dwells in a glorious Country to the Southward of them, and that the Souls of the Good ſhall go thither, where they ſhall live again. Their Worſhip conſiſts of two Parts, Sacrifice and Rejoicing. Their Sacrifice is their firſt Fruits: the firſt and fatteſt Buck they kill, goes to the Fire, where it is burnt with a mournful Ditty of him that performs the Ceremony, but with ſuch Fervency that he will even ſweat to a Foam. The other Part is performed by round Dances, ſometimes Words, ſometimes Songs, then Shouts; their Poſtures in the Dance are very antick and differing, but all keep Meaſure. In the Fall, when the Corn comes in, they begin to feaſt one another.

Government and Laws.

Their Government is by Kings, which they call *Sachema*; and thoſe by Succeſſion, but always of the Mother's Side; for Inſtance, the Children of him that is now King, will not ſucceed, but his Brother by the Mother, or the Children of his Siſter, whoſe Sons, and after them the Children of her Daughters, will reign; for no Woman inherits. The Reaſon they render for this Way of Deſcent, is, that their Iſſue may not be ſpurious. Every King hath his Council, and that conſiſts of all the old and wiſe Men of his Nation. Nothing of Moment is undertaken without adviſing with them; and, which is more, with the young Men too. 'Tis admirable to conſider, how powerful the Kings are, and how they move by the Breath of the People. Their Order is thus: The King ſits in the Middle of a half-Moon, and hath his Council, the Old and Wiſe, on each Hand: Behind them, or at a little Diſtance, ſit the younger Men in the ſame Figure. During the Time that one of them ſpeaks, not a Man whiſpers or ſmiles. The Old are grave, the Young are reverent in their Deportment: They ſpeak little, but fervently, and with Elegancy.

Their Juſtice.

The Juſtice they have is pecuniary: In caſe of any Wrong or evil Fact, be it Murder itſelf, they atone by Preſents and Preſents of their *Wampum*, which is proportioned to the Quality of the Offence, or Perſon injured, or of the Sex they are of: For in caſe they kill a Woman, they pay double; and the Reaſon they render, is, That ſhe breedeth Children, which Men cannot do. 'Tis rare that they fall out, if ſober; and if drunk, they forgive it; ſaying, it was the Drink, and not the Man that abuſed them. Do not abuſe them, but let them have Juſtice, and you win them. Their Children are of ſo lively Reſemblance to the *Jews*, that a Man would think himſelf in *Duke's-Place*, or *Berry-Street*, in *London*, when he ſeeth them. But this is not all; they agree in Rites; they reckon by Moons; they offer their firſt Fruits; they have a Kind of Feaſt of Tabernacles; they are ſaid to lay their Altar upon twelve Stones; they mourn a Year; the Cuſtoms of the Women, with many Things that do not now occur, are much like the *Jews*.

The firſt Planters in theſe Parts, were the *Dutch*, and ſoon after them the *Swedes* and *Finns*. The *Dutch* apply'd themſelves to Traffick, the *Swedes* and *Finns* to Husbandry. There were ſome Deputies between them ſome Years. The *Dutch* looked upon the *Finns* as Intruders upon their Purchaſe and Poſſeſſion; which was finally ended in the Surrender made by *John Rizeing*, the *Swedes* Governor, to *Peter Styreſant*, Governor for the States of *Holland*, *Anno* 1655. The *Dutch* inhabit moſtly thoſe Parts of the Province that lie upon or near the Bay, and the *Swedes* the Freſhes of the River *Delaware*. They are both a plain, ſtrong, induſtrious People, yet have made no great Progreſs in Culture, or Propagation of Fruit-trees. But the *Indians* make them more careleſs, by furniſhing them with the Means of Profit, ſuch as Skins and Furs, for Rum, and ſuch ſtrong Liquors. As they are ſtrong of Body, ſo they have fine Children, and almoſt every Houſe full. The *Dutch* have a Meeting-Place for religious Worſhip, at *Newcaſtle*; and the *Swedes* three, one at *Chriſtiana*, one at *Tenecum*, and one at *Wicoco*.

Situation.

The Country lieth bounded on the Eaſt, by the River, the Bay of *Delaware*, and the Eaſtern Sea. It hath the Advantage of many Creeks, or Rivers, that run into the main River or Bay; ſome navigable for great Ships, ſome for ſmall Craft: Thoſe of moſt Eminency, are, *Chriſtiana*, *Brandy-Wine*, *Skulpot*, and *Skulkil*; any one of which have Room to lay up the Royal Navy of *England*. The leſſer Creeks or Rivers, convenient for Sloops of good Burthen, are, *Lewis*, *Meſpilon*, *Cedar*, *Dover*, *Cranbrook*, *Feverſham*, and *George's* below; and *Chicheſter*, *Cheſter*, *Toacawry*, *Pemmapecka*, *Fortqueſſin*, *Neſhimene*, and *Pemberry* in the Freſhes. Our People are moſtly ſettled upon the upper Rivers, which are pleaſant and ſweet, and generally bounded with good Land. The planted Part of the Province and Territories is caſt into ſix Counties, *Philadelphia*, *Buckingham*, *Cheſter*, *Newcaſtle*, *Kent*, and *Suſſex*. For the well Government of the ſaid Counties, Courts of Juſtice are eſtabliſhed in every County, with Juſtices, Sheriffs, Clerks, Conſtables, &c. Which Courts are held every two Months. But to prevent Law Suits there are three Peace-makers choſen by each County-Court, in the Nature of common Arbitrators, to hear and end Differences between Man and Man; and Spring and Fall there is an Orphan's Court in each County, to inſpect and regulate the Affairs of Orphans and Widows.

Its Rivers.

Counties.

Courts of Juſtice erected.

Philadelphia deſcribed.

The City of *Philadelphia*, extends in Length, from River to River, two Miles, and in Breadth near a Mile. And as it is thus placed, between two Navigable Rivers upon a Neck of Land, and that Ships may ride in good Anchorage, in ſix or eight Fathom Water in both Rivers, cloſe to the City, and the Land of the City level, dry, and wholeſome; ſuch a Situation is ſcarce to be parallell'd. The Ground on which it ſtands is high and dry, yet replenished with running Streams. Beſides the *High-Street* that runs in the Middle, from River to River, and is an hundred Foot broad, it has eight Streets more, that run the ſame Courſe, the leaſt of which is fifty Foot in Breadth; and, beſides *Broad-Street*, which croſſeth the Town in the Middle, and is alſo an hundred Foot wide, there are twenty Streets more, that run the ſame Courſe, and are alſo fifty Foot broad. Within a few Weeks after the Ground was Laid out, this Town advanced to 357 Houſes, divers of them large, well-built, with good Cellars, three Stories, and ſome Balconies. There is a fair Key, of about three hundred Foot ſquare. There inhabit moſt Sorts of uſeful Tradeſmen; as Carpenters, Joiners, Bricklayers, Maſons, Plaſterers, Plumbers, Smiths, Glaziers, Tailors, Shoemakers, Butchers, Bakers, Brewers,

A fair Key.

Brewers, Glovers, Tanners, Felmongers, Wheelwrights, Mill-wrights, Ship-wrights, Boat-wrights, Rope-makers, Sailmakers, Block-makers, Turners, &c. There are two Markets every Week, and two Fairs every Year. In other Places are Markets also, as at *Chester* and *Newcastle*. The Town is well furnished with convenient Mills; and what with their Garden-Plots, the Fish of the River, and their Labour, the Inhabitants live comfortably.

Markets and Fairs.

Mills.

The Planters settle in the Way of Townships or Villages, each of which contains 5000 Acres Square, and at least ten Families, the Regulation of the Country being a Family to each 500 Acres. Some Townships have more, where the Interest of the People is less than that Quantity, which often falls out. These Townships lie square, generally the Village in the Centre: The Houses either opposite, or else opposite to the Middle, betwixt two Houses over the Way, for nearer Neighbourhood. Five hundred Acres are alotted for the Village, which, among ten Families, comes to fifty Acres each: This lies square, and on the Outside of the Square stands the Houses, and their fifty Acres running back, whose Ends meeting, make the Centre of the five hundred Acres as they are to the whole. Before the Doors of the Houses lies the Highway, and cross it every Man's four hundred and fifty Acres of Land, that make up his Compliment of five hundred.

Their Settlements.

The Corn and Roots that grow in *England*, thrive very well there; as Wheat, Barley, Rye, Oats, Buck-Wheat, Pease, Beans, Cabbages, Turnips, Carrots, Parsneps, Colliflowers, Asparagus, Onions, Charlots, Garlick, and *Irish* Potatoes. They have also *Spanish* Potatoes, and very good Rice, which do not grow here. The Low Lands are excellent for Rape, and Hemp, and Flax. The Weeds of the Woods feed their Cattle for the Market as well as the Dairy. Their Swamps or Marshes yield them coarse Hay for the Winter. *English* Grass Seeds take well; which gives them fatting Hay. All Sorts of *English* Fruits take mighty well; the Peach is excellent, and in great Quantities. They Sundry them, and lay them up in Lofts, as we do Roots here, and stew them with Meat in Winter Time. Musk-Melons and Water-Melons are raised here, with as little Care as Pumkins in *England*: The Vine especially prevails, which grows every where; and upon Experience of some *French* People from *Rochel* and the Isle of *Rhee*, good Wine may be made there, especially when the Earth and Stem are tined and civilized by Culture.

Mighty Whales rowl upon the Coast, near the Mouth of the Bay of *Delaware*. Sturgeons play continually in the Rivers in Summer. Alloes, as they call them, are excellent Fish, and of the Bigness of our largest Carp: They are so plentiful that six hundred and odd have been drawn at one Draught: Three hundred is no Wonder, and one hundred familiar: They are excellent pickled or smoaked, as well as boiled fresh. Rocks are somewhat rounder and larger: They have also a whiter Fish, little inferior in Relish to our Mallet. These are often barrelled like Cod, and not much inferior for their spending. Of both these, the Inhabitants lay up their Winter Store. The Sheeps-head, so called from the Resemblance of its Mouth and Nose to a Sheep, is a Fish much preferred by some: They keep in Salt Water, are like a Roch in Fashion, as thick as a Salmon, but not so long. They have also the Drum, a large and noble Fish, commended equal to the Sheeps-head. 'Tis so called from a Noise it makes in its Belly when it is taken, resembling a Drum. There are Abundance of lesser Fish to be caught at Pleasure, but they quit not Cost, except the Herring, which swarms in such Shoals, that it is hardly credible: In little Creeks, they almost shovel them up in Tubs. There is the Cat-fish, or Flat-head, Lamprey, Eel, Trout, Perch, black and white Smelt, Sun-fish, &c. Also Oisters, Cockles, Concks, Crabs, Muscles, Mananoses.

Waters.

Fish.

Their Drink is Beer and Punch, made of Rum and Water: Their Beer was made mostly of Molosses, which well boiled, with Sassafras or Pine infused into it, makes very tolerable Drink: But now they make Malt, and Malt Drink grows common, especially at Ordinaries, and the Houses of substantial People.

Drink.

New-Jersey is subdivided into *East* and *West-Jersey*. *East-Jersey* lies between forty-one, and forty four Degrees of North Latitude, its South being about ten Degrees nearer the Line than *London*. It is bounded on the South-East by the main Sea; East, by *Hudson's-River*; West, by a Line which separates it from *West-Jersey*; and North by the main Land. The Proprietors of this Province in 1682, published an Account of it, for the Information and Encouragement of all Persons who were inclined to settle themselves, Families, and Servants, in that Country; from which Account we shall extract what is for our Purpose, and add a few Particulars.

New-Jersey.

"The Conveniency of Situation, Temperature of Air, and Fertility of Soil, is such, that there were no less than seven considerable Towns, in a short Time, *viz. Shrewsbury*, *Middle-Town*, *Burgin*, *Newark*, *Elizabeth-Town*, *Woodbridge*, and *Piscataway*: Which were all inhabited by a sober and industrious People, who had necessary Provisions for themselves and Families, and for the comfortable Entertainment of Strangers and Travellers. But the principal Towns at this Day are *Perth-Amboy* and *Elizabeth's*, neither of which are far distant from *New-York*. This Colony was soon found generally to agree well with *English* Constitutions. For Navigation it hath the Advantages, not only to be situate along the navigable Part of *Hudson's-River*, but to lie also fifty Miles on the main Sea. And near the Midst of this Province is a Bay for Ships, within *Sandy-Hook*, not inferior to any in *America*, where Ships not only harbour in the greatest Storms, but ride safe with all Winds, and sail in and out thence, as well in Winter as Summer.

Chief Towns.

Its Advantages for Navigation

For Fishery, the Sea Banks there are stored with Variety of Fish, not only such as are profitable for Transportation, but fit for Food there; as Whales, Cod-fish, Cole, Hake-fish, large Mackarel, and many other Sorts of flat and small Fish. The Bay also, and *Hudson's-River*, are plentifully stored with Sturgeon, *Great Basse*, and other Scale-fish; Eels and Shell-fish, as Oisters, &c. in great Plenty, and easy to take. This Country is likewise plentifully supplied with Springs, Rivulets, Inland Rivers, and Creeks which fall into the Sea, besides *Hudson's-River*, in which is much Variety of fresh Fish and Water Fowl. There is also great Plenty of Oak-Timber, fit for Shipping, and Masts for Ships, and other Variety of Wood, like the adjacent Colonies; as Chesnut, Walnut, Poplar, Cedar, Ash, Fir, &c. fit for building, within the Country.

Fish.

Wate

The Soil varies in Goodness and Richness, but is generally fertil, and, with much smaller Labour than in *England*, produceth plentiful Crops of all Sorts of *English* Grain, besides *Indian* Corn. It also produceth good Flax and Hemp, which they manufacture into Linnen Cloth. There is sufficient

Fer

ſufficient Meadow and Mariſh to their Up-lands; and the very Barrens there, are not like ſome in *England*, but produce Graſs fit for grazing Cattle in the Summer Seaſon.

Fowl and Fruits. The Country is well ſtored with wild Deer, Conies, and wild Fowl of ſeveral Sorts; as Turkeys, Pigeons, Partridges, Plover, Quails, wild Swans, Geeſe, Ducks, &c. in great Plenty. It produceth Variety of good delicious Fruits, as Grapes, Plumbs, Mulberries, Abricots, Peaches, Pears, Apples, Quinces, Water-Melons, &c. which are in *England* planted in Orchards and Gardens. Theſe, as alſo many other Fruits which come not to Perfection in *England*, are the Cattle natural Product of this Country. There are alſo great Store of Horſes, Cows, Hogs, and ſome Sheep, which may be bought at reaſonable Prices, with *Engliſh* Money, or *Engliſh* Commodities, or Man's Labour, where Money and Goods are wanting. What Sort of Minerals are in the Bowels of the Earth, After-Time muſt produce. But there is already a Melting Furnace and Forge ſet up in this Colony, where is made good Iron, Harbours which is of great Benefit to the Country. It is exceedingly well furniſhed with ſafe and convenient Harbours for Shipping; which is of great Advantage to the Country, and affords already great Plenty of Horſes; and alſo Beef, Pork, Pipe-ſtaves, Boards, Bread, Flour, Wheat, Barley, Rye, *Indian* Corn, Butter and Cheeſe, which they export for *Barbadoes*, *Jamaica*, *Nevis*, and other adjacent Iſlands; as alſo to *Portugal*, *Spain*, the *Canaries*, &c. Their Whale-Oil and Whale-Fins, Bever, Monkey, Racoon, and Martin-Skins, they tranſport for *England*.

The Natives. The *Indian* Natives are but few, comparative to the neighbouring Colonies; and thoſe that are there, are ſo far from being formidable to the Planters, that they are really ſerviceable to the *Engliſh*; not only in taking the Deer, and other wild Creatures, and catching of Fiſh and Fowl in their Seaſons, but in the deſtroying of Bears, Wolves, and Foxes, and divers Sorts of Vermin and Poultry, whoſe Skins and Furs they bring the *Engliſh*, and ſell at leſs Price than the Value of Time an *Engliſhman* muſt ſpend to take them. As for the Conſtitutions of the Country, there are ſuch Proviſion in them for Liberty in Matters of Religion, and Property in their Eſtates, that the Colony has been conſiderably peopled from the adjacent Countries, and the Inhabitants here have not only for many Years enjoyed their Eſtates according to the Conceſſions, but alſo an uninterrupted Exerciſe of their particular Perſuaſions in Religion.

Our Purpoſe is, with all convenient Expedition, to erect our principal Town; which, by Reaſon of Situation, muſt in all Probability be the moſt conſiderable for Merchandize, Trade, and Fiſhery, in thoſe Parts. It is deſigned to be placed upon a Point of rich Land, called *Ambo-Point*, lying on *Raritor-River*, and pointing to *Sandy-Hook-Bay*, and near the Place where Ships in that Harbour commonly ride at Anchor." The Town erected according to this Scheme, is that which is now call'd *Perth-Amboy*, the Capital of the Province.

Jerſey The South and Weſt Part of *New-Jerſey*, lying on the Sea and *Delaware-River*, is called *Weſt-Jerſey*. It hath all the Conveniencies and Excellencies of the other Part afore-mentioned, and may be made one of the beſt Colonies in *America*, the Situation, Air, and Soil, the Ports, Creeks, good Harbours and Havens, being not inferior to any in that Part of the World, having no leſs than thirty navigable Creeks, ranging themſelves at a convenient Diſtance upon the Sea, and the River of *Delaware*, the Shores thereof are generally very deep and bold.

Buying of Lands. The *Engliſh* that are ſettled here, buy the Lands of the Natives, and give them real Satisfaction for the ſame, whereby they are aſſured of their Love and Friendſhip for ever; and the poor Creatures are never the worſe, but much the better, as they themſelves confeſs; being now ſupplied, by Way of Trade, with all they want, hunting and fiſhing as they did before, except in incloſed or planted Ground. There is a Town called *Burlington* here, which is the Capital, and looked upon as a Place of conſiderable Trade. Their Orchards about *Burlington* are ſo laden with Fruit, that the very Branches have been torn away with the Weight thereof: Peaches are in ſuch Plenty, that they bring them Home in Carts. They receive forty Buſhels of good *Engliſh* Wheat, for one Buſhel ſown. Cherries they have in Abundance, and Fowl and Fiſh great Plenty, with ſeveral Sorts that are unknown in *England*. There are likewiſe Bears, Wolves, Foxes, Rattle-Snakes, and ſeveral other Creatures. We are not troubled with the *Muſketto-Fly* in this Place, our Land lying generally high and healthy, and they being commonly in boggy Ground. By the Care and Induſtry of the Inhabitants, this Country is furniſhed with Horſes, Beef, Pork, Flour, Biſcuit and Peaſe to ſpare. It alſo produces Honey, Wax, Silk, Hemp, Flax, Hops, Woad, Rapeſeed, Madder, Pot-aſhes, Anniſeed, Salt, Hides, raw or tanned; and there is a very large Creature, called a Mooſe, of whoſe Skins are made excellent Buff; beſides the natural Product of Pitch, Tar, Roſin, Turpentine, &c. As for Furs, they have Bever, black Fox, and Otter, with divers other Sorts. The Tobacco is excellent upon the River *Delaware*. There may be very good fiſhing for Cod and Cuſh, as ſeveral have found by Experience. Upon the whole Matter, this Province affords all that is either for the Neceſſity, Conveniency, Profit, or Pleaſure of human Life.

New York. Adjoining to *New-Jerſey* Eaſtwards, is the Colony of *New-York*, ſo called from the late King *James* the Second when Duke of *York*. It was formerly all that Part of *New-England* which the *Dutch* once poſſeſſed; and which is now divided into *Penſilvania*, *New-Jerſey*, and *New-York*. It Its Diſcovery. was firſt diſcovered by Mr. *Hudſon*, and ſold preſently by him to the *Dutch*, without Authority from his Sovereign the King of *England*, in 1608. The *Hollanders* in 1614, began to plant there, and called it *New-Netherland*; but Sir *Samuel Argal*, Governor of *Virginia*, routed them: After which, they got Leave of King *James* to put in there for freſh Water, in their Paſſage to *Brazil*, and did not offer to plant till a good while after the *Engliſh* were ſettled in the Country. In 1664 King *Charles* the Second ſent over four Commiſſioners to reduce the Colony into Bounds, that had been encroached upon by each other; who marched with three hundred Soldiers, to *Manhadees*, and took from the *Dutch* the chief Town, then called *New-Amſterdam*, now *New-York*: And *Auguſt* the 29th they turned out their Governor, and all the reſt, but thoſe who acknowledged Subjection to the King of *England*; ſuffering thoſe to enjoy their Houſes and Eſtates as before. Thirteen Days after, Sir *Robert Carr* took the Fort and Town of *Aurania*, now called *Albany*; and twelve Days after that, the Fort and Town of *Araſapha*, then *Delaware-Caſtle*, manned with *Dutch* and *Swedes*: So that now the *Engliſh* were immediately Maſters of three handſome Towns, three ſtrong Forts and a Caſtle, without the Loſs of one Man; and have ſince been in quiet Poſſeſſion of the whole Province

The.

The firſt Governor of theſe Parts for the King of *England* was Colonel *Nicols*, one of the Commiſſioners.

It is a Country of a rich and fertil Soil, well watered with Rivers; and is found to produce the ſame Beaſts, Birds, Fiſh, Fruits, Commodities, Trees, &c. as *Virginia* and *Maryland*, and in as great Plenty; and it is reported that one Buſhel of *European* Wheat, has yielded an hundred in one Year.

New York City. The moſt conſiderable Town is that of *New-York*; being well ſeated both for Trade, Security, and Pleaſure, in a ſmall Iſle called *Manahatan*, regarding the Sea, made ſo by *Hudſon's-River*, which ſevereth it from *Long-Iſland*; which River is very commodious for Shipping, being about two Leagues broad. The Town is large, well built, conſiſting of handſome Houſes, built with *Dutch* Brick. To the Landward it is encompaſſed with a Wall of good Thickneſs; and fortified at the Entrance of the River, ſo as to command any Ship which paſſeth that Way, by a Fort, called *James Fort*: And for Civil Government, it hath a Mayor, Aldermen, Sheriff, and Juſtices of the Peace, for their Magiſtrates. The Inhabitants are moſtly *Engliſh* and *Dutch*, who have a very conſiderable Trade with the *Indians*, for the Skins of Elks, Deer, Bears, &c. alſo for thoſe of Beaver, Otter, Racoon, with other rich Furs; and are ſupplied with Veniſon and Fowl in Winter, and Fiſh in the Summer, by the *Indians*, at an eaſy Price.

This Province, as we took notice, formerly contained all that Land which is ſeated in the North Part of *America*, betwixt *New-England* and *Maryland*, the Length towards the North being not fully known; the Breadth is about two hundred Miles: The chief Rivers are *Hudſon-River*, *Raritan-River*, and *Delaware-Bay*; and the principal Iſlands are the *Manahatan-Iſland*, *Long-Iſland*, and *Stater-Iſland*. *Manahatan-Iſland*, ſo called by the *Indians*, lieth within Land, betwixt forty-one and forty-two Degrees of North Latitude, and is in Length about fourteen Miles, and two broad. *New-York* is ſeated on the Weſt End of this Iſland, having a ſmall Arm of the Sea, which divides it from *Long-Iſland* on the South. *Long Iſland* runs in Length about a hundred Miles, and is in ſome Places eight, twelve, and fourteen Miles broad; inhabited from one End to the other, having a rich Soil for all *Engliſh* Grain; the Fruits, Trees, and Herbs very good. In *May* you may ſee the Woods and Fields ſo richly bedecked with Roſes, and Variety of other delightful Flowers, as equal, if not excel, many Gardens in *England*.

Inhabitants. This Country is alſo poſſeſſed by ſundry Sorts of People, not much unlike the *Indians* of *Virginia*; being well proportioned, of an Olive Colour, black haired, very expert in their Bow and Arrows, which are the chief Weapons of War. They are very ſerviceable and courteous to the *Engliſh*, being of a ready Wit, and very apt to receive Inſtruction from them: But there are now but few *Indians* upon the Iſland, being ſtrangely decreaſed ſince the *Engliſh* firſt ſettled there; for not eighty Years ago there were ſix Towns full of them, which were ſoon reduced to two Villages, the reſt being cut off by Wars among themſelves, or ſome raging mortal Diſeaſes. They live principally by Hunting, Fowling, and Fiſhing; their Wives tilling the Land, and planting the Corn. They feed on Fiſh, Fowl, and Veniſon; likewiſe Pol-cats, Turtles, Racoon, and the like. They build ſmall moveable Tents, which they remove three Times a Year, chiefly quartering where they plant their Corn, beſides their Hunting and Fiſhing-Quarters. Their principal Recreations are Foot-ball and Cards, at which they will play away all they have, except a Flap to cover their Nakedneſs. They are very great Lovers of ſtrong Drink; ſo that without they have enough to be drunk, they care not to drink at all. If their Company be ſo great, that they have not enough to make them all drunk, they uſually chuſe ſo many as are proportionable to that Quantity, and the reſt muſt be Spectators. If any happen to be drunk before he has taken his Share, which is ordinarily a Quart of Brandy, Rum, or Strong Waters; to ſhew their Juſtice, they will pour the reſt down his Throat: In which Debauches they often kill one another; which the Friends of the Dead revenge upon the Murderer, unleſs he purchaſe his Life with Money; which is made of Periwinkle-Shell, both black and white, ſtrung like Beads.

Religion. They obſerve ſeveral Ceremonies in their religious Rites, and were ſaid by the firſt Adventurers to worſhip the Devil. They uſually perform their ſolemn Devotions once or twice a Year, unleſs upon ſome extraordinary Occaſion, as the making of War, or the like. The Day being appointed by their Chief Prieſt, or *Pawaw*, moſt of them go a Hunting for Veniſon. When they are all aſſembled, if the Prieſt wants Money, he then tells them, their God will accept no Offering but Money; which the People believing, every one gives according to his Ability. The Prieſt takes the Money, and putting it into ſome Diſhes, ſets them upon the Top of their low, flat-rooſed Houſes, and ſo falls a calling upon their God, to come and receive it; which Invocation, with many loud Hollows and Outcries, ſtriking the Ground with Sticks, and beating themſelves, is performed by the Prieſt, and ſeconded by the People. After being thus wearied, a Devil, they tell us, (but more likely a Perſon appointed by the *Pawaw*) appears amongſt them, which ſo amazeth the People, that they dare not ſtir. The Prieſt improves the Opportunity, and ſtepping out, makes ſure of the Money, and then returns to lay the Spirit, who is often gone before he comes back. If at ſuch Times any *Engliſh* come among them, it puts a Period to their Proceedings, and they will deſire his Abſence, ſaying, *Their God will not come, till they are departed*, which is a pretty good Proof that Prieſtcraft is not wanting among them. They are much addicted to go to War againſt one another: However, they fight no pitched Battle, but upon their Enemy's Approach, (having firſt ſecured their Wives and Children in ſome Iſland or thick Swamp) armed with Guns and Hatchets, they way-lay their Enemy. They ſeldom give Quarter to any, but the Women and Children, whom they reſerve, and make uſe of for increaſing their Strength.

Burials. When an *Indian* dies, they bury him upright, ſitting upon a Seat, with his Gun, Money, and Goods, to furniſh him in the other World; which they believe to be weſtward, where they ſhall have great Store of Game for Hunting, and live at Eaſe. At his Funeral, his Relations paint their Faces black; making, at his Grave, once or twice every Day, ſad Lamentations; thus continuing till the Blackneſs is worn off their Faces; and after that, once a Year they mourn afreſh for him, viſiting and trimming up the Grave, and covering it with Mats for a Shelter from the Rain. Notwithſtanding all this Buſtle, when an *Indian* is dead, his Name dies with him, none daring ever after to mention his Name, not only becauſe it is a Breach of their Law, but an Affront to his Friends and Relations, as it done on Purpoſe to renew their Grief. And e-

very

very Perſon, bearing the ſame Name, inſtantly changes it for another, which every one invents for himſelf: Some call themſelves Rattleſnakes; others Buckſhorn, or the like. It is ſaid moreover, that if a Perſon die, whoſe Name is ſome Word uſed in common Speech, they change that Word, and invent a new one, which makes their Language very troubleſome. When any one is ſick, after his Friends have uſed all poſſible Means, and all prove ineffectual, they ſend for a *Pawaw*, or Prieſt, who, ſitting down by the ſick Perſon, without the leaſt enquiring after the Diſtemper, expects a Fee, according to which he proportions his Work; beginning with a low Voice to call ſometimes upon one God, and then on another, ſtill raiſing his Voice; beating his naked Breaſts and Sides till the Sweat runs down, and his Breath is almoſt gone; and what remains, he breathes upon the Face of the ſick Perſon three or four Times together, and ſo takes his Leave.

Marriages. Their Weddings are performed without any Ceremony, the Match being firſt made by Money; which being agreed on, and given to the Woman, makes a Conſummation of the Marriage; after which, the Husband keeps her during Pleaſure, and, upon the leaſt Diſlike, turns her away, and takes another. It is no Offence for their married Women to lie with another Man, provided ſhe acquaint her Husband, or ſome of her neareſt Relations therewith; but if not, they account it ſuch a Fault, as is ſometimes puniſhable by Death. When any Woman finds herſelf quick with Child, ſhe keeps herſelf untouched by any Man, until her Delivery: The like ſhe obſerveth in her giving ſuck. An *Indian* may have two, or three, or more Wives, if he pleaſe: But this is not now ſo much uſed, as before the *Engliſh* came, they being inclined to imitate them in Things both good and bad. Any Maid, before ſhe is married, lies with whom ſhe pleaſes for Money, without the leaſt Scandal or Aſperſion, it being not only cuſtomary, but lawful. They are extremely charitable to one another; for if any one has to ſpare, he freely imparts to his Friends; and whatever they get by gaming, or otherwiſe, they ſhare one with another, leaving commonly the leaſt Part to themſelves.

Government. When their King or *Sachem* ſits in Council, he hath a Company of armed Men to guard his Perſon, great Reſpect being ſhewed him by the People, which chiefly appears by their Silence. After he has declared the Cauſe of their Convention, he demands their Opinions, ordering who ſhall firſt begin; who, having delivered his Mind, tells them, he hath done; for no Man interrupts him, though he makes never ſo many long Stops, till he hath no more to ſay. The Council having all delivered their Opinions, the King, after ſome Pauſe, gives the definitive Sentence, which is commonly ſeconded by a Shout from the People. If any Perſon be condemned to die, which is ſeldom, but for Murder, or Inceſt, the King himſelf goes out in Perſon, to ſeek him, and having found him, the King ſhoots firſt, and then happy is the Man that can ſhoot him down, he being, for his Pains, made ſome military Officer.

Apparel. Their modern Clothing is a Yard and an half of Broad-Cloth, which they hang on their Shoulders; and half a Yard of the ſame being put between their Legs, is tied up before and behind, faſtened with a Girdle about their Middle, and hangs with a Flap on each Side. They wear no Hats, but commonly tie a Snake's-Skin about their Heads. They wear alſo a Belt of their Money, or a Kind of Ruff, made with Deer's Hair, and dyed of a Scarlet-Colour, which they eſteem very rich. They greaſe their Bodies and Hair very often, and paint their Faces with divers Colours, which they take great Pride in, every one being painted in a ſeveral Manner.

New-Albany. *Hudſon's-River* runs by *New-York*, Northward, into the Country, towards the Head of which is ſeated a Country called by the *Engliſh New-Albany*, but by the *French* eſteemed a Part of *Canada*; a Place of a very conſiderable Trade with the Natives; betwixt which and *New-York*, being above an hundred Miles Diſtance, is as good Corn Land as the World affords. It was reduced to the *Engliſh* Obedience by Colonel *Nicols*, and a League of Friendſhip concluded between the Inhabitants and the *Indians*, by whom they have never been ſince diſturbed.

CHAP. XXVII.

A Deſcription of New-England, New-Scotland, Newfoundland, Hudſon's-Bay, *&c. treating of their Situation and Extent, Climates, Seaſons, Rivers, Productions, Trade, Inhabitants both Natives and Planters, Animals, Towns,* &c.

New England Diſcovery. NEW-*England* was firſt diſcovered, as well as the other Northern Coaſts of *America*, by *Sebaſtian Cabot*. Mr. *Philip Amadas*, and Mr. *Arthur Barlow*, were the firſt Chriſtians that took Poſſeſſion thereof for Queen *Elizabeth*. The Year following Sir *Richard Greenvile* conveyed an *Engliſh* Colony thither, under the Government of Mr. *Ralph Lane*, who continued there till the next Year; but, upon ſome extraordinary Occaſion, returned with Sir *Francis Drake* into *England*, who on that Account was called the Firſt Diſcoverer.

Situation. It is ſeated on the Eaſt of *New-York*, and lies between about forty-two and forty-five Degrees of North Latitude. It has a long Extent of Sea Coaſt, where are found divers good Havens, ſeveral of which are capable to harbour five hundred Sail of Ships, by reaſon of the Interpoſition of ſeveral Iſles which lie along the Coaſt. And

Temperature. although this Country is ſeated in the Midſt of the *Temperate Zone*, yet is the Clime more uncertain, as to the Heat and Cold, than thoſe *European* Kingdoms which lie parallel with it; and, as to *Virginia*, this may be compared as *Scotland* is to *England*. The Air is found, very healthful Air. and agreeable to the *Engliſh*, which makes them poſſeſs many potent Colonies, being very numerous and powerful.

Religion of the Natives. The Natives, when they deſign to make War, firſt conſult with their Prieſts, no People being ſo barbarous almoſt, but they have their Gods, Prieſts, and Religion. They adore as it were all Things that they think may hurt them; as Fire, Water, Lightning, Thunder, our great Guns, Muskets, and Horſes. Some of them once ſeeing an *Engliſh* Boar, were ſtruck with Terror, becauſe he briſtled up his Hairs and gnaſhed his Teeth, be-

lieving him to be the God of the Swine, who was offended with them. The chief God they worship is *Okee*. In their Temples they have his Image ill-favouredly carved, painted, and adorned with Chains, Copper, and Beads, and covered with a Skin. The Sepulchre of their Kings is commonly near them, whose Bodies are first imbowelled, dried on a Hurdle, adorned with Chains and Beads, and then wrapped in white Skins, over which are Mats. They are afterwards intombed orderly in Arches made of Mats, their Wealth being placed at their Feet. But for their common Burials, they dig a Hole in the Earth with sharp Stakes, and the Corps, being wrapped in Skins and Mats, they lay them in the Ground, placing them upon Sticks, and then cover them with Earth. The Burial ended, the Women, having their Faces painted black with Coal and Oil, sit mourning in the House twenty-four Hours together, howling and yelling by Turns.

Burials.

Cloaths.

The Natives are clothed with loose Mantles made of Deers Skins, and Aprons of the same round their Middle, all else being naked: They are of Stature like to us in *England*. They paint themselves and their Children, and he is most gallant who is most deformed. The Women imbroider their Legs, Hands, and other Parts, with several Works, as Serpents, and the like, making black Spots in their Flesh. Their Houses are made of small Poles, round, and fastened at the Top in a Circle like our Arbours, covered with Mats twice as long as broad. They are exact Archers, and with their Arrows will kill Birds flying, or Beasts running full Speed. Their Bows are of tough Hazel, and their Strings of Leather; their Arrows of Cane or Hazel, headed with Stones or Horn, and feathered artificially. They soon grow heartless, if they find their Arrows do not do Execution.

New England planted.

Though the planting of this Country was designed by several of the *English*, yet it lay much neglected, 'till a small Company of Planters, under the Command of Captain *George Popham*, and Captain *Gilbert*, was sent over at the Charge of Sir *John Popham*, 1606, to begin a Colony upon a Tract of Land about *Saga de hoch*, the most northerly Part of *New-England*; but that Design, within two Years, expired with its Founder. Soon after, some honourable Persons of the West of *England*, commonly called the Council of *Plymouth*, being more certainly informed of several navigable Rivers, and commodious Havens, with other Places fit either for Planting or Traffick, newly discovered by many Navigators, obtained of King *James* the First, a Patent under the Great Seal, of all that Part of *North-America*, called *New-England*. This Tract of Land, was in 1612 cantoned, and divided by Grant into many lesser Parcels, according as Adventurers presented; which Grants being founded upon uncertain and false Descriptions, and Reports of some that travelled thither, did much interfere one with another, to the great Disturbance of the first Planters; so that little Profit was reaped from thence: Nor was any greater Improvement made of those Portions of Land, save the erecting some few Cottages for Fishermen, and a few inconsiderable Buildings for the Planters.

This was the beginning of *New-England*, when, in the Year 1610 one Mr. *Robinson*, a Presbyterian, or rather Independant Preacher, and several other *English* then at *Leyden* in *Holland*, foreseeing that they could not well provide for their Posterity, under the Government of a foreign Nation, resolved to intreat so much Favour of King *James*, as to grant them Liberty, under the Protection of his Authority, to place themselves in some Place of *New-England*. Having therefore obtained a Patent for some Place about *Hudson's-River*, they set Sail from *Plymouth*, in *September*, for the Southern Parts of *New-England*: But, as they intended their Course thither-ward, they were thro' many Dangers, at last, about *November* the 11th, cast upon a Bosom of the South Cape of the *Massachusets* Bay, called *Cape Cod*. When Winter approached so fast, that they had no Opportunity to remove, and finding some Encouragement from the Hopefulness of the Soil, they resolved there to make their Abode, laying the Foundation of a new Colony, which, from the last Town they sailed from in *England*, they called *New-Plymouth*.

From this Time, to the Year 1636, Things were very prosperously and successfully carried on in *New-England*. At which Time, the *Naraganset Indians*, who are much dreaded by all the rest, committed divers Outrages upon several of them, and likewise upon the *English* and *Dutch*, barbarously murdering Captain *Stone*, Captain *Oldham*, with several others: Whereupon, the Inhabitants of all the Colonies unanimously falling upon them, in 1637 they were easily suppressed, about seven hundred of them being destroyed. Upon which, *Miantonimoh*, the chief of the *Mageshins*, expecting to be sole Ruler over all the *Indians*, committed many Insolencies upon some others, who were in Confederacy with the *English* as well as himself; and he being sent for to the *Massachusetts* Court, at *Boston*, endeavoured to clear himself, but was clearly convicted by one of his Fellows, named *Uncas*: In Revenge of which, after his Return Home, he made War upon *Uncas*, by whom being taken Prisoner, by the Advice and Counsel of the *English*, he cut off his Head. This happened in 1643, from whence, to 1675, there was always an Appearance of Amity on all Sides; only in 1671, one *Matoonas*, being vexed that an intended Design against the *English* did not take Effect, out of mere Malice against them, slew an *Englishman* on the Road. The Murderer was a *Nipnet Indian*, and, under the Command of the *Sachem* of *Mount-Hope*, the Author of all the Mischief against the *English* in 1675.

Upon a due Enquiry of all the Transactions between the *Indians* and the *English*, there will appear no Ground of Quarrel or Provocation given by the *English*. For when *Plymouth* Colony was first planted, in 1620, within three Months after, *Massasoit*, the chief *Sachem* or Commander of all that Side of the Country, repaired thither to the *English*, and entered solemnly into a League with them. This League the same *Sachem* confirmed a little before his Death, in 1630, coming with his two Sons, *Alexander* and *Philip*, to *Plymouth*, and renewing the same for himself, his Heirs and Successors: Yet *Massasoit* never loved the *English*, and would have engaged them never to have attempted to draw away any of his People from their Superstition to the Christian Religion: But finding they would make no Treaty with him upon such Conditions, he urged it no further. After the Death of *Massasoit*, his eldest Son *Alexander* succeeded, who, notwithstanding the League he had entered into with the *English*, in Conjunction with his Father, had no Affection to them nor their Religion, but was plotting to rise against them: Whereupon a Gentleman was sent to bring him before the Council of *Plymouth*, who found him and eight more in a Hunting House, where they were just come in from hunting, leaving all their Guns without Doors; which being seized by the *English*, they then entered the *Wigwam*, and demanded *Alexander* to go along with

with them before the Governor. At which Meſſage he was much ſtartled; but being told that if he ſtirred, or refuſed to go, he was a dead Man, he was perſuaded to go; but his very Indignation for this Surprizal caſt him into a Fever, whereof he ſoon after died. After his Death, *Philip*, his Brother, came with *Sauſaman* his chief Secretary, to renew the former League betwixt them, for the next ſeven Years, as had been in former Times; and yet, without any Kind of Provocation, this treacherous Man plotted a general Inſurrection in all the *Engliſh* Colonies, all the *Indians* being to riſe as one Man againſt the Plantations which were next them. Which being diſcovered by *Sauſaman*, *Philip* thereupon cauſed him to be murdered. The Murderers being apprehended, were executed, and *Philip* fearing his own Head, got openly into Arms, killing, burning, and deſtroying the *Engliſh*, and their Habitations, with all manner of Cruelty. Which Troubles continued almoſt two Years, 'till at length, after ſeveral Defeats given to *Philip* and his Forces, Divine Vengeance, (ſay our *Engliſh* Writers,) overtook him for cauſeleſly breaking his League. For having been Hunting through the Woods, he was driven to his own Den upon Mount *Hope*, which proved a Priſon to ſecure him 'till the Meſſenger of Death came.

After this Digreſſion concerning the Eſtabliſhment of the *Engliſh* here, we proceed to give ſome Account of the Country. It was poſſeſſed by divers Sorts of People, who are judged by ſome to be of the *Tartars*, called *Samoids*, bordering upon *Muſcovia*, being divided into Tribes. Thoſe to the Eaſt and North-Eaſt are called *Chaudiers*, *Tarentines*, and *Menbegans*: To the South are the *Pequets*, and *Naraganſets*: Weſtwards, *Connecticuts* and *Mowhocks*: To the North, *Aborigines*, which conſiſt of *Mattachuſets*, *Wippanaps*, and *Tarentines*: The *Pocanets* live to the Weſtward of *Plymouth*. Not long before the *Engliſh* came into the Country, happened a great Mortality among them, eſpecially where the *Engliſh* afterwards planted. The Eaſt and Northern Parts were ſmitten, firſt by the Plague, after, when the *Engliſh* came, by the Small-Pox. The three Kingdoms of the *Mattachuſets*, being before very populous, having under them ſeven petty *Saganmoſhips*, were now by the Plague reduced from 30,000 to 500. There are now many People to the Eaſtward. The *Pequods* were deſtroyed by the *Engliſh*. The *Mowhacks* are few in Number. Their Speech is thought to be a Dialect of the *Tartars*. They are of Perſon tall, and well limb'd; of a pale and lean Viſage, black ey'd, and black hair'd, both ſmooth and curl'd, generally wearing it long. They have ſeldom any Beards; their Teeth are very white, ſhort, and even, which they account the moſt neceſſary Part of Man: And as the *Auſtrians* are known by their great Lips, the *Bavarians* by their Pokes under their Chins, the *Jews* by their goggle Eyes, ſo the *Indians* are remarkable for their flat Noſes. The *Indeſſes*, or young Women, are ſome of them very comely, with round plump Faces, and generally plump of their Bodies, as well as the Men; ſoft and ſmooth like a Mole Skin, of a reaſonable good Complexion, but that they dye themſelves tawny: Yet many pretty Laſſes are found amongſt them. The old Women are lean and ugly; yet all of a modeſt Demeanour, conſidering their ſavage Breeding; and indeed they ſhame our *Engliſh* Ruffians, whoſe Rudeneſs in many Things exceeds theirs. The Natives in general, are of a very inconſtant, crafty, and timorous Diſpoſition; but are very ingenious and quick of Apprehenſion; ſoon angry, and ſo malicious, that they ſeldom forget an Injury; prone to Violence and Slaughter, both Men and Women being very theeviſh, and great Haters of Strangers.

Wives they have two or three, according to their Ability and Strength of Body. The Women are ſaid to have the eaſieſt Labour of any in the World; for when their time is come, they go out alone, carrying a Board with them two Foot along, and a Foot and an half broad, bored full of Holes on each Side, having a Foot beneath, and on the Top a broad Strap of Leather, which they put over their Forehead, the Board hanging at their Back. When they come to a convenient Buſh or Tree, they lay them down, and are delivered without ſo much as one Groan. They wrap the Child up in a young Beaver Skin, with his Heels cloſe to his Buttocks, and laced down to the Board upon his Back, his Knees reſting upon the Foot beneath: Then they put the Strap of Leather upon their Forehead, with the Infant hanging at their Back, and home they trudge. They dye the Child with a Liquor of boil'd Hemlock-Bark, and the Men throw him into the Water, if they ſuſpect it gotten by any other Nation: But if it will ſwim, they acknowledge it for their own. They give them Names when they are Men grown, and love thoſe of the *Engliſh*, as *Robbin*, *Harry*, *Philip*, and the like. They are very indulgent to their Children, as well as Parents: But if the latter live ſo long as to be burthenſome, they are reported either to ſtarve or bury them alive. Their Apparel, before the *Engliſh* came among them, was the Skins of wild Beaſts, with the Hair on; *Buskins* of Deer Skins, or Mooſe, dreſt, and drawn with Lines into ſeveral Works; the Lines being coloured with yellow, blue, or red. Pumps too they have, made of tough Skins, without Soles. In the Winter, when Snow will bear them, they faſten to their Feet Snow Shoes, made like a large Racket for Tennis Play, laced on before; and behind they wear a ſquare Piece of Leather, tied about their Middle with a String, to hide their Secrets. But ſince they have had to do with the *Engliſh*, they buy of them a Cloth, of which they make Mantles, Coats with ſhort Sleeves, and Caps for their Heads; but the Men keep their old Faſhion.

Women and Children. Their Apparel.

This Country is well watered with Rivers, the chief among which, are, *Agamentico*, *Connecticut*, *Kenebequy*, *Merrimick*, *Miſhum*, *Miſtick*, *Norragenſat*, *Piſcataway*, *Pemmaquid*, *Tachobacco*, &c. And in theſe Rivers, together with the Sea, are taken excellent Fiſh, as Cod, Thornback, Sturgeon, Porpuſſes, Haddock, Salmons, Herrings, Mackarel, Oyſters, Crab fiſh, Tortoiſe, Cockles, Muſcles, Clams, Smelts, Eels, Lamprons, Alewives, Baſſes, Hallibuts, Shacks, Scales, Grampuſſes, and Whales. Here are alſo great Variety of Fowls, as Pheaſants, Partridges, Heath Cocks, Turkeys, Geeſe, Ducks, Herons, Cranes, Cormorants, Swans, Widgeons, Sheldrakes, Snipes, Doppers, Black birds, the Humbird, Loor, &c. The wild Beaſts of chief Note, are Lions, Bears, Foxes, Racoons, Mooſes, Muſquathes, Otters, Beavers, Deer, Hares, Coneys, &c. and for tame Beaſts, Cows, Sheep, Goats, Swine, and Horſes. Amongſt the hurtful Things in this Country, the Rattle Snake is moſt dangerous. Here are alſo ſeveral Sorts of ſtinging Flies, which are found very troubleſome to the Inhabitants. Here are ſeveral Sorts of Trees, as the Oak, Cypreſs, Pine, Chefnut, Cedar, Walnut, Fir, Aſh, Aſp, Elm, Alder, Maple, Birch, Saſſafras, Sumach; ſeveral Fruit-Trees, as Apples, Pears, Plumbs, with ſeveral others that are growing in *Virginia* and *Maryland*, which have already been mentioned.

Rivers. Animals. Trees and Fruit.

This

Produce. This Country affordeth ſeveral Sorts of rich Furs, Flax, Linen, Amber, Iron, Pitch, Tar, Cables, Maſts, and Timber, to build Ships; alſo ſeveral Sorts of Grain, wherewith they drive a conſiderable Trade to *Barbadoes*, and other *Engliſh* Plantations in *America*, ſupplying them with Flour, Biſcuit, Salt, Fleſh, and Fiſh, *&c.* and in return, bring Sugars, and other Commodities. They alſo drive a conſiderable Trade with *England* for wearing Apparel, Stuffs, Cloth, Iron, Braſs, and other Utenſils for their Houſes. As to the Coins, Weights, and Meaſures of *New-England*, and the reſt of the *American* Plantations belonging to his Majeſty, they are the ſame with thoſe of *England*; but as to Coins, they are not much made uſe of in Trade, their Way being to uſe Paper for it, or barter one Commodity for another, *&c.*

The *Engliſh*, now inhabiting in *New-England*, are very numerous and powerful, poſſeſſing many potent Colonies, and are governed by Laws of their own making, having ſeveral Courts of Judicature, where they aſſemble together, as well for the making of new Laws, aboliſhing of old, hearing and determining of Cauſes, as for the Electing of Magiſtrates, each County Electing ſuch like Officers. The Government, both Civil and Eccleſiaſtical, is in the Hands of Independants or Presbyterians. The Military Part of their Government, is by one Major-General and three Serjeant-Majors, to whom belong the four Counties of *Suffolk*, *Middleſex*, *Eſſex*, and *Norfolk*.

Towns. *Boſton.* Here are ſeveral fine Towns; as *Boſton*, the Metropolis of *New-England*, and indeed of all the *Britiſh* Dominions in *America*; commodiouſly ſeated for Traffick on the Sea-Shore. It is at preſent a very large and ſpacious City, compoſed of ſeveral well-ordered Streets, and graced with ſeveral fair and beautiful Houſes, which are well Inhabited by Merchants and Tradeſmen, who drive a conſiderable Trade for ſuch Commodities as the Country affordeth, to *Barbadoes* and other *Caribbee* Iſles; as alſo to *England* and *Ireland*; taking in exchange ſuch Commodities as each Place affordeth, or are found uſeful to them. It has ſeveral Churches, and a greater Number of Meeting-houſes, and is a Place of good Strength; having two or three Hills adjoining, on which are raiſed Fortifications, with great Pieces mounted thereon, which are well guarded. 2. *Charles-Town*, ſeated on and between the Rivers *Charles* and *Miſtick*: It is beautified with a large and well-built Church, and near the River-ſide is the Market-place, from which runneth two Streets, in which are ſeveral good Houſes. 3. *Dorcheſter*, ſituated near the Sea, where there falls in two Rivulets; an indifferent Town. 4. *Cambridge*, formerly *New-Town*, ſeated on the River *Merrimick*: This Town conſiſts of ſeveral Streets, and is beautified with two Colleges, and divers fair and well-built Houſes. 5. *St. George's Fort*, ſeated on the Mouth of the River *Sagadebock*. 6. *New-Plymouth*, ſeated on that large Bay of *Patuxet*. 7. *Reading*, commodiouſly ſeated above a great Lake, and well watered and inhabited. In this Town are two Mills, one for Corn, and the other for Timber. 8. *Salem*, pleaſantly ſeated between two Rivers. Other Towns are *Berwick*, *Braintree*, *Briſtol*, *Concord*, *Dartmouth*, *Dedham*, *Dover*, *Exeter*, *Falmouth*, *Glouceſter*, *Green's-Harbour*, *Hampton*, *Hartford*, *Haverhil*, *Hingham*, *Hull*, *Ipſwich*, *Lynn*, *London*, *Malden*, *Newbury*, *New-Haven*, *Northam*, *Norwich*, *Oxford*, *Rowley*, *Roxbury*, *Salisbury*, *Sandwich*, *Southampton*, *Springfield*, *Sudbury*, *Warwick*, *Wenham*, *Weymouth*, *Woſtanne*, and *Yarmouth*; the particular Deſcription of which would carry us to too great a Length. Moſt of theſe have their Names from ſome Towns in *England*; many of them being of good Account, and commodiouſly ſeated, either on the Sea-Shore, or on Navigable Rivers, and are well inhabited. And moſt of theſe Towns are known to the *Indians* by other Names.

New-Scotland, or *Acadia*, the moſt Northerly of thoſe *Britiſh* Provinces in *America* that are contiguous, extends from *Kenebretri*, one of the Frontiers of *New-England*, to the Mouth of the River of *St. Laurence*. It is bounded by the *Atlantick Ocean* on the North, by Cape *Breton* Iſland on the Eaſt, by *Canada* on the Weſt, and by *New-England* on the South, having in all near three hundred Leagues of Sea-Coaſt. It abounds in Corn, Pulſe, and Fruits, and the Coaſt of it in Fiſh. The *Europeans* have made no great Progreſs in planting it, there being but one Town of any Conſideration in the whole Country, the Name of which is *Port-Royal*, or *Annapolis-Royal*. It belonged formerly to the *French*, but was taken by the *Engliſh* in the War of 1689, and yielded up to them by the Peace of *Utrecht*. It lies in Latitude 44 Degrees 40 Minutes, upon a fine Bay, called the Bay of *Fundy*. Little can be ſaid of the natural Produce of this Province, either Animal or Vegetable, that has not been mentioned in treating of the neighbouring Countries; and therefore we ſhall proceed to a Country that affords us more Matter to expatiate on, tho' indeed not ſo much as the Plantations we have already paſs'd thro'. *New-Scotland.*

Newfoundland is an Iſland over-againſt the Mouth of *St. Laurence-River*, in Extent equal to *England*, from whence it is diſtant little above ſix hundred Leagues, lying near half Way between *Ireland* and *Virginia*. We ſhall deſcribe it in this Place, becauſe it falls here more naturally in our Way, than it will do in ſpeaking of the other *Britiſh* Iſlands in *America*. It is ſituated between 46 and 53 Degrees North Latitude; the North Part being better inhabited than the South, tho' the latter be fitter for Habitation; and it is only ſevered from the Continent of *America* by an Arm of the Sea, like that which ſeparates *England* from *France*. It is famous for many excellent Bays and Harbours, and for the Variety of freſh Springs, whoſe Waters are exceeding delicious. *Newfoundland.* Its Extent. Its Situation.

It is enriched by Nature with Plenty of Fiſh and Fowl, with Deer, Hares, Otters, Foxes, Squirrels, and other Beaſts, which yield good Furs. Cod-Fiſh, Herrings, Salmons, Thornbacks, Oiſters, Muſcles, *&c.* they have in Abundance. And though the Country is not over-run generally with Woods, it affords abundance of Trees fit for Timber, Maſts, Planks, and other Uſes. The Soil in moſt Places is fertile, the Climate wholſome, though the Rigour of the Winter Seaſon, and the Exceſs of Heats in Summer, detracts ſomething from its Praiſe. Animals. Its Fertility.

The Iſland of *Newfoundland* is ſaid to be firſt diſcovered by *Sebaſtian Cabot*: But *Fabian* gives an Account, that in the Time of *Henry* the Seventh, three Men being taken in *Newfoundland*, were brought to the King: And one *Robert Thorn* writes, that his Father, and one Mr. *Elliot*, were the Diſcoverers of *Newfoundland*, in 1530. Mr. *Hore* ſet out for a further Diſcovery, but was brought to ſuch Extremity by Famine, that many of his Company were killed and eaten by their Fellows. After the firſt Diſcovery, the Buſineſs of Trading thither was laid aſide for many Years. In the mean Time, the *Normans*, *Portugueſe*, and *Britons* of *France*, reſorted to it, and changed the Names which had been given by the *Engliſh* to the Bays and Promontories; but the *Engliſh* would The firſt Diſcove

not

not ſo ſoon relinquiſh their Pretenſions: And therefore, in 1583, Sir *Humphry Gilbert* took Poſſeſſion thereof, in the Name, and by the Commiſſion, of Queen *Elizabeth*, forbidding all other Nations to uſe Fiſhing, and intending to have ſettled an *Engliſh* Colony there: But Sir *Humphry* being wreck'd in his Return, the ſettling of the Colony was diſcontinued till 1608, and then undertook by *John Guy*, a Merchant of *Briſtol*, who in twenty three Days ſailed from thence to *Conception Bay* in *Newfoundland*. In 1611, they had ſcarce ſix Days of Froſt in *October* and *November*, which preſently thawed, the reſt of the Months being warmer and drier than in *England*; neither were the Brooks frozen up three Nights together, with Ice able to bear a Dog. They had Filberds, Fiſh, Mackerel, and Foxes, in the Winter; White Partridges in the Summer, larger than ours, who are much afraid of *Ravens*. They kill a Wolf with a Maſtiff and a Greyhound.

In 1612, they found ſome Houſes of the Natives, which were nothing but Poles ſet round, and meeting on the Top, ten Foot broad, the Fire in the midſt, and covered with Deer-Skins. The People are of a reaſonable Stature, Beardleſs, broad-faced, and have their Faces covered with Oker: Some of them went naked, only their Privities covered with a Skin. They believe in one God, who created all Things, but have many whimſical Notions, and ridiculous Opinions: For they ſay, *That after God had made all Things, he took a Number of Arrows, and ſtruck them in the Ground, from whence Men and Women firſt ſprung up, and have multiplied ever ſince.* A *Sa ance*, or Governor, being asked concerning the Trinity, anſwered, *There was only one God, one Son, one Mother, and the Sun, which were four; yet God was above all.* Being queſtioned if they or their Anceſtors had heard that God was come into the World, he ſaid, *That he had not ſeen him.* When a Maid among them is fourteen or fifteen Years of Age, ſhe hath many Lovers, and uſes her Pleaſure with as many of them as ſhe pleaſes, for five or ſix Years, and then takes whom ſhe likes for a Huſband, provided he be a good Hunter, living chaſtly with him all her Life after, except for Barrenneſs he forſakes her. When any one dies, they make a Pit, and therein put all his Goods with the Corps, covering it over with Earth, and ſetting many Pieces of Wood over it, and a Stake painted red. They believe the Immortality of the Soul, and that the Dead go into a far Country, to make merry with their Friends.

In 1613, fifty four *Engliſhmen*, ſix Women, and two Children, wintered there: They killed Bears, Otters, and Sables; ſowed Wheat, Rye, Turnips, and Coleworts. Their Winter was dry and clear, with ſome Froſt and Snow. Several had the Scurvy, againſt which, their Turnips proved a ſoveraign Remedy. There are Muſk Cats and Muſk-Rats; and near the Coaſts, is great killing of Maſes, or Sea-Oxen. A ſmall Ship, in a ſmall Time, ſlew fifteen hundred of them. They are bigger than an Ox; the Hide, dreſſed, is as thick again as a Bull's; they have Teeth like Elephants, but about a Foot longer, growing downward out of the upper Jaw, and therefore leſs dangerous: This Tooth is ſold dearer than Ivory. The young Maſes eat like Veal, which the Old will defend to the utmoſt, holding them in their Arms or fore-feet. Out of the Bellies of five of theſe Fiſhes (which live both on the Land and Water) they make an Hogſhead of Train Oil. They ſkip in great Companies, and have one Centinel to wake the reſt upon Occaſion. Their Skins are ſhort haired like Seals; their Faces reſemble a Lion's, and may therefore more juſtly be called Sea-Lions than Sea-Oxen or Horſes.

Eaſt of *Newfoundland*, over-againſt *Cape-Ray*, at the Diſtance of about 70 Miles from the Shore, lies a Bank or Ridge of Ground, extending about 300 Miles in Length, and not above 75 in Breadth, where broadeſt. This great Bank is covered with Water when the Sea is high, and dry at the Ebb, on all Sides whereof the Sea is 200 fathom deep, ſo that Ships of a conſiderable Burthen may ride over it. And about this Bank lie diſperſed ſeveral ſmall Iſles, called by *Sebaſtian Cabot*, *Los Bacalaos*, or the Iſles of *Cod-fiſh*, from that prodigious Quantity of Cod Fiſh there found, which were ſaid to obſtruct the Paſſage of his Veſſels.

It is almoſt incredible how many Nations yearly Trade thither, amounting to between three or four hundred Sail of Ships, that are aſſured to find ſufficient Freight of Cod and Poor John. They fiſh with Hooks, which are never thrown into the Sea, but the Fiſh ſnapping the Bait, is taken, and drawn a Ship-board, where they lay him on a Plank. One cutting off its Head, another guts and takes out its biggeſt Bones, and another ſalts and barrels it: Which being thus ordered, is tranſported to all Parts of *Chriſtendom*, and through moſt other Parts of the World. They fiſh only in the Day, the Cod not biting in the Night; nor do'th the Fiſhing laſt all Seaſons, but begins towards Spring, and ends in *September*; for in Winter they retire to the Bottom of the Sea, where Storms and Tempeſts have no Power.

Near theſe Coaſts is another Kind of Fiſhing for Cod, which they called Dried, as the other Green Fiſh. The Fiſhermen retire into ſome Harbour, and every Morning ſend out their Shallops two or three Leagues into the Sea, who fail not of their Lead by Noon, or ſoon after. After this Fiſh has lain ſome Days in Salt, they take it out, and dry it in the Wind, laying it again in Heaps, and expoſing it daily to the open Air, till it be dry. The Air ought to be good and temperate, to make the Fiſh freſhable; for Miſt moiſten it, and make it rot, and the Sun cauſes Yellowneſs. At this their Fiſhing, the Mariners have likewiſe the Pleaſure of taking Fowl, without going out of their Veſſels; for baiting their Hook with Cod's Livers, theſe Fowls are ſo greedy that they come by Flocks, and fight who ſhall get the Bait firſt; and one being taken, the Hook is no ſooner thrown out, but another is inſtantly catch'd.

In the Year 1623 Sir *George Calvert*, Principal Secretary of State, and afterwards Lord *Baltimore*, obtained a Patent of Part of *Newfoundland*, which was erected into a Province, and called *Avalon*; where he cauſed a Plantation to be attempted, and a ſtately Houſe and Fort to be built at *Ferryland*, and afterwards tranſported himſelf and Family thither, and continued the Plantation by his Deputy, till by Deſcent it came to his Son and Heir, the Right Honourable *Cecilius* Lord *Baltimore*, who, by Deputies from Time to Time, was no leſs careful to preſerve his Intereſt there: And though during the laſt Troubles in *England*, it was, by Sir *David Kirk*'s Means, for ſome Years diſcontinued; he was ſoon re-inveſted in the ſame, by King *Charles* the Second's Reſtoration.

The chief Town of *Newfoundland* is *Placentia*, or *Plaiſance*. There are other Iſland hereabouts, the chief of which are *Cape Breton* Iſlands, *Aſſumption*, or *Anticoſti*, *St. John's*, and the Iſlands of *Madalena*. Theſe, as well as *Newfoundland*, are famous for the Cod Fiſhery. They are all ſi-

tu-

ject to the *English* and *French*, the former of which did great Damage to the other there in 1702. *Placentia* is under the *French* Dominion.

Hudson's Bay.

Hudson's-Bay, and the Countries about it, come last in Order, among the Northern Dominions of *Great-Britain* in *America*. The Bay lies between the Artick Circle, and about 51 Degrees of North Latitude. It received its Name from Captain *Hudson*, its Discoverer, as did the Streights that lead to it on the North of *New-Britain*. The Extremity of this Bay on the South, that borders on *Canada*, is called *James's* Bay, and the Northern Point of it has the Name of *Button's* Bay. The principal Countries about it are these. 1. *New South Wales*, on the South-West of the Bay; a Country but little known, and probably of no great Importance. 2. *New-Britain*, on the East, between the River of *St. Laurence* and the Bay, a very large Tract of Land, but not much better known than the former. It is divided into the Provinces of *Estoitland* and *Terra de Laborador*; but we do not find any one Town, either in this Country, or in *New South Wales*: For which Reason we shall not detain the Reader with any farther Account of them, but proceed to the Islands in the Great Western Gulph, which are commonly known by the Name of the *West-Indies*. With these, which perhaps are the most valuable of our Acquisitions in *America*, we shall conclude our Account of the *British* Dominions in this Part of the World.

However, that we may not be thought to have assign'd this vast Tract of Land about *Hudson's-Bay* to *Great-Britain* without any Foundation, we will here first insert, that Article of the Treaty of *Utrecht*, whereby the *French* resigned this Part of *America* to the *British* Crown. It is to the following Tenour: "The said most *Christian* King shall restore to the Kingdom and Queen of *Great-Britain*, to be possessed in full right forever, the Bay and Streights of *Hudson*, together with all Lands, Seas, Sea-Coasts, Rivers, and Places, situated in the same Bay and Streights, and which belong thereto, no Tracts of Land or Sea being excepted which are at present possess'd by the Subjects of *France*. All which, as well as any Buildings there made, in the Condition they now are, and likewise all Fortresses there erected, either before or since the *French* seized the same, shall, within six Months from the Ratification of the present Treaty, or sooner if possible, be well and truely delivered to the *British* Subjects, having Commission from the Queen of *Great-Britain* to demand and receive the same, entire and undemolished, together with all the Cannon and Cannon Ball, and Powder, &c, which are therein." By which Article the *French* have given us at least all the Right they had in this Country, and excluded themselves from it; but whether that be a sufficient Right with regard to the Natives, is what we will not here determine.

CHAP. XXVIII.

A Description of the British West-Indies, *containing the Islands of* Jamaica, Barbadoes, St. Christopher's, Nevis, Antegoa, St. Vincent, Dominica, Monserrat, Anguilla, *and* Barbuda; *also of* Bermudas, *or the* Summer-Islands; *treating of their Names, Extent, Air, Soil, Product, History, Towns, Inhabitants, Trade,* &c.

Jamaica. Its Situation.

THE Island of *Jamaica* is situate between the *Tropicks*, in seventeen or eighteen Degrees North Latitude, upon the *Mare del Nort*, being about an hundred and forty Leagues North of the main Continent of *America*, fifteen Leagues South from the great Island of *Cuba*, and twenty Leagues Westward from *Hispaniola*: From *Porto Bello*, Northwards, an hundred and sixty; and from *Carthagena* an hundred and forty Leagues. 'Tis of an oval Form, and hath a continued Ridge of lofty Mountains running from East to West, which extend themselves from one End of it to the other, and being full of fresh Springs, furnish the Island with great Plenty of pleasant and useful Rivers. It is exceeding fruitful, being for the most Part a rich fat Soil, the Earth blackish, and mixt with Clay, except in the South-West Parts, where it is generally of a more red and loose Earth. It enjoys a perpetual Spring, and its Plants and Trees are never disrob'd of their Summer-Livery; every Month is to them like *April* or *May* to us. It is in Length about 170 Miles, and about 70 in Breadth, containing between four or five Millions of Acres. There are intermix'd with the Woods and Mountains, many Savanahs or Plains, which are supposed to have formerly been Fields of *Indian* Maiz. But the *Spaniards*, when they made themselves Masters of the Ile, and had destroyed all the Natives, to the Number of about sixty thousand Persons, converted them to Pasture for the Feeding of Horses, Cows, Hogs, and other Cattle. There are now great Herds of Horses and other Cattle running wild in the Woods. These Savanahs are accounted the most barren Parts of the Island, in regard they have lain so long without Tillage; but notwithstanding they produce such vast Quantities of Grass, that the Planters are oftentimes constrained to burn it up.

Its Fertility.

Its Form and Extent.

The Air is very serene and clear, and more temperate than in other Islands in those Parts and in Reference to Heat, it is as mild as in any Place that lieth between the Tropicks, in regard it is continually cooled by fresh Breezes, which generally blow Eastwardly: Beside which, it is refreshed with frequent Showers of Rain, and great Dews which fall in the Night. Its continual Verdure commends it as one of the most delightful Places in the World to live in, especially the South Part of the Isle; the East and West Parts being somewhat more subject to Rains and Winds, and more mountainous and wooded. The Southern Parts are so wholsome, that it gave occasion to the *English* to build *Port Royal* there, it being thought convenient that the chief Port should be upon the best Spot in the Island. Nor doth any Part of this Island necessitate any of its new Inhabitants to any particular Distemper. It hath

hath been obſerved by ſome who live in the Iſland, that the Mountains which run through the Midſt of the Iſle, are much cooler than the other Parts; inſomuch that ſometimes in the Morning early there are ſmall white Froſts. The Weather is leſs certain in *Jamaica* than in the reſt of the Iſlands; but wet Seaſons are moſt expected in *May* and *November*. The Winds which they call Sea Breezes, uſually riſe about nine in the Morning, and blow freſher as the Sun mounts higher; ſo that Labour is tolerable at Mid-day. Theſe Eaſterly Winds blow till about ſix or ſeven in the Afternoon, and then they change to the Weſt; which the Iſlanders call Land Breezes, becauſe they blow off the Shore. There is no apparent Winter, only they have more Rain and Thunder in the Winter Months than at other Times: Nor doth the Length of the Days vary much, but continue almoſt all the Year about fifteen Hours.

The Rivers of this Iſland are none of them navigable up into the Country, in regard the Iſland is very mountainous, and their Original is for the moſt Part in thoſe Hills that run through its Centre; which running Eaſt and Weſt, the Rivers diſembogue themſelves North and South, and falling out of thoſe high Mountains, are very fierce and rapid in their Motion; being likewiſe, in regard of the great Rains, ſubject to ſudden Inundations; at which Times they fall with ſuch Fury, that great Stone Rocks and large Pieces of Timber are borne down by the Violence of the Torrent. Beſides which, there are divers of them which at ſome Times have not one Drop of Water in them, which renders them likewiſe uſeleſs for Navigation. But although the Rivers are thus uſeleſs, yet towards the Sea the Iſland abounds with Plenty of very good Bays, Roads, and Harbours: The principal whereof are, 1. *Port Royal*, which, at its firſt ſetling by the *Engliſh*, received the Name of *Cagaay*; but when the Town began to increaſe, it obtained the Name of *Port-Royal*, in regard of the Excellency of its Harbour. It is ſituated on the extreme End of that long Point of Land that makes the Harbour, running about twelve Miles from the Main Weſterly, having the Sea on its South, and the Harbour on the North: Which Harbour is ſo exceeding ſafe for Shipping, that they are ſecure in all Weathers, and can unload themſelves afloat at the Merchant's Key. The Harbour is about three Leagues broad in moſt Places, and ſo deep, that a Ship of a thouſand Ton may lay her Sides to the Shore of the Point, and load and unload at Pleaſure; nor doth there want good Anchorage in any Part of it. The Point of Land whereon the Town is built, is exceeding narrow, and nothing but a looſe Sand; ſo that it affords neither Graſs, Stone, freſh Water, Trees, nor any Thing elſe which could encourage the building a Town upon it, beſides the Goodneſs of the Harbour. It was at firſt begun by building a few Warehouſes, but afterwards grew exceeding large and populous. But was, however, almoſt ruined by an Earthquake in 1692, and in a Manner deſtroyed by Fire in 1702. 2. *Old Harbour*, about ſeven Miles Weſtward from *St. Jago*, is generally accounted, next to *Port Royal* the beſt Harbour on the South Side. 3. *Port-Morant*, in the Eaſtern Point, is a very fair, capacious, and ſecure Harbour. 5. *Negril*, in the extreme Weſterly Point, is a good Harbour, very convenient, and ſufficiently ſecure to the Windwards. 5. *Port Antonio* is accounted the next beſt Port, being a fair, land-locked Harbour; only the coming in is ſomewhat difficult. But there are divers other good Bays and Harbours along the Coaſt of this Iſland, which are not altogether ſo much frequented; as *Michael's-Hole Macary-Bay*, *Alligator Point*, *Point Pedro*, *Pallate Bay*, *Lewana Bay*, *Blewfield's Bay*, *Cabarita's Bay*: Theſe are on the South Side, and are all very good and commodious. On the North Side, there is *Porto Maria*, *Oro Chaſſa*, *Cold Harbour*, *Rio Nova*, *Montego Bay*, *Orange Bay*, and divers more; at all which there are ſome Houſes.

This Iſland doth not very much abound with Towns. The chief uſed to be thought *St. Jago de la Vega*, ſituated ſix Miles within the Land North-Weſt, upon a large Plain. This Place was, when the *Spaniards* were Maſters of the Iſle, a large City, containing about two thouſand Houſes, two Churches, four Chapels, and an Abby for divine Worſhip. The Houſes, upon the taking the Iſland by the *Engliſh*, were reduced to about fifteen hundred, and the Churches and Chapels to a ſmaller Number than before; nor did thoſe which remained, altogether eſcape, but were ſufficiently ſpoiled. The Capital of the whole Iſland, at this Day, is *Kingſton*.

The next Town of Note is *Port-Royal*; which hath been already deſcribed: And the fourth is known by the Name of *Paſſage*, ſituated on the Mouth of the River, ſix Miles from *St. Jago* by Land, and about as far from *Port-Royal* by Sea. 'Tis the greateſt Paſſage in the whole Iſland, from whence it took its Name; and thoſe who go from *Port-Royal* to *St. Jago*, land here. When the *Spaniards* enjoyed the Place, there were diver other Towns which are now of no Account; the chief whereof, are, 1. *Seville*, ſituated on the North Part of the Iſland, and beautified with a Collegiate Church. 2. *Melilla*. 3. *Oriſa*, ſituated upon the *South-Seas*; in which Seas there are many Rocks, and amongſt their Banks ſome Iſles; as *Serranilla*, *Quitaſueno*, and *Serrana*. But there are in *Jamaica* divers Villages or Pariſhes, which are well inhabited by the *Engliſh*, in every one whereof, they have very good Plantations, well ſituated, and furniſhed with all Things neceſſary; eſpecially all the Southern Part, from *Point Morant* in the Eaſt, to *Point Negril* in the Weſt. Nor are its Northern Parts, eſpecially near the Sea, without Inhabitants, who have ſeated themſelves in good Plantations. The whole Iſland is divided into fourteen Pariſhes, Diviſions, or Precincts. The Names of the Pariſhes on the South Side, are *Port-Royal*, *St. Katharine's*, *St. John's*, *St. Andrew's*, *St. David's*, *St. Thomas*, *Clarendon*. On the North Side are, *St. Mary's*, *St. Anne's*, and *St. James's*. On the Eaſt Side, is *St. Elizabeth*, and two Pariſhes more near adjoining to it. Diviſion

This Iſle abounds with many excellent Commodities; as Sugars, which are ſo good, that they out ſell thoſe that are made in *Barbadoes*. Cocoa, whereof we make Chocolate, is the moſt beneficial and ſtaple Commodity of the Iſland. Indico, which the Iſle produces in great Abundance, is here very good. Cotton is another of their Products, which is very fine. Tobacco, which is here indifferent good. Tortoiſe Shells, which are in ſo much Eſteem with us in *England*. Hides, great Quantities whereof have been yearly made there. Woods for the Uſe of Dyers, whereof there are great Variety, as Fuſtick, Red Wood, &c. Here is likewiſe Cedar, Mahogony, Braſiletto, Lignum Vitæ, Ebony, Granadilla, and divers other excellent, ſweet-ſmelling, and curious Woods. Salt is another of the Products of this Iſland, which might be made here in great Quantities. But, at preſent, they make little more than what is ſpent in the Iſland. Ginger grows better there, than it doth in many of the *Caribee* Iſlands. Cod Pepper likewiſe, a Product

Spice

Spice very much used in all the *West Indies*. Piemento, or Spice which is better known by the Name of *Jamaica-Pepper*, very aromatical, and of a curious Flavour. Drugs, which this Island produces in great Abundance, as Guaiacum, China-Roots, Sarsaparilla, Cassia-Fistula, Tamarinds, Vinello's, and Achiots or Anetto. Gums and Roots, as Aloes, Benjamin, and the like: And there is likewise Cypress, Contrayerva, Adjunctum nigrum, Cucumis Agrestis, Sumach, Acacia, Mistletoe, with many Drugs, Balsams, and Gums, whose Names and Virtues are not known or remembered. Cochineal is likewise produced, by a Plant that grows in this Isle. These, and the like Commodities, are the Product of this Island, which the *long ish* have improved to that Degree, that it is become one of the best and richest Plantations they ever were Masters of.

Cattle. There is in this Island a greater Plenty of Cattle, than in most of the *English* Plantations in *America*. Horses much abound there. Their Cows are very large and numerous. Asinegroes and Mules, both wild and tame, are in great Abundance. Their Sheep are very large and tall, the flesh whereof is very good, but the Wooll long, hairy, and little worth. They have great Plenty of Goats, which thrive and increase there exceedingly. Hogs they have likewise in great Plenty, as well wild in the Mountains, as tame in the Plantations. They have also Plenty of Rabbits; but no Hare nor Deer in all the Island.

Fish. *Jamaica* very much abounds with Variety of excellent Fish, the great Abundance whereof very much contributes to the feeding of the Inhabitants, and others who frequent the Island. 'Tis true indeed, they have none of those common to us, but such vast Variety of those appropriated to the *Indies*, that it would be too tedious to repeat their Names, where they are known or remembered. The principal Sort is the Tortoise. There are in *Jamaica* great Store of tame Hens, Turkeys, some Geese and Ducks, but of wild Fowl such Plenty, that it is almost incredible, viz. Ducks, Teal, Wigeon, Geese, Turkeys, Piggeons, *Guinea* Hens, Plover, Flemingo's, Snipes, Parrots, Paraquets, with Abundance more, whose Names are scarcely known. There

Animals and Vegetables. are here very few obnoxious Beasts, and scarce any venomous Things, either Animal or Vegetable. The most considerable of all the obnoxious Creatures, is the Alligator. There are likewise the Manchonele, a Kind of Crab, common to all the *Caribee* Islands; and Snakes and Guiana's; but they have no poisonous Quality observed in them. There are also Muskettoes, and Merry-wings.

The Dropsy, Fevers, and Agues, are the Maladies most incident to the Inhabitants, which are generally procured by Surfeits, Slothfulness, or excessive Drinking; and although they are found to be more acute there, than with us, yet they seldom prove mortal. The Gardens adjoining to

Gardens. the Planter's Houses, are (besides great Variety of curious and delightful Flowers, and wholsome Medicinal Herbs proper to the Island,) sufficiently stored with all Manner of Summer Garden Herbs and Roots common to us in *England*; as Peas, Beans, Cabbages, Carrots, Turnips, Radishes, Onions, Lettuce, Parsley, Collyflowers, Cucumbers, Melons, Parsley, and other Pot-herbs.

Laws. The Laws of *Jamaica* are, as near as the different Circumstances of the Places will admit, accommodated to those of *England*; and they have their several Courts, Magistrates, and Officers, for executing their Laws, hearing and determining all Causes and Controversies between Party and Party.

Columbus, having in the Year 1492, discovered [illegible] *Hispaniola* and *Cuba*, soon after returned [illegible] *Spain*, to provide himself with Conveniencies for a second Voyage; which he understood [illegible] soon as all Things were ready: And in this Voyage endeavouring to sail round *Cuba*, he discovered the Island of *Jamaica*; where he made some short Stay, and gave it the Name of *St. Jago*. In his third Voyage, he was shipwrecked on this Coast, and driven to great Extremity. But having, after two Months lying in a deplorable Condition, obtained the good Opinion of the Natives, he landed, and finding the Ground fertile, he resolved to fall to planting: In order whereunto, the Town called *Metilla*, was presently begun by the *Spaniards*; but before it was far advanced, they deserted it again, and settled ten Leagues further West; where they met with a better Bay, whereupon they gave the Name of *St. Anne's*. Near this Place they built a handsome Town called *Seville*, which hath been already mentioned. But finding that the South Side was more fruitful and pleasant, about the Year 1509, the *Spaniards* forsook this likewise, and built *St. Jago*; which they enjoyed without any Molestation, till it was about 1638 surprised and taken by one *Jackson*, with a Fleet of *English* Privateers: But having no Design but Pillage, when he had plundered the Town, he surrendered it up again to the *Spaniards* for a thousand Beavers. But more fatal to the *Spaniards* was the next Attempt made on this Island; for *Cromwel*, having made Peace with the *Hollanders*, found himself at Leisure to try his Fortune in the *Indies*, and make his Name terrible in those remoter Parts of the Earth. In order whereunto, having got ready a great Fleet, he sent it under *Penn* and *Venables*. Which having touch'd at *Barbadoes*, sail'd directly towards *Hispaniola*, and had certainly surprised *Domingo*, and consequently the whole Island, had not some strange Councils of his own, ruined the whole Design: For so terrified were the *Spaniards* at the sudden Approach of this mighty Fleet, that they forsook the Town, and left it to those new Invaders: But seeing *Venables* land his Forces at twelve Leagues to the westward of it, they resumed their Courage, and betook themselves again to the Defence of it. The *English*, finding no Opposition at their landing, began in their own Thoughts to share the golden Mines among themselves, which they had peradventure effected, had not *Venables*'s covetous Humour, by forbidding the Soldiers to meddle with any of that rich Booty, together with their tedious and disconsolate March, so damped their Spirits, that they became an easy Prey to the *Spaniards*, who, taking them at that Advantage, destroyed them without Resistance. Having thus frustrated their Expectations, they resolved however not to lose the whole Voyage, and therefore next directed their Course to *Jamaica*. Upon the [illegible] Landing of the *English* Army, the Inhabitants of *St. Jago* forsook the Town, and betook themselves to the Mountains; but after divers Skirmishes and Surprisals on both Sides, several of the most considerable among them got into *Cuba*, but were soon after commanded back again by the Viceroy, with Promises of a speedy Supply. The Viceroy's Promise was long before it was performed; and when the Succour came, it was but five hundred Men, who fortified themselves at a Place called *St. Chereas*, expecting to receive more Recruits. But the *English* marched immediately against them, and defeated them, and so they did about thirty Companies of *Spanish* Soldiers that arrived soon after; which made the *Spaniards* despair of ever regaining the Island. Whereupon the *English* began to form themselves into

into a Colony; ſome ſettling themſelves in Plantations, and others venturing to Sea as Privateers; in which they proved ſo very ſucceſsful, that *Jamaica* began to be much talked of, and had in great Eſteem in *England*, and ſo, by little and little, it came to its preſent Potency.

Barbadoes. *Barbadoes*, the moſt conſiderable Colony the *Engliſh* enjoy amongſt the Iſles called *Caribees*, lies in thirteen Degrees twenty Minutes Northern Latitude; and though it is not above eight Leagues in Length, and five in Breadth, yet it is a Place of great Strength: For beſides its being naturally ſtrong, the Inhabitants are able to bid Defiance to the ſtouteſt Enemy. It was diſcovered for us in the Reign of King *James* the Firſt, by Sir *William Curteen*, who returning homewards from *Pernambuc* in *Brazil*, was driven by a Storm upon this Iſle, which he found ſo overgrown with Woods, that they could find no Ground fit to inhabit, nor any Beaſts but Swine, which the *Portugueſe* having formerly put on Shore here, had multiplied abundantly, the Fruits and Roots that grew there ſerving them for Food. Having made this Diſcovery, he gave notice thereof to his Friends in *England*; from whence divers Ships were diſpatched thither, who, having about the Year 1627, increaſed the Number of its Inhabitants, and Tobacco, Indico, Cotton-wooll, Fuſtick-wood, and the like, beginning to grow there, and afford great Increaſe, the Iſland began to gain Repute, and invited divers Ships to trade with them, exchanging divers Sorts of working Tools, together with Cloth, Shirts, Drawers, Hoſe, Shoes, Hats, Servants, for Tobacco, and other Things which the Iſland produced. After which, they grew wonderfully, both in Number and Wealth; eſpecially when their Sugar-Canes were grown, and they had learned the Art of making Sugar.

Temperature. This Iſle is very hot, eſpecially for eight Months, and would be more inſupportable, were it not for the cool Breezes, which riſe with the Sun, and blow freſher as the Sun mounteth higher. And theſe Breezes blow always from the North-Eaſt, except in the Time of the Turnado, and then, for an Hour or two, it chops into the South; but after returns to the ſame Point again. And it is obſerved, that although the People ſweat much, yet they find not that Faintneſs as with us in *England* in *July* and *Auguſt*; neither are they ſo thirſty, unleſs over-heated by Excels of Labour, or drinking of ſtrong Liquors. The Iſle is not over-plentifully watered with freſh Springs, there being but one Lake, which runs not far into the Land; yet the Inhabitants are not deſtitute of Water, for the Country lying low and level, there are ſeveral Pools or Ponds; and beſides they are ſupplied with Rain Water, by having Wells and Ciſterns in their Houſes. Here is alſo a River, which the Inhabitants call *Tuglo-River*, from the Top of whoſe Water is gathered an Oil, which ſerveth them to burn in their Lamps. This Iſle is exceeding fertile, bearing Crops all the Year long, and its Trees being always clothed in their Summer Livery. The two principal Seaſons of the Year for planting, are in *May* and *November*: But the Sugar Canes are planted all the Year round.

Waters. Fertility.

Commodities. The Commodities this Iſland produceth, are Sugars, Indico, Cotton-Wooll, Ginger, Logwood, Fuſtick, and Lignum Vitæ, in great Abundance: And in Exchange of thoſe Commodities, they take ſuch as are neceſſary for the Uſe of Man, as well for the Back and Belly, as for their Houſes and Plantations; with many of which they are ſupplied from *New-England*, *Virginia*, and the *Bermudas*; together with Servants and Slaves; with Horſes, Camels, Aſſinegroes, Cattle, ſalted Fleſh, and Fiſh of ſeveral Sorts; alſo Butter and Cheeſe. The Air, though hot, is very moiſt, which cauſeth all Iron Tools to ruſt; ſo that without conſtant Uſage, they will ſoon become eaten up. Air.

Here are Abundance of Fruits of all Sorts; as Dates, Oranges ſweet and ſharp, Pomegranates, Citrons, Limes, Lemons, Macows, Grapes, Juniper Apples, Papayers, Momins, Mombains, Acajous, Icacos, Cherries, Raiſins, *Indian* Figs, Cocoas, Plantains, Bononoes, Guavars, Prickle-Apples, Prickle-Pears, Cuſtard-Apples, Melons both Land and Water, and Pine-Apples. Here are great Store of Fiſh in the Sea, as Snappers, Crabs, Lobſters, Terbums, Mackarels, Mullets, Cavalloes, Parrot-Fiſh, Conyfiſh, and green Turtles; with ſeveral other Sorts appropriated to this and the reſt of the *Caribee Iſles*; but the Rivulets or Ponds have few or no Fiſh in them. Here are no Beaſts but what are tame, and brought them; as Camels, Horſes, Aſſinegroes, Oxen, Bulls, Cows, Sheep, Goats, and Hogs. Here grow divers Sorts of *Engliſh* Herbs and Roots; as Roſemary, Lavender, Lavender-Cotton, Marjoram, Winter-Savoury, Thyme, Parſley, Tanſey, Sage, Purſlan, &c. And for Roots, Cabbages, Coleworts, Colliflowers, Turnips, Potatoes, Onions, Garlick, Radiſhes, Lettice, Taragon, Marigolds, &c. Here are ſeveral Sorts of Fowls, as Turkeys, Hens, *Muſcovy* Ducks, Pigeons, Turtle-Doves, &c. And for ſmall Birds great Variety, as Thruſhes, Blackbirds, &c. Here are ſeveral Animals and Inſects, as Snakes a Yard and a half long, Scorpions as big as Rats, but no Way hurtful; Lizards, which are exceeding harmleſs; Muſketoes, Cockroches, and Merriwings, which are very troubleſome in the Night in ſtinging; alſo there are Land-Crabs, which are found good to eat. Here are alſo great Variety of Trees, fit for ſeveral Uſes; as the Locuſt, Maſtick, Red-Wood, the Iron-wood-tree, and Cedar, which are fit for Building. Alſo the Caſſia Fiſtula, Coloquintida, Tamarind, Caſſavy, of which is made their Bread; the Poiſon-Tree, and the Phyſick-Nut. Alſo here are the Calibaſh, the Mangraſs-tree, the Roucou, of whoſe Bark is made Ropes; as alſo Flax, the Lignum Vitæ, the Palmetto, with ſeveral others. In this Iſland are likewiſe divers Caves, ſome of which are very deep, and large enough to hold five hundred Men; and theſe Caves are often the Sanctuary of ſuch Negro Slaves that run away. Fruit. Fiſh. Cattle. Herbs. Fowls. Animals. Trees.

Drink. They have a Drink called *Mobby*, made of Potatoes ſoaked in Water; another named *Prino*, made of Caſſavy Root and Water, which, tho' it is not ſo pleaſant, yet is reckoned much better than the other. They likewiſe drink Crippo, Kill-Devil, Punch, Plumb-drink, Plantain-drink, a ſtrong Drink made of the Skimming of Sugar; Beveridge made of Spring-water, Sugar, and the Juice of Oranges; and Wine of Pines, which is only made of the Juice of the Fruit, which is the beſt of all their Liquors. Their Meat is generally Hogs-Fleſh, ſalted Fleſh or Fiſh. When any of their Cattle die by any Diſtemper, or by Accident, it is given to the Negroes; but they are commonly contented with Potatoes; Loblolly, made of Maiz mixed with Water; Caſſader-Bread, common in all the *Indies*; Bonatill, and ſuch like Food that the Plantation affords; as, Pompions, Plantains, Sugar-Canes, &c. They have here Turkeys, Pullets, *Muſcovy* Ducks, Turtle-Doves, Pigeons, and Rabbits, with Fiſh of divers Kinds. But as for the Maſter-Planters, Merchants Factors, and Strangers, their Fare is far otherwiſe, having Cuſtards, Cheeſe-cakes, Tarts;

Tanſies; alſo Sturgeon, Anchovies, Cavear, Botardo, Neats Tongues; beſides Poultry, Fiſh, Fowl, Mutton, Beef, Kid, Pork, Beans, Peaſe, ſeveral Roots, and other good Diſhes. And beſides the ſeveral Sorts of Liquors already named, Wines, Strong-Waters, Brandy, and *Engliſh* Beer.

The Diviſion of the Iſland.

This Iſland may be divided into Maſters, Servants, and Slaves. The Maſters live in all Affluance of Pleaſure and Delight. The Apparel they allow their Servants yearly is but mean, and not in great Plenty: But for themſelves, they are exceeding profuſe and coſtly. The Lodging of the Slaves is worſt of all; for having laboured all the Day in ſo hot a Country, at Night they muſt be content to lie hard, on nothing but a Board, without any Coverlet, in their Huts: But Chriſtian Servants are ſomething better treated, being allowed Hammocks. Theſe Servants, after five Years, become Freemen of the Iſland, and then employ their Time as may be moſt to their Advantage: But the Negro-Slaves and their Children being in Bondage for ever, are preſerved with greater Care, and uſed with much Severity.

Chief Towns.

The chief Towns of this Iſle are, 1. *St. Michael's*, formerly called the *Bridge-Town*, ſituate at the Bottom of *Carliſle-Bay*, in the Southern Part of the Iſle. The Bay is very capacious, deep, and ſecure for Ships, being large enough to entertain 500 Veſſels at one Time. The Town is long, containing ſeveral Streets, and graced with abundance of well-built Houſes. It is very populous, being the Reſidence of the Governor, or his Deputy, the Place of Judicature, and the Scale of Trade, where moſt of the Merchants and Factors have their Store-Houſes. The Town is ill-ſeated, the Ground being lower than the Banks of the Sea; by which means the Spring-Tides flow over it; and there remaining, make a kind of a Bog, which occaſions it to be more unhealthful than the other Parts of the Iſle. This Town, for its Defence, hath two ſtrong Forts oppoſite to each other, with a Platform in the Midſt, which alſo commands the Road. 2. *Little Briſtol*, formerly *Speight's-Bay*, ſituate about four Leagues Leeward from *St. Michael's*, hath a commodious Road for Ships. 3. *St. James's*, formerly called *The Hall*, ſeated not far from *Briſtol*, hath the Accommodation of a good Road for Ships, and is a Place of a conſiderable Trade. 4. *Charles-Town*, ſeated Windward of *St. Michael's* about two Leagues, an Oyſter-Bay. This Town hath weekly Markets. The other Places of note along the Sea-Coaſt, are as followeth, *viz. Fowl-Bay*, *Auguſtin's-Bay*, *Maxwell's-Bay*, *Black-Rock*, *The Hole*, *Spike's-Bay*, *Baliſe's-Bay*, *Long-Bay*, *Clerk's-Bay*, and *Conſtance-Bay*.

Government

The Government is by Laws agreeable to thoſe in *England*, for which they have Courts of Judicature, Juſtices of Peace, Conſtables, Churchwardens, and the like. And for the Adminiſtration of Juſtice, here are yearly five Seſſions. It is divided into eleven Precincts, wherein are fourteen Churches and Chapels; the whole ſo filled with Houſes, that it may almoſt ſeem one great Town. There is a Fiſh called a Rock-Fiſh taken near this Iſland, which is red, intermixed with ſeveral other Colours, very delightful to the Eye: And a great Fly, called by the *Indians*, *Cucuyes*, which gives a great Light in the Night.

We ſhall be leſs particular in moſt of the other *Caribee Iſlands*, they not being of ſo much Account, and but little different in their Product from the laſt mentioned. The firſt is *St. Chriſtopher's*, ſo named from *Chriſtopher Columbus*, the firſt Diſcoverer thereof. It is ſituated in the Latitude of ſeventeen Degrees and twenty-five Minutes on this Side of the Line; in Circuit about ſeventy-five Miles: The Land lies high in the Midſt, by reaſon of ſome very high Mountains, from which ſpring ſeveral Rivers, which oftentimes, by reaſon of the Rains falling from the Mountains, are overflown to the Detriment of the Inhabitants. The Soil, being light and ſandy, is apt to produce all Sorts of the Country Fruits, Proviſion, and Commodities, as Sugar, Tobacco, Cotton, Ginger, *&c.* This Iſle hath dreadful Rocks, and Springs of ſulphureous Water, with horrid Precipices and thick Woods. There is on the Sea-ſide a Salt-Pit, called *Guldeſac*; and not far from the Salt-Pit there is a ſmall Iſthmus of Land, which reacheth within a Mile and a half of the Iſland of *Nevis*. The Situation is exceeding delightful, for it is divided into ſeveral Stages, from the uppermoſt whereof a Man may take a Proſpect of all the Plantations and Gardens, which gently deſcend to the Sea-ſide; and that which makes the Proſpect more delectable, are the fair Houſes covered with glazed Slate.

St. Chriſtopher's Situation

Diviſion.

The whole Iſland is divided into four Cantons; two whereof are inhabited by the *Engliſh*, and two by the *French*; but ſo ſeparated, that People cannot go from one Quarter to another, without paſſing over the Lands of one of the two Nations. The *Engliſh* have more little Rivers in their Diviſion; the *French* more of the plain Country fit for Tillage. The *Engliſh* exceed the *French* in Number, but the *French* have four Forts; of which one hath regular Works like a Citadel: That of moſt note commands the Haven, and is called *Baſſe-Terre*. The *Engliſh* have only two, one commanding the great Haven, and the other a Deſcent not far from *Pointe de Sable*. The *Engliſh* have erected here ſeveral Churches, which are well furniſhed; one of them is at *Sandy-Point*, one at *Palm-Tree*, another near the *Great Road*, and two at the Inlet of *Cayoune*. They have alſo many fair Structures.

Planting

The *French* and *Engliſh* Colonies had their Beginning at the ſame Time; for in the Year 1625, Monſieur *Deſnambuck*, a *French*, and Sir *Thomas Warner*, and *Engliſh* Gentleman, jointly took Poſſeſſion of *St. Chriſtopher's* on the ſame Day, in the Names of the Kings of *Great Britain* and *France*, their Maſters, that ſo they might have a Place of ſafe Retreat, and a good Haven for the Ships of both Nations bound for *America*.

These Gentlemen ſuſpecting ſome private Intelligence between the *Indians* and *Spaniards*, for deſtroying all the *Engliſh* and *French* in their Abſence, they in one Night rid their Hands of the moſt Factious of that Nation, and ſoon after forced all the reſt to retire to ſome other Iſlands. After this, they returned home, where their Conqueſt and Proceeding being approved of by their Maſters, they returned with Recruits of Men, in the Quality of Lieutenants under the Kings of *Great-Britain* and *France*.

Baſſe Terre

The *French*, beſides their Habitations diſperſed up and down in their Quarters, have at *Baſſe-Terre* a Town of a good Bigneſs, whoſe Houſes are well built, of Brick, Freeſtone, and Timber, where the Merchants have their Store-Houſes, and it is well inhabited by Tradeſmen. Here is a large Church, as alſo a Publick-Hall, for the Adminiſtration of Juſtice. Here is alſo a fair Hoſpital, for ſuch People as cannot get cured at their Houſes: And a ſtately Caſtle, pleaſantly ſeated at the Foot of a Mountain, not far from the Sea, having ſpacious Courts, with delightful Walks and Gardens.

In 1629, a powerful Fleet from *Spain*, under Don *Frederick de Toledo*, put the Inhabitants of this Iſland into great Conſternation. The *French* actually

ally embark'd to find a new Settlement, and the *Engliſh* were about to do the ſame, when the Storm blew over on the Admiral's Departure. After this the *French* returned; and the *Engliſh* Colony, by conſtant Supplies from *London*, grew very powerful, ſending new Plantations from hence to *Barbuda*, *Montſerrat*, *Antegoa*, and *Barbadoes*, which are all grown very famous for the Commodities they are furniſhed with, as well as this Iſland; the chief Trade of them all bring Sugar, Tobacco, Cotton, Ginger, with ſeveral other Sorts of Fruits and Proviſions. The Sovereignty of this Iſland was yielded wholly to the *Engliſh* at the Concluſion of the laſt War, many of the *French* having been expelled during the Times of Hoſtility. The moſt remarkable Animals here are the Roquet, the Eagle of *Orinna*, the Craw-fowl, and the Humming-bird, which latter, tho' no bigger than a Bee, is admirable for Variety of beautiful Feathers.

Commodities.

Animals

The Iſland of *Nevis*, or *Mevis*, lieth not far from *St. Chriſtopher's*, in the Latitude of ſeventeen Degrees and nineteen Minutes North. It is not above eighteen Miles in Circuit; and in the midſt of the Iſle there is one only Mountain, which is of a very great Height, but of an eaſy Acceſs, and clothed with Trees up to the very Top; about which Mountain are the Plantations, which reach to the Sea ſhore. Here are divers Springs of freſh Water, whereof ſome are ſtrong enough to make their way into the Sea: And one Spring is of a hot and mineral Water; not far from whoſe Head are Baths made, found very beneficial for ſeveral Diſeaſes.

Nevis. *Its Situation.* *Its Extent.*

The *Engliſh* planted themſelves in this Iſle in 1628, and are ſtill Poſſeſſors thereof. They drive a very handſome Trade for ſuch Things as they have Occaſion for, by exchanging ſuch Commodities as the Iſle produceth, as Sugar, Cotton, Ginger, Tobacco, *&c.*

Inhabitants. *Trade.*

Of all the *Caribee-Iſlands*, none is better governed than this; Juſtice being adminiſter'd with Impartiality, by a Council of the moſt eminent and antient Inhabitants. For the Service of God there are ſeveral Churches erected; and, for its further Security, it hath a Fort, whereon are mounted ſeveral great Guns, that command at a great Diſtance. The Iſle is indifferent fruitful, and hath great Store of Deer, with ſeveral other Sorts of Game. This, as the reſt of the *Caribee-Iſlands*, is troubled with Muſketoes, Chigoes, and Murigoins. There are Lizards five Foot in Length, and a Foot about; their Skins of divers Colours, according to the different Soil they are bred in. The Annelis is another Creature very common in all the Plantations, about the Bigneſs of a Lizard, but the Head longer, and the Skin yellowiſh. A Land-Pike is another ſtrange Reptile, ſo called from its likeneſs to that Fiſh. It hath four Feet, which are ſo weak, that they only crawl on the Ground, and wind their Bodies like Pikes newly taken out of the Water. Some of the longeſt are about fifteen Inches, and proportionably big. The Flying-Tyger here is very obſervable, whoſe Body is chequered with Spots of ſeveral Colours, as the Tyger's is. It is about the Bigneſs of an horned Beetle; the Head ſharp, with two great Eyes, and the Mouth armed with two hard and ſharp Hooks. The Horn-Fly is another Inſect, which hath two Snouts like an Elephant, one turning upwards, and the other down, about three Inches long. There is in this Iſland an Inſect ſomewhat like a Snail, called a Soldier, which have no Shells proper to themſelves, but get Shelter in ſuch Shells as they find moſt convenient. There is likewiſe a monſtrous Spider, which, when ſhe ſpreads her Legs, is ſo large, that ſhe takes up above the Breadth of a Man's Hand. There is alſo a very lovely Animal, called a Fly-catcher. It hath four Legs, and is of a very ſmall Size; ſome of them ſeeming to be covered with Gold or Silver Brocade. He generally lies down where he expects the Fly to come, keeping his Eye always fixed thereon. If one come near him, and make never ſo great a Noiſe, it will not diſturb him; and at laſt he ſprings direct on his Prey, very rarely miſſing it. It may be counted a Sort of Camelion, partaking of the Colour of thoſe Things on which he makes his Reſidence. The Palm-worm is remarkable for its infinite Number of Feet, which are like Briſtles under his Body, and help him to creep with incredible Swiftneſs.

Government.

Churches.

Its Fertile Annals.

The Iſland of *Antegoa* is ſeated in the Latitude of ſixteen Degrees, and eleven Minutes. It is in Length about ſix or ſeven Leagues, and of the ſame Breadth in ſeveral Places. The Acceſs is very dangerous for Shipping, by reaſon of the Rocks which encompaſs it. It was conceived heretofore, that *Antegoa* was not to be inhabited, upon Preſumption there was no freſh Water in it. But the *Engliſh* Inhabitants have made ſeveral Ponds and Ciſterns, for the preſerving of Rain-water. Beſides the Commodities of Sugar, Indico, Ginger, and Tobacco, this Iſle abounds with Fiſh of all Sorts, amongſt which the Shark-Fiſh, well known to our Sailors, deſerves to be mentioned. There is another Sea-Monſter, called the Becune, in Shape like a Pike, being about ſeven or eight Foot long: He lives by Prey, and furiouſly faſtens on the Men he perceives in the Water. Another Fiſh found about theſe Iſlands, is called the Sea-Urchin, or Hedge-Hog. It is as round as a Ball, and full of exceeding ſharp Prickles. There is great Plenty of moſt Sorts of Wild Fowl, and no Want of Veniſon and Tame Cattle. The Sea-Parrots are very admirable, having extraordinary beautiful Eyes, the Ball as clear as Chriſtal, incloſed within a Circle as green as an Emerald, of which Colour are the Scales on their Backs. They are excellent Fiſh to eat, and ſome of them weigh upward of twenty Pounds. The Dorado, Sea Bream, or Amber-Fiſh, is alſo common in theſe Parts; ſo called, becauſe in the Water the Head ſeems to be of a Green gilt, and the reſt of the Body as yellow as Gold. He is as good Meat as a Trout or Salmon.

Antegoa. *Its Situation.* *Extent.*

Animals.

Among the Birds, ſome count the Canades the moſt beautiful Bird in the World, being under the Belly and Wings of a waving *Aurora* Colour; the Back and one half of the Wings of a very bright Sky-Colour; the Tail and great Feathers mixed with a ſparkling Carnation, diverſified with a Sky. Upon the Back it is Graſs-green, with ſhining black. But the moſt beautiful Part is the Head, covered with a Kind of Murrey Down, checkered with green, yellow, and a pale blew, which reaches waving down to his Back. It hath upon the Head a Tuft, or Cap of Feathers, of a Vermillion red and ſparkling. It is about the Bigneſs of a Pheaſant. The Flamet is a beautiful Bird, about the Bigneſs of a wild Goſe: His Beak is like a Spoon, his Legs and Neck very long, ſo that his Body is three Foot from the Ground.

The Iſland of *St. Vincent* lies in the Latitude of ſixteen Degrees North, and is about twenty-four Miles in Length, and eighteen in Breadth. In it are ſeveral high Mountains, having between them exceeding fruitful Plains, yielding good Store of Sugar Canes, which grow naturally without planting: It is well watered with Rivers, and hath ſeveral convenient Harbours and Bays for Shipping. The *Engliſh* have here ſome Settlements, but are not very powerful.

St. Vincent. *Situation.*

The Iſland of *Dominica* is ſeated in the Latitude

St. Dom. *of the*

Situation. of fifteen Degrees thirty Minutes, and about twelve Leagues in Length, and eight in Breadth. On the Weſt Side is a very convenient Harbour for Ships. It is very mountainous in the Midſt, which encompaſſes an inacceſſible Bottom, where, from the Tops of certain Rocks, may be ſeen an infinite Number of Vipers, and other venemous and dreadful Creatures, whom none dares come near. Yet there are many fertile Villages, producing ſeveral Commodities, but chiefly Tobacco. The Natives are very populous in it, and have a long Time entertained thoſe who come to viſit them, with a Story of a monſtrous Serpent that frequented that Bottom. They are generally very friendly with the *French*; but to the *Engliſh* they are ſaid to have a great Averſion, conceived, as it is reported, upon this Occaſion: Some *Engliſhmen*, under the Flags of other Nations, having, by little Gifts, gotten divers of them on Board of their Ships, and made them merry with *Aqua Vitæ*, which they love extremely, they ſuddenly hoiſted up Sail, and carried away thoſe poor innocent People, who expected no ſuch Treachery. And although the *Engliſh* have endeavoured to ſatisfy them, yet ſo implacable is their Temper, that they cannot be perſuaded to forgive the Injury.

Montſerrat *Montſerrat* is of a ſmall Extent, being not above ten Miles long, and nine broad. It was ſo called by the *Spaniards*, at their Diſcovery of it, from a Mountain therein, which reſembles that Situation. of *Montſerrat*, near *Barcelona*, in *Spain*. It is ſituated in the Latitude of ſeventeen Degrees on this Side of the Line. 'Tis very much inclined to Mountains, which for the moſt Part are very well clothed with Cedar and other uſeful Trees; the Valleys and Plains being likewiſe very pleaſant and fruitful. 'Tis chiefly inhabited by *Iriſh*, Inhabitants. intermixed with ſome *Engliſh*. There is in it a Church of a delightful Structure, built by the liberal Contributions of the Governor and Inhabitants.

Fiſh. There is ſometimes taken upon the Coaſt of this Iſland, a Monſter about four Foot long, and proportionable in Bulk, having on its Head a great Bunch like an Hedgehog; his Skin hard and rough, of a black Colour; his Head flat, having on the upper Part of it many little Riſings, and among them two ſmall black Eyes: His Mouth is very wide, his Teeth ſharp, and two of them crooked like a Boar's; he has two Finns, and a broad, forked Tail; all which renders him of ſo terrible a Look, that they call him the Sea Devil. He hath two little Horns, growing above the Eyes, and turning towards his Back like a Ram's. The Sea-Unicorn is no leſs wonderful; ſome of them being eighteen Foot long, of a Vermillion Colour; the Body covered with blue Scales, about the Bigneſs of a Crown piece. It hath ſix large Fins, like the Ends of Galley Oars; a Head like a Horſe, and a ſtrait Horn, about nine Foot long, iſſuing out of the Forepart of it. Upon this Coaſt likewiſe are often ſeen great Numbers of Fiſhes, which fly fifteen or twenty Foot above Water, and near an hundred Paces in Length, but no more, in regard their Wings are dried by the Sun. They are ſomewhat like Herrings, but of a rounder Head, and broader Back. Their Wings are like a Bat's. The Sword-Fiſh is alſo worth obſerving. It has at the End of the upper Jaw a defenſive Weapon, about the Breadth of a great broad Sword, which hath ſharp hard Teeth on both Sides. Several of theſe Swords are five Foot long, and about ſix Inches broad towards the lower End.

The Iſle of *Anguilla*, or *Snake-Iſland*, ſo called *Anguilla.* from its Shape, is ſeated in the Latitude of eighSituation. teen Degrees and twenty-one Minutes on this Side the Equinoctial. It is a long Tract of Land, and extendeth itſelf in Length about ten Leagues, and in Breadth about three. The Inhabitants are Inhabi*Engliſh*: They plant Tobacco, which is highly tants. eſteemed by thoſe who are good Judges in that Commodity. The Animals here, both Land and Water, are much the ſame as in the other Iſlands already deſcribed, and in the neighbouring Continent.

Barbuda is ſituated in about ſeventeen Degrees *Barbuda.* of Northern Latitude; of about fifteen Miles in Situation. Length, and of no great Account to the *Engliſh*, who are the Poſſeſſors of it: Yet it is found to be of a fertile Soil, well ſtored with Cattle and Sheep, and might produce ſeveral good Commodities, were it well managed, to the Advantage of the Inhabitants.

The *Caribeans*, who inhabit theſe Iſlands, are Natives of the Caribee Iſlands. generally thought to have been formerly driven by their Enemies from the Continent of *America*, and forced to take Shelter here, having amongſt themſelves various and very different Opinions, Cuſtoms, and Ceremonies. Such as live near, and converſe with the Chriſtians, have relinquiſhed many of their antient barbarous Uſages, and have very much civilized their Converſations. They are handſome, well-proportioned, and of a ſmiling Countenance; their Eyes and Hair are black; their Foreheads and Noſes flat, being cruſhed down by their Mothers, at the Time of their Birth, and all the Time of their ſucking, becauſe they imagine that Flatneſs to be a Kind of Beauty. Their Feet are large and thick, and exceeding hard. You ſhall not ſee any of them blind, lame, crook-backed, bald, or having any other natural Infirmity. Such Scars and Deformities as they get in the Wars, they glory in, as evident Demonſtrations of their Valour. Their Hair is ſtrait and long, the Women attributing the higheſt Excellency to that which exceeds in Blackneſs. Both Men and Women tie up their Hair behind, which they bind ſo hard, that it ſtands up upon their Heads like a Horn, but hanging looſe at the Top, it falls down again on each Side of their Heads. The Men, ſo ſoon as their Beards begin to grow, pluck them up by the Roots. Both Men and Women go naked, and they generally ſay, they came naked into the World, and it would be a Madneſs for them to hide the Bodies Nature has beſtowed upon them: Notwithſtanding which, they change the natural Colour of their Skins, by dying them with a red Compoſition. And many Times, to make themſelves appear the more gallant, they draw black Circles about their Eyes, with the Juice of Juniper-Apples. And when they would appear more gallant than ordinary, they put on a Crown of Feathers of different Colours, and hang Fiſh-Bones, or Toys, made of Gold, Silver, or Tin, in their Ears. Some of them make Holes through their Lips, or in the Space between their Noſtrils, wherein they hang Rings, Fiſh-Bones, or ſome ſuch Toys; and many of the better Sort wear Necklaces of Amber, Coral, Cryſtal, or ſome ſuch Kind of glittering Stuff.

There grow in theſe Iſlands (and particularly Fruits. in the laſt mentioned) great Store of excellent Fruits, *viz.* Oranges, Pomegranates, Citrons, Ratins, *Indian* Figs, and Cocoa Nuts. Beſides which, there are divers excellent Trees and Woods, as Brazil, Ebony, and the like. Caſſia, Cinamon, Cotton, Pepper, Tobacco, Indico, Ginger, Potatoes, Pine-Apples, and Sugar-Cane.

Canes, grow likewise there in great Plenty; and a certain sensitive Plant, esteemed one of the greatest Rarities in the World, which, as soon as touched with the Hand, falls down, and the Leaves run together, as if they were suddenly withered: But, so soon as the Hand is removed, and the Party gone, it presently rises up and flourisheth again.

Bermudas Islands. East of *Virginia* and *Carolina*, lie the Isles of *Bermudas*, (so called from *John Bermudas*, by whom they were first discovered;) or the *Summer-Islands*, as they are likewise sometimes called, from the Shipwreck which Sir *George Summers*, an *English* man, suffered upon that Coast. They are a great Multitude of Isles, being no less than four hundred in Number, as some affirm, that lie distant 1600 Leagues from *England*, from *Madera* 1000, from *Hispaniola* 400, and from *Carolina*, which is the nearest Land, about 300 Leagues.

St. George's. The biggest of these Isles is called *St. George's*, and is about five or six Leagues long, but in the broadest Place not a League broad. All the rest are much less. The whole Cluster do altogether form a Body much like a Crescent, and include several very good Ports, the chief whereof are those of the *Great Sound*, *Harrington's Inlet*, *Southampton*, and *Pagets*; which, with the Forts of *Dover* and *Warwick*, take their Names from the several Noblemen that have been concerned as Adventurers.

Fertility. The Earth in these Isles is exceeding fertile, yielding two Crops every Year, which they generally gather in about the Months of *July* and *December*. They have several Sorts of excellent Fruits, as Oranges, Dates, Mulberries, both white and red, (in the Trees whereof breed Abundance of Silkworms, which produce great Plenty of that Commodity) and Tobacco. There has been found some Pearl and Ambergrise. They have likewise there Plenty of Tortoise, their Flesh being counted very delicious. They have good Store of Hogs, and great Variety of Fowls and Birds; amongst which are Cranes, and a Sort of Sea Fowl, which breeds in Holes, like our Rabbits. And such is the Fruitfulness and delightful Verdure wherein these Isles always appear, that *Summers* seemed to take Pleasure in his Shipwreck, and, neglecting his Return for *England*, endeavoured, with the Assistance of Sir *Thomas Gates*, to settle a Plantation there. At their first coming ashore, they found themselves supplied by a vast Variety of Fowl, which were taken without Difficulty; no less than one thousand of one Kind, somewhat bigger than a Pigeon, being caught by them in two or three Hours Space. This Sort of Fowl lay speckled Eggs, as large as Hens, on the Sand; and this they do every Day, without being frighted, tho' Men sit down by them. The greatest Inconveniency that attends the Place, is their Want of fresh Water: There is none for their Occasions, but what is to be found in Wells or Pits, there being neither Fountain nor Stream in all these Isles. On all other Accounts, it is one of the most delightful Situations in the World.

Air. The Sky is almost continually serene and clear, and the Air so exceeding temperate and healthy, that it is rare to hear of a Man's dying of any other Distemper than that of Old Age; which has occasioned many to remove from *England* thither, barely for the Enjoyment of a long and healthful Life. However, when the Sky is at any Time darkened with Clouds, it thunders and lightens, and the Weather proves exceeding tempestuous, the Wind sometimes rather thundering than blowing from every Quarter, for forty-eight Hours together. The North and North-West Winds cause Winter in *December*, *January*, and *February*; which is however so very moderate, that young Birds and Fruits, and other Concomitants of the Spring, are seen there in those Months. The Isle of *St. George's*, to which the Name of *Bermudas* is more generally given, is situated in thirty-two Degrees, and thirty Minutes of North Latitude.

Beasts. No venomous Beasts are to be found in this Island, neither will they live, if brought thither. Their Spiders are no Way poisonous, but are of sundry and various Colours, and in hot Weather make their Webs so exceeding strong, that the small Birds are sometimes entangled and caught therein.

Trees. There grows in this Island a Sort of Cedar-Trees, which differ from all other in the World, in several Respects: The Wood whereof is very sweet and well scented.

Proprietors. The *English*, who settled themselves upon this Isle in the Year 1612, are the only Proprietors thereof, having established a powerful Colony there. The Island is exceeding strong, and defended with a kind of natural Fortification, being so fenced about with Rocks, that without Knowledge of the Passages, a Boat of ten Ton cannot be brought into the Haven; although, by the Assistance of a skilful Pilot, there is Entrance for Ships of the greatest Burden. And, besides the natural Strength of those Islands, the *English* have, since their settling there, added such artificial Helps, and so strongly fortified the Approaches, by Block-houses and Forts, as renders it impregnable.

In the Year 1616, four Years after the first settling there, Captain *Tucker* was sent over with a new Supply; whereupon they applied themselves to the planting of Corn, Tobacco, and other Commodities; so that, in about three Years, those Isles began to gain so much Repute in *England*, that the improving them became a publick Business, many Persons of Quality interesting themselves therein, as Adventurers. Captain *Butler* was afterwards dispatched thither with a new Supply of five hundred Men; and about that Time the Isle was divided into Tribes or Counties, and the whole reduced to settled Government, both in Church and State. After which, Things succeeded so well, that it has been ever since growing to greater Perfection.

CHAP. XXIX.

A Deſcription of the French *Dominions in* America, *known by the Names of* Canada, Florida, *&c. wherein the Juſtice of their Claim to thoſe Countries is particularly conſidered, and the Right of the* Engliſh, *&c. aſſerted.*

WE come now to the fourth Grand Diviſion of *America*, which we ſhall diſpatch in a ſingle Chapter, and that not very long; this Diviſion being more thinly planted, and conſequently leſs known, than the Parts we have already treated of. It is that which the *French* pretend is ſubject to them; and, according to their Maps, extends from the North Side of the Gulph of *Mexico* or *Florida*, to the North of *Canada*, that is, from the Latitude of twenty-eight to fifty-two Degrees and upwards of Northern Latitude; ſo that they would have us believe, their Territories extend near ſeventeen hundred Miles in Length from North to South, and are little leſs in Breadth from Eaſt to Weſt; for their Maps lay them down between the *Britiſh* Dominions on the Eaſt, and *New Mexico* on the Weſt, comprehending moſt Part of *Florida* and *Canada*, to which their Geographers have given the Name of *Louiſiana* and *New France*.

The Territories claim'd by *France*.

But *Florida* and *Canada*, may with much more Propriety be aſſigned to the *Spaniards* and the *Engliſh*, than to the *French*; for the *Spaniards* firſt diſcovered and made Settlements in *South Florida*, ſome of which they poſſeſs at this Day, as they do the entire Weſt Side of *Florida* and *Canada*: The *Engliſh*, on the other hand, have been long poſſeſſed of *Virginia* and *Carolina*, which were originally Part of *Florida*, and of ſeveral Places in *Canada*; while the *French* have only two or three little Settlements on the Gulph of *Florida* or *Mexico*, near the Mouth of the River *Miſſiſſippi*, to entitle them to *Florida*; and a Man may travel ſome hundreds of Miles, both in *Florida* and *Canada*, without meeting with a *French* Settlement, or even with a ſingle *Frenchman*. To ſay the Truth, very few of the *Indians* of *Florida* or *Canada* are yet ſubject to any *European* Power; and a very ſmall Part of their Country the Property of any Foreigner. The only juſt and legal Way of becoming Proprietors of any Part of either, is by Treaty with the Natives, and giving them what they eſteem a valuable Conſideration for it; as our Adventurers in *Georgia* actually do, for whatever they intend to plant or cultivate.

The *Spaniards* and *Engliſh* more Right to *Florida* than the *French*.

We are extremely weak, in aſſigning this fine Country to *France*, which lies on the Back of all the *Britiſh* Settlements; and that for no other Reaſon, than that the *French* have Aſſurance enough to lay Claim to it; eſpecially ſince this Claim, if it be allowed, muſt for ever exclude us from extending our Settlements to the Weſtward: It is hoped therefore, that our *Britiſh* Geographers will be commanded by their Superiors, to blot *Louiſiana* and *New France* out of their Maps, and reſtore the primitive Names of *Florida* and *Canada* to thoſe Countries; and that they ſhall not be ſuffered [illegible] to follow the *French* Geography, [illegible] that People a Colour for their Encroachments on the *Britiſh* Plantations.

The Map of that Country muſt be corrected.

We already looks upon the great Rivers of *Miſſiſſippi* and *St. Laurence* as her own, and will, no doubt, if ever it is in her Power, ſwallow up all thoſe Countries that border upon them, or which lie between the Mouths of thoſe two Rivers, in which Space lie moſt of the *Britiſh* Dominions on the Continent of *America*. Forty Years ago they had ſcarce any Footing in the Country they have denominated *Louiſiana*, and are not at this Day poſſeſſed of more of it than the County of *Middleſex* contains; though the whole Country they lay Claim to, is a fine Square of fifteen hundred Miles of a Side, the moſt temperate, fruitful, and moſt beautiful Spot of Earth upon the Face of the Globe; from whence it obtained its antient Name of *Florida*. If we ſuffer the encroaching *French* to eſtabliſh themſelves there, and drive us from this terreſtrial Paradiſe, when nothing is ſo eaſy as to prevent it, by uniting our Forces with the *Spaniards*; both Nations richly deſerve to enjoy the Fruits of their ſupine Negligence.

Canada, or *New France*, the Northern Part of the Territories claimed by the *French*, is a very large Country, not well diſcovered. Under this Name they comprehend not only the Coaſts of St. *Laurence*'s River, (which is the only Part of it that they have planted to any Purpoſe) but the vaſt Tracts that we have already mentioned under the Names of *New-Britain*, *New-Wales*, *New-Scotland*, and, in ſhort, the whole North of *America*, Iſlands and all, from about forty to upwards of ſixty Degrees of North Latitude: Which Country, taking it in this Extent, is bounded on the South and South-Eaſt, by the *Britiſh* Provinces of *New-England*, *New-York*, &c. and on all the other Sides by Parts unknown, though ſome of them are diſtinguiſhed by imaginary Names. The true Magnitude of this Country cannot therefore be given with any Probability. *Canada*.

The planted Parts of *Canada* were firſt diſcovered by the *French*, to whom they are ſtill ſubject, but can be of no conſiderable Advantage to them. All we know of the reſt, is, that the Natives are diſtributed into ſeveral Nations, under the Government of their Sagamo's or Princes, who are ſaid to be the eldeſt in their ſeveral Tribes. As to the Climate, it cannot but vary much in ſo large an Extent: But the whole muſt be ſomewhat colder than that of *New-England*. The Product, (we mean the negotiable Part of it) is chiefly Bevers, Mouſe Skins, Firs, Stock-fiſh, Whale-Oil, and a Shell-Fiſh called *Eſturgny*. It is a Country full of Woods, which are well repleniſhed with Stags, Rabbits, and other Beaſts. It has alſo Plenty of Fowls, and Fiſh of various Kinds. Natives. Product.

The great River of St. *Laurence* runs through the whole Country, from South-Weſt, to North Eaſt, where it falls into the Sea over-againſt *Newfoundland*. On this River the *French* have ſome Settlement, and a few Towns, the chief of which is *Quebec*. An unfortunate Attempt was made upon this Place in Queen *Anne*'s Time, by a Fleet under the Command of Sir *Hovenden Walker*, who publiſhed an Account of the Affair in his own Vindication. River. Quebec.

Vindication. The City lies in forty-seven Degrees twelve Minutes North Latitude: It is a Bishop's See, and divided into the upper and lower Town. Other Places here are *Tadoussac* and *Brest*, of neither of which we meet with any particular Description.

Louisiana or Florida

Louisiana, as the *French* call it, (but *Florida* as named by us and the *Spaniards*) is a very large and fruitful Country, that lies parallel with *Castile* in *Spain*. It is bounded on the North-East with *Virginia*; on the East by *Carolina* and *Georgia* (both formerly Parts of it) and the *Atlantic* Ocean; on the South, and some Part of the West, by the Gulph of *Mexico*; and on the direct West, and North-West, by *New Mexico* and Parts unknown. On the North they would unite it with *Canada*, but the Bounds of each are not ascertained, nor is any thing known of the Parts where they seem willing to place them. However, according to the best Maps, it extends from the twenty-fifth to about the fortieth Degree of North Latitude. The whole Length, from East to West, is about twelve hundred Miles, and the Breadth from North to South above six hundred.

Extent.

Discovery

It was first discovered by the *English*, under the Conduct of *Sebastian Cabot*, in the Year 1497, but afterwards more fully by the *Spaniards* in 1527. It is still, however, very imperfectly known, and contains few *European* Settlements.

Natives.

The Natives are in Possession of all the Inland Parts, where they live under the Jurisdiction of their Parcultes or Caciques. Their Customs, civil and religious, may be best judged of from what we have said of their Neighbours, in speaking of the Provinces that lie round them. We shall not repeat the Names which Geographers have given us of the several Provinces of *Florida* (to the Number of forty-three) because we look upon them to be chimerical; and if they are not so, they are the only Particulars we can know of many of these Subdivisions. As to the Climate, it is found to be exceeding temperate; the Air healthy; the Soil very rich and fertile; the Woods extraordinary well stored with Venison and Fowl, and all Sorts of excellent Fruits that are found in this Part of the World. In several Places they have rich Furs, and an immense Quantity of Pearls: It is also said to have several Mines of Silver and Gold.

Climate & Product.

River

The principal River of the whole County, is the great River *Mississippi*, whose Head to the Northward is not known, but which falls into the Gulph of *Mexico* in about thirty Degrees of North Latitude. What few Settlements the *French* have in *Florida*, are near the Mouth of this River, and a smaller one called *Mobile*, where their Maps present us with two or three Forts, but not one Town of any Consideration. The *Spaniards*, however, who inhabit the *Peninsula* on the South of our Colony of *Georgia*, have two or three Places of Note. The principal is *St. Augustine*, a City and Seaport, which was taken by the *English* in 1702, but soon after relinquished. Others mentioned by Geographers, are *St. Matthea* and *Vitaracho*.

Towns.

Islands.

The *French*, as well as the *English*, possess several of the Islands called *Caribees*; we shall just mention a few of them, as they lie in Order. 1. *St. Lucia*, North of *St. Vincent*, and North-West of *Barbadoes*, a small Island. 2. *Martinico*, North of *St. Lucia*, about sixteen Leagues long, but unequally broad. The *English* attempted to take it in the late War, but in vain. 3. *Marigalante*, ten or twelve Leagues North of *Dominica*, and six South of *Guardaloupe*. It was taken by the *English* in the late War, as well as *Dominica*. 4. *Guardaloupe*. 5. *Deseada*: Both small. 6. *St. Bartholomeo*: With some others. The *Dutch* have also a few Islands, mingled with the *French* and *English* in these Seas. For an Account of their Climate, Natives, Product, and other Particulars, we refer to the preceding Chapter, where we have treated of the *Caribee* Islands that are subject to the Crown of *Great-Britain*.

A DE-

A DESCRIPTION OF THE *BRITISH ISLES*:

TREATING

Of their Diviſions and Sub-Diviſions; the Soil, Climate, Air, Seaſons, Rivers, Produce, &c. of the ſeveral Parts; the Perſons, Genius, Habits, Buildings, Orders, Laws, Cuſtoms, Religion, Policy, Arts, Manufactures, Trade, Learning, and Languages of the Inhabitants; the Monarchy, Parliament, Courts of Juſtice, and other Particulars.

CHAP. I.

Of Great-Britain *in general, its antient Inhabitants, and principal Diviſions; the Situation, Extent, Air, Rivers, Beauty, Fertility, Curioſities, and Populouſneſs of* England *in particular.*

Extent of Great Britain

BRITAIN was by the Antients accounted the greateſt Iſland of the known World. It extends from North to South about ten Degrees, and near 300 Miles in the Breadth of its moſt extended Angles. It was antiently called *Albion*, from *Alpion*; the Word *Alp*, in the Original Weſtern Languages, ſignifying very high Lands. By the *Romans* it was called *Britannia*; concerning which Name no Agreement has been among the modern Learned: That which ſeems moſt probable, is, That the Strangers who came over from *Gaul* or *Germany*, call'd the Inhabitants *Brith*, from the Cuſtom of painting their Bodies and Shields with an Azure Blue, which by them was called *Brith*; and from this Name, the *Romans* called it *Britannia*. The *Britons* were little known abroad, before the Entrance of the *Romans* into their Iſle. Their Coaſts only, oppoſite to *Gaul* and *Belgium*, were frequented by Merchants: And theſe were the Men from whom *Cæſar* drew his Intelligence concerning the Country he intended to invade. All that we find related of them before the *Romans* entered, is, That the whole Country was fill'd with infinite Numbers of People, abounding in all Sorts of Cattle or Beaſts; their Houſes poorly built, and ſcattered all over the Country, without Obſervance of Order or Diſtance. They lived moſt upon Milk, or Fleſh, which they got by Hunting. What Clothes they wore were uſually of the Skins of Beaſts; but much of their Body was left naked, and in many of them, all. What was naked, was painted with blue. Their Towns were moſt upon their Coaſts, and founded for the Advantage of Havens. Theſe Inhabitants were much more civiliz'd than thoſe of the Inland Country, by the Commerce of other Nations. The Commodities exported out of this Iſle, were chiefly Hides and Tin; which laſt was peculiar to this Country. Some Silver they had, but not in common Uſe: Pearls they had too, but neither clear nor colour'd like thoſe of the *Orient*. But little Iron, and that uſed either for Arms, or for Rings, which was a Sort of Money current among them: The reſt was of Braſs, which was brought from Abroad.

Its Name.

Antient Inhabitants

Their Commodities

In their Religion and Laws they were wholly governed by their *Druids*, as were the antient *Gauls*. Their Language and Cuſtoms were alſo generally the ſame with thoſe of the *Gauls*, before the *Roman* Conqueſts in this Province. Which Affinity made them frequently aſſiſt the *Gauls* in their Wars againſt the *Romans*, and gave the firſt Occaſion of *Cæſar*'s invading *Britain*. Their Government was likewiſe, as that of the *Gauls*, of ſeveral Nations, under ſeveral petty Princes. Whether theſe Principalities deſcended by Succeſſion, or were elective according to the Advantages of Age, Wiſdom, or Valour, is not recorded: But upon great or common Dangers, the chief Commander of all their Forces was choſen by common Conſent, as *Cæſar* relates of *Cassivellaunus* againſt his Invaſion. Women were admitted to their Principalities by the Right of Succeſſion, Nobleſſe of Birth, or Eminence of other Qualities.

Their Religion, Laws and Government

Their

Their Forces conſiſted chiefly in their Foot, and yet they could draw great Numbers of Horſe into the Field: They likewiſe uſed Chariots in Fight, with Scythes faſten'd to the Ends of the Axle-Trees. Their common Arms were ſmall Shields, but very large Swords. They were eſteem'd a very brave and fierce People, till ſoftened by the Luxury, as well as Servitude, which the *Romans* introduced among them. One Cuſtom among the *Britons*, ſeems peculiar to themſelves, which was, a Society of Wives among certain Numbers, by common Conſent. Every Man marry'd a ſingle Woman, who was eſteem'd his only Wife: But it was uſual for Five or Six, Ten or Twelve, or more, to have all their Wives in common. Every Woman's Children were attributed to him that marry'd her, but all had a Share in the Care and Defence of the whole Society. Such were the People and the Cuſtoms of *Britain*, when the *Romans* firſt invaded their Iſland under *Julius Cæſar*, whoſe Forces were compos'd of *Germans*, *Batavians*, and *Gauls*, beſides the beſt of his old *Roman* Legions: Yet in two Expeditions he rather increas'd the Glory than the Dominion of *Rome*; and gave *Britain* the Honour of being the laſt Triumph of that mighty Republick.

The next Expedition into *Britain* was made by the Emperor *Claudius*, under the Conduct of *Plautus*, and purſued under *Oſtorius*, and other *Roman* Commanders, with great Succeſs. *Domitian* finiſh'd what *Claudius* had begun, carrying the *Roman* Colours as far as *Edinburgh* and *Dunbarton* in *Scotland*. Then lived the *Britons* under the *Roman* Empire near 460 Years, *viz.* from the Reign of *Claudius*, to that of *Honorius*; when *Italy* being over-run by the *Goths*, the *Romans* were oblig'd to abandon *Britain*, and take Care of their own Country. Thus the *Britons* recovered their Liberty, but did not enjoy it long; for the *Picts* and *Scots*, who were often repreſs'd by the *Roman* Legions, finding the Country deſtitute of that Force, and exhauſted of their own braveſt Youth, purſued their Invaſions with greater Rage and Fury. The poor *Britons* ſent over to *Aëtius* for Relief; but having no Hopes given them of any Succours from that Side, *Vortigern* made Addreſs for Aid to the *Saxons*, a People poſſeſs'd of all thoſe Tracts of Land in *Germany* that lie between the *Elbe* and the *Lower Rhine*. Theſe People were called *Saxons* from a Weapon uſed among them, made like a Scythe, with the Edge reverſed, which they call'd *Seax*. The *Britons* Offers were ſoon accepted by the *Saxons*, whoſe Aſſiſtance was recompenſed with the Iſle of *Thanet*, and afterwards with the County of *Kent*, one of the moſt conſiderable in *England*. But that would not ſerve their Turn; ſo prodigious was the Succeſs of their Arms, as to drive the *Britons* out of their own Country, and force the greateſt Part of them to take Sanctuary in *Wales*; while the reſt fled, ſome to *Cornwall*, and others to *Cumberland*. The *Saxons*, hearten'd with Succeſs, invited ſtill greater Numbers of their own from Abroad, who being of ſeveral Branches, arrived here under ſeveral Names: Among whom the *Angles* ſwarm'd over in ſuch Numbers, that this Province from them was called *Angle-Land*, and, for eaſier Sound, *England*. The *Saxons* having ſubdued the whole Body of the Province, eſtabliſhed in it ſeven ſeveral Kingdoms (which were ſtiled the *Heptarchy*.) Theſe ſeveral Kingdoms continued for ſome Ages, till *Egbert*, King of the *Weſt-Saxons*, reduced the *Heptarchy* into a *Monarchy*, and was crowned King of *England* at *Winchester*, the Royal Seat of the *Weſt-Saxons*, in the Year 819. Thus *Britain* came to be divided into three principal Parts, *England*, *Scotland* and *Wales*; all three now happily united into One, under the Name of *Great-Britain*.

The Monarchy of *England* was no ſooner ſettled, but the *Danes* came in to diſturb its Tranquility. During no leſs than two hundred Years, this Kingdom was haraſſed by thoſe fierce Invaders; till at laſt *Canute* their King got Poſſeſſion of the Crown, in the Year 1017. Then the *Saxons* and *Danes* keeping a good Correſpondence, and intermixing together by Marriages, made but one Nation. However, the Reign of the *Danes* was of no long Continuance, there having been but three Kings of that Nation, who reigned but twenty-five Years. For in 1042 the *Saxons* recovered the Throne, in the Perſon of *Edward*, ſirnamed the *Confeſſor*. Next to King *Edward*, and *Harold* his Succeſſor, this Kingdom fell, *Anno* 1066, into the Hands of the *Normans*, under *William* Duke of *Normandy*, ſirnamed the *Conqueror*. Thus this Part of *Great-Britain* was no leſs than four Times conquered by four different Nations, the *Romans*, *Saxons*, *Danes*, and *Normans*. But the *Saxon* and *Norman* Blood were united afterwards, in the Perſon of *Henry* the Second, from whom are deſcended all the ſucceeding Kings and Queens to this preſent Time.

England lies South of *Scotland*, North of *France*, Eaſt of *Ireland*, and Weſt of the *Netherlands*. In reference to the Globe, *England* lies between the fiftieth and ſixtieth Degree of Northern Latitude. As the Situation contributes much to its Security, ſo it is moſt convenient for Trade, Nature having furniſhed its Sea Coaſts with many good Ports and Havens: Among which, *Falmouth*, *Plymouth*, *Dartmouth*, *Weymouth*, *Southampton*, and *Portſmouth*, upon the Channel; *Briſtol* near the Mouth of the *Severn*; *London* upon the *Thames*; *Yarmouth* and *Hull* upon the *German* Sea; *Liverpool* and *White-Haven* in *St. George*'s Channel, are the principal. *England* has this Advantage beſides, that its Sea Coaſt is for the moſt Part ſecured with high Cliffs, from the Irruptions of the Sea. As for its Extent, from *Berwick* upon *Tweed* Northward, to the South Parts of the Iſle of *Wight*, it reaches about three hundred and thirty Miles: And from *Sandwich* Eaſt, to the *Land's-End*, Weſt and by South, two hundred and eighty.

The Air of *England* is generally groſs, the Winters moſt commonly rainy and foggy, and the Weather variable. However, People live here to as great an Age, as in any Part of *Europe*. On the other hand, *England* gets great Advantages from the Thickneſs of her Air. It makes the Fields look green almoſt all the Year round. It makes Abundance of Paſture for Cattle. The Summer Heat is the leſs ſcorching, and the Cold in Winter leſs ſevere. It is leſs ſubject to the dreadful Meteors of Hail, Thunder, Lightning, Thunderbolts, Earthquakes, and Hurricanes. And if Nature be ſomewhat too prodigal of Moiſture in this Country, ſhe takes care to cure it: For, after a great Glut of Rain, a Wind does commonly riſe from the Weſt, to dry it up. This is the Wind that predominates in *England*, and is the wholeſomeſt. The Eaſterly Winds are unwholeſome, eſpecially in the Spring. As to the North and North-Weſt Winds, they commonly bring fair Weather: But thoſe oppoſite to them, that blow but ſeldom in *England*, do for the moſt Part bring Rain.

England has no Rivers of a long Courſe, like the *Danube*, the *Rhine*, or the *Volga*. But there is one, the *Thames*, which carries more Wealth in the Space of twenty-five Leagues, than all thoſe three great Rivers in their utmoſt Extent. The *Thames* is made up of two Rivers, *Thame* and *Iſis*, which join together near *Dorcheſter* in

Oxfordſhire; from whence it runs Eaſtward, parting *Buckinghamſhire* from *Berkſhire*, *Middleſex* from *Surry*, and *Eſſex* from *Kent*. For Navigation, *Europe* does not afford a more commodious River. Its Stream is eaſy, its Tides convenient, and the Water wholſome. The *Medway* in *Kent* runs through *Maidſtone*, *Rocheſter*, and *Chatham*, into the *Thames*. This River is made uſe of to lay up the greateſt Ships of War, its Entrance being defended by a ſtrong Fort called *Sheerneſs*. The *Severn* riſes in *North Wales*, and runs from *Montgomery* through *Shropſhire*, *Worceſter*, and *Glouceſterſhire*. In the laſt of theſe Counties it does ſo expatiate itſelf, that the Mouth of it is called the *Severn Sea*. It receives ſeveral Rivers of good Note, particularly the *Avon*, *Wye*, and *Uſk*, abounding with Salmon and Trout. *Humber* is a *Yorkſhire* River, compounded of ſeveral leſſer Rivers, *viz.* the *Trent*, *Ouſe*, *Dun*, and *Darwent*. This River is of a great Breadth, and the Port of *Hull* is at the Mouth of it. The *Trent* riſes in *Staffordſhire*, and runs through the Counties of *Derby*, *Nottingham*, and *Lincoln*, where it falls into the *Humber*. By this River *England* is divided into two Parts. The *Ouſe* begins its Courſe in *Northamptonſhire*, and runs thro' the Counties of *Buckingham*, *Bedford*, *Huntington*, *Cambridge*, and *Norfolk*. The *Tine*, famous for its Sea-Coal Trade, divides Part of the County of *Durham* from *Northumberland*, and runs by *Newcaſtle upon Tine*. The *Tweed* parts *England* from *Scotland*. The *Ouſe*, another of that Name, parts *Norfolk* from *Suffolk*. The *Avon*, having croſſed the Counties of *Warwick*, *Worceſter*, and *Glouceſter*, falls into the *Severn*. Another of that Name runs through *Bath* and *Briſtol*. A third *Avon* waters *Salisbury*.

Beauty of *England*

Forests.

England is an open level Country, excepting ſome Hills here and there, agreeably diverſified with arable Land, Meadows, and Woods: And its Foreſts ſeem to have been preſerved only for the Pleaſure of Variety, and the Diverſion of Hunting. The principal of them are *Windſor-Foreſt* in *Berkſhire*, *New Foreſt* in *Hampſhire*, the Foreſt of *Dean* in the County of *Glouceſter*, and *Sherwood-Foreſt* in *Nottinghamſhire*.

Verdure

England is alſo to be admired for its Verdure, which continues commonly nine Months together;

Fertility

and the great Number of her Streams makes the Country agreeable. It yields to no Country in Point of Fertility; eſpecially for Corn, Cattle, Fiſh, and Fleſh. As for its Soil, 'tis rank in ſome Places, in others light and ſandy, and elſewhere clayiſh. 'Tis true, there are many Heaths, Downs, and Plains, that yield only Graſs for Sheep; but they cannot be ſaid to be barren. Here is alſo Abundance of Hares, wild Fowl, and Poultry. As for Fruits, and edible Roots and Herbs, no Country goes beyond it: And ſo conſtant is Plenty here, that there has been no Famine in the three laſt Centuries. As for Drink, 'tis true, we have no rich Wines of our own Growth: But by Navigation we have the greateſt Variety that can be got. Our common Drink is Beer or Ale, which is the beſt in *Europe*, eſpecially in the Northern Parts. Beſides this, great Quantities of Cyder, Perry, Mead, Mum, and Punch; Cherry, Gooſeberry, and Currant-Wines, *&c.* are made in *England*.

Commodities.

For Raiment, *Engliſh* Wooll is famous all over the World: Of which is made the beſt and moſt ſerviceable Cloth. Fullers-Earth, ſo neceſſary in the Manufacture of Cloth, is alſo moſt excellent, and plentiful in *England*. As to Linnen, the Soil is very fit for it in many Places, eſpecially in *Lancaſhire*, which yields good Hemp and Flax. But the Land is commonly improved to better Uſes. Leather no Country yields better, nor in greater Quantity. For Building, here is no great Stock of Timber, which for the moſt Part is fetched from Abroad. However, *England* wants neither Stones, Bricks, Tiles, Glaſs, nor Iron. The Firing here is Wood, Turf, and Pit-Coal: But the laſt is the moſt common Fewel, whoſe Heat is greater, and the Fire more laſting than either that of Wood or Turf. For Carriage, and other Uſes, there's no Country better ſtocked with Horſes than *England*. For Hunting and Racing, few can match them: And ſet aſide *Spain* and *Barbary*, no Country can ſhew finer, or of briſker Mettle. Here are alſo Dogs of all Sorts, all of them ſtrong, and full of Mettle. Our Maſtiffs, eſpecially thoſe we call Bull-Dogs, are of unparallel'd Conrage. There is alſo in *England* a Race of Cocks, which ſhew a peculiar Courage not to be found in any other Country. And it is obſervable, that an *Engliſh* Dog or Cock, tranſported beyond Sea, degenerates.

Horſes.

Dogs.

Cocks.

Flowers, Simples.

For Delight and Ornament, *England* yields Abundance of great Variety of Flowers: For Phyſical Uſes, Abundance of Simples, moſt excellent Saffron and Honey, and Plenty of Liquorith. Here are alſo Hot-Baths in the Counties of *Somerſet* and *Derby*, and Abundance of Mineral Waters, about *London* eſpecially; beſides the famed Waters of *Tunbridge*. For other Uſes, *England* is well ſtocked with Metals. *Suſſex* is noted for its Iron Mines, *Derbyſhire* for its Lead, *Cumberland* and *Somerſetſhire* for their Copper, and *Cornwall* for its Tin. *England* has alſo Plenty of Alum and Cryſtal, Coperas, and *Lapis Calaminaris*, beſides Woad for the Uſe of Dyers. Another Thing *England* is happy in, is her being free from dangerous and voracious Beaſts, which are ſo pernicious in many Regions of *Europe*. There are alſo but a few Serpents, and other venomous Creatures. *England* was formerly peſtered with Wolves: But the *Welch* Prince being tributary to *Edgar*, the King changed that Tribute into three thouſand Wolves Skins. Upon which the *Welch* cleared *England* from thoſe ravenous Creatures.

Baths and Mineral Waters.

Metals.

Publick Buildings.

As to Churches, beſides St. *Paul's* in *London*, where ſhall one find finer Cathedrals than at *York*, *Salisbury*, *Winchester*, *Lincoln*, and *Glouceſter*? *England* has alſo many fine Collegiate Churches, particularly at *Weſtminſter*, *Rippon* in *Yorkſhire*, and *Manchester* in *Lancaſhire*. What can be neater than the Pariſh Churches of *London* built ſince the Fire, and eſpecially the moſt modern ones? In the Country there are alſo many, more like Cathedral than Parochial Churches. For Chapels, there is *Henry* the Seventh's Chapel at *Weſtminſter*, the Chapel of *Windſor-Caſtle*, and *King's Chapel* at *Cambridge*. There are alſo a great many Steeples of curious Architecture, particularly thoſe of St. *Bridget*, and *Bow-Church* at *London*; *Salisbury* Steeple, whoſe Spire is the higheſt of any in *England*; thoſe of St. *Nicholas* at *Newcaſtle*, and *Grantham* in *Lincolnſhire*. What Country in *Europe* can ſhew two ſuch Univerſities as *Oxford* and *Cambridge*, adorned with ſo many and richly endow'd Colleges? And, amongſt Lawyers, where ſhall one ſee ſuch Societies as our Inns of Court at *London*? For publick Halls, there is no Country like *England*; witneſs *Weſtminſter-Hall*, the *Middle Temple-Hall*, *Lambeth-Hall*, *Guild-Hall*, and others belonging to the ſeveral Companies of Tradeſmen. If we come to Hoſpitals, few will be found more ſtately than thoſe of *Chelſea* and *Greenwich*, that of St. *Thomas* in *Southwark*, St. *Bartholomew's*, and *Bethlehem* in *London*. *England* is noted beſides for the great Number and Beauty of her Stone-Bridges; particularly thoſe of *London*, *Rocheſter*, *Briſtol*, and *Burton* upon *Trent*. The Kings of *England*, in former Ages, had in moſt Counties a Caſtle, or Royal Houſe, with a Park or Foreſt, for their Entertain-

Entertainment. At this very Day the King has Palaces at *Kenſington*, *Hampton-Court*, and *Windſor-Caſtle*; beſides others inferior to thoſe, at *Richmond*, *Wincheſter*, *Greenwich*, and *Audley-Inn*. No Country in *Europe* is ſo full of ſtately Seats as *England*, conſidering its Extent. But of all the Counties of *England*, none are ſo full of them as *Yorkſhire*, *Cheſhire*, and *Northamptonſhire*.

Curioſities. Amongſt the Curioſities of *England*, we reckon *Salisbury-Plain*, and that of *New-market*; the firſt being of a vaſt Extent, and the other noted for the Horſe-Races. On *Salisbury-Plain* is to be ſeen that remarkable Monument of Antiquity, called the *Stone-henge*. It conſiſts of three Rows of Stones, ſome of them twenty-eight Foot high, and ſeven broad, with others laid croſs on the Top, and framed into them. Near *Witney* in *Oxfordſhire*, is a Trophy called *Roll-rich-Stones*, not much unlike the *Stone-henge*. At *Boskenna*, in *Cornwall*, is to be ſeen another Trophy of eighteen huge Stones in a Circle, with another in the Center over-topping them all. In *Cleer* Pariſh, in the ſame County, there ſtands up in a Plain ſix or eight Stones of a prodigious Bigneſs, artificially ſet together. The *Main-Amber*, near *Mount's-Bay*, is a Rock, which being mounted upon leſſer Rocks with a Counterpoiſe, may be ſtirred, but not removed out of its Place. Near *Salkeld* in *Cumberland*, is a Trophy, vulgarly called *Long Meg and her Daughters*, conſiſting of ſeventy-ſeven Stones. In *Weſtmoreland*, not far from the River *Lowther*, there are Pyramidal Stones, eight or nine Foot high, pitched directly in a Row for a Mile together, at equal Diſtances. At *Rygate* in *Surrey*, is to be ſeen the Ruins of an old Caſtle, with a long Vault under Ground, and a Room at the End of it, where the Barons met in Council during their War againſt King *John*. In *Derbyſhire* is the *Peak*, famous for its Lead Mines, Quarries, and wonderful Caves. Theſe laſt are of a large Extent, and apt to ſtrike with Horror all that come into them.

In *Weſtmoreland* is a Well, or Fountain, which ebbs and flows many Times in a Day. *Oundle*, in *Northamptonſhire*, is noted for its *Drumming-Wells*. The City of *Bath* is noted for its Springs, of a wonderful Virtue for the Cure of the Palſy, Rheumatiſm, Weakneſs of the Nerves, and Scorbutular Diſeaſes, &c. There are four Hot Baths, the *Croſs-Bath*, that called the *Hot-Bath*, and the *King's* and *Queen's-Baths*. The antient *Romans* had a great Value for theſe Waters, and built a Temple dedicated to *Minerva*, in the very Place where the Cathedral now ſtands. At *Buxton-Wells* in *Derbyſhire*, nine Springs iſſue out of a Rock, at a ſmall Diſtance from each other, eight of which are warm, and the ninth exceeding cold. At *Laſſington*, near *Glouceſter*, there are found Stones about the Breadth of a Silver-Penny, and the Thickneſs of a Half-Crown: They are flat, and five-pointed, like a Star; of a greyiſh Colour, and the flat Sides of them naturally engraven in fine Works. At *Whitby* in *Yorkſhire*, there are found Stones naturally as round as a Bullet; which being broken, ſtony Serpents are found in them. *Gotham* in *Nottinghamſhire*, yields a Sort of rugged Stone, but with ſuch delicate Veins, as exceed the Beauty of Marble; *Cornwall* and *Staffordſhire* have Quarries of Marble, and Alabaſter is to be found in *Lincolnſhire*. But *Cornwall* particularly is of Note for its Diamond-like Stones, found in Rocks, ready ſhaped, and poliſhed by Nature, and wanting nothing but Hardneſs to bear the Price of Diamonds. St. *Vincent's* Rock, near *Briſtol*, is alſo noted for yielding Plenty of Cryſtal. The *Picts* Wall is alſo worth our Notice, being a Piece of *Roman* Antiquity. It extended from the *German* to the *Iriſh* Sea, the Space of eighty Miles. It was eight Foot thick, and twelve Foot high from the Ground. Some Part of it is ſtill to be ſeen, both in *Northumberland* and *Cumberland*.

Populouſneſs of *England*. 'Tis doubtleſs a great Advantage for a Country to be populous. The Republick of *Holland* is ſo well convinced of this Truth, that ſhe freely receives all Strangers that come thither to ſettle. 'Tis true, *England* is not altogether ſo populous, but comes little ſhort of it: Though great Numbers of Men, Women, and Children, tranſport themſelves yearly into the Plantations. But then their Loſs is ſupplied by a perpetual Concourſe of Foreigners: Otherwiſe *England* would go near to be unpeopled, in leſs than half an Age. The *Saxons*, *Danes*, and *Normans*, all contributed to people the Country. In the Reign of *Henry* III. this Nation ſwarmed with *Poitevins*. In Queen *Elizabeth's* Reign, above 30,000 *Flemings* came to take Sanctuary here. And *James* I. drew hither an infinite Number of *Scots*. From that Time to this, *London* particularly has been conſtantly ſupplied with Foreigners from moſt Parts of *Europe*, but above all with *French*. Which City alone, conſidering it in its whole Extent, does probably contain one Million of Souls. Next to which, *York*, *Norwich*, *Salisbury*, *Exeter*, *Canterbury*, *Briſtol*, *Shrewſbury*, *Glouceſter*, *Worceſter*, *Oxford*, and *Cheſter*, are the moſt conſiderable. As for Market Towns, there are above ſix hundred and fifty; beſide many good Towns in which no Market is kept, and an infinite Number of Villages.

Yearly Rent of Lands and Houſes. The yearly Rent of all the Lands in *England* and *Wales* is computed to be ten Millions Sterling: And that of Houſes not let with the Lands, two Millions: In all twelve *Engliſh* Millions. Beſides her prodigious Wealth in Jewels, Plate, Hoards of Money, rich Moveables, Merchandiſe, &c.

CHAP. II.

A particular Deſcription of each County in England: *Wherein Notice is taken of the Shire-Towns, and of other remarkable Places.*

THE Advantages of *England* over moſt Countries in *Europe*, and her Populouſneſs, cannot be better made out, than by a particular Deſcription of her Counties. And in this we ſhall take notice only of remarkable Places and Things, without enumerating all the Particulars that are to be found in common Tables.

Berkſhire is an Inland and a pleaſant Country, one hundred and twenty Miles in Circumference, where the Air is good, and the Soil fruitful. It yields Plenty of Corn, Cattle, wild Fowl, Wooll, *Berkſhire*

Woodl, and Wood, Oak especially. The *Thames* and *Kennet* are its principal Rivers. *Reading*, the Shire-Town, is seated at the Fall of the *Kennet* into the *Thames*, consists of three Parishes, and is pretty populous. *Abington*, on the *Thames*, is a neat Town, having two Parishes, and a Town-house. *Windsor*, also on the *Thames*, stands upon a Hill; on the Top of which is the Castle of *Windsor*, a Royal Palace, to which belongs a Chapel, wherein are installed the Knights of the Garter; and a magnificent Hall for the Installation-Feast. What is remarkable besides, is the great and spacious Terrass on one Side of the Castle. *Wallingford*, also on the *Thames*, has been a Town of great Note.

Reading. *Abington.* *Windsor* *Windsor* Castle *Wallingford*

Bedfordshire is an Inland County, 73 Miles in Circumference, well stored with Corn and Cattle, especially the North Parts of it. *Bedford*, the Shire-Town, lies upon the *Ouse*, and contains five Parishes. *Dunstable* is noted for its excellent Larks, and *Woburn* for its Fuller's Earth.

Bedfordshire. *Bedford.* *Dunstable.*

Buckinghamshire is another Inland County, 138 Miles in Circumference, very plentiful both in Corn and Pasture, particularly the *Vale* of *Aylesbury*, which feeds an infinite Number of Sheep, yielding excellent Wooll. The *Thame*, *Ouse*, and *Colne*, are its principal Rivers. *Buckingham*, the chief Town, stands upon the *Ouse*, over which it has three Stone Bridges. There is in the County a Place called *Eaton*, situate upon the *Thames*, over-against *Windsor*, noted for its College and and School, founded by King *Henry* VI. In this School there are 70 Scholars, maintained gratis, and sent by Turns to the Universities.

Buckinghamshire. *Buckingham*

Cambridgeshire is an Inland County, 130 Miles in Circumference, and abounds in Corn and Pasture, Fish, Wild Fowl, and Saffron. The North Parts of it, called the Isle of *Ely*, are full of Marshes, which make them unhealthful, and yield but little Corn: But this Defect is supply'd by their Plenty of Cattle, Fish, and Wild-Fowl. In this County, not far from *Cambridge*, are the Hills called *Hog-Magog* Hills, fortified by the *Danes* with three Intrenchments. *Cambridge*, the Shire-Town, upon the *Cam*, 44 Miles North of *London*, is the *Camboritum* of the Antients. In the *Romans* Time, *Cambridge* was one of their Colonies; which Colonies had their Schools of Learning. *Lucius*, a *British* Monarch, and the first *Christian* King, was instructed in the *Christian* Faith by the Doctors of *Cambridge*. Whether it were *Lucius*, or Pope *Eleutherius*, that granted great Privileges to this University; certain it is, that *Cambridge* was counted an University from the latter End of the second Age, when both *Lucius* and *Eleutherius* were living. As a Town, it consists of 14 Parishes. In Point of Situation, and good Air, *Oxford* has the Advantage of *Cambridge*. 'Tis governed by a Mayor, in Subjection to the University: To which he takes a solemn Oath, when he enters upon his Office. As an University, here are twelve Colleges and four Halls, all endowed, which the Halls in *Oxford* are not: And whereas *Oxford* is an University within a Town, *Cambridge*, on the contrary, is a Town within an University; most of its Colleges being seated in the Skirts of the Town, which affords them the more delightful Walks and Gardens. By the Foundations of the Colleges and Halls, a certain Number of Fellows and Scholars are maintained by each College or Hall: And each of these is ruled according to the Statutes of the Founder. Over each College and Hall there is a Head, called Master; except the Head of King's College, who goes by the Name of Provost; and the Head of Queen's College, by that of President. Over the whole University there is, first, a Chancellor, chosen by the University, who is usually one of the prime Nobility. Under the Chancellor there is a Commissary, who holds a Court of Record for all privileged Persons and Scholars under the Degree of Master of Arts, where Causes are determined by the Civil and Statute Law, and by the Custom of the University. Next to the Chancellor, is the Vice-Chancellor, who actually governs the University. He is yearly chosen upon the third of *November*. The Batchelors of Arts here complete their Degree in *Lent*, beginning at *Ash Wednesday*. And the first *Tuesday* of *July* is always the Commencement, wherein the Masters of Arts, and the Doctors of all Faculties, complete their respective Degrees. Here three Years after a Man has taken the Degree of Batchelor, he may take that of Master of Arts; seven Years after which he may commence Batchelor in Divinity; and at the Expiration of three Years more he may go out Doctor. Besides *Cambridge*, there is in this County *Ely*, a Bishop's See, erected by King *Henry* I. The Revenue of this Bishoprick is very considerable. As to the Town, its Situation in an Isle, made by several Rivers, renders it unhealthful. Nor is it considerable, either for Extent or Beauty; and its Cathedral, the Work of several Bishops, is its only Ornament.

Cambridgeshire. *Cambridge.* *Ely.*

Cheshire is a Maritime County, 112 Miles in Circumference. It yields more Pasture than Corn, and is for the most Part level; its greatest Hills being those which part it from *Stafford* and *Derby* Shires. There are in it several Forests, particularly *Delamere* and *Macclesfield* Forests: And so great a Number of Parks, that few Gentlemens Country-Seats are without one. There are also many Heaths, in which both Sheep and Horses feed; and some mossy Plots, the Moss whereof serves to make Turfs. Its principal Rivers are the *Dee*, the *Weaver*, and the *Mersey*. The first has this Singularity in it, that it swells little in a Glut of Rain; but is most apt to overflow, when the Wind is a long Time South. Cheese and Salt are the chief Product of this County, and both in great Request all over *England*. It has the Privilege of being a County Palatine, the Earls whereof antiently lived more like Princes than Subjects. The Prince of *Wales* is now by Birth-right, Earl of *Chester*, as he is Duke of *Cornwal*. However, this County enjoys to this Day its antient Privileges, and the Palatine Courts are still kept at *Chester*, the Shire-Town, which stands upon the *Dee*, 25 Miles from its Fall into the *Irish* Sea. Over the River is a Stone Bridge, with eight Arches, and one Gate at each End of it. The Town is well inhabited, and drives a good Trade with *Ireland*. It contains ten Parishes; and is the most usual Place where People take Shipping for *Dublin*. The principal Streets have the Convenience of dry Walks, that shelter one from the Rain. This is a defensible Place, fortified with good Walls, and a strong Castle. *Nantwich*, *Middlewich*, and *Northwich*, are noted for their Salt Pits.

Cheshire. *Chester.* *Nantwich* &c.

Cornwal, a Maritime County, is the most Western County of *England*, surrounded with the Sea on the North, South, and West, and parted from *Devonshire*, Eastward, by the *Tamar*, so that 'tis a perfect Peninsula, 150 Miles in Circumference. Its Valleys are plentiful of Corn and Pasture, and the Hills famous for their Tin and Copper Mines; and it abounds in Wild-Fowl, Woodcocks especially; and the Seas thereof in Fish. Here is the great Fishing of Pilchards, between *July* and *November*. It yields also Plenty of Samphire, Eringo, fine Slate, and Marble. The People of this County are accounted the strongest in *England*,

Corn-

land, skilful in Wreſtling, and much addicted to that Exerciſe. Here is the *Lizard Point*, and *Land's-End*. Of all the Counties of *England*, *Cornwal*, *Cumberland*, and *Monmouthſhire*, have moſt of *Britiſh* Blood. The firſt was a long Time governed by its own Princes, called Earls of *Cornwal*. *Edward* III. created his eldeſt Son *Edward*, the Black Prince, Duke of *Cornwal*; and ever ſince the eldeſt Son of *England* has borne that Title, without Creation. *Launceſton*, the chief Place in *Cornwal*, is a goodly Town, near the *Tamer*. *Falmouth* is one of the beſt Ports of *England*. This is the Station of our Packet-boats for *Lisbon*. Over-againſt *Falmouth* ſtands the Caſtle of *Pendennis*, built by *Henry* VIII. for the Security of this Coaſt. The Iſles of *Scilly* lie about 60 Miles from the *Land's-End*, and are a Cluſter of ſmall Iſlands, to the Number of 145; one of 'em called *Scilly*, which gave Name to the reſt, was then counted the chief: But *St. Mary* has got ſince the Pre-eminence, as the largeſt and moſt fruitful; yet it is but nine Miles about. But it has a very good Harbour, fortified with a Caſtle, built by Queen *Elizabeth*.

Launceſton *Falmouth.* *Pendennis Caſtle.* *Iſles of Scilly.*

Cumberland is a Maritime County, bounded Northward with *Scotland*, and Weſtward with the *Iriſh* Sea. It is 168 Miles in Circumference. As far North as it lies, 'tis a fruitful Country; whoſe Hills yield good Paſture, and the Valleys plenty of Corn. There is abundance both of Wild-Fowl and Fiſh. For Fewel it yields Pit-Coal; and for other Uſes there are large Mines both of Copper and Lead. Beſides its Rivers, of which *Eden* is the principal, here are ſeveral ſmall Lakes, noted for yielding moſt dainty Fiſh. 'Tis Matter of Wonder, that in ſo Northern a County, more *Roman* Antiquities ſhould be found than in any other. *Carliſle*, the chief Place, is a Biſhop's See; ſurrounded on all Sides, but Southward, with the River *Eden*. This Town has a good Wall, fortified with a great Caſtle, built by *Henry* VIII. *Whitehaven* is a noted Port, eſpecially for its Salt and Coal-Trade. *Penrith* has a great many Tanners, and *Keſwick* abundance of good Lead.

Cumberland. *Carlyle* *Whitehaven.*

The Situation of the Iſle of *Man* is in the *Iriſh* Sea, 10 Leagues from *Cumberland*. It reaches about nine Leagues in Length, and three in Breadth. The Air of it is cold, and the Soil yields abundance of Oats. Here is alſo Plenty of Cattle, Wild-Fowl, and Fiſh. It contains 17 Pariſhes, has five Towns, and two Caſtles. There is a Hill in it of ſpecial Note, for yielding a Proſpect of *England*, *Scotland*, and *Ireland*. The Earls of *Derby* were long Lords of the Iſle of *Man*, but that Line being extinct, the Duke of *Athol* now enjoys that Honour. He holds it in Fee of the Crown. There is a Biſhop of *Man*, but he is no Peer of the Realm, becauſe he does not hold his Biſhoprick immediately of the Crown, but of the Lord of the Iſle. He is confirm'd by the King of *Great-Britain*, and conſecrated by the Archbiſhop of *York*.

Iſle of Man.

Derbyſhire is an Inland County, 130 Miles in Circumference; a plentiful Country of Paſture, Corn, and Wood, eſpecially on the Eaſt and South Side. Here are alſo Quarries of Free-Stone and Marble, abundance of Mill, Lime, and Whet-Stones, with Coal, Lead, and Iron-Mines. It yields likewiſe both Cryſtal and Alabaſter. The River *Derwent* divides it into two Parts, one Eaſt, and the other Weſt. *Derby*, the Shire-Town, is populous, and rich by its Trade. It conſiſts of five Pariſhes. The Steeple of one of its Churches is both very beautiful, and extraordinary high. The Hall, wherein the Aſſizes are kept, is a fair Building of Free-Stone. *Wirkſworth* is noted for its great Trade in Lead.

Derbyſhire. *Derby.* *Wirkſworth.*

Devonſhire is a Maritime County, 200 Miles in Circumference. It borders upon *Cornwall*, and is watered on two Sides with the Sea. The Air is very good, and the Soil for the moſt Part fruitful; but there are both Hills and Woods. This Country abounds chiefly in Corn, Paſture, Wooll, Wild-Fowl, and Sea-Fiſh. There are alſo Tin and Lead-Mines. Its chief Manufactures are Kerſeys, Serges, and Lace. The People of this Country are, with the *Corniſh* Men, accounted the ſtrongeſt in *England*. *Exeter*, the Capital, is ſo called from the River *Ex*, upon which it is ſituated, with a fair Stone-Bridge over it. It contains 15 Pariſhes, and is fortified with a good Wall and a Caſtle. *Plimouth* is one of the beſt and moſt famous Ports in *England*, ſeated on the Mouth of the *Plim*. 'Twas from this Town Sir *Francis Drake* ſet Sail in 1577, to ſail round the Terreſtrial Globe. *Dartmouth*, ſo called from the River *Dart*, on which it is ſituate, is a very good Port, defended by two Forts. It contains three Pariſhes. *Topſham* is the Port-Town for *Exeter*, about four Miles from it. *Biddiford* and *Barnſtable* are two Inland Ports, Northward: The firſt on the *Turridge*, and the laſt upon the *Taw*, which meet together three Miles from the Sea. Theſe two Towns drive a pretty Trade, and have fair Stone-Bridges, particularly *Biddiford*. Some Miles North of *Dartmouth* is *Torbay*, upon the Channel; the uſual Rendezvous of the Royal Navy, when ſailing near this Coaſt, and forced back by contrary Winds. The *Star-Point* is not far from it. *Lundy* Iſland lies 50 Miles from *Devonſhire*, North-Weſtward, and is much more remote from any other Continent. 'Tis but five Miles long, and two broad; but ſo ſurrounded with inacceſſible Rocks, that there is but one ſmall Entrance into it, where two Men can ſcarce go a-breaſt. What is moſt ſurprizing, is, that lying ſo far in the Sea, it has the Advantage of ſeveral Springs of freſh Water.

Devonſhire. *Exeter.* *Plimouth.* *Dartmouth.* *Topſham.* *Biddiford.* *Branſtable.* *Torbay.* *Lundy Iſland.*

Dorſetſhire is a Maritime County upon the Channel, Eaſt of *Devonſhire*, 150 Miles in Circumference. 'Tis a pleaſant and fruitful Country, yielding Plenty of Corn, Paſture, Cattle, Wild-Fowl, and Fiſh. It yields alſo abundance of Hemp, and Quarries of Free-Stone and Marble. *Dorcheſter*, the Capital, is pleaſantly ſeated on the *Frome*, 10 Miles from the Mouth of it. But it has been ſo ruined by the *Danes*, and next by the *Normans*, that it feels the Effect of it to this Day. *Weymouth*, between *Dorcheſter* Northward, and the Iſle of *Portland* Southward, is a good Port, at the Mouth of the River *Wey*. *Pool* is another Port, rich and well built, almoſt ſurrounded with an Arm of the Sea, ſo that there is but one Entrance into it on the Land's Side. Here the Tide ebbs and flows four Times in 24 Hours. *Lime*, on the Side of *Devonſhire*, is another Harbour, not much reſorted to, except by Fiſhermen. Here the Duke of *Monmouth* landed, coming from *Holland*, to oppoſe King *James* II. *Bridport*, Eaſt from *Lime*, was the only Place formerly for the twiſting of Ropes for the Royal Navy; and 'tis uſed ſtill for that Purpoſe, the neighbouring Lands yielding Plenty of Hemp. *Shaftesbury*, or *Shafton*, has a fair Proſpect, and was formerly a Place of Importance, when it had ten Pariſhes, now reduced into three. There are in it about 500 Houſes, all built of Stone. *Sherborn* is noted for the fine Structure of its Church. The Iſles of *Portland* and *Purbeck* belong to *Dorſetſhire*. *Portland*, ſome Miles South of *Dorcheſter*, is of no great Extent, but very fruitful, and of chief

Dorſetſhire. *Dorcheſter.* *Weymouth* *Pool.* *Lime.* *Bridport.* *Shaftesbury* *Sherborn.* *Iſles of Portland and Purbeck.*

Note for its Quarries of Free-Stone, almoſt as durable as Marble. There is in it a Caſtle, called *Portland* Caſtle, and on the Land-Side another, called *Sanford* Caſtle. Theſe two Caſtles command all the Ships that paſs into the Road, called the *Race of Portland*. *Purbeck*, Eaſt of *Portland*, is about ten Miles long, and ſix broad. Here is found the Marble, commonly called *Purbeck* Stone; and excellent Clay for making Tobacco-Pipes. In this Iſland is the Town of *Corf*, with a Caſtle upon a Hill.

Durham. *Durham* is a Maritime and a Northern County, commonly called the Biſhoprick of *Durham*, 107 Miles in Circumference. As it lies not far from *Scotland*, ſo the Air of it is cold. The Soil on the Eaſt Side is the beſt; the South full of Marſhes, and the Weſt full of Rocks. The greateſt Advantage this County has, conſiſts in its Coal, Iron, and Lead-Mines. This is a County Palatine, the Biſhop whereof had formerly a Right of Sovereignty, keeping his Courts of Juſtice, both Civil and Criminal: But moſt of thoſe Rights are returned to the Crown. The Biſhop, however, is ſtill Earl of *Sadberg* in this County, and takes Place next to the Biſhop of *London*. *Durham*, the Capital, ſtands upon ſeveral Hills, enjoys a pure Air, and has plenty of Proviſions. Here excellent Bread is made. Its greateſt Ornaments are the Caſtle, in which the Biſhop reſides, and the Cathedral near it, both on the Top of a Hill. *Aukland*, or *Biſhop's-Aukland*, on the *Ware*, as well as *Durham*, is pleaſantly ſituated, in a good Air, upon the Aſcent of a Hill. The Biſhop has here a ſtately Palace, and a fine Chapel. *Sunderland*, at the *Ware*'s Mouth, is ſurrounded with the Sea, at high Water: A Town noted for its Sea-Coal Trade. At the Mouth of the *Tine*, which parts *Durham* from *Northumberland*, is *Sheals*, the Station of the Sea-Coal Fleets. *Jarrow*, the Birth-Place of Venerable *Bede*, ſtands a little higher on the ſame River. And over-againſt *Newcaſtle* is *Gateſhead*, the Receptacle of the Coal-Pit Men in theſe Parts. Between theſe Towns there is a Stone-Bridge upon the River, with an Iron Gate in the Middle, ſerving as a Boundary between the Counties.

Durham. *Aukland.* *Sunderland* *Sheals.* *Jarrow* *Gateſhead.*

Eſſex *Eſſex* is a Maritime County in the Eaſt of *England*, 146 Miles in Circumference. Here the Air is temperate; but near the Sea and the *Thames* very moiſt, and the Inhabitants in thoſe Parts ſubject to Agues. The Soil yields Plenty of Corn, Cattle, and Wood. Here is alſo abundance of Fiſh, and Wild-Fowl. In the North Parts Saffron grows to Admiration. This County is water'd by a great Number of Rivers: Beſides the *Thames* that parts it from *Kent*, the *Stoure* from *Suffolk*, the *Lea* from *Middleſex*, and the little *Stoure* from *Hartfordſhire*; here are the *Coln*, *Chelmer*, *Crouch*, *Roding*, and many others, all yielding Plenty and Variety of Fiſh. *Colcheſter*, the Shire-Town, on the *Coln*, lies ſeven Miles from the Sea. This is a Town of great Antiquity, if the Tradition be true, that it was built by *Coilus*, a *Britiſh* Prince, who reigned in the ſecond Age. 'Tis alſo pretended to be the Birth-place of *Lucius*, the firſt Chriſtian King; of *Conſtantine the Great*, the firſt Chriſtian Emperor; and of *Helena*, the firſt Chriſtian Empreſs. The Town is large and populous, and drives a good Trade in Woollen Manufacture. Its large and excellent Oſters, ſo much in Requeſt among the antient *Romans*, are to this Day accounted the beſt in *England*. Its Walls and Caſtles ſhew it to be antient. This Town was very ſeverely uſed by the Parliament's Forces, in the Reign of King *Charles* the Firſt. *Harwich* is a Sea port Town, at the *Stoure*'s Mouth, upon the Borders of *Suffolk*. This is the Station of our Packet-Boats for *Holland*. Its Situation is very advantageous, being almoſt ſurrounded with the Sea; but the Harbour is not fit for great Ships. *Malden* ſtands upon the *Chelmer*, ten or twelve Miles from *Colcheſter*. *Claudius*, a *Roman* Emperor, took this Town, and made it a *Roman* Colony. At *Chelmsford* the Aſſizes are uſually kept. *Walden* is noted for the Plenty of Saffron that grows in its Neighbourhood. Upon the *Thames*, againſt *Graveſend* in *Kent*, is *Tilbury-Fort*, which commands the River there.

Colcheſter. *Harwich* *Malden.* *Chelmsford* *Walden* *Tilbury-Fort*

Glouceſterſhire, an Inland County, is a fine, fruitful, and delightful County. There are Hills on the Eaſt Side of it, called *Cotſwold*, which feed innumerable Flocks of Sheep, the Wooll whereof is very much eſteemed. The Middle Parts are level, and watered by the *Severn*, which contributes very much to their Fertility. Weſtward it is a woody Country; and there is *Dean-Foreſt*, which formerly was more ſtocked with Wood than at preſent, the Iron Mines having conſumed a good Part of it. Beſides the *Severn*, which croſſes this County from North to South, here is the *Avon* that parts it from *Somerſetſhire*, the *Wye* that partly divides it from *Monmouthſhire*; beſides the *Stroud* and the *Iſis*; all very filthy Rivers, and the *Severn* chiefly yields great Plenty of Salmon. Formerly the Vales of this County were full of Vineyards, which have been ſince converted into Orchards, yielding Plenty of Apples for Cyder. In ſhort, this County abounds chiefly in Corn, Wooll, Wood, Iron and Steel, Cyder and Salmon. Among its Manufactures, the Woollen is the moſt conſiderable. Here is alſo very good Cheeſe made. *Glouceſter*, the Capital, ſtands upon the *Severn*. 'Tis a moſt antient City, large and populous, containing twelve Pariſhes; fortified of old with a good Wall, and a Caſtle of Free-Stone, but ſince fallen to Ruin. The Cathedral is ſtately. *Cirenceſter* is ſeated upon the *Churn*, twelve Miles South-Eaſt of *Glouceſter*. In the Time of the *Romans* this was an important Place, but the *Saxons* and *Danes* defaced it. *Tewksbury* is ſituate at the Influx of the *Avon* into the *Severn*, and drives a conſiderable Trade with its Woollen Manufacture. *Stroud* is a goodly Town, upon the River of that Name, over which it has a Bridge, and on the Banks of it many Fulling-Mills for Scarlet, the *Stroud*-Water having a peculiar Quality to give the right Tincture.

Glouceſterſhire. *Glouceſter.* *Cirenceſter.* *Tewksbury* *Stroud.*

Hampſhire is a maritime County, upon the *Britiſh* Channel, one hundred Miles in Circuit. It is a pleaſant and fruitful Country, yielding Plenty both of Corn and Graſs, Wooll, Wood, and Iron; and particularly noted for the Excellency of its Honey and Bacon. On the Weſt Side it is watered by the *Avon* and the *Stour*, that meet together near the Sea; and on the Eaſt by the *Teſt*, and the *Itchin*. *Southampton*, the Shire-Town, is ſituate at the Mouth of the *Hampton*; that is, the *Teſt* and the *Itchin*, ſo called where they run in one Channel. The Haven is good, and has a fair Key to it, but its Trade very much decayed. It has now five Pariſhes. This is one of thoſe which are called County-Towns, and are independant from the Lord Lieutenant of the County. *Winchеſter* is a Biſhop's See, yielding the greateſt Revenue of any Biſhop in *England*, *viz.* about eight thouſand Pound a Year. It ſtands upon the Banks of the *Itchin*, in a Vale between two Hills. In the *Romans* Time, *Winchеſter* paſſed for one of the chief Cities of *Britain*; and in the Heptarchy was the Royal Seat of the Weſt *Saxons*. This City has now five Pariſhes, and is adorned with a fine Cathedral, dedicated to the Trinity. Here is alſo a fair Hall, wherein the Aſſizes and Seſſions are kept, and

Hampſhire *Southampton.* *Winchеſter*

King

King *Arthur*'s round Table hangs up: A noble College, with a publick School for seventy Scholars, taught here and maintained *gratis*, from whence they are elected to *New-College* in *Oxford*. *Portsmouth* is one of the most famous Ports of the Island, and a Place of great Strength. It stands in the Isle of *Portsey*, which is fourteen Miles about. Though its Air be unhealthful, and fresh Water scarce, this Town is very populous, a Place of good Trade, and a Nursery of Seamen; and *Spithead*, in its Neighbourhood, is the general Rendezvous of the Royal Fleet, sailing Westward or returning Eastward. Here is a Dock for building Men of War, and Storehouses to fit them out.

The Isle of *Wight* makes Part of *Hampshire*, and lies South-West of *Portsmouth*, being sixty Miles about, and containing thirty-six Parishes. 'Tis both a very delightful, and fruitful Isle. It abounds in Corn and Pasture, wild Fowl, Fish, Hares, and Rabbits; and its Wooll is counted almost as fine as that of *Lempster* in *Herefordshire*. There are two Market-Towns in it, both privileged to send Members to Parliament, *viz.* *Newport* and *Yarmouth*. *Newport* is a pretty large Town, and well peopled. *Yarmouth* is built of Free-Stone. Here is a Castle, and other Pieces of Fortification. At the Entrance of *Newport* Haven lies *Cowes*, a noted Place for harbouring of Ships. West of *Newport* there is another Castle, called *Carisbrook Castle*. South-East from this Island is *Sandham*, also fortified with a Castle. Between *Portsmouth* and this Isle is *Spithead*, and two Leagues from thence *St. Helen*.

Hartfordshire is an Inland County, one hundred and thirty Miles in Circumference; a fine and delightful County, bordering upon *Middlesex*. Here the Inhabitants breathe a wholsome Air, and the Soil yields Plenty of Corn, Grass, and Wood. The *Lea* and *Coln* are its principal Rivers; Wheat, Barley, and Malt, its chief Commodities. *Hartford*, the Chief upon the *Lea*, is a very antient but decayed Town, since the Highway was turned thro' *Ware*. There is a Castle in it, and three Parishes. *St. Albans*, on the *Ver*, was raised out of the Ruins of *Verulamium*. It derived its Name from St. *Alban*, a Citizen of *Verulam*, the Protomartyr of *Britain*. 'Twas near this Town that *Richard* Duke of *York* routed *Henry* VI. and took him Prisoner. *Barnet* is noted both for its Mineral Waters, and the Victory gained here by the House of *York*, over that of *Lancaster*; *Berkhamsted*, for its antient Castle, in which the Duke of *Cornwall* did formerly reside; *Hitchin* for its School; and *Ware*, upon the *Lea*, for its artificial River, supplying a good Part of *London* with fresh Water, though at twenty Miles Distance. *Hatfield* and *Hodsdon* are also seated on the *Lea*: The first in a most pleasant Situation, near *Hatfield-House*, once a Royal Palace. *Royston* stands partly in this County, and partly in that of *Cambridge*. The Inhabitants of this Place carry on a great Trade in Malt.

Herefordshire is an Inland County, towards *Wales*, one hundred Miles in Circumference. It abounds in all Things necessary for Life, particularly Corn, Wooll, Salmon, and Cyder. Its Wooll and Cyder are counted the best in *Great-Britain*. *Hereford*, the Shire Town, stands upon the *Wye*, in a very fruitful Soil. It had formerly a Castle, built by the *Normans*, but since fallen to Ruin. *Lempster* is noted for the Goodness of its Bread and Wooll.

Huntingtonshire, is an Inland County, sixty-seven Miles in Circuit, called by some *Wilhuntshire*. It was formerly a very woody Country, and consequently proper for Hunting, whence the Name. Now it is open, mostly on the North-East Side, but plentiful of Pasture. In general, it is a pleasant Country, diversified with Hills, and yielding Plenty both of Corn and Cattle. Amongst its Rivers, the *Ouse* is the principal. *Huntington*, the Capital, upon the *Ouse*, is a pleasant Town, which formerly consisted of fifteen Parishes, now reduced to four. Over the River it has a Stone Bridge, leading to *Godmanchester*, on the other Side of the River. Here is a good Publick School. *St. Ives* and *St. Neots* are noted for their Medicinal Waters. *Ramsey* was famous of old for its rich Abbey.

Kent is a maritime County, at the East Part of the Channel, one hundred and sixty Miles in Circumference. According to the different Nature of the Soil, it is divided into the Downs, which have Health without Wealth; the marshy Parts, that have Wealth without Health; and the Middle, that has Health and Wealth. One Part of this County is woody, another plentiful of Corn, and the third of Pasture. Its Soil yields Plenty of Wheat in some Places, in some Barley, and in others excellent Cherries and Pippins. Besides the *Thames* that parts it from *Essex*, here is the *Medway*, the *Stoure*, and other Rivers. The *Medway* Salmon is excellent, and the Trouts of *Fordwich* are of a prodigious Size. In the Time of the Heptarchy, this County alone made one of the seven Kingdoms. When the *Normans* invaded *England*, *William the Conqueror* confirmed the antient Privileges of the *Kentish* Men, called *Gavelkind*; by which the Heir Males share all the Lands alike, and though the Father be convicted of Treason, yet the Sons enjoy his Inheritance. *Canterbury*, the Capital, upon the *Stour*, is a very antient, and has been a fair and flourishing City; the Beauty and Glory whereof is decayed much. The Cathedral Church is very fine, in which eight Kings of *Kent* lie interred, and *Becket's* Tomb is to be seen. It has the Honour of being the See of the Primate of *England*, as *London* was in the Time of the Christian *Britons*. The Archbishops had a Palace here, which having been ruined, they now reside at *Lambeth-House* on the *Thames*, over-against *Westminster*. *Canterbury* consists of about fourteen Parishes. Here is a Royal School, and several Hospitals. And the City is partly inhabited by *Walloons*, an industrious People. *Rochester*, on the *Medway*, is also an antient City, and an Episcopal See, whose Revenue is but small; and therefore the *Deanry* of *Westminster* is annexed to it. Here is one of the fairest Bridges in *England*. *Maidstone*, on the *Medway*, is one of the best Towns in *Kent*, in which the Assizes are held. *Dover* is a Sea-port Town, over-against *Calais* in *France*, from which it is but seven Leagues distant. This is the Station of the Packet-Boats that are appointed for *France*, which makes *Dover* a great Thorough fare. There is a Mole that has been long repairing; and on the Top of a high and steep Rock stands *Dover-Castle*, commanding this Road, and supposed to have been built by the *Romans*. *Dover* is one of the *Cinque-Ports*, which enjoy great Privileges. *Sandwich* is also one of the *Cinque-Ports*, and was a famous Town in the Time of the *Romans*. In the Reign of Queen *Mary*, the Mouth of its Haven was so choaked up by a Ship of great Burden which sunk in it, that it proved incurable. *Rumney* is also one the *Cinque-Ports*. In *Rumney-Marsh*, as in other Parts of *England*, there are found great Timber Trees lying under Ground, as black as Ebony. *Gravesend*, upon the *Thames*, is a great Thorough fare betwixt *London* and *Dover*. *Tunbridge* is noted for its Mineral Waters, which Place is much resorted unto, in the Summer, by Persons of Quality, and others: *Bromley*, for

Hunting-ton. *St. Ives* *St. Neots.* *Kent.* *Canter-bury* *Rochester.* *Maidstone.* *Dover.* *Sandwich* *Rumney* *Gravesend* *Tunbridge*

for its College, or Hoſpital, for the Maintenance of twenty poor Miniſters Widows: *Woolwich*, upon the *Thames* for its Royal Docks: *Wye*, and *Sevenoke*, for their Grammar-Schoools; this laſt alſo for its Hoſpital. *Chatham*, on the *Medway*, adjoining to *Rocheſter*, hath ſeveral Docks and Store-houſes for Ships of War, and where the biggeſt of them are laid up in Winter. *Deptford*, upon the *Thames*, hath alſo ſeveral Docks, and Store-houſes for the Royal Navy. *Greenwich*, alſo on the *Thames*, is a very delightful Place. Here is an old Royal Houſe, with a fine Park belonging to it. But nothing ſets off this Place with greater Advantage, than the ſtately Hoſpital, built there by the late King *William* and Queen *Mary*, for diſabled Seamen. *Deal*, in the *Downs*, is much reſorted unto by Mariners, and fortified with a Caſtle. *Sheerneſs*, a ſtrong Fortreſs, is ſituate at the Influx of the *Medway* into the *Thames*, and commanding all Ships that go in and out. The Iſles of *Thanet* and *Sheepey* belong to this County, and are much of the ſame Extent; that is, eight Miles in Length, and ſix or ſeven in Breadth. *Thanet* is plentiful both of Corn and Paſture. This is the Place in which the *Saxons* ſet their firſt Footing in *Britain*. *Sheepey* ſeems to be ſo called from the Word *Sheep*, this Iſland feeding a vaſt Multitude of them. *Queenborough*, its chief Place, is privileged to ſend two Members to Parliament.

Woolwich. *Chatham.* *Deptford.* *Greenwich* *Deal* *Sheerneſs.* *Iſles of Thanet and Sheepey.* *Queenborough*

Lancaſhire is a maritime County, one hundred and ſeventy Miles in Circumference; of all maritime Counties the leaſt ſubject to Fogs, and the Inhabitants generally ſtrong-bodied. The Soil is partly upon the Level, yielding Plenty of Wheat and Barley, and the Bottom of the Hills excellent Oats. But the hilly Parts Eaſtward are generally ſtony and barren. In the flat Country there are Marſhes, that yield very good Turfs for Fewel. And there are found ſometimes whole Trees growing under Ground. The *Merſey*, *Ribble*, and *Lon*, are its principal Rivers, all emptying themſelves into the *Iriſh* Sea: The firſt parts this County from *Cheſhire* on the South, the *Ribble* waters the middle Parts of it, and the *Lon* its Northern Parts. This County has alſo ſeveral Meers in it, of which *Minander* and *Merton* are the principal. The firſt is about ten Miles long, and four broad, the biggeſt Standing Water in *England*. It breeds Abundance of Trouts, Pikes, and Perches: And particularly a Fiſh call'd Charr, not to be found elſewhere, except in *Ulles Water*. How barren ſoever ſome Parts of this County be, it abounds in wild Fowl and Fiſh; and the *Lancaſhire* Oxen are of a prodigious Bigneſs. For Fewel, it yields both Turfs and Pit-Coal. For Building, here are ſeveral Quarries: And Flax thrives here to Admiration. Of all the Counties in *England*, none has ſo many *Roman* Catholicks. *Lancaſter*, the chief Town, is ſo call'd from the River *Lon*, on which it is ſituate, and over which there is a Stone Bridge, with five Arches. Upon a Hill, near the River, ſtands a ſmall Caſtle, which is now the County Goal, and wherein are held the Aſſizes. The Town has only one Pariſh; but the Church is fair and ſpacious. *Manchеſter* does much excel *Lancaſter*, it being a rich and populous Place, ſeated upon the *Spelden*, in the Borders of *Cheſhire*. Here is a very fair College, and Market-Place. But its Collegiate Church, with a Chair of excellent Workmanſhip, are the greateſt Ornaments of this Town; which thrives very much by its Manufacture of Woollen, Cottons, and Linnen. *Liverpool* is a Seaport-Town, at the *Merſey's-Mouth*, and a Place of good Trade. On the South Side it is fortified with a Caſtle, and on the Weſt with a ſtrong Tower upon the River. *Preſton*, upon the *Ribble*, is one of the principal Town, both for Extent and Beauty. Therefore it is honoured with the Court of *Chancery*, and the Offices of Juſtice for *Lancaſter*, as a County Palatine. *Warrington*, upon the *Merſey*, is a goodly Town, with a fair Stone Bridge over the River, leading to *Cheſhire*. *Ribcheſter*, not far from *Preſton*, ſuppoſed to be the *Bretenomacum* of the Antients, in its flouriſhing Time, was ſaid to be the richeſt Town in *Chriſtendom*.

Lancaſter. *Manchеſter* *Liverpool* *Preſton* *Warrington.* *Ribcheſter*

Leiceſterſhire, an Inland County, is ninety-ſix Miles in Circuit; enjoys a good Air, and abounds in Corn and Paſture. Peaſe and Beans particularly thrive here to Admiration. It yields alſo Plenty of Sea Coals, and the Wooll of its Sheep is the largeſt in *England*. Its principal Rivers are the *Stoure*, *Reek*, and *Swift*. *Leiceſter*, the Shire-Town, upon the *Stoure*, is pleaſantly ſeated, and adorned with ſeveral fair Buildings. It conſiſts of five Pariſhes. It has been formerly a large, rich, and populous Town; had a Collegiate Church, an Abbey, and a Caſtle: But it was diſmantled by *Henry* the Second. *Abby de la Zouch* is noted for its fine Tower. And *Boſworth* for *Redmore* Battle, fought near it, between *Richard* the Third of the Houſe of *York*, and his Succeſſor *Henry* the Seventh of the Houſe of *Lancaſter*. And *Lutterworth*, for *Wickliff*, Parſon of this Place, who in the fourteenth Century preached againſt the Corruptions of the Church of *Rome*.

Leiceſterſhire *Leiceſter* *Abby de la Zouch* *Lutterworth*

Lincolnſhire, a maritime County, is one hundred and eighty Miles in Circuit. The North and Weſt Parts of it are moſt fruitful, but the Eaſt and South marſhy, yet abound in Fiſh and wild Fowl. The *Humber*, that parts it from *Yorkſhire*, and the *Trent* from *Nottinghamſhire*, are its principal Rivers. Beſides which, the *Witham*, *Nen*, and *Weland*, water the Inland Parts. This County is divided into three Parts; *Lindſey* takes up the North, and almoſt half the County; *Holland* lies South-Eaſt, and *Keſteven* Weſt from it. *Lincoln*, the Capital, on the *Witham*, ſtands upon the Aſcent of a Hill. This was a large, populous, and rich City, in *William the Conqueror*'s Time, who built a Caſtle in it; and *Remigius* Biſhop of *Dorcheſter*, removing his See thither, built the Cathedral, one of the fineſt Fabricks in *Chriſtendom*. Though this City has ſuffered much by the Wars, it is to this Day of a conſiderable Extent. *Boſton*, near the *Witham*'s Mouth, is a very good Port. There is a Tower looked upon as the fineſt in *England*. *Grantham*, upon the ſame River, is a good Town, and a great Thorough-fare to ſuch as travel to the North. The Steeple of its Church is ſo high, that it ſeems to ſtand awry. *Bolingbroke*, an Honour of the Crown, was the Birth-place of *Henry* the Fourth. *Gainſborough*, upon the *Trent*, is one of the chief Towns of this County. *Stamford*, ſtands upon the *Weland*, and borders upon *Lincolnſhire*, *Rutland*, and *Northamptonſhire*. It has ſeveral Bridges over the River, and moſt of its Buildings are of Stone. It contains ſix Pariſhes. *Grimsby* and *Kirton*, are of Note for their fair Churches. Here is alſo *Axholm*, an Iſle made by ſeveral Rivers, about ten Miles long, and four broad; yields Alabaſter, and a ſweet Shrub, called Gall.

Lincolnſhire *Lincoln.* *Boſton.* *Grantham* *Bolingbroke.* *Gainſborough* *Stamford* *Grimsby* *Kirton* *Axholm*

Middleſex, an Inland County, is eighty one Miles in Circumference. It has a ſweet and wholſome Air, and fertile Soil, much improved by the Compoſt of *London*. The *Thames*, that ſeparates it from *Surrey*, is its principal River. *London*, the Metropolis, not only of this County, but the whole Kingdom, we ſhall deſcribe by itſelf. Other Towns are, *Brentford* upon the *Thames*, *Staines* alſo upon the *Thames*, and *Uxbridge* on the *Colne*. There are about *London*, both in this County and *Surrey*, many pleaſant Towns and Villages, and in them fair Country-Houſes. In this County, particularly, there is *Iſlington*, *Highgate*, *Hampſtead*,

Middleſex *Brentford* *Staines* *Uxbridge*

Hampſted, *Kentiſh-Town*, *Chelſea*, *Kenſington*, *Fulham*, *Hammerſmith*, *Thiſtleworth*, &c. And the Palaces of *St. James's*, *Kenſington*, and *Hampton-Court*.

Monmouthſhire, formerly counted Part of *Wales*, and now reckoned among the Counties of *England*, lies on the Borders of *Wales*, watered on the South Side by the *Severn*, which falls there into the Sea. It is eighty Miles in Circuit. Here the People ſpeak both *Engliſh* and *Welch*. As woody and hilly as this County is, it is nevertheleſs very plentiful; to which the Rivers *Uſk* and *Wye*, *Monnow*, and *Rumney*, contribute very much. *Monmouth*, the Shire-Town, is pleaſantly ſeated between the *Wye* and *Monnow*, with a Bridge over each River. It was formerly fortified with a ſtately Caſtle, which is fallen to Ruin; but Part of the Wall, and three Gates, are ſtanding. *Abergavenny*, ſo called from the River *Gavenny*, on which it is ſituate, is alſo a goodly Town, well built, and which drives a great Trade in Flannel. It is encompaſſed with a Wall, and fortified with a Caſtle. *Caerleon* ſtands upon the *Uſk*, and was of old a Place of Importance. In the Time of the *Britons*, this was a Kind of Univerſity, and the See of an Archbiſhop, afterwards moved to *St. David's*. *Chepſtow*, ſeated on the *Wye*, over which it has a fair Bridge, was formerly walled about, and defended by a great Caſtle. To this Day, it is one of the beſt Towns of this County.

Norfolk, a maritime County, is one hundred and forty Miles in Circumference. Its Soil is in ſome Places fat, in ſome ſandy, and in others heavy. Towards the Sea it is level, and yields Plenty of Corn. In other Parts you will find Woods and Heaths. Thoſe feed Abundance of Cattle, and theſe infinite Numbers of Sheep and Conies. Its principal Rivers are the *Ouſe*, *Waveney*, *Yare*, and *Thryn*: Its Commodities, Corn, Wooll, Honey, and Saffron; the beſt Saffron growing near *Walſingham*: Its Manufactures, Stuffs and Stockings. The neighbouring Sea ſwarms with Herrings. Jet and Amber are ſometimes found upon the Coaſt. The Inhabitants are accounted a litigious People, and it is ſaid they have among them no leſs than fifteen hundred Attorneys. *Norwich*, the Capital, ſtands in the Middle of the County, where the *Windſor* falls into the *Yare*. In the Time of the *Saxons*, *Norwich* was the principal Seat of the *Eaſt Angles*. The Rebellion raiſed by *Kett*, a Tanner of *Windham*, brought this Town to Ruin: But it was happily reſtored by Queen *Elizabeth*, who ſent hither Part of the *Flemings* that came over for Shelter from Perſecution. Theſe *Flemings* ſettled here the Manufacture of Stuffs; and thus this City became flouriſhing. In ſhort, it is now one of the largeſt and faireſt Cities of *England*. Its principal Buildings are the Cathedral, the Duke of *Norfolk*'s Houſe, the Biſhop's Palace, and the Hoſpital. *Houghton* is noted for the Seat of Sir *Robert Walpole*. *Lyn*, or *Lyn Regis*, is a Sea Port, at the Mouth of the *Ouſe*; large, rich, and well inhabited; fortified with a large Ditch, and two Forts. *Yarmouth* is the beſt Haven in this County, ſeated at the *Yare*'s Mouth. 'Tis called *Great Yarmouth*, in Oppoſition to *Yarmouth* in the *Iſle of Wight*. The Herring Fiſhing in *September* makes this Town flouriſhing. 'Tis pretty large, well built, and fortified both by Nature and Art. But there is but one Church, noted for its lofty Spire. *Thetford*, a moſt antient Town, ſtands upon the leſſer *Ouſe*, which ſeparates *Norfolk* from *Suffolk*. The Epiſcopal See of the *Eaſt Angles* was removed from hence to *Norwich*. *Thetford* was a Loſer by this Change. But to make it ſome Amends, the *Lent* Aſſizes are uſually held here. *Caſſhorſing* is an antient, but decayed Town, near the Sea. *Walſingham*, in the Northern Parts, was a famous Place in the Times of Popery; ſuch was the Concourſe of People to it from all Parts, to worſhip the Bleſſed Virgin, hence called, *Our Lady of Walſingham*.

Northamptonſhire, an Inland County, one hundred and twenty Miles in Circuit, is one of the beſt Counties in *England*, has a healthful Air, a rich fruitful Soil, Abundance of Inhabitants, and more Noblemen's Seats than any other County. It abounds in Corn and Cattle, Wood, and Saltpetre. Its principal Rivers are the *Ouſe*, the *Welland*, and the *Nen*, all riſing in this County. *Northampton*, the Shire-Town, upon the *Nen*, is one of the prettieſt Towns in *England*. In 1675 it had the Misfortune to be reduced to Aſhes; but by a general Contribution, it was ſoon after raiſed up again much finer, and more uniform than before. *Peterborough*, upon the *Nen*, is one of the ſix Biſhopricks erected by *Henry* the Eighth, after the Diſſolution of the Monaſteries. *Brackley*, *Higham-Ferrers*, *Oundle*, and *Wellinborough*, are of Note for their Grammar-Schools. *Oundle*, upon the *Nen*, is of ſome Note beſide for its fair Church, but chiefly for its *Drumming-Wells*. *Toxeceter* was formerly a Place of ſuch Strength, as to baffle the *Danes*. Beſides theſe Towns, we may take notice of *Fotheringhay Caſtle*, in which *Mary* Queen of *Scots* was beheaded: Of *Naſeby*, in the Neighbourhood of which was fought the famous Battle, in which King *Charles* the Firſt loſt the Day; and of the Caſtle of *Holdenby*, where the King was kept Priſoner ſome Months.

Northumberland, a maritime County, is one hundred and forty-three Miles in Circumference. 'Tis none of the moſt fruitful, but there are ſome Parts of it very good, eſpecially towards the Sea Side. Here are ſeveral Lead and Coal Mines. Wild Fowl and Fiſh abound in this County. *Newcaſtle upon the Tine*, the Capital, is built upon the Aſcent of a Hill, with a Key by the River Side, for the Conveniency of Ships. 'Tis a large, populous, rich, trading Town. The Houſes are for the moſt Part built of Stone, and moſt of the Streets very ſteep. The Town-Houſe is not far from a Stone Bridge over the River, with an Iron Gate in the Middle, parting this County from *Durham*. This is a Place of great Trade for Sea Coals, which Commodity is fetched thence for *London* eſpecially. It conſiſts of four large Pariſhes. This Town was formerly fortified with a great Caſtle, the Walls of which are yet ſtanding. It enjoys great Privileges, being one of thoſe called County Towns, or Counties Corporate. *Berwick upon the Tweed* is a Frontier Town, which formerly belonged to *Scotland*. It is ſituate on an Eminence that ſhoots forth into the Sea, and watered Southward by the River, which makes it a Peninſula. The Town is large, well inhabited, and fortified. Heretofore this Town had often changed Maſters, ſometimes falling to the Share of the *Engliſh*, and ſometimes to that of the *Scots*, till the Reign of *Edward* the Fourth, when Sir *Thomas Stanley* retook it the laſt Time from the latter. It is a County Town, independant of the Lord Lieutenant of the County. *Morpeth* is a good Town, ſeated on the *Wensbeck*. *Hexham* was formerly a Biſhop's See. Its Cathedral was ſtately, before it came to be partly ruined by the *Scots*. Near the Coaſt of this County there are three Iſles, the principal of which is called *Holy-Iſland*, and the two others, *Cocket* and *Farn*. *Holy-Iſland* is not far from *Berwick*, and took its Name as a retiring Place for Biſhops, Monks, and others, who being weaned from the World, made this their Sanctuary. It is but a ſmall Iſland, the Air of which is not wholſome, nor the Soil fruitful. It is there

for its College, or Hoſpital, for the Maintenance of twenty poor Miniſters Widows: *Woolwich*, upon the *Thames* for its Royal Docks: *Wye*, and *Sevenoke*, for their Grammar-Schoools; this laſt alſo for its Hoſpital. *Chatham*, on the *Medway*, adjoining to *Rocheſter*, hath ſeveral Docks and Store-houſes for Ships of War, and where the biggeſt of them are laid up in Winter. *Deptford*, upon the *Thames*, hath alſo ſeveral Docks, and Store-houſes for the Royal Navy. *Greenwich*, alſo on the *Thames*, is a very delightful Place. Here is an old Royal Houſe, with a fine Park belonging to it. But nothing ſets off this Place with greater Advantage, than the ſtately Hoſpital, built there by the late King *William* and Queen *Mary*, for diſabled Seamen. *Deal*, in the *Downs*, is much reſorted unto by Mariners, and fortified with a Caſtle. *Sheerneſs*, a ſtrong Fortreſs, is ſituate at the Influx of the *Medway* into the *Thames*, and commanding all Ships that go in and out. The Iſles of *Thanet* and *Sheepey* belong to this County, and are much of the ſame Extent; that is, eight Miles in Length, and ſix or ſeven in Breadth. *Thanet* is plentiful both of Corn and Paſture. This is the Place in which the *Saxons* ſet their firſt Footing in *Britain*. *Sheepey* ſeems to be ſo called from the Word *Sheep*, this Iſland feeding a vaſt Multitude of them. *Queenborough*, its chief Place, is privileged to ſend two Members to Parliament.

Woolwich. *Chatham*. *Deptford*. *Greenwich*. *Deal*. *Sheerneſs*. *Iſles of Thanet and Sheepey*. *Queenborough*.

Lancaſhire is a maritime County, one hundred and ſeventy Miles in Circumference; of all maritime Counties the leaſt ſubject to Fogs, and the Inhabitants generally ſtrong-bodied. The Soil is partly upon the Level, yielding Plenty of Wheat and Barley, and the Bottom of the Hills excellent Oats. But the hilly Parts Eaſtward are generally ſtony and barren. In the flat Country there are Marſhes, that yield very good Turfs for Fewel. And there are found ſometimes whole Trees growing under Ground. The *Merſey*, *Ribble*, and *Lon*, are its principal Rivers, all emptying themſelves into the *Iriſh* Sea: The firſt parts this County from *Cheſhire* on the South, the *Ribble* waters the middle Parts of it, and the *Lon* its Northern Parts. This County has alſo ſeveral Meers in it, of which *Minander* and *Merton* are the principal. The firſt is about ten Miles long, and four broad, the biggeſt Standing Water in *England*. It breeds Abundance of Trouts, Pikes, and Perches: And particularly a Fiſh call'd Charr, not to be found elſewhere, except in *Ulles Water*. How barren ſoever ſome Parts of this County be, it abounds in wild Fowl and Fiſh; and the *Lancaſhire* Oxen are of a prodigious Bigneſs. For Fewel, it yields both Turfs and Pit-Coal. For Building, here are ſeveral Quarries: And Flax thrives here to Admiration. Of all the Counties in *England*, none has ſo many *Roman* Catholicks. *Lancaſter*, the chief Town, is ſo call'd from the River *Lon*, on which it is ſituate, and over which there is a Stone Bridge, with five Arches. Upon a Hill, near the River, ſtands a ſmall Caſtle, which is now the County Goal, and wherein are held the Aſſizes. The Town has only one Pariſh; but the Church is fair and ſpacious. *Manchester* does much excel *Lancaſter*, it being a rich and populous Place, ſeated upon the *Spelden*, in the Borders of *Cheſhire*. Wild Fowl and Fiſh abound in this County. *Newcaſtle upon the Tine*, the Capital, is built upon the Aſcent of a Hill, with a Key by the River Side, for the Convenience of Ships. 'Tis a large, populous, rich, trading Town. The Houſes are for the moſt Part built of Stone, and moſt of the Streets very ſteep. The Town-Houſe is not far from a Stone Bridge over the River, with an Iron Gate in the Middle, parting this County from *Durham*. This is a Place of great Trade for Sea Coals, which Commodity is fetched thence for *London* eſpecially. It conſiſts of four large Pariſhes. This Town was formerly fortified with a great Caſtle, the Walls of which are yet ſtanding. It enjoys great Privileges, being one of thoſe called County Towns, or Counties Corporate. *Berwick upon the Tweed* is a Frontier Town, which formerly belonged to *Scotland*. It is ſituate on an Eminence that ſhoots forth into the Sea, and watered Southward by the River, which makes it a Peninſula. The Town is large, well inhabited, and fortified. Heretofore this Town had often changed Maſters, ſometimes falling to the Share of the *Engliſh*, and ſometimes to that of the *Scots*, till the Reign of *Edward* the Fourth, when Sir *Thomas Stanley* retook it the laſt Time from the latter. It is a County Town, independant of the Lord Lieutenant of the County. *Morpath* is a good Town, ſeated on the *Wensbeck*. *Hexham* was formerly a Biſhop's See. Its Cathedral was ſtately, before it came to be partly ruined by the *Scots*. Near the Coaſt of this County there are three Iſles, the principal of which is called *Holy-Iſland*, and the two others, *Cocket* and *Farn*. *Holy-Iſland* is not far from *Berwick*, and took its Name as a retiring Place for Biſhops, Monks, and others, who being weaned from the World, made this their Sanctuary. It is but a ſmall Iſland, the Air of which is not wholſome, nor the Soil fruitful. It is there-

fore but thinly inhabited, there being but one Town, with a Caſtle and a Church. The Haven is pretty good, and defended with a Fort.

Nottingham-ſhire *Nottinghamſhire*, an Inland County, one hundred and ten Miles in Circuit, has a wholſome Air, and different Sorts of Soil; for the South East Parts are fertile, the Weſtern woody, and yield Abundance of Pit-Coals. Here is the famous Foreſt of *Sherwood*. Beſides the *Trent*, which parts this County from *Lincolnſhire*, here is the *Idle*, &c. *Nottingham* *Nottingham*, the Shire-Town, on the *Leen*, is a pleaſant and well built Town, conſiſting of three Pariſhes, and having one of the fineſt Caſtles in *England*. *Newark* *Newark*, upon the *Trent*, took that Name from a ſtately Caſtle. Its Walls, ſtill to be ſeen, are a plain Demonſtration of its Magnificence. There is in this Town a fair Church, with a Steeple of curious Workmanſhip. *Mansfield* *Mansfield* and *Workſop* *Workſop* are noted for their Malt-Trade, and *Workſop* for its Licoriſh.

Oxfordſhire *Oxfordſhire*, an Inland County, one hundred and thirty Miles in Circumference, has a ſweet healthful Air, and a Soil fertile in Corn and Fruits, and rich in Paſture. Beſides the *Thames*, here's the *Cherwel*, *Windruſh*, *Evenlode*, &c. *Oxford* *Oxford*, the Capital, ſeated at the Influx of the *Cherwel* into the *Iſis*, is both a fair City, and a famous Univerſity. Beſides the Cathedral, here are thirteen Pariſh Churches, ſo that *Oxford* is one of the largeſt Cities in *England*. And in Point of Situation, it has the Advantage of *Cambridge* both for Health and Pleaſure. As a City, it is governed by a Mayor and Aldermen, but in Subjection to the Chancellor, or Vice-Chancellor of the Univerſity. As an Univerſity, except her Siſter *Cambridge*, the World cannot ſhew ſuch another Nurſery of Learning as *Oxford*, nor ſuch ſtately, or ſo well endowed Colleges. Nor is there any where elſe a greater Opportunity for Scholars to improve themſelves, by converſing with Men of Learning, or the Uſe of Libraries. Here are eighteen endowed Colleges, and ſix Halls not endowed; each of them under a Head, called Maſter, Warden, Preſident, Rector, Principal, or Provoſt. There are reckoned in *Oxford* one thouſand Students, that live upon the Revenues of the Colleges; and of other Students, that pay for their Maintenance, about twice as many: Beſides Stewards, Manciples, Butlers, Cooks, Porters, Gardeners, *&c.* Every College and Hall is tied to certain Statutes, for the better Government thereof. And for the Students publick Exerciſes, the Year is here divided, as by Lawyers, into Four Terms. During theſe Terms, the Students have within their own Walls Lectures and Diſputations. And in ſome of them they have publick Lectures for all Comers, with large Degrees Salaries for the Readers. The firſt Degree taken here, is that of Batchelor of Arts, and *Lent* is the proper Time for it. In order to which, the Party muſt perform all Exerciſes during the Space of four Years. The next Degree is that of Maſter of Arts: To attain which, three Years more are required. The proper Time for taking this Degree is when the Act is kept. For the three Faculties of Divinity, Law, and Phyſick, there is a higher Degree, which is that of Doctor.

Libra- For the publick Uſe of this Univerſity, here is ries, The the famous *Bodleian* Library, conſiſting of many Thouſands of choice printed Books, beſides a great Number of Manuſcripts. Here are alſo the *Aſhmolean* and the *Savilian* Libraries, both full of Manuſcripts. Amongſt the private Libraries of Colleges, *Baliol*, *Merton*, *Magdalen*, *New-College*, St. *John*'s, and *Corpus Chriſti*, are the beſt. The Theatre is a curious Piece of Architecture, for ſcholaſtick Exerciſes, with a fair Printing Office, built by the Beneficence of Dr. *Sheldon*, Archbiſhop of *Canterbury*. The *Muſeum*, at the Weſt End of the Theatre, is a ſtately Pile of ſquared Stone, built at the Charge of the Univerſity. It is a Repoſitory of natural Rarities, and of ſeveral *Roman* Antiquities. Here is alſo a Laboratory, furniſhed with all Sorts of Materials for Chymical Practice; a Store Room for Preparations, and another Room with a Chymical Library. The Phyſick Garden, a delightful Place to walk in, is alſo of great Uſe to improve *Botanick* Knowledge. The Magiſtrates of this Univerſity, are the Chancellor, High Steward, Vice-Chancellor, and Proctors. The firſt is uſually one of the prime Nobility, choſen by the Students themſelves in Convocation. The High Steward is nominated by the Chancellor, and approved by the Univerſity. The Vice-Chancellor, who is always the Head of ſome College, and in holy Orders, is yearly elected in Convocation. The Proctors are two Maſters of Arts, yearly choſen by Turns out of the ſeveral Colleges.

Other Market-Towns of *Oxfordſhire*, are *Woodſtock* *Woodſtock*, formerly a Royal Manor, but ſettled by Act of Parliament upon the Duke of *Marborough*, as a publick Acknowledgment of his Grace's Services to the Nation; particularly at the Battle of *Blenheim*; to perpetuate the Memory whereof, here is a ſtately Palace called *Blenheim-Houſe*. Here was formerly a Labyrinth, in which Fair *Roſamond*, a Concubine of *Henry* the Second, was poiſoned. *Banbury* *Banbury*, upon the *Cherwel*, a pleaſant and rich Town, is particularly noted for the Excellency of its Cheeſe: But more for the Battles fought in its Neighbourhood, and the Sieges it has ſuſtained. *Burford* *Burford*, on the *Windruſh*, is a very antient Town. Horſe-Saddles are the chief Manufacture of this Place. *Henley* *Henley* is noted for its Malt Trade; *Tame* *Tame*, for its Grammar-School; *Whitney* *Whitney*, for its Blankets, Free-School, and Library. At the Confluence of the *Tame* and *Iſis* ſtands *Dorceſter* *Dorceſter*, a Town of Note among the antient *Romans*, and ſince that a Biſhop's See.

Rutland *Rutland*, an Inland County, forty Miles in Circuit, yields Plenty both of Corn and Cattle, and feeds an infinite Multitude of Sheep: The Wooll whereof (like the Soil) is reddiſh. From whence this Country is called *Rutland*; *i. e. Red-Land*. Here is Abundance of Wood, and ſeveral ſmall Rivers, the principal of which are the *Welland* and *Waſh*. *Oakham* *Oakham*, the principal Town, ſtands in the rich Valley of *Cathmos*. Here's a Caſtle, in which the Aſſizes are kept, an Hoſpital for the Poor, and a Free-School for the Education of Youth. *Uppingham* *Uppingham* is a neat and well-built Town, that ſtands upon a Hill. There is an Hoſpital, and a Free-School.

Shropſhire *Shropſhire*, an Inland County, is one hundred and thirty-four Miles in Circumference. Here the Inhabitants breathe a good Air, and have the Benefit of a fruitful Soil, though hilly on the South and Weſt. It yields Plenty of Wheat and Barley, of Pit-Coals, Wood, and Iron. Beſides the *Severn*, that runs through this County, here are the *Roden*, *Teme*, &c. *Shrewsbury* *Shrewsbury*, the Shire-Town, has two Bridges over the River *Severn*, which almoſt ſurrounds the Town. In the Reign of *William the Conqueror*, it was an important Place, and to this Day, it makes a pretty good Figure, by its Trade with *Wales*. Here are five Churches, two of them with lofty Spires. *Ludlow* *Ludlow* is alſo a Place of Note, ſurrounded with a Wall, and fortified with a Caſtle; in which was kept the Court of the *Marches of Wales*, till it was ſuppreſſed by Act of Parliament. *Bridgenorth* *Bridgenorth* is ſeated

ed upon the *Severn*, and has a fair Stone Bridge over that River. It consists of two Parishes. This Town was formerly fortify'd with a Wall, a Ditch, and a Castle built upon a Rock, but fallen to Ruin.

Somersetshire, a Maritime County, 204 Miles in Circuit, is plentiful of Corn and Pasture, most pleasant in the Summer, but very troublesome to Travellers in the Winter. Besides the *Severn*, which empties itself here into the Sea, here is the *Avon*, *Frome*, *Parret*, *Tor*, and *Tone*. The Oxon in this County are of as large a Size as those in *Lincolnshire*. This County yields also Lead and Copper, Lapis calaminaris, Crystal, and Woad for Dyers. Its chief Manufactures are Woollen Cloth, and Serges. At *Cheddar* they make the best and the biggest Cheeses in *England*. The whole Milk of the Parish goes for the making of it. *Bristol*, the Capital, upon the *Avon*, stands part in this County, and part in *Glocestershire*. Next to *London*, this is the most trading and flourishing Place in *England*; happily seated both for the *Welch* and *West-India* Trade. 'Tis a fair, large, and populous Place; has a Stone Bridge over the River, with Houses on both Sides, making a Street, as *London* Bridge. It has also a convenient Key, for the loading and unloading of Ships. Ten Miles from hence, the *Avon* falls into the *Severn*'s Mouth. *Bristol* has been formerly a Place of Strength, and there was a Castle, but it was demolished by *Oliver Cromwel*. It is a County Town. *Bath*, also upon the *Avon*, is more famous for its Baths, than its Beauty. It stands in a Bottom, surrounded with Hills, out of which spring its Mineral Waters and Baths, which are much resorted to in the Summer Season. *Wells* is a neat, well-built, and populous Town; called *Wells*, from the many Springs that are about it. This City, in Conjunction with *Bath*, is a Bishop's See. Its Cathedral is a very fine Pile. *Bridgewater*, on the *Parret*, is a goodly Town. *Taunton* for its Antiquity; *Taunton* for its Manufacture of Woollen Cloth, and Serges; *Minehead* for its Harbour; *Bruton* for its Church, School, and Hospital; and *Glastenbury* for having been one of the richest Abbeys in *England*.

Staffordshire is an Inland County, 141 Miles in Circumference. The Air is sharp and healthful; the Soil diverse: For Northward 'tis hilly and barren, Southward it yields Plenty of Corn and Grass, Iron, and Pit-Coals; of which last curious Utensils are made, as black as Jet. The Inland Parts are level, but woody. This County yields also good Stone, Marble, Alabaster, and Lime-Stone for Building. Besides the *Trent*, that waters it Northward, here is the *Dove*, *Churner*, *Blithe*, *Line*, *Sow*, and other small Rivers. The *Dove* makes the neighbouring Lands very fruitful, and the Sheep that feed upon them yield the best Mutton in *England*. But, besides those fresh Waters, here are Salt-Springs, very near as good as the Salt Springs of *Cheshire*. *Stafford*, the Shire Town, upon the *Sow*, is a well-built and agreeable Town, consisting of two Parishes, and having a Free-School. *Litchfield*, and *Coventry* in *Warwickshire*, make jointly a Bishop's See. *Burton*, upon *Trent*, is noted for its Bridge, and of late for its strong Ale. *Wolverhampton* for its Collegiate Church, which is annexed to the Deanery of *Windsor*.

Suffolk is a Maritime Province, 140 Miles in Compass. The Air is wholsome here, except towards the Sea, but the Soil diverse: Sandy and full of Heaths towards the Sea; but yielding Plenty of Rye, Peas, and Hemp, and feeding vast Multitudes of Sheep. Further off from the Sea are the *Woodlands*, otherwise called *High Suffolk*, which feeds abundance of Cattle. But the most fruitful Parts of this County are about St. *Edmondsbury*, and North-West from it. There are above 40 Parks in this County. Its principal Rivers are the *Stoure*, *Breton*, *Deben*, *Orwell*, and *Blithe*, &c. Here is some Cheese made tolerable good, but *Suffolk* Butter is counted excellent. Its Manufactures are Woollen and Linen Cloth. *Ipswich*, the Capital, upon the *Stoure*, was formerly one of the most considerable Towns in *England*, till the *Danes* reduced it, in a Manner, into a Heap of Ruins. In the *Norman*'s Time it began to recover itself, and consists at this Time of 14 Parishes. Here's a College, founded by the famous Cardinal *Woolsey*. St. *Edmondsbury* is a Town most pleasantly seated, and enjoying a very good Air. It took its Name from *Edmund* the Martyr, King of the *East-Angles*. *Canute*, King of *England*, Son of the *Danish* King *Sueno*, the Author of *Edmund*'s Murder, erected here a stately Abbey. *Dunwich*, a Sea-Town, was of old of great Note, and an Episcopal See, which was removed first to *North Elmham*, then to *Thetford*, and afterwards from *Thetford* to *Norwich*. *Sudbury* stands upon the *Stoure*, and is a rich and populous Place, consisting of three Parishes, and having a great Manufacture of Cloth. *Eye* is a good Town, and a Peculiar of the Crown. Here is a fair Church, some Ruins of a Castle, and of an antient Abbey. *Stow-Market*, upon the *Orwell*, is a large and beautiful Town, that drives a great Trade in Stuffs, and is adorned with a spacious Church. *New-Market* borders upon *Cambridgeshire*, and is a noted Place for Horse-Racing, in a Plain near it. *Beccles* on the *Waveney*, and *Buddesdale*, are noted for their publick Schools: *Hadleigh*, *Muldenhall*, and *Lavenham*, for their beautiful Churches.

Ipswich. St. *Edmondsbury*. *Dunwich*. *Sudbury*. *Eye*. *Stow-Market*. *New-Market*. *Beccles*. *Buddesdale*, &c.

Surrey, an Inland County, is 112 Miles in Circuit. 'Tis observed, that the Skirts of this County are the most fruitful, and the Middle Parts barren in Comparison. However, in Point of Health, the middle Parts have the Advantage. Besides the *Thames*, here is the *Wye*, which runs through *Guilford*, the *Mole* through *Darking*, and the *Wandle*, all three emptying themselves into the *Thames*. *Guilford*, the Shire-Town, upon the *Wye*, is a good Town, consisting of three Parishes. *Southwark*, against *London*, on the South-Side of the *Thames*, is partly under the Government of the Lord-Mayor of *London*; but with many Privileges, particularly that of sending two Members of Parliament. 'Tis a Suburb, if it may be so called, of a large Extent. The high Street, leading from *London-Bridge* to St. *George's* Church, deserves a particular Notice, as being the Center of Trade for this County. Besides St. *George's* Church, here are three or four more Churches And in this Borough, you will find St. *Thomas*'s Hospital, and two Prisons for Debt, one called the *King*'s-*Bench* Prison, and the other the *Marshalsea*; besides a County Jail for Criminals, lately built. At *Kingston* upon *Thames*, the Assizes are commonly held. *Croydon*, upon the *Wandle*, is noted for its Steeple, for the Archbishop of *Canterbury*'s Palace, and its Free-School and Hospital, founded by Archbishop *Whitgift*. Near this Town are *Banstead Downs*, famous for Horse-Races. *Ryegate* stands in a Valley, called *Holmes Dale*: Near this Town is abundance of Fuller's Earth. *Epsom* is a delightful Place, noted for its Mineral Waters, and much resorted to, in the Summer. *Richmond* is a pretty large Town, very agreeable in the Summer-Season, and much frequented by the Gentry. His Majesty has a pleasant Seat here. Here is also a noble Park, encompass'd with a Brick-Wall. *Battersea*, *Putney*, *Mortlack*, *Wandsworth*, *Clapham*, *Dulwich*, &

Surrey. *Guilford*. *Southwark*. *Kingston*. *Croydon*. *Epsom*. *Richmond*. *Battersea*, *Putney*, *Mortlack*, *Wandsworth*, *Clapham*, *Dulwich*, &

Malden,

Micham, *Cheam*, and *Stretham*, are alſo delightful Places in the Summer-Seaſon.

Suſſex *Suſſex*, a Maritime County, is 158 Miles in Compaſs. Its *Downs*, near the Sea, are charming, and its Valleys (called the Wilds of *Suſſex*) very plentiful, of Oats eſpecially. The Foreſts are barren, but the Eaſt Parts yield abundance of Iron. Here the Roads are ſo deep in Winter, that in ſome Places the Coaches muſt be drawn with Oxen. This County is well water'd, but with Rivers of no long Courſe. *Arun* is the principal. A *Suſſex* Carp, an *Arundel* Mullet, an *Amerley* Trout, and a *Chicheſter* Lobſter, are much admired: And ſo is the Wheat-Ear, a Bird as good as a *French* Ortelan. Its principal *Chicheſter.* Manufactures are Iron Guns, and Glaſs. *Chicheſter*, the Capital, on the *Levant*, was formerly the Royal Seat of the South *Saxons*. It now conſiſts of five or ſix Pariſhes, four large Streets, and a fair Market-Place. Its greateſt Ornament is the Cathedral, which has been twice burnt down, *Lewes* and as often built up again. *Lewes* ſtands upon an Eminence, and has ſix Pariſhes. Here the Aſſizes are moſt commonly held, and ſometimes at *Haſtings.* *Eaſt-Grinſtead*. *Haſtings*, one of the Cinque-Ports, is a very antient Town, and has two Pa- *Rye.* riſhes. *Rye* is the uſual Landing-Place from *Diepe* into *England*. Here they have excellent Her- *Winchelſea* rings. *Winchelſea* has been formerly a conſiderable Town; but the Sea being gone from it, has contributed very much to its Decay.

Warwickſhire *Warwickſhire*, an Inland County, is 135 Miles in Circuit, and enjoys both a good Air, and a plentiful Soil, eſpecially on the South. Northward, 'tis a woody Country. Among its Rivers, *Avon* is the Chief, which runs through the Midſt of it, and falls into the *Severn*. Cheeſe is its *Warwick* chief Commodity. *Warwick*, the Shire-Town, upon the *Avon*, is a well-built Town, conſiſting of two Pariſhes, with a Free-School, and ſeveral Hoſpitals; but the Caſtle is its greateſt Ornament. *Coventry.* *Coventry*, upon the *Sherburn*, took that Name from a Convent founded here by *Canute*. 'Tis ſituate upon the Aſcent of a Hill, having two Pariſhes, three Churches, and four Steeples. But the greateſt Ornament of *Coventry* is the Croſs in the Middle of the City. The Roads leading to it are well pav'd, for about a Mile out of Town. Here is a free-School, and a fair Library; and *Birmingham* for the Poor, an Hoſpital. *Birmingham* is of *Lary* Note for its Works of Iron and Steel, and *Polleſworth* for its School. Near *Warwick*, there is a *Guy Cliff* Rock called *Guy-Cliff*, from *Guy* of *Warwick*, the *Hercules* of *England*.

Weſtmoreland *Weſtmoreland*, in the North-Weſt Parts of *England*, is 120 Miles in Compaſs, and is a hilly and marſhy Country, but not without fruitful Spots of Ground, eſpecially Southward. The *Eden*, *Ken*, *Lon*, and *Eamon*, are its principal Rivers. *Ulles* Water, and *Alemander-Mere*, border on this County. *Appleby* *Appleby*, the Shire-Town, upon the *Eden*, has been formerly a conſiderable Place. At this Time there is but one Street, and that but thinly peopled. However, the Aſſizes are kept here, and here is a publick School, and an Hoſpital. *Kendal* *Kendal*, the beſt Town in this County, is ſeated upon the *Ken*, in a Valley. 'Tis rich, and well inhabited, driving a good Trade in Woollen Cloths, Druggets, Serges, Cotton-Stockings, and Hats. Over the River there are two Bridges of Stone, and another of Wood. The Church of *Kendal* is both fair and ſpacious, and there are two Chapels of Eaſe beſides. Near the Church-Yard ſtands a publick School, from whence a certain Number of Scholars are ſent from time to time to *Oxford*. *Lonſdale*, or *Kirby Lonſdale*, upon the *Lon*, is a large and well-built Town, noted beſides for its Manufactures of Cloth. Here is a fine Church, and a Stone-Bridge over the River.

Wiltſhire, an Inland County, 140 Miles in Cir- *Wiltſhire.* cuit, is a healthful Country. Northward, 'tis ſomewhat hilly, and woody; but Southward, 'tis pretty level. In the middle Parts of it is *Salisbury* Plain, noted for its large Extent, and for feeding innumerable Flocks of Sheep. Its principal Rivers are the *Iſis*, *Kennet*, *Avon*, *Willy*, and *Nadder*. This County drives a great Manufacture of Wooll. *Salisbury*, the Capital, is one *Salisbury* of the fineſt Cities in *England*, watered chiefly by the *Avon*. Here are large Strees, a fair Market-Place, and a Town-Houſe. But the greateſt Ornament of this City is the Cathedral, that has as many Doors as Months, Windows as Weeks, and Pillars as Days in the Year. Its Steeple is the higheſt of any in *England*. *Hindon* and *Chip-* *Hindon* *penham* are noted for their great Markets; *Cane.* *Chippenham* for the Provincial Synod held here in 997; *Marl-* *Cane.* *borough*, for the Title of a Duke it gave to *John* *Marlborough.* *Churchill*, one of the Heroes of our Days. *Wil-* *John Churchill.* *ton* has been formerly the chief Town of this *Wilton.* County, whence the Name of *Wiltſhire*.

Worceſterſhire, an Inland County, 130 Miles *Worceſterſhire.* in Compaſs, yields Plenty of Corn, Paſture, Cattle, Fiſh, and Fruit. The Vale of *Eveſham* is noted eſpecially for its great Fertility. Here are alſo ſeveral Salt Springs. Its Rivers are the *Severn*, *Avon*, *Salwarp*, *Stoure*, &c. *Worceſter*, the *Worceſter.* Capital, upon the *Severn*, is a large, rich, and populous City, conſiſting of ten Pariſhes. Over the River it has a fair Stone-Bridge, with a Tower, ſaid to be built by the *Romans*. 'Twas under this City Walls the Battle was fought in 1651, which proved ſo fatal to King *Charles* the Second, as to force him to quit the Kingdom. *Worceſter* drives a great Trade in Cloth. *Eveſham*, *Eveſham* on the *Avon*, is a good trading Place. *Droitwich*, *Droitwich* on the *Salwarp*, is noted for its Salt-Pits; *Stur-* *&c.* *bridge*, for its School and Library; and *Kidder-* *minſter* for its Stuffs.

Yorkſhire, a Northern Maritime County, is 320 *Yorkſhire.* Miles in Compaſs. 'Tis divided into the North, Eaſt, and Weſt-Riding; this latter the largeſt. 'Tis generally a moſt fruitful Country, yielding Plenty of Corn, Cattle, Fiſh, and Wild-Fowl. Here are alſo abundance of fine Horſes, Lime-Stone, Jet, and Allum. *Surely* is noted for its Goats, *Sheffield* for Iron, *Richmondſhire* for its Lead, Copper, and Pit Coals. Its principal Rivers are the *Humber*, *Are*, *Calder*, *Don*, *Derwent*, *Nyd*, *Ouſe*, *Swall*, *Toure*, *Warf*, and *Tees*. *York*, the Capital, ſtands upon the *Ouſe*. 'Tis a *York.* fair, large, rich, and populous Place; in which are reckoned 28 Churches and Chapels of Eaſe. *York* was in ſuch Eſteem among the antient *Romans*, that *Severus* the Emperor had a Palace in it, in which he ended his Days. But it has ſuffer'd much by the frequent Revolutions of the State, in the Time of the *Saxons*, *Danes*, and *Normans*. The greateſt Ornament of this City is its Cathedral, which deſerves to be put in the firſt Rank of the Cathedrals in *Europe*. The Mayor of *York* bears the Title of Lord, as the Mayor of *London* does, there being but thoſe two Lord Mayors all over *England*. *Hull*, or *King-* *ſton upon Hull*, is a good Port, and a well fortify'd Town. 'Tis a Place of great Trade, and of a large Extent, though there be but two Pariſhes. *Rippon* is a good Town upon the *Toure*, where a *Rippon.* great deal of Cloth, and the beſt Spurs in *England* are made. Here is a Collegiate Church, that has three very lofty Spires. *Scarborough* is a good *Scarborough.* Harbour, fortify'd with a Caſtle, wherein a Garriſon is kept. This Town is almoſt inacceſſible

by

by Land, surrounded with the Sea, and very steep Rocks, except on the West Side, which is fenced with a strong Wall. The Town is not large, but pretty well inhabited, and a good trading Place. It has a commodious Key. Formerly there was a fine Tower, which served as a Land-Mark for Ships, before it fell by our Civil Wars. This Place is noted for its famous Spaw.

Richmond. *Richmond*, upon the *Swale*, in the North-Riding, is the chief Place of a District, hence called *Richmondshire*, a spacious Name for a barren and hilly

Pontefract Country. *Pontefract*, or *Pomfret*, is a neat Town, that had formerly a strong and stately Castle, which fell by the Civil Wars. 'Twas in this Castle

Leeds *Richard* II. was barbarously murdered. *Leeds*, on the *Are*, is one of the best Towns of this County, and was in the Heptarchy the Royal Seat of the Kings of *Northumberland*. Noted besides for

Halifax. its great Manufacture in Cloth. *Halifax*, formerly called *Horton*, is a good large Town, with Stone-built Houses. It stands upon the steep Ascent of a Hill, in a barren Soil. The Woollen Manufacture is the principal here. *Duncaster*, on *Duncaster.* the *Dun*, is a Town in which there was formerly a Castle. Here is a fair Church, with a stately Steeple. Its chief Manufactures are Stockings, Gloves, and knit Waistcoats. *Wakefield*, upon *Wakefield* the *Calder*, is noted for the Battle fought near it, between *Henry* the Sixth, and *Richard* Duke of *York* his Rival. *Sheffield* is noted for its Smiths *Sheffield, &c* Trade; *Knaresborough* for its Licorish, and Medicinal Waters; *Rotheram* for its three Schools, one for Writing, another for Languages, and the third for Musick; *Ripley* for Licorish; *Sherborn* for its Free-School; *Burlington* for its Bay. There are in this County two Boroughs that send Members to Parliament, which are no Market-Towns; *Aldborough* in the *North Riding*, and *Boroughbrigg* in the *West Riding*.

CHAP. III.

A Description of Wales, *general and particular; treating of its Name, Extent, Climate, Divisions, Counties, Inhabitants, History*, &c.

Wales WE subjoin *Wales* to *England*, as being incorporated with it, and living under the same Laws; though the Countries differ very much, and the *Welch* have a very different Language from the *English*. This Country

Face of the Country. is for the most Part mountainous, yet it yields wherewith to subsist its Inhabitants; and some Parts of it are as fruitful as any Part of *England*. The antient *Romans* divided *Britain* into three Parts, *viz. Britannia Prima*, containing the South of *England*; *Britannia Secunda*, containing *Wales*; and *Maxima Cæsariensis*, the North Parts of *Eng-*

Inhabitants *land*. Hither most of the *Britons* fled from the victorious *Saxons*; and their Posterity, the *Welch*,

Name have ever since inhabited that Country. Some Authors are of Opinion, that the Name of *Wales* came from *Idwallo*, Son of *Cadwallader*, the last King of the *Britons*.

Situation. Its Situation is Westward, the Eastern Parts of it bordering upon *Cheshire*, *Shropshire*, *Herefordshire*, and *Monmouthshire*, in *England*; and the

Extent. Western watered by the *Irish* Sea. Its Extent is about a fifth Part of *England*, and does hardly exceed the four Eastern and Maritime Counties of *Norfolk*, *Suffolk*, *Essex*, and *Kent*. In which Compass it contains seven hundred and fifty-one Parishes, fifty-eight Market-Towns, and above three hundred thousand People. Its Air is clear

Air and sharp; the Cattle small, but all Provisions good and cheap. Here is particularly Abundance of Goats, which naturally delight in hilly Places: And for Fewel, great Plenty of Wood, Coals, and Turfs. As for Harbours, the World can hardly shew one safer and more capacious than *Milford-Haven*. This Haven consists of many

Rivers. Creeks, Bays, and Roads for Ships. Here are also many Rivers; as the *Dee*, *Wye*, *Usk*, *Conway*, *Clwyd*, *Tivy*, and many others of less Note; beside the *Severn*, that rises in this Country.

Division The Division of *Wales* is into North and South. *North Wales* is subdivided into *Anglesey*, *Caernarvonshire*, *Denbighshire*, *Flintshire*, *Merionethshire*, and *Montgomeryshire*. *South Wales*, into *Brecknockshire*, *Cardiganshire*, *Carmardenshire*, *Glamorganshire*, *Pembrokeshire*, and *Radnorshire*. *South Wales* contained formerly *Monmouth* and *Hereford* Shires, now two *English* Counties, and all *Shropshire*, beyond the *Severn*, with the Town of *Shrewsbury*. Of the aforesaid twelve Counties, all but *Montgomery*, *Radnor*, and *Brecknockshire*, are watered by the Sea. *Pembroke*, *Caermarden*, and *Glamorganshire*, in *South Wales*; *Anglesey*, *Denbighshire*, and *Montgomeryshire*, in *North Wales*; are the most plentiful. There are four Bishopricks in *Wales*, all belonging to the Province of *Canterbury*, *viz. St. David's*, *St. Asaph*, *Bangor*, and *Landaff*.

Among the Counties of *North Wales*, the first *North Wales.* is *Anglesey*, an Island in the North-West Parts, *Anglesey.* about eighty Miles East of *Dublin* in *Ireland*. It is all surrounded by the *Irish* Sea, but South-Eastward, where its parted from *Caernarvonshire* by an Inlet called *Menay*. It is about eighty Miles in Compass. It looks barren, and yet it yields Plenty of Corn and Cattle. Here is also Plenty of Fish and Fowl, and good Store of Millstones for the grinding of Corn. Here are *Beaumaris.* but two Towns, *Beaumaris* and *Newborough*. Before the *Welch* were subdued by *England*, *Aberfraw*, *Newborough.* now but a Village, was the chief Place of the *Aberfraw* Island, and the Royal Seat of *North Wales*. *Holy-Head* *Holy-Head*, the nearest Place to *Ireland*, is the Station for the Packet-Boats for that Kingdom. 2. *Caernarvonshire*, one hundred and ten Miles in Cir- *Caernarvonshire.* cuit; plentiful in Cattle, Fowl, Fish, and Wood. The middle Parts are swelled with Mountains, but the Western Parts are pretty level, and yield Abundance of Barley. *Caernarvon*, the County *Caernarvon.* Town, is but small, and of a circular Form; defended by a Castle, in which was born *Edward* the Second. *Bangor*, antiently *Bonium*, an old *Bangor.* *Roman* Town, stands not far from *Caernarvon*. It was famous of old for its vast Monastery, which entertained about two thousand Monks, but came to Ruin before the *Norman* Conquest. 3. *Den-* *Denbighshire.* *bighshire*, one hundred and sixteen Miles in Compass. The middle Parts of it, watered by the *Clwyd*, are the most fruitful; and the West is improved with the Ashes of burnt Turf. Here is Plenty of Rye, Goats, and Sheep, and some Lead near *Mongliath*. But the best Part of it is

that noble Valley called *Diffryn-Clwyd*, of great Length and Fertility, inhabited by several Gentlemen. *Denbigh*, the County Town, is of good Trade for Tanners and Glovers, and hath a very strong Castle. But being built upon a rocky Ground, full of Lime stone, few of its Inhabitants live to a great Age, which is attributed to the Drink here. *Wrexham* is a good Town, noted for its Market, and its neat Church and lofty Steeple. 4. *Flintshire*, eighty-two Miles in Compass. It is full of Hills, but the Valleys are very fruitful, and the Inhabitants long-lived. Its chief Commodities are small Cattle, Butter, Cheese, Honey, Pit-Coal, Lead, and Millstones. With the Honey good Store of Metheglin is made. *Flint*, though the Shire-Town, is so very small, that it has not a Market; yet there is an old Castle, which shews the Ruins of its former Stateliness. *St. Asaph* is also a mean Town, and but a poor Bishoprick. *Gajervis* is the only Market-Town in the County. We must not omit St. *Winifred's Well* in this County, so famed for curing Aches and Lamenesses, and forwarding Propagation. Over the Head of this Spring is a fine Free Stone Chapel. 5. *Merionethshire*, one hundred and eight Miles in Circuit. It is a very mountainous Country, however not without Sheep, Fish, and Fowl. Here are also Cottons wrought. *Harlech*, the chief Town, was of Note heretofore for its stately Castle. 6. *Montgomeryshire*, 94 Miles in Circumference, is a fruitful though mountainous Country. Here the *Severn* has its Rise. *Montgomery*, the Shire-Town, is pleasantly seated, and has a strong Castle. *Mathravel*, now a poor Village, was of old the Seat of the Princes of *Powis Land*.

Denbigh. *Wrexham.* *Flintshire.* *Flint.* *St. Asaph* *Gajervis.* *St. Winifred's Well* *Merionethshire* *Harlech* *Montgomeryshire* *Montgomery* *Mathravel*

The Counties of South *Wales* are 1. *Brecknockshire*, one hundred and six Miles in Compass, divided into Mountains and Valleys; the first barren, but the last fruitful. Corn, Cattle, Fish, and some Otter Fur, are its chief Commodities. *Brecknock*, the Shire-Town, is seated at the Confluence of the *Hodney* and *Usk*. 'Tis a well-built Town, having a good Trade for Clothing, and being the Place where the Assizes are kept. 2. *Cardiganshire*, ninety-four Miles in Circuit. Here is Plenty of Corn, Cattle, Fish, Fowl, and Lead; and this County is of some Note, for its Silver, Lead, and Copper Mines. *Cardigan*, the Shire-Town, is pleasantly seated upon the *Tivy*. It is a good Town, walled about, and fortified with a Castle, having a fair Church. 3. *Caermarthenshire*, one hundred and two Miles in Circumference, is none of the least mounteinous, and most fruitful Counties of *Wales*. It yields Plenty of Corn, Grass, Cattle, Salmon, Wood, Pit-Coal, and the best Lead. *Caermarden*, or *Caermarthen*, the Shire-Town, upon the River *Towy*, about seven Miles from the Sea, is pleasantly seated between Woods and Meadows. This Town was of old the Seat of the Princes of *South-Wales*, till forced to remove for their Safety to *Dynevour* Castle in this County, where they kept their Court. 4. *Glamorganshire*, one hundred and twelve Miles in Circumference. The North Part is mountainous, but the South so fruitful, that it is called the Garden of *Wales*. *Cardiff*, the chief Town, stands near the Mouth of the River *Taave*, where it has a commodious Haven. *Landaff* stands also upon the *Taave*, a little above *Cardiff*: A City, but so small, that it has not a Market. [illegible] in this County, is a well frequented [illegible]. 5. *Pembrokeshire*, ninety-three Miles [illegible], in most part surrounded with the Sea. The whole County is plentiful, but the East Side most pleasant. It is remarkable for its Fewel, called Culm, which is nothing but the Dust of Pit-Coal, and has this singular Property, that it will never cake or burn well, unless it be mixed with Mud. *Pembroke*, the Shire-Town, stands upon a long and narrow Point of *Milford-Haven* the Sea every Tide flowing up to the Town Wall. It consists of two Parishes, and is fortified with a Castle. *St. David's* stands near the Sea, in the most Western Part of *South-Wales*. It was once a City of good Account, but now so ruined, that there is not so much as Market kept. However, 'tis a Bishop's See, whose Cathedral was eminent for its wonderful Roof, and once the Metropolis of *Wales*. In this Shire also is the Town and County of *Haverford West*. 6. *Radnorshire*, one of the barren Shires of *Wales*, is ninety Miles in Compass. *Radnor* is the Shire-Town. Among the other Market Towns, *Presslain* is a large and well built Town, where the Assizes are held.

Brecknock *Cardiganshire* *Cardigan* *Caermarthenshire* *Caermarden* *Glamorganshire* *Cardiff* *Landaff* *Pembrokeshire* *Pembroke* *St. David's* *Radnorshire* *Radnor* *Presslain*

Having thus run over the Counties of *Wales*, we proceed to the Inhabitants. As to their Original, we have already hinted, that they are an Offspring of the antient *Britons*. Their Language is also the antient *British*, having, perhaps, the least Mixture of Foreign Words of any Tongue in *Europe*. As to their Temper, they are a stout and hardy People, and there goes an old Proverb of them, that they are a People of great Probity, Ebriety, and Volubility. From the Time of the *Romans* downwards, they made many Struggles for Liberty, and never were quiet, till they got a Prince of the *British* Blood, King *Henry* the Seventh, upon the Throne of *England*. To this very Day, the *Welch* are represented as a cholerick People, soon provoked, but quickly appeased. They generally profess the same Religion with the Church of *England*; but there are amongst them, as in *England*, great Numbers of Dissenters. These *Britons*, when all the rest of the Island had relapsed into Heathenism, still retained the Christian Faith: And when *Austin* attempted to draw the *British* Bishops to own the Pope as the Head of the Church, they rejected that Doctrine. Thus the *Britons* of *Wales* kept themselves from Innovations in Matters of Religion, till the greatest Part of *Christendom* had stooped to the See of *Rome*: And upon the Reformation of the Church of *England*, they shook off with her the Errors and Tyranny of that See.

Original

Cadwallader, the last King of *Britain*, went to *Rome*, there to receive the Habit of a religious Order. His Son, *Idwallo*, set up for a King of *Wales*, and was succeeded by *Roderick*, *Cynan*, and *Mervin*; and this by *Roderick* his Son, surnamed the *Great*. This *Roderick* had three Sons, among whom he improvidently divided his Kingdom. His Successors, following his Example, subdivided their small Estates into many Parcels. *North Wales* was enjoyed by several Generations of the eldest Branch of *Roderick*, till *Llewellen* the Second lost it, with his Life, to King *Edward* the First; and in *Llewellen* ended the Line of the *British* Princes, after they had for several Ages struggled with the *English* Power. In short, at the End of the thirteenth Age, King *Edward* the First entirely subdued *Wales*; which he reduced into Counties, after the Manner of *England*, placing over each of them an *English* Lieutenant: But when he expected his Desire to have one over all, the King, perceiving their Dislike, sent for his Queen to *Caernarvon* where she was delivered of a Prince: Upon which, the King sent for the *British* Lords, and offered to name them a Governor born in *Wales*, who could not speak a Word of *English*, and who de facto no Man could tax. They expecting their Readiness to submit to such an one, the King named *Edward*, his new-born Son; since which Time, the King of *England's*

England's eldeſt Son has always borne the Title of Prince of *Wales*, and the Country that of a Principality. In the Reign of *Henry* VIII. the *Welch* were, by Act of Parliament, made one Nation with the *Engliſh*, ſubject to the ſame Laws, capable of the ſame Preferments, and privileged with the ſame Immunities. So that, the Name and Language only excepted, there is now no Difference between the *Engliſh* and *Welch*. Their Noblemen ſit in the Houſe of Peers, and they ſend Repreſentatives to the Houſe of Commons. The ſaid King *Henry* the Eighth, for the Eaſe of his *Welch* Subjects, ſet up a Court at *Ludlow* in *Shropſhire*, for the Adminiſtration of Juſtice, after the Way of the Courts at *Weſtminſter*. And, till of late, there has been a Governor General of *Wales*, with the Title of Lord Preſident.

CHAP. IV.

A New and Exact Deſcription of London.

LONDON is the greateſt, richeſt, and moſt flouriſhing City in *Europe*, if not in the Univerſe. By *London*, we underſtand not only the City properly ſo called, but alſo *Weſtminſter*. This great and populous City lies in fifty-one Degrees thirty Minutes of North Latitude, on the North Side of the *Thames*, which is counted more healthy than the South Side. Except the City of *Weſtminſter*, *London* ſtands on a riſing Bank, and a wholſome Soil, where the River is caſt into a Creſcent, or Half-Moon. The Tide flows here four Hours, and ebbs eight. It is about forty Miles diſtant from the Sea, which makes it leſs in Danger of being ſurpriſed by foreign Enemies, and leſs annoyed by the Vapours of the Sea. On the North Side it is ſheltered from the cold North Wind, by *Hampſtead*, *Highgate*, and the riſing Grounds of *Iſlington*. Its Length, from Eaſt to Weſt, reaches about eight Miles; but its Breadth, from North to South, is not above two Miles and a half, even from the End of St. *Leonard Shoreditch*, to the End of *Blackman-Street* in *Southwark*. Within that Compaſs it contains one hundred and thirty-five Pariſhes, viz. ninety-ſeven within the Walls of *London*, ſixteen without, fifteen Out Pariſhes in *Middleſex* and *Surrey*, and ſeven in the City and Liberties of *Weſtminſter*: For whoſe publick Devotion, there are (beſides St. *Paul*'s Cathedral, the Collegiate Church of *Weſtminſter*, and ſeveral Chapels one hundred and one Pariſh Churches. As for the Diſſenters, it is reckoned they have at leaſt one hundred Meetings. Here are alſo reckoned ſix thouſand Streets, Lanes, Courts, Yards, and Allies, and about one hundred and twenty-four thouſand Dwelling-Houſes; whereas *Paris* has not half the Number. And, allowing eight Souls to each Houſe, one with another, the Number of the Inhabitants will amount at that Rate to nine hundred and ninety-thouſand. The Eaſt Parts of *London*, almoſt as far as the Bridge, are chiefly inhabited by ſeafaring Men, and Tradeſmen relating to the Sea Buſineſs; the main Part of the City, by Merchants and Tradeſmen; the City and Liberties of *Weſtminſter*, by the Nobility, Gentry, and retailing Traders. The Houſes are generally of Brick, except ſuch Timber Houſes as eſcaped the Fire of *London*, and a few built ſince. The new Buildings being much greater, more uniform, and regular than the old, have occaſioned the Fall of many great and ſpacious Noblemen's Houſes, which are now built into Streets and Tenements. The Nobility, and Chief among the Gentry, are, at this Time, much better accommodated, in fine Squares, or Streets, where they breathe a good Air, and have Houſes built after the modern Way. In ſhort, *London* is remarkable for its Multitude of fine Squares: Among which, *Lincoln's-Inn-Fields* is the moſt ſpacious. And, did not moſt of the publick Buildings ſtand in Bye Places, no City perhaps in the World could make a greater Shew. *London* has alſo many fair and ſpacious Streets, as *Cornhill*, *Cheapſide*, *Fleet-Street*, *Hatton-Garden*, *Pall-Mall*, &c. and, for Length, *Thames Street*, the *Strand*, and *Holborn*. The new built Streets are beſt for Foot-Paſſengers, being paved on each Side with broad ſmooth Stones, for a conſiderable Breadth. Fine Squares and Streets.

We come now to the Conveniencies of *London*. Firſt, for freſh Water, no Place in the World is better ſupplied than this is by the *Thames* and *New-River*, beſides ſeveral other Springs. The *New-River* Water is owing to the great Care, Skill, and Coſt of Sir *Hugh Middleton*, a worthy Knight of *Wales*, who for that Service deſerves a Statue in Braſs. For Fewel, this City is abundantly ſerved, both with Sea-Coals and Wood. For Butcher's Meat, there are twelve great Markets, wonderfully ſtocked with all Sorts of Meat; beſides Abundance of private Butchers up and down. *Leadenhall-Market*, amongſt others, is ſo prodigious for Meat, that three ſuch would ſupply the whole City of *Paris*. For Fiſh, there is but one great Market, which is at *Billingſgate*. For all edible Roots and Herbs, Fruits, Flowers, and phyſical Herbs, there are two noted Markets. For all Sorts of Grain, *Queenhithe* and *Parr-Key* are two great Markets. For Meal, there is one near *Fleet-Ditch*, and another in *Bloomsbury*. For Hay and Straw one in *Weſt-Smithfield*, and another called the *Hay-Market* near *Charing-Croſs*. *Smithfield* is alſo a great Market for live Cattle, and Horſes; as is *Leadenhall* for Hides and Leather, and *Blackwell-Hall* for Woollen Cloth. Laſtly, all along the *Thames*, Timber, Stone, Coals, and Wood, are to be ſold. Thoſe that delight in taking the Air, for the Improvement of Health, have a fair Opportunity for it in *Moorfields*, *Iſlington*, and *Red Lion-Fields*; *Mary bone*, and *Tuttle-fields*; as alſo by going to *Chelſea*, *Kenſington*, &c. For Perſons of a genteel Appearance, there are the noble Gardens of the Inns of Court, and ſome of the Companies Halls, beſides the *Charter-Houſe* Garden. The Court Side has the Advantage chiefly of two Parks, one called *St. James's-Park*, and the other *Hide Park*: The firſt only for walking, and the laſt moſt properly for taking the Air on Horſe-back, or in Coaches. For the Conveyance of Letters and ſmall Parcels under one Pound Weight, and ten Pounds in Value, to any Part of *London* and *Weſtminſter*, and ſome Miles out of Town, here is ſuch a Conveniency, as is not to be found in any other great City, namely, the Penny-Poſt. If a Parcel Freſh Water. Fewel. Markets. Places for Exercise. Penny Poſt.

Parcel happens to miſcarry, the Value thereof is to be made good by the Office, provided the Things were ſecurely incloſed.

Vaſt Traffick

But the greateſt Advantage of *London* is its vaſt Traffick, carried on firſt by Merchants, who trade in wholeſale; and next by Tradeſmen, that is, Shop-keepers and Retalers. For the Improvement of Trade, the City Traders are divided into ſixty-two Companies, being ſo many Bodies Politick, that enjoy great Privileges, granted them by former Kings. Each Company has a Maſter yearly choſen from among themſelves; and other ſubordinate Governors, called Wardens and Aſſiſtants. Amongſt other Privileges of the Citizens of *London*, one is, that they are Toll-free throughout *England*. They are alſo privileged to keep out all Artificers and Handicraftſmen not free of the City. This makes the City ſwarm with Apprentices, brought up to all Manner of Trades. Another great Privilege is the City's ſending four Members to Parliament, which is twice the Number of any other City. But the greateſt Privilege of this City, is, that the Citizens chuſe their own Magiſtrates, keep Courts within themſelves, and make what Bye-Laws they think fit for the Government of it, provided they be not repugnant to the Laws of the Land.

Companies of Tradeſmen.

Privileges of the Citizens.

London-Wall is now for the moſt part decayed, and its Gates not ſo beautiful as ſolid. When this Wall was firſt built, the City of *London* was but three Miles in Compaſs. And now the Suburbs are almoſt ſix Times bigger. However, moſt of the Gates of the old Wall ſtill remain. Amongſt which *Ludgate* and *Newgate* were burnt down by the Fire of *London*, but are now rebuilt more magnificent, and ſtronger than before.

Its Wall and Gates.

The principal Churches of this City, are St. *Paul*'s Cathedral, and the Collegiate Church of *Weſtminſter*. St. *Paul*'s being burnt down by the diſmal Fire of *London*, Care was taken, few Years after, for the rebuilding of it, and a Tax laid upon every Chaldron of Sea-Coals towards it, beſides many liberal Contributions, and thirty thouſand Pounds granted by Act of Parliament. This great and ſtately Fabrick is now brought to Perfection, together with a Dome and two Steeples. On the Weſt End there are two preaching Chapels, and over one of them is to be a Library. Its Length from Eaſt to Weſt, the Steps included, is five hundred and ſeventy Foot; the Breadth from North to South, including both Portico's, three hundred and eleven Foot; and the Dome, from the Surface of the Ground level with the Street, three hundred and thirty-eight Foot. Its Choir, adorned with fine carved Work, is all paved with Marble, and all the Doors of Iron, caſt into Figures. The Stone Work is of *Portland* Stone, next to Marble for Durableneſs. The Collegiate Church of *Weſtminſter* was formerly an Abbey Church, and ſince a Cathedral. This Church lies low, as the whole City of *Weſtminſter* does; and yet is ſeen at a great Diſtance, by reaſon of its Height. King *Edward the Confeſſor* was the Founder of it; King *Henry* the Third rebuilt it from the Ground, and King *Henry* the Seventh added a Chapel to it, which is a Maſter-piece of Art. In this Church, the Coronation of our Kings has been uſually performed, ever ſince the *Norman* Conqueſt. Here are alſo to be ſeen the Tombs of moſt of our Kings and Queens, and others of great Men. *London* has alſo many fair Pariſh Churches, eſpecially ſuch as were built ſince the Fire, being generally decent, neat and beautiful. Beſides the Pariſh Churches, Chapels, and Tabernacles, and the Diſſenters Meeting-Houſes, here are alſo near forty Congregations of Foreign Proteſtants, for the moſt Part *French*;

Churches

Meeting-Houſes Foreigners Congregations

moſt of them conforming to the Church of *England*, and others to *Calvin*'s Diſcipline. The *Jews* have alſo a ſtately Synagogue near *Duke's-Place*.

Of all the Palaces belonging to the Crown, that ſtood within the Precincts of *Weſtminſter*, there are but two left entire, *viz.* St. *James's* and *Somerſet-Houſe*. The Situation of the firſt upon the Park, to which it gives its Name, makes it very delightful. *Somerſet-Houſe* in the *Strand*, was the uſual Reſidence of *Katharine*, the Queen Dowager of the late King *Charles*. Near *Weſtminſter-Abbey* is another Palace, Part of which was burnt down in the Reign of King *Henry* the Eighth. That Part which eſcaped the Fire, has been employed ſince for the Uſe of the Lords and Commons aſſembled in Parliament. *Whitehall* was unhappily burnt down in the Reign of King *William*, *Jan.* 4, 1698, and there was ſcarce any Part of it left ſtanding beſides the *Banquetting-Houſe*, a ſtately Pile, now converted into a Chapel. In the *Strand*, near *Somerſet-Houſe*, is the *Savoy*, once a Palace, but fallen to Decay many Years ſince. *Kenſington* Palace, *Hampton-Court*, and *Windſor-Caſtle*, three Royal Houſes, are alſo not far from *London*. As to Royal Statues, that of King *Charles* I. at *Charing-Croſs* is the beſt.

Royal Palaces.

Statues.

The *Tower* is remarkable on ſeveral Accounts. 1. As it is a Fortreſs. 2. For its grand Magazine of Arms, and Office of Ordinance. 3. For its *Mint*, wherein all our Coin is milled. 4. For its Jewel-Houſe. 5. For being the Repoſitory of the antient Records of the Nation. 6. And the uſual Place of Confinement for Perſons of Quality, charged with Miſdemeanor, or any Capital Crime. This Fortreſs, called the *Tower*, from its great white ſquare Tower in the Middle, built by *William the Conqueror*, ſtands near the *Thames*, below Bridge, on the Eaſt Side of the City. It is about a Mile in Compaſs, ſurrounded with an old Wall, and this with a very broad and deep Ditch. It commands both the City and the River; and for its Security, has a conſtant Garriſon in it, commonly of eight Companies of Foot. The *Cuſtom-Houſe*, lies between the *Tower* and the *Bridge*. It is a ſtately, uniform, and commodious Building. The Bridge, over the River, conſiſts of nineteen Stone Arches, twenty Foot between each Arch, and has a Draw-Bridge almoſt in the Middle. Here is on each Side a fine Row of Tradeſmen's Houſes, with Shops well ſtocked. The *Monument* was erected in perpetual Memory of the Fire of *London*, which broke out *September* 2, 1666, and continued burning three Days together. During which it conſumed thirteen thouſand and two hundred Houſes, St. *Paul*'s Cathedral, eighty-ſeven Pariſh Churches, ſix Chapels, the *Cuſtom-Houſe*, the *Royal-Exchange*, *Guild-hall*, and many other ſtately Halls; ſeveral Colleges, Schools, and other publick Edifices; and yet, it is ſaid, there were but eight Perſons burned. The Monument is a round Pillar, and is, perhaps, one of the boldeſt Pieces of Architecture that ever was attempted, all built of ſolid *Portland* Stone, two hundred and two Foot high from the Ground, the Diameter fifteen. It ſtands on a Pedeſtal forty Foot high, and twenty-one Foot ſquare, the Front of it being adorned with ingenious Emblems. Within-ſide is a fair winding Stair-Caſe, with Iron Rails up to the Top, and this graced with an Iron Balcony round the Pillar, yielding a pleaſant Proſpect all over the City. The North and South Sides of the Pedeſtal have each a *Latin* Inſcription, one deſcribing the Deſolation of this City laid in Aſhes, and the other its glorious Reſtoration.

Tower.

Cuſtom-Houſe.

Bridge.

Monument.

The *Royal-Exchange* in *Cornhill*, is the nobleſt Building of this Kind in the Univerſe: Founded by

Ex-

by Sir *Thomas Greſham*, a rich Merchant in Queen *Elizabeth*'s Reign. It is now rebuilt much more ſtately than it was before the Fire, of *Portland* Stone, with curious Architecture. This is the general Place of Meeting for all Merchants, and others, concerned in Trade and Commerce. The *New-Exchange* in the *Strand* has been worth much to the Earls of *Salisbury*, in the flouriſhing Time of its Trade, which of late Years is very much fallen off. Not far from this ſtands *Exeter-Change*, of a late Erection.

New Exchange

Exeter Change.

As no Foreign City can boaſt of ſo many Squares, ſo none can ſhew ſo many fine Halls, amongſt which *Weſtminſter-Hall* has got the Pre-eminency, a Building two hundred and ſeventy Foot in Length, forty-ſeven in Breadth, and the Height proportionable, all paved with Free-Stone, and the Roof ſupported without any Pillar. This Hall is the common Thorough-fare to the Parliament when ſitting. In Term Time, the Courts of *Chancery*, *King's-Bench*, and *Common-Pleas* ſit here. It is in this Hall the Coronation Feaſt is kept, and where a Court is erected for the ſolemn Trial of any Peer charged with a Capital Crime. *Guild-hall*, the Town-Houſe where the City Courts are held, is alſo a ſtately Piece of Building, finely adorned with Pictures. *Blakwell-Hall*, the Storehouſe for all Sorts of Woollen Cloth, is adjoining to *Guild-hall*. The Traders of *London* being divided into ſixty two Companies, every Company has a Hall. Moſt of theſe Halls look like Palaces, with fine Frontiſpieces, ſpacious Courts, and beautiful Rooms. At *Grocer's-Hall*, in the *Poultry*, was kept, till the beautiful New Bank in *Threadneedle Street* was built, the Bank of *England*, erected to ſupply, by Loans, the Exigencies of the State.

Halls of Companies of Tradeſmen.

Bank of *England*

For the common Law and *Chancery*, there are two Societies, called *Serjeants-Inns*, one in *Fleet-ſtreet*, and the other in *Chancery-Lane*; beſides the *Inner* and the *Middle-Temple* in *Fleet-ſtreet*, *Gray's-Inn* in *Holbourn*, and *Lincoln's Inn* in *Chancery-Lane*. In all which Inns the Lawyers live in a Collegiate Manner, having their Chambers, in which they follow their Buſineſs. Such as are arrived to the higheſt Degree in the common Law, are admitted by the Sovereign as Serjeants at Law, which is a Degree anſwerable to that of Doctor in the civil Law. All the Judges of the *King's-Bench*, *Common-Pleas*, and the *Exchequer*, are choſen by the King out of their Number. The Inns of Court have each a Hall to dine in during the Terms, a Church or Chapel for publick Devotion, a Garden, and other convenient Places to walk in. The two Temples were heretofore the Houſe of the *Engliſh* Knight Templars, who being diſſolved above three hundred Years ago, their Houſe was purchaſed by ſome Profeſſors of the common Law. There are, beſides, eight Inns of *Chancery* belonging to the aforeſaid Inns, viz. *Clifford's-Inn* in *Fleet-ſtreet*, *Clement's Inn*, *New-Inn*, and *Lyon's-Inn*, without the Liberties, belonging to the two Temples; *Thavies* and *Furnival's-Inn* in *Holbourn*, to *Lincoln's-Inn*; *Bernard's* and *Staples' Inn* in *Holbourn*, to *Gray's-Inn*. The whole Company of Gentlemen in each Society, conſiſts of Benchers, Outer Barriſters, and Inner-Barriſter.

Serjeants Inns.

Serjeants at Law.

The two Temples

Inns of Chancery

Near St. *Paul's* Cathedral is a Society of *Civilians*, called *Doctors-Commons*, and founded by Dr. *Harvey*, formerly Dean of the *Arches*: There did commonly reſide the Judges of the *Arches*, *Admiralty*, and the *Prerogative Court*, with divers other eminent *Civilians*; from whoſe former Living together in a Collegiate Manner, this Place got the Name of *Doctors Commons*. In the common Hall of *Doctors Commons* are held ſeveral Courts, under the Juriſdiction of the civil Law; particularly the *High Court of Admiralty*, the *Court of Delegates*, and the *Arches Court of Canterbury*. In *Warwick-Lane*, near *Newgate*, is the *College of Phyſicians*, a fine Building, with a ſpacious Court, an Amphitheatre over the Gate for anatomical Lectures, and a good Library of Books. The Number of Phyſicians belonging to this College, ought not to exceed eighty. The chief of them are called Fellows, and the next Candidates, who fill up the Places of Fellows, as they become vacant by Death or otherwiſe. Next to theſe are the Honorary Fellows; and laſtly, the Licentiates, that is, ſuch as being found capable to practiſe Phyſick, are by the College allowed to practiſe. This College has many great Privileges, by Virtue whereof, no Man may, without Licenſe under the College Seal, practiſe Phyſick in *London*, or within ſeven Miles of it. However, *London*, like other populous Cities, ſwarms with Empyricks, Mountebanks, and others that practiſe Phyſick without Authority.

College of Phyſicians

Greſham-College, in *Biſhopſgate-Street*, was founded by Sir *Thomas Greſham*, who built the *Royal-Exchange*, and gave in Truſt one Moiety of the Revenue thereof to the Mayor and Commonalty of *London*, and the other Moiety to the Company of Mercers: The firſt to find four able Perſons to read within this College, Divinity, Aſtronomy, Muſick, and Geometry; and the laſt three able Men to read Rhetorick, civil Law, and Phyſick. For this Service, each Lecturer has fifty Pounds *per Annum*, beſides a fair Lodging in the College. This College was noted for being the Meeting Place of the Royal Society, (now removed to *Crane-Court*, *Fleet-Street*) eſtabliſhed by a Charter of King *Charles* the Second, in *April*, 663, for promoting natural Knowledge, and uſeful Arts, by Experiments. Accordingly, ſeveral Diſcoveries in Nature have been made by this Society; ſome for Uſe or Profit; and others for the Satisfaction of the Curious, which may prove, in Time, of great Uſe and Benefit. In this College is a Library, conſiſting of the choiceſt Books of Philoſophy, and eſpecially ſuch as are moſt proper for the Deſign of this Society. Here is a Repoſitory of many Curioſities of Nature. The Royal Society conſiſts of near two hundred Fellows, moſt *Engliſh*, and the reſt of ſeveral Nations. This Society is governed by a Council conſiſting of twenty-one Members, ten of them going out yearly. The chief of the Council bears the Name of Preſident. *Sion-College*, near *Cripplegate*, was formerly a Religious Houſe, next a Spital, or Hoſpital, and now it is both a College and an Hoſpital: The College, for the Uſe of all the *London* Miniſters of the Church of *England*; and the Hoſpital, for ten poor Men and ten poor Women. The *College of Heralds*, commonly called the *Heralds-Office*, ſtands upon *St. Bennet's-Hill*, near *Doctors-Commons*, and is ſubordinate to the Earl Marſhal of *England*. There are three Degrees of Heralds in *England*: The firſt called Kings of Arms, the ſecond Heralds, and the third Purſuivants. There are three Kings of Arms, the firſt called *Garter*, the ſecond *Clarencieux*, and the third *Norroy*. The Heralds are ſix in Number, beſides one extraordinary, and are diſtinguiſhed by the Names of *Richmond*, *Lancaſter*, *Cheſter*, *Windſor*, *Somerſet*, and *York*. The Purſuivants are four, called *Blue Mantle*, *Rouge Croſs*, *Rouge Dragon*, and *Port Cullice*. They muſt be all Gentlemen born, and the ſix Heralds are, at their Creation, made Eſquires by the King.

Greſham College.

Royal Society.

Sion College.

College of Heralds

For the Education of Youth, there are in *London* and *Weſtminſter* ſeveral famous publick Schools, beſides

School

beſides an infinite Number of private ones. The principal publick Schools are, 1. The Royal School at *Weſtminſter*, founded by Queen *Elizabeth* for forty Scholars, out of which a certain Number is yearly elected, ſome to *Oxford*, and others to *Cambridge*. 2. St. *Paul*'s School, founded by Dr. *Collet*, for one hundred and fifty-three Children to be taught *gratis*. 3. *Merchant Taylor*'s School, founded by Sir *Thomas White*. In this School alone three hundred Scholars are taught, *viz.* one hundred *gratis*, one hundred for two Shillings and Six-pence a Quarter each, and one hundred more for five Shillings a Quarter. 4. A School at *Mercer's-Chapel* in *Cheapſide*, founded by the Company of Mercers. 5. A School, with a publick Library, near the *Mews*, founded by Dr. *Tennyſon*. In and about *London* and *Weſtminſter*, and within ten Miles of the ſame, there are beſides a great Number of Charity-Schools; of which, all but two have been ſet up by charitable Perſons.

Hoſpitals. Beſides a great many Alms-Houſes, or ſmall Hoſpitals, founded by private Men, here are eight great Hoſpitals, including *Greenwich* and *Chelſea*, a little Way out of Town. 1. *Chriſt's Hoſpital* by *Newgate-Street*, formerly a Convent of Gray Friars, converted by *Edward* VI. into an Hoſpital for poor Children, whoſe Number has formerly amounted to above 1000. Here the Boys have a Grammar-School, from which the aptest Scholars are ſent to the Univerſity. 2. St. *Bartholomew's Hoſpital*, at a ſmall Diſtance from the former, belonging to the Gray Friars, now a great Hoſpital for ſick, maimed, or wounded Poor, who reſort hither for Cure, and are well accommodated, and provided with able Phyſicians and Surgeons, careful Nurſes to look after them, and all other Neceſſaries. There are two other Hoſpitals at the Charge of this, one at *Kingſland*, and the other called the *Lock* in *Southwark*. 3. For the Cure and Maintenance of poor Lunaticks, or diſtracted Perſons, there is in *Moorfields* a ſtately Hoſpital, commonly called *Bedlam*; which for Greatneſs, Beauty, and Conveniencies, is not to be matched in *Europe*. 4. St. *Thomas's Hoſpital* in *Southwark*, on the South Side of the River. The Uſe of this Hoſpital is for the Sick, Maimed, or Wounded, as St. *Bartholomew's*. And adjoining to this is *Guy's Hoſpital*, founded by Mr. *Guy* a Bookſeller. 5. But the nobleſt Foundation is *Sutton's* Hoſpital, commonly called the *Charter Houſe*, as having been a Convent of *Carthuſian* Friars, in the Times of Popery. In the Reign of King *James* I. this Houſe was come by Deſcent to *Thomas* Earl of *Suffolk*, and Mr. *Sutton* purchaſed it from him, at the Rate of 13,000 Pounds. To fit it up for this Uſe, it coſt him about 7000 Pounds more, in all 20,000 Pounds. This done, he endowed it with 4,000 Pounds *per Annum*, now improved to near 6,000. This noble Foundation was ſettled for eighty poor Gentlemen, commonly called Penſioners, there to be maintained with a liberal Allowance, and in a Chriſtian Preparation for their latter End. Alſo for forty Boys, to be taught *Latin* and *Greek*, with a Proviſion for ſome to be put out to Trades, and others qualified for Learning to be ſent to *Cambridge*, where they are allowed each twenty Pounds a Year for eight Years together. And whereas there are nine Church Livings belonging to this Hoſpital, ſuch as are beſt qualified have an immediate Right to them. The Governors of this famous Hoſpital are ſixteen in Number, and moſt of them Perſons of the greateſt Quality. The Maſter of the Hoſpital, who reſides in the Houſe, is one of them. 6. At *Hoxton* is another Hoſpital, which looks more like a Palace than an Hoſpital. This was founded by Alderman *Ask*, of the Company of Haberdaſhers, for the Maintenance of twenty poor old Men of that Company, and twenty poor Boys to be there educated. 7. *Chelſea-College*, a Royal Hoſpital, for the Entertainment of diſabled, or ſuperannuated Officers and Soldiers, ſtands about two Miles out of Town, Weſtward. It is a neat and ſtately Edifice, on the River's Side, with a convenient Landing-Place. The Number of Penſioners or private Soldiers maintained by this Hoſpital, is about 400, who all wear red Coats lined with blue, and are provided with all other Clothes, both Linnen and Woollen; beſides their Lodging, Diet, Waſhing and Firing, and one Day's Pay weekly for ſpending Money. As to the Officers, their Annual Money Allowance is in Proportion to their Dignity. If *Chelſea Hoſpital* may be called ſtately, that of *Greenwich* deſerves the Title of magnificent. This Hoſpital was founded for the Encouragement of Seamen, by making Proviſion for them, when they are diſabled from farther Service by Sea, and not in a Condition to maintain themſelves: As alſo, for the Widows or Children of ſuch diſabled Seamen, and others that happen to be ſlain or drowned in the King's Service. The preſent Number of Penſioners in this Hoſpital is very great, they having been much increaſed of late Years. Their Commons is the ſame as in *Chelſea-Hoſpital*, and their Spending-Money one Shilling *per* Week. The common Warrant-Officers have the beſt Cabbins in the Wards, and ſit at the upper End of the Tables. Their weekly Allowance for Spending-Money is one Shilling and ſix Pence.

There are in *London* two Workhouſes of Note: One called *Bridewell*, which ſtands on the Back-Side of *Fleet-Street*. Here are, at this Time, 140 poor Boys provided for, and brought up to Mechanick Trades, under twenty-two Maſters, who have each of them a convenient Houſe *gratis*. The Houſe finds the Boys Clothes and Bedding, and the Maſters Victuals. This is alſo a Houſe of Correction for ſawcy and unruly Servants, Pick-pockets, Night-walkers, Strumpets, and the like. It is governed in chief by a Preſident, who from Time to Time keeps a Court, for the Puniſhment of Offenders. The other Workhouſe is in *Biſhopſgate-Street*, for employing the Poor, Old and Young, and all grown Vagrants, ſturdy Beggars, and other idle and diſorderly Perſons. Here the Boys and Girls are provided with Lodging, Clothes, and Diet. They are alſo taught to ſow, ſpin, and knit, to read and write, and the Principles of Religion. The grown Vagrants are employed in hard Labour.

As for Priſons, *Newgate*, the County Jail, is both for Debtors and Malefactors: Beſides which, there are the two Compters for Debtors, and *Ludgate* particularly for ſuch as are Freemen of *London*. Alſo *Bridewell* and *New-Priſon* in *Clerkenwell*, the *Gatehouſe* for *Weſtminſter*, and *Bridewell* in *Tuttle-Fields*; and the *Marſhalſea* and *Clink* Priſons in *Southwark*. There are moreover two great Priſons for Debt, one called the *King's-Bench* in *Southwark*, from the Court of *King's-Bench* to which it belongs; and the other, the *Fleet*, near *Fleet-Bridge*, belonging to the Courts of *Chancery*, *Common Pleas*, and *Exchequer*. The *Seſſions-Houſe*, the Place appointed for the Trial of Malefactors, ſtands in the *Old-Bailey*, between *Ludgate* and *Newgate*; from which laſt, the Priſoners are brought openly in Fetters.

The Lord Mayor of *London* hath nothing to do with *Weſtminſter*, nor the High Steward of *Weſtminſter* with *London*, except a Street called *St. Martin's Le Grand*, which is under the Juriſdiction of *Weſtminſter*. The Lord Mayor is yearly choſen upon *Michaelmas-Day*, and enters upon his Office with great Solemnity, upon the twenty-ninth of *October* following. The City Govern-

ment is every where answerable to the National: For, as *England* is governed by King, Lords, and Commons, so is *London* by the Lord-Mayor, Aldermen, and Common Council. So great is the Lord-Mayor of *London*'s Magistracy, that of all the Mayors in *England*, none but he, and the Mayor of *York*, bear the Title of Lord. His Authority reaches, not only over the City, and Part of the Suburbs, but also on the *Thames*, as far as the Mouth of it; and Westward, as far as *Staines-Bridge*. He is the chief Judge of *London*, and has a Power to summon and imprison. His House is a Court, and his Table open to all Comers of Quality. He has under him both great and small Officers. For his Diversion, he has a Kennel of Hounds always maintained, and the Privilege to hunt in *Middlesex*, *Surrey*, and *Sussex*. On the King's Coronation Day, he claims to be the chief Butler. When he appears Abroad, it is always in long Robes, sometimes Purple, sometimes Scarlet, with a great Chain of Gold, and a rich Jewel to it, hanging from his Neck downwards; he is also attended by several Officers. But the Greatness of this Magistrate, upon his Installation Day, is beyond any thing of this Nature elsewhere.

Grandeur of the Lord-Mayor.

Offices of the Aldermen.

For the better Government of the City, it is divided into 26 Wards, and there is an Alderman to every Ward. These 26 Aldermen are next to the Lord-Mayor in Power and Dignity, and each has under him a certain Number of Common-Council-Men, one of them his Deputy, besides Under-Officers. The Aldermen that have been Lord-Mayors, and the three eldest next to them, are Justices of the Peace of the City. There is also a Recorder, who is an Assistant to the Lord-Mayor, as to the Laws and Customs of the City, in which he ought to be well versed. The two Sheriffs of *London* and *Middlesex* are also considerable Magistrates, especially in their Power to impannel Juries. Each Sheriff has under him an Under-Sheriff, six Clerks, a certain Number of Serjeants, and every Serjeant a Yeoman. Lastly, There is a Chamberlain, an Officer of great Trust, being intrusted with the City Cash, and the Orphans Money. Part of his Office does also relate to Apprentices, over whom he has a great Authority. None can be bound without his Licence, nor can any Man set up Shop, or follow his Trade, without being sworn before him.

Recorder.

Sheriffs.

Chamberlain

Court of London

As to the City Courts, most of them are held in *Guild-hall*. The Common-Council, which is the City Parliament, consists of two Orders, *viz.* the Lord-Mayor and Aldermen, representing the House of Lords; and the Common-Council-Men, which represent the House of Commons. These last are in all 231, belonging to their respective Wards, of which some have more, some less. In this Court all Bye Laws are made, which bind all the Citizens. The Court of the Lord-Mayor is a Court of Record, held in the Chamber of *Guild-hall*, where all Actions may be entered, and tried by a Jury, as in other Courts, for Debt, Trespass, &c. arising within the Liberties of *London*, and to any Value. The Court of Aldermen is also a Court of Record, held in the Inner Chamber every *Tuesday* and *Thursday*, except Holy-Days, and in the Time of Sessions of Goal Delivery. The *Hustings* is a most antient Court of Record, always held in *Guild-hall*, before the Lord-Mayor and Sheriffs, the Recorder sitting as Judge with them. The Court of Goal-Delivery is usually held eight Times a Year, at the *Old Bayly*, for the Trial of Malefactors in the County of *Middlesex*. The two Sheriffs Courts are held in *Guild-hall*, the one by one Sheriff, every *Wednesday* and *Friday*, for Actions entered at *Woodstreet-Compter*; the other, by the other Sheriff, every *Thursday* and *Saturday*, for Actions entered at the *Poultry-Compter*. The Chamberlain's Court, or Office, is kept in the Chamber of *Guild-hall*, where he attends commonly every Forenoon. The Court of Conscience or Request, for the Relief of poor Debtors, and of poor Persons having small Debts owing to them, sits in *Guild-hall* every *Wednesday* and *Saturday* in the Forenoon, and consists of two Aldermen and four Commoners. The Orphans Court is held before the Lord-Mayor and Aldermen, who are Guardians to the Children of all Freemen of *London*, that are, or shall be under the Age of 21 Years, at the Time of their Father's Decease. This Court meets but once a Year, *viz.* on the *Monday* Morning after *Mid-Lent-Sunday*. The Court for the Conservation of the *Thames*, is held before the Lord-Mayor, at such Times as he appoints, within the adjacent Counties to *London* and *Westminster*. The Pie-Powder-Court, is held every Hour during the first three Days of *Bartholomew-Fair*: Here are tried all Suits for petty Matters, and Offences there committed. Besides the Courts aforesaid, every Alderman keeps a Court in his Ward, called a Wardmote. The Traders Companies have also their Courts, called Hall-motes.

Military Government.

This City being by Charter a County Corporate, the Power of a Lord Lieutenant is in the Lord-Mayor and Aldermen, who order the City Militia with the same Power that other Lord Lieutenants have in their respective Counties. Which Militia consists of 6 Regiments of Foot, making about 9,000 Men, besides 2 Regiments of the Hamlets of the *Tower*, and the Regiment of *Southwark*. But in Case of Necessity, the Auxiliaries are raised, consisting of Apprentices, which make 6 Regiments more. For a Nursery of Commanders there is a Company of 600 choice Men, commanded in chief by a Leader appointed by the Sovereign. This Company, called the Artillery-Company, is exercised in the *Artillery-Ground*, a spacious Place, near *Moorfields*, walled about for that Purpose. In Church Matters, this City is governed in chief by the Bishop of *London*; to whom is committed the Care of the whole Clergy of this Place: For whose Maintenance there is in most Parishes a Parsonage, or a Vicarage-House, with a competent Allowance. But where-ever there is a Lecturer and a Reader, besides the Incumbent, they have their Maintenance by a voluntary Contribution from the Parishioners.

Church Government.

Parish in Westminster

Westminster itself had but one Parish, called St. *Margaret's*, till the new Church of St. *John* was built; but the Liberties consist of six Parishes, *viz.* St. *Martin's in the Fields*, St. *Clement's*, St. *Mary Le Savoy*, St. *Paul's Covent-Garden*, St. *James's*, and St. *Anne's*. As for St. *Giles's* Parish, it belongs neither to *London* nor *Westminster*.

Its Government in Civil Matters.

The Dean and Chapter of *Westminster* are vested with all Manner of Jurisdiction, Civil and Ecclesiastical: But the Management of the Civil Part is left in the Hands of Laymen, confirmed by the Dean and Chapter: The principal of which is the High-Steward, who is usually a Nobleman, and holds his Office during Life. To officiate for him, he chuses an Under-Steward, a Man versed in the Law. He, with the other Magistrates, keeps the Court-Leet, or Town-Court. Next to whom is the Head Bailiff, who is instead of a Sheriff. In the Court Leet he sits next to the Under Steward. There is also a High-Constable, chosen by the Court-Leet, and having all other Constables under his Command. Lastly, here are 14 Burgesses, 7 for the City, and 7 more for the Liberties, each having an Assistant. Their Office is much like that of the Aldermen of the City of *London*, having each a proper Ward under his Jurisdiction.

CHAP.

CHAP. V.

Of the English Britons; *their Original, Language, Complexion, Constitution, Religion, Way of Living, Trade, the Orders and Degrees among them,* &c.

Original of the *English.*

THE *Engliſh Britons* are an aggregate Body of ſeveral Nations: But chiefly of *Saxons*, *Danes*, and *Normans*, not without ſome Mixture of *Roman* and *Britiſh* Blood.

Their Language.

Their Speech is likewiſe a Compound of ſeveral Languages, but chiefly the *Saxon*, *Latin*, and *French*; the firſt being properly the Stock in which the others are ingrafted.

Complexion.

Their Complexion anſwers to their Climate: For they are neither Sun burnt, as in hot Countries, nor Weather-beaten, as in cold Regions. No Country in *Europe* can outvie *England*, for Charmingneſs of Youth, comely Stature, and graceful Countenance in Men, or Beautifulneſs in Women.

Conſtitution.

The *Engliſh* are generally of a ſtrong Conſtitution, but it is commonly ſpoiled by Education. When they want their uſual Food, good Bread and Meat eſpecially, they are preſently to ſeek, and cannot make ſuch Shift as other Nations.

Temper.

Their Temper is naturally ſuitable to their Climate; not ſo fiery as the *French*, nor ſo cold as the Northern People. They are for the moſt Part reſerved, and leſs Communicative than the *French*: And as their Friendſhip is not eaſily gained, ſo when once got not eaſily loſt. So great is the Tenderneſs of *Engliſhmen* for the fair Sex in general, that every where they give them the Precedency, and put them the leaſt of any Nation to Hardſhip and Drudgery. Valour is a peculiar Character of the *Engliſh*, who never draw their Sword in vain; and their Conduct anſwers to their Courage.

Genius.

In Genius, they yield to no Nation in *Europe*. None has been more induſtrious to improve the Mechanick Arts; and the World to this Day is obliged to 'em for many of their uſeful Inventions and Diſcoveries. Here are made the beſt Clocks, Watches, Barometers, Thermometers, Air-Pumps, and all Sorts of Mathematical Inſtruments. For building neat and convenient Houſes, upon a little Spot of Ground, they have a ſingular Talent; and in the Art of Scaffolding they ſurpaſs all Nations. As to liberal Arts, where ſhall one find a People ſo generally knowing? Here Experimental Philoſophy is improved to a Wonder, and no foreign Church is better ſtock'd with Divines than *England*, which makes their Works ſo much in requeſt beyond Sea.

Religion of the *Engliſh.*

'Tis the Opinion of the learned Dr. *Stillingfleet*, that St. *Paul* was the firſt Founder of a Church in this Iſland. But by reaſon of Perſecution, or for want of a Supply of Preachers, Chriſtianity did not flouriſh here till the Reign of *Lucius*, towards the End of the ſecond Age: By whoſe Example, and the Diligence of the Preachers, Chriſtianity ſoon ſpread over the Iſland. The *Britons* had Biſhops of their own, without any Dependency on the See of *Rome*. But, when the *Saxons* came to be poſſeſſed of this Iſland, and the Natives were forced to take Shelter amongſt the Mountains of *Wales*, the *Chriſtian* Faith fled with them; 'till, about the Year 596, *Auſtin* the Monk being ſent to preach the Goſpel here, the Work proſpered ſo well, that all the *Saxons* were by degrees converted, and *Auſtin* made the firſt Archbiſhop of *Canterbury*, with a Subjection to the Church of *Rome*. Thus the Church of *England* continued ſubject to the *Roman* Church, till the Reign of *Henry* VIII. who, being juſtly diſguſted at the Pope, re-aſſumed the Power of the *Chriſtian Britiſh* Kings, and by that Means laid the Ground for a Reformation: In which a great Progreſs was made in the next Reign, being that of *Edward* VI. Queen *Mary* ſucceeding her Brother, reſtored Popery. But her Siſter, the famous Queen *Elizabeth*, coming next to the Throne, reſtored the Reformed Religion.

The Doctrinal Points of this Religion conſiſt of 39 Articles, being the Confeſſion of Faith of the Church of *England*. Not only the Epiſcopal Government is retained, but alſo ſuch Rites and Ceremonies as are appointed by the Church, both for Decency's Sake, and to invite the Papiſts to come over, are allowable. A great Number of Papiſts nevertheleſs kept to their Religion, and thoſe Extrinſecals proved ſuch a ſtumbling Block to others of the Reformed Party, as made at laſt a Schiſm in the Church: For many, in thoſe Days called Puritans, rather than comply to thoſe Ceremonies, ſeparated themſelves from the Church, keeping her Fundamentals, but renouncing both her Diſcipline and Rites: Therefore called Diſſenters, or Nonconformiſts, or Separatiſts; ſome of them Presbyterians, ſome Independents, and others Anabaptiſts; all which together make no inconſiderable Party. And beſides theſe, there is another particular Sect of thoſe we call Quakers, from their former Way of quaking and groaning at their Meetings, when they waited for the Spirit. To prevent the Growth of Diſſenters, ſevere Laws were made againſt them, that have ſometimes been ſtrictly put into Execution. This created a Feud that laſted till the late happy Revolution; when the Diſſenters joining with the Church, obtained an Indulgence, which ſtands on the Foundation of an Act of Parliament. The *Roman* Catholicks, commonly called Papiſts, and, by the Law, *Popiſh* Recuſants, grew formidable in the Reign of the late King *James*. There are divers Laws in Force againſt them, but ſeldom put in Execution. As for *Jews*, we have many in *London*, where they are tolerated by Royal Permiſſion.

Diſſenters. Quakers. Papiſts. Jews.

Modern Way of Building.

One would think the Men of former Ages were afraid of Light and good Air: But now the Caſe is alter'd, and nothing can be neater than the modern Buildings, with lightſome Staire-Caſes, lofty Cielings, Cloſets in moſt Rooms, and Saſh-Windows as high as the Cieling. The Uſe of Hangings is partly laid aſide, ſince Wainſcotting came into Faſhion; much fitter for a moiſt Country.

Diet.

In Point of Diet, the *Engliſh* live moſt upon Butchers Meat, as the moſt proper Nouriſhment for this Country; and all edible Roots and Herbs are uſed only as a Supplement. *French* Soops and Kickſhaws, Veniſon, &c. are ſeldom eaten but by the better Sort. In Paſtry Work, but chiefly Veniſon-Paſties, they exceed all Nations. Their Variety of Puddings, their rich Plum-

Plumb Porridge, *Chriſtmas*-Pies, and Brawn, are properly *Engliſh* Diſhes, hardly known elſewhere. Tho' Malt-Drink be their uſual Liquor, yet vaſt Quantities of Wines are conſumed here. For Pleaſantneſs of Colour, Strength, and Palatableneſs, they have Beer and Ale, little inferior to Wine; beſides Cyder, Punch, and other Liquors. Coffee and Tea, two ſober Liquors, are of common Uſe in *England*. Punch is alſo much uſed, eſpecially by Sea-faring Men. The Uſe of Tobacco is very Univerſal, and not improper for ſo moiſt a Climate. For Raiment, the common Wear amongſt Men is plain Cloth and Drugget, without any coſtly Ornament. But the fair Sex ſpare for nothing to make the beſt Appearance. *England* is too temperate a Country to uſe Stoves, as in cold Climates. A Chimney-Fire, of Wood, or Pit-Coals, is much better, and apter to cheer up the Spirits. The *Engliſh* Exerciſes and Recreations, common with other Nations, are Hunting, Hawking, Fowling, Fiſhing, Shooting with Bows and Arrows, Dancing, Muſick, Stage-Plays, *&c.* Playing at Mall, ſo frequent in *France*, and playing at Tennis, are much diſuſed in *England*. But Bowling is very much uſed, for which there are Bowling-Greens kept very neat, peculiar to the *Engliſh*. And ſo is the Recreation of Paddock-Courſes, Horſe-Races, Cock-Fighting; and with the common People, Leaping, Wreſtling, Bear-Baiting, Bull-Baiting, Prizes, Cudgels, Foot-Ball in froſty Weather, and Throwing at Cocks in *Lent*. The Art of Ringing Bells is peculiar to the *Engliſh*; but the *Dutch* excel the *Engliſh* in their muſical Chimes. The *Engliſh* Feſtival Days are particularly the Holy-Days at *Chriſtmas*, *Eaſter*, and *Whitſuntide*. They have alſo publick Days of Rejoicing upon a civil Account; particularly the Reigning King's Birth-Day, Proclamation-Day, and Coronation-Day. The fifth of *November* is alſo a Thankſgiving-Day, for the Deliverance of King *James* I. and the Parliament, at the Point of being blown up by Conſpirators; as is alſo *May* 29th, for the Reſtauration of Monarchy. As to Faſting Days, the Church of *England* has, indeed, appointed *Lent*, as a particular Time of Faſting, but not wholly to abſtain from Fleſh at that Time. However, many Members of the Church of *England* abſtain from Fleſh on *Wedneſdays* and *Fridays* in *Lent*; but *Good-Friday*, particularly, is obſerved with Faſting. The 30th of *January*, being the Day when King *Charles* I. was martyr'd, is appointed by Law to be obſerved with Faſting. The ſecond of *September*, being the Day when *London* was burnt, has been obſerved as a Faſt ever ſince, by the Citizens thereof. To deprecate God's Judgments, and implore his Mercy, the Sovereign appoints ſolemn Faſts, when he thinks proper; as he does publick Thankſgivings, for ſignal Bleſſings. The *Engliſh Britons* have a particular Cuſtom on *Valentine*'s Day, *Feb.* 14. which ſometimes introduces a Match, and is grounded upon the Inſtinct of Animals, which about this Time of the Year, begin to couple. Upon *March* 1ſt, being St. *David*'s Day, the *Welſh* wear a Leek on their Hats. The King himſelf wears one. *November* 30. being St. *Andrew*'s Day, the *Scots* wear a Blue Croſs on the Fore-part of their Hats.

Pleaſant Drinks.

Tobacco.

Exerciſes and Recreations.

Feſtival Days.

Faſting Days.

Particular Cuſtoms.

As to the *Engliſh* Computation of Time, the natural Day begins with them, as with moſt Parts of *Europe*, at Midnight. But the Year begins with them properly on *Lady* Day, *March* 25th, and they date accordingly all their publick Writings; tho' they allow the Year, by the Cycles of the Sun and Moon, to begin *January* 1. and commonly call it *New Year's* Day. The *Engliſh* Epoch is from the Time of our Saviour's Birth, but they keep the old *Julian* Stile; whereas all Popiſh, and ſome Proteſtant States, go by the New, otherwiſe called the *Gregorian* Stile. By this New Stile, they go now 11 Days before us.

Computation of Time.

The Diſeaſes the *Engliſh* are moſt ſubject to, are chiefly the Rickets, the Scurvy, and the Conſumption. The firſt incident to Children, the Scurvy to moſt People more or leſs, and the Conſumption to many. There is no Country, perhaps, where Rheums and Coughs are more predominant, eſpecially in the Winter. Agues and Rheumatiſms are alſo very riſe, eſpecially near the Sea: But Fevers are not ſo frequent, as in hot Countries. From the Gout, Stone, Gravel, Cholick, and other Diſeaſes, *England* is no more free than other Nations: But Surfeits are more frequent, the *Engliſh* being too apt to indulge their Appetites. The Plague, formerly ſo frequent in *England*, as to return once in 20 or 30 Years, has not afflicted it ſince the Year 1665 and 1666. In the three Reigns of *Henry* VII. *Henry* VIII. and *Edward* VI. this People was viſited with an odd Kind of Diſeaſe, called the Sweating Sickneſs, which affected the *Engliſh* any where beyond Sea, without touching the Natives. Whence it came to be called in *Latin*, *Sudor Anglicus*, as being peculiar to the *Engliſh*.

Diſeaſes.

The Trade of *England* is carried on two Ways, at Home and Abroad. At Home, by Land and Water. By Land, all Proviſions and Commodities are convey'd in Waggons, and upon Pack-Horſes; by Water, either by Sea, or upon navigable Rivers. This vaſt Tranſport of Proviſions and Commodities, both by Land and Water, employs a World of Waggoners, Seamen, and Watermen. To receive what comes by Land, we may reckon 150 great Inns at *London*, where a vaſt Number of Porters are employ'd to load and unload the Waggons, and to carry the Parcels where they are directed. As to the Conveyance by Water, one may judge of the vaſt Number of Ships, Mariners, and Watermen, employ'd in *England*, by the Sea-Coal Trade only, which takes up conſtantly 500 great Veſſels.

Home Trade.

If the Home Trade be ſo prodigious, we may reaſonably conclude our Foreign Trade to be far beyond it. Not but that *England* may very well ſubſiſt without it. For ſhe yields all Things neceſſary for Life; which cannot be ſaid of *Holland*, her Rival in Point of Trade. But as Foreign Trade is uſeful to employ Artiſts, and improve Manufactures; ſo 'tis an effectual Means to inrich the Nation, and make it formidable. The principal Commodities of the Growth of *England* are her Wooll, of which Cloth and Stuffs are made, to the Sum of two Millions Sterling *per Annum*. Her Tin, Lead, Copper, Pit-Coal, great Guns, Bombs, Carcaſſes, *&c.* for one Million. Moreover, ſhe exports abundance of Corn, Red-Herrings, ſmoak'd Pilchards, and Salmon; beſides abundance of Leather and Saffron. Many other of her Manufactures are alſo in great Requeſt, particularly her Sattin, Damask, Velvet, Plush, Locks, Pendulums, and Watches; and all Sorts of Mathematical Inſtruments, *&c.* great Quantities of which are exported. Beſides the great Conſumption *England* makes of the Products of the New World, particularly Sugar, Indigo, Cocoa Nuts, Tobacco, *&c.* ſhe ſpares to the Sum of half a Million a Year for other Parts of *Europe*. Her Trade with *Ireland*, and Fiſhery with *Newfoundland*, is alſo very beneficial to her. With *Ireland*, by exporting her Wooll, Beef, Hides, Tallow, Butter, and Fiſh.

Foreign Trade.

The foreign Trade is regulated chiefly at *London*, by ſeveral Companies of Merchants, impowered, by Royal Authority, to make ſuch Regu-

Companies of Merchants.

lations for the Improvement of their reſpective Trade, as they ſhall think convenient. The principal are, 1. The *Eaſt-India* Companies, the Old and the New, now united together. Their Trade extends from *Perſia* to *China*. In *Perſia* they have two Factories, one at *Iſpahan*, and the other at *Gambroon*. In *India*, a great many, particularly at Fort *St. George*, and Fort *St. David*; *Achim*, and *York* Forts in the Iſle of *Sumatra*; *Calicut*, *Surat*, and *Pettipolee* on the Coaſt of *Coromandel*; *Rajama* in *Malabar*, and the Iſle of *Bombay*, &c. and in *China*, *Amoy*, *Canton*, and *Tunqueen*. 2. The *Levant*, or *Turkey* Company, ſettled by the famous Queen *Elizabeth*. 3. The Company of Merchant-Adventurers, the moſt antient of all, firſt ſettled by King *Edward* I. now only allowed to export Cloths ready made. 4. The *Ruſſia* Company, eſtabliſhed in the Reign of *Edward* VI. upon the Diſcovery made by the *Engliſh* of the Way to *Archangel*, which formerly was counted impracticable. 5. The Company called the *Eaſt-Land* Company, whoſe Trade is upon the *Baltick*, in *Denmark*, *Sweden*, and *Poland*. 6. The Royal *African* Company, ſettled by King *Charles* II. who gave them full Power to trade all over the Weſtern Coaſt of *Africk*. This Company has built, at their own Charge, many Forts upon that Coaſt, for the Security of their Trade. 7. The *South-Sea* Company, ſo called from its Trade to the great *South-Sea*, on the Weſt of *America*. We paſs by the *Green-Land* Company for Whale-Fiſhing, *Hudſon*'s Bay Company, and others. 'Tis computed, that what is brought in only by the *Eaſt-India* Company, after we have ſupplied ourſelves, amounts to 500,000 *l. per Annum*. And what is tranſported hither from the *Britiſh* Plantations in *America*, beſides the Fiſh, Pipe-Staves, Maſts, Beaver, &c. from the North Parts of that Continent, 400,000 *l. per Annum*. For promoting the Trade of *Great-Britain*, and for inſpecting and improving his Majeſty's Plantations, there is a Council of Trade eſtabliſhed.

Council of Trade

Coin

The *Britiſh* Coin, now Current, is of two Metals, Gold and Silver. The Gold is either a Guinea, or an Half Guinea. The Silver Coin is of the beſt Silver, called Sterling; of which there have been formerly many Species, now reduced to 4, *viz.* Crowns, Half Crowns, Shillings, and Sixpences. We have likewiſe abundance of Copper Farthings and Half Pence, which have been coined for the Convenience of ſmall Change. What we call a Noble, is 6*s.* 8*d.* a Mark, 13*s.* 4*d.* an Angel, 10*s.* but they are not to be ſeen in Specie. We don't uſe the Word Pound under 3*l.* which is 60*s.* 'Tis preſumed there are in *England* Six Millions of coined Gold, and Ten Millions of Silver; in all, Sixteen Millions. The Office of the Mint, where all our Money is coined, and to which belong ſeveral Officers, is kept in the *Tower* of *London*; but when the hammered Coin was called in to be milled, 5 other Mints were erected, *viz.* at *Briſtol*, *Cheſter*, *Exeter*, *Norwich*, and *York*.

Weights

The Weights and Meaſures are the ſame all over *England*, according to the King's Standard in the *Exchequer*. The Weights are of two Sorts, one called Troy Weight, and the other Averdupois; the firſt containing 12 Ounces, and the other 16, in the Pound. The Ounce Averdupois is lighter than the other; but the Averdupois Pound is more than the Troy Pound, for 14 Pounds of that are equal to 17 Troy. By Troy Weight are weighed Jewels, Gold, Silver, Bread, Corn, and Liquors; and by the other Mercery and Grocery Ware, Wooll, Metals, Tallow, and the like, of which 100 Weight comes to 112 Pounds.

Meaſures

Meaſures are either applicative or receptive; that is, for Things meaſured outwardly or inwardly. Of the firſt Sort we have an Inch, a Foot, a Yard, an Ell, a Geometrical Place, a Fadom, a Rod, and a Pole or Perch. The receptive Meaſure is either for liquid or dry Things. Of the firſt, we have a Pint, a Quart, a Pottle, and a Gallon. Wine Meaſures are ſhorter than thoſe of Ale and Beer, 4 Gallons of theſe making 5 of Wine Meaſure. For dry Things, ſuch as Corn or Grain, the Gallon is of a Size between the Wine and Beer Gallon; above which are the Peck, the Buſhel, the Comb, the Quarter, the Laſt, or Wey.

Beſides the Convenience of Travelling by Sea, or on Rivers, no Nation in the World is better accommodated, either with Horſes or Coaches. The firſt ſo common in *England*, as to be uſed even by the vulgar Sort. If a Man's Occaſions require the utmoſt Speed, he has the Convenience of Poſt-Horſes, to be ſhifted at every Poſt Stage. The Roads are alſo much frequented with Coaches: eſpecially the Neighbourhood of *London*, ſome belonging to Gentlemen, and others being either Hackney or Stage-Coaches. Theſe ſet out from *London* at certain Times for all the noted Towns in *England*, and return from thence with great Speed. As to the Poſt, for Intercourſe of Letters, there is a General Office in *Lombard-Street*, *London*, formerly managed in chief by one Poſt-Maſter-General, and now in the Hands of two, who have under 'em 182 Deputy-Poſt-Maſters in *England* and *Scotland*, moſt of 'em keeping regular Offices in their Stages, and Sub-Poſt-Maſters in their Branches. There is alſo a General Office in *Ireland* for that Kingdom, which is kept in *Dublin*. And ſuch is the Diſpoſition of Poſtages, that there is no conſiderable Market-Town in *England*, but has an eaſy and certain Conveyance for all Letters to and from the ſaid Office, in the due Courſe of the Mails every Poſt. This Conveyance is ſo expeditious, that every 24 Hours the Poſt goes 120 Miles; and in 5 or 6 Days an Anſwer may be had from a Place 300 Miles diſtant from the Writer. The Poſt-Days to ſend Letters from *London* to any Part of *England* and *Scotland*, are *Tueſdays*, *Thurſdays*, and *Saturdays*. And the Returns certain on *Mondays*, *Wedneſdays*, and *Fridays*. But to *Wales* and *Ireland* the Poſt goes only twice a Week, *viz.* *Tueſdays* and *Saturdays*; and comes from *Wales* every *Monday* and *Friday*: But from *Ireland* the Return is uncertain, becauſe it depends upon Winds. When the Court is in the Country, the Poſt goes every Day to the Place where it reſides. The ſame it is with *Kent*, the Univerſities, and the uſual Stations of the Royal Fleet, as the *Downs*, *Spithead*, &c. For Foreign Intelligence, in Times of Peace, *Mondays* and *Tueſdays* are the Poſt-Days for *France*, *Spain*, and *Italy*: *Tueſdays* and *Fridays* for *Holland*, *Germany*, *Denmark*, and *Sweden*. On *Mondays* and *Fridays*, the Poſt goes alſo for *Flanders*, and from thence to *Germany*, *Denmark*, and *Sweden*. Queen *Anne* was alſo pleaſed, for the Encouragement of Trade and Commerce, to appoint Boats to convey Letters and Packets from *England* as far as the *Weſt Indies*. One of theſe Boats ſets out from the *Thames* on the laſt *Thurſday* of the Month, particularly for the Iſles of *Barbadoes*, *Montſerrat*, *Nevis*, *St. Chriſtopher*, *Antego*, and *Jamaica*.

Poſt

The People of *England* are generally divided into Laity and Clergy; and the firſt ſub-divided into Nobility, Gentry, and Commonalty. The Law of *England*, indeed, makes no Diſtinction of Laity, but that of Nobles and Commons: So that the Gentry of *England* are, by Law, but the Flower of the Commonality. By the Nobility, we mean only the Temporal Peers of the Realm, being

Degrees of the Laity

No-

ing Lords of Parliament; of whom there are 5 Degrees, diſtinguiſhed by the ſeveral Titles of Duke, Marquis, Earl, Viſcount, and Baron. A Duke is created by Patent, Cincture of Sword, Mantle of State, Impoſition of a Cap and Coronet of Gold on his Head, and a Verge of Gold put into his Hand. He is called his Grace, a Title formerly given to the Kings of *England*. A Duke's eldeſt Son is called Lord Marquis; the younger Sons by their Chriſtian Names, with the Title of Lord prefix'd, and all his Daughters Ladies. A Marquis and an Earl are created as a Duke, but with Difference in their Coronets. All the Sons of a Marquis are Lords by the Courteſy of *England*, and all his Daughters Ladies. And as a Duke's eldeſt Son bears the Title of a Marquis, ſo an Earl's bears that of a Viſcount: But the younger Sons of an Earl are but Eſquires, tho' all his Daughters be Ladies. Viſcounts and Barons are made by Patent, the laſt ſometimes by Writ, when called to the Houſe of Lords. None of their Sons bear the Title of Lord, nor any of their Daughters that of Lady: Therefore the eldeſt Son of the firſt Viſcount, is looked upon as the firſt Gentleman, and his eldeſt Daughter as the firſt Gentlewoman, without a Title, in *England*. All Peers of *England* keep their Rank according to the Date of their Patents. Their Ladies, and their Sons Ladies, keep amongſt them the Rank of their Husbands. A *Scots* Nobleman takes Place next to the *Engliſh* of his Rank; and an *Iriſh* Nobleman, after a *Scots* Peer of his Rank. But there are ſome High Officers, who, by Virtue of their Office, precede even all Dukes that are not of the Royal Blood, whatever be their Quality otherwiſe; *viz.* the Lord Chancellor, or Lord Keeper, the Lord High Treaſurer, the Lord Preſident of the Privy Council, and the Lord Privy Seal. And others that take Place only of all that are of that Degree, particularly the Lord Great Chamberlain of *England*, the Earl Marſhal, the Lord High Admiral, and the Lord Chamberlain of the King's Houſhold. A Secretary of State, being a Baron, takes Place of all Barons, that are not in any of theſe high Stations. But if he be above a Baron, he only keeps the Rank his Quality gives him. The Nobility of *England* enjoy many great Privileges, the Principal of which are theſe that follow: 1. That they are free from all Arreſts for Debts, as being the King's Hereditary Counſellors. But Execution may be taken upon their Lands and Goods. For the ſame Reaſon they are free from all Attendance at Courts-Leet, or Sheriffs-Turns. 2. In Criminal Cauſes, they are only tried by their Peers; who give in their Verdict, not upon Oath, as other Juries, but only upon their Honour. 3. To prevent the ſpreading of any Scandal upon Peers, or any great Officer of the Realm, there is an expreſs Law, called *Scandalum Magnatum*, by which any Man convicted, is condemned to an arbitrary Fine, and to remain in Priſon till the ſame be paid. 4. Upon any great Trial in a Court of Juſtice, a Peer may come into the Court, and ſit there covered.

Of the Knights of the Garter.

Of all the Secular Orders in the Chriſtian World, that of the Garter is the moſt noble and moſt antient; for it was inſtituted in 1350, by *Edward* III. who conquered *France* and *Scotland*, and brought home their Kings Priſoners. 'Tis called, The Order of the Garter, becauſe this was the only Part of the whole Habit of the Order worn at firſt. And this Motto was order'd to be wrought on the Garter, *Honi ſoit qui mal y penſe*, Shame be to him that Evil thinks. This honourable Society conſiſts of the Sovereign, the King or Queen of *Great Britain*, and 25 Companions, called Knights of the Garter. And whereas St. *George* is the Patron of *England*, 'tis upon St. *George*'s Day they are uſuall inſtalled, in the noble Chapel of the Caſtle of *Windſor*, with great Pomp and Magnificence. The Garter is worn by the Knights on the left Leg. The ſame is blue, deck'd with Gold, Pearls, and precious Stones, with a Buckle of Gold. But inſtead of it, they commonly wear but a large blue Ribbon. They alſo wear a broad blue Ribbon hanging over their left Shoulder, with St. *George*'s Picture at the Bottom of it, beſides ſeveral other Ornaments, either conſtant or occaſional. The Biſhop of *Wincheſter* is the Prelate of the Garter, the Biſhop of *Saliſbury* Chancellor, and the Dean of *Windſor* Regiſter. The principal King at Arms, called Garter, is the chief Lay Officer of this Society. There are in the Caſtle of *Windſor* 26 decay'd Gentlemen, commonly called the Poor Knights of *Windſor*, who have a liberal Maintainance at the Charge of the College. There have been of this Order, 8 Emperors, above 20 foreign Kings, and many more inferior Princes.

Gentry

Next to the Peers of the Realm, who properly are the Nobles of *England*, we come to the Gentry, conſiſting of Knights, Eſquires, and Gentlemen without Title. Beſides the Knights of the Garter, here are Knights Baronets, Knights of the Bath, and Knights Batchelors, all diſtinguiſhed from the reſt of the Gentry by the Title of Sir prefix'd to their Chriſtian Names. Baronets are the firſt among the Gentry, and the only Knighthood that is Hereditary. This Honour was firſt inſtituted in the Year 1611, by King *James* I. who limited their Number to 200. But his Succeſſors did not tie themſelves up to that Rule. The Knights of the Bath are ſo called from their Bathing, uſed before they were created. *Henry* IV. was the Founder of this Order; which was reviv'd in the late Reign. They wear a Scarlet Ribbon, belt-wiſe. Knights Batchelors are the moſt common, and therefore the leſs eſteem'd. Formerly this Honour was beſtowed only upon Sword-men for their military Service, or upon Noblemens Sons. But of later Times it has been ſo frequently conferr'd upon Lawyers, Phyſicians, Merchants, Painters, Mathematicians, and others, that the Kingdom ſwarms with this Sort of Knights. All Knights Wives bear the Title of Lady, which gives 'em a Precedency over Eſquires and Gentlemens Wives. Eſquires are properly the younger Sons of Earls, the Sons of Viſcounts and Barons, the eldeſt Sons of the younger Sons of Peers, the eldeſt Sons of Knights, and their eldeſt Sons for ever. There are alſo Eſquires created by the King. And thoſe that are in publick Offices, or in any eminent Station, ſuch as Juſtices of the Peace, Mayors of Towns, Counſellors at Law, Serjeants of the ſeveral Offices in the King's Court, and other noted Officers, are alſo reputed Eſquires. Gentlemen are thoſe properly, who, being deſcended of a good Family, bear a Coat of Arms, without any particular Title. Formerly Trading degraded a Gentleman, and now a thriving Tradeſman becomes a Gentleman by the happy Return of his Trade. As to Merchants, the Founders of Trade, and of the Nation's Wealth, they deſerve indeed to be ranked amongſt Gentlemen: Therefore many Gentlemen born, take upon them this Profeſſion, without any Prejudice or Blemiſh to their Birth. Nay, 'tis common with us, for Gentlemens and Merchants Sons and Daughters to intermarry. In ſhort, the Title of Gentlemen is given in *England* to all that diſtinguiſh themſelves from the common Sort of People, by a good Garb, genteel Air, good Education, Wealth, or Learning. The younger

Sons

Sons of Viſcounts and Barons, are preceded by ſuch Privy-Counſellors as are but Gentlemen, by the Chancellor of the *Exchequer*, the Chancellor of the *Dutchy* of *Lancaſter*, the Lord Chief Juſtice of th *Common-Pleas*, the Lord Chief Baron of the *Exchequer*, and the other Judges.

Inferior Sort of People

By the inferior Sort of People, we mean properly ſuch as get their Livelihood either in a mechanick, or ſervile Way; as ordinary Tradeſmen, Mariners, Husbandmen, inferior Servants, Labourers, &c. But there is a middle Sort, between the Degree of a Gentleman and theſe, *viz.* Yeomen, and Copyholders. Thoſe are called Yeomen, or Freeholders, that have Land of their own to a good Value, and husband it themſelves. The Copyholders are much of the ſame Nature; a Copyhold being a Kind of Inheritance. The meaner Sort of People are the happieſt People in *Europe* of their Rank, and the leaſt liable to Oppreſſion from the Sovereign.

Clergy.

As the Laity of *England* conſiſts of Nobility, Gentry, and Commonalty; ſo the Clergy is divided into Biſhops, Dignitaries, and inferior Clergy.

Of the Biſhops, and their Dioceſes.

England and *Wales* conſiſting of 26 Dioceſſes, there are accordingly 26 Dioceſans, or Biſhops, beſides the Biſhop of *Man*, who is no Peer of the Realm, as the other Biſhops are. Two of thoſe Biſhops having a Super-intendency over the whole Church of *England*, are therefore called Archbiſhops, one of *Canterbury*, and the other of *York*; and their Provinces accordingly. The firſt of which far exceeds the laſt; for of 26 Dioceſſes it takes 22, *viz.* 18 in *England*, and 4 in *Wales*. The Biſhops are the Overſeers of the Clergy and People committed to their Charge.

Their Power and Privileges.

They have in chief the Power of Ordination, tho' they always perform it jointly with ſome other Prieſts. The Archbiſhop of *Canterbury* has a Kind of Super-eminency over the Archbiſhop of *York*: For he has Power to ſummon him to a National Synod, or Convocation. The Archbiſhop of *York* is called Primate of *England*: But the Archbiſhop of *Canterbury* is Primate of All *England*. They are both ſtiled Moſt Reverend, in a ſuperlative Manner, and honoured with the Title of Grace. The Archbiſhop of *Canterbury* is the firſt Peer of the Realm, next to the Royal Family, and takes place of the greateſt Officers of the Crown. Nor does any one of theſe, except the Lord-Chancellor, or Lord-Keeper, ſtep between his Grace and the Archbiſhop of *York*. To the Archbiſhop of *Canterbury* it properly belongs to crown the King, to conſecrate a new-made Biſhop, and to call Provincial Synods, according to the King's Writ directed to him for that Purpoſe. The Biſhop of *London* is accounted his Provincial Dean, the Biſhop of *Wincheſter* his Chancellor, and the Biſhop of *Rocheſter* his Chaplain. To decide all Differences in Eccleſiaſtick Matters, he holds ſeveral Courts. The Archbiſhop of *York* has alſo many Prerogatives, and holds ſeveral Courts.

The Rank of Biſhops.

Next to them the Biſhops of *London*, *Durham*, and *Wincheſter*, have always the Precedence; and all other Biſhops according to the Priority of their Conſecration. Whereas ſome Biſhopricks have but a ſmall Income, the Biſhop in that Caſe is uſually provided with ſome good Living beſides. The Biſhop of *Rocheſter*, being Dean of *Weſtminſter*, has a much better Revenue from his Deanery, than from his Biſhopprick. All the Biſhops are called Lords Spiritual, Fathers in God, Right Reverend, and have the Title of Lordſhip. Theſe have not only the ſame Privileges as the Temporal Lords, but alſo ſome peculiar Prerogatives, and thoſe of a high Nature.

Dignify'd Clergy.

By the Dignify'd Clergy, we mean, Deans, Arch Deacons, Rural Deans, and Prebendaries, or Canons; who are Aſſiſtant to Biſhops, and for the moſt Part Men above the common Capacity of the Inferior Clergy. In all Cathedral and Collegiate Churches (except at St. *David*'s and *Landaff* in *Wales*) there is a Dean, who is the Head of the Canons or Prebendaries, and with them makes a Chapter. Theſe Dignitaries have each a Dwelling-houſe near the Cathedral or Collegiate Church, and a plentiful Maintenance Both the Dean and Prebendaries ought to preach by Turns upon *Sundays*, and at due times to adminiſter the Lord's Supper. Upon the King's Writ of *Conge d'eſlire*, when the See is vacant, they chuſe their own Biſhop, who is always the Perſon recommended by the King. The Deans of the Chapel Royal, St. *George*'s Chapel at *Windſor*, *Ripon*, and *Guernſey*, are only honourary Deans, without any Juriſdiction. The Deans of *Croydon* in *Surry*, *Battle* in *Suſſex*, and a few others, are Deans without any Chapter, but with a Kind of Juriſdiction. The Arch-Deacons are ſo called from their Charge over the Deacons. There are of theſe 60 in all *England*, each Dioceſe having in it one Arch-Deaconry, or more, for Diſpatch of Eccleſiaſtical Buſineſs: And whereas the Biſhop makes the Viſitation of his Dioceſe once in 3 Years, 'tis the Arch-Deacon's Office to viſit the ſame the other two Years. The Rural Deans having the Overſight of a certain Number of Prieſts, their Office is, upon the Biſhop's Order, to convocate the Clergy, and ſignify to them the Biſhop's Pleaſure. Every Arch-Deaconry is ſub-divided into Rural Deaneries.

Inferior Clergy.

By the Inferior Clergy, we mean ſuch as are not dignify'd, whether Rectors, Vicars, Curates, or ſimple Deacons. We call Rector a Clergyman poſſeſſed of a Living, the predial Tythe whereof is not impropriated; Vicars, that officiate in thoſe Livings which are called Impropriations; Curates, that attend the Service of the Church in the Room of Incumbents diſabled, or of Rectors holding ſeveral Livings; and Deacons, ſuch as are admitted into ſome Part of the Service of the Church, till they be fit for the prieſtly Office.

The three Orders of the Church.

For the Church of *England* has 3 diſtinct Orders, *viz.* Biſhops, Prieſts, and Deacons. By the Canon-Law, to be admitted a Deacon, one muſt be 23 Years of Age; to be a Prieſt, 24; and a Biſhop, 30. The Office of Deacon is but miniſterial to the prieſtly Office, and to fit him for it: He may baptize, read in the Church, and aſſiſt the Prieſt at the Lord's Supper, only by giving the Cup.

Of the Ordination.

To be admitted into Holy Orders, one muſt have a Teſtimonial from the Maſters and Fellows of the College where he laſt reſided; or under the Hands and Seals of at leaſt three Divines of good Repute. The Ordination of Prieſts and Deacons is performed 4 times a Year, *viz.* upon the 4 *Sundays* in the Ember-Week. Theſe 4 Weeks are, by the Laws of the Church, Times of Prayer and Faſting. The Ordination (which it is needleſs to deſcribe) is performed in a moſt ſolemn, grave, and devout Manner, by a Biſhop, aſſiſted by ſome of the Dignify'd Clergy, or others in prieſtly Orders.

The Methods to get Livings.

To get a Benefice, a Clergyman muſt procure a Preſentation from the true Patron of the Church, without any Agreement by himſelf, or any in his Behalf, for any Sum of Money, Reward, Gift, Profit, or Benefit, directly or indirectly, in Hand paid, or yearly to be allowed; which is called Simony. Patrons of Churches are thoſe who, by firſt building of Churches, or firſt endowing them with Lands, have obtained for them, and their Heirs, a Right of Advowſon or Patronage. Within 6 Months after he is inſtituted by the Biſhop, upon ſome Lord's Day, he muſt read in the Church the 39 Articles, and declare aloud his unfeigned

Aſſent

Aſſent and Conſent to all the Contents thereof. And within the ſame Time he muſt alſo read the whole Service of the Church appointed for that Day, and declare his Aſſent and Conſent to all Things contained in the Book of Common-Prayer. Within 3 Months after his Inſtitution, he muſt likewiſe, during divine Service, publickly read his Certificate from the Biſhop of his Subſcription to the Declaration aforeſaid, and at the ſame Time the Declaration itſelf. All which muſt be atteſted by ſome of the moſt intelligent Pariſhioners under their own Hands. And if he fails in any of thoſe Duties, he thereby forfeits his Living.

CHAP. VI.

Of the Government of England; viz. *the Laws, the King, the Royal Family, the Officers of State, the Forces, the Court, the Treaſury, the Privy Council, the Parliament, the High Courts of Judicature, Inferior and Spiritual Courts, Puniſhments*, &c.

Laws. THE Laws of *England* are the Foundation of its Government. The Common Law is a Summary of the Laws of the *Saxons* and *Danes*, to which *William the Conqueror* having added ſome of the Cuſtoms of *Normandy*, he cauſed them all to be written in his own *Norman* Dialect. Beſides the Common Law, we have the Statute Law, that is, the Laws made from Time to Time by King and Parliament, as Occaſion requires: The Martial Law, which concerns only Soldiers and Mariners: The Foreſt Law, concerning Foreſts: The Civil Law, made uſe of in the Court of Admiralty, the two Univerſities, all ſpiritual Courts, the Earl-Marſhal's Court, and in Treaties with Foreign Princes: The Laws of *Rhodes* and *Oleron*, concerning Maritime Affairs: And the Canon Law, which takes Place in Things relating merely to Religion. There are other Laws, called Municipal, or Bye-Laws, proper to Corporations. By the Laws of *England*, the *Engliſh* are a free People, becauſe no Law can be made or abrogated, without their Conſent by their Repreſentatives in Parliament. By the ſame Laws, no *Engliſh* Subject ought to be impriſoned, without Cauſe ſhewn; nor may he be denied a Writ of *Habeas Corpus*, if deſired, to bring him ſpeedily to his Trial. And if upon an *Habeas Corpus*, no Cauſe of Impriſonment be alledged, the Priſoner muſt be ſet at Liberty. No Racks are uſed to force a Confeſſion of Guilt from the Priſoner; and nothing but clear Evidence, upon Oath, can bring him in guilty. None can be tried but by a Jury of his Peers, nor condemned but by the Laws of the Land, or by an Act of Parliament. Nor ought any to be fined for any Offence, but according to the Merit of it. No Taxes, Loans, or Benevolences, can be impoſed upon *Engliſh* Subjects, but with their own Conſent by their Repreſentatives in Parliament. Nor is any one to be preſſed for a Soldier, but ſuch as Acts of Parliament direct. In Time of Peace or War, (unleſs upon an Invaſion) no Soldiers can be quartered in the Houſe of a private Houſe-keeper againſt his Will, though they pay for their Quarters.

Freedom of the *Engliſh*.

Power belongs to Wives

When a Woman marries, ſhe gives herſelf over, and what ſhe brings with her, to her Husband's Power. She parts with her very Sirname, and aſſumes her Husband's. If ſhe has any Tenure, ſhe holds it of, and by her Husband. She can make no Contract, nor give away, nor alienate any Thing, without her Husband's Conſent. If ſhe offends, her Husband may correct her: But if ſhe wrong another by her Tongue, or Treſpaſs, her Husband anſwers for the Fault. If ſhe takes Things upon Truſt, unknown to her Husband, he is liable to pay, unleſs he has cried her down in the Market. A Woman that has killed her Husband, is, by Law, to be burnt alive. If a Wife brings forth a Child begotten before Marriage by another Man, the Husband is bound to own it, and the Child ſhall be his Heir at Law. If ſhe brings forth a Child after a long Abſence of her Husband, and he lived all that while within the four Seas, he muſt father that Child. If a Wife, being an Heireſs, brings to her Husband an Eſtate in Land, that deſcends to her eldeſt Son; and if ſhe has no Son, but only Daughters, it is divided amongſt them. But if ſhe dies without Iſſue, the Land goes to the next Heir at Law: Only the Husband ſhall enjoy the Profit thereof during his Life, provided he had a Child alive of her Body. In ſhort, as the Huſband and Wife are accounted but One, ſo ſhe cannot be produced as a Witneſs for or againſt him. Nor can they be wholly ſeparated by Law, but upon a Nullity of Marriage, Precontract, Conſanguinity within the Degrees forbidden, Impotency, or ſuch like. Noblewomen are ſo by Deſcent, Creation, or Marriage. But the greateſt Part of *Engliſh* Noblewomen are ſo by Marriage. A Noblewoman by Deſcent, or Creation, marrying a Husband not noble, after the Deceaſe of the firſt, keeps her Honour by Law. A Noblewoman by Marriage, who marries a Husband of a lower Eſtate, loſes her Honour.

To Children

The eldeſt Son of a Family, is, by the Cuſtom of *England*, commonly provided for beyond all other Children, and ſucceeds both in the Title and Eſtate; he inherits all Lands, and younger Children the perſonal Eſtate. But if there be no Son, both the real and perſonal Eſtate are equally divided among the Daughters. When the Eſtate is not entailed, the Father may leave it to what Child he pleaſes, or give it away from his Children. A Son at the Age of 14, his Father being dead, may chuſe his Guardian, conſent to Marriage, and by Will diſpoſe of Goods and Chattels. At 21 he is of Age, and then free to make Contracts. A Daughter may conſent to Marriage at 7 Years of Age; and at 12 may retract or confirm it.

To Servants

Servants are commonly hired for 1 Year, at the End whereof they leave their Maſters, after a fair Warning. A Maſter may by Law correct his Servant, when he gives him juſt Cauſe; and Reſiſtance in a Servant is liable to a ſevere Penalty. Apprentices in *England* are bound to ſerve 7 Years, and all that Time bare-headed in open Shops. An Apprentice is bound by his Indenture, not to marry during the Time of his Apprenticeſhip. But if a Maiden-Apprentice do marry, ſhe may go to her Husband. A Foreign Slave, brought over, is, upon Landing, free from Slavery, tho' not from common Service.

The King's Government

The Monarchy of *Great-Britain* is admirably well framed, being limited in such a Manner as secures the People's Liberty, without making the King little. 'Tis a mixed Government of Monarchy in the King, Aristocracy in the Lords, and Democracy in the Commons. The King has all the Ensigns of Royalty: At his Accession to the Crown, he is proclaimed with great Solemnity; and his Coronation is performed with great Pomp and Magnificence. He has likewise all the Marks of Sovereignty, as the Power of making Treaties and Leagues with Foreign States, of making Peace and War, sending and receiving Ambassadors, creating of Magistrates; of calling, adjourning, and proroguing, and dissolving the Parliament; of conferring Titles of Honour; of coining, pardoning of Criminals, &c. He has alone the Choice and Nomination of the superior Officers, the principal Direction and Command of his Armies, of all Magazines and Ammunition, Castles, Forts, Ports, Havens, and Ships of War. The Militia is likewise wholly at his Command, and the publick Monies at his Disposal. Without his Assent, no Bill in Parliament can pass into a Law: And he may increase the Number of Peers, by creating more Barons, or calling to their House whom he thinks fit by Writ. All Counsellors, Officers of State, and Judges, are nominated by him. None but the King has the sovereign Power in the Administration of Justice. In Point of Punishments, he may either pardon the Offence, or alleviate the Punishment, after Sentence given according to Law. The King is the supreme Head of the Church, as he is of the State, and is looked upon as her Guardian and nursing Father: He alone has the Patronage of all Bishopricks, for none can be chosen Bishop but whom he nominates in his *Congé d'Elire*. Nor can a Bishop Elect be consecrated, without the King's special Writ or Assent. So tender is the Law for the Preservation of the King's Person, that the very imagining or intending his Death, proved by any Overt Act, is High-Treason by Law. Such is the Respect paid to the King by his Subjects, that they all stand bare, not only in his Presence, but even in his Absence, where he has a Chair of State. All People at their first Address kneel to him, and he is at all Times served upon the Knee. To support the Honour of the Crown, the Kings of *England* have always kept a great and splendid Court, consisting of a numerous Train of Officers and Servants of all Ranks, with large Salaries, beyond any Court in *Europe*.

Of the King's Minority

When the King is under 12 Years of Age, then a Regent, Protector, or Guardian, is appointed, either by the King his Predecessor, or by the Parliament. But when the King comes to be 14 Years of Age, he may revoke, and utterly annul, what Acts he thinks fit, that have passed during his Minority. In the King's Absence upon any Foreign Expedition, it was usual formerly to appoint a Vicegerent, with the Title of Lord Warden, or Lord Keeper of the Realm, and sometimes that of Protector. In the Reign of King *William*, the Queen took upon her the Administration, by Virtue of an Act made for that Purpose. But, after her Decease, the Nation was yearly governed, during the King's Absence, by Lords Justices; as was the Case in the Reign of King *George* I. In the present King's Reign, her late Majesty has always been constituted Guardian during his Absence.

Of the Queen's Royalty

The Queen Consort is reputed the second Person in the Kingdom, and respected accordingly. She has her Court and Officers apart, with a large Power to maintain her Greatness. She may without Naturalization purchase Lands, make Leases and Grants, and sue in her own Name. To conspire her Death, or violate her Chastity, is High Treason. If she survives the King, she is called Queen Dowager, is still respected as a Queen, and keeps a Court accordingly. If the next King be unmarried, her Rank is next to him; and if married, she is next to the Queen. Nor does she lose her Dignity, though she marries a private Gentleman. The King's Children are to be called the Sons and Daughters of *Great Britain*, because all Subjects thereof have a special Interest in them. The Prince of *Wales* is by Birth Earl of *Chester* and *Flint*, and Duke of *Cornwall*, but Prince of *Wales* by Creation. It is High-Treason to imagine his Death, or violate his Wife. The younger Sons of *England* have no Appenages, but depend altogether upon the King's Favour, for Honour and Revenues. They are, indeed, by Birthright, Counsellors of State. The Daughters are called Princesses, and to attempt their Chastity is High Treason. The Title of Royal Highness is common to all the King's Children. All other Subjects ought to be uncovered in their Presence, and to kneel when they kiss their Hands. They are served on the Knee at Table; unless the King be present. All Persons of the Blood Royal, being lawful Issue, have the Precedency of all others in *England*. The Crown falls from Father to Son, and his Heirs; for want of a Son, to the eldest Daughter, and her Heirs; for want of a Daughter, to the Brother and his Heirs; and for want of a Brother, to the Sister, and her Heirs.

Great Officers of State.

Next to the Princes of the Blood, we commonly reckon the great Officers of State, *viz.* 1. The Lord High Steward, whose Power was so great and exorbitant, that it was thought fit at last to trust it no longer in the Hands of any Subject. *Henry* of *Bollingbrook*, afterwards King *Henry* IV. was the last that had a State of Inheritance in this Office. Since that Time there has been no Lord High Steward made, but only to officiate either at a Coronation, or for the Arraignment of a Peer or Peeress for a Capital Crime. 2. The Lord High Chancellor, or Keeper of the Great Seal, now looked upon as Prime Minister of State, and the highest Person in the Kingdom in Civil Affairs, after the King and Princes of the Blood. 3. The Lord High Treasurer, who has under his Charge all the King's Revenue, which is kept in the *Exchequer*, and the Check of all Officers employed in collecting the same, whose Offices are for the most Part in his Gift. 4. The Lord Privy-Seal, whose Place is also of great Trust. 5. The Lord President, whose Office has been always granted by Letters Patents under the Great Seal. 6. The Lord Great Chamberlain of *England*, an Officer of great Antiquity, and of special Service at the Coronation of our Kings. 7. The Lord High Constable, whose Power and Jurisdiction was anciently so exorbitant, that it was thought too great for any Subject. This Office has been discontinued ever-since the Reign of *Henry* VII. However, upon a Coronation, a Lord High Constable is created *pro illa vice*. 8. The Earl Marshal of *England*, who takes Cognizance of all Matters of War, and Arms, wherein he is commonly guided by the Civil Law. This Office has continued a long Time hereditary in the Duke of *Norfolk*'s Family. 9. The Lord High Admiral, who has the Management of all maritime Affairs, and the Government of the Royal Navy, with Power of Decision in all maritime Cases, both civil and criminal. The Sea being reckoned without the Limits of the common Law, and under the Jurisdiction of the Lord High Admiral, therefore

the

the civil Law is made uſe of in the Court of Admiralty. The Offices of Lord High Admiral and Lord High Treaſurer are now executed by Commiſſion.

Engliſh Hiſtory. The *Engliſh* Hiſtory is ſo full of Variety, of ſuch ſurpriſing Turns and Revolutions, that none can parallel it: But the Bounds of this Work not allowing us to enlarge upon it, we ſhall only give a ſhort View of the *Engliſh* Monarchs, with the Time of their Acceſſion to the Crown; leaving other Particulars to the Hiſtories of their Reigns, which are in almoſt every one's Hand.

Dominions.

In *Europe* the preſent King is poſſeſſed of the two greateſt Iſlands in this Part of the World, *viz. Great-Britain* and *Ireland*, likewiſe of moſt of the North-Weſt Part of *Germany*, including ſeveral ſpacious Territories, which belong to him as Elector of *Hanover*. His Majeſty is alſo in Poſſeſſion of theſe four Iſlands on the Coaſt of *Normandy*, *viz. Jerſey*, *Guernſey*, *Alderney*, and *Sark*; beſides the Iſland of *Minorca* within the *Streights*, and the Town of *Gibraltar* in *Spain*. *Great Britain*, moreover, lays a Claim to the Sovereignty of the Seas, even to the Shores of all neighbouring Nations. In *America*, the King has the greateſt Share next to *Spain*, containing the Countries before deſcribed. In *Africk* and *Aſia* there are ſeveral Forts and Factories belonging to *Great Britain*. Near *Goa*, in the *Eaſt Indies*, this Crown is poſſeſſed of the Iſle of *Bombay*; and between *Africk* and *America*, of St. *Helen*. As for the King's Titles, his Majeſty is only ſtiled, *George* by the Grace of God, King of *Great Britain*, *France*, and *Ireland*, Defender of the Faith, beſides the Additions, as Elector of *Hanover*. The Title of Majeſty was not uſed in *England* till the Reign of *Henry* VIII. who was firſt called His Highneſs,

The King's Title.

and afterwards His Majeſty. The Title of Madam is uſed to the Queen, as that of Sir to the King. By the Act of Union it is agreed, That as the Arms of *Scotland* are quartered with thoſe of *England*, *France*, and *Ireland* (before borne by our Kings) ſo the Great Seal of the united Kingdoms ſhall be different from the former Great Seals uſed in either Kingdom; and that the quartering of the Arms, as may beſt ſuit to the Union, be left to his Majeſty. Alſo, that the Croſſes of St. *George* and St. *Andrew* be conjoined, when uſed in Flags, Banners, Standards, and Enſigns, both at Sea and Land.

Forces. As the Extent of the *Britiſh* Monarchy is great, ſo is her Power. In our late Wars, under the Conduct of *John* Duke of *Marlborough*, the *Britiſh* Forces amounted to above 80,000 Soldiers, beſides 40,000 Seamen. Theſe have been reduced to 18,000 Land Forces, and Seamen according to the Occaſion. The principal Magazine is the Tower of *London*, which contains a noble Arſenal, to equip at leaſt 60,000 Men, with a Train of Artillery conſiſting of 50 Pieces of Braſs Ordnance, ready mounted, beſides ſeveral Mortars, with all neceſſary Furniture. But there are other Magazines at *Portſmouth*, *Plymouth*, *Woolwich*, *Windſor-Caſtle*, &c. which are all under the Maſter General of the Ordnance, who has under him, 1. The Lieutenant of the Ordnance, 2. the Surveyor, 3. the Clerk of the Ordnance, 4. the Storekeeper, 5. the Clerk of Deliveries, 6. the Treaſurer, or Pay-Maſter, 7. the Maſter-Gunner. Beſides the King's regular Land Forces, his Majeſty's ſtanding Militia, inrolled for the Defence of *England*, upon any Rebellion or Invaſion, are computed to be near 200,000, in *England* and *Wales* only. They are to muſter once or twice a Year. To regulate theſe Forces, the Sovereign appoints Lord Lieutenants of the ſeveral Counties, who are commonly Peers of the Realm, with a Power to give Commiſſion to Colonels, &c. Under the Lord Lieutenants there are Deputy Lieutenants, who, in the Abſence of the Lord Lieutenants, have the ſame Power. To give ſpeedy Notice of an Invaſion, there are Beacons erected upon eminent Places of all Parts of *England*. There were of old many Caſtles, in all Parts of *England*, But to prevent any lingring War in it, moſt of the Inland Caſtles have been demoliſhed, or ſuffered to decay. The Naval Strength of *England*, which is beyond all, conſiſts of about 200 Men of War; beſides Catches, Fire-Ships, Bomb-Veſſels, Advice-Boats, Brigantines, Sloops, Store-Ships, Hulks, and Hoys. In Times of Peace, when the Royal Navy continues in Harbour, the very Charge of keeping it in Repair, amounts to about 13,000 *l.* yealy. For the Sea Service, in Time of War, not only unemploy'd Seamen may be preſſed, but alſo Vagabonds, and Seamen belonging to Merchant's Ships. When the *Britiſh* Fleet is compleat, it is uſually divided into 3 Squadrons, diſtinguiſhed by the Colours of their ſeveral Flags, into Red, White, and Blue. The principal Commanders bear the Title of Admiral, each of his Squadron. But the Admiral of the Red commands in Chief. Each of thoſe Admirals has under him a Vice-Admiral, and a Rear-Admiral, all called Flag Officers. But the ſupreme Command of the Naval Forces is in the Lord High Admiral of *England*, or the Commiſſion of Admiralty. There is alſo a Vice-Admiral, and Rear-Admiral of *Great-Britain*, appointed by his Majeſty. But at the Navy Office the whole Buſineſs concerning the Navy Royal is managed in Chief by theſe four Officers, under the Lord High Admiral, *viz.* A Treaſurer, Comptroller, Surveyor, and Clerk of the Act. There are alſo

Commiſſioners

Maſter of the Ordnance.

Militia.

Naval Strength

Commiſſioners of the Navy, under divers Denominations. For building, repairing, and cleaning his Majeſty's Ships, there are 6 great Yards, *viz. Chatham*, *Deptford*, *Woolwich*, *Sheerneſs*, *Portſmouth*, and *Plymouth*; which are fitted with ſeveral Docks, Wharfs, Lanches, and Graving Places. For a Reſerve, in Time of a great War, there is another Yard at *Harwich*. And to each Yard belong ſeveral Officers, particularly a Clerk of the Cheque, a Store-keeper, 2 Maſter Attendants, a Maſter-Shipwright, 2 Aſſiſtants, and a Clerk of the Survey.

The King's Court.

The Kings of *England*, far from falling ſhort of any other Princes, have always exceeded moſt crowned Heads in the Statelineſs, and Magnificence of their Courts; and few have ſurpaſſed them in a liberal Allowance for that Purpoſe. Though the Court is not what it has been formerly, yet it makes ſtill a Figure beyond moſt Courts of *Europe*; nor can any compare with it in the large Salaries and Perquiſites of its Officers and Servants. It conſiſts of three Orders, *viz.* Civil, Military, and Eccleſiaſtick. The Civil Liſt alone amounts, by Computation, to about 600 Servants, under theſe principal Officers, *viz.* the Lord High Steward, the Lord High Chamberlain, the Groom of the Stole, and the Maſter of the Horſe. The firſt has particularly under his Charge all the Officers and Servants below Stairs; the Lord Chamberlain, the greateſt Part of thoſe above Stairs; the Groom of the Stole, thoſe who belong to the King's Bed-Chamber; the Maſter of the Horſe, all the Officers and Servants belonging to his Majeſty's Stables. It would be tedious to enumerate the ſeveral Parts of their Prerogatives, and the Offices under them.

Principal Officers.

King's Guards.

The Military Part of the Court conſiſts of 3 ſeveral Bodies, *viz.* the Band of Gentlemen Penſioners, the Yeomen of the Guard, and the Troops of the Houſhold. Of which, the 2 firſt guard the King above Stairs. The Band of Gentlemen Penſioners conſiſts of 40 Gentlemen, whoſe Office is to attend the King's Perſon with their Pole-Axes, to and from his Chapel Royal, and receive him in the Preſence Chamber, or coming out of his Privy-Lodgings. The Yeomen of the Guard wait in the firſt Room above Stairs, called the Guard-Chamber. Formerly they were 250; now they are but 100 in daily Waiting, and 70 more not in Waiting; but to ſucceed the former, as they die. The Guards of Horſe, commonly called the Life Guard, conſiſt of 4 Troops, each of 160 private Gentlemen, well mounted, armed, and equipped. Each of theſe Troops is divided into 4 Squadrons. There are alſo belonging to the Horſe-Guards, 2 Troops of Horſe-Grenadiers, conſiſting each of 115 private Gentlemen. The Foot-Guards conſiſt of 3 Regiments, *viz.* the King's, the Cold-Stream, and the *Scots* Regiment. The firſt of 28 Companies, the other 2 of 18 Companies each. There are a great Number of Officers, with different Titles, belonging to theſe 4 Orders of Guards.

King's Chapel.

The Chapel Royal is under the Conduct of a Dean, who is ſtiled Dean of the Chapel, and who owns no Superior but the King in his Station. In this Chapel Prayers are read 3 Times a Day, Sermons preached on *Sundays*, and Holy-Days; the Communion adminiſtered every firſt *Sunday* of the Month, beſides the great Feſtivals. By the Dean (who is generally ſome Biſhop) are choſen all the other Officers of the Chapel, particularly a Sub-Dean, 12 Gentlemen in Holy Orders, to perform Divine Service, in praying and ſinging, *&c.* beſides 8 Clerks, and 10 Children of the Chapel. Upon *Sundays*, Collar Days, and other Holy-Days, a Concert of the King's Muſick is joined to them, to make the Chapel Muſick more complete. For the Preaching Part, there are 48 Chaplains in Ordinary, 4 of them in waiting monthly: Beſides 6 Chaplains appointed to preach at *St. James's*, and 2 Houſhold Chaplains at *White-Hall*. And, whereas *Lent* is a ſolemn Part of the Year, the Preachers for that Seaſon are appointed by the Archbiſhop of *Canterbury*, and the Lord Chamberlain, thus: Upon *Aſh-Wedneſday*, the Dean of the Chapel is to preach of Courſe; and each *Wedneſday* after, one of the King's ableſt Chaplains. Every *Friday*, a Dean of ſome Cathedral, or Collegiate Church; and on *Good Friday*, the Dean of *Weſtminſter*. On every *Sunday* in *Lent*, a Biſhop; on *Palm-Sunday*, an Archbiſhop; and upon *Eaſter-Day*, the Lord High Almoner. Beſides the Chapel Royal, the King has a Cloſet, or private Oratory, for his more retired Devotion. The Lord High Almoner is uſually a Biſhop; by whom the King's Alms are diſtributed, as he thinks moſt convenient. Under the Lord Almoner, there is a Sub-Almoner, a Yeoman, and 2 Grooms of the Almonry.

King's Revenue.

The Charge of the King's Houſhold, *&c.* commonly called the Civil Liſt, and including the Prince of *Wales's* Allowance, is ſettled at 800,000 *l. per Annum*; raiſed by the Exciſe of Beer, Ale, *&c.* the Subſidies of Tunnage and Poundage; the Revenue of the General Poſt-Office; the Produce of Fines in the Alienation Office; the Produce of the Revenue by Wine Licenſes; Seizures of uncuſtomed and prohibited Goods, and other Particulars of leſs Moment. The Land-Tax, *&c.* for the other Charges of the State, is aſcertained at near 2,000,000, the Cuſtoms at above 1,300,000 *l.* and the Exciſe at near 1,000,000.

Officers of the Revenue.

For managing the Cuſtom Revenue, there are 7 Commiſſioners, having the Overſight of all the Ports of *England*. Many Officers and Servants are employed under them, amounting to about 600. The Exciſe is alſo managed by Commiſſioners. Theſe have likewiſe ſeveral Officers and Servants under them. In the Country there are 50 Collectors, and 140 Superviſors; beſides a vaſt Number of inferior Officers. From the ſaid Commiſſioners there lies an Appeal to 5 others, called Commiſſioners of Appeals. For the Salt Duty, Wine-Licenſes, ſtamped Paper and Vellum, Prizes and *Hackney* Coaches, there are 5 Commiſſioners to each; and for the Duty ariſing from Hawkers, Pedlars, and petty Chapmen, 3 Commiſſioners. The principal Officers who receive the King's Money in his Majeſty's Exchequer or Treaſury, and diſburſe it according to his Order, are, the Lord High Treaſurer of *England*, or the Lords Commiſſioners of the Treaſury, and the Chancellor (or Under-Treaſurer) of the *Exchequer*. Next to the Chancellor are the 2 Chamberlains, the Auditor of the Receipts, the 4 Tellers, and the Clerk of the Pells. It is obſervable,

Uſe of Tallies.

that no Acquittances are uſed in the *Exchequer* upon paying any Monies to the King, but only Tallies, or Sticks, with Words written on them on both Sides, expreſſing what the Money received is for. The Deputy Chamberlains, who cleave the Tallies, and examine each Piece a-part, ſit in the Tally-Court, where the Tally-Cutter attends. Agents for Taxes are Aſſiſtants to the Lord Treaſurer.

The Privy Council is compoſed of eminent Perſons, upon whoſe Wiſdom, Vigilance, and Integrity, depends, in a great Meaſure, the Welfare of his Majeſty's Dominions. They are bound by Oath to adviſe the King, to the beſt of their Judgment, with all the Fidelity and Secreſy that becomes their Station. The Number of them is at the Sovereign's Pleaſure: But it is rare to ſee one half meet in Council. The King

often present to hear their Debates, the lowest Counsellor delivering his Opinion first, and his Majesty at last declaring his Judgment, which terminates the Matter debated. To propose Business to the Privy-Council, and in the King's Absence to make a Report to his Majesty, there is a President. The King may declare or conceal from his Privy-Counsellors whatever he thinks fit, and has a select Council out of their Number, commonly called the Cabinet-Council. A Privy-Counsellor, though but a Gentleman, has Precedence of all Knights, and younger Sons of Barons and Viscounts, and is stiled Right Honourable: But the Council itself is called Most Honourable. To attend the Council, there are 4 Clerks in Ordinary, and 4 Extraordinary: Also 2 Keepers of the Council-Chamber. The principal Secretaries of State, are, by their Office, Members of the Privy-Council, ever-since the Reign of Queen *Elizabeth*. As for Domestick Affairs, the 2 Secretaries equally receive and dispatch whatsoever is brought to them, *&c.* except for *Ireland* and the Plantations, which belong to the elder Secretary. But for Foreign Affairs, they have each his Province, one called the Northern, and the other the Southern Province, the last belonging to the elder Secretary. In all the Royal Houses, they have each his Apartment, as well for his own Accommodation, as for his Office, and those that attend upon it. They have each of them 2 Under Secretaries and Clerks attending the Office, and wholly at his own Choice, without any Dependance upon any other. To the Secretaries of State there belong 2 other Offices, one called the Signet, and the other the Paper-Office.

The Secretaries of State.

The Constitution of the *British* Parliament.

The High Court of Parliament is vested with a Legislative Power, and makes 2 of the 3 Estates of the Realm; which 3 are the King, Lords, and Commons. Accordingly this August Body consists of 2 Houses, one called the House of Lords, and the other the House of Commons. Before the Union, the first consisted of all the Spiritual and Temporal Peers of the Realm, qualified to sit in the House, and making up about 170. But the House of Commons consisted of 513 Commoners: Among which we call Knights of the Shire, such as serve for the Counties; Barons, those of the *Cinque Ports*; Citizens, that stand for Cities; and Burgesses, for Towns or Boroughs privileged to send Members to Parliament. By the Union, there is an Accession of 16 Peers of *Scotland* to the House of Lords, and 45 Commoners to the House of Commons. The first to be chosen against a new Parliament, by the Peers of *Scotland*, out of their Body; and the last, being Barons and Burgesses, by the Shires and Boroughs. By which 16 Peers, and 45 Commoners, *Scotland* is to be represented in the Parliament of *Great-Britain*. And the *Scots* Peers sitting in the House of Lords, have the same Privileges as the *English* Peers.

The Election.

The Sitting of the Parliament is appointed by Royal Proclamation, with the Advice of the Privy Council; and the Time appointed for the Parliament to meet, ought to be no less than 50 Days after the Date of such Proclamation. Upon the Proclamation, Writs are issued by the Lord Chancellor, or Lord Keeper, to every Lord Spiritual and Temporal, to appear at the Time and Place appointed, to give their Advice in some weighty Affairs. Also to all the Sheriffs, commanding them to summon the People to elect as many Knights, Citizens, and Burgesses, in their respective Counties, as are to sit in the House of Commons. As for *Scotland*, a Writ is to be directed to the Privy Council there, for summoning the 16 Peers, and for electing the 45 Members, by whom *Scotland* is to be represented in the Parliament of *Great-Britain*. And whereas it happens sometimes, that a Burgess is elected for 2 Boroughs, when the Parliament meets, he must declare for which Place he will serve, that a Writ may be issued out, for a new Election, by the other Place. No Judge of the *King's-Bench*, *Common-Pleas*, or *Exchequer*, can be chosen, because they are Assistants in the Lords House; no Sheriff, because his personal Attendance is required at his Bailiwick; no Clergyman, because of his attending the Convocation; nor is any Gentleman qualified to serve in Parliament, unless he be possessed of 300 *l. per Annum*.

The Solemnity of the Parliament's Meeting.

As the Time for the Parliament's Sitting lies in the Sovereign's Breast, so does the Place of Meeting: Though it is fixed at the antient Palace of *Westminster*; the Lords in a large Room by themselves, and the Commons in a larger, which was of old St. *Stephen*'s Chapel. At the Opening of the Parliament on the Day prefixed, the King comes to the House of Lords, in his Royal Robes, with the Crown on his Head, and the Sword of State borne before him. His Majesty sits under a Canopy, at the upper End of the Room. Then the Temporal Lords appear in their Scarlet Robes of State, every one according to his Degree; and the Spiritual Lords in their Episcopal Habit. Against the Wall, on the King's Right-Hand, the two Archbishops sit by themselves on a Form. Below them, the Bishops of *London*, *Durham*, and *Winchester*; and next to them, all the other Bishops, according to the Priority of their Consecration. On the King's Left-Hand, the Lord Treasurer, Lord President of the Council, and Lord Privy Seal, sit upon Forms, above all Dukes that are not of the Royal Blood. Then the Dukes, Marquisses, and Earls, according to their Creation. Cross the Room are the Wooll-sacks, to put the Peers in Mind of the Advantages the *English* Wooll has brought to the Nation, that the Care of it may never be neglected. The Lord Chancellor, or Lord Keeper, being of Course the Speaker of the House of Lords, sits on the first Wooll-sack, before the Throne, with the Great Seal and Mace lying by him. Below the Wooll-sacks there are Forms cross the Room, first for the Viscounts, and next for the Barons, sitting in Order according to their Creation. As to the other Wooll-sacks, the Judges, the King's Council at Law, and Masters of *Chancery*, sit upon them, when called to give their Advice in Point of Law. But they ought not to sit in the King's Presence, without his Leave. The lower-most Wooll-sack is for the Clerks of the Crown, and Clerk of the Parliament. This latter has two Under-Clerks, who, kneeling behind the Wooll-sack, write upon it.

When the King comes to Parliament, he commands the Usher of the Black Rod to call the House of Commons to the Lords House. The Commons being come, stand without the Bar; and the King commands them, by the Lord Chancellor, to chuse one of their Members for their Speaker, and to present him such a Day. But this is done sometimes without the King, and only by the Lord Chancellor. The Commons being returned to their House, chuse a Speaker, who ought to be a Person of great Experience and Ability, especially in parliamentary Affairs: For the Speaker is in Effect the Mouth of the House, and so necessary a Part thereof, that the Commons can do no Business without him. The Choice being made, by the Majority of Votes, it is a Custom for the Party chosen to decline the Office, and pray the House to proceed to a new Election. But he is commonly answered with a full Content

How the Speaker of the Commons is chosen.

of Voices, upon which two of the principal Members go to him, and lead him to the Speaker's Chair; where being ſet, they return to their Places. At the Day appointed for his Preſentation to the King, his Majeſty being come to the Houſe of Lords, the Commons are called in. Then the new Speaker is brought in between two of their Members, and there preſented to the King, where he makes alſo a Refuſal of that high Office: Which not being allowed of, he makes a Speech to his Majeſty, which generally concludes with theſe Petitions, That *the Commons may, during their Sitting, have free Acceſs to his Majeſty*; That *they may have Freedom of Speech in their Houſe*, and *be free from Arreſts*. Theſe Requeſts being granted, his Majeſty makes a Speech to both Houſes of Parliament, concerning ſuch Matters as he thinks fit to lay before them. This done, he leaves both Houſes to their private Debates, and the Commons return to their own Houſe, the Mace being carried before the Speaker. After this, his Majeſty never comes to the Parliament in State, but to lay freſh important Affairs before them, to give his royal Aſſent to Bills paſſed in both Houſes, or to cloſe the Seſſion. In the King's Abſence, the Lords do always pay a Reverence to the Chair of State, when they come into the Houſe. Though the full Number of the Houſe of Commons is 558, yet if 300 are met, it is reckoned a full Houſe; and 40 make a Houſe. They ſit promiſcuouſly upon Forms, except the Speaker, who ſits upon a Chair in the Middle of the Room, with a Table before him, the Clerk of the Houſe ſitting near him at the Table. Nor does any Member wear a Robe but the Speaker, except the Members for *London*, who at their firſt Meeting appear in Scarlet Robes. Before the Parliament enters upon any Buſineſs, the Members of both Houſes muſt take the Oaths appointed by Act of Parliament. They are alſo to make a ſolemn Declaration againſt the Doctrine of Tranſubſtantiation, the Invocation and Adoration of Saints, and the Sacrifice of the Maſs, by which all Papiſts are incapacitated to ſit in Parliament. They are, moreover, to abjure the Pretender, before they can be admitted to ſit in either Houſe.

Clerk's Office.

The firſt Thing the Commons do after the Choice of their Speaker, is their appointing the ſtanding Grand Committees, for Privileges and Elections, for Grievances, for Trade, and for Religion. The ſtanding Committees being ſettled, a private Committee is generally appointed to draw up an Addreſs of Thanks to the King. The ſame is done in the Houſe of Lords. As the chief Buſineſs of the Parliament is to make new Laws, revive or abrogate old Ones; whatever is propoſed for a Law, is firſt put in Writing, and called a Bill. Any Member of the Houſe may offer a Bill; but he muſt firſt open the Matter of it to the Houſe, and offer Reaſons for the admitting thereof, which is called, Making a Motion. Upon which the Houſe will either admit, or deny it. Subſidy Bills, for impoſing of Taxes, are not to be brought in but by Order of the Houſe: And whereas all other Bills may begin in either Houſe, theſe do always begin in the Houſe of Commons. Before any Bill can paſs into a Law, it muſt be read 3 ſeveral Times in each Houſe, and debated; and then obtain the royal Aſſent. A Bill of Indemnity, coming from the Throne, has but one Reading in each Houſe. The Speaking for, or againſt a Bill, is commonly put off till the ſecond Reading, that the Members may have Time to conſider of it. Whilſt a Bill is under Debate, whoever ſpeaks to it ſtands up uncovered, and directs his Speech to the Speaker. If two riſe at the ſame Time, the Speaker determines which ſhall give Way to the other. None is allowed to ſpeak twice to a Bill in one Day, except it be by Way of Explication, or when the Bill happens to be read twice. The Speaker is not to argue for, or againſt any Side. He is only to hear the Arguments of the Houſe, and collect the Subſtance of them. Neither has he any Voice, but when the Houſe is equally divided, and then he has the caſting Vote. No Member, in his Diſcourſe, ought to mention the Name of any other then preſent, but to deſcribe him by his Title, or Addition, as, That noble Lord, That worthy Knight, or Gentleman: Or by his Office, as Serjeant, Gentleman of the long Robe, *&c.* Or by his Place, as The Gentleman near the Chair, near the Bar, on the other Side, or That Gentleman who ſpoke laſt, or laſt but one, and the like. No reviling or reflecting Expreſſions muſt be uſed: And, though the Freedom of Speech be an undoubted Privilege of the Houſe, yet whatſoever is there ſpoken, is liable to the Cenſure of the Houſe. When a Bill that has been committed (that is, referred to a Committee, which is uſually on the ſecond reading) is reported, the Houſe does commonly agree to the Report in the whole, or in Part only. But when the Matter is of Importance, the Bill is ſometimes re-committed. After the Debate is ended, the Speaker puts the Queſtion for ingroſſing. If the Majority of Voices be againſt it, then the Bill is daſhed. If for it, it is immediately performed. The Bill being ingroſſed, the Speaker offers it ſome Days after to be read the third Time, for the paſſing thereof. When the Bill comes to a third reading, it is done after the ſame Manner as at the firſt and ſecond reading. After it is read, the Speaker tells the Houſe, that it has been read thrice, and with their Favours he will put it to the paſſing. But before he does it, he pauſeth, that the Members may ſpeak to it, if they pleaſe. The Debate, if any happen, being over, the Speaker, holding ſtill the Bill in his Hand, puts it to the paſſing, thus; As many as are of Opinion that this Bill ſhould paſs, ſay Yea; and after the Affirmative, As many as are of the contrary Opinion, ſay No. Upon which the Speaker declares his Opinion, whether the Yea's or Noes have it; and his Opinion is to ſtand as the Judgment of the Houſe, unleſs the Caſe be doubtful. If it be carried in the Affirmative, the Clerk enters it, Reſolved. If in the Negative, thus; The Queſtion being put, *&c.* it paſſed in the Negative. If the Bill paſſed be originally exhibited in the Houſe of Commons, the Clerk writes within it at the Top in *French*, *Let it be ſent to the Lords*. But, if begun in the Lords Houſe, he writes underneath the Subſcription of the Lords, *To this Bill the Commons muſt aſſent*. If either Houſe diſagrees with the other upon a Bill, a Conference is demanded. The Conference is held in the Painted Chamber, to which both Houſes ſend reſpective Deputies, called Managers, to argue upon the Matter. The Manner of Voting in the Houſe of Lords is thus: They begin at the loweſt Baron, and ſo go on *ſeriatim*; every one anſwering apart, Content, or Not Content. If the Voices be equal, the Negative carries it, the Speaker being not allowed a caſting Voice, unleſs he be a Peer of the Realm.

Procedure in Parliament.

Upon the firſt Meeting of a Committee in the Committee-Chamber, they chuſe a Chairman amongſt them, who is much like the Speaker in the Houſe. The Bill they are entruſted with is firſt read over, and then they conſider it by Parts. If there be a Preamble, they conſider it after the Parts of the Bill. The Committee may not raze, interline, or blot the Bill, but muſt mark

Rules of proceeding in Committees

the

the Amendments in a Paper by itſelf. Every Amendment is voted ſingly, and when they are all perfect, they are read, and put to the Queſtion, Whether the ſame ſhall be reported to the Houſe. If the Vote of the Committee paſs in the Affirmative, the Chairman is appointed to make the Report. He firſt acquaints the Houſe, that he has a Report to make from the Committee; which being received by the Houſe, the Chairman reads each of the Amendments, with the Coherence in the Bill; and gives the Reaſons for ſuch Amendments. Whereupon any Member of the Houſe may ſpeak againſt all, or any of the Amendments, and deſire the Coherence to be read. But he muſt make all his Objections at once to all the Amendments. When any great Buſineſs is in Hand, which requires much Debate, the Houſe reſolves itſelf into a Grand Committee, commonly called a Committee of the whole Houſe. The Deſign of it is, to have a greater Freedom of Debate: For in this Committee every Member is free to ſpeak to one Queſtion as often as he ſhall ſee Cauſe. Then the Houſe being reſolved from the Rules of it, the Speaker leaves the Chair, and the Houſe chuſes a Chairman, who ſits in the Clerk's Place, and writes the Votes of the Committee. If the Queſtion be carried in the Affirmative, the Speaker is called again to the Chair; and the Chairman reports what has been reſolved in the Committee, and brings up his Report to the Table: Whereupon the Houſe proceeds as a Houſe, and not as a Committee. The Lords have alſo their Committees, but with this Difference, That the Judges, and other Aſſiſtants there, are ſometimes joined to the Lords of the Committee, though they have no Voice in the Houſe.

The Royal Aſſent to Bills.

When Bills are ready for the Royal Aſſent, the King comes to the Houſe of Lords in the ſame State as before. Being ſeated upon his Throne, and the Commons ſent for up by the Black Rod, the Clerk of the Crown reads the Title of each Bill; and as he reads, the Clerk of the Parliament pronounces the Royal Aſſent: If a publick Bill, the Anſwer is, *Le Roy le veut.* If private, *Soit fait comme il eſt deſiré.* If a Money Bill, *Le Roy remercie ſes loyaux Sujets, accepte leur Benevolence, & auſſi le veut.* If a Bill of Indemnity, the Return is from the Lords and Commons to his Majeſty, *Les Prelats, Seigneurs, & Communes, en ce Parlement aſſemblez, au Nom de tous vos autres Sujets, remercient tres humblement Votre Majeſté, & prient Dieu vous donner en Sante bonne Vie & longue.* If a Bill which the King does not think fit to paſs into a Law, *Le Roy s'avuſera*, i. e. The King will conſider of it. But 'tis obſervable, that the King may, by Commiſſion granted to ſome of the Peers, give his Royal Aſſent to any Bill, without his perſonal Preſence.

The Meaning of Adjourning, Proroguing, and Diſſolving the Parliament.

As each Houſe has an undoubted Privilege to adjourn themſelves for ſome Days, ſo the King may adjourn 'em, in order to a Receſs for ſome Time. And then all Bills already read and debated, in one or both Houſes, remain as they were, and at the next Meeting may be brought to an Iſſue. 'Tis otherwiſe with a Prorogation, which makes a Seſſions. For in this Caſe all Bills that paſſed either Houſe, or both Houſes, and had not the Royal Aſſent, muſt begin a new at the next Meeting, before they can be brought to Perfection. *Laſtly*, The Parliament is ſaid to be diſſolved, when the Houſe of Commons is diſcharged in order to a new Election. Both the Diſſolution, and the Calling a New Parliament, are commonly done by Proclamation, after the laſt Sitting of the Old One. Upon the King's Deceaſe, if there was a Parliament, ſitting, or in being, 'twas *ipſo facto* diſſolved, the King being look'd upon as the Head of Parliament. But, to prevent the Miſchiefs and Confuſions that may be occaſioned in ſuch a Caſe, a providential Act was made in Queen *Anne*'s Reign; by which the Parliament then ſitting, or in being, ſhall continue, and immediately meet, for and during the Time of Six Months, unleſs the ſame ſhall be ſooner prorogued or diſſolved. But in Caſe there ſhall be no Parliament in being, then the laſt preceding Parliament ſhall immediatly meet, ſit, and act.

Courts of Juſtice.

From the High Court of Parliament, we proceed to the Courts of Juſtice ſitting at *Weſtminſter*, and opened 4 Times a Year, called the 4 Terms, *viz. Eaſter*, *Trinity*, *Michaelmas*, and *Hilary* Terms. The ſeveral Courts are the Court of *Chancery*, *King's-Bench*, and *Common-Pleas*; and two concerning the King's Revenue, *viz.* the Court of *Exchequer*, and that of the Dutchy of *Lancaſter*. The *Chancery* has two Courts in one; the equitable Part being inſtituted for the Relief of the Subject, againſt Cheats, Breaches of Truſt, and unfortunate Accidents, to temper the Rigour of the Law, and reſcue Men from Oppreſſion. The Judge is the Lord High Chancellor, or Lord Keeper of the Great Seal. He is the Chief Magiſtrate in the Kingdom, and the prime Miniſter of State. In the other Courts there are 4 Judges to each, but in *Chancery* the Lord Chancellor is the ſole Judge. And, for his Equity, he is ſaid to be the Keeper of the King's Conſcience. But tho' the Lord Chancellor be the ſole Judge here, yet he has 12 Aſſiſtants, called Maſters of *Chancery*. Their chief Buſineſs is to take Affidavits, or Depoſitions upon Oath, or any other Matter to which an Oath is required by the Rules of the Court. The Chancellor does alſo refer to them the Examination of Accounts. In Term-time 3 of them ſit in Court with the Lord Chancellor, and 2 out of Term, when he hears Cauſes at his own Houſe. The firſt of the aforeſaid 12 Maſters is called Maſter of the Rolls, as having the Cuſtody of all Charters, Patents, Commiſſions, Deeds, and Recognizances; which being made in Rolls of Parchment, gave Occaſion for that Name. This is a great Officer, and his Place of great Profit. He is ſo far an Aſſiſtant to the Lord Chancellor, as to hear Cauſes in his Abſence, but does not go ſo far as to make a Decree. By virtue of his Office, he keeps a Court at the Rolls, with two Aſſiſtant Maſters of *Chancery*, where he hears and determines Cauſes that come there before him: But his Decrees are appealable to the Court of *Chancery*. In Parliament, when he ſits in the Houſe of Lords, his Place is next to the Lord Chief Juſtice of *England*. The *Chancery* Court ſwarms with Officers: Amongſt which the Six Clerks are next in Degree to the Maſters of *Chancery*. Next the 6 Clerks is the Clerk of the Crown, the Protbonotary, the Regiſters, 2 Examiners, a Clerk, and a Comptroller of the Hanaper, 3 Clerks of the Petty Bag, 2 Maſters of the Subpæna Office, and 24 Curſitors. The Alienation Office is a Bench of this Court; to which Office there belong 3 Commiſſioners, a Maſter in *Chancery*, a Receiver, a Clerk of the Inrollments, and a Clerk of the Entries. *Laſtly*, Here is the Warden of the *Fleet*, and a Serjeant at Arms.

Chancery

2. The *King's-Bench* Court is the higheſt Court in *England* at Common Law, next to the Houſe of Lords in Parliament. The Pleas between the King and the Subject, all Treaſons, Felonies, Breach of Peace, Oppreſſion, and Miſ-government, are commonly brought before this Court. In this Court all young Lawyers that have been

King's Bench

called

called to the Bar, are allowed to plead and practise. There are 4 Judges belonging to it. The first of these Judges is called Lord Chief Justice of the *King's-Bench*, or else Lord Chief Justice of *England*. 3. The *Common-Pleas* is so called, because the Pleas usually here debated, are between Subject and Subject. None but Serjeants at Law may plead in this Court, and yet they have the Privilege of pleading in all other Courts. This Court has also 4 Judges. The first is called Lord Chief Justice of the *Common-Pleas*. Here is also the Register of the Fine-Office, and a Clerk of the Proclamations; a Clerk of the Treasury, a Clerk of the Inrolments of Fines and Recoveries, a Clerk of the Outlawries, a Clerk of the King's Silver, a Clerk of the Warrant, a Clerk of the *Habeas Corpus*, a Clerk of the Essoines, a Clerk of the Errors, a Clerk of the Supersedeas, also 14 Filazers, and 4 Exigenters. 4. There are 2 Courts held in the *Exchequer*, 1 which tries Causes according to Law, and the other according to Equity. The Court of Equity is held before the Lord Treasurer, the Chancellor of the *Exchequer*, and the Barons: But the judicial Proceedings are only before the Barons. Here are tried all Causes relating to the King's Revenue: For which there are 4 Judges appointed, called Barons of the *Exchequer*; none but Barons sitting here as Judges in former Times. The Title of Lord Chief Baron belongs to the first of them. There is another Baron, called Cursitor-Baron, who sits in the Court with them, but is none of the Judges. The next Officers are, the King's Remembrancer, the Lord Treasurer's Remembrancer, the Clerk of the Pipe, the Comptroller of the Pipe, the Clerk of the Pleas, a Clerk of the Estreats, 2 Auditors of the Impress, 4 Auditors of the Revenue, a Remembrancer of the First-Fruits, and a Chief Usher, who has under him 4 Ushers, and 6 Messengers. 5. The Court of the Dutchy of *Lancaster* is kept at *Westminster*, by the *Lower Exchequer*, to take Cognizance of all Causes that concern the Revenue of this Dutchy. The chief Judge of this Court is the Chancellor of the Dutchy, who is assisted by the Attorney thereof.

Common Pleas

Exchequer

Assizes. The Assizes are Courts kept twice a Year in every County of *England*, for the Ease of the People in the Distribution of Justice; the 12 Judges going for that Purpose by Commission from the King, to do Justice all over *England*. They judge both civil and criminal Causes. The Assizes are distinguished into *Lent* and Summer Assizes, the first falling out presently after *Hilary*-Term, the last after *Trinity* Term. They are usually held at the County-Town, and that with great Attendance and Feasting. The Jury is chosen by the Sheriff of the County, and only directed in Point of Law by the Judges. For every Trial by Assize is referred for the Fact to a Jury, as in most Courts of the Common Law. The Trial of Malefactors in *England* is very singular, and different from other Nations. The Court being met, the Prisoners are brought in 1, 2, or 3 at a Time. The Clerk commands one of them to the Bar, and to hold up his Hand; then he charges him with his Crime, and asks him, Whether he is Guilty, or not Guilty? If he answers Guilty, his Trial is over, and nothing left but the Sentence to be pronounced against him. If he stands mute, his Punishment is to be pressed to Death. But the usual Way is, to answer Not Guilty, though the Prisoner's Crime be ever so apparent, and he has confessed the Fact before his Trial. For the Law of *England* takes no Notice of such Confession, and the Judges proceed only upon Evidence; so that, unless the Witnesses be positive and clear against the Prisoner, the Jury will acquit him. When the Evidence is over, the Judge directs the Jury, and bids them discharge their Conscience. The Jury being agreed on their Verdict, the Prisoner is either condemned or acquitted, for the Verdict is unalterable. If the Verdict be brought in Guilty, the Prisoner, if it be the first Fault, and the Crime be within the Statute, may demand the Benefit of the Clergy, which saves his Life, and makes him liable to be only burnt in the Hand. But where the Benefit of the Clergy is not allowed of, the Sentence of Death runs in these Words: *The Law is, That thou shalt return to the Place from whence thou camest, and from thence to the Place of Execution, where thou shalt hang by the Neck, till thy Body be dead; and the Lord have Mercy on thy Soul:* Whereupon the Sheriff is charged with the Execution.

Jury.

Trial of Malefactors

The Convocation is a general Assembly of the Clergy, to consult of Church Matters. The same is either National or Provincial, and never meets, but in Time of Parliament. It is like the Parliament, divided into 2 Houses, the Upper and the Lower: And all Members thereof have, by Statute, the same Privileges for themselves and Servants, as the Members of Parliament have. The upper House, in the Province of *Canterbury*, consists of 22 Bishops. The Archbishop sits in a Chair at the upper End of the Table, and the Bishops on each Side, all in their Scarlet Robes and Hoods. The Lower House consists of the Deans and Archdeacons, 1 Proctor for every Chapter, and 2 Proctors for the inferior Clergy of the Dioceses. *Henry* the VIIth's Chapel at *Westminster*, is the usual Meeting-place for the Province of *Canterbury*; and *York*, the Place for the Province of *York*. The first Business of the Lower House is to chuse a Prolocutor, who, being chosen, is presented to the Upper House by 2 of the Members; one of them making a Speech in *Latin*, and the Prolocutor elect another. To which the Archbishop answers in the same Language, and approves the Person. The Matter debated by both Houses, are properly Church and religious Matters; first proposed in the Upper, and then communicated to the Lower House, the Majority of Votes prevailing in each House. But whatever is transacted there, can be of no Force without the Concurrence of both Houses of Parliament, and the Royal Assent. The executive Power of Ecclesiastical Laws is lodged in several Courts, provided for that Purpose: Whose proper Matters are Ordinations, Institution of Clerks to Benefices, Celebration of divine Service, Tithes, Oblations, Obventions, Mortuaries, Dilapidations, Reparation of Churches, matrimonial Rights, Divorces, general Bastardy, Probate of Wills, Administrations, Pensions, Procurations, Commutation of Penance, Apostacy, Simony, Heresy, Schism, Blasphemy, Fornications, Adulteries, Incests, *&c.* The Manner of Trials in these Courts differs from those at common Law. The first Step here is a Citation; then a Bill and Answer. Next they proceed to Proofs, Witnesses, and Presumption, the Matter being argued *pro* and *con*, and the Canon and Civil Law quoted. Whereupon the Judges decisive Sentence passeth, without any Jury, and then Execution follows. The Archbishop of *Canterbury* has no less than 3 several Courts, *viz.* the *Court of Arches*, the *Court of Audience*, and the *Court of Peculiars*. We must not omit the *Court of Delegates*, so called, as consisting of Commoners delegated by Royal Commission, to sit upon an Appeal to the King in the Court of *Chancery*. Besides the Courts aforesaid, every Bishop has a Court of his own, which is held in the Cathedral of his Dioces, and is called

Convocation.

Ecclesiastical Courts.

Bishop Court

called *Consistory Court*: Over which he has a Chancellor, who sits as Judge. *Lastly*, Every Archdeacon has his Court, in which small Differences arising within his Jurisdiction are determined.

Punishments

The Punishments inflicted upon Offenders of all Kinds, are much more merciful in *England*, than in any other Part of the known World. For such Criminals as are obstinate at their Trial, *pressing to Death* is the proper Punishment. The most usual Punishment in *England* for Capital Crimes, is *Hanging*. But, in Case of Robbery and Murder, the Malefactor is afterwards hang'd in Chains, till his Body be wasted, or devoured by the Fowls of the Air. Though counterfeiting the Coin be *High Treason* by Law, yet Offenders therein are only hanged. But they are drawn, as Traytors, on a Sledge, to the Place of Execution; and, if Women, they are burnt alive. For *burning alive* is what the Law inflicts upon Women guilty of *High* or *Petty Treason*, and upon *Witches*. But the Criminal is usually strangled, before the Fire takes hold of her at the Stake. *Beheading* is only allowed to Persons of Quality, convicted of any capital Crime. 'Tis true, the Sentence is the same with that of common Persons, but by the Sovereign's Favour, they are commonly beheaded. The Law of *England* includes all capital Crimes in these three, *viz. High Treason*, *Petty Treason*, and *Felony*. The *First* is a Crime of State; *Petty Treason* is, when a Child kills his Father; a Servant, his Master or Mistress; a Wife, her Husband, or a Clergyman his Prelate. And by *Felony*, are meant Thefts, Robberies, Murders, *&c.* *Punishments* not Capital, are *Burning in the Hand*, *Whipping*, *Transportation*, the *Pillory*, the *Stocks*, and Pecuniary Mulcts called *Fines*. The Spiritual Courts have also their *Punishments*; some peculiar to the Clergy, and some common to the Clergy and Laity. Of the first Sort is, *Suspensio ab Officio*, *Suspensio a Beneficio*, and *Deprivatio ab Officio & Beneficio*. The *Spiritual Punishments*, inflicted both upon the Clergy and Laity, are *Excommunication*, or an Exclusion from the Church; which is of two Sorts, *Minor* and *Major*; the Anathema, used only to obstinate Hereticks; and publick Penance, when the Delinquent is compell'd to make a publick Confession of his Fault in the Church.

CHAP. VII.

A Description of Scotland, *treating of its Situation, Extent, Air, Soil, Produce, Trade, Inhabitants,* &c. *Its Counties, principal Towns, and adjacent Islands; also of its* Government, *Civil, Military, and Ecclesiastical.*

Its Situation.

Scotland, the Northern Part of *Great-Britain*, is bounded on the South by *England*, from which it is divided by the River *Tweed* on the East Border, by *Cheviot-Hills* in the Middle Marches, and by the Rivers *Esk* and *Solway* on the Western Border. On the North it is bounded by the *Deucalidon* Sea, on the West by the *Irish* Sea, and on the East by the *German* Ocean. From the *Mull* of *Galloway* to *Dunsbey Head* in *Caithness*, it is 380 *English* Miles in Length; and from *Adermouth Head*, near the Isle of *Mull*, to *Buchanness*, it is 190 Miles in Breadth, and is so frequently cut by Inlets of Sea, that there's scarce a House in the Kingdom above 60 Miles distant from it.

Air.

The Air of the Country in general is wholesome, and though colder than that of *England*, yet, for the most Part, clearer. This contributes much to the Health of the Inhabitants, and not a little to the Clearness of their Understandings. Their longest Day is commonly reckoned about 18 Hours 2 Minutes, and their shortest Nights about 5 Hours and 45 Minutes in the Continent; but in the Isle of *Skye*, about the Summer Solstice, the Night is not above an Hour and a Half; and in *Orkney*, about *June*, one may see to read all Night. The Winter is longer in *Scotland*, and more subject to Storms of Snow, and hard Frosts, than in *England*.

Soil and Produce.

The Soil, though not generally so fruitful as that of *England*, produces all Things necessary for human Life; and not only enough for its Inhabitants, but sufficient for Export, to exchange for such foreign Commodities as they want, and to bring home considerable Sums. Though the Country, for the most Part, be mountainous, and full of Heaths, yet it has many large and fruitful Valleys, abounding with Corn and Grass; and more of the latter they might have, were the Tenants encouraged by long Leases to inclose, as in *England*, and had they any Vent for their Cattle when fatted. In a Word, the Country produces all Sorts of Grain that are found in *England*; and in several Counties they have great Store of good Wheat; and they have Store of Beer, which they distinguish from Barley, and of this Beer they make good Bread and Ale. The most general Grain of the Country is Oats, which exceed those of *England*, and grow in the Highlands, and other mountainous Countries, where other Sorts of Corn will not grow so well; and of this they make good Bread and Drink.

Fruits.

Most of the Fruits that grow in *England*, are also found in *Scotland*; but though they have very good Apples, they have none comparable to the *English* Pippin: Nor is their Climate so proper for Grapes and Wall-Fruit; yet those who are at the Expence, may have very good of both; and the Soil is productive of good Herbs and Roots for Food and Physick.

Timber.

They have the same Sorts of Timber as in *England*, and exceed it much in Forests of Fir, especially in the *North* and *Highlands*, where their Woods afford Masts for the largest Men of War. In most Places of the *Lowlands*, especially on this Side *Forth*, the Country is but ill stor'd with Timber, occasioned by the long Wars betwixt the two Nations, during which it was cut down and destroy'd, as well as in the Northern Provinces of *England*.

Fewel.

For Fewel, many Parts of the Country are well provided of Coal, better for Chambers than that of *England*, though not generally so good for the Forge; yet sufficient for their own Use that Way, as also to boil their Salt; and of this Coal they export great Quantities. In the *North* and *Highlands* they have Store of Timber for Fewel, and in other Places they have Turf, Peat, Heath, Broom, and Furzes: But in some Corn-Countries, they burn much Straw, with which they bake their Oat-Cakes well, and with great Expedition.

Cattle

The Country in general abounds with Flocks of Sheep, and black Cattle, except in Corn-Countries, where they ſeldom keep more of the latter than are neceſſary for domeſtick Uſes. But ſuch as are bred in thoſe Countries, are much larger than thoſe bred in the other Parts of the Country, and equal in Size to thoſe of *England*; yet in general, their white and black Cattle are much ſmaller than thoſe of *England*, but of a more delicious Taſte. They export ſalt Beef and Pork from the Northern Parts; and from thence, and the Highlands, they bring annually great Herds of their ſmall black Cattle into the Lowlands and *England*. In the Highlands and Iſles they have abundance of Deer; but there are few in the Lowlands, except in *Galloway*, and the Parks of ſome Perſons of Quality. The Hides of their black Cattle, are not ſo fit for ſtrong Shoes, Boots, and Coach-Harneſs, *&c.* as thoſe of *England*, but are proper enough for other Uſes. In the Highlands, North and Weſt, and in *Galloway*, they breed great Numbers of Horſes, ſmall indeed, but capable of great Fatigue, and more proper in thoſe Countries, than Horſes of a larger Size, becauſe more hardy, and living well upon what would ſtarve great Horſes; but in the Lowlands, they are capable of breeding and maintaining Horſes fit for Coach, War, and Carriage. They made great Pro-

Wool

fit of the Skins and Wool of their Sheep, by exporting them in Kind, and manufactur'd, before the Union. Their Wool in ſome Places, eſpecially in *Galloway*, *Tweedale*, and ſome of the Iſles, is very good for Stuffs, Serges, Fingrams, Shalloons, Stockings, and Cloth; in making of which they have improv'd much of late. Their Wool affords them not only Cloth and Stuffs for their Home-Conſumption, but for Export. Their greateſt Trade for that, and their other Commodities, has for many Years been with the United *Netherlands*. From this Trade the Town of *Rotterdam* has acquir'd conſiderable Wealth; in Conſideration of which, the *Scots* have been always eſteem'd in thoſe Provinces, and the States allow them Churches, and Maintenance for their Miniſters. The Coun-

Linen.

try produces great Quantities of Hemp and Flax, of which they make Store of Linen, Coarſe and Fine, Holland, Cambrick, Muſlins, Callicoes, Dornick, Damask, *&c.* for their own Uſe and Export. Their greateſt Ladies take Care to have moſt of their Linen and Woollen, for ordinary Uſes, and many Times for their own, and their Huſband's wearing, made in their own Houſes. In

Plaids

this Place it is proper to mention their Plaids, a Manufacture wherein they exceed all Nations both as to Colour and Fineneſs. They have of late been pretty much fancied in *England*, and are very ornamental as well as durable.

Fiſh and Fowl

For Variety and Plenty of Fiſh, Eggs, and Fowl, *Scotland* exceeds any Country in *Europe*; affording, not only Food and Feathers to the Inhabitants, but an inexhauſtible Fund for Exportation; and ſince it is known that the *Dutch* have raiſed themſelves to much of their preſent Grandeur by fiſhing in the *Scots* Seas, it is an unaccountable Neglect, that ſince the *Union*, that Fiſhery is not improved to the general Advantage of the Iſland, ſo as to enable us to out-do all the World in Fiſhing.

Mines.

For Mines, they have thoſe of Gold, Silver, Brafs, Copper, and Lead white and black, as good as any in *Britain*. They abound alſo with Quarries of Free Stone for Building, Slates of a grey Colour, ordinarily made Uſe of for covering Houſes, and thoſe of a blue Colour, which they call Skelley, made Uſe of for covering the Houſes of People of Quality, and thoſe of the richer Sort in Town and elſewhere: They have alſo Quarries, nay, Mountains of Marble; ſome white, with Veins of ſeveral Colours, and ſome green, with Veins of red and other Colours; and they have fine *Greek* Stone, Calmſtone, and Limeſtone. They have alſo Agat, fine blue Amethiſts, and many ſmall Stones about their Rivers, which being cut and poliſh'd, reſemble Diamonds. They have likewiſe Pearl and Coral, and Ambergreaſe is ſometimes found on their Coaſts.

Harbours.

For the Conveniency of Trade and Fiſhing, there are many Inlets of the Sea, which afford many Harbours, and ſeveral of them very good, capable of Men of War, and other Ships of the greateſt Burthen. The principal Rivers of *Scotland* are

Rivers.

Forth, *Tay*, *Clyde*, *Spey*, *Dith*, *Dee*, *Don*, *Nayn*, and *Tweed*. The moſt convenient for Trade are *Forth* and *Clyde*, which, by a Canal of about 30 Miles long, might be join'd, and open a Communication betwixt the Eaſt and Weſt Seas, to the great Advancement of the Commerce of the whole Iſland: Some who have viewed the Country, ſay it is practicable, and it has been pretty much talk'd of ſince the *Union*.

The *Scots* are divided into *Highlanders*, who call themſelves the antient *Scots*, and into *Lowlanders*, who are a Mixture of antient *Scots*, *French*, *Engliſh*, *Danes*, *Germans*, *Hungarians*, and others.

Cuſtoms of the High-landers.

The *Highlanders*, in their Diet, Apparel, and Houſhold Furniture, follow the Parſimony of the Antients; they provide their Diet by Fiſhing and Hunting, and boil their Fleſh in the Paunch or Skin of a Beaſt: While they hunt, they eat it raw, after having ſqueez'd out the Blood. Their Drink is the Broth of boil'd Meat, or Whey. They keep this ſome Years, and drink it plentifully in their Entertainments, but moſt of them drink Water. Their Bread is of *Oats* and *Barley*; they eat a little of it in the Morning, and contenting themſelves with that, hunt, or go about their Buſineſs without eating any more till Night. Their Anceſtors, as do moſt

Hardi-neſs.

of them ſtill, made Uſe of Plaids very much variegated. Being rather wrapped up, than cover'd with thoſe Plaids, they endure all the Rigour of the Seaſon, and ſometimes ſleep cover'd all over with Snow. At Home they lie upon the Ground, having under them Fern or Heath, the latter laid with the Roots undermoſt, ſo as it is almoſt equal to Feathers for Softneſs, but much more healthful. If at any Time they come into other Places of the Country, where there is better Accommodation, they pull the Coverings off the Bed, and lie down upon them wrapped up in their Plaids, leſt they ſhould be ſpoil'd by this barbarous Effeminacy, as they call it. In War, they cover themſelves with Coats of Mail, made up of Iron Rings, for the moſt Part as low as their Ankles. Their Arms are Bows and barbed Arrows, which cannot be taken out of the Body, without making a great Wound; and others of them make Uſe of broad Swords, and Battle-Axes. Their Martial Muſick

Muſick.

is a Bagpipe. They delight much in Muſick, eſpecially Fiddles. Their Songs are artfully enough compos'd, and the Subject of them is generally the Praiſe of brave Men. They make Uſe of a little of the old *Gaulick* Tongue. They take long Journies in the Height of Winter, on Foot, without Inconvenience, and trouble themſelves about no

Iſlands.

other Proviſion, than a little *Aqua vitæ*, and ſome *Cheeſe*. The *Orkney* Mens Language is a Dialect of the old *Gothick*, and living after the old temperate Way, they are not much troubled with Diſtempers of Body or Mind. Their Ignorance of Luxury contributes to their Health, and makes their Stature manly, and their Complection comely. However, their antient Diſcipline begins to grow into Debauchery, by their Commerce with other Nations. The *Shetlanders* have much the ſame Cuſtoms, but them retain ſomewhat more of the antient *Parſimony*.

The

Their Habit is that of the *Germans*, and tolerably decent. They abhor Drunkenneſs, but once a Month entertain one another chearfully for cultivating mutual Friendſhip, without Brawls or Quarrels, the uſual Companions of Exceſs. The Firmneſs of their Conſtitution is extraordinary.

Low-landers. The *Lowlanders* partake much of the Temper of the People, of whom we have mentioned them to be compos'd, but moſt reſemble the *French*, occaſioned by the long League betwixt the two Nations, their mutual Commerce, frequent Intermarriages, and Cuſtom of travelling into *France* to ſtudy the Law, and other Sciences, and by their affecting to ſerve in the *French* Armies. But ſince the Union of the Crowns, the *Engliſh* Cuſtoms and Way of Living have obtained much in the *Lowlands*, where the *Engliſh* Tongue has been their natural Language for above 600 Years, but ſtill retains more of the antient *Saxon*. This being extraordinary, and perhaps ſingular, that a foreign Language ſhould prevail in a Country altogether independent of *England*, and where the Inhabitants were of another Lineage, and maintained ſuch fierce and long Wars to preſerve their diſtinct Sovereignty; the *Scotiſh* Antiquaries and Hiſtorians give ſeveral Reaſons for it. Without enumerating all theſe, we will only obſerve, That a great many *Engliſh* going to *Scotland* after the *Norman* Conqueſt, with *Edgar Atheling*, and his Siſter *Margaret*, who was afterwards marry'd to King *Malcolm*, the *Engliſh* has been gaining Ground upon the old *Scots* Language ever ſince; which is now confin'd to the Highlands, and the Iſles, where thoſe of Note do alſo underſtand *Engliſh*. In a Word, the *Scots* in general are naturally inclin'd to Civility, eſpecially to Strangers; and the Lineaments of their Bodies are as well proportion'd and comely, as any Nation in *Europe*, which, together with their native Courage and Ability to endure Fatigue, makes them valued by all the Princes of *Europe* for Soldiers.

Scotland is uſually divided into two Parts, by the River *Tay*, *viz.* *North* and *South Scotland*. In the latter of theſe, which lies next to *England*, are the following Counties. Counties. *Mers.* 1. *March*, or *Mers*, in the Law-Writings of *Scotland* call'd the Shire of *Berwick*, which was formerly the principal Town of the County, till it was taken by the *Engliſh*. This County is very fruitful in Corn and Graſs, and abounds with the Seats of Perſons of Quality. The principal Rivers in this County are *Tweed*, *Whitader*, *Blackader*, *Leye*, and *Eduem*. The chief Place of Note is the Town and Caſtle of *Dunſ*. It has a good Weekly Market, eſpecially for Cattle, and is the Place of the beſt Trade in the County. Next to this are *Hume*, *Coldingham*, *Eaſtcaſtle*, *Leymouth*, *Coldſtream*, and *Eccles*. *Tweedale.* 2. *Tweedale*, which derives its Name from the River *Tweed*, that runs through it: It is fruitful in Corn and Paſturage, and abounds with Flocks. The chief Places of Note in this County, were the antient Borough and Caſtle of *Roxburgh*, now demoliſh'd, *Jedburgh*, a Royal Borough on the River *Jed*; *Kelſo*, a Town of good Trade, on the River *Tweed*; *Hawick*, a Market Town on the River *Teviot*; the Town, and once famous Abbey of *Melroſſe*, on the River *Tweed*; *Dribugh*, once noted alſo for a ſtately Abbey. There are many Seats of Perſons of Quality in this County. The principal Rivers here are *Tweed*, *Teviot*, *Jed* and *Eal*. Weſt from *Teviotdale*, upon the Borders, lie the ſmall Counties of *Liddeſdale*, *Eskdale*, and *Wachopdale*, ſo called from the Rivers *Liddel*, *Esk*, and *Wachop*. Theſe are uſually reckoned now of *Teviotdale*. 3. *Annandale*, ſo called from the River *Annan*. It has many pleaſant Woods, and fruitful Fields, on both Sides. The principal Places of *Annandale*, are the Town and Caſtle of *Annan*, the Town and Caſtle of *Lochmaben*, and *Moffet*, remarkable for its Medicinal Wells. 4. Next to *Annandale*, lies *Nithiſdale*, which together make up the Shire of *Dumfreis*. The Duke of *Queensberry* is Hereditary Sheriff of this County. It takes its Name from the River of *Nith*. This River receives ſeveral others from *North* and *South*: Near the Head of it lies the Town of *Sanquehar*, and near its Mouth lies *Dumfreis*, a pleaſant, conſiderable, and flouriſhing Town, noted for its Trade, and a famous Bridge. There are many conſiderable Woods in this County. 5. *Lothian*, which, for Cultivation, Gentlemens Seats, and Plenty of all Neceſſaries for Human Life, exceeds any other County in *Scotland*: 'Tis particularly fruitful in Corn, eſpecially Wheat. 'Tis divided into *Eaſt*, *Weſt*, and *Mid-Lothian*. The chief Places of Note in *East-Lothian*, are *Dunbar*, formerly remarkable for a ſtrong Caſtle, now demoliſh'd; *Haddington*, a Market-Town upon the River *Tine*; *Dalkeith*, a Town and Caſtle on the River *Esk*; *Muſſelburgh*, *Tranent*, and *Preſton-pans*.

In *Mid Lothian* lies *Edinburgh*, the Metropolis of the Kingdom, where, for ſome Ages, the Kings of *Scotland* had their Reſidence, in the adjoining Palace of *Holyrood-Houſe*. The City has alſo, of a long Time, been the uſual Seat of the Parliament, and the ſupreme Courts of Judicature. It was famous of old for its Caſtle, one of the ſtrongeſt in *Europe*. This City has been built here for the Protection of the Caſtle, from which the principal, and indeed as beautiful and magnificent a Street as is to be ſeen any where, lies on the Ridge of a Hill to the King's Palace; and from this Street on both Sides the Hill, there run a vaſt Number of Lanes, down to the Lake on the North-ſide; and to another Street call'd the *Cowgate*, on the South-ſide; and whence alſo there are many Lanes, which run up the Hill, on the South, towards the Univerſity, and *Herriot*'s-Hoſpital, and the principal Suburbs on that Side. This City, from the Caſtle to the Palace, is a large *Scotch* Mile in Length, and above half a Mile in Breadth, from the North to the South-ſide of the Town. It is accounted as populous, if not more, than any City in *Europe* for its Bounds; the Houſes being very high, large, and contiguous, but rather too cloſe, except in the principal Street. It was naturally fortify'd by a Lake on the North, and by a ſtrong Wall on the other Parts, without which there lie now many fair Suburbs. This City would certainly have been more conſiderable, had it not been for its unhappy Situation for Trade, and its Nearneſs to the Borders; ſo that its Riſe and Subſiſtence did chiefly depend on the Reſidence of the Kings, the Seat of the Parliament, and Courts of Judicature, and the Reſidence of the chief Nobility, many of whom have great Houſes there. The remarkable Edifices, beſides the Caſtle and Palace, are the Parliament Houſe; a ſtately, convenient, and large Structure, with a large Court call'd The Parliament-Cloſe. The Room, for the meeting of the Parliament, has a high Throne for the Sovereign or the Commiſſioner, with Benches on each Side for the Nobility, and Forms conveniently plac'd in the Middle for the Commoners. The Weſt ſide of the Parliament Houſe is incloſ'd by the Council Houſe, where the Town Council aſſembles. The South ſide is bounded by the Seſſions Houſe, where the ſupreme Courts of Judicature are held. In the upper Part of this Edifice are the Apartments for the Lords of the Privy Council, and Exchequer. Near the Council Chamber ſtands the Royal Exchange, and another Exchange inferior to this. On the North ſide ſtands the high Church, now divided into four Churches. The Steeple is very high, and the Summit reſembles an imperial Crown. The Churches of this City, including the

Chapel

Chapel of the Caſtle, are twelve, and the Miniſters twenty-three. *Herriot*'s Hoſpital is a large and ſtately Edifice, which was built at the Charge of *George Herriot*, Goldſmith to King *James* VI. for the Education and Entertainment of 40 Boys. Upon the South-ſide of the Town ſtands the College, which has large Precincts enclos'd with high Walls, and is divided into three Courts. The publick Schools are large and commodious; there is good Accommodation for the Students, handſome Dwellings for the Profeſſors, and fine Gardens for their Recreation. It was founded in 1580, by King *James* VI. They have a very good Library, which was founded by *Clement Little*, in 1635. ſince which it is much increaſed by Donatives. Under the Library is the King's Printing-Houſe, where they are chiefly employed in printing Bibles. The Mint-Houſe hath a large Court, adorn'd with neat and convenient Buildings, for the Accommodation of the Overſeers and Workmen. Near to the Collegiate Church is the Hoſpital of St. *Thomas*, in which decay'd Citizens of both Sexes are very handſomely maintained. Over-againſt that Church is the Correction-houſe, commonly call'd *Paul*'s Work. The common Burial-place of this City is *Gray-friars* Church-yard, where there are abundance of fine Monuments. The City is incloſed with a kind of old *Roman* Wall on every Side, except the North. It has ſix Gates; two to the Eaſt, two to the South, one to the Weſt, and one to the North. The chief Gate is one of thoſe to the Eaſt, called the *Nether Bow*, built in 1616, and adorn'd with Towers on both Sides: This is the Entrance from the Palace, and the principal Suburb call'd the *Cannon-gate*. The Caſtle is ſituated at the Weſt End of the City, where the Rock riſes to a high and large Summit; 'tis inacceſſible on the South, Weſt, and North: The Entrance is from the Town, where the Rock is alſo very high; and the En- is defended by a round Battery, and an Out- it. The Palace conſiſts of Entrance is adorned with great Stone, and a fine Cupola in Form n over it. In the Front, there are four high Towers. The Palace is almoſt ſurrounded with lovely Gardens, and on the South-ſide of it lies the King's Park. In the City there is a College of Phyſicians, where they have a noble *Muſæum*, which contains a vaſt Treaſure of Curioſities of Art and Nature, foreign and domeſtick. In this City there is alſo a noble Library of Books and Manuſcripts, belonging to the College of Juſtice, or Gentlemen of the Law. On the North-ſide, there is an excellent Phyſick-Garden, with ſome thouſands of Plants. This City is governed by a Lord Provoſt, (whoſe Office is much the ſame with that of the Lord-Mayor of *London*); four Bailiffs, who, beſides the Power of Aldermen, have that of Sheriffs; and a Common-Council, which conſiſts of twenty-five Perſons: All theſe are choſen annually; and the Provoſt, Dean of *Gild*, and Treaſurer, are to be Merchants. The 14 incorporated Trades are, Chirurgeons, Goldſmiths, Skinners, Furriers, Hammer-men, Wrights, Maſons, Taylors, Bakers, Butchers, Cord wainers, Weavers, Wakers, *i. e.* Fullers, and Bonnet-makers, *i. e.* Cap-makers. The Magiſtrates are choſen annually upon the *Tueſday* next after *Michaelmas Day*, by 38 Perſons, whereof 20 are to be Merchants, and Tradeſmen, who are to chuſe ſuch as in their Conſcience they think to be beſt qualify'd. The Lord Provoſt, Dean of *Gild*, and Treaſurer, are not to continue longer than one or two Years at a Time; and the Bailiff is to be one Year Bailiff, one Year old Bailiff, and one Year free of Office. The Lord Provoſt for the Time being is always one of the Privy-Council. The Train'd Bands of the City conſiſt of 16 Companies, beſides which, they have a ſtanding Company of Town-Guards. *Leith*, the Port of *Edinburgh*, the beſt frequented Harbour in *Scotland*, and a thriving Town, was noted in Queen *Mary*'s Minority for being fortified. The Shire of *Edinburgh* contains that which is call'd *Mid-Lothian*. *Leith.*

In *Weſt-Lothian*, the moſt conſiderable Place is *Linlithgow*, where there is a ſtately Palace belonging to the Crown. They have alſo a ſtately Town-houſe, and a curious Church built of hewn Stone. There is alſo a fine Park. *Torſichen*, two Miles from *Linlithgow*, is a Borough, formerly the Reſidence of the Knights of *Malta*. The principal Rivers of the *Lothians* are *Tine*, the two *Esks*, *Leith*, and *Almond*. The Country in general abounds with pleaſant Corn-fields, Meadows, green Hills, and others cover'd with Heath. They have plenty of Coals for Fuel and Export; and make great Quantities of Salt. There are ſeveral Iſlands on the Coaſt of this Country, of which the *Baſs* is the moſt remarkable, being an impregnable Fort, and abounding with *Solan Geeſe*. *Weſt-Lothian.*

6. The Shire of *Selkirk*, takes Denomination from *Selkirk*, the principal Town, where the Sheriff keeps his Courts. *Galloſhiells* is another Market Town in this County, which is mountainous and woody, and more fit for Paſturage than Corn. *Selkirk.*

7. *Twedale*, ſo call'd from the River *Tweed*. *Peebles*, the only Borough of the County, is pleaſantly ſituated betwixt the Rivers *Tweed* and *Peebles*, and is remarkable for its three Churches, three Gates, three Streets, and three Bridges. *Twedale.*

8. *Galloway*, ſo call'd becauſe of its antient Inhabitants, deſcended from the *Gauls*. It is divided into two Sheriffalties, call'd the Upper and the Nether. This County produces all Things neceſſary for human Life, and is remarkable for its excellent Wool, and briſk vigorous little Horſes, from hence call'd *Galloways*. It is water'd by 5 Rivers, which all fall into the *Iriſh* Sea. The remarkable Sea-Ports in this County are, *Kircudbright*, *Garvellan*, *Neſſock*, *Loch-Rian*, and Port *Patrick*. The moſt remarkable Towns are *Kircudbright*, excellently ſituated for Trade; *Wigtoun*, very well ſituated alſo; *Whitehorn*, and *Stranraver*. *Galloway.*

9. Next to *Galloway* lies *Carrick*, a County fruitful in Corn and Paſturage, and has all neceſſary Commodities by Land and Sea. Here *Ptolomy* places the Town and Bay of *Rerigonium*, whence the Town of *Bargeny* is ſuppoſed to derive its Name, and to ſtand in its Place. *Carrick.*

10. *Kyle*, or the Shire of *Air*, lies next to *Carrick*. The River of *Air* here is very pleaſant, and beautified with Woods, Caſtles, and Gentlemens Seats. Over this River there is a Bridge near the new Town of *Air*, and South of the Bridge lies the old Town of *Air*, famous for its Antiquity and Priviledges. *Kyle.*

11. *Cunningham*. The chief Town of this County is *Irwin*, upon the Mouth of a River of that Name, where there is a good Port for ſmall Ships, and a Stone Bridge over the River, and the Town is well ſituated for Trade. *Cunningham.*

12. *Renfrew*. The chief Town is *Renfrew*, a Royal Borough on the Left of *Clyde*. But *Paſley*, another Borough in this County, is a much larger Town than *Renfrew*. *Renfrew.*

13. *Clydſdale*, which derives its Name from the River *Clyde*. It is divided into two Wards, called the Upper and Nether, in the latter of which is contained the Barony of *Glaſgow*. The County Town is *Lanerk*, from whence the whole is call'd the Shire of *Lanerk*. The chief City of this County is *Glaſgow*, a large, ſtately, and well-built City, and for its Commerce and Riches, the Second in the Kingdom. It is pleaſantly ſituated upon the Eaſt Bank of the River *Clyde*, which is navigable to the Tower by Ships of conſiderable Burthen, but its Port is *Newport-Glaſgow*, which ſtands on the Mouth of *Clyde*, and is a Harbour for Ships of the *Clydſdale.* *Glaſgow.*

greateſt

greatest Burthen. In the higher Part of the City stands the great Church, formerly a Cathedral, a magnificent and stately Edifice. Near the Church stands the Castle, formerly the Residence of the Archbishop. But the chief Ornament of this City is the College or University, a magnificent and stately Fabrick, consisting of several Courts. The Town of *Hamilton* is pleasant and well-built, and the *Hamilton*-Family have their Burying-place in the Church. *Ruglen* is another Town in this County. 14. *Sterlingshire* derives its Name from the Town of *Sterling*, which in the *Saxon* Tongue signifies a Rock or Mountain on a River, alluding to the Situation of the Town and Castle. This Town is reckoned the Key of the Kingdom, because it opens the Passage from the South to the North, there being no such easy Passage over the *Forth* as by *Sterling-Bridge*. The Earl of *Mar* is Hereditary Governor of the Castle, which is well stor'd with Ordnance for defending the Bridge, and has a competent Garrison for its Security. The City very much resembles *Edinburgh* in its Situation: 'Tis enclosed by a Wall, and on the North-side has the River *Forth*. 16. *Lenox* is also called the Shire of *Dunbarton*, from its head Town. *Dun*, in the old *Scotch* Language signifies a Hill, or a Rock, and *Bar*, a Tower or Castle, from whence 'tis evident the Town took its Name. This County is remarkable for its noble Herring-Fishing, in two Bays which break into it from the Mouth of *Clyde*, call'd *Lochlong* and *Lochfin*. It is also remarkable because of *Lochlomond*, which contains 30 Islands, three of which have Churches, and many of the rest are inhabited; the Chief of 'em is *Inchmurin*. The famous *Grampian* Mountains begin at this Lake, and run Northward near *Aberdeen*. *Dunbarton* was once considerable for its Trade, which is now much decay'd; but is still remarkable for its Castle, one of the strongest by Nature in *Europe*. 17. The Shire of *Bute* contains the Isles of *Bute* and *Arran*. *Bute* is 8 Miles long, and four broad. It has a Royal Borough call'd *Rothsay*, with an antient Castle. This Island is also remarkable for its noble Herring-Fishing; it lies in the Mouth of *Clyde*. The Isle of *Arran* lies also in the Mouth of *Clyde*, 24 Miles in Length, and 16 Broad, fruitful in Corn and Pasturage. It has four Churches, and several Castles, of which that of *Brodick* is the strongest and most remarkable. 18. The Shire of *Argyle* contains the County of that Name, *Knapdale*, *Corral*, *Kintyre* and *Lorn*, with most Part of the Western Isles. *Kintyre* is a Peninsula, which runs 30 Miles out into the *Irish* Sea. *Campbell Town*, a Royal Borough, with a safe Harbour for Ships, lies in this County. *Knapdale* is join'd to *Kintyre* on the North by a Neck of Land, scarce a Mile broad. It abounds with Lakes and Bays, several of which contain Islands and Castles. *Argyle*, properly so called, has *Knapdale* on the South. The whole Shire of *Argyle*, taking in the constituent Parts above mentioned, has seven Bays of the Sea that enter it, which by the Inhabitants are called *Lochs*; the chief of them *Lochfyn*, which is about 60 Miles in Length, and at the narrowest Place above four Miles in Breadth, famous for the Number and Goodness of its Herrings. *Lorn* is the pleasantest and most fruitful Part of the Shire of *Argyle*. The Castle of *Dunstaffage* lies in this County, which was formerly a Seat belonging to the Kings, where many of them are buried. 19. *Perthshire*, so denominated from the City of *Perth*, the chief Town in the County, commonly called St. *Johnstoun*, pleasantly situated upon the South Bank of the River *Tay*, the second Town of the Nation for Dignity. Vessels come up to the Town at full Tide. *Dun*. This on the North side of *Tay*, at the Foot of the *Grampian* Hill. *Scone*, near *Perth*, remarkable for being the Place where the Kings of *Scotland* were formerly crown'd. That Part of the County called *Strathern*, takes its Denomination from the River *Ern*. *Menteith*, another Part of this County, derives its Name from the River *Teith*, upon which lies the Town of *Dumblain*, famous for a Battle in the last Rebellion. The principal River in *Perthshire*, and indeed of the Nation, is *Tay*, which flows from a Lake of that Name 10 Miles long, and one broad, and after a Course of 46 Miles, falls into the *German* Ocean below *Dundee*. There are many lesser Rivers fall into it. That Part of the County call'd *Braidalbin* lies among the *Grampian* Hills. The Word in the old Language signifies the highest Part of *Scotland*; and Part of it call'd, *Drumalbin*, signifies the Ridge or Back of *Scotland*. 20. *Clackmannan*, Part of *Fife*, has good Corn, Pasturage, and store of Coal and Salt. In another Part of *Fife*, call'd the Shire of *Kinross*, lies *Culross*, noted for a Trade in Salt and Coals. East from this lies *Proper Fife*, 32 Miles in Length. The Air of this County is good, both for preserving and recovering Health. The chief Town of *Fife* is St. *Andrews*, pleasantly situated in a Plain, and has a Prospect into the *German* Sea. It has an Harbour on the East Part, but capable only of small Ships. The Town was formerly very considerable, and consists now of several broad Streets, which cross one another; but is particularly famous for its University, founded by Bishop *Wardlaw* in 1412. and endowed with very ample Privileges. It has a good Library, which was founded by Dr. *Sheen*.

We come now to the Counties North of *Tay*, 1. *Angus*, fruitful in Corn and Pasturage, and has many Lakes and Hills. The County-Town is *Forfar*; but *Dundee* is the most noted Town of this County for Strength, Situation, and Trade. *Montross* is also a Town of good Trade, with a Harbour for Ships of considerable Burthen. 2. The *Merns*, called also the Shire of *Kincardin*, from the County-Town, is fruitful in Corn and Pasturage. The Place of chief Note in this County is the strong Castle of *Dunnotter*. 3. *Mar*, or the Shire of *Aberdeen*. The chief Places of this County are *Old* and *New Aberdeen*. *Old Aberdeen* is situated at the Mouth of the River *Don*, remarkable for the Multitude of Salmon and Perches taken in it. The chief Ornament of this Town is the King's College, on the South-side of it, a neat and stately Structure. Close to the Church there is a Library, well furnished with Books. *New Aberdeen* is about a Mile distant; it is the County Town, and exceeds all the other Cities in the North of *Scotland*, for Largeness, Trade, and Beauty. In this City lies the Marshal College, which has a very good Library. 4. *Bamf*, which contains Part of *Buchan*, *Strathdovern*, *Boyne*, *Enzy*, *Strathavon* and *Balveny*. *Bamf*, the chief Town of the County, lies at the Mouth of the *Dovern*, but has no Port, and by consequence little Trade. 5. *Buchan*. The principal Town of this Place is *Peterburgh*, a Sea Port, and *Peterhead*, another. Near the Ruins of the Castle of *Slains*, there are several Springs of petrifying Water, which make very white and excellent Lime. 6. *Garioch*. The principal Place here is *Innerury*. 7. *Murray*. The Climate and Soil of this County, is the best in all the North of *Scotland*. The principal Towns in this County are *Inverness*, conveniently situated for Trade; *Forres*, as pleasantly situated as any in the North; *Elgin*, formerly a Bishop's See. 8. The Shire of *Inverness* contains Part of *Murray Land*, which lies near the Town, with *Badenoch*, *Lochaber*, and the South Part of *Ross*. In this Shire there are Iron Mines, and large Woods of Fir and Oak. *Badenoch* abounds with Deer, and *Lochaber* with Fish. The Place of chief

chief Note here is *Inverlochy*, a Place of great Strength and Trade, now fortified at the Revolution by King *William*'s Order. 9. *Cromarty*, a ſmall County, derives its Name from the little Town of *Cromarty*, which lies on a Bay of the ſame Name. This Shire comprehends Part of *Roſs*. 10. *Roſs*, betwixt the Eaſt and Weſt Sea. It has many Bays, eſpecially on the Weſtern Coaſt, which abound with Fiſh, particularly Herrings. The Peninſula, which lies betwixt the Bay of *Cromarty* and *Murray*, is called *Ardmeanach*, upon the Shore of which ſtands the Town, called the *Chantrie* of *Roſs*, formerly a Biſhop's See. 10. *Southerland*, fruitful in Corn and Paſturage, and abounding with Fiſh, Fowl, Sheep, black Cattle, and Deer. It has 3 remarkable Foreſts, beſides Abundance of other Woods. There are many Rivers here, though but ſmall. There are about 60 Lakes in this County: The greateſt is *Lochskin*. There are Silver Mines alſo in this County, and excellent Iron Mines, Coal Mines, and Quarries of Freeſtone. The Barley of this County is reckoned excellent. 11. *Strathnaver* derives its Name from the River *Navern*, which runs through it. The County abounds with high Mountains, upon which the Snow lies long. There are many Lakes in the Valleys. It abounds with Woods, and has good Harbours. It has little Corn, but abounds with Cattle. The Bays and Rivers are full of Fiſh, from whence the Natives reap great Profit. They have Iron Works alſo in this County. The two Places of moſt Note in it are *Borwe* and *Young*. 12. *Cathneſs*, divided from *Southerland* by the Mountain *Ord*. The Soil on the Coaſt is low, and fruitful in Corn. The Coaſts and Rivers abound with Fiſh, and the Mountains with black Cattle and Sheep. There are many little Towns and Villages in this County, which are very well inhabited.

Cromarty. *Roſs.* *Southerland.* *Strathnaver.* *Cathneſs.*

The Weſtern Iſles of *Scotland* lie in the *Deucaledon* Sea. Beſides *Boot* and *Arran*, which have been already deſcribed, in the Mouth of *Clyde*, are *Ailſa*, *Cumbra* the greater and leſſer, *Flada*, *Mennock*, and *Avona*. In the main Ocean, the moſt remarkable are, 1. *Gigaia*, 6 Miles in Length, and a Mile and a half in Breadth. 2. *Jura*, 12 Miles from *Gigaia*, 24 Miles long, and 6 or 7 broad, reckoned one of the wholſomeſt Places in *Scotland*. 3. *Scarba*. 4. *Liſmore*. 5. *Bernera*. 6. *Ila*, 24 Miles long, in ſome Places 8, and in others 16 broad; it abounds with Corn and Cattle, has Store of Deer and Lead Mines, with Lime-ſtone in vaſt Quantities. 7. *Mull*, 24 Miles in Length, and as much in Breadth. This Iſland in general affords good Paſturage for Cattle of all Sorts. 8. *St. Columbus*, 2 Miles in Length, and above a Mile broad. The Biſhops of the Iſles had formerly their Seat here. Among the Ruins there are ſtill to be ſeen a Burial Place, in which ſeveral Kings of *Scotland*, *Ireland*, and *Norway*, and the Chiefs of the Tribes of the Weſtern Iſles, were buried. This Iſland is famous in Hiſtory for being a Seminary of Eccleſiaſticks, and in a Manner the Mother Church of all the Dominions of the *Scots* and *Picts*. 9. *Tire-ry*, 8 Miles long, and 3 broad, reckoned to be the moſt plentiful of all the Iſlands in Neceſſaries of human Life. 10. *Col*, 15 Miles long, and 2 broad, and very fruitful. 11. *Rum*, 16 Miles long, and 6 broad; mountainous and heathy, but the Coaſt arable and fruitful. 12. *Canney*. 13. *Muſk*. 14. *Egg*. 15. *Skye*, 42 Miles long, and in ſome Places 20, and in others 30 Miles broad: It is ſeparated from the Shire of *Inverneſs*, by a narrow Firth, where a Man may call from one Side to the other. It has a great deal of arable Ground, which yields a good Increaſe. It has many excellent Bays and Harbours, for the Conveniency of Fiſhing and other Trade, and about 30 Rivers, which afford Salmon. There are many large Caves in this Iſland, one of them ſaid to be 7 Miles long. There are Abundance of old Forts on the Coaſt, that ſeem to have been erected by the *Danes*. The Cattle here are Horſes, Cows, Sheep, Goats, and Hogs. This Iſland abounds alſo with Land and Water Fowl of many Sorts. 16. *Sota Britil*. 17. *Oranſa*. 18. *Scalſa*. 19. *Raſay*. 20. *Altvig*. 21. *Pladda*. Theſe 6, and others, are on the Coaſt of *Skye*. The Natives of *Skye*, and the neighbouring Iſlands, have a peculiar Way of curing the Diſtempers they are incident to, by Simples of their own Product. 22. *Vaterſa*. 23. *Barra*, 7 Miles long, noted for Cod-Fiſhing. 24. *Kiſmul*. 25. *South-Viſt*, 21 Miles long; the Eaſt Side mountainous, but the Weſt plain and arable. It abounds with freſh Water Lakes, which have Plenty of Fiſh and Fowl. 26. *Benbecula*. 27. *North-Viſt*, about 30 Miles in Circumference, the Weſt Side plain and arable. This Iſland has ſeveral Bays on the Eaſt Side, where Ships may ride. In one of them, 400 Veſſels have been loaded with Herrings in a Seaſon. 28. *Scalpinſ*. 29. *Borera*. 30. *Lingay*. Theſe 3 and others are between *North-Viſt* and *Lewis*. The Inhabitants of *South* and *North-Viſt* are generally well-proportioned and healthful, and many of them live to a great Age. 31. The Iſle of *Lewis* is 100 Miles in Length, and from 13 to 14 in Breadth; it is reckoned Part of the Shire of *Roſſe*: But that Part which is properly called *Lewis*, is but 36 Miles in Length, the reſt of it being called *Harries*. The Iſland is healthful, eſpecially in the Middle. It is arable on the Weſt Side for about 16 Miles on the Coaſt, and likewiſe in ſeveral Places in the Eaſt. It is fruitful in Corn: Their common Grain is Barley, Oats, and Rye; and they have alſo Flax and Hemp. There are ſeveral convenient Bays and Harbours here; and all the Bays and Coaſts abound with Cod, Ling, Herring, and all other Sorts of Fiſh taken in the Weſtern Seas. Seals and Fowls frequent here in great Numbers. The Inhabitants are well-proportioned, and in general healthful and ſtrong; they are very quick of Apprehenſion, and Lovers of Poeſy and Muſick; they are dexterous at Swimming, Vaulting, and Archery, and make able Seamen. There are many leſſer Iſlands which lie round this; the chief of which are, 32. *Garve*. 33. the 2 *Berneras*. 34. The Iſland of *Pigmies*. 35. *Rona*. 36. *Soulisker*. There are 24 Churches in *Lewis* and *Harries*, and the Iſlands belonging to them. That Part which is called *Harries*, produces the ſame Sorts of Corn, but with a greater Increaſe than *Lewis*. There are other Iſlands of ſmall Extent belonging to *Harries*, the chief of which are 37. *Bernera*. 38. *Pabbay*. 39. *Sellay*. 40. *Taranſay*. 41. *Hermatra*. 42. The Iſlands called *St. Kilda*, or *Hirt*; the moſt remote of all the *Scotch* Iſles to the North-Weſt.

Weſtern Iſles.

We come now to the Iſles of *Orkney* and *Shetland*. The *Orkneys* have the *Caledonian* Ocean on the Weſt, the *German* Ocean on the Eaſt, the Sea that divides them from *Shetland* on the North, and *Pentland Firth*, which divides them from the main Land of *Scotland*, on the South. They are 28 in Number. *Stroma* near the Coaſt of *Cathneſs*, is not reckoned among the *Orcades*. *Pharay* is a ſmall Iſland, but not unfruitful. *Pentland-Firth*, in which *Stroma* is ſituated, is remarkable for its ſwift, violent, and contrary Tides. The beſt of the *Orkney* Iſlands is *South-Ronaldſa*, 6 Miles long and 3 broad, fruitful in Corn, and well-inhabited.

North Iſles.

habited. 2. *Swinna*, a ſmall Iſland, fruitful in Corn. 3. *Wayes* and *Hoy*, which are but one Iſle, 12 Miles long, and full of high Mountains. 4. *Burra*, 3 Miles long, fruitful in Corn and Paſturage. 5. *Flotta*, 5 Miles long, encompaſſed with high Rocks. Near this lie 6. *Fara*, 7. *Cava*, and 8. *Gramſey*, fruitful and pleaſant, though ſmall Iſlands. We paſs by ſeveral Holms, which are left for Paſturage, and come to 9. *Pomona*, the largeſt of the *Orkney* Iſlands. It is 24 Miles long, in ſome Places 9, and in other 6 Miles broad; very fruitful, and well-inhabited. In this Iſland lies *Kirkwal*, the only Town in *Orkney*, a Royal Borough, pleaſantly ſituated upon a Bay near the Middle of the Iſland; it is about a Mile in Length, and is the Seat of Juſtice. It conſiſts of one Street, the Houſes well-built, and moſt of them covered with Slate. There is a ſtately Church here, formerly called by the Name of St. *Magnus*. 10. *Coppinſha*, a ſmall Iſland, but fruitful. 11. *Shapinſha*, 5 or 6 Miles long. 12. *Stronſa*, 6 Miles long, well known becauſe of its good Harbours. 13. *Papa-Stronſa*, very fruitful and well-inhabited. 14. *Sanda*, about 12 Miles long, well-inhabited, and has 2 Harbours. 15. *Eda*, 10 Miles long, and abounds with Fiſh and Fowl. 16. *Damſey*, a ſmall but fruitful Iſland. 17. *Rouſa*, 8 Miles long, and well-inhabited; it abounds with Fowl, Fiſh, and Rabbits. There are ſeveral other Iſlands in the Neighbourhood, which are fruitful enough. 18. *Egliſha*, 3 Miles long, and has a ſafe Road for Ships. 19. *North-Fara*, 3 Miles long, but thinly inhabited. 20. *South-Fara*, much of the ſame Extent. 21. *Weſtra*, 8 Miles long, well-inhabited, and abounds with Corn, Cattle, Fiſh, and Rabbits. 22. *Papa-Weſtra*, 3 Miles long, well-inhabited, and has a good Harbour. The other Iſlands are not worth mentioning. The People of this Country are generally healthful, ſtout, and well-proportioned: They are more numerous than can reaſonably be imagined. They have muſtered 10,000 Men at once, fit to carry Arms, beſides thoſe that were left to cultivate the Ground. The Commodities which they export yearly, are Butter, Tallow, Hides, Barley, Malt, Oatmeal, Fiſh, ſalted Beef, Pork, Rabbit-Skins, Otter-Skins, white Salt, Stuffs, Stockings, Woodl, Hams, Quills, Down, Feathers, *&c.* The Claik Geeſe, or Barnacles, reckoned to breed in the Trunks of Trees, and frequently ſeen about theſe and the neighbouring Iſlands, have occaſioned Abundance of Wrangling among the Learned. This Country had antiently its own Kings, and after it was reduced by the *Scots*, was for ſome Time poſſeſſed by the *Danes* and *Norwegians*; but recovered again by the *Scots*.

Eighty Miles farther North lie the Iſles of *Shetland*; betwixt them lies the *Fair Iſle*, which riſes up in 3 high Promontories, and is ſeen both in *Orkney* and *Shetland*. There are in all 46 of the *Shetland* Iſlands, 40 Holms, or leſſer Iſlands, left for Paſturage, and 30 Rocks, frequented only by Fowl. The firſt of theſe Iſlands is called the Main Land, being 60 Miles long, and in ſome Places 16 broad. It is beſt inhabited and cultivated on the Shore, but the inner Part is mountainous, and full of Lakes or Bogs. The Air is cool and piercing, yet many of the Inhabitants live to a great Age. In the Winter, the Violence of the Tides, and the Tempeſtuouſneſs of the Seas, deprive them of all Foreign Correſpondence from *October* to *April*. They have little Corn of their own Growth, and therefore import great Quantities from *Orkney*. Their common Drink is Whey, which they barrel up and keep in cold Cellars: This makes it very ſtrong, ſo that it quickly turns their Heads. Some of them keep for their Drink Butter-Milk mixed with Water. The better Sort have good Beer and Ale, of which they are very liberal to Strangers. They have Abundance of Fiſh of all Sorts on their Coaſts, for moſt Part of the Year. They abound with all Sorts of Fowl, except Heath-cocks. They have Plenty of little Horſes, very fit for the Husbandman's Uſe. They make coarſe Cloth, Stockings, and knit Gloves, for their own Uſe, and alſo for Sale to *Norwegians*. Their Grain is Oats and Barley, but moſt of the latter. They have Abundance of black Cattle and Sheep. Their Fuel is Turf, Peat, and Heath. Their native Language is old *Gothick*, or *German*, as was alſo that of *Orkney*; but they generally now ſpeak *Engliſh*. In their Cuſtoms and Habit they much reſemble the *Germans*, but the better Sort imitate the *Scots* Lowlanders. Their Religion is Proteſtant, and they are generally, as well as the *Orkney* Men, very devout. There are two little Towns in this Iſland; the firſt and oldeſt is *Scalloway*, on the Weſt Side of the Iſland. The ſecond and largeſt is *Lerwick*, which is increaſed to about 300 Families. There are ſeveral antient Monuments in theſe Iſlands, which we have not Room to inſiſt upon. The moſt remarkable of the other Iſlands here are, 1. *Zeal*, 18 Miles long, and 9 broad. 2. *Vuiſt*, much of the ſame Dimenſions. 3. *Fronda*, 4. *Walſey*, 5. *Great-Rule*, 6. *Foula*, 7. *Braſſa*, 8. *Burray*. *Shetland* is divided into 12 Pariſhes, but there are many more Churches and Chapels in it. This Country, like *Orkney*, has no Wood in it; and they have ſome Fiſh and Fowl peculiar to themſelves.

Iſles of Scotland

In the Mouth of the River *Firth* lie ſeveral Iſlands, the moſt conſiderable of which is the *May*; formerly dedicated to St. *Adrian*, and had a Monaſtery and Chapel. The Monks there gave out, that barren Women, who came to worſhip there annually, would thereby be cured of their Barrenneſs; and it was frequented upon that Account by Women in the Popiſh Times: But whether St. *Adrian* or the Monks had the moſt Influence in curing their Barrenneſs, the Readers may judge. The *Paſs* lies next; and higher up in the *Firth* lie *Inchkeith*, *St. Colms-inch*, and *Inchgarvy*. Eaſtern Iſlands.

The Government of *Scotland*, as that of *England*, is by King and Parliament. The *Scots* Monarchy is juſtly reckoned the oldeſt of the known World; his preſent Majeſty being the 115th Sovereign. The Original of the Monarchy is aſcribed to the Choice of the Chiefains, who governed in an ariſtocratical Manner, till being attacked by the *Picts* and *Britons*, they ſent to *Ireland* for *Fergus*, Son to King *Ferquhard*, to come to their Aſſiſtance with Troops; upon which they made him King, and the Crown has continued in his Poſterity ever-ſince. Civil Government. Monarchy.

The Parliament of *Scotland* conſiſts of 3 Eſtates, *viz.* Lords, Barons, and Boroughs; but this Diſtinction is modern; for all Freeholders in the old Acts, are called Lords of Parliament; but that Denomination came afterwards to be appropriated to the Peers. However, they never ſat in a diſtinct Houſe from thoſe other Members, whom latter Ages called Commons. The leſſer Nobility, called Barons, are very numerous. By the late Act of Union, the Peers of *Scotland* are to name 16 by Plurality of Voices of the Peers preſent, and of the Proxies of the abſent Peers, ſuch Proxies being Peers; and in caſe of the Death or legal Incapacity of any of the ſaid 16 Peers, the Peers ſhall nominate another of their own Number. The Number of the Commons, according to the Act of Union, is 45, one a-piece for the Shires, one for *Edinburgh*, and 14 for the other Parliament

Burghs;

Burghs; ſeveral of which unite in the Choice of each Repreſentative. The Way how they are elected is thus: Each of the Boroughs elect a Commiſſioner in the ſame Manner as they did formerly, and the Commiſſioners ſo elected meet at ſuch Time and Borough within their reſpective Diſtricts, as his Majeſty ſhall appoint, and elect one for each of the Diſtricts; and where the Votes of the Commiſſioners for the ſaid Boroughs ſhall be equal, the Preſident of the Meeting to have a caſting Vote, beſides his Vote for the Borough from which he is ſent. None are capable to elect, or to be elected for any of the 3 Eſtates, but ſuch as are 21 Years of Age complete, and are Proteſtants. This is all we need add to our Account of the Parliament of *England*.

Courts of Juſtice. The Courts of Juſtice in *Scotland*, are, 1. The College of Juſtice, commonly called the Seſſion, before which all Civil Cauſes are tried, at ſtated Times, according to Statute Law, and the Cuſtom of the Country; and, where theſe are defective, according to the Civil Law. There lies no Appeal from this Court, but to the Parliament. 2. The Juſticiary, where are tried all Crimes which reach the Life of the Priſoner, and the Matter is ſubmitted to a Jury of 16 Perſons. 3. The Court of *Exchequer*, of the ſame Nature with the Court of *Exchequer* in *England*. 4. The Commiſſaries Court, which determines Controverſies and Wills, Eccleſiaſtical Benefices, Tithes, Divorces, &c. 5. The Sheriff's Court, in which the Sheriff or his Deputy is Judge, in Matters of Ejection, Intruſion, Damage, and ſmall Debts. 6. The Courts of Regality, in which the Lord of the Regality is Judge. 7. Every one who holds a Barony of the Crown, has the Power of holding a Court within his Barony.

Military Government. It would ſeem, by the *Roman* Hiſtory, that all the Time they invaded the Iſland, the *Scots* Kings were ſcarce known by any other Title but that of General. And ſince that, their Kings were ſo far from having Peace and War at their own Diſpoſal that they could do nothing in either without the Conſent of the Eſtates. But ſince the Union of the Crowns, their Prerogative has been advanced in this, as well as in other Reſpects; ſo that Peace and War, and the naming of military Officers, has been in the Crown. Even the Militia of *Scotland* is not ſubject to Lord-Lieutenants, but all their Officers are named by the Sovereign, as in the Standing-Army. The regular Forces of *Scotland*, are 3 Regiments of Dragoons, 8 of Foot, and 8 independant Companies. The *Scots* never abounded in naval Force, nor ſeem to have affected it.

Heralds The Heralds Office is of an old Standing. The chief of the Heralds is called *Lion* King of Arms, becauſe the Lion is the Royal Arms of *Scotland*. Some learned Men ſay, That the *Scots* and *Picts* were the firſt who wore coloured Shields; but the digeſting of Heraldy into an Art, is aſcribed to the Emperors *Charlemain* and *Frederic Barbaroſſa*. Their antient Orders of Knighthood were thoſe of the Thiſtle, or St. *Andrew*, and Banrents or Bannerets, created under the Royal Standard for gallant Actions in the Field. The Order of the Thiſtle, by reaſon of its great Antiquity and memorable Inſtitution, is, upon all Occaſions, called, *The moſt antient, and moſt noble Order of the Thiſtle*, being founded, as all the *Scots* Hiſtorians aſſert, by *Achius* the 65th King of *Scotland*, after a ſignal Victory obtained over the *Saxons*, *Anno* 819, and dedicated to St. *Andrew*, the Patron, or tutelar Saint of *Scotland*.

Eccleſiaſtical Government. The Government of the Church in this Kingdom is that which latter Ages call Presbyterian, becauſe they allow of no Officer higher than a preaching Presbyter, who, with the Elders, in leſſer and larger Aſſociations, adminiſter the Government of the Church. And that the Church of *Scotland* was reformed from Popery by Preſbyters, without ſettling any Proteſtant Epiſcopacy inſtead of the Popiſh Biſhops, is evident from the Acts of Parliament and General Aſſemblies. According to this Form of Government, the Kingdom is divided into 13 Provincial Synods, 68 Presbyteries, and 938 Pariſhes. The loweſt Eccleſiaſtical Court is the Kirk-Seſſion, or Parochial Conſiſtory, which conſiſts of the Miniſter, or Miniſters, Elders and Deacons, with a Clerk and Beadle. The Elders are choſen from among the moſt ſubſtantial, knowing, and regular People. The Deacons are choſen in the ſame Manner. From this Court there lies an Appeal to the Preſbytery, which conſiſts of ſuch a Number of Miniſters and Elders of neighbouring Pariſhes, as can moſt conveniently meet together. The Miniſters and Elders, when met, chuſe one of the Miniſters to be Chairman: The Perſon ſo choſen is called Moderator, and his Buſineſs is to regulate their Proceedings, according to the Rules of Scripture, and the Conſtitutions of the Church. Before this Court are tried Appeals from Parochial Conſiſtories, and they inſpect into the Behavior of the Miniſters and Elders of their reſpective Bounds. They take Care to ſupply the vacant Churches in their reſpective Diſtricts. They alſo try and licenſe young Men, in order to their Entrance upon the Work of the Miniſtry. This Court does alſo judge of Cauſes for the greater Excommunication, before it be inflicted on any Perſon within their Bounds. The Provincial Synod conſiſts of all the Miniſters of the Province, with a ruling Elder from each Pariſh; their Buſineſs is to determine Appeals from the Presbyteries of their Diſtrict, and to enquire into the Behaviour of the ſeveral Presbyteries. From this Court there lies an Appeal to the general Aſſembly, which is conſtituted of Miniſters and Elders deputed from every Presbytery of the Nation. The ruling Elders to this Aſſembly are many Times of the greateſt Quality. This Court gives a final Determination to all Appeals from inferior Church-Judicatories, and makes Acts and Conſtitutions for the whole Church. Their Moderator is choſen by themſelves, and the Sovereign generally ſends a Commiſſioner, who propoſes what is thought proper on the Part of the Crown; but he has no Vote in the Aſſembly. In all theſe Eccleſiaſtical Courts they begin and end with Prayer: They can inflict no Temporal Puniſhment, but confine themſelves altogether to Eccleſiaſtical Cenſures.

CHAP.

CHAP. VIII.

A Deſcription of Ireland; *its Name, and Inhabitants; their Language, Cuſtoms, Religion; its Soil, Produce, Curioſities; its Diviſions, and principal Towns; its Lakes, Bays, Havens, Rivers, Mountains, &c. its Government, Eccleſiaſtical and Civil Hiſtory, &c.*

Name. THE Name of *Ireland* probably came from *Erinlandi*, which in *Iriſh* ſignifies a Weſtern Land. *Bochart* will have it called *Hibernia* from *Ibernae*, a *Phenician* Word, ſignifying the fartheſt Habitation. It is an Iſland ſubject to the Crown of *Britain*, bounded on the Eaſt with a violent and boiſterous Sea, called *St. George's Channel*, which ſeparates it from *England* and *Wales*, and on the North-Eaſt from *Scotland*; on the Weſt with the *Atlantick*, which parts it from the main Continent of *America*; on the North with the *Deucaledon Sea*; and on the South and South-Weſt with that which is called the *Virginian Ocean*. It is ſituated between the 5th Degree and 58th Minute, and the 10th Degree and 45th Minute of Longitude from *London*; and between the 51ſt Degree and 15 Minutes of North Latitude; by which we may ſee, that it lies under the 9th and 10th Climes, with a little of the 8th, in one of the Temperate Zones, towards the Northern Parts of it. It is of an oblong Form, ſomewhat reſembling an Egg; but if we conſider all the Windings and Turnings, ſcarce any Thing can be imagined to have a more irregular Make: In Length about 285 Miles, in Breadth 160 Miles; the whole Circuit about 1400 Miles.

Old and preſent Inhabitants. 'Tis certain the antient Inhabitants of this Iſland were originally *Britons*; for *Britain* being the neighboureſt Country to it, the People had a ſpeedy Paſſage hither. They were a rude and barbarous People, of whoſe Actions we know but little; this Country not being ever conquered by the *Romans*, thoſe Maſters of Learning and Civility. Towards the Decline of the *Roman* Empire, we find them called by the Name of *Scots*. They ſubdued the Weſtern Iſles, and the neighbouring *Picts* and *Caledonians*, and gave the Name of *Scotland* to the Northern Parts of the *Britiſh* Continent: But not long after they left the Name of *Scot*, and returned to the firſt Name of *Iriſh*. Theſe People at ſeveral Times have been intermixed with *Danes*, *Saxons*, and *Normans*, but at preſent they are only *Engliſh* and *Iriſh*. As for the *Engliſh*, there needs nothing to be ſaid of them, nor the more civiliz'd Sort of *Iriſh*, who are conformable to the Cuſtoms and Laws of our Nation: But as for the *Kerns*, *Rapparees*, &c. thoſe Wild *Iriſh*, they are of a middle Stature, ſtrong of Body, of an hotter and moiſter Nature than any other Nations, of wonderful ſoft Skins, and excel in Nimbleneſs, and the Flexibility of all Parts of the Body. They are reckoned of a quick Wit, prodigal of their Lives, enduring Travel, Cold, and Hunger, given to fleſhly Luſts, light of Belief, kind and courteous to Strangers, conſtant in Love, impatient of Abuſe and Injury, in Enmity implacable, and in all Affections moſt vehement and paſſionate. Their Language is originally *Britiſh*, but now very much degenerated from it, by Reaſon of the Intermixture with Foreigners; but in the main it conſiſts of the *Britiſh* and old *Cantabrian*; but the Names of Waters, Iſles, Mountains, and Places, are ſtill moſtly *Britiſh*. As to the Names of the People, the greateſt Men have often the Letter (*O*) put before them, as *O Neal*, &c. Some of the better Sort alſo carry the Name of *Mac* (which ſignifies Son) as *Mac Decan*, &c. but when they are baptized, they commonly add ſome profane Name, and never give the Name of the Parent, or any of the Kindred then living, for they are perſuaded that their Death is haſten'd thereby; but when the Father is dead, the Son commonly aſſumes his Name. They feed much upon Herbs and Roots, and delight in Butter temper'd with Oatmeal; alſo in Milk, Whey, Beef-Broth, and Fleſh oftentimes, without any Bread at all. Their Corn they lay up for their Horſes. When they are hunger-bitten they diſdain not to eat raw Fleſh, after they have preſſed out the Blood; and drink down large Quantities of Uſquebaugh or Aquavitæ after it. They commonly wear little Woollen Jackets, Breeches cloſe to their Thighs, and over them a Mantle or Shag-Rug deeply fringed. They go for the moſt Part bare-headed, wear their Hair long, and count it the greateſt Ornament. The Women alſo make a great Eſteem of their Hair, eſpecially if it be of a Golden Colour, and long. Their Cows and Cattle are the chief Wealth they have. They count it no Infamy to commit Robberies; and when they go to rob, they make Prayers to God that they may meet with a Booty. They alſo ſuppoſe, that Violence and Murder are no ways diſpleaſing to God; for if it were a Sin, he would not preſent them with that Opportunity. Moreover, they ſay, that this Sort of Life was left to them, and that they only walk in their Fathers Steps; that it would be a Diſgrace to their Nobility to forbear ſuch Facts, and get their Living by Labour. They have fooliſh Credulities, and at every third Word rap out an Oath; and have no great Regard in forſwearing themſelves. Diet

Thoſe that dwell in Towns ſeldom make any Contract of Marriage with them in the Country: They paſs their Promiſe, not for the preſent, but for the future, ſo that a very little Difference parts them aſunder. They are very much given to Inceſt, and nothing is ſo common as Divorces under Pretence of Conſcience. Marriages.

Their Burials are ſingular enough; for when any one lies a dying, Women, hired on purpoſe, ſtand in Croſs-ways, calling on him with great Outcries, and abundance of ridiculous Expoſtulations, why he ſhould depart from ſo many Advantages. After he is dead, they keep a Mourning; with loud Howlings and clapping of Hands together. They follow the Corps with ſuch a Peal of Outcries, that a Man would think the Quick, as well as the Dead, were paſt all Recovery. Neither do they mourn leſs for thoſe that are ſlain in Battle, or by Robbings; tho' they affirm ſuch to have an eaſier Death. They ſuppoſe, that the Souls of the Deceaſed go into the Company of certain Men, famous in thoſe Places; of whom they ſtill retain ſtrange Fables and Songs. Burials.

Their Religion is the *Romiſh*, and attended with more Indecency and Superſtition than uſually in other Countries; for when they firſt ſee the Moon after the Change, they commonly bow the Knee, and lay the Lord's Prayer; Religion.

and then ſpeak to the Moon with a loud Voice, *Leave us as thou haſt found us.* They pray for the Wolves, and with them well, and ſo they are not afraid to be hurt by them. They count it unlawful to rub down or curry their Horſes, or to gather Graſs for their Fodder on *Saturdays*. They hang up the Feet and Legs of a dead Horſe; nay, the very Hoofs are eſteem'd as a ſacred Relict. They count her a wicked Woman, or a Witch, that cometh to fetch Fire from them on *May-Day*.

Air. The Air of *Ireland* is mild and temperate, cooler in Summer, and warmer in Winter, than in *England*, but not ſo clear and pure as here; therefore not ſo good for ripening Corn and Fruits; tho' by the Skill and Induſtry of the *Engliſh* Planters, it ſeems to be much mended. In the Winter it is more ſubject to Wind, Clouds, and Rain, than Froſt and Snow. It is ſo exceſſive moiſt, that many are troubled with Looſneſſes and Rheums, more eſpecially Strangers, who ſeldom eſcape thoſe Diſtempers; for the ſtopping of which they drink Uſquebaugh. Soil. As for its Soil, it is abundantly fruitful, but naturally fitter for Graſs or Paſturage than Corn: In ſome Places the Graſs is ſo long, and withal ſo ſweet, that the Cattle would ſoon graze to ſurfeit, if they were not hindered. Nay, in the County of *Armagh*, the Ground is ſo rank and fertile, that the laying of any Compoſt upon it abates its Fruitfulneſs. It is in many Places incumbred with vaſt Bogs, and unwholſome Marſhes, being full of great Lakes and Sands; and is alſo overgrown with many large Woods: But of late Years thoſe Inconveniencies have been very much corrected. The Wonder of this Country is, that it breeds no venomous Creature, and that no ſuch will live here, brought from any other Places. But tho' *Ireland* is free from all venomous Creatures, as from Worms and Spiders, yet it is ſubject to noxious and voracious Animals, particularly Wolves, that ſtill abound in this Country. It Cattle. Flocks. produces a vaſt Number of good Flocks of Sheep, which they ſhear twice a Year. Here are likewiſe excellent good Horſes, called Hobbies, which have a particular ſoft and round Amble. As for Cattle, here are infinite Numbers, being indeed the principal Wealth of the Inhabitants. For Bees they have ſuch Numbers, that they are found not only in Hives, but alſo in the Bodies of Trees, and Holes of the Earth. You meet here alſo with Roes, Hares, Coneys, and the like Animals. It has a Variety of all Sorts of wild and tame Fowls; and all Quantities of Fiſh, eſpecially Salmons and Herrings. Commodities. The principal Commodities of *Ireland* are Cattle, Hides, Tallow, Suet, and great Store of Butter and Cheeſe; Wood, Salt, Honey, Wax, Fir, Hemp, Linen-Cloth, Pipe-ſtaves, great Quantities of Wool, of which they make Cloth and Frizes; Variety of Fiſh and Fowl, and alſo ſeveral Metals, as Lead, Tin, and Iron; and in a Word, there is nothing wanting, either for Pleaſure or Profit. It is obſerv'd, their Animals are not ſo large as thoſe of *England*, except Men, Women, and Grey-hounds.

Fountains. *Ireland* is very full every where of Springs and Fountains, not only in the mountainous Parts, but even in the flat and champain Country. There are a great Number of Fountains throughout the Land, called *Holy Wells* by the Inhabitants, whoſe Water is no ways differing from that of other Wells, yet is believed to be effectual for the curing of ſeveral Diſeaſes. One of the *Lough* Islands, call'd *Lough Derg*, has been very famous upon the Account of a large Hollow, called, that the Suburbs of Purgatory were there, into which thoſe that had the Courage to enter, lay and liſten'd very ſtrange and terrible things. There is a wonderful Property aſcribed to *Lough*, called *Lough Neagh*, of turning Wood into Stones; which is generally believed. It is very common in *Ireland* to find whole Bodies of Trees in Bogs. There were no Mines diſcovered in *Ireland*, till the Settlement of the *Engliſh* there in the Reign of Queen *Elizabeth*. Iron Mines are now of three Sorts there; the Bog-mine, the Rock-mine, and the Pin or White-mine. There are alſo Silver and Leaden-mines in *Ireland*, that do not turn to any conſiderable Account. *Ireland* has the Preeminence of *England* upon the Account of its Marble, which is found in many Places of ſeveral Sorts.

Provinces. *Ireland* is divided into four Provinces, and theſe again into ſo many Counties: We ſhall here treat of the Provinces in their Alphabetical Order. And firſt of *Connaught*: This Province is in Length *Connaught.* 130 Miles; in Breadth about 84 Miles. As for Rivers, here are few of conſiderable Note beſides that great one of *Shannon*: The chief are, 1. *May*, 2. *Suck*, 3. *Droſos*, 4 *Gyll*. This Province abounds with many convenient Bays and Creeks, fit for Navigation. The Soil is ſufficiently fruitful, were not the Inhabitants ſo lazy; producing Abundance of Cattle, good Store of Deer and Hawks, and Plenty of Honey. It is the meaneſt of the four Provinces in general, and contains one Archbiſhoprick, *viz. Tuam*, 5 Biſhopricks, 7 Market-Towns, 12 Places that return Parliament Men, 24 Caſtles of old Erection, beſides Fortreſſes raiſed in the latter Troubles. The principal Town of the whole is *Gallway*. This Province was, before the *Engliſh* Conqueſt of it, a Kingdom of itſelf. It is now govern'd by a principal Commiſſioner, under the Lord-Lieutenant. It is at preſent divided into 6 Counties, *viz.* 1. *Letrim*, 2. *Slego*, 3. *Mayo*, 4. *Roſcommon*, 5. *Gallway*, and, 6. *Thomond*, or *Clare* County. Of theſe, 4 border on the Sea, *viz. Slego*, *Mayo*, *Gallway*, and *Thomond*: *Roſcommon* is a midland County, ſo may alſo *Letrim* be counted; and theſe Counties are ſubdivided into 51 Baronies.

Leinſter. The Province of *Leinſter* is in Length about 112 Miles, in Breadth about 70 Miles. The chief Rivers are, 1. the *Barrow*, 2. the *Boyne*, famous for the Battle in 1690; 3. *Liffe*, or *Leffy*, 4. *Nuer*, 5. *Urrin* or *Slane*, 6. *Iuny*. This Province is very fertile and fruitful in Corn and Paſture Ground, and well watered, the Air clear and gentle, mix'd with a temperate Diſpoſition. It is plentiful both in Fiſh and Fleſh, and in other Victuals; as Butter, Cheeſe, and Milk. The Commodities chiefly conſiſt in Cattle, Sea-Fowl, and Fiſh, and it breeds excellent good Horſes. The Inhabitants come neareſt the civil Diſpoſition of the *Engliſh*, from whom they are for the moſt Part deſcended; ſo that this is look'd upon to be the moſt conſiderable Province in *Ireland*. In this Province is one Archbiſhoprick, *viz. Dublin*, and 3 Biſhopricks; 16 Market-Towns, 47 Places that return Parliament-Men, or Boroughs, and 102 Caſtles, well fortified. The chief Place is *Dublin*, alſo the Capital of the Kingdom, of which hereafter. This Province was, before the *Engliſh* Conqueſt of it, divided into two Kingdoms, *viz. Leinſter* and *Meath*, both under their own Kings, till a falling out happened between them, which cauſed King *Henry* II. of *England* to make a Conqueſt of it. *Leinſter* has been inſeparably annexed to *England* ever ſince, but *Meath* was granted in Fee Farm to *Hugh Lacey*, a noble *Engliſhman*: Since which it came wholly under the Kings of *England*, and now the Province of *Meath* is united to *Leinſter*. It is now divided into 12 Counties, *viz.* 1. *Longford*, 2. *Weſt Meath*, 3. *Eaſt Meath*, 4. *Dublin*, 5. *Wicklow*, 6. *Kildare*, 7. *King's County*, 8. *Queen's County*, 9. *Kilkenny*, 10. *Catherlogh*, and 11. *Wexford*; of theſe 4 border on the Sea, *viz. Eaſt Meath*, *Dublin*, *Wicklow*, and *Wexford*; the ſeven others are midland Counties, and theſe Counties are ſubdivided into 90 Baronies.

The

Munster. The Province of *Munster* is in Length about 135 Miles; in Breadth about 120 Miles. The chief Rivers of this Province are, 1. *Shure*. 2. *Awluffe*. 3. *Lee*. 4. *Bande*. 5. *Leane*. 6. *Caffon*. This Province abounds with many excellent Bays and Havens, and many rich Towns; the Air mild and temperate. The Soil in ſome Places hilly, with woody, wild, and ſolitary Mountains; yet the below Vallies are garniſhed with Corn-Fields. The moſt general Commodities are Corn, Cattle, Wood, Wooll, and Fiſh; of the laſt whereof it affords abundance of all Sorts, eſpecially Herrings. It contains one Archbiſhoprick, viz. *Caſhell*, 5 Biſhopricks, 7 Market-Towns, 25 Places that return Parliament-Men, and 66 Caſtles of old Erection. The chief City of the whole is commonly reckoned *Waterford*, but *Limerick* at preſent deſerves the Pre-eminence. This Province, before the *Engliſh* Conqueſt of it, was a Kingdom of itſelf, and governed by its own King. Since the *Engliſh* became Maſters of it, it has been kept cloſe to the Crown, only the *Spaniards* in the Reign of Queen *Elizabeth* became Maſters of a little of it, but were ſoon driven out. It is govern'd by a Lord Preſident, who has one Aſſiſtant, two Lawyers, and a Secretary, to keep it in Obedience. The Subdiviſion of it ſtands thus; 1. *Tipperary*, 2. *Waterford*, 3. *Cork*, to which is join'd the County of *Deſmond*. 4. *Limerick*, and 5. *Kerry*: Of theſe, three border on the Sea, viz. *Waterford*, *Cork*, and *Kerry*. *Tipperary* and *Limerick* are Midland Counties. Theſe Counties are again divided into 52 Baronies.

Ulſter. The Province of *Ulſter* is in Length about 116 Miles; in Breadth, nigh 100. The chief Rivers. Rivers of this Province are, 1. The *Banne*, 2. the *Lough-Foyle*, 3. the *Swilly*, 4. *Lagen-Water*, 5. *Newry-Water*. This Country abounds with large Lakes, ſhaded with many and thick Woods; the Soil is fruitful in Corn and Graſs, but in ſome Places a little barren; yet in every Place it is well furniſhed with Horſes, Sheep, and Oxen; and affords great Plenty of Timber and Fruit-Trees. The Waters are deep, and well repleniſh'd with Fiſh. As for Salmons, here are more in ſome Rivers of this Country, than in any other River in *Europe*. In this Province is one Archbiſhoprick, viz. *Armagh*, and 6 Biſhopricks; 10 Market-Towns, 34 Places that return Parliament-Men, and 30 Caſtles for the Defence of the Country. The chief City of all is *Londonderry*. The Province, before the *Engliſh* conquer'd it, was a Kingdom of itſelf, firſt conquer'd by *John Courcy*. Soon after it was ſo neglected by the *Engliſh*, that it was canton'd into Principalities by the natural *Iriſh*. In this Eſtate it continued till *Tir-Owen*'s Rebellion; the Conqueſt of whom brought this Province in full Subjection to *England*, and it has ever ſince continued ſo. It is now divided into 9 Counties, viz. 1. *Antrim*, 2. *Londonderry*, 3. *Donnagal*, 4. *Tyrone*, 5. *Armagh*, 6. *Fermanagh*, 7. *Cavan*, 8. *Monaghan*, 9. *Down*, and 10. *Louth*. Of theſe, 5 border on the Sea, viz. *Louth*, *Down*, *Antrim*, *Londonderry*, and *Donnagal*. *Tyrone*, *Armagh*, *Fermanagh*, *Monaghan*, and *Cavan*, are Midland Counties.

Dublin. *Dublin*, the Capital City of *Ireland* (and the only one that we need particularly deſcribe) is ſituate in a County of the ſame Name, upon the River *Liffy*, which makes a capacious Haven here. There are Hills to the South of it, Weſtward open Champain Ground, and on the Eaſt the Sea at hand. It is the largeſt and beſt built City of *Great-Britain* and *Ireland*, next to *London*, and ſtill very improving. It has a Cathedral of great Antiquity, dedicated to St. *Patrick*, and built at ſeveral Times. There is alſo another Collegiate Church, called *Chriſt-Church*, to which the Lord Lieutenant, or Lords Juſtices, uſually go in State to their Devotion. This City was built in 1012, and has about 13 Parochial Churches. The Soil about *Dublin* is fruitful enough as to every Thing but Wood, ſo that they uſe Sea-Coal brought them from *Wales* and other Parts of *Great-Britain*, and Turf dug up in the adjacent Country. *Dublin* has a very ſtrong Wall fortified with Ramparts. It openeth at 6 Gates, from whence there run out Suburbs, of great Length: It reſembles *London* very much, not only in the Form of Building, but in the Names of the Streets and other Places. Towards the Eaſt ſtands the King's-Caſtle, the uſual Reſidence of the chief Governour of the Kingdom. It is fenced with Ditches and Towers, tho' but of little Strength in Compariſon of the Modern Fortifications. Here is a College for Students, which is an Univerſity of itſelf, founded by Queen *Elizabeth* in the Year 1591. The College is beautiful enough, and richly endowed, and conſecrated to the Name of the Holy Trinity. King *William* III. gave 3000 *l.* to enlarge it by ſome additional Buildings, which are ſince erected. *Dublin*, at the North-Gate, had a Bridge of hewn Stone, built by *John*, King of *England*. In the Year 1676, Sir *Humphry Jervis* began to build *Iſſex*-Bridge in the City. In the Beginning of King *James* II's Reign, the City of *Dublin* built *Ormond* and *Arran* Bridges. This City, much after the ſame Manner as *London*, being the Capital of the Kingdom, as it is the Reſidence of the chief Magiſtrates, ſo it is likewiſe of their Courts of Juſtice, and of their Parliaments; where the Law is practiſ'd and pleaded in the ſame Form as with us. It was in the Year 1683, that what they call the *Tholſel*, or *Exchange* of *Dublin*, was built at the Charge of the City. It is a fair and handſome Piece of Architecture. This City in antient Times was govern'd by a Provoſt, but in 1409, the Citizens had Liberty granted them to chuſe every Year a Mayor and two Bailiffs, which laſt were changed to Sheriffs by *Edward* IV. And that this City might not ſeem Inferior in the Dignity of its Magiſtracy to any in the three Kingdoms, King *Charles* in 1665, was pleaſed to honour the Mayor thereof with the Title of Lord; and there was 500 *l. per Ann.* allowed by the Crown to ſupport the Honour of the Lord Mayor. The Tradeſmen here, as in other Places, are divided into Companies, which are ſo many Corporations. The Lord Mayor, Sheriffs, and Citizens of *Dublin*, in the Year 1703, purchaſed Lands to the Value of 100 *l. per Ann.* beſides a ſpacious Piece of Ground for erecting a Work-houſe, and made Application to the Parliament to have the ſame ſettled for the Uſe of the Poor for ever; which being kindly received by the Parliament, ſeveral additional Funds were ſettled, not only for employing common Beggars, but alſo for the Relief of thoſe who were unable to work. The Citizens of *London* alſo, in Imitation of the Hoſpital of *Chriſt-Church*, *London*, took it into Conſideration to build one in their City for poor Children by Way of voluntary Contribution, in 1668, which they happily effected. As to the Royal Hoſpital of *Kilmainham*, it was, in 1685, built at the Charge of the Army, for aged and maimed Soldiers, who are there maintained to the Number of between 4 and 500. And as *Ireland*, above moſt other Countries, has been liable to domeſtick Troubles and Rebellions, as well as foreign Invaſions, her late Majeſty Queen *Anne* thought fit to order 3000 *l.* Sterling, to be applied for the building and furniſhing an Arſenal near *Dublin*.

Wood.

In

Islands. In mentioning the Islands of *Ireland*, the usual Way is to begin from the Bay of *Carrickfergus*, and from thence coasting along the Shore, first visit the Eastern Islands, thence proceed to the Southern, thence to the Western, and last to the Northern. But as none of them are of any considerable Magnitude, or of Importance on any particular Account, we chuse to omit the Catalogue of their Names, which is almost all that is recorded concerning them.

Lakes. The principal Lakes of this Kingdom are, 1. *Lough-Erne*, in *Ulster*, nigh 30 Miles long, and 10 broad, and full of inhabited Islands: 2. *Lough-Neah*, or *Sidney*, 20 Miles long, and 12 broad, extremely pleasant. 3. *Lough-Ree*, 15 Miles long and 5 broad. 4. *Lough-Derk*, 18 Miles long, and 4 broad. 5. *Lough-Cerrib*, having in it several Isles abounding with Pine-Trees. Besides these, there are *Lough-Conn*, *Lough-Care*, *Lough-Cilly*, *Lough-Allyn*, *Dercuereagh*, *Lough-Hamel*,

Bays. with several others. The most considerable Bays in this Country, are, 1. The Bay of *Gallaway*, 2. *Dingle-Bay*, 3. *Bantry-Bay*, 4. *Donnegal-Bay*, 5. that of *Londonderry*, 6. *Carrickfergus-Bay*, 7. *Carlingford Bay*, 8. that of *Dublin*, 9. *Wexford-Bay*, 10. *Kingsale-Bay*. *Ireland* has also some considerable Promontories or Capes in it: *viz.* That called *Fairhead*, St. *John's* Point, *Old-Head*, *Mussen-Head*, *Lean*, St. *John's* Cape, and *North-*

Havens. *Cape*. The Havens of this Kingdom are numerous and commodious, and perhaps not to be match'd in any Country in the World. Those of most Note are *Waterford*, *Cork*, *Youghall*, and

Rivers. *Kingsale*. Tho' this Kingdom does not abound with many considerable Rivers, yet it has some very good ones; the largest of all is the *Shannon*, which after a Course of 200 Miles, about 60 of which 'tis navigable, falls into the Western Ocean with a Mouth about 7 Miles in Breadth. The other Rivers are, *Swift*, *Awiduff*, or *Black-Water*, *Paleful*, *Surewoody*, *Barrow*, *Liffe*, *Boyne*, *Lee*, &c.

as mentioned in the Counties. The most memorable Mountains in this Kingdom are reckon'd to be *Knock-Patrick*, or St. *Patrick's-Hill*, *Shiew-Bloom*, *Fragh* and *Mourne*, *Shiew-Gallen*, *Cirlew-Hills*, and the *Gualty* Mountains.

Ecclesiastical Government. The Ecclesiastical Government of *Ireland* is under 4 Archbishopricks; viz. *Armagh*, *Dublin*, *Cashel*, and *Tuam*: The first is entitled Primate of all *Ireland*, the second Primate of *Ireland*, but the other 2 have no distinguished Character. There were under these once a great Number of poor Bishopricks, but since the Reformation they have been reckoned 19. These Bishopricks, tho' they are not generally so good as those of *England*, yet the Livings of the inferior Clergy in this Kingdom are much more upon an Equality. As for the Doctrine and Discipline of the Church of *Ireland*, nothing more need to be said, but that they are conformable to that of *England*.

Civil Government. The civil Government of this Country is by Vice-Roys, first called Keepers or Wardens of *Ireland*, afterwards Justices of *Ireland*, and now Lord Lieutenants and Deputies of *Ireland*. Their Authority is large, ample, and royal; having Power to make War; to conclude Peace; to bestow all Magistracies and Offices, except a very few; to pardon all Crimes, unless they be some of High-Treason; to dub Knights, &c. and there is not in all Christendom any Vice-Roy that comes nigher the Majesty of a King, for his Jurisdiction, Authority, Train, Fortune, and Provision. There are assistant to him in Council the Lord Chancellor of the Realm, the Treasurer, and others of the Earls, Bishops, Barons, and Judges, which are of the Privy-Council, formed much in the same Manner as in *England*. As for the several Degrees of State, this Country has the very same as in *England*; as Dukes, Marquisses, Earls, Viscounts, Barons, Knights, and Esquires. Here are also the same Courts as in *England*; as the High Court of Parliament, the *Chancery*, the *King's-Bench*, the *Common-Pleas*, and the *Exchequer*; likewise 4 Terms in the Year. Here are also Justices of Assizes, *Nisi Prius*, and *Oyer* and *Terminer*, and Justices of the Peace in every County. Also the King hath his Serjeant at Law, his Attorney, Sollicitor, &c. As for the Common Law, *Ireland* is govern'd by the same with *England*.

Strength. The Strength of this Nation consists partly in the Situation, being environed with difficult and dangerous Seas; and partly in the several Fortifications and Castles built by the *English*. Their Forces have never been reckoned very numerous till of late, and then they have either been so ill disciplined, or of such cowardly Dispositions, that an Enemy of no very great Power (were it not for their strong Places) might easily tame them.

Arms. The Arms of this Kingdom are, Azure, an Harp, stringed Argent; which Arms King *James* the First caused to be marshalled with the Royal Arms of *Great-Britain*, and have ever since been set upon our Coins. They have no College of Arms erected on purpose in this Kingdom; but they have Officers of Arms, and they are only two, *viz.* 1. *Ulster*, King of Arms, 2. *Athlone*, Pursuivant.

As to the History of *Ireland*, it being intermixed with that of *England*, we refer for it to the History of the Reigns of our Monarchs, as we did for that of *England*, in our Description of that Kingdom.

FINIS.
